the left General Brooks's brigade of General Smith's division, Sixth Corps, moved forward, with its right on the Williamsburg road, against a force of the enemy that was moving south of that road in the wood skirting the open field. It steadily drove back the enemy, meeting with heavy loss, particularly in the Fifth Vermont Regiment, and darkness ended the fight. General Brooks was wounded in the leg, but did not leave the field. Hancock's and Davidson's brigades were posted some distance to the rear to repel an anticipated attack from the right and rear, but were not engaged. When the fight was over, our troops held the contested ground, and their behavior throughout the fight had been admirable.

The Confederate force engaged in this fight was commanded by General J. B. Magruder, and consisted of Semmes's and Kershaw's brigades, Kemper's battery; and two regiments of Barksdale's brigade opposite our left. Cobb's division and two guns of Hart's battery were north of the railroad to the right of our line. Cobb's infantry was not engaged.

About a half hour after the fight was ended, I suggested to General Sumner that if he had no objection I would carry out the commanding general's orders, so far as I was concerned, and cross the White Oak Swamp with General Smith's division. We were then on the field. His answer was, "No, General; you shall not go, nor will I go—I never leave a victorious field. Why! if I had twenty thousand more men, I would crush this rebellion." I then told him that I would show him a dispatch from General McClellan directing that all of the troops should cross during that night. With some difficulty a candle was found and lighted, and the general read the dispatch. After reading it he exclaimed, with some excitement, "General McClellan did not know the circumstances when he wrote that note. He did not know that we would fight a battle and gain a victory." I was at my wit's end. I knew that General McClellan's arrangements did anticipate a fight exactly like that just over, and that unless the whole force was on the other side of the swamp by the next morning, his movement might be seriously delayed. Moreover, I believed that if we staid where we were, the enemy would be upon us in force enough to defeat us utterly on the next morning, endangering the remainder of the army. Yet, by all military usage I was under General Sumner's orders. At this juncture General Smith asked me to introduce Lieutenant Berry, his aide-de-camp, to General Sumner. After the introduction, Lieutenant Berry told General Sumner that he had seen General McClellan only a short time before, that he knew there

had been a fight, and fully expected that all of the troops would cross the swamp that night. General Sumner was convinced by this statement, and with great reluctance permitted me to continue the movement towards the swamp, he following immediately after.

General Smith's division crossed the White Oak bridge about three o'clock on the morning of June 30th, and went into position on the left of the road leading from the bridge

MAJOR-GENERAL W. F. SMITH.

towards the James River. The batteries of the division were already there in position. It faced about so that its left rested upon the road, the division bearing southward from the road. At the same time I reported to McClellan at his headquarters, which were in a clearing not far from the crossing.

The rear of Sumner's corps, Richardson's division, crossed the bridge at ten o'clock in the morning, destroyed it, and took position some distance on Smith's left, nearly in line with him. Both divisions guarded the crossing.

After the fight at Savage's Station was over, Hazzard's battery of Richardson's division was unhitched, its captain not supposing there was to be any further movement that night, and the men and horses went to sleep, as usual when there was opportunity, which was not often in those days. The division, as has been told, moved off, and by accident no notice of the movement was sent to Captain Hazzard. On the next morning he heard reveillé sounded by drums and trumpets from positions that he knew our troops did not hold the evening before. Everything in his vicinity was quiet. He took in the situation at once. He had been left behind, and the enemy might be upon him at any moment. He had the battery quietly hitched up, sent the caissons off in

THE REAR GUARD AT WHITE OAK SWAMP—SHOWING GENERAL W. F. SMITH'S DIVISION. (DRAWN BY JULIAN SCOTT AFTER HIS PAINTING OWNED BY THE UNION LEAGUE CLUB, NEW YORK.)

advance, and bringing up the rear with two guns ready to open on a pursuing force, started off at a walk. When he was clear of the field he ordered the battery to trot; and without harm arrived at the White Oak bridge at that pace just as General Richardson was destroying it. He crossed in safety. He found on the road many stragglers who were coolly wandering along with no suspicion that they were behind everybody, and he, by his warning, was the means of saving many soldiers from a Richmond prison. The pluck and coolness shown in this exploit of Captain Hazzard were admirable. He was killed the next day while doing excellent work with his battery.

As the result of the dispositions made by the commanding general of the troops (a part of whose operations has just been described) a whole day was gained in getting a large part of the army to the James River without serious opposition, and into a proper defensive position; the enormous trains and heavy artillery had been given a start of twenty-four hours, insuring their safe arrival at the river. The rear of the army also had crossed the White Oak Swamp, leaving the way clear to the James River, while at the same time a strong force was ready to protect the movement during its completion.

On the enemy's side, the slowness of Jackson in getting his force to the south side of the Chickahominy (he only arrived at Savage's Station at three o'clock on the morning of June 30th) prevented us from being defeated in the fight of June 29. The 28th and 29th were occupied by Jackson in disposing of the dead and wounded at Gaines's Mill, and in repairing Grapevine bridge.

On the north (the enemy's) side of White Oak Swamp, the road for more than a quarter of a mile approaches the White Oak bridge through low ground, open to artillery fire from the south (our) side. On the right of the enemy looking to the rear, there were hills covered with thick woods approaching the road, forming good cover for artillery, and making it possible for a large force to gather in the wood unseen from our side. The same range of hills continues up the stream, and approaches quite near it at Brackett's Ford about one mile above White Oak bridge. Both of these crossings were passable for artillery, but the bridges had been destroyed by our troops in the morning, after everything had crossed and before the appearance of the enemy.

On our side of the swamp, the ground rises from the bridge, and the road passes along the right, or east, of a ravine and joins the Long Bridge road about one and a quarter miles from the swamp. On the left of the ravine

was a cleared space about a half mile long in the direction of the swamp and running back about the same distance. At the swamp the clearing was fringed with trees and underbrush, and about half-way up the clearing to the left of the ravine was a small farm-house and some slight out-buildings. On the right of the ravine was a similar clearing, extending from the swamp about a furlong back. All other ground in the vicinity was covered with timber and underbrush. (The troops were disposed as shown on the map, page 470.)

The cleared space at this time had in it many wagons of the train, and Colonel R. O. Tyler's First Connecticut Heavy Artillery, which I ordered to the rear at once. Glad enough would I have been to keep this accomplished officer, with his gallant regiment and heavy guns, but we both knew that he was needed at the James River. At about 10:30 in the morning, as near as I can now recollect, I accompanied General McClellan to the intersection of the Charles City and Quaker roads, about two miles from the White Oak bridge. I found General Slocum's division posted somewhat in rear of the intersection of those roads, and in front of the road leading from Brackett's Ford. A small portion of his infantry and one gun were posted near Brackett's Ford. His division formed the right of the force which later in the day fought the battle of Glendale or Frayser's Farm. The small force at Brackett's Ford defeated an attack at that point, some time during the day.

At the junction of the Charles City and Quaker roads General McClellan had a conference with the corps commanders (Sumner, Heintzelman, and Franklin), and when it was ended he went towards the James River. A short time afterwards I received an order directing me to take charge of the force guarding the White Oak bridge, and I immediately started back. I had gone but a short distance when a bombardment commenced in the direction of the bridge, the severity of which I had never heard equaled in the field. The wood through which I was riding seemed torn to pieces with round shot and exploding shells. But the danger was really greater from falling branches than from the shot, which did small damage.

It appears that Jackson, having left Savage's Station early in the morning, arrived at the vicinity of White Oak bridge about noon, without exciting suspicion of his presence on our part, the whole movement being hidden by the woods. Here, masked by the trees, he massed about thirty guns, which opened simultaneously on the troops in the clearings, and on the rear part of the wagon train, which had not yet started from the clearing where it

had passed the night. The troops immediately got under cover of the wood, except Caldwell's brigade, which was guarding Richardson's batteries. It remained in the open ground, and lost many men, but the effect of the firing was otherwise small, except on the wagon train, which was thrown into some confusion, many of the wagons not being hitched up. These were at first abandoned by the drivers, but nearly all got away during the day. One field-piece was dismounted. The batteries were, however, soon in position to return the enemy's fire, which they did with such effect that many of his guns were silenced. It was here that Captain Hazzard, already mentioned, was mortally wounded, ending a brilliant career with a glorious death. Captain, now General, Ayres, who commanded the artillery of Smith's division, used his guns with excellent effect. One of the enemy's batteries came into view near the bridge, but was forced to retire almost immediately. The bombardment lasted with great severity for about a half hour, when it slackened and gradually fell off, opening again at intervals during the day, but never with its original vigor. A cavalry force which was sent over by the enemy just after the height of the bombardment was forced to retire much faster than it advanced.

The development of our defense of the crossing convinced General Jackson that it would be impossible for him to force it. At any rate, he made no attempt during the day to cross his infantry, unless sending sharpshooters across to pick off our pickets may be so considered. The fight at White Oak bridge was entirely with artillery, there being little musketry firing.

About four o'clock the enemy made a movement to our left, threatening Brackett's Ford, where I knew we were very weak. This was met by Dana's and Sully's brigades of Sedgwick's division, sent by General Sumner when he learned of the danger. There was no further movement in that direction after these troops appeared, and they were returned to General Sumner about five o'clock, in time to do good service at Glendale. Towards sundown, at the request of General Sumner, Caldwell's and Meagher's brigades of Richardson's division were also sent to reënforce him.

No other movement was made by General Jackson's force during the day. Our artillery fired at whatever could be seen on the other side, and was answered by theirs, in what seemed a reluctant manner. When the bombardment began, the mules belonging to an engineer ponton train were being watered at the swamp. The noise stampeded them, and they rushed to the rear, going through one of the regiments of Meagher's brigade, and disabling more men

than were hurt in the brigade during the remainder of the day. The mules were seen no more, and the ponton train was deserted. Captain M. T. (now General) McMahan, of my staff, volunteered to burn the train about five o'clock. It was a plucky thing to do, for the train was under the guns of the enemy, who knew its value as well as we did, and the presumption was that he would open his guns on it. But Captain McMahan got ten volunteers, and the train was soon in flames. He found four mules already harnessed, and brought off in triumph the most valuable wagon with this team.

In the house which has been described as about the middle of the left clearing lived an old man with a young wife and a child about two years old. He came to me about ten o'clock and asked if I thought there would be a fight there that day. I told him that there certainly would be. He then asked when I thought it would begin. I thought in about half an hour. "Then," said he, "I will have time to take my wife and child to my brother, who lives about half a mile down the swamp, and get back before it begins."

"Yes," said I, "but why come back at all?"

"Why," said he, "if I don't come back your men will take all my chickens and ducks." So he departed with his wife and child and in a little while returned. General Smith's headquarters were near this house, so it was a fair target for the enemy. Several shots went through it, and one of them took off the leg of the poor old man, who bled to death in a few minutes. He had sacrificed himself for his poultry.

One of the brigadier-generals of the command during a lull in the firing came to my headquarters, leaving his brigade to take care of itself. Finding his stay too long, I had him sent back to his post, and a short time afterwards I was informed that he had been carried off the field on a stretcher, wounded. I thought it my duty to go to the brigade, and find how things were going with it, and asked General Smith to accompany me. We started out, and almost at once the enemy opened on us with great vigor. I looked back, and found to my horror that all my own and General Smith's staff were following us, and that a large cavalry escort belonging to headquarters was also in the procession. The enemy had evidently taken us for a cavalry regiment. Getting rid of them all, we finally arrived at the right of the brigade unharmed. Making inquiry of a staff-officer about the general, he replied, "Oh, no, sir, he is not wounded, he felt unwell and has gone to the wood to lie down and will soon be back." I turned off in great disgust to return, when another officer, looking as neat and clean as if he had just joined the army, stepped up

with the air of a private secretary of some grand official, and touching his hat, said—"Who shall I say called, sir?" General Smith and I did not hear the last of that expedition for a long time.

During the day a staff-officer of General Smith had explored a road towards James River about two miles in rear of that which the troops at Glendale were to take, and found it practicable. About ten in the evening, considering that my instructions to hold the crossing until nightfall had been obeyed, I sent word to General Heintzelman and General Sumner that I should move to the James River by that road. General Richardson, with French's brigade, was instructed to remain, to deceive the enemy as to our movements by firing field-pieces in the direction of the bridge, and then, after an hour, to march. General Naglee was to follow Smith's division. These instructions were carried out, and the command arrived at the James about daylight. The discovery of this road made the concentration of the troops at Malvern Hill a completed manoeuvre by noon of the 1st of July, and was due to the fertile brain of General Smith, who ordered the exploration.

The military results of the defense of White Oak bridge and the battle of Glendale were: 1, The enemy was repulsed at all points, except in the single case of McCall's division at Glendale, which was overpowered by numbers, after it had captured three of the enemy's colors; 2, The trains and heavy artillery arrived in safety at the James River (except those wagons which were destroyed by the bombardment at White Oak bridge, not exceeding fifty out of more than four thousand), the road along which they passed not having been molested by the enemy; 3, The troops arrived in good time at the river, so that they were all in the positions desired by the commanding general, to await the attack at Malvern Hill, long before that attack was made.

General Jackson in his report intimates that his whole command, consisting of three divisions and D. H. Hill's division of five brigades, were all at White Oak bridge on the 30th of June. He says: "It was soon seen that the enemy occupied such a position beyond a thick intervening wood on the right of the road as enabled him to command the crossing. Captain Wooding's battery was consequently recalled." General Lee says: "Jackson having been unable to force the passage of White Oak Swamp, Longstreet and A. P. Hill were without the expected support" at the battle of Glendale. It must be evident to any military reader that Jackson ought to have known of the existence of Brackett's Ford, only one mile above White Oak bridge, and ought to have

discovered the weakness of our defense at that point. He had troops enough to have attacked the ford and the bridge with forces at both points exceeding ours at the bridge, and the two attacks, to say the least, would have embarrassed us exceedingly. Had he made two attacks simultaneously, the result of the day at Glendale and White Oak bridge might have been different. There may be reasons for his inaction in this matter that I do not understand, but as the record now shows, he seems to have been ignorant of what General Lee expected of him, and badly informed about Brackett's Ford. When he found how strenuous was our defense at the bridge, he should have turned his attention to Brackett's Ford also. A force could have been as quietly gathered there as at the bridge; a strong infantry movement at the ford would have easily overrun our small force there, placing our right at Glendale, held by Slocum's division, in great jeopardy, and turning our force at the bridge by getting between it and Glendale. In fact, it is likely that we would have been defeated on that day had General Jackson done what his great reputation seems to make it imperative that he should have done.

A short time after I separated from General McClellan (as mentioned above) at the junction of the Charles City and Quaker roads, I bade farewell to the Prince de Joinville, who told me that he and his nephews were about to leave us and return to Europe. He had always been very friendly, and now expressed many good wishes for my future. Holding my hand in his, he said, with great earnestness, "General, advise General McClellan to concentrate his army at this point, and fight a battle to-day; if he does, he will be in Richmond to-morrow." I was much impressed by his manner and by what he said, and from the purely military point of view the advice may have been good. But it was impracticable for me to adopt the suggestion. General McClellan was then well on his way to the James River, and I had no right to leave my command. It was impossible to concentrate the army there that day early enough to give battle, and had it been possible to risk a general engagement there, it would have been contrary to General McClellan's views as to his responsibility connected with the safety of the army, views which were actuating him in the very movement then taking place. It is likely from what we know now, that had it been possible to follow the Prince's advice, his military forecast might have proved correct. But no one at that hour could have predicted the paralysis of Jackson's large force in our rear for the whole of that day, nor General Lee's ignorance of McClellan's in-

tentions. Had a general engagement taken place, and had we been defeated, the army would have reached the James River, it is true, but instead of getting there as it did, with its *morale* unharmed, and with slight damage to its men and material, it would have been a disorganized mob, and as an army would have perished miserably. General McClellan believed that the destruction of the Army of the Potomac at that time would have been ruin to our cause, and his actions, for which he alone is responsible, were guided by that belief and by the conviction that at any sacrifice, the preservation of that army, *at that time*, was paramount to every other consideration.

I cannot finish without a word as to the conduct of the men. My experience during the period generally known as "the seven days" was with the Sixth and Second corps. During the whole time between June 26th and July 2d, there was not a night in which the men

did not march almost continually, nor a day on which there was not a fight. I never saw a skulker during the whole time, nor heard one insubordinate word. Some men fell by the wayside, exhausted, and were captured; but their misfortune was due to physical inability to go on. They had no food but that which was carried in their haversacks, and the hot weather soon rendered that uneatable. Sleep was out of the question, and the only rest obtained was while lying down awaiting an attack, or sheltering themselves from shot and shell. No murmur was heard; everything was accepted as the work for which they had enlisted. They had been soldiers less than a year, yet their conduct could not have been more soldierly had they seen ten years of service. No such material for soldiers was ever in the field before, and their behavior in this movement foreshadowed that of the successful veterans of Appomattox.

W. B. Franklin.

THE SEVEN DAYS' FIGHTING ABOUT RICHMOND:

WITH SPECIAL REFERENCE TO THE BATTLE OF FRAYSER'S FARM (JUNE 30, 1862).*

"GIN'L LONGSTREET'S BODY-SARVANT, SAH, ENDU'IN' DE WAH!"

WHEN General Joseph E. Johnston was wounded at the battle of Seven Pines, and General Lee assumed his new duties as commander of the Army of Northern Virginia, General Stonewall Jackson was in the Virginia Valley, and the rest of the Confederate troops were east and north of Richmond in front of General George B. McClellan's army, then encamped about the

Chickahominy River, one hundred and fifteen thousand strong, and preparing for a regular siege of the Confederate capital. The situation required prompt and successful action by General Lee. Very early in June he called about him, on the noted Nine-mile road near

Richmond, all his commanders, and asked each in turn his opinion of the military situation. I had my own views, but did not express them, believing that if they were important it was equally important they should be unfolded privately to the commanding general. The next day I called on General Lee, and suggested my plan for driving the Federal forces away from the Chickahominy. McClellan had a small force at Mechanicsville, and farther back, at Beaver Dam Creek, a considerable portion of his army in a stronghold that was simply unassailable from the front. The banks of Beaver Dam Creek were so steep as to be impassable except on bridges. I proposed an echelon movement, and suggested that Jackson be called down from the Valley, and passed to the rear of the Federal right, in order to turn the position behind Beaver Dam, while the rest of the Confederate forces who were to engage in the attack could cross the Chickahominy at points suitable for the succession in the move, and be ready to attack the Federals as soon as they were thrown from their position. After hearing me, General Lee sent General J. E. B. Stuart on his famous ride around McClellan. The dashing horseman with a strong reconnoitering force of cavalry

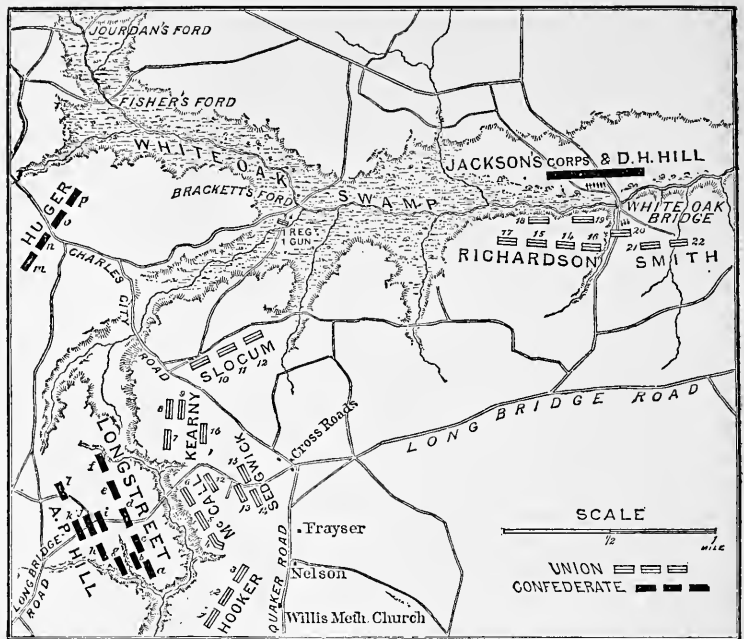

* The usual spelling is Frazier or Frazer. The authority for the form here adopted is Captain R. E. Frayser, of Richmond.—ED.

GENERAL J. E. B. STUART, C. S. ARMY. (FROM PHOTOGRAPH BY COOK.)

made a forced reconnaissance, passing above and around the Federal forces, recrossing the Chickahominy below them, and returning safe to Confederate headquarters. He made a favorable report of the situation and the practicability of the proposed plan. On the 23d of June General Jackson was summoned to General Lee's headquarters, and was there met by General A. P. Hill, General D. H. Hill, and myself. A conference resulted in the selection of the 26th as the day on which we would move against the Federal position at Beaver Dam. General Jackson was ordered down from the valley. General A. P. Hill was to pass the Chickahominy with part of his division, and hold the rest in readiness to cross at Meadow bridge, following Jackson's swoop along the dividing ridge between the Pamunkey and the Chickahominy. D. H. Hill and I were ordered to be in position on the Mechanicsville pike early on the 26th ready to cross the river at Mechanicsville bridge as soon as it was cleared by the advance of Jackson and A. P. Hill.

Thus matters stood when the morning of the 26th arrived. The weather was clear and the roads were in fine condition. Everything seemed favorable to the move. But the morning passed and we received no tidings from Jackson. As noon approached, General Hill, who was to move behind Jackson, grew impatient at the delay and begged permission to hurry him up by a fusillade. General Lee consented, and General Hill opened his batteries on Mechanicsville, driving the Federals off. When D. H. Hill and I crossed at the Mechanicsville bridge we found A. P. Hill severely engaged trying to drive the Federals from their strong position behind Beaver Dam Creek. Without Jackson to turn the Federal right, the battle could not be ours. Although the contest lasted until some time after night, the Confederates made no progress. The next day the fight was renewed, and the position was hotly contested by the Federals until seven o'clock in the morning, when Jackson reached the position intended for him, and, opening a battery on their rear, speedily caused the Federals to abandon their position, thus ending the battle.* It is easy to see that the

MAP OF THE BATTLE OF FRAYSER'S FARM (CHARLES CITY CROSS ROADS OR GLENDALE), JUNE 30, 1862, SHOWING APPROXIMATE POSITIONS OF UNION AND CONFEDERATE TROOPS. ALSO DISPOSITION OF TROOPS DURING THE ARTILLERY ENGAGEMENT AT WHITE OAK BRIDGE.

Union brigades: 1, Sickles; 2, Carr; 3, Grover; 4, Seymour; 5, Reynolds (Simmons); 6, Meade (this brigade should be represented as north of the road); 7, Robinson; 8, Birney; 9, Berry; 10, Newton; 11, Bartlett; 12, 12, Taylor; 13, Burns; 14, 14, Dana; 15, 15, Sully; 16, 16, Caldwell; 17, French; 18, Meagher; 19, Naglee (of Keyes's corps); 20, Davidson; 21, Brooks; 22, Hancock. Randol's battery was on the right of the road, Kerns's and Cooper's on the left, and Diederichs's and Knieriem's yet farther to the left. Thompson's battery of Kearny's division was with General Robinson's brigade (7).

Confederate brigades: a, Kemper; b, Pickett (Hunton); c, R. H. Anderson (Jenkins); d, Wilcox; e, Featherston; f, Pryor; g, Branch; h, Archer; i, Field; j, J. R. Anderson; k, Pender; l, Gregg; m, n, o, p, Armistead, Wright, Mahone, and Ransom. Of the Confederate batteries: Rogers's, Dearing's, the Thomas artillery, Pegram's, Davidson's, and others were engaged.

The action at White Oak Bridge, beginning about 11 A. M., and that between Huger and Slocum, beginning about 3 P. M., were of artillery only, and were successful from the Union point of view, in that they prevented the Confederate forces at these points from reinforcing Longstreet, while they enabled four Union brigades (12, 14, 15 and 16), to reinforce his opponents. The battle of Frayser's Farm, beginning about 4 P. M., resulted in the accomplishment of General McClellan's object, the protection of his trains from rear and flank attack as they were passing down the Long Bridge and Quaker Roads to the James River. General Kearny's report characterized this battle as "one of the most desperate of the war, the one the most fatal if lost." The fighting began in force on the left of Seymour's brigade (4), and the brunt of the attack fell upon McCall and the left of Kearny. "Of the four divisions that day engaged," says General McCall's report, "each manœuvred and fought independently." McCall's division, being flanked on the left by Longstreet's right, was driven from its position after a stubborn resistance; its place was taken by Burns's brigade, reinforced by Dana's and Sully's, and these troops recovered part of the ground lost by McCall. The fury of the battle now shifted to the front of Kearny, who was reinforced by Taylor's and Caldwell's brigades. The Confederates gained some ground but no substantial advantage, and the Union troops withdrew during the night to Malvern Hill.—EDITOR.

battle of the previous day would have been a quick and bloodless Confederate victory if Jackson could have reached his position at the time appointed. In my judgment the evacuation of Beaver Dam Creek was very unwise on the part of the Federal commanders. We had attacked at Beaver Dam, and had failed to make an impression at that point, losing several thousand men and officers. This demonstrated that the position was safe. If the Federal commanders knew of Jackson's approach on the 26th, they had ample time to reinforce Porter's right before Friday morning (27th) with men and field defenses, to such extent as to make the remainder of the line to the right secure against assault. So that the Federals in withdrawing not only abandoned a strong position, but gave up the *morale* of their success, and transferred it

* According to General Fitz John Porter, it was not Jackson's approach, but information of that event, that caused the withdrawal of the Union troops, who, with the exception of "some batteries and infantry skirmishers," were withdrawn before sunrise on the 27th. See CENTURY for June, p. 315.—ED.

to our somewhat disheartened forces; for, next to Malvern Hill, the sacrifice at Beaver Dam was unequalled in demoralization during the entire summer.

From Beaver Dam we followed the Federals closely, encountering them again under Porter beyond Powhite Creek, where the battle of Gaines's Mill occurred. General A. P. Hill, being in advance, deployed his men

with trees and slashed timber and hastily made rifle-trenches. General Whiting came to me with two brigades of Jackson's men and asked me to put him in. I told him I was just organizing an attack and would give him position. My column of attack then was R. H. Anderson's and Pickett's brigades, with Law's and Hood's of Whiting's division. We attacked and defeated the Federals on their left,

OPENING OF THE BATTLE OF FRAYSER'S FARM: SLOCUM'S ARTILLERY ENGAGED WITH THAT OF HUGER ON THE CHARLES CITY ROAD. (FROM A SKETCH AT THE TIME BY A. R. WAUD.)

and opened the attack without consulting me. A very severe battle followed. I came up with my reserve forces and was preparing to support Hill, who was suffering very severely, when I received an order from General Lee to make a demonstration against the Federal left, as the battle was not progressing to suit him. I threw in three brigades opposite the Federal left and engaged them in a severe skirmish with infantry and artillery. The battle then raged with great fierceness. General Jackson was again missing, and General Lee grew fearful of the result. Soon I received another message from General Lee, saying that unless I could do something the day seemed to be lost. I then determined to make the heaviest attack I could. The position in front of me was very strong. An open field led down to a difficult ravine a short distance beyond the Powhite Creek. From there the ground made a steep ascent, and was covered

capturing many thousand stand of arms, fifty-two pieces of artillery, a large quantity of supplies, and many prisoners, among them General Reynolds, who afterward fell at Gettysburg. The Federals made some effort to reënforce and recover their lost ground, but failed, and during the afternoon and night withdrew their entire forces from that side of the Chickahominy, going in the direction of James River. On the 29th General Lee ascertained that McClellan was marching toward the James. He determined to make a vigorous move and strike the enemy a severe blow. He decided to intercept them in the neighborhood of Charles City Cross-roads, and with that end in view planned a pursuit as follows: I was to march to a point below Frayser's Farm with General A. P. Hill. General Holmes was to take up position below me on the New Market or River road to be in readiness to coöperate with me and to attack such

Federals as would come in his reach. Jackson was to closely pursue the Federal rear, crossing at the Grapevine bridge, and coming in on the north of the Cross-roads. Huger was to attend to the Federal right flank, and take position on the Charles City road west of the Cross-roads. Thus we were to envelop the Federal rear and make the destruction of that part of McClellan's army sure. To reach my

position when I was ready. After getting my troops in position I called upon General A. P. Hill to throw one of his brigades to cover my right and to hold the rest of his troops in readiness to give pursuit when the enemy had been dislodged. My line extended from near the Quaker road across the New Market road to the Federal right. The ground upon which I approached was much lower than that occu-

CHARGE OF CONFEDERATES UPON RANDOL'S BATTERY AT FRAYSER'S FARM. (DRAWN BY A. C. REDWOOD.)

[The contest for this battery was one of the most severe encounters of the day. The Confederates (the 55th and 60th Virginia Regiments) advanced out of formation, in wedge shape, and with trailing arms, and began a hand-to-hand conflict over the guns, which were finally yielded to them.—EDITOR.]

position south of the Cross-roads, I had about sixteen miles to march. I marched fourteen miles on the 29th, crossing over into the Darbytown road and moving down to its intersection with the New Market road, where I camped for the night about three miles southwest of Frayser's Farm. On the morning of the 30th I moved two miles nearer up and made preparation to intercept the Federals as they retreated toward James River. General McCall, with a division of ten thousand Federals, was at the Cross-roads and about Frayser's Farm. My division, being in advance, was deployed in front of the enemy. I placed such of my batteries as I could find position for, and kept Hill's troops in my rear. As I had twice as far to march as the other commanders, I considered it certain that Jackson and Huger would be in

pied by General McCall, and was greatly cut up by ravines and covered with heavy timber and tangled undergrowth. On account of these obstructions we were not disturbed while getting into position, except by the firing of a few shots that did no damage. Holmes got into position below me on the New Market road, and was afterward joined by Magruder, who had previously made an unsuccessful attack on the Federal rear-guard at Savage's Station.

By eleven o'clock our troops were in position, and we waited for the signal from Jackson and Huger. Everything was quiet on my part of the line, except occasional firing between my pickets and McCall's. I was in momentary expectation of the signal. About half-past two o'clock artillery firing was heard on my left, evidently at the point near White Oak

FRAYSER'S FARM-HOUSE, FROM THE QUAKER OR CHURCH ROAD, LOOKING SOUTH. (FROM PHOTOGRAPH BY E. S. ANDERSON, 1885.)

[This house was used as General Sumner's headquarters and as a hospital during the battle. The fighting took place from half to three quarters of a mile to the right, or westward. The National Cemetery is shown in the middle distance. — EDITOR.]

Swamp where Huger was to attack. I very naturally supposed this firing to be the expected signal, and ordered some of my batteries to reply, as a signal that I was ready to cooperate. While the order to open was going around to the batteries, President Davis and General Lee, with their staffs and followers, were with me in a little open field near the rear of my right. We were in pleasant conversation, anticipating fruitful results from the fight, when our batteries opened. Instantly the Federal batteries responded most spitefully. It was impossible for the enemy to see us as we sat on our horses in the little field, surrounded by tall, heavy timber and thick undergrowth; yet a battery by chance had our range and exact distance, and poured upon us a terrific fire. The second or third shell burst in our midst, killing two or three horses and wounding one or two men. Our little party speedily retired to safer quarters. The Federals doubtless had no idea the Confederate President, commanding general, and division commanders were receiving point-blank shot from their batteries. Colonel Jenkins was in front of us, and I sent him an order to silence the Federal battery, supposing he could do so with his long-range rifles. He became engaged, and finally determined to charge the battery. That brought on a general fight between my division and the troops in front of us. Kemper on my right advanced

his brigade over difficult ground and captured a battery. Jenkins moved his brigade forward and made a bold fight. He was followed by the other four brigades successively.

The enemy's line was broken, and he was partly dislodged from his position. The batteries were taken, but our line was very much broken up by the rough ground we had to move over, and we were hardly enough in solid form to maintain a proper battle. The battle was continued, however, until we encountered succor from the corps of Generals Sumner and Heintzelman, when we were obliged to halt and hold the position the enemy had left. This line was held throughout the day, though at times, when vigorous combinations were made against me, McCall regained points along his line. Our counter-movements, however, finally pushed him back again, and more formidable efforts from our adversary were required. Other advances were made, and reinforcements came to the support of the Federals, who contested the line with varying fortune, sometimes recovering batteries

GENERAL W. H. C. WHITING, C. S. ARMY. (FROM PHOTOGRAPH BY VAN ORSDELL.)

we had taken, and again losing them. Finally McCall's division was driven off, and fresh troops seemed to come in to their relief. Ten thousand men of A. P. Hill's division had been held in reserve, hoping Jackson and Huger would come up on our left, enabling us to dislodge the Federals, after which Hill's troops could be put in fresh to give pursuit, and follow them down to Harrison's Landing. Jackson found Grapevine bridge destroyed and could not reach his position; while for some unaccountable reason Huger failed to take part, though near enough to do so.* As neither Jackson nor Huger came up, and as night drew on, I put Hill in to relieve my troops. When he came into the fight the Federal line had been broken at every point except one. He formed his line and followed up in the position occupied by my troops. By night we succeeded in getting the entire field, though all of it was not actually occupied until we advanced in pursuit next day. As the enemy moved off they continued the fire of their artillery upon us from various points, and it was after nine o'clock when the shells ceased to fall. Just before dark General McCall, while looking up a fragment of his

division, found us where he supposed his troops were, and was taken prisoner. At the time he was brought in General Lee happened to be with us. As I had known General McCall pleasantly in our service together in the Fourth Infantry, I moved to offer my hand as he dismounted. At the first motion, however, I saw he did not regard the occasion as one for renewing the old friendship, and I merely offered him some of my staff as an escort to Richmond. But for his succoring forces, which should have been engaged by Jackson, Huger, Holmes, and Magruder, McCall would have been entirely dislodged by the first attack. All of our other forces were within a radius of three miles, and in easy hearing of the battle, yet of the fifty thousand none came in to coöperate. (Jackson should have done more for me than he did. When he wanted me at Second Manassas, I marched two columns by night to clear the way at Thoroughfare Gap, and joined him in due season.) Hooker claimed at Glendale to have rolled me up and hurriedly thrown me over on Kearny, — tennis-like, I suppose; but McCall said in his supplementary report that

Hooker could as well claim, with a little tension of the hyperbole, that he had thrown me over the moon. On leaving Frayser's Farm the Federals withdrew to Malvern Hill, and Lee concentrated his forces and followed them.

COLONEL E. M. LAW, C. S. ARMY. (FROM PHOTOGRAPH BY LEE.)

* General Huger says, in his official report, that the road was very effectively obstructed.—ED.

On the morning of July 1st, the day after the battle at Frayser's Farm, we encountered the enemy, and General Lee asked me to make a reconnaissance and see if I could find a good position for the artillery. I found position offering

position there could go in only one or two batteries at a time. As the batteries in front did not engage, the result was the enemy concentrated the fire of fifty or sixty guns upon our isolated batteries, and tore them into frag-

GENERAL GEORGE A. McCALL. (FROM PHOTOGRAPH BY BRADY.)

good play for batteries across the Federal left over to the right, and suggested that sixty pieces should be put in while Jackson was to engage the Federal front. I suggested that a heavy play of this cross-fire on the Federals would so discomfit them as to warrant an assault by infantry. General Lee issued his orders accordingly, and designated the advance of Armistead's brigade as the signal for the grand assault. Later it was found that the ground over which our batteries were to pass into position on our right was so rough and obstructed that the artillery ordered into

ments in a few minutes after they would open, piling horses upon each other and guns upon horses. Before night, the fire from our batteries failing of execution, General Lee seemed to abandon the idea of an attack on Malvern Hill, and proposed to me to move around it with my own and A.P. Hill's division turning the Federal right. I issued my orders accordingly for the two divisions to go around and turn the Federal right, when in some way unknown to me the battle was drawn on. We were repulsed at all points with fearful slaughter, losing six thousand men and accomplishing nothing.

MAJOR-GENERAL WILLIAM B. FRANKLIN.

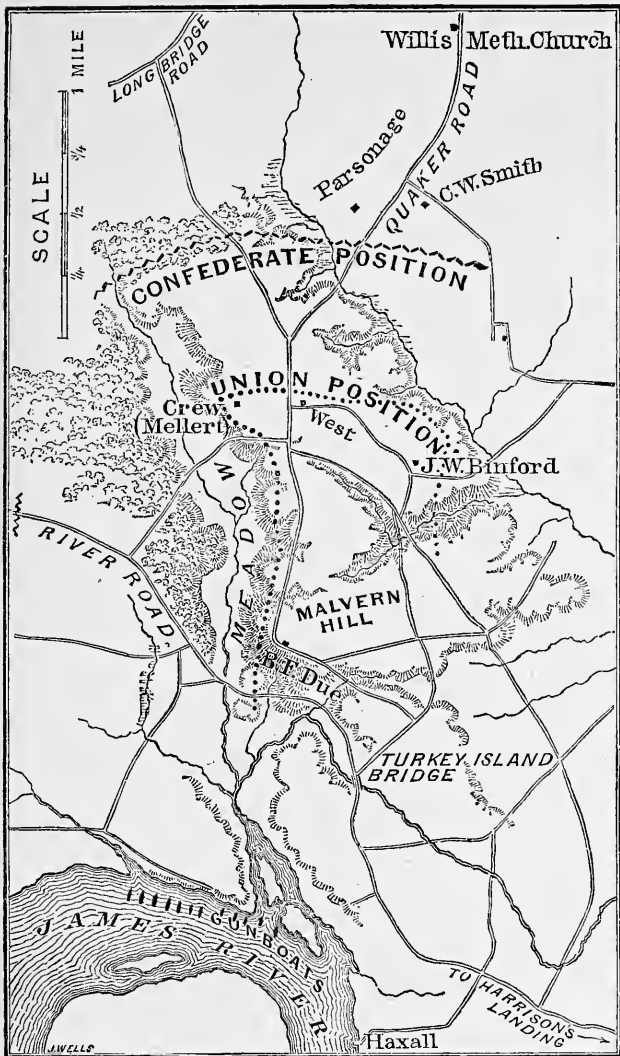

[From a photograph taken in August, 1862, when General Franklin was temporarily at home on sick leave.—ED.]

The Federals withdrew after the battle, and the next day I moved on around by the route which it was proposed we should take the day before. I followed the enemy to Harrison's Landing, and Jackson went down by another route in advance of Lee. As soon as we reached the front of the Federal position we put out our skirmish-lines, and I ordered an advance, intending to make another attack, but revoked it on Jackson urging me to wait until the arrival of General Lee. Very soon General Lee came, and, after carefully considering the position of the enemy and of their gun-boats on the James, decided it would be better to forego any further operations. Our skirmish-lines were withdrawn, we ordered our troops back to their old lines around Richmond, and a month later McClellan's army was withdrawn to the North.

The Seven Days' Fighting, although a decided Confederate victory, was a succession of mis-

haps. If Jackson had arrived on the 26th,—the day of his own selection,—the Federals would have been driven back from Mechanicsville without a battle. His delay there, caused by obstructions placed in his road by the enemy, was the first mishap. He was too late in entering the fight at Gaines's Mill, and the destruction of Grapevine bridge kept him from reaching Frayser's Farm until the day after that battle. If he had been there, we might have destroyed or captured McClellan's army. Huger was in position for the battle of Frayser's Farm, and after his batteries had misled me into opening the fight he subsided. Holmes and Magruder, who were on the New Market road to attack the Federals as they passed that way, failed to do so.

General McClellan's retreat was successfully managed; therefore we must give it credit for being well managed. He had 115,000 men, and insisted to the authorities at Washington that Lee had 200,000. In fact, Lee had only

SKETCH MAP OF THE VICINITY OF MALVERN HILL (JULY 1, 1862).

The Union troops reached the field by the so-called Quaker Road (more properly the Church Road); the Confederates by this and the Long Bridge Road, taking up the general lines as approximately indicated above. The Confederates on the River Road are the troops of General Holmes, who had been repulsed at Turkey Island Bridge the day before by Warren's brigade, with the aid of the gunboats. The Confederate line on the left (east) of the Quaker Road was (from left to right) Longstreet, A. P. Hill, Whiting and two brigades of Ewell, the rest of Ewell's and all of Jackson's old division being in the rear. None of these troops were engaged. On the Confederate right, beginning at the Quaker Road, the disposition was: D. H. Hill, Magruder, Huger and McLaws, the last three divisions much mingled. The main fighting was in the space between the words "Confederate" and "Union," together with one or two assaults upon the west side of the Crew Hill from the meadow. Morell's and Couch's divisions formed the first Union line, and General Porter's batteries extended from the Crew House to the West House.

A full map, giving in detail the disposition of troops, will be given in the August number, with General Fitz John Porter's article on the battle.—EDITOR.

90,000. General McClellan's plan to take Richmond by a siege was wise enough, and it would have been a success if the Confederates

had consented to such a programme. In spite of McClellan's excellent plans, General Lee, with a force inferior in numbers, completely routed him, and while suffering less than McClellan, captured over ten thousand of his men.* General Lee's plans in the Seven Days' Fight were excellent, but were poorly executed. General McClellan was a very accomplished soldier and a very able engineer, but hardly equal to the position of field-marshal as a military chieftain. He organized the Army of the Potomac cleverly, but did not handle it skillfully when in actual battle. Still I doubt if his retreat could have been better handled, though the rear of his army should have been more positively either in his own hands or in the hands of Sumner. Heintzelman crossed the White Oak Swamp prematurely and left the rear of McClellan's army exposed, which would have been fatal had Jackson come up and taken part in Magruder's affair of the 29th near Savage's Station.

I cannot close this sketch without referring to the Confederate commander when he came upon the scene for the first time. General Lee was an unusually handsome man, even in his advanced life. He seemed fresh from West Point, so trim was his figure and so elastic his step. Out of battle he was as gentle as a woman, but when the clash of arms came he loved fight and urged his battle with wonderful determination. As a usual thing he was remarkably well-balanced—always so, except on one or two occasions of severe trial when he failed to maintain his exact equipoise. Lee's orders were always well considered and well chosen. He depended almost too much on his officers for their execution. Jackson was a very skillful man against such men as Shields, Banks, and Frémont, but when pitted against the best of the Federal commanders he did not appear so well. Without doubt the greatest man of rebellion times, the one matchless among forty millions for the peculiar difficulties of the period, was Abraham Lincoln.

James Longstreet.

* In this estimate General Longstreet follows General Lee's report. The Union returns state the "Captured or missing" of McClellan's army at 6053, and the total loss at 15,849. The Confederate loss is given by General McClellan as 19,749,—a recapitulation of the published Confederate returns. (See THE CENTURY for June, page 149.)—EDITOR.

"JEB" STUART'S HAT.

MEMORANDA ON THE CIVIL WAR.

General Beauregard's Courier at Bull Run.

AT the first battle of Manassas General Beauregard's order to General Ewell to advance on the right did not reach him promptly. An accident to the courier who bore the order was stated at the time to be the reason of the delay. He was thrown from his horse, his head striking a tree with such force as to render him unconscious. I saw him myself lying helpless just in rear of the line at Mitchell's Ford, badly used up and bleeding. When he was able to move on General Ewell must have been on his way to the left.

I was a private in the 7th S. C. V., but detached as orderly for General M. L. Bonham, whose brigade held Mitchell's Ford on that day.

Robert R. Hemphill.

ABBEVILLE, S. C.

The Death of Theodore Winthrop.

I NOTICE in "The Recollections of a Private," in your March number, a statement regarding the death of Major Theodore Winthrop, which is incorrect. The facts are these:

Major Winthrop headed a force at the battle of Bethel, intending to turn our left flank. His course lay through a heavily wooded swamp. On our left was a slight earth-work or rifle-pit, in which lay a small infantry force. About seventy-five yards in front of this was a rail fence; just beyond, the ground dipped suddenly about four feet, the woods running almost up to the fence. Our attention was called by cheering to the advance of Major Winthrop's troops. Looking up, we saw the Major and two privates on the fence. His sword was drawn, and he was calling on his troops to follow him. Our first volley killed these three; those following, being protected by the peculiar formation of the ground, were not injured, but upon the fall of their leader, they beat a precipitate retreat. I was among the first to reach these men. All were dead, having been instantly killed. Major Winthrop was shot in the breast, the others in the head. All were buried in the same grave. About ten days afterward, a flag of truce came up asking for Major Winthrop's body. Having assisted in burying him and being confident of my ability to recognize his body, I was sent with a party to disinter and turn it over to his friends. Among the numberless incidents that followed this skirmish, none are more indelibly impressed on my mind than the gallant bearing of this unfortunate young man, when I first saw him, calling his men to follow, and confident that he had accomplished his object, and the immediately succeeding rattle of our muskets and his fall.

RICHMOND, VA.

J. B. Moore.

"Fortress" Monroe.

IN THE CENTURY for March, 1885, Colonel John T. Wood and Mr. W. L. Goss speak of "Fortress Monroe." Except that these contributions to the history of the War are widely read and quoted, I should re-

frain from calling your attention to this error. The proper designation is "Fort Monroe," in honor of President Monroe, who was in office when its construction was commenced. The first appropriation bill in which it is specifically designated as "Fort Monroe" is dated March 3, 1821. By General Orders, No. 11, Headquarters of the Army, Adjutant-General's Office, February 8, 1832, it was called, by order of the Secretary of War, "Fort Monroe." There is a tradition in the Engineer Department, U. S. A., that the plan of the fort was designed by General Simon Bernard, an ex-officer of the French Army under Napoleon, and appointed Assistant-Engineer, U. S. A., with the rank of Brigadier-General, November 16, 1816. The drawings were made by Captain W. T. Poussin, Topographical Engineer, acting aide to General Bernard.

John P. Nicholson.

PHILADELPHIA.

Positions of Union Troops at the Battle of Seven Pines.

THE map printed on page 118 of the May CENTURY, with General Joseph E. Johnston's description of the battle of Seven Pines (a map for which General Johnston is not responsible), was misleading in an important particular. The line described as the "position of the Union troops on the evening of May 31" should have been entitled "position of the Union troops on the morning of June 1." At the close of the first day's fighting, May 31, the Union forces at Fair Oaks Station were separated from the left, which suffered so severely at Seven Pines, and which retreated to a third line of entrenchments midway between Seven Pines and Savage's Station. During the night connection was made between the two wings, and in the morning the army presented front on the line indicated in the map as the second position.

EDITOR.

The "Mississippi" at the Passage of the Forts.

IN a letter to the Editor, Rear-Admiral Melancton Smith, who commanded the *Mississippi*, during the passage of the forts at New Orleans, quotes from page 949 of Admiral Porter's article in the April CENTURY: "Meantime Farragut was steering up the river with all his fleet except the *Mississippi*," etc., and adds: "The *Mississippi* proceeded with the fleet up the river and was present at the engagement with the Chalmette batteries. At 3 P. M. the same day, when at anchor off New Orleans, I was ordered to return to the quarantine station (just above Fort St. Philip) to look after the *Louisiana* and to cover the landing of the troops under General Butler. Admiral Porter, seeing the *Mississippi* the morning after the fleet passed up, doubtless supposed it had remained at anchor below."

EDITOR.

A FEW WORDS ABOUT HENRY CLAY.

HENRY CLAY was of the sanguineous temperament. "His nature," as he said of himself, "was warm, his temper ardent, his disposition enthusiastic." He was of a light complexion with light hair. His eyes were blue, and when he was excited were singularly brilliant and attractive. His forehead was high and full of promise of intelligence. In stature he was over six feet. Spare and long-limbed, he stood erect as if full of vigor and vitality, and ever ready to command. His countenance expressed perpetual wakefulness and activity. His voice was music itself, and yet penetrating and far-reaching, enchanting the listener; his words flowed rapidly, without sing-song or mannerism, in a clear and steady stream. Neither in public nor in private did he know how to be dull. His nature was quickly sensitive; his emotions, like his thoughts, moved swiftly, and were not always under his control. He was sometimes like a sportsman who takes pleasure in pursuing his game; and sometimes could chide with petulance. I was present once when in the Senate he was provoked by what he thought the tedious opposition of a Senator of advanced old age, and in his anger he applied to him the two lines of Pope:

"Old politicians chew on wisdom past,
And totter on in business to the last."

But if he was not master of the art of self-restraint and self-government, he never took home with him a feeling of resentment; never stored up in memory grievances or enmities; never harbored an approach to malice or a hidden discontent or dislike.

As a party leader he was impatient of reserve or resistance, and ever ready to crack the whip over any one that should show a disposition to hang back, sparing not even men of as much ability as himself.

When he first became distinguished before the nation, he astonished by his seemingly inexhaustible physical strength; and the public mind made up its opinion, half fabulous, and yet in substance true, that he knew nothing of fatigue; that after a long day's service as Speaker of the House of Representatives, or as the leading debater when the House was in committee and the session continued into the night, he would at the adjournment come forth, as if watching and long and close attention to business had refreshed him and left him only more eager for the gay society of his

friends. But years flew over him, and this man of an heroic mold, of mental activity that could not be worn out, of physical forces that defied fatigue, in his seventy-fifth year could not hide from himself the symptoms of decline.

Philadelphia, seemingly by some divine right of succession, has always a constellation of men, adepts in the science of life, and alike skillful and successful in practice. At that time Samuel Jackson, one of the great physicians of his day, was in the zenith of his fame, and was well known for his genial kindness of nature as well as for consummate skill in his profession.

When Henry Clay was debating in his mind the nature of his disease, and as yet had not quite renounced the hope of a renewal of his days of action, he sought counsel of Samuel Jackson. He was greatly in earnest and wanted to know the truth, the exact and whole truth. His question was, if the evident decline in his strength was so far beyond relief that he must surely die soon. He required an explicit answer, without color or reserve, however unpleasant it might be for the physician to announce an unfavorable result. Dr. Jackson made a careful examination of his condition, found the case to be a clear one, and had the courage to make to the hero of a hundred parliamentary battles a faithful report. The great statesman received the communication that for him life was near its close, not without concern, but yet with the fortitude of resignation. He declared that he had no dread of death, but he was still troubled by one fear, which was probably suggested to him by the recollection of the magnificent constitution with which he had started in life. That fear was not of death, but of the mode of dying; he had a terrible apprehension that his last hours would be hours of anguish in a long agonizing struggle between life and death; this and this only, he said, was the thought that now lay heavily on his mind. Dr. Jackson explained to him the nature of his malady and the smooth and tranquil channel in which it was to run, and assured him with a sagacity which did not admit of question, that in his last hour he would die as quietly as an infant falls asleep in its cradle. "You give me infinite relief," answered Clay. The chief terror which death had for him vanished.

Clay left not an enemy behind him. John Caldwell Calhoun began his national career as a member of the twelfth House of Repre-

HENRY CLAY.

[ENGRAVED BY T. JOHNSON, AFTER A PHOTOGRAPH BY ROCKWOOD, FROM THE DAGUERRETYPE OWNED BY ALFRED HASSACK.]

sentatives. He took his seat in Congress in November, 1811, just two days too late to give his vote for Henry Clay as Speaker.

Calhoun was immediately drawn into the closest relations with Clay, alike from admiration of his talents and agreement with his mode of treating the great questions of that day.

He always remembered this earliest part of his public service with perfect satisfaction. It was from him I learned that he and Clay were of one mind on our foreign relations, and that for their zeal in support of the honor of the country against the long-continued aggressions of Britain, they two and others of the House, of whom he named only Bibb, were known at the time by the name of "the war mess."

Twelve years later, the two became estranged from each other, and the parts which they severally took corresponded to the differences in their character. Clay was a man by the character of his mind inclined to compromises; Calhoun was in his logic unyielding, and ever ready to push the principle which he supported to its extreme results. In 1823 each of them was put forward as a candidate for the Presidency at the ensuing election. In vain did the friends of Calhoun strive to restrain his ambition. Seaton, of the "National Intelligencer," taking a morning walk with him near the banks of the Potomac, struggled to induce him to abide his time, saying: "If you succeed now, you will be through with your two terms while you are still too young for retirement; and what occupation will you find when the eight years are over?" He answered: "I will retire and write my memoirs." Yet Calhoun, moved by very different notions from those which dictated the restraining advice of Seaton, assented to being the candidate for the second place; Andrew Jackson and many competitors being candidates for the first. It seemed that all parties were courting Calhoun, that he was the favorite of the nation; while Andrew Jackson for the moment signally failed, Calhoun was borne into the chair of

the Vice-President by the vote of more than two-thirds of the electors.

The political antagonism between Clay and Calhoun never ceased; their relations of personal amity were broken off, and remained so for about a quarter of a century. But not very long before the death of Calhoun, Clay took pains to let his own strong desire for an interview of reconciliation be made known to his old friend and hearty associate in the time of our second war for independence. The invitation was readily accepted. In the interview between the two statesmen, at which Andrew Pickens Butler, senator from South Carolina, was present, Clay showed genial self-possession and charm of manner that was remarked upon at the time and remembered; while the manner of Calhoun bore something of embarrassment and constraint.

Party records, biographies, and histories might lead to a supposition that the suspension of personal relations between Clay and Andrew Jackson raged more fiercely than in truth was the case. Jackson did full justice to Clay as a man of warm affections, which extended not to his family and friends only, but to his country.

Of our great statesmen, Madison is the one who held Henry Clay in the highest esteem; and in conversation freely applauded him, because on all occasions he manifested a fixed purpose to prevent a conflict between the States.

In the character of Clay, that which will commend him most to posterity is his love of the Union; or, to take a more comprehensive form of expression, his patriotism, his love for his country, his love for his whole country. He repeatedly declares in his letters that on crossing the ocean to serve in a foreign land, every tie of party was forgotten, and that he knew himself only as an American. At home he could be impetuous, swift in decision, unflinching, of an imperative will; and yet in his action as a guiding statesman, whenever measures came up that threatened to rend the continent in twain, he was inflexible in his resolve to uphold the Constitution and the Union.

George Bancroft.

THE DISCOURAGER OF HESITANCY.

A CONTINUATION OF "THE LADY, OR THE TIGER?"

IT was nearly a year after the occurrence of that event in the arena of the semi-barbaric King known as the incident of the lady or the tiger* that there came to the palace of this monarch a deputation of five strangers from a far country. These men, of venerable and dignified aspect and demeanor, were received by a high officer of the court, and to him they made known their errand.

"Most noble officer," said the speaker of the deputation, "it so happened that one of our countrymen was present here, in your capital city, on that momentous occasion when a young man who had dared to aspire to the hand of your King's daughter had been placed in the arena, in the midst of the assembled multitude, and ordered to open one of two doors, not knowing whether a ferocious tiger would spring out upon him, or a beautiful lady would advance, ready to become his bride. Our fellow-citizen who was then present was a man of super-sensitive feelings, and at the moment when the youth was about to open the door he was so fearful lest he should behold a horrible spectacle, that his nerves failed him, and he fled precipitately from the arena, and mounting his camel rode homeward as fast as he could go.

"We were all very much interested in the story which our countryman told us, and we were extremely sorry that he did not wait to see the end of the affair. We hoped, however, that in a few weeks some traveler from your city would come among us and bring us further news; but up to the day when we left our country, no such traveler had arrived. At last it was determined that the only thing to be done was to send a deputation to this country, and to ask the question: 'Which came out of the open door, the lady, or the tiger?'"

When the high officer had heard the mission of this most respectable deputation, he led the five strangers into an inner room, where they were seated upon soft cushions, and where he ordered coffee, pipes, sherbet, and other semi-barbaric refreshments to be served to them. Then, taking his seat before them, he thus addressed the visitors:

"Most noble strangers, before answering the question you have come so far to ask, I will relate to you an incident which occurred not very long after that to which you have referred. It is well known in all regions

hereabouts that our great King is very fond of the presence of beautiful women about his court. All the ladies-in-waiting upon the Queen and Royal Family are most lovely maidens, brought here from every part of the kingdom. The fame of this concourse of beauty, unequalled in any other royal court, has spread far and wide; and had it not been for the equally wide-spread fame of the systems of impetuous justice adopted by our King, many foreigners would doubtless have visited our court.

"But not very long ago there arrived here from a distant land a prince of distinguished appearance and undoubted rank. To such an one, of course, a royal audience was granted, and our King met him very graciously, and begged him to make known the object of his visit. Thereupon the Prince informed his Royal Highness that, having heard of the superior beauty of the ladies of his court, he had come to ask permission to make one of them his wife.

"When our King heard this bold announcement, his face reddened, he turned uneasily on his throne, and we were all in dread lest some quick words of furious condemnation should leap from out his quivering lips. But by a mighty effort he controlled himself; and after a moment's silence he turned to the Prince, and said: 'Your request is granted. To-morrow at noon you shall wed one of the fairest damsels of our court.' Then turning to his officers, he said: 'Give orders that everything be prepared for a wedding in this palace at high noon to-morrow. Convey this royal Prince to suitable apartments. Send to him tailors, boot-makers, hatters, jewelers, armorers; men of every craft, whose services he may need. Whatever he asks, provide. And let all be ready for the ceremony to-morrow.'

"'But, your Majesty,' exclaimed the Prince, 'before we make these preparations, I would like ——'

"'Say no more!' roared the King. 'My royal orders have been given, and nothing more is needed to be said. You asked a boon; I granted it; and I will hear no more on the subject. Farewell, my Prince, until to-morrow noon.'

"At this the King arose, and left the audience chamber, while the Prince was hurried away to the apartments selected for him. And here came to him tailors, hatters, jewelers, and every one who was needed to fit

* See THE CENTURY MAGAZINE for November, 1882.

him out in grand attire for the wedding. But the mind of the Prince was much troubled and perplexed.

“‘I do not understand,’ he said to his attendants, ‘this precipitancy of action. When am I to see the ladies, that I may choose among them? I wish opportunity, not only to gaze upon their forms and faces, but to become acquainted with their relative intellectual development.’

“‘We can tell you nothing,’ was the answer. ‘What our King thinks right, that will he do. And more than this we know not.’

“‘His Majesty’s notions seem to be very peculiar,’ said the Prince, ‘and, so far as I can see, they do not at all agree with mine.’

“At that moment an attendant whom the Prince had not noticed before came and stood beside him. This was a broad-shouldered man of cheery aspect, who carried, its hilt in his right hand, and its broad back resting on his broad arm, an enormous scimeter, the upturned edge of which was keen and bright as any razor. Holding this formidable weapon as tenderly as though it had been a sleeping infant, this man drew closer to the Prince and bowed.

“‘Who are you?’ exclaimed his Highness, starting back at the sight of the frightful weapon.

“‘I,’ said the other, with a courteous smile, ‘am the Discourager of Hesitancy. When our King makes known his wishes to any one, a subject or visitor, whose disposition in some little points may be supposed not to wholly coincide with that of his Majesty, I am appointed to attend him closely, that, should he think of pausing in the path of obedience to the royal will, he may look at me, and proceed.’

“The Prince looked at him, and proceeded to be measured for a coat.

“The tailors and shoemakers and hatters worked all night; and the next morning, when everything was ready, and the hour of noon was drawing nigh, the Prince again anxiously inquired of his attendants when he might expect to be introduced to the ladies.

“‘The King will attend to that,’ they said. ‘We know nothing of the matter.’

“‘Your Highness,’ said the Discourager of Hesitancy, approaching with a courtly bow, ‘will observe the excellent quality of this edge.’ And drawing a hair from his head, he dropped it upon the upturned edge of his scimeter, upon which it was cut in two at the moment of touching.

“The Prince glanced and turned upon his heel.

“Now came officers to conduct him to the grand hall of the palace, in which the cere-

mony was to be performed. Here the Prince found the King seated on the throne, with his nobles, his courtiers, and his officers standing about him in magnificent array. The Prince was led to a position in front of the King, to whom he made obeisance, and then said:

“‘Your Majesty, before I proceed further——’

“At this moment an attendant, who had approached with a long scarf of delicate silk, wound it about the lower part of the Prince’s face so quickly and adroitly that he was obliged to cease speaking. Then, with wonderful dexterity, the rest of the scarf was wound around the Prince’s head, so that he was completely blindfolded. Thereupon the attendant quickly made openings in the scarf over the mouth and ears, so that the Prince might breathe and hear; and fastening the ends of the scarf securely, he retired.

“The first impulse of the Prince was to snatch the silken folds from his head and face; but as he raised his hands to do so, he heard beside him the voice of the Discourager of Hesitancy, who gently whispered: ‘I am here, your Highness.’ And, with a shudder, the arms of the Prince fell down by his side.

“Now before him he heard the voice of a priest, who had begun the marriage service in use in that semi-barbaric country. At his side he could hear a delicate rustle, which seemed to proceed from fabrics of soft silk. Gently putting forth his hand, he felt folds of such silk close beside him. Then came the voice of the priest requesting him to take the hand of the lady by his side; and reaching forth his right hand, the Prince received within it another hand so small, so soft, so delicately fashioned, and so delightful to the touch, that a thrill went through his being. Then, as was the custom of the country, the priest first asked the lady would she have this man to be her husband. To which the answer gently came in the sweetest voice he ever heard: ‘I will.’

“Then ran raptures rampant through the Prince’s blood. The touch, the tone, enchanted him. All the ladies of that court were beautiful; the Discourager was behind him; and through his parted scarf he boldly answered: ‘Yes, I will.’

“Whereupon the priest pronounced them man and wife.

“Now the Prince heard a little bustle about him; the long scarf was rapidly unrolled from his head; and he turned, with a start, to gaze upon his bride. To his utter amazement, there was no one there. He stood alone. Unable on the instant to ask a question or say a word, he gazed blankly about him.

“Then the King arose from his throne, and came down, and took him by the hand.

“‘Where is my wife?’ gasped the Prince.

“‘She is here,’ said the King, leading him to a curtained doorway at the side of the hall.

“The curtains were drawn aside, and the Prince, entering, found himself in a long apartment, near the opposite wall of which stood a line of forty ladies, all dressed in rich attire, and each one apparently more beautiful than the rest.

“Waving his hand towards the line, the King said to the Prince: ‘There is your bride! Approach, and lead her forth! But, remember this: that if you attempt to take away one of the unmarried damsels of our court, your execution shall be instantaneous. Now, delay no longer. Step up and take your bride.’

“The Prince, as in a dream, walked slowly along the line of ladies, and then walked slowly back again. Nothing could he see about any one of them to indicate that she was more of a bride than the others. Their dresses were all similar; they all blushed; they all looked up, and then looked down. They all had charming little hands. Not one spoke a word. Not one lifted a finger to make a sign. It was evident that the orders given them had been very strict.

“‘Why this delay?’ roared the King. ‘If I had been married this day to one so fair as the lady who wedded you, I should not wait one second to claim her.’

“The bewildered Prince walked again up and down the line. And this time there was a slight change in the countenances of two of the ladies. One of them among the fairest gently smiled as he passed her. Another, just as beautiful, slightly frowned.

“‘Now,’ said the Prince to himself, ‘I am sure that it is one of those two ladies whom I have married. But which? One smiled. And would not any woman smile when she saw, in such a case, her husband coming towards her? But, then, were she not his bride, would

she not smile with satisfaction to think he had not selected her, and that she had not led him to an untimely doom? But then, on the other hand, would not any woman frown when she saw her husband come towards her and fail to claim her? Would she not knit her lovely brows? And would she not inwardly say, ‘It is I! Don’t you know it? Don’t you feel it? Come!’ But if this woman had not been married, would she not frown when she saw the man looking at her? Would she not say to herself, ‘Don’t stop at me! It is the next but one. It is two ladies above. Go on!’ And then again, the one who married me did not see my face. Would she not smile if she thought me comely? While if I wedded the one who frowned, could she restrain her disapprobation if she did not like me? Smiles invite the approach of true love. A frown is a reproach to a tardy advance. A smile——’

“‘Now, hear me!’ loud cried the King. ‘In ten seconds, if you do not take the lady we have given you, she, who has just been made your bride, shall be your widow.’

“And, as the last word was uttered, the Discourager of Hesitancy stepped close behind the Prince, and whispered: ‘I am here!’

“Now the Prince could not hesitate an instant; and he stepped forward and took one of the two ladies by the hand.

“Loud rang the bells; loud cheered the people; and the King came forward to congratulate the Prince. He had taken his lawful bride.

“Now, then,” said the high officer to the deputation of five strangers from a far country, “when you can decide among yourselves which lady the Prince chose, the one who smiled or the one who frowned, then will I tell you which came out of the opened door, the lady or the tiger!”

At the latest accounts the five strangers had not yet decided.

Frank R. Stockton.

SONG.

LONELY art thou in thy sorrow—lonely art thou;
Yet, lone as thou art, at least it is left thee to sing:
Thy heart-blood staining the thorn on the secret bough,
Make the deep woodland ring!

Well-friended art thou in thy joy—well-friended art thou;
No longer, Love-kept as thou art, it is left thee to sing:
Thou, in thy down-soft nest on the summer bough,
Foldest both song and wing.

Edith M. Thomas.

TOPICS OF THE TIME.

Twenty Years after the War.

IT was anticipated that besides its other probable accomplishments the New Orleans Exposition would have an excellent effect in bringing citizens of different parts of the country together, and especially in affording occasion for a visit to the Far South to many in the North who had not recently enjoyed the opportunity of travel and observation there. In this direction, at least, the latest of the world's fairs has certainly been of value to the whole country.

Among the things that must have first struck the unused observer in the South was the fact that, notwithstanding all the agony and sorrow and loss of the North growing out of the Civil War, that war was brought home to the people of the insurgent States with much greater force. One of the still-lingering mistakes with regard to the North among our Southern brethren is the supposition that so much of the Northern armies consisted of virtual aliens, or "hiredlings," and there were so many non-combatants on the Northern side that the people of that section knew little of the sufferings of the war. This, of course, is untrue; though it is true, doubtless, that the proportion of non-combatants among the whites was smaller in the South than in the North. But besides this, the traveler in the South is forever passing through cities and States that have been crushed beneath the iron wheels of war. The very railroad maps that he finds it necessary to consult are maps of famous battles and campaigns. The churches where they worship, the houses where they gathered together the little that was left to them for a new start in life, have been riddled by Union shells, and the gardens and fields still yield a plentiful crop of iron and of lead. The Northern visitor finds his hospitable hosts living on the very battle-fields where they lost, not only the "Cause" once passionately dear to them, but their fathers, their brothers, their husbands, their dearest friends.

So, while in all directions there are rebuilt cities, and harvests are growing prosperously on fields strangely marked by fading lines of intrenchment, still everywhere in the South there is an inextinguishable atmosphere of pathos. Those who stood by the Union in the days when the slave-power lifted up its hand against the government of the country may hold morally, intellectually, and politically to the view that the rebellious districts suffered nothing that they did not deserve; yet he must have a mean heart who does not sympathize with a brave, sincere, and conquered foe.

But what will the traveler learn as to the sentiment of the Southern people with regard to the great questions which were involved in the war that was brought to a close just a score of years ago? What of the old belief in the institution of slavery and in the doctrine of secession? We believe it will be found that on these questions there is not only a general acceptance of the situation, but also in many cases a change of view, which involve a political revolution such as within the same length of time has never before been accom-

plished in the history of mankind. When one recalls the enthusiasm and devotion with which the South contended for its so-called rights during a four years' war, when one contemplates the humiliation and loss of the period of negro and carpet-bag domination, and when one realizes all the causes for bitterness and opposition from a Southern point of view, the wide extent of the anti-slavery and of the Union sentiment in the South to-day is a matter not only of surprise, but also one for the deepest gratification to the lover of his country.

The visitor in the South will soon learn that a natural loyalty to the dead soldiers of the Confederate army, along with the desire to defend the character and motives both of the dead and the living, and an insistence upon that sincerity of purpose which Abraham Lincoln recognized,— he will learn that these do not imply either an admiration of or desire for the institution of slavery, or the slightest wish for a revival of "the lost cause." In fact, the vagueness and unreasonableness of that "cause" is being borne in upon the minds of the people with growing force and conviction. It is coming more and more to be felt that slavery was not a thing to fight for, and that the Confederacy had in its origin and basis elements of disintegration which would have worked its own speedy downfall. It is probably felt also that there is little more of difficulty in carrying out national legislation in a manner acceptable to all sections of the country than there is in bringing different sections of many of the individual States themselves into harmony of view and action.

Many in the South will be apt to resent the statement that they were fighting for slavery, but a discussion of the origin of the secession movement would only reveal its inherent weakness, and the lack of unity of sentiment from the beginning.

That would be a hardy philosopher, indeed, who before the event should seek to draw consolation for the bloodshed and loss of war from any source save the desired general result,— one way or the other, according to the side with which he sympathized. But after the conflict is over, it is not so difficult to recognize the good that is ever being mysteriously evolved from evil, and at least partially to offset against the carnage and suffering not merely the main, obvious political and moral results, but other sequences scarcely less important. Suppose, then, that Lincoln at Washington and Anderson at Sumter had shown the white feather, and that the North had refused to fight, as many in the South had believed it would,— or suppose that either side had fought feebly or failed ignominiously,— would mutual respect and understanding have been advanced? Without war,— a war which those who sustained the Government must yet regard as, on the Southern side, morally and politically inexcusable and never to be commended,— could the North and the South have grown in twenty years to know and respect each other to the degree that the soldiers at least of both sections do now know and respect each other?

The Blindness of Legislators.

IT has been remarked as a triumphant test of the strength of republican government, that the reins of executive power could pass without a ripple of excitement from the hands of a party bearing a name identified with the perpetuity of the Union itself, to that of a party new to office and, to say the least, by no means established in the confidence of the entire country. But it may be regarded as a more signal triumph of popular government, that it has stood and is standing the strain of an era of distrust: — on the part of the people, a well-founded distrust of their so-called servants; on the part of our public men, an ill-founded but not unnatural distrust of the people. We are by no means likely to escape from this condition of things in one administration, or by the example of any one or two or half dozen men doing bravely the service of the people and looking to them for approval; in the faithfulness of such lies the salvation of the body politic from present evils. But it is a more profound source of hope (and an offset to the mutual distrust of which we speak) to know, as recent events have shown, that the people believe in themselves, and in principles of national honor. In the latter respect they are a generation ahead of the politicians, and even of some very honest but rather technical statesmen, who are afraid to trust their own instincts until they have heard from the noisiest and least representative of their constituents.

No one can come in contact with our legislators at Washington or Albany or elsewhere without realizing how deaf they sometimes are to the opinions of the intelligent class, the applause of whom should outweigh that of a whole continent of others. So deep a hold have vested and corporate interests upon, we will not say the sympathy, but the attention, of Congress, that no question of honor or sentiment has a ghost of a chance for attention while the material interests of somebody are clamoring for help. Ask for an honest currency, and you meet the silver lobby. Ask for an equitable international copyright law in order to abolish a national disgrace, the theft of brains,—comparable only to slavery, the theft of brawn,—and you are confronted with the awful fact that somebody's pocket is likely to suffer thereby. Ask for a consideration of works of art on a higher plane than the frames which contain them, and you are met with false ideas of the purposes of tariffs, and a blind indifference to our obligations to the art of other countries. In all questions concerning life, liberty, and the pursuit of happiness, the public body, whether aldermen or Congress, has to be pushed and driven by the people into a recognition of their most evident desires. A conspicuous and lamentable example of this blindness of the "public servant" is the tardiness with which Congress responded to the unanimous feeling of gratitude in which the whole country holds its first soldier. How long would an "effete monarchy" have hesitated over so manifest a duty?

These are questions of too great moment to the progress and honor of the country to be met by the response of the average Congressman: "Oh, your bill is good enough, but there is no demand for it." "Yielding to pressure" in a bad direction is deplorable enough, and we had its prospective evils suffi-

ciently set forth on both sides of the late campaign; but *not yielding* in a good direction *except to pressure* is a danger that will bear presenting. For on the heels of the habit which a Congressman acquires of waiting for the expression of public opinion, comes the habit of indifference to public opinion when it is expressed. If a man will not listen to conscience within him, how soon will he fail to hear the thunders of its echoes from other breasts! The easy willingness of Congressmen to defer their approval of good measures reminds us, by contrast, of the Abolitionist to whom after a heated discussion an opponent said, "I believe, Mr. —, if you had your way you would free every slave in the country to-morrow." "To-morrow!" was the indignant response; "to-morrow! Do you think me such a scoundrel as to wait until to-morrow?"

The chief difficulty, we say, in getting attention for apparently non-material interests seems to be in the indifference of legislators to the best public opinion. Men who have influence in public meetings, in the press, in society, seem to have but little weight with Congress, unless it be with the representative from their own district. Legislation thus becomes a sort of multiplied local option. Both parties compete for the title of "national," but as a rule the Congressman refers the settlement of questions of national interest and honor to his own constituency — not to the best of it, but to the opinion he thinks to be held by the average voter of his district. This timidity and lack of faith in the people is continually coming to the surface. Occasionally it meets with merited rebuke. During the recent session of the New York Legislature, a large number of petitions were received for the passage of the Niagara Reservation Bill — a most important measure, which has since been passed. Among these was one from the Rev. Thomas K. Beecher, to which were added the following comments:

"I believe and teach that legislators ought not to be looking down for instructions. A man under oath is degraded if he act or vote through love of praise or fear of blame from his fellow-man. I do not wish to influence your vote. This Niagara Park enterprise is or is not in your judgment a wise and salutary enterprise. I decline to bring popular pressure to bear on you. You know that I can get one hundred names to the above. You know as well as I about what names I should get. But if every voter in the country should ask you to vote aye, and you in your chair should feel it unwise or wrong to so vote, it would be your duty to disregard us and vote according to your best wisdom as a legislator. Then come home and teach us — not we, you."

It is time we had more of this sort of protest against the abdication of responsibility by public men. The reverence for the right of petition which is affected by legislators is often only a pretext for gauging the effect of a vote upon their reelection. In local contests the wishes of the majority are entitled to superior consideration, but on national questions they should have, as a rule, no weight against the clearly apprehended needs of the country. Americans are in the broad a moral people, and the qualities they admire most of all in their servants are bravery and loyalty; and if the self-seeking legislator were of keener vision, he would note the popular response that comes to every manifestation of these qualities. Whether in a mayor, an assemblyman, a governor, or a President, the country forgives

much to much devotion. Men who are devoted to the public interest are too few to let minor mistakes of policy mar their usefulness. To such, if they be in the party now intrusted with power, the legacy of unsettled public questions from their opponents, which was expected to be a stumbling-block, is but a legacy of opportunities; for every question has its right and its wrong side, and offers a new chance to serve the people. Nor are opportunities fewer to members of the party now in opposition; the times were never so propitious for devotion to the country by the minority, whether individually or as a body. The people have found that their servants, as such, are of no party, and, seeing possibilities of higher honor and progress, are in no mood to lose the end and aim of popular government in a factious struggle for mean partisan advantages. In spite of the spoilsmen of both parties, a better era is at hand, with rewards for an honest and brave devotion to public interests.

Dr. Edward Eggleston's Historical Papers.

IN a leisurely way Dr. Eggleston's serial history of life in the American colonies has been brought down to the tenth paper,—“Social Life in the Colonies,”—which appears in this number of *THE CENTURY*. Since each article of the series is complete in itself, desultory publication has harmonized with the aim to make the contents of the magazine as varied as possible, and with the author's purpose to leave no source of information and illustration unexamined. Dr. Eggleston's first visit on this errand to the British Museum resulted in the discovery of facts and pictorial materials of the highest value, including the John White drawings of Indian life. Now that his work, as it will appear in the magazine, is a little more than half finished, it may interest our readers to know that Dr. Eggleston sailed for England early in May, with the purpose of making further investigations in the large collections relating to American life at the British Museum, and in other libraries and depositories in the mother country.

In writing this history, which is perhaps unique for the telling of heretofore ungarnered facts in a popular as well as an exact style, the author, while availing himself of all the important results reached by special students and local historians, has found it indispensably necessary to go back to the original authorities, where possible, in order to get behind the superstitions and illusions that have been so long and faithfully cherished, and to catch the very tone and complexion of the old life. More than five years have already been spent in the careful study of that complex mass of printed and manuscript authorities which must be searched and winnowed in order to attain a thorough knowledge of the life of the colonists; and it will take nearly as many years more to complete the history. No such exhaustive study of the social, domestic, industrial, religious, and intellectual life of the colonists in general has ever before been made, and it will probably be long before such a comprehensive investigation will be undertaken again.

Perhaps the most important advantage the author has had for this work has been derived from an early personal acquaintance with many diverse forms of

social life still existing in this country. The geologist must know the corresponding living animals in order to understand his fossils, and the social historian will find his records an enigma unless he is acquainted with the new life that has been evolved from the old. There came to Dr. Eggleston early opportunity to know life in the North, the South, and the middle country, and to live at the East and at the West—some of the fruits of which are “The Hoosier Schoolmaster,” “The Circuit Rider,” “Roxy,” and other stories. In southern Indiana he saw eighteenth-century life still preserved around the wide fire-places; in Minnesota he saw the preserves of colonization, the Indians, the white men in contact with savages, and an Indian massacre—that of 1862; he saw the antique Virginia life before the war, and knew rural New England at a later period. From boyhood he has noted diversities of speech and manners, and this history of life in the United States before the Revolution is in some sense the mature outgrowth of a lifetime of observation and study. And since the series was begun he has made a number of journeys between Boston and Charleston for the purpose of special study and observation of the land and the people as they exist now.

It has been the custom to write colonial history by narrating the public events, such as the appointment of a new governor, or a quarrel between a governor and an assembly. In this way the whole current of the history is destroyed by the necessity for telling thirteen different and contemporaneous stories! A squabble between a colonial governor and his assembly is an event hardly greater in dimensions than a disagreement between the mayor and common council of some third-rate city of to-day. While the public events are mostly trivial, the social history is of the greatest consequence. To tell how and why our ancestors came here, what were the aborigines, and what were the settlers' relations with them in trade, in efforts to civilize them, and in war; to relate what were the notions and methods of field and garden culture which they brought with them, and what changes and evolutions their agriculture passed through here; to describe the curious forms of their commerce by sea and along the waterways of the provinces, as well as by pack-horse with the interior; to analyze mediæval notions of land tenure introduced here, and to trace the gradual change to modern American forms; and to tell the strange story of white and black slavery in the plantations, are among the important and neglected portions of American history that are being set forth comprehensively in this work. Dr. Eggleston has written also of domestic life and manners; of houses, furniture, costume, and equipages, as well as of social life—that is, of the weddings, the funerals, the sports, and the theater in colonial days. There remain yet to be written in order to fill up the scheme the story of the multiform Religious Life—the story of churchmen, Puritans, Quakers, Baptists, and other sects; the story of persecution and of witches, and that of the Whitefield revival and its results. There will be also some account of the Curiosities of Colonial Law and Government, of strange legislation and absolute punishments, of stocks, pillories, cages, brands, ducking-stools, and gibbets; and under the head of “Intellectual Life,” education and the lack of it, the rise of schools and colleges—the strange sub-

jects of intellectual inquiry, the curiosities and absurdities of colonial medical theory and practice, and the efforts at literature and art. A chapter will be devoted to the French war and its influence on colonial life. And the underlying causes which tended to produce a separation from the mother country will be traced with more fullness than ever before.

The illustrations prepared for this series of papers

are among the most valuable that have ever been made for an American historical work. Though many of them are picturesque, none of them are works of fancy, but every one represents a fact of historic interest. A great amount of pains has been expended to insure the authenticity and veracity of these cuts; it is, indeed, intended to make them as valuable for historic purposes as the text itself.

OPEN LETTERS.

Dr. Holmes on International Copyright.

ON the 28th and 29th of April an interesting and successful series of readings was given by American authors at the Madison Square Theater, New York, in aid of the fund of the American Copyright League. George William Curtis, Esq., presided on the first afternoon, and the Right Reverend Henry C. Potter, Assistant Bishop of New York, on the second. Both gentlemen made striking and eloquent appeals in favor of the establishment of an International Copyright. Among those who took part were the Rev. Henry Ward Beecher, Messrs. W. D. Howells, Edward Eggleston, S. L. Clemens, R. H. Stoddard, Julian Hawthorne, Will Carleton, H. H. Boyesen, H. C. Bunner, G. P. Lathrop, and others. Mr. Joel Chandler Harris and Mr. Frank R. Stockton were represented by proxy, the latter by a new story. Two of Dr. Holmes's poems were read, prefaced by the following letter, which we are permitted to print for the first time. — EDITOR.

BOSTON, April 27, 1885.

MY DEAR SIR: I regret deeply that I cannot be present at the meeting, where so many of my friends will be gathered. It will be a grand rally in the cause of one of the hardest worked of the laboring classes,— a meeting of the soft-handed sons of toil, whose tasks are more trying than those of the roughest day-laborer, though his palms might shame the hide of a rhinoceros. How complex, how difficult is the work of the brain-operative! He employs the noblest implement which God has given to mortals. He handles the most precious material that is modeled by the art of man: the imperishable embodiment of human thought in language.

Is not the product of the author's industry an addition to the wealth of his country and of civilization as much as if it were a ponderable or a measurable substance? It cannot be weighed in the grocer's scales, or measured by the shop-keeper's yard-stick. But nothing is so real, nothing so permanent, nothing of human origin so prized. Better lose the Parthenon than the Iliad; better level St. Peter's than blot out the Divina Commedia; better blow up Saint Paul's than strike Paradise Lost from the treasures of the English language.

How much a great work costs! What fortunate strains of blood have gone to the formation of that delicate yet potent brain-tissue! What happy influences have met for the development of its marvelous

capacities! What travail, what throbbing temples, what tension of every mental fiber, what conflicts, what hopes, what illusions, what disappointments, what triumphs, lie recorded between the covers of that volume on the bookseller's counter! And shall the work which has drained its author's life-blood be the prey of the first vampire that chooses to flap his penny-edition wings over his unprotected and hapless victim?

This is the wrong we would put an end to. The British author, whose stolen works are in the hands of the vast American reading public, may possibly receive a small pension if he come to want in his old age. But the bread of even public charity is apt to have a bitter taste, and the slice is at best but a small one. Shall not our English-writing brother have his fair day's wage for his fair day's work in furnishing us with instruction and entertainment?

As to the poor American author, no pension will ever keep him from dying in the poorhouse. His books may be on every stall in Europe, in their own or in foreign tongues, but his only compensation is the free-will offering of some liberal-minded publisher.

This should not be so. We all know it, and some among us have felt it, and still feel it as a great wrong. I think especially of those who are in the flower of their productive period, and those who are just coming into their time of inflorescence. To us who are too far advanced to profit by any provision for justice likely to be made in our day, it would still be a great satisfaction to know that the writers who come after us will be fairly treated, and that genius will no longer be an outlaw as soon as it crosses the Atlantic.

Believe me, dear Mr. Lathrop,

Very truly yours,

Oliver Wendell Holmes.

GEORGE P. LATHROP, ESQ., *Secretary, etc.*

Another Side of the Copyright Question.

THE struggle to secure the protection of our laws for literary property produced by citizens of foreign countries has been long and wearisome. To some it may seem fruitless. An ocean of ink has been spilt and a myriad of speeches have been made; and as yet there are no positive results set down in black and white in the Revised Statutes of the United States. But the best cure for pessimism is to look back along the past, and to take exact account of the progress already made. This examination reveals solid grounds

for encouragement in the future. The labor spent, although often misdirected, has not been in vain. Something has been gained. Public opinion is slowly crystallizing. By judicial decision, it is true, and not by legislative enactment, it is now possible for the foreign dramatist to protect his stage-right in the United States, and for the American dramatist to protect his stage-right in Great Britain. The means whereby this protection can be attained are troublesome and expensive; but that they exist at all indicates an increasing enlightenment of the public mind. Far more important than this judicial victory is the formation of the American Copyright League, and the massing together in a solid phalanx of nearly all American authors. This organization is ready to move on the enemy's works at once, and it is prepared to fight it out on this line if it takes all summer. It is devoting its utmost efforts to the urging of a bill which shall establish in the simplest manner the rights of the author. As soon as the people of the United States are aroused to see the justice of this bill and its necessity, it will become a law, and the question of International Copyright will be settled once for all. The Anti-slavery Society awakened the conscience of the people, and when the time was ripe slavery was abolished. The Civil Service Reform Associations cried aloud in the wilderness for months and years, until at last the hour came and the man, and the Spoils System received its death-blow. So the American Copyright League has settled down to its task, which it will stick to, without haste and without rest, until the good work is done.

The argument most generally used in favor of this great moral reform is that it will put an end to an atrocious and systematic robbery of foreign authors. That this is a strong argument no one can deny. As the law stands now we are willing to avail ourselves of the literary labors of the great English writers on science and on history, but we do not think the laborer worthy of his hire; we are willing to get pleasure and to take refreshment from the great English novelists and poets, without money and without price. The Englishman, the Frenchman, or the German may send to this country his goods for sale, his trade-marks to be registered, his inventions to be patented; but we deny his right of property in his writings, and his books are free stealing for whoso will. We are wont to consider this a moral country, and we are proud to call ourselves a progressive people; but in the evolution of morality in regard to intellectual property we are at a lower stage than nations which we are glad to look on as less moral and more backward. All things considered, intellectual property is now most carefully protected in France. Not long ago Belgium maintained the right of pirating books; and the business of book-piracy was then as respectable a trade in Brussels as it is now in New York. But in time the Belgians felt the disgrace of their position, and they experienced a change of heart. Not long ago the French novelist and the French dramatist were at the mercy of the English translator and the English adapter; but the English came to see the error of their ways. The Frenchman is now no longer pirated in Belgium or pillaged in Great Britain. The world moves—and the country which lags farthest behind is the United States of America. It is for the people

of the United States to say how much longer we can afford to steal from the stranger.

A stronger argument, however, than that drawn from our robbing the foreigner is to be taken from our ill-treatment of our own authors. So long as we prey on the authors of other countries, just so long may we expect other countries to prey on our authors. While the writers of Great Britain are without protection in the United States, the writers of the United States will be without protection in Great Britain. In the present state of the case a double wrong is inflicted on the American author: (1) at home he is forced to an unfair competition with stolen goods, and (2) abroad he has no redress when his goods are stolen. In his "English Note-books" Hawthorne records a visit in 1856 to the office of an important English publishing house—he gives the name in full—where he met one of the firm, who "expressed great pleasure at seeing me, as indeed he might, having published and sold, without any profit on my part, uncounted thousands of my books." Cooper and Irving have fared as ill at the hands of the English pirate as Hawthorne did. The number of American books republished in England is increasing every year. In proportion there is as much piracy in Great Britain as in the United States. Time was when there was no sarcasm in the query, Who reads an American book? Time is when that question may be answered by saying that the English now read American books—and by the hundred thousand. A glance at a railway book-stall in England will show that a very heavy proportion of the books which cover it are of American authorship—just as a glance at an American news-stand will reveal a very heavy proportion of books of British origin. In both countries the most of these literary wares are stolen goods. Half a dozen English publishers have series or libraries in which a good half of the books are of American authorship. It would not be easy to make out a list of the rival British editions of "Little Women," of "Helen's Babies," of "Democracy," of "Uncle Remus," of Artemus Ward's books, of the "Wide, Wide World," of the "Biglow Papers," of the "Autocrat of the Breakfast-Table," of many American semi-religious novels, or of many books of so-called American humor. The editions of Longfellow and of Poe are numberless. Poe is perhaps more highly esteemed in England than in America; and Longfellow's popularity was greater in Great Britain than in the United States—as Tennyson's, so it is asserted, is greater in the United States than in Great Britain. Now, nearly all these editions are unauthorized by the American author, and it is very rare indeed for him to derive any benefit from them. While the American publisher has a pleasant habit of sending an *honorarium* to the writer whose books he has captured, the British publisher generally scorns to exhibit any such evidence of delicacy.

One popular American author agreed with a London publisher that the latter should have a certain new book of the former's for a fixed sum. A rival London publisher reprinted the book in a rival edition at a lower price, and the publisher with whom the American author had dealt seized this as a pretext to break his bargain; he published his edition, and he advertised it as the authorized edition, but he never paid one penny of the sum he had promised. The

English publisher, even when he is honest and means well, is prevented from offering a fair price by the fear of a rival edition. A certain American humorist wrote a book which he believed would be popular, and an English publisher offered him a hundred pounds for it. If the American could have protected his rights in England, he would have refused this offer, and he would have insisted on a royalty. As it was, he had, perforce, to accept it. It so happened that the book made a greater hit in England than in America; in the United States twelve thousand copies were sold, while in Great Britain the sale exceeded one hundred and eighty thousand copies.

The island of Manhattan has no monopoly of book-pirates. Captain Kidd was a native of the British Isles. Hawthorne, in his "American Note-books," recorded in 1850 that he had just found two of his stories published as original in the last London "Metropolitan," and he added, "The English are much more unscrupulous and dishonest pirates than ourselves." It is true that the British literary freebooter sometimes cruelly and barbarously mutilates his American victim. An American publisher, if he takes an English book, reprints it *verbatim, literatim, et punctuatim*, with the author's name in full. But the British publisher sometimes, as we have seen, drops out the author's name; sometimes he hires an English notability as editor; sometimes he revises and amends the heretical views of the American author in religion or in politics; sometimes he adapts throughout. One of Dr. Holland's earlier novels was published in England with a multitude of changes, such as the substitution of the Queen for the President, and of the Thames for the Connecticut. One of his later novels, "Arthur Bonnicastle," appeared in England with a new ending, or, as the title-page announced in the finest of type,— "The last chapter by another hand."

Writing on the subject of International Copyright fifteen years ago, Mr. James Parton began his essay with a striking statement, as is his custom: "There is an American lady living at Hartford, in Connecticut, whom the United States has permitted to be robbed by foreigners of two hundred thousand dollars. Her name is Harriet Beecher Stowe. By no disloyal act has she or her family forfeited their right to the protection of the government of the United States. She pays her taxes, keeps the peace, and earns her livelihood by honest industry; she has reared children for the service of the Commonwealth; she was warm and active for her country when many around her were cold or hostile; in a word, she is a good citizen. More than that: she is an illustrious citizen. The United States stands higher to-day in the regard of every civilized being in Christendom because she lives in the United States. . . . To that American woman every person on earth who read 'Uncle Tom's Cabin' incurred a personal obligation. Every individual who became possessed of a copy of the book, and every one who saw the story played in a theater, was bound in natural justice to pay money to her for service rendered, unless she expressly and formally relinquished her right,— which she never has done." Mr. Parton's statement of the case is vehement, but his estimate of the loss to Mrs. Stowe, owing to the absence of any way by which she could protect her rights in foreign parts, is none too high. Because the people of the United States have

not chosen to give protection here to the works of foreign authors, Mrs. Stowe has been robbed by foreigners, and the extent of her loss is quite two hundred thousand dollars. The extent of the loss of Irving, Cooper, Longfellow, Hawthorne, and of the many living Americans whose writings are read eagerly on the far side of the Atlantic, is many times two hundred thousand dollars, and it increases every day.

B. M.

The Calling of a Christian Minister.

THERE is loud complaint of a famine in the ministry. The bread of life is plenty, men say, but there are few to break it. The scarcity is somewhat exaggerated, but the catalogues of the theological seminaries show that it exists. The number of men in preparation for the ministry does not increase so fast as the number of the churches increases.

Part of this disparity is due, as was recently shown by an Open Letter in these pages, to the needless multiplication of churches, under the stress of a fierce and greedy sectarianism. Not only is the demand for ministers in many of the smaller communities in excess of the real need, but the petty competitions into which the churches are thus plunged prevent many high-minded young men from entering the ministry. It is probable, also, that the theological disputations which have been rife during the last few years have discouraged some who might otherwise have chosen this work. They have seen devout and faithful pastors bearing the stigma of heresy, and even cast out of the synagogues; they have seen earnest and brave young men stopped and turned back on the threshold of the ministry; and they have shrunk from entering upon a work which appeared to be beset with so many snares and suspicions. This action may have been ill-advised, but there can be no doubt that it has been taken for such reasons in a great many cases. To doubts within, as well as to disputations without, the reluctance of some to enter the ministry must be attributed. In this period of theological reconstruction it is not strange that some ingenuous young men have become somewhat uncertain respecting the foundations of the Christian faith. To enter upon the work of preparation for the ministry with such misgivings would, of course, be out of the question.

To obstacles of this nature rather than to any lack of worldly advantages in the ministry is due, we are persuaded, the greater part of the falling off in the number of theological students. The Christian ministry will never suffer from the loss of those who are allured from its labors by the superior prizes of wealth or power which are offered to men in other callings; and, tempting as these prizes are, it is to be hoped that there are still a great many young men in this country to whom other motives more strongly appeal. If young men of this class, whose aims are not mainly sordid, and who entertain a generous ambition to serve their generation, are less strongly attracted than formerly to the work of the ministry, that is certainly to be regretted. And the reasons which lead them to decline so good a work ought to be well weighed.

Even those who turn away from the ministry because of intellectual difficulties might find, if they took counsel with some judicious and intelligent friend, an easy

solution of their difficulties. And although the theological strifes are annoying and the sectarian competitions vexatious, it is quite possible to preserve in the midst of these an even temper, and to carry through them all a heart so brave and a will so firm and a spirit so generous that their worst mischiefs shall be greatly counteracted. Indeed, these evils should serve to furnish earnest young men with reasons for entering the ministry, rather than of turning from it. Doubtless there is a great work to do in overcoming sectarianism with charity, and in conquering theological rancors and prejudices by the inculcation of the simple truths of the Gospel. Is not this a work worth doing? There is really great reason to hope that Christianity can be Christianized. Efforts put forth in this direction are meeting with the most encouraging success. And any young man who finds it in his heart to take the elementary truths of the Christian religion and apply them courageously to the lives of men, may be assured that there is a great field open to him. He will get a most cordial hearing, and, if he have but a fair quantum of pluck and of prudence, it will not be possible for sectaries or heresy-hunters to hinder him in his work.

It is quite true, as has been said, that the work of the ministry offers no such baits to cupidity as are displayed before men in other callings. No minister can hope to heap up a great fortune; and most ministers must be content with a simple and frugal manner of life. Nevertheless, every man has a right to a decent livelihood; and a minister of the Gospel, of fair ability, is tolerably sure of a decent livelihood. There are indigent ministers, but probably no more of them than of indigent lawyers or physicians; and while the income of the most successful legal or medical practitioner is far larger than that of any clergyman, the clergyman's support at the beginning of his professional life is far better assured than that of beginners in the other professions. Ministers generally are able to live as well as the average of their parishioners, and they ought to live no better.

To these prudential considerations may be added the fact that the minister's calling, as shown by the life tables, is conducive to health and longevity, and the other fact that the position occupied by him in the community is still a highly honorable one. There is complaint that the respect yielded to the clergy has diminished somewhat since the days when the congregations rose upon the parson's entrance, and when little boys took off their caps to him as he passed along the road; and there is, no doubt, some lack in these times of such formal civilities. Nevertheless the minister still occupies a high place in the respect of his neighbors. If he be a gentleman, and possess a fair measure of enterprise and judgment, he will always rank with the leaders of opinion and action in the community where he lives; and if the possession of a good fame be a worthy object of desire, it is certain that no other calling offers a better opportunity of becoming widely and honorably known. These are not the reasons for entering the ministry; any man with whom they would be decisive has no call to this service; but, in view of the disparaging estimates frequently put upon this calling in recent times, it is well to keep these facts in mind. There is room enough for self-denial in the ministry, no doubt; but it should

not be represented as the road to penury or martyrdom. It is quite possible for the average clergyman of this generation to avoid mendicancy, to eat his own bread, to keep his self-respect, and to live a dignified and honorable life among his neighbors.

These are not the reasons for choosing this calling, but good reasons are not wanting. Those who believe that the issues of eternity depend on the choices of time find in this fact the highest incentives to this service. But, apart from this, the work of the ministry ought to make a strong appeal to men of conscience and good-will. The services which the minister is able to render to society are above all computation, and there never was a time when society was in greater need of such services. In the work of public education, the work of moral reform, the work of charity, he is the natural leader. Here are great problems, demanding the most diligent study, the most patient and self-denying labor. The minister is bound to master them; to make his congregation familiar with them; to stir up the community to intelligent action upon them. The questions now so urgent respecting the relations of labor and capital, and the right distribution of the products of industry, are questions that are not likely to be justly solved without the application of Christian principles. To search out and apply these principles, in this great conflict, is a work that might satisfy the noblest ambition. The conduct of politics often presents ethical questions of great importance; not only the issues presented, but the methods of the politicians, need to be criticised from the point of view of an uncompromising morality, and to this service the clergyman is called. He has no right to be a mere partisan, or to advocate in the pulpit the cause of any party; but it is his duty, as a citizen, to stand up for good order and morality, and to rebuke the corruption and the trickery by which the foundations of the state are undermined.

There are other services, less direct and palpable, but even more important, which the faithful clergyman renders to the community in which he lives. The tendency of our time is strongly toward a gross materialism in philosophy and in life, and toward the substitution of æsthetical for ethical standards of conduct and of character. The greatest dangers to which society is exposed arise from this subtle but powerful tendency. Mr. Walt Whitman has not been ranked among the most spiritual-minded of our teachers, but we find him bearing such testimony as this:

"I say that our New World democracy, however great a success in uplifting the masses out of the slough, in materialistic developments, products, and in a certain highly deceptive superficial intellectuality, is, so far, an almost complete failure in its social aspects, and in really grand religious, moral, literary, and social results. . . . It is as if we were somehow being endowed with a vast and more and more thoroughly appointed body, and then left with little or no soul."

A state of society which wrings a cry like this from the lips of Mr. Walt Whitman is one in which there must be great need of lifting up a nobler pattern, and of urging, with unwearied and dauntless faith, forgotten obligations. To this work the Christian minister is especially called. It is for him to show the superiority of ideal standards over those which are

simply materialistic or utilitarian; it is for him to make his hearers believe that "a man's life consisteth not in the abundance of the things which he possesseth," and that there is a more august rule of human conduct than the canons of the art whose primal law is pleasure. To save the men and women round about him from the greed and the frivolity and the hardness of heart into which so many of them are sinking would be indeed a great salvation. If a call was ever heard for the lifting up of spiritual standards, that call is heard to-day from the avenues of our cities and the middle aisles of our fashionable churches. If there ever was a time when the minister's vocation was neither superfluous nor a sinecure, that time is now. "An urgent exhortation," says Mr. O. B. Frothingham, in a late essay, "must be spoken to teachers, preachers, authors, guides of public opinion. . . . They must work hard if they would counteract the downward tendencies of democratic ideas as vulgarly expounded. Theirs is no holiday task. They are put upon their intelligence and their honor." To such heroic enterprise as this the pulpit is especially called. The other classes of public instructors to whom Mr. Frothingham refers may help in this work, but the preacher's opportunity and responsibility are larger than can come to men in any other calling.

It is not too much to hope that this view of the dignity and importance of the ministerial profession will impress itself upon the minds of an increasing number of ingenuous young men. It would be easy to name a goodly number of men yet young in the ministry who have entered it with such high purposes,—men who have gone out from homes of wealth and luxury, renouncing splendid opportunities of self-aggrandizement, and devoting the finest talents to this unselfish service. It is not they who are to be commiserated; let us save our tears for those who look on them with pity for the choice that they have made.

A Minister of the Gospel.

The National Flag at New Orleans.

TO THE EDITOR OF THE CENTURY.

DEAR SIR: I called to-day upon Mr. Wilson, the photographer of the Exposition, from Philadelphia, who has superintended the taking of all the views inside the grounds, and inquired of him in regard to the alleged *hissing* of the United States flag on the occasion of the decoration of the Bankers' building, as stated in "In and Out of the New Orleans Exposition" in your June number.

Mr. Wilson was much surprised by my inquiry. Not only had he heard no hissing on that or any other occasion, but he had never before heard it intimated that the flag had been hissed. He was on the platform, and it was he who proposed the cheers, and led off. The response was hearty and unanimous—"what I should call," said Mr. Wilson, "a very enthusiastic salute." Mr. Wilson was indignant as well as surprised at the statement.

The other statement in regard to the flag—that "it is rare to see the stars and stripes in New Orleans, save on the shipping and the government building"—is also untrue. All the public buildings of the city or State, all hotels, club-houses, newspaper

offices, warehouses, halls, arsenals, and many of the large business houses, display the flag on holiday occasions. It is universally used for inside decoration at public balls, fairs, concerts, lectures, etc., where any drapery is used. All the benevolent organizations of the city carry it in their processions; even in the funeral processions it appears, appropriately draped with crape. These societies, having banners of their own, could easily dispense with the national flag were they disposed to do so.

The purple, green, and orange banner, which is said to be so perplexing to strangers, is the official banner of Rex. Rex, it must be understood, has his court, his ministers, and all the paraphernalia and insignia of regular government. Purple, green, and orange are his colors; and several weeks before his arrival all good subjects are required by public proclamation to display these colors upon their residences and places of business. The order is very generally complied with, especially along the line of march of the procession. This banner does not, however, entirely usurp the place of the national flag even during Rex's brief reign, and the two may often be seen floating amicably from the same building, either public or private. The Rex banners, being as a rule of inexpensive material and renewed every year, are left hanging long after the occasion for their display has passed, while the national emblems are taken in out of the weather to be preserved for another holiday. This may account for the very queer mistake of the writer who supposes it to have been devised by the citizens for the purpose of gratifying their taste for bright colors. He must have been surprised at the remarkable unanimity with which the citizens adopted this rather singular combination. Why not vary it occasionally if it were a mere unauthorized device?

Very sincerely yours,

Marion A. Baker,
Associate Editor Times-Democrat.

[From what we learn from other sources there seems at least to have been some hissing on the occasion alluded to, but whether meant for the flag or not it would be difficult to say. The incident, at any rate, seems to have been without serious significance.—EDITOR.]

Our Club.

FIVE years ago seven or eight married ladies, feeling the need of more culture and a strong desire to improve their minds, met and decided to form a "Literary Club." Very modestly and quietly they talked the subject over, and organized with just enough red tape to enable them to work properly. A president was chosen for three months, that each one might learn to preside, and come to know enough of parliamentary rules to do so correctly. A secretary was chosen to keep what records were needed, and notify absent members, etc. We began by choosing an author, assigning to one the sketch of his life and works, and choosing three others to read selections from the same. The second year we gave to American history and contemporary authors; the third and fourth years we enjoyed English history and literature; the present year we have taken up ancient history; and we are looking forward to German and French, and a year at least for art. Our year of study

begins the first week in October and closes the last of May. We have taken the name of Every Wednesday, and meet from half-past two till half-past four every Wednesday afternoon. Our membership is limited to twenty. The programmes for the year are arranged by a committee chosen the last of the year, who prepare them during the summer vacation.

Unlike the club spoken of in the January number, we are entirely unsectarian; nearly every church is represented. Perfect harmony prevails, and we thoroughly enjoy the interchange of thought, and feel we are greatly benefited. At the close of the year we have an evening devoted to literary and social pleasure. This is in a small town of fifteen thousand inhabitants "out West." We have found it so pleasant and so beneficial, we would like to help other women.

W.

Text-books in Unitarian Sunday-schools.

IN "Topics of the Time," in the November CENTURY, reference was made to a little manual entitled "The Citizen and the Neighbor," published by the Unitarian Sunday-school Society. The connection in which this reference occurs might lead the reader to think that Unitarians are using in their Sunday-schools text-books on sociology and politics in preference to manuals on religion and lessons on the Bible. The facts are the other way. "The Citizen and the Neighbor" is one of a comprehensive series of graded Sunday-school manuals designed to meet the needs of pupils of all ages, capacities, and aptitudes. It was prepared for those classes of older boys which are found in some Sunday-schools,—boys who have just entered college or are in the preparatory schools, who have gone through the other text-books, and but for some such studies in *applied religion* might follow a too prevalent fashion of leaving the school altogether. But the text-books which are generally used in Unitarian Sunday-schools are those which are directly or indirectly studies of the Bible. For several years our Sunday-school Society issued monthly lessons on special portions of the Old or New Testament, on the general plan of the International Sunday-school lessons. Since the publication of the series of graded manuals was commenced, the books most widely used (often by all the classes in a school above the infant class) have been "First Lessons on the Bible," "History of the Religion of Israel" (by the *Baptist* professor in the Divinity School of Harvard College), and the "Life of Jesus for Young People." In the primary department a manual with accompanying picture-cards on the New Testament Parables is now used. Even the most radical of our Sunday-school workers place the Bible "highest among the helps, subjects of instruction, and written sources of inspiration."

Henry G. Spaulding,
Secretary Unitarian Sunday-school Society.

Notes from Letters Received.

COLERIDGE.—Mr. Charles F. Johnson thinks that Mr. Frothingham (CENTURY for March) "is hardly fair to Coleridge in implying that his criticism of Shakspeare was in any way dependent on his German studies."

SOCIAL CLUBS.—D. R. J. writes to suggest the use of social clubs for those young men who, in our various smaller cities, are largely dependent for their amusement on the local billiard saloons and bowling alleys. He takes the ground that billiards, bowls, cards, etc., are only evil when associated with vice, or used as a means of gambling, and speaks of a club having the attraction of games, but with the two following rules among its by-laws, which rules he believes to have made the success of the organization: "The use of intoxicating beverages of any description in the club rooms is prohibited." "Gambling or betting on games of chance to be played, or being played, in the club rooms, is prohibited." The violation of either of these laws means expulsion. Young men seeing the advantages offered by such an association, where the members make the acquaintance of leading citizens of the town, have formed several similar societies, governed by nearly the same rules. Our correspondent finds that these new societies are prospering finely, while an organization formed about two years ago by a number of well-to-do business men, but without any such restrictions, was sold out under the hammer.

RIVAL CITIES OF THE NORTH-WEST.—In the "Open Letters" department for last March, George M. Higginson, in presenting "The Claims of Chicago," stated that "St. Louis and Chicago are almost alone in the division of this great North-western trade, there being in all that immense region only one other city (Milwaukee) that has over one hundred thousand inhabitants." Exception is taken to this statement by Eaton B. Northrop, of St. Paul, who claims for both St. Paul and Minneapolis (whose corporate limits now join) a population, each, of much over one hundred thousand, and a combined population of between two hundred and fifty and three hundred thousand. But he says that Mr. Higginson is excusable for the error "on the grounds that even citizens of St. Paul and Minneapolis find it difficult to keep pace with statistics, which prove that the population of either city has increased over two hundred per cent. within four years," the population of the two cities in 1880, taken together, being "less than ninety thousand."

CHICAGO VS. NEW YORK.—A correspondent, referring to the Open Letter on "The Claims of Chicago" in the March CENTURY, says that one of Mr. Higginson's arguments is that in eight months the number of entries and clearances of vessels at Chicago was over 26,000, thus exceeding the number of entries and clearances for the year at New York, Philadelphia, and San Francisco. "But a great part of such vessels as are entered at Chicago are not so entered at the port of New York. The arrivals at the port of New York from the Hudson River alone, and the clearances by the same route, would undoubtedly fully equal all the claims for Chicago, and those from the East River and Jersey shore would be equal again; but such vessels are not entered at the New York Custom House. Again, he says a line of steamers will doubtless be established between Chicago and Liverpool. This would do very well for the eight months in which navigation is open, but before Chicago can compete with New York as a seaport, the business of the world must be confined to the eight months on which his argument is based."

BRIC-À-BRAC.

SCRIPTURAL REMINISCENCES.

Aunt Patty: "Bress me, Uncle Abum, ef yer doesn't call to mind Baalam gwine down ter J'rusalem."

Uncle Abram (with a weakness for Aunt Patty): "Yaas, and does yer 'member dar stood an angel in the way?"

Uncle Esek's Wisdom.

AN old man doesn't catch on quite so quick as a young one, but he hangs on enough to make it up.

THE dead are the only true democracy.

GREAT wealth is too often like a great pile of manure: it only enriches one spot.

A HALF-EDUCATED man is as dangerous as a half-broken horse.

THE reason why the world grows no better is because each one is trying to convert his neighbor and neglects himself.

CONVERSATION is often nothing more than giving a wrong the benefit of the doubt.

THE boy whose only ambition is to equal his father will not only fail in doing it, but will drop away below the other boys in his neighborhood.

THANKS are cheap, and yet we can pay more than half our debts with them.

THE man who praises all things, if he happens to fall in the right company will damn all things with equal fervor.

THE moral questions that a man can't prove by his conscience better remain in doubt.

THERE is nothing so rich and so rare as philosophy; but, to make money out of, give me a ring-tailed monkey with a soldier's suit on.

SUCCESS, like other rare things, is put up in small packages.

IT seems to me that what we call the "virtues" are simply the duties of life, for observing which we are not entitled to any particular credit.

IT matters not what a man's capacity may be; if he has not honesty for a foundation, his superstructure never is safe.

PRECISE people make as many blunders as others, but they are too stubborn to correct them.

THE Devil takes all the chances; he has won more by attacking the saints than he has ever lost by neglecting the sinners.

IT takes half a life-time to do anything better than any one else can do it, if it is only pitching pennies at a hub.

THERE are a thousand different ways to tell a lie, but there is only one way to tell the truth.

Uncle Esek.

Heart and Hand.

SILLY fool, 'tis in vain you pursue,

For she heeds not the words that you say!
Can't you see, as you fruitlessly woo,

That her thoughts are with one far away?

That, though far, he her love can command,
Of which you can have never a part?

You are near — you can touch her white hand;
He is nearer — he touches her heart.

George Birdseye.

Altruism.

(A TALE.)

THE *Lovely Mary*, on her way
From Singapore to Boston Bay,
Had cloudless skies and glorious weather,
With favoring winds for days together;
And everything was going well,
When, near the Cape, it so befell
That, with a most decided shock,
The *Lovely Mary*—struck a rock.

She sank; but as the night was clear,
The ocean calm, an island near,
All who could keep themselves afloat
With cask, spar, life-preserver, boat
(In short, whatever came to hand),
Put off, and safely reached the land;
Leaving the gallant ship to sleep
Beneath the waves nine fathoms deep.

Now, as it chanced, upon that ship,
Returning from an Eastern trip,
Two scholars sailed, of great renown,
Jones, and the yet more famous Brown;
And when 'twas plain that naught could save
The vessel from a watery grave,
As Fate or Chance would have it, each
Espied within convenient reach
Something that both desired to own,—
A life-preserver, which, 'tis known,
Can never be relied upon
To hold up safely more than *one*.
Yet on this life-preserver *both*
Seized in an instant, nothing loath;
And all of it Brown couldn't clasp
Was quickly locked in Jones's grasp;
And Jones's keen, determined eye
In grim resolve was equalled by
The stern, uncompromising frown
Upon the lofty brow of Brown.

But lest you think that selfish thought
In those two noble bosoms wrought,
I will relate, from first to last,
The high, heroic words that passed
From Brown to Jones, and Jones to Brown,
While the good ship was going down.
Dear Reader, bear them well in mind,
And think more nobly of your kind!

Quoth Jones: "Dear Brown, pray do not think
'Tis selfish fear that makes me shrink
From yielding up this wretched breath
To save a fellow-man from death.
I long to cry, 'Dear friend, oh take
This life-preserver, for my sake!'
But this, alas! I cannot do:
I am not free, dear Brown, like you.
You may enjoy the bliss divine
Of giving up your life for mine;
But ah! 'tis different with *me*!
I have a wife and children three;
And, for their sake, I must control
The generous impulse of my soul.
Yet trust me, Brown, most willingly,
Nay, with unfeigned alacrity,
This life-preserver I'd resign,
Were my case yours, or your case mine!"

"Dear Jones, your reasons," Brown replied,
"Are good, and cannot be denied.

All that your words imply is true:
I have no wife nor child, like you.
But, Jones, I have a tie to life
Far stronger (do not start) than wife
Or child, though dear, could ever be:
I mean my great 'Cosmogony,'
Of which, as you have doubtless heard,
One volume is to come—the third.
Oh, were that mighty task complete
Down to the last corrected sheet,
Believe me, Jones, to save your life
To your dear family and wife,
I'd yield to you, un murmuring,
This frail support to which we cling!
But what are wife and children three
Compared with a Cosmogony?
Or what—confess it, dearest Jones—
Are *many* wives' and children's moans
To that loud cry of grief and woe
With which the learned world shall know
That it can never hope to see
The long-expected Volume Three?"

"Quite true," sighed Jones. "And yet—and yet—
I think, dear Brown, that you forget
The theory of Average
As held in this enlightened age.
Had all the mighty men of old—
Kings, scholars, statesmen, heroes bold—
Suffered untimely taking-off
With measles, croup, or whooping-cough,
Think you that this great earth would then
Have nourished only common men?
Had Homer died a stripling lad,
Should we have lost the *Iliad*?
Would Shakspeare's early, timeless death
Have cost us Hamlet, Lear, Macbeth?
The voice of reason answers, 'No;
Wrong not prolific Nature so!'
Now, if this theory is true,
It must apply, dear Brown, to you;
And, fearless, you may leave behind
This master-product of your mind
(Though all unfinished, as you say),
Assured that, at no distant day,
Another will be found to do
The work so well begun by you.
But I——"

"Allow me!" struck in Brown.

"The ship is plainly going down;
And, ere she sinks beneath us, I
Would most decidedly deny
The theory of which you speak.
It is ingenious, but weak—
A vain though pleasing fallacy,
That never has deluded me.
Besides, the theory, if true,
Applies with equal force to you;
For, dearest Jones, if you are drowned,
Doubtless *another* will be found
To comfort your dear wife, and be
A father to your children three!"

"Nay, nay!" cried Jones, "you jest, dear Brown
——"

But at this point the ship went down:
The arguments of both, you see,
Balanced to such a nicety,
So fine, so subtle, so profound,
That both held on,—and both were drowned!

Robertson Trowbridge.

The Hobby-Horse.

BRING out, bring out the gallant steed,
The noblest of his wooden breed!
With head erect, and bearing high,
What courage lights his vitreous eye,
As if he kindled at the clank
Of scabbard on his dappled flank!

Thou shalt my hero be, my boy,
Ulysses at the siege of Troy!
Not Dick, unhorsed at Bosworth field,
But Ivanhoe, with lance and shield,
On deeds of lofty valor bent—
The wonder of the tournament!

Then mount, my gallant cavalier!
No rival knight hast thou to fear;
Ride, boldly ride, with boot and spur,
Like Sheridan to Winchester;
Not prouder Alexander, thus,
Bestrode the fierce Bucephalus!

No foam-flakes mark thy furious way;
Thy charger needs nor oats nor hay;
Yet urged amain, for league on league,
His white-oak shanks defy fatigue,
As if he heard the battle-blast
And longed to follow far and fast!

Then haste! to scour, with might and main,
Thy trackless waste of carpet-plain;
On! ere the night-shade settles down
On the dim spires of slumber-town;
And, when at length outwearied quite,
To tented couch, and so good-night!

Henry S. Cornwell.

A Reminiscence.

THERE was a time, fond girl, when you
Were partial to caresses;
Before your graceful figure grew
Too tall for ankle-dresses;
When "Keys and Pillows," and the rest
Of sentimental pastimes,
Were thought to be the very best
Amusement out of class-times.

You wore your nut-brown hair in curls
That reached beyond your bodice,
Quite in the style of other girls,—
But you I thought a goddess!
I wrote you letters, long and short,
How many there's no telling!
Imagination was my forte:—
I can't say that of spelling!

We shared our sticks of chewing-gum,
Our precious bits of candy;
Together solved the knotty sum,
And learned the *ars amandi*:
Whene'er you wept, a woful lump
Stuck in my throat, delayed there!
My sympathetic heart would jump:—
I wondered how it staid there!

We meet to-day,— we meet, alas!
With salutation formal;
I'm in the college senior class,
You study at the Normal;
And as we part I think again,
And sadly wonder whether
You wish, as I, we loved as when
We sat at school together!

Frank Dempster Sherman.

Mariette.

TOO RASH is she for cold coquette,—
Love dares not claim her:
I can but say, "'Tis Mariette,"
Nor more than name her!

She mocks the world her arrows reach
With light derision;
Yet who would choose the softer speech,
The graver vision?

An eager glance, and incomplete,
Repays you, after;
A voice to make all satire sweet—
Delicious laughter!

I think no woman's warmth is hers—
How could she use it?
Another's pain no passion stirs,
Nor would you choose it.

Can warning tame the maiden gaze
That dares discover?
Pride, mirth, ambition, thirst for praise—
They're hers—you love her!

No grief should shake the gay disdain
That will not fear it,
Or mar by one subduing pain
So rare a spirit.

Who ever watched that rounded grace,
Born of the minute,
Nor thought the world a prettier place
That she was in it?

You ask no larger gift than this,
No nearer honor,—
It is enough for happiness
To look upon her.

The oval cheek, the rising tread
In careless measure,
The willful, bright, ethereal head,
Alive with pleasure:

On these the old desire is stayed
That long has waited,
For soul and body, rightly made,
Are fitly mated.

But what have I, whom men forget,
To offer to her?
A woman's passion, Mariette
There is no truer!

Dora Read Goodale.

Shakspeare's Sonnets.

(TO THE OVER-CURIOS.)

GOOD friend for Iesus sake forbear
To digg the dvst enclosed heare
Bleste be the man that spares these stones
And curst be he that moves my bones.

These living stones hide most mysterious dust;
The curse and blessing that so guard his grave
Seem flashing, somehow, from their blinding light.
Let what *he* willed lie in the heart of night;
Dig not for deathly things of love or lust
Beneath the deathless beauty that they have.

AUGUST, 1885.

No. 4.

CAMP GRINDSTONE.

SIMPLE citizen, who is withal a fisher of muscalonge and pickerel and whose habit is to pass a vacation all too brief among the Thousand Islands, took skiff one evening at Clayton, with intent to spend the night on Grind-

stone Island and rise as early as the bass and the flies beloved of bass at Eel Bay. Rounding the southerly end of Grindstone some time after dusk, he dropped his oars astonished. There was no moon, the sky was dark and the shore darker, but over the stillness of Eel Bay moved a mysterious body of soft and brilliant lights. It was like a long irregular dragon winding slowly above a mirror. Here and there were luminous crests as if on higher points of its wavy back. Darker parts alternated with spots of great splendor which appeared to stream forth a phosphorescent glow like the rings of fire-flies, red, yellow, and green. The water repeated all the curves as if a comrade of the glistening worm swam lovingly, always the same way, just below the surface. The onlooker knew and in his quiet way loved Eel Bay for a lonesome but most attractive piece of water several miles broad, more like a lake than a part of a great stream, and was aware that no dwellings defiled its shores. Hardly by telescope could Gananoqué, the sleepy little Canadian town to the north-east, see a portion of it, though it was commanded by those who cared to climb the cupola of a barrack-like hotel at Thousand Island Park. Had he come, he asked himself, on the gambols of those two mighty dragons

of the waters whose sport among the waves afford the Japanese unending subjects for ivory-work or for bronze, for carved stone and embroidery? Was he about to prove the Jack-in-luck who catches the Soul-Crystal as the two tide-dragons cast it from mouth to mouth, thus winning power over all monsters, demons, and good genii of the sea? Or were these the Puckwudjies afloat on strips of bark, with fire-flies for lamps, the tails of squirrels for sails, and loons' feet for paddles? Meantime the glowing head of the upper dragon, a mass of colors, is nearing him, and he hears a low rushing noise as of little oars, a sound of subdued voices, and — there! surely a call? Then a bugle rings clear and sweet. The head stops before the lonely grove near Squaw Point, where answering lights shine among the trees. Body and tail begin to wrap together, fold on fold, until a broad space of the bay is flecked with light. All becomes quiet; the rushing noise is gone; only a dull report like the striking of wood on wood is heard. Then voices start a song. They are masculine; the song is well known. It is the odd rolling chant of the devil-may-care and yet prudent sailor who refuses to part with his money until a stronger passion overwhelms his avarice. The secret is out, the enchantment gone. Fairylike though it is, the scene is intensely human. Our startled cit, who has been hugging himself with the prospect of the lonely pleasures of the fisherman, and has allowed his Fifth Avenue imagination to revel in the supernatural, has stumbled on a popular encampment. The shore is dimly white; the smooth bay alive with boats. Those lights are Chinese lanterns festooned from the slender spars of canoes; the voices those of canoemen, offering to the ladies who grace the tents at Squaw Point a serenade; the gleaming dragon that now unrolls again its slow length, and with the delicate

swish of the paddles and low laughter steers away to the camps on the northern shore of the island, is the main body of amateur boatmen who have come to the fifth meet of the American Canoe Association.

The scene, however, is such as to more than repay the crustiest for the loss of a favorite fishing-ground. Save for the absence of her buildings, dimly felt behind the background of the night, Venice in her bewitching festivals of illuminated boats hardly surpasses the effect of a hundred or more canoes, thickly hung with paper lanterns and boat-lights, moving mysteriously between dark water and dark sky. There is something peculiarly fascinating in the modern decked canoe. It is a miniature yacht, compact, finished, ready for smooth weather or rough, portable by one man and yet able to stand, when rightly managed, very severe gales. At night, in a calm like this, it moves with the ease and silence of the birch-bark, leaving on the water scarcely a ripple. Its decks and minion masts offer places for lanterns; its occupant seems to belong to it as a part of the craft itself. The gondola of Venice is clumsy in comparison, and must always lack the charm of the miniature ship, at once freighted and navigated by its owner. The nearest approach to the scene on Eel Bay

would be a Venetian night-festival limited to several hundred of the small and slender sandolos used for races. These, well set with lights, would resemble very nearly the magic night-effect, as the moon rose from a bank of clouds and brought into relief on a dark shore the white tents of Camp Grindstone.

The following day, what a change! In the land-locked bay, with its pine-crowned islets, broad vanishing outlets, and narrow curious passage through what seems the center of an island, lies a cluster of canoes about the flag-ship—a little sloop-rigged sailboat carrying the weighty presence of the commodore, the vice-commodore, and the rear-commodore of the Association. What is this ever oncoming line of dark spots broken by glittering high lights? and beyond, the other line with larger gleams of sunlight? The first is the advanced skirmish-line of canoeists, who use no sails, relying on the single-bladed paddle. The second consists of the double-blades. As the two ranks approach the reviewing officers, the first rests and allows the second to shoot through to the front, and on coming abreast of the flag-ship the single-paddlers dash forward in turn. Then the two lines turn by the left flank, follow each other in single file, and, locking paddles, huddle into one compact mass

THE FLEET.

OUR VENETIAN NIGHT-FESTIVAL.

opposite the reviewing group. Now glance down the bay. Was there ever a finer sight at a meet of the New York Yacht Club? These little boats coming up under full sail are the size of large toys; yet they have a "value"—if another painter's term be acceptable and duly stretched — which larger craft often lack. The variety of the sails is charming, and as the whole fleet, now strung out because certain clippers have out-sailed the rest, passes before the commodore, the sight has a wonderful microscopic grandeur, as of scenes viewed through the large end of an opera-glass. A hundred canoes side by side will not take up all the deck of a White Star steamer; but seen under sail all by themselves, a hundred canoes vie in effectiveness with a hundred of any other

craft that floats. A cabinet painting, if you will, but not a petty scene.

Canoeing, be it remarked, is a very new sport in its present phase of clubs and regattas. The Association had its origin when Mr. Alden of "The Times" founded the New York club, and began the endless series of modifications of the *Nautilus* canoe by evolving the *Shadow* from that model. So long as cruising remains the attraction of the majority, and paddling and sailing races are merely features of the meets, or confined to a handful of enthusiasts in each local club, canoeing will stay what it has peculiarly been—the game for gentlefolk. It is preëminent among water sports for the amount of pleasure it gives in return for the trouble taken. It is voted slow

by ardent youths who like to blister their hands and run three miles hard before breakfast for several weeks, in order to perform once before admiring crowds; but it encourages self-helpfulness and individuality. It is calculated to give one more occasion to "fool round in a boat" than any other watery sport. It is an excellent school for the yachtsman, and in future it is likely to hold out as no other against the gangrene of professionalism. Professionals can make no money at these regattas, not even in the paddling races. Rough fellows, and those who do not understand the simple joys of outdoor life, are not likely to spend their leisure exploring the head-waters of the Wallkill on the track of Mr. John Burroughs and his dory, or to be moved to poetical emotion with the thought that they are the first white men to break the charmed loneliness of some Canadian lake! Safe from such undesirable members, how large is yet the range of individuality to which canoeing utters its soothing appeal! The worried business man, the lawyer, clergyman, and journalist find just the right amount of physical exercise in the cruising canoe. It is gentle exercise and cumulative. While in winter the city offers the gymnasium, the boxing-floor, or the fencers' club to the townsman, at any one of which an hour's work each day is enough to keep his muscles supple, his skin wholesome, his lungs in good order, in the summer-time there is nothing like a canoe voyage for amassing a large store of health for the whole of the year. And that store is of the true life-giving quality, for it is drawn from the open air. But these are commonplaces. Is it needful to recall the sharper, more eventful pleasures of the canoeist, his risks and delightful half-dangers, when Messrs. Macgregor and Baden-Powell have so recently told their tales of prowess and of derring-do with the paddle? when Messrs. Alden* and Stevenson† have amused and edified the public with their humorous and instructive booklets? And as to the intricacies of hull and rigging, or rules for matches, or advice as to articles for the cruiser, is there not "The Canoeist," a special organ of the Association, not to mention "Forest and Stream," autocrat on all things relating to sports by flood and field? ‡

Yet, while on the general subject of exercise, is it not odd that although we sit at the feet of the ancient Greeks in a thousand ways, envy their physical development as it appears in their statuary, and puzzle over their superiority in modeling the human figure, we do

not esteem athletics as they? Therefore are we probably as far as ever from equaling them in art. Sleight-of-hand such as we see in base-ball, endurance like the fine play in cricket, cultivate special faculties to the neglect of other things much more important to the rounded gymnast admired in Greece. Professionals spring up in every branch of athletics, and soon destroy all enjoyment for ordinary players. Even in lawn-tennis young women of the best parentage are allowed to become specialists, and perform in public like professionals. Canoeing has this in its favor: It is an "all-round" exercise, developing none of the faculties too much, and securing good health without the danger of excess through competition. Betting men and the sporting reporters avoid canoe meets; there is no "life" at them,—which means that canoeing is not yet vulgarized by a straining for the lead on the part of ambitious members; that the Association gets on all the better without the public or the press; that the enjoyment of canoeing lies in itself, not in the excitement of bets or the clamors of a gaping crowd. Yet the tendency has appeared in canoeing, as it always will. Starting a few years ago with canoes adapted more for paddling than sailing, the spirit of sport has already effected changes. The fleet may be split into sailing-cracks, cruisers, paddling cruisers, and Peterboros, lumping in the latter name all undecked canoes, birchbark or otherwise. In the "crack" sailors we see the tendency toward professionalism. But the tendency is good if kept in bounds, for it sets wits to work on improvements in rigs and hulls. Messrs. Vaux and Whitlock of the New York, Gibson of the Albany, Dickerson of the Springfield, and Jones of the Hartford club are among the foremost sailors, and have perfected their canoes in various ways. But to effectually stop the too great movement toward racing, a movement which in time would be fatal to the Association and the general cause of canoeing, there has been an agreement to give prizes, not for special races won, but for a high average of races. Thus, the winner of three minor races, for instance, takes the prize from the man who is far away the first in the sailing-match only. This is a distinct blow to the ambitious canoeist who is disposed to neglect paddling for sailing, or the opposite, and make either a paddling or sailing machine of his canoe instead of a cruiser. The "all-round" man is thus the hero at the meet.

To fix the type or class to which a given canoe shall be assigned is now a task for a jury of canoe-builders and veterans. For being once bit by the gentle mania of canoeing, each man must have a boat of his own designing. If he has added a new rope to the reef of the mainsail, snipped an inch off the rudder, or put a cleat in some new place, he claims the right of a patentee, and becomes infected with all the horrible conceit and loss of finer perceptions of the truth which belongs to the inventor's mind. For the outsider to express opinions at a meet of the Canoe Association is about as safe as to venture criticisms on horses at a race-course crowded with the gentry of the turf. You may wander (like the giant specter of Phœbus Apollo among the galleys of the Greeks at Troy) from the canoes of the Deserontos to them of Brockville, scan in turn, among the pretty craft from Hartford, Springfield, Rochester, Albany, Buffalo, and Cincinnati, the various lines of stem, deck, keel, and stern, of garboard streak and floor, pass in review the fleet of the New York club and their fellow-townsmen the Knickerbockers; and you will find no two builds exactly alike. And yet a vast majority now seem alike to the uneducated eye, being decked canoes of almost the same length, fitted with mainsail and "dandy" (this is a sail), with center-board and rudder worked with tiller outside and steering foot-yoke within. The proud veteran of four long summers casts but one fresh-water nautical eye on a canoe, and glibly informs you whether it is a Rob Roy, now an almost extinct type, or a Nautilus, or a Shadow, a Peterboro or a Pearl; and if you are not wise enough to turn the conversation, he will explain to you wherein it differs from the formal type owing to the inventive genius of its owner. So many canoes, so many rigs. The Albany men have introduced the jib in addition to mainsail and dandy, and the new complication of little cords repays the trouble during regatta week, for it enables the canoe to go better to windward and to turn with more speed. In a light wind at a turning-stake the jib has a marvelous fashion of gaining several lengths by turning the boat closely and sharply around the stake. The popular mainsail is now the "balance lug," stretched by the yard, which is hoisted to the masthead and stiffened by sundry strips of wood, or battens, which gives it cousinship with the sails of Chinese junks. It has almost driven out the cruising "lateen" sail. Marvelous and delightful are the whims shown in the wee sail behind the canoeist, the dandy or jigger. Some are like half the wing of a bat or a butterfly, rising up from the after-deck like a

fan, and hardly surpassing in size the fans of recent extravaganza in fashion. For cruising, the Lord Rosse lateen, that detaches itself from the short masts when an upset occurs, is still much favored, though it is a difficult sail to strike quickly when running before a freshening breeze.

But the humors of a canoe meet are many. In the whaling villages old captains of whalers stump about, carping and sneering at everybody's ideas of navigation or of rig. At Delmonico's the young gentlemen who own yachts, or are owned by yachting friends, discuss seamanship with a wisdom altogether appalling. In the canoe clubs the same kind of tarry-breeches talk prevails, only with a flavor of knickerbockers and soap, while the size of the craft gives a special zest to the familiar lingo. One canoeist hoists a mainsail only; unable to carry a dandy, he fixes on the deck behind him a rod eighteen inches high, on which he hoists a flag the size of a kerchief secured in ultra-orthodox fashion by halyards of strong cord, which he twines around the staff in a pattern. Another covers his foredeck with beautiful little nickel-plated cleats, which he belays with a bewildering series of fine ropes for hoisting, reefing, and downhauling. Sleeping in the canoe at night has become general, and the aspect of the camp by moonlight is most original. Between the array of tents and the shore, on which vast numbers of empty canoes repose in Lilliputian dignity, are rows of cruisers standing on even keels, the cockpits covered with sleeping canopies, either swung between the masts or held in place by upright sticks. Each is a chrysalis, from which the image of a full-fledged canoeist will emerge when that dread dignitary, the bugler, sends his morning notes over the bay. It is often a pretty problem what a given canoe may bring forth, so alike do they look. Perhaps it will be a modest freshman, who will take an unexpected place at the head (or the bottom) of the novices' race; perhaps an old stager, who will tell you that he likes Canadian whisky because it flavors of smuggling, thereby showing himself a bold bad fellow who would shake hands with a pirate. Speak gently: it may contain a full commodore, or a vice, or a rear,—at any rate, a club commodore! In this odd Association it is remarkable that rank begins with the bugler, continues with the secretary, and then drops to the Association commodores. As to club commodores and captains, they are so ubiquitous that it would be thoughtless to risk offense by not using one of these titles "for luck," when addressing a casual canoeist, whose stern bearing and air of aloofness from the common paddling herd betoken in him the genius born to command.

THE MORNING BUGLE-CALL.

Sundown is a majestic moment. In a timid manner Commodore Nickerson nears the haughty bugler, Mr. Delavan, rouses him from the abstraction of musical composition, and points shyly to the sun. Grasping his bugle, the latter takes his stand where no trees or tents interfere with the full effect of his notes in the distant settlement of Squaw Point, and breathes all his soul into the yearning call. To hide their emotion canoeists bury their heads in blankets, or plunge into the clear cool water off the steamboat dock. Sobby, the little dog of the Mohicans from Albany, so named because of the unquenchable gayety of his disposition, *lucus a non*, becomes thoughtful and seems about to justify his tearful name; Psish, the Hartford cat, named after the vice-commodore's canoe, a kitten with a sympathetic soul, tries to aid the music with her silvery voice; and it is popularly understood that at Squaw Point ladies are often moved to tears. As the call ends, the enormous American flag at the New York tent and that of the Association fall together, and all the other banners, British, Canadian, American, and interna-

tional, are expected to follow suit. As if released from the strain of too much sentiment, the Hartford kitten, Psish, administers on general principles a mauling to Sob, the puppy, and the latter, to work off his injured feelings, goes to the wood-pile of the New York club and steals firewood. He has been taught by a thrifty master to gather in sticks for the fire, boat-sponges as well; nay, towels, bathing-suits, flannels, clothes-brushes, cans of fruit, and such other trifles lying unguarded in the surrounding tents as in camp are often very welcome to

"SOBBY."

CAMP GRINDSTONE—WELCOMING A VETERAN.

the larder. There are few mornings when he fails to earn his breakfast. Sob has even been known to steal the old gray beaver hat which is worn in the nature of a talisman of success by one canoeist famous for a sweet voice (his legend being, *Vox et præterea multum in parvo*), a hat which has been to the fore in many well-sailed or well-paddled races. Nay, such is his devilish ingenuity, he has been known to steal the hat and stow it away in the fore-castle of a canoe, whence it was withdrawn only after its owner had lost a race by reason of its absence. Sob is generally held capable of assuming to the face of one of his master's rivals the utmost friendliness, and quietly gnawing a hole in that rival's boat while his back is turned. He is a cheery little "yaller" dog, on whose tail a dandy might be rigged, and whose barrel assumes the finest lines for a winning center-board canoe, double-decked and forereaching. Like a good speedy coaster, he is often seen "with a bone in his mouth," and as a pirate the cut of his jib is known wherever on North American soil is found a member of the A. C. A.

At the Thousand Islands there is an indig-enous boat for fishing and rowing, remarkable for the methods by which it is managed under sail. Visitors call it a skiff, natives a skift. Holding five or six persons easily, it is of strong yet light build, and in its lines probably the most beautiful rowboat afloat. Birchbark, Peterboro, Rob Roy, Shadow, Nautilus, Pearl—the hulls of all these must yield in gracefulness to the skiff. It is sailed, with the aid of a small center-board, by means of a large sprit-sail, the mast being stepped well forward when in use. The main peculiarity of the skiff under sail is that neither rudder nor oar nor paddle is needed to guide it. Some persons help themselves to come about on a fresh tack with the oars, but this is not at all necessary, and is held in great scorn by a good sailor. The latter walks unconcernedly up and down his boat, pays her off the wind, or brings her up close-hauled as if by magic. The secret lies in distributing the weight of the sailor forward or backward. In order to bring the boat into the wind with the needed swiftness, he moves suddenly forward quite to the

RACE OF THE CANOE "VENTURE" AND THE ST. LAWRENCE SKIFF.

mast. This buries the bow of the boat, and the stern, shaped like the bow, rises up and is swung around by the wind. As soon as the sail shakes well in the wind, the skiff-man runs aft, thus raising the bow, which is helped about by the wind, and depressing at the same time the stern. All this is without steering-oar or rudder, or the help of the oars in the rowlocks. It is curious to see how sensitive such a boat is to the weight of a man. Running free, he sits nearly aft. Should it be necessary to keep directly before the wind, he gets as far astern as possible; while to come up into the wind the reverse movement is made. First lessons in this unique boat deal severely with the shins of the novice and with the paint inside the boat, but a little practice gives mastery. In the skiff it is considered dangerous to make the main-sheet fast to the gunwale, because the boat is so long, narrow, and shallow that

it might be easily caught in one of the squalls that come with little warning down from the islands. Many will not use the running-block, caught to the gunwale with a snap-spring, which keeps the sail flat and holds it well. The simple rope is preferred, passed through a ring on the gunwale and held in the hand ready to be loosed at once. The block and tackle might be hampered in an emergency and the boat turn over. Of course the skiff is not the best sailer to windward in the world, and a good regatta canoe under full sail can generally beat her, especially if the wind be light. A race that interested Camp Grindstone hugely was a scratch trial between a native in a skiff and a canoeist in his canoe. It was sailed at twilight in a fair light sailboat breeze. So far as any judgment could be made in view of the informal nature of the race, the canoe had the best of it, though the native was called

SQUAW POINT.

a crack sailor and his boat one of unusual swiftness. It is fair to say, however, that the St. Lawrence man claimed that the wind was too light for his craft. Singular and pleasing it was to see the two small sails flitting mysteriously through the dusk. The success of the canoeist, Mr. L. Q. Jones of Hartford, was hailed with great delight by the assembled camp.

It is probable that in extremes of wind the cruising canoe will beat the St. Lawrence skiff: in light winds, from its larger spread of canvas compared to its hull; in storms, from the ability of the canoe to stand drenching and its power of climbing seas. In a storm the skiff, though admirably modeled for waves, would necessarily ship a good deal of water which the decked canoe would shed, while its great length would expose it to the danger of riding several waves at a time, and having them curl in. But it may be considered without a rival for its purpose, which is to provide a safe and roomy rowboat, easily rowed, and having nothing aft to interfere with fishing-lines. The principle by which it is sailed might be applied to any craft of a whale-boat

shape with high stem and stern which is sufficiently light and long to be influenced by the wind in the same way. Of course it is not to be judged as a sailboat; for it is certain that for quick and easy handling there is nothing that can compete with a "cat."

Paddling races are to the outsiders more interesting than sailing races, although they have little of their beauty; the canoes that win are always the open canoes — Peterboros or birchbark. The personal equation is stronger in paddling races, the struggle more definite. One paddler lies in his canoe shoving against the back-board, and works with his arms alone; another, and he is the one that is pretty sure to win, sits very high, with his feet or knees on the bottom, and leans over his paddle, getting the weight of his shoulder into each stroke. Two single-paddlers in the same boat against two double-paddlers make a close race. Here the single-paddlers need not change to the other side, since one keeps the port, the other the starboard side, and between them the prow is held fairly steady to a straight line. The double-paddlers use the two ends of their paddles alternately,

HEADQUARTERS — SECRETARY A. C. A. ENROLLING A RECRUIT FROM SQUAW POINT.

in the usual way, both dipping to starboard together and then to port. But the advantage is still with the double-bladed paddles. There is a strong likeness between the mechanism of the Indian (single-bladed) paddle-stroke and that of the long oar used by the gondolier of Venice.

The canoe (let us be just, even if we are mendacious canoeists in minor matters) has rivals and superiors in several ways, whether considered as a sailing or a paddling craft. But this is true only when the criticism is partial. For Venice, Amsterdam, Stockholm, for the crowded Thames, and perhaps in the future for the Harlem River, the gondola and its junior the sandolo cannot be surpassed. For river and lake fishing, what boat equals the St. Lawrence skiff? For hunting, a Peterboro is the thing. But for cruising in fresh water and salt, especially for the exploration of streams full of shallows and rapids, what civilized or savage craft can approach the canoe? It is quick and obedient to the paddle. Sail can be made in a few moments and reefed or furled at once. It holds bedding, tent, wardrobe, fuel, lights, and stores. Its solid hull withstands shocks that

no other boat will. Its weight—from sixty to eighty pounds—permits one man to transfer it from river to river or around a rapid. In it the expert will take risks no Indian can with his birchbark. In rain and high waves it is dry; it rides waves from its shortness, and is a good sea-boat and often a fair sailer in a blow. It is one of the safest boats known when properly provided with air-tight chambers fore and aft, for then it is a little life-boat. Upset, it can be righted at once and paddled while full of water.

“The crew of each canoe shall consist of one man only” is a rule laid down in a little book published yearly by the Association. Nothing is said of women; and as a dozen or more ladies are honorary members, this omission has much significance. For the canoe is not so unsociable a craft as it looks. Owing to the need of stability for ballast, camping equipage, and stores, the ordinary canoe, when the sails are not used, is quite capable of shipping a mate for a short cruise. There are loose bulkheads which can be removed, leaving plenty of room for a passenger who will agree to avoid violent movements, and may often demand to work her passage with a second paddle. There are many canoes of this type among the Thousand

Islands in which ladies wield a paddle with skill and effect. When sailing, however, two persons make most canoes unstable, and the greatest care is needed to avoid upset. Increase the spread of sails, and of course the stability is less; racing-rigs much over one hundred square feet in size generally capsize the canoe in a race where there is much wind, unless the sailor is a marvel of quick-

the Toronto canoes are so built that in righting they throw out most of the water, while practice has taught their owners to vault into their canoes as neatly as a naked Huron. Messrs. Miller of Peterboro and Johnston of Toronto have carried off honors in these jolly races.

A meet like that in 1883 at Stony Lake, Canada, and in August, 1884, at the Grind-

THE HURRY-SCURRY RACE.

ness. In some races not a boat comes in under sail. It is amusing to see the expert, as his sail goes over and adheres to the water, scramble over on the bottom of his canoe, wetting his legs only. Presently he detaches the little masts, which float off with the sails. Then righting the canoe, he makes a hand-spring and lands his body over the cockpit. Seating himself, he displaces a certain amount of the water in it. Should the water be calm, he may bale her out; if not, he paddles ashore heavily enough. Special races to develop practice in regaining control of the upset canoe are the most popular of all, since they afford visitors huge enjoyment, and insure much skylarking. At a given point each man upsets, "clings to his paddle," as Mr. Stevenson has it in his funny epitaph, rights his boat, gets in (if he knows how), and paddles on over the line. Some of

stone Camp, is in itself a pretty scene. Paddling-canoes, and those under a cloud of canvas — or shall we say cambric? — are ever putting off or landing at the rough-and-ready ways quickly built of logs and planks. The shore is covered with boats, among which stand animated groups of hearty-looking young men in knee-breeches and flannels, mending sails, rigging "balance" or "settee lugs," "sliding gunters," "dandies," or "jiggers," "shoulder of mutton" or "Lord Rosse lateens," discussing clippers, or making forecasts of the races. Now and then an excursion steamer passes and salutes the camp, receiving from bugle and conch ironical answer. Or the moment is meal-time, and while one band seeks the general mess and another journeys to a distant farm-house, the thorough-goers start their own dinners at fires near their tents. Impromptu races between friends are incessant. The Al-

THE CHORUS.

bany club lead in decorative effects, for they paint their sails with large totems whereby afar off the "Muscalonge" may be distinguished from the "Siren," or the "Snake" from the "Devil." A member of the Knickerbocker club has had the good taste to dye his sails Venetian fashion, and pleases the eye very much. The review of the fleet is not beautiful merely; it is impressive, despite, or perhaps because of, the minuteness of the craft. Were the boats a little larger, like the St. Lawrence skiff, or the Barnegat sneak-box, or the cat-boat that men call "skip-jack," or, on the other hand, were they a little smaller, like the big model boats in which boys delight, this fine effect would be lost. The only way to account for the phenomenon is to remember that the human body is the norm on which everything is measured. The canoe is so closely adapted to the size and weight of a man, that it is on water what the horse is on land. The Esquimau kayak is still more of a unit with its occupant, and never fails to delight those who venture toward the Pole.

It would be wrong not to note the kindly

and even jovial spirit that rules the short summer meets. Some of the pleasantest comrades hail from provinces of the Dominion. The Association has between five and six hundred members, by no means confined to Canada, New England, and the Middle and Central States. Texas is here; Florida has several representatives, and so has Kansas. One canoeist comes from Washington Territory and another from Manitoba, while San Francisco and Halifax, at the extremes of the continent, may see the little A. C. A. flag. Soon we may expect to find recorded an application for admittance from the "Yukon Canoe Club of Alaska" and the "Coatzacoatl Boating Society" of Central America. Honorary memberships have been given only to a few "epoch-making" canoeists, while a few ladies who own and use canoes have been added to the honorary list in deference to their sex. Those of the latter who honor the meets with their presence are, with their male relatives, assigned quarters in another camp and enjoined not to visit the main encampment till after eight in the morning, when the laziest canoeist is expected to have had his dip,

made his toilet, and done breakfast. Nothing has ever occurred to make these honored honoraries regret the little taste of camp life. Canoeing is a gentle and harmonious occupation, closely akin to the genial sport that makes Izaak Walton a classic, and sure, like it, to encourage the contemplative and dispassionate side of men and women. Croquet, lawn-tennis, base-ball, cricket, lacrosse, rowing races—what a harvest of heartburns every summer do not these reap! The beauty of the canoe is, that if you are angry you can paddle off and count more than twenty-five! At the camp, also, each is independent. The solitary man or he who becomes easily bored has a fine choice of resources. He can go to an island within sight and be as lonely as he likes; or sail three or four miles and find the greater loneliness which is said to exist in a crowd; for if in a crowd, where better than in the motley one at an overgrown American hotel? He can cruise, or fish, or sail, or paddle alone, or with one friend or twenty; or he may easily have friends among the pretty little villas scattered over the enchanting shores of the larger islands. Is he sociable? Then let him join the brazen-lunged company of strummers on the banjo, and sing in stentorian chorus the cook's song in *habitant* French,—“Al-ouettay, genti allouettay, al-ouettay, je te ploomeray!” He can talk annexation with the Canadian of the old stock, or admire the superiority of British rule with the loyalist of later arrival. If he is insatiable of the society of ladies and must have many of them of a choice variety, then let him hie to Squaw Point.

As night draws on, the moon, as if uncertain what is the correct currency for an island discovered by one nation and claimed by two others, turns from a tin dime to a copper cent and then to a silver sixpence; camp-fires are stirred, and ambitious clubs hang up lanterns in the form of their initial, as R. for Rochester. Banjos, and musical tools of even greater deadliness, are now brought out. The “kazoo” is admired, and a performer on the Jew's-harp is a second David. Healthy appetites support the ditty wailed from the ambush of a comb. Temperance is not only courted, but indispensable; for while it is hard to get about camp

SEARCHING FOR A PIRATE.

by daylight, owing to the canoes and their gear, at night the clearest head is none too clear to avoid a fall over the chaste bed-chamber of a bugler or the tent-ropes of a commodore. One night will never be forgot. The doughty Canoe Chief, his mind inflamed by the reading of Clark Russell's sea-stories, had expelled from the island a bad man who sold rum with ulterior intentions of a cut-purse kind. He had threatened the Canoe Chief's life, and was known to have slipped back to the island in his long, low, piratical-looking skiff. Then was there an assembling of fearless canoeists, dare-devil dicks with a paddle in one hand and a white “cruiskeen,” which is Irish for pistol, in the other. There was a solemn patrolling of the camp and its neighborhood, until night and the baffled jail-bird fled together.

A notification on the bulletin is enough to invite all who wish to come that a camp-fire will be held at a certain club headquarters, each club taking turns. Every now and then a great general bonfire is on the order of the day; then roots and trunks of trees are consumed, and the circle closes in as the fierce glare subsides. One of these (to set some bounds to a paper already too long) was more than usually complete. Speeches, songs, music from Arcadian instruments, declamations, and yet more

songs had their turn. The ring of ladies and gentlemen, of youths, boys, and rustics, was brilliant with the strong red glow from four great roots of trees. Thousands of winged creatures from the St. Lawrence fluttered in the big half-sphere of light, with the fantastic bonfire as a center, and among them swooped numberless bats, their fur shining in the glare like silver against the soft black of the sky. The place was a hill-top, and far below were the lights of yachts and excursion steamers at anchor, the glimmering coals in the long camp by the water, and toward the horizon the clusters of colored lamps at some big hotel. All was jollity and comradeship. The Canadians hardly felt on alien soil; it took an effort to remember that American is a word that is ever used in a narrow sense. The line between these two great wings of the Association was as im-

aginary as the border itself, which, if we must believe the map, runs yonder among the lovely islands along the deepest channel of the St. Lawrence. After all was over and the encampment asleep, how curiously in contrast with the noise of men was the hooting of the loon! It is not a laugh, but more like the cry of the screech-owl. Loons appear to fish apart and call to keep each other distantly company, like canoeists when they cruise. They have two calls, at the very least. One is lower and much like a screech-owl's, but more musical and less plaintive in its quavering; the other is that misnamed a laugh. It startles, but it has a great charm. Delightful to waken at dawn and hear the loon's cry from the water near the sleeping camp! There is a savage relish in the note like the taste of the dark wild raspberry.

Henry Eckford.

THE HUMMING-BIRD.

THERE is a silence in this summer day,
 And in the sweet soft air no faintest sound
 But gentle breezes passing on their way,
 Just stirring phantom branches on the ground;
 While in between the softly moving leaves,
 Down to their shadows on the grass below,
 The brilliant sunshine finds its way and weaves
 A thousand patterns, glancing to and fro.
 A peace ineffable, a beauty rare
 Holds human hearts with touch we know divine,
 When, hush! — a little tumult in the air;
 A rush of tiny wings, a something, fine
 And frail, darting in fiery haste, all free
 In every motion; scarce we've seen or heard
 Ere it is gone! How can such swiftness be
 Incarnate in an atom of a bird!
 To know this mite, one instant poised in space,
 Scarce tangible, yet seen, then vanishing
 From out our ken, leaving no slightest trace!
 Ah, whither gone, you glowing jeweled thing?
 Before you came, the very air seemed stilled;
 More silent now because with wonder filled.

Laura M. Marquand.

THE RISE OF SILAS LAPHAM.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "A Modern Instance," "A Woman's Reason," etc.

XXVI.

LATER in the forenoon came the dispatch from the West Virginians in New York, saying their brother assented to their agreement; and it now remained for Lapham to fulfill his part of it. He was ludicrously far from able to do this; and unless he could get some extension of time from them, he must lose this chance, his only chance, to retrieve himself. He spent the time in a desperate endeavor to raise the money, but he had not raised the half of it when the banks closed. With shame in his heart he went to Bellingham, from whom he had parted so haughtily, and laid his plan before him. He could not bring himself to ask Bellingham's help, but he told him what he proposed to do. Bellingham pointed out that the whole thing was an experiment, and that the price asked was enormous, unless a great success were morally certain. He advised delay, he advised prudence; he insisted that Lapham ought at least to go out to Kanawha Falls, and see the mines and works, before he put any such sum into the development of the enterprise.

"That's all well enough," cried Lapham; "but if I don't clinch this offer within twenty-four hours, they'll withdraw it, and go into the market; and then where am I?"

"Go on and see them again," said Bellingham. "They can't be so peremptory as that with you. They must give you time to look at what they want to sell. If it turns out what you hope, then — I'll see what can be done. But look into it thoroughly."

"Well!" cried Lapham, helplessly submitting. He took out his watch, and saw that he had forty minutes to catch the four o'clock train. He hurried back to his office, put together some papers preparatory to going, and dispatched a note by his boy to Mrs. Lapham saying that he was starting for New York, and did not know just when he should get back.

The early spring day was raw and cold. As he went out through the office he saw the clerks at work with their street coats and hats on; Miss Dewey had her jacket dragged up on her shoulders and looked particularly comfortable as she operated her machine with her

red fingers. "What's up?" asked Lapham, stopping a moment.

"Seems to be something the matter with the steam," she answered, with the air of unmerited wrong habitual with so many pretty women who have to work for a living.

"Well, take your writer into my room; there's a fire in the stove there," said Lapham, passing out.

Half an hour later his wife came into the outer office. She had passed the day in a passion of self-reproach, gradually mounting from the mental numbness in which he had left her, and now she could wait no longer to tell him that she saw how she had forsaken him in his hour of trial and left him to bear it alone. She wondered at herself in shame and dismay; she wondered that she could have been so confused as to the real point by that old wretch of a Rogers, that she could have let him hoodwink her so, even for a moment. It astounded her that such a thing should have happened, for if there was any virtue upon which this good woman prided herself, in which she thought herself superior to her husband, it was her instant and steadfast perception of right and wrong, and the ability to choose the right to her own hurt. But she had now to confess, as each of us has had likewise to confess in his own case, that the very virtue on which she had prided herself was the thing that had played her false; that she had kept her mind so long upon that old wrong which she believed her husband had done this man that she could not detach it, but clung to the thought of reparation for it when she ought to have seen that he was proposing a piece of roguery as the means. The suffering which Lapham must inflict on him if he decided against him had been more to her apprehension than the harm he might do if he decided for him. But now she owned her limitations to herself, and above everything in the world she wished the man whom her conscience had roused and driven on whither her intelligence had not followed, to do right, to do what he felt to be right, and nothing else. She admired and revered him for going beyond her, and she wished to tell him that she did not know what he had determined to do about Rogers, but that she

* Copyright, 1884, by W. D. Howells. All rights reserved.

knew it was right, and would gladly abide the consequences with him, whatever they were.

She had not been near his place of business for nearly a year, and her heart smote her tenderly as she looked about her there, and thought of the early days when she knew as much about the paint as he did; she wished that those days were back again. She saw Corey at his desk, and she could not bear to speak to him; she dropped her veil that she need not recognize him, and pushed on to Lapham's room, and, opening the door without knocking, shut it behind her.

Then she became aware with intolerable disappointment that her husband was not there. Instead, a very pretty girl sat at his desk, operating a type-writer. She seemed quite at home, and she paid Mrs. Lapham the scant attention which such young women often bestow upon people not personally interesting to them. It vexed the wife that any one else should seem to be helping her husband about business that she had once been so intimate with; and she did not at all like the girl's indifference to her presence. Her hat and sack hung on a nail in one corner, and Lapham's office coat, looking intensely like him to his wife's familiar eye, hung on a nail in the other corner; and Mrs. Lapham liked even less than the girl's good looks this domestication of her garments in her husband's office. She began to ask herself excitedly why he should be away from his office when she happened to come; and she had not the strength at the moment to reason herself out of her unreasonableness.

"When will Colonel Lapham be in, do you suppose?" she sharply asked of the girl.

"I couldn't say exactly," replied the girl, without looking round.

"Has he been out long?"

"I don't know as I noticed," said the girl, looking up at the clock, without looking at Mrs. Lapham. She went on working her machine.

"Well, I can't wait any longer," said the wife abruptly. "When Colonel Lapham comes in, you please tell him Mrs. Lapham wants to see him."

The girl started to her feet and turned toward Mrs. Lapham with a red and startled face, which she did not lift to confront her. "Yes—yes—I will," she faltered.

The wife went home with a sense of defeat mixed with an irritation about this girl which she could not quell or account for. She found her husband's message, and it seemed intolerable that he should have gone to New York without seeing her; she asked herself in vain what the mysterious business could be that took him away so suddenly. She said to

herself that he was neglecting her; he was leaving her out a little too much; and in demanding of herself why he had never mentioned that girl there in his office, she forgot how much she had left herself out of his business life. That was another curse of their prosperity. Well, she was glad the prosperity was going; it had never been happiness. After this she was going to know everything as she used.

She tried to dismiss the whole matter till Lapham returned; and if there had been anything for her to do in that miserable house, as she called it in her thought, she might have succeeded. But again the curse was on her; there was nothing to do; and the looks of that girl kept coming back to her vacancy, her disoccupation. She tried to make herself something to do, but that beauty, which she had not liked, followed her amid the work of overhauling the summer clothing, which Irene had seen to putting away in the fall. Who was the thing, anyway? It was very strange, her being there; why did she jump up in that frightened way when Mrs. Lapham had named herself?

After dark that evening, when the question had worn away its poignancy from mere iteration, a note for Mrs. Lapham was left at the door by a messenger who said there was no answer. "A note for me?" she said, staring at the unknown, and somehow artificial-looking, handwriting of the superscription. Then she opened it and read: "Ask your husband about his lady copying-clerk. A Friend and Well-wisher," who signed the note, gave no other name.

Mrs. Lapham sat helpless with it in her hand. Her brain reeled; she tried to fight the madness off; but before Lapham came back the second morning, it had become, with lessening intervals of sanity and release, a demoniacal possession. She passed the night without sleep, without rest, in the frenzy of the cruellest of the passions, which covers with shame the unhappy soul it possesses, and murderously lusts for the misery of its object. If she had known where to find her husband in New York, she would have followed him; she waited his return in an ecstasy of impatience. In the morning he came back, looking spent and haggard. She saw him drive up to the door, and she ran to let him in herself.

"Who is that girl you've got in your office, Silas Lapham?" she demanded, when her husband entered.

"Girl in my office?"

"Yes! Who is she? What is she doing there?"

"Why, what have you heard about her?"

"Never you mind what I've heard. Who

is she? *Is it Mrs. M. that you gave that money to?* I want to know who she is! I want to know what a respectable man, with grown-up girls of his own, is doing with such a looking thing as that in his office! I want to know how long she's been there! I want to know what she's there at all for!"

He had mechanically pushed her before him into the long, darkened parlor, and he shut himself in there with her now, to keep the household from hearing her lifted voice. For a while he stood bewildered, and could not have answered if he would; and then he would not. He merely asked, "Have I ever accused you of anything wrong, Persis?"

"You no need to!" she answered furiously, placing herself against the closed door.

"Did you ever know me to do anything out of the way?"

"That isn't what I asked you."

"Well, I guess you may find out about that girl yourself. Get away from the door."

"I won't get away from the door."

She felt herself set lightly aside, and her husband opened the door and went out. "I *will* find out about her," she screamed after him. "I'll find out, and I'll disgrace you — I'll teach you how to treat me!"

The air blackened round her; she reeled to the sofa; and then she found herself waking from a faint. She did not know how long she had lain there; she did not care. In a moment her madness came whirling back upon her. She rushed up to his room; it was empty; the closet-doors stood ajar and the drawers were open; he must have packed a bag hastily and fled. She went out, and wandered crazily up and down till she found a hack. She gave the driver her husband's business address, and told him to drive there as fast as he could; and three times she lowered the window to put her head out and ask him if he could not hurry. A thousand things thronged into her mind to support her in her evil will. She remembered how glad and proud that man had been to marry her, and how everybody said she was marrying beneath her when she took him. She remembered how good she had always been to him, how perfectly devoted, slaving early and late to advance him, and looking out for his interests in all things, and sparing herself in nothing. If it had not been for her, he might have been driving stage yet; and since their troubles had begun, the troubles which his own folly and imprudence had brought on them, her conduct had been that of a true and faithful wife. Was *he* the sort of man to be allowed to play her false with impunity? She set her teeth and drew her breath sharply through them, when she thought how willingly she had

let him befool her and delude her about that memorandum of payments to Mrs. M., because she loved him so much, and pitied him for his cares and anxieties. She recalled his confusion, his guilty looks.

She plunged out of the carriage so hastily when she reached the office that she did not think of paying the driver; and he had to call after her when she had got half-way up the stairs. Then she went straight to Lapham's room, with outrage in her heart. There was again no one there but that type-writer girl; she jumped to her feet in a fright, as Mrs. Lapham dashed the door to behind her and flung up her veil.

The two women confronted each other.

"Why, the good land!" cried Mrs. Lapham, "ain't you Zerrilla Millon?"

"I — I'm married," faltered the girl. "My name's Dewey now."

"You're Jim Millon's daughter, anyway. How long have you been here?"

"I haven't been here regularly; I've been here off and on ever since last May."

"Where's your mother?"

"She's here — in Boston."

Mrs. Lapham kept her eyes on the girl, but she dropped, trembling, into her husband's chair, and a sort of amaze and curiosity were in her voice instead of the fury she had meant to put there.

"The Colonel," continued Zerrilla, "he's been helping us, and he's got me a type-writer, so that I can help myself a little. Mother's doing pretty well now; and when Hen isn't around we can get along."

"That your husband?"

"I never wanted to marry him; but he promised to try to get something to do on shore; and mother was all for it, because he had a little property then, and I thought maybe I'd better. But it's turned out just as I said, and if he don't stay away long enough this time to let me get the divorce, — he's agreed to it, time and again, — I don't know what we're going to do." Zerrilla's voice fell, and the trouble which she could keep out of her face usually, when she was comfortably warmed and fed and prettily dressed, clouded it in the presence of a sympathetic listener. "I saw it was you when you came in the other day," she went on; "but you didn't seem to know me. I suppose the Colonel's told you that there's a gentleman going to marry me — Mr. Wemmell's his name — as soon as I get the divorce; but sometimes I'm completely discouraged; it don't seem as if I ever *could* get it."

Mrs. Lapham would not let her know that she was ignorant of the fact attributed to her knowledge. She remained listening to Zerrilla,

and piecing out the whole history of her presence there from the facts of the past, and the traits of her husband's character. One of the things she had always had to fight him about was that idea of his that he was bound to take care of Jim Millon's worthless wife and her child because Millon had got the bullet that was meant for him. It was a perfect superstition of his; she could not beat it out of him; but she had made him promise the last time he had done anything for that woman that it should *be* the last time. He had then got her a little house in one of the fishing ports, where she could take the sailors to board and wash for, and earn an honest living if she would keep straight. That was five or six years ago, and Mrs. Lapham had heard nothing of Mrs. Millon since; she had heard quite enough of her before, and had known her idle and baddish ever since she was the worst little girl at school in Lumberville, and all through her shameful girlhood, and the married days which she had made so miserable to the poor fellow who had given her his decent name and a chance to behave herself. Mrs. Lapham had no mercy on Moll Millon, and she had quarreled often enough with her husband for befriending her. As for the child, if the mother would put Zerrilla out with some respectable family, that would be *one* thing; but as long as she kept Zerrilla with her, she was against letting her husband do anything for either of them. He had done ten times as much for them now as he had any need to, and she had made him give her his solemn word that he would do no more. She saw now that she was wrong to make him give it, and that he must have broken it again and again for the reason that he had given when she once scolded him for throwing away his money on that hussy:

"When I think of Jim Millon, I've *got* to; that's all."

She recalled now that whenever she had brought up the subject of Mrs. Millon and her daughter, he had seemed shy of it, and had dropped it with some guess that they were getting along now. She wondered that she had not thought at once of Mrs. Millon when she saw that memorandum about Mrs. M.; but the woman had passed so entirely out of her life, that she had never dreamt of her in connection with it. Her husband had deceived her, yet her heart was no longer hot against him, but rather tenderly grateful that his deceit was in this sort, and not in that other. All cruel and shameful doubt of him went out of it. She looked at this beautiful girl, who had blossomed out of her knowledge since she saw her last, and she knew that she was only a blossomed weed, of the

same worthless root as her mother, and saved, if saved, from the same evil destiny by the good of her father in her; but so far as the girl and her mother were concerned, Mrs. Lapham knew that her husband was to blame for nothing but his willful, wrong-headed kind-heartedness, which her own exactions had turned into deceit. She remained awhile, questioning the girl quietly about herself and her mother, and then, with a better mind towards Zerrilla, at least, than she had ever had before, she rose up and went out. There must have been some outer hint of the exhaustion in which the subsidence of her excitement had left her within, for before she had reached the head of the stairs, Corey came towards her.

"Can I be of any use to you, Mrs. Lapham? The Colonel was here just before you came in, on his way to the train."

"Yes,—yes. I didn't know—I thought perhaps I could catch him here. But it don't matter. I wish you would let some one go with me to get a carriage," she begged feebly.

"I'll go with you myself," said the young fellow, ignoring the strangeness in her manner. He offered her his arm in the twilight of the staircase, and she was glad to put her trembling hand through it, and keep it there till he helped her into a hack which he found for her. He gave the driver her direction, and stood looking a little anxiously at her.

"I thank you; I am all right now," she said, and he bade the man drive on.

When she reached home she went to bed, spent with the tumult of her emotions and sick with shame and self-reproach. She understood now, as clearly as if he had told her in so many words, that if he had befriended these worthless jades—the Millons characterized themselves so, even to Mrs. Lapham's remorse—secretly and in defiance of her, it was because he dreaded her blame, which was so sharp and bitter, for what he could not help doing. It consoled her that he had defied her; deceived her; when he came back she should tell him that; and then it flashed upon her that she did not know where he was gone, or whether he would ever come again. If he never came, it would be no more than she deserved; but she sent for Penelope, and tried to give herself hopes of escape from this just penalty.

Lapham had not told his daughter where he was going; she had heard him packing his bag, and had offered to help him; but he had said he could do it best, and had gone off, as he usually did, without taking leave of any one.

"What were you talking about so loud, down in the parlor," she asked her mother, "just before he came up? Is there any new trouble?"

"No; it was nothing."

"I couldn't tell. Once I thought you were laughing." She went about, closing the curtains on account of her mother's headache, and doing awkwardly and imperfectly the things that Irene would have done so skillfully for her comfort.

The day wore away to nightfall, and then Mrs. Lapham said she *must* know. Penelope said there was no one to ask; the clerks would all be gone home; and her mother said yes, there was Mr. Corey; they could send and ask him; he would know.

The girl hesitated. "Very well," she said then, scarcely above a whisper, and she presently laughed huskily. "Mr. Corey seems fated to come in somewhere. I guess it's a Providence, mother."

She sent off a note, inquiring whether he could tell her just where her father had expected to be that night; and the answer came quickly back that Corey did not know, but would look up the book-keeper and inquire. This office brought him in person, an hour later, to tell Penelope that the Colonel was to be at Lapham that night and next day.

"He came in from New York in a great hurry, and rushed off as soon as he could pack his bag," Penelope explained, "and we hadn't a chance to ask him where he was to be to-night. And mother wasn't very well, and ——"

"I thought she wasn't looking well when she was at the office to-day; and so I thought I would come rather than send," Corey explained, in his turn.

"Oh, thank you!"

"If there is anything I can do—telegraph Colonel Lapham, or anything?"

"Oh, no, thank you; mother's better now. She merely wanted to be sure where he was."

He did not offer to go upon this conclusion of his business, but hoped he was not keeping her from her mother. She thanked him once again, and said no, that her mother was much better since she had had a cup of tea; and then they looked at each other, and without any apparent exchange of intelligence he remained, and at eleven o'clock he was still there. He was honest in saying he did not know it was so late; but he made no pretense of being sorry, and she took the blame to herself.

"I oughtn't to have let you stay," she said. "But with father gone, and all that trouble hanging over us ——"

She was allowing him to hold her hand a moment at the door, to which she had followed him.

"I'm so glad you could let me!" he said;

"and I want to ask you now when I may come again. But if you need me, you'll ——"

A sharp pull at the door-bell outside made them start asunder, and at a sign from Penelope, who knew that the maids were abed by this time, he opened it.

"Why, Irene!" shrieked the girl.

Irene entered, with the hackman, who had driven her unheard to the door, following with her small bags, and kissed her sister with resolute composure. "That's all," she said to the hackman. "I gave my checks to the expressman," she explained to Penelope.

Corey stood helpless. Irene turned upon him, and gave him her hand. "How do you do, Mr. Corey?" she said, with a courage that sent a thrill of admiring gratitude through him. "Where's mamma, Pen? Papa gone to bed?"

Penelope faltered out some reply embodying the facts, and Irene ran up the stairs to her mother's room. Mrs. Lapham started up in bed at her apparition.

"Irene Lapham!"

"Uncle William thought he ought to tell me the trouble papa was in; and did you think I was going to stay off there junketing, while you were going through all this at home, and Pen acting so silly too? You ought to have been ashamed to let me stay so long! I started just as soon as I could pack. Did you get my dispatch? I telegraphed from Springfield. But it don't matter now. Here I am. And I don't think I need have hurried on Pen's account," she added, with an accent prophetic of the sort of old maid she would become if she happened never to marry.

"Did you see him?" asked her mother. "It's the first time he's been here since she told him he mustn't come."

"I guess it isn't the last time, by the looks," said Irene; and before she took off her bonnet she began to undo some of Penelope's mistaken arrangements of the room.

At breakfast, where Corey and his mother met the next morning before his father and sisters came down, he told her, with embarrassment which told much more, that he wished now that she would go and call upon the Laphams.

Mrs. Corey turned a little pale, but shut her lips tight and mourned in silence whatever hopes she had lately permitted herself. She answered with Roman fortitude: "Of course, if there's anything between you and Miss Lapham, your family ought to recognize it."

"Yes," said Corey.

"You were reluctant to have me call at first, but now if the affair is going on ——"

"It is! I hope—yes, it is!"

"Then I ought to go and see her, with your sisters; and she ought to come here and—we ought all to see her and make the matter public. We can't do so too soon. It will seem as if we were ashamed if we don't."

"Yes, you are quite right, mother," said the young man gratefully, "and I feel how kind and good you are. I have tried to consider you in this matter, though I don't seem to have done so; I know what your rights are, and I wish with all my heart that I were meeting even your tastes perfectly. But I know you will like her when you come to know her. It's been very hard for her every way,—about her sister,—and she's made a great sacrifice for me. She's acted nobly."

Mrs. Corey, whose thoughts cannot always be reported, said she was sure of it, and that all she desired was her son's happiness.

"She's been very unwilling to consider it an engagement on that account, and on account of Colonel Lapham's difficulties. I should like to have you go, now, for that very reason. I don't know just how serious the trouble is; but it isn't a time when we can seem indifferent."

The logic of this was not perhaps so apparent to the glasses of fifty as to the eyes of twenty-six; but Mrs. Corey, however she viewed it, could not allow herself to blench before the son whom she had taught that to want magnanimity was to be less than gentlemanly. She answered, with what composure she could, "I will take your sisters," and then she made some natural inquiries about Lapham's affairs.

"Oh, I hope it will come out all right," Corey said, with a lover's vague smile, and left her. When his father came down, rubbing his long hands together, and looking aloof from all the cares of the practical world, in an artistic withdrawal, from which his eye ranged over the breakfast-table before he sat down, Mrs. Corey told him what she and their son had been saying.

He laughed, with a delicate impersonal appreciation of the predicament. "Well, Anna, you can't say but if you ever were guilty of supposing yourself porcelain, this is a just punishment of your arrogance. Here you are bound by the very quality on which you've prided yourself to behave well to a bit of earthenware who is apparently in danger of losing the gilding that rendered her tolerable."

"We never cared for the money," said Mrs. Corey. "You know that."

"No; and now we can't seem to care for the loss of it. That would be still worse. Either horn of the dilemma gores us. Well, we still have the comfort we had in the beginning; we can't help ourselves, and we

should only make bad worse by trying. Unless we can look to Tom's inamorata herself for help."

Mrs. Corey shook her head so gloomily that her husband broke off with another laugh. But at the continued trouble of her face he said, sympathetically: "My dear, I know it's a very disagreeable affair; and I don't think either of us has failed to see that it was so from the beginning. I have had my way of expressing my sense of it, and you yours, but we have always been of the same mind about it. We would both have preferred to have Tom marry in his own set; the Laphams are about the last set we could have wished him to marry into. They *are* uncultivated people, and, so far as I have seen them, I'm not able to believe that poverty will improve them. Still, it may. Let us hope for the best, and let us behave as well as we know how. I'm sure *you* will behave well, and I shall try. I'm going with you to call on Miss Lapham. This is a thing that can't be done by halves!"

He cut his orange in the Neapolitan manner, and ate it in quarters.

XXVII.

IRENE did not leave her mother in any illusion concerning her cousin Will and herself. She said they had all been as nice to her as they could be, and when Mrs. Lapham hinted at what had been in her thoughts,—or her hopes, rather,—Irene severely snubbed the notion. She said that he was as good as engaged to a girl out there, and that he had never dreamt of her. Her mother wondered at her severity; in these few months the girl had toughened and hardened; she had lost all her babyish dependence and pliability; she was like iron; and here and there she was sharpened to a cutting edge. It had been a life and death struggle with her; she had conquered, but she had also necessarily lost much. Perhaps what she had lost was not worth keeping; but at any rate she had lost it.

She required from her mother a strict and accurate account of her father's affairs, so far as Mrs. Lapham knew them; and she showed a business-like quickness in comprehending them that Penelope had never pretended to. With her sister she ignored the past as completely as it was possible to do; and she treated both Corey and Penelope with the justice which their innocence of voluntary offense deserved. It was a difficult part, and she kept away from them as much as she

could. She had been easily excused, on a plea of fatigue from her journey, when Mr. and Mrs. Corey had called the day after her arrival, and, Mrs. Lapham being still unwell, Penelope received them alone.

The girl had instinctively judged best that they should know the worst at once, and she let them have the full brunt of the drawing-room, while she was screwing her courage up to come down and see them. She was afterwards—months afterwards—able to report to Corey that when she entered the room his father was sitting with his hat on his knees, a little tilted away from the Emancipation group, as if he expected the Lincoln to hit him with that lifted hand of benediction; and that Mrs. Corey looked as if she were not sure but the Eagle pecked. But for the time being Penelope was as nearly crazed as might be by the complications of her position, and received her visitors with a piteous distraction which could not fail of touching Bromfield Corey's Italianized sympatheticism. He was very polite and tender with her at first, and ended by making a joke with her, to which Penelope responded in her sort. He said he hoped they parted friends, if not quite acquaintances; and she said she hoped they would be able to recognize each other if they ever met again.

"That is what I meant by her pertness," said Mrs. Corey, when they were driving away.

"Was it very pert?" he queried. "The child had to answer something."

"I would much rather she had answered nothing, under the circumstances," said Mrs. Corey. "However!" she added hopelessly.

"Oh, she's a merry little grig, you can see that, and there's no harm in her. I can understand a little why a formal fellow like Tom should be taken with her. She hasn't the least reverence, I suppose, and joked with the young man from the beginning. You must remember, Anna, that there was a time when you liked my joking."

"It was a very different thing!"

"But that drawing-room!" pursued Corey; "really, I don't see how Tom stands that. Anna, a terrible thought occurs to me! Fancy Tom being married in front of that group, with a floral horse-shoe in tuberoses coming down on either side of it!"

"Bromfield!" cried his wife, "you are unmerciful."

"No, no, my dear," he argued; "merely imaginative. And I can even imagine that little thing finding Tom just the least bit slow at times, if it were not for his goodness. Tom is so kind that I'm convinced he sometimes feels your joke in his heart when his

head isn't quite clear about it. Well, we will not despond, my dear."

"Your father seemed actually to like her," Mrs. Corey reported to her daughters, very much shaken in her own prejudices by the fact. If the girl were not so offensive to his fastidiousness, there might be some hope that she was not so offensive as Mrs. Corey had thought. "I wonder how she will strike *you*," she concluded, looking from one daughter to another, as if trying to decide which of them would like Penelope least.

Irene's return and the visit of the Coreys formed a distraction for the Laphams in which their impending troubles seemed to hang farther aloof; but it was only one of those reliefs which mark the course of adversity, and it was not one of the cheerful reliefs. At any other time, either incident would have been an anxiety and care for Mrs. Lapham which she would have found hard to bear; but now she almost welcomed them. At the end of three days Lapham returned, and his wife met him as if nothing unusual had marked their parting; she reserved her atonement for a fitter time; he would know now from the way she acted that she felt all right towards him. He took very little note of her manner, but met his family with an austere quiet that puzzled her, and a sort of pensive dignity that refined his rudeness to an effect that sometimes comes to such natures after long sickness, when the animal strength has been taxed and lowered. He sat silent with her at the table after their girls had left them alone; and seeing that he did not mean to speak, she began to explain why Irene had come home, and to praise her.

"Yes, she done right," said Lapham. "It was time for her to come," he added gently.

Then he was silent again, and his wife told him of Corey's having been there, and of his father's and mother's calling. "I guess Pen concluded to make it up," she said.

"Well, we'll see about that," said Lapham; and now she could no longer forbear to ask him about his affairs.

"I don't know as I've got any right to know anything about it," she said humbly, with remote allusion to her treatment of him. "But I can't help wanting to know. How *are* things going, Si?"

"Bad," he said, pushing his plate from him, and tilting himself back in his chair. "Or they ain't going at all. They've stopped."

"What do you mean, Si?" she persisted tenderly.

"I've got to the end of my string. Tomorrow I shall call a meeting of my creditors, and put myself in their hands. If there's enough left to satisfy them, I'm satisfied." His

voice dropped in his throat; he swallowed once or twice, and then did not speak.

"Do you mean that it's all over with you?" she asked fearfully.

He bowed his big head, wrinkled and grizzled; and after a while he said, "It's hard to realize it; but I guess there ain't any doubt about it." He drew a long breath, and then he explained to her about the West Virginia people, and how he had got an extension of the first time they had given him, and had got a man to go up to Lapham with him and look at the works,—a man that had turned up in New York, and wanted to put money in the business. His money would have enabled Lapham to close with the West Virginians. "The devil was in it, right straight along," said Lapham. "All I had to do was to keep quiet about that other company. It was Rogers and his property right over again. He liked the look of things, and he wanted to go into the business, and he had the money—plenty; it would have saved me with those West Virginia folks. But I had to tell him how I stood. I had to tell him all about it, and what I wanted to do. He began to back water in a minute, and the next morning I saw that it was up with him. He's gone back to New York. I've lost my last chance. Now all I've got to do is to save the pieces."

"Will—will—everything go?" she asked.

"I can't tell yet. But they shall have a chance at everything—every dollar, every cent. I'm sorry for you, Persis—and the girls."

"Oh, don't talk of *us*!" She was trying to realize that the simple, rude soul to which her heart clove in her youth, but which she had put to such cruel proof with her unsparing conscience and her unsparing tongue, had been equal to its ordeals, and had come out unscathed and unstained. He was able in his talk to make so little of them; he hardly seemed to see what they were; he was apparently not proud of them, and certainly not glad; if they were victories of any sort, he bore them with the patience of defeat. His wife wished to praise him, but she did not know how; so she offered him a little reproach, in which alone she touched the cause of her behavior at parting. "Silas," she asked after a long gaze at him, "why didn't you tell me you had Jim Millon's girl there?"

"I didn't suppose you'd like it, Persis," he answered. "I did intend to tell you at first, but then I put it off. I thought you'd come round some day, and find it out for yourself."

"I'm punished," said his wife, "for not taking enough interest in your business to even come near it. If we're brought back to the

day of small things, I guess it's a lesson for me, Silas."

"Oh, I don't know about the lesson," he said wearily.

That night she showed him the anonymous scrawl which had kindled her fury against him. He turned it listlessly over in his hand. "I guess I know who it's from," he said, giving it back to her, "and I guess you do too, Persis."

"But how—how could he——"

"Mebbe he believed it," said Lapham, with patience that cut her more keenly than any reproach. "You did."

Perhaps because the process of his ruin had been so gradual, perhaps because the excitement of preceding events had exhausted their capacity for emotion, the actual consummation of his bankruptcy brought a relief, a repose to Lapham and his family, rather than a fresh sensation of calamity. In the shadow of his disaster they returned to something like their old, united life; they were at least all together again; and it will be intelligible to those whom life has blessed with vicissitude, that Lapham should come home the evening after he had given up everything to his creditors, and should sit down to his supper so cheerful that Penelope could joke him in the old way, and tell him that she thought from his looks they had concluded to pay him a hundred cents on every dollar he owed them.

As James Bellingham had taken so much interest in his troubles from the first, Lapham thought he ought to tell him, before taking the final step, just how things stood with him, and what he meant to do. Bellingham made some futile inquiries about his negotiations with the West Virginians, and Lapham told him they had come to nothing. He spoke of the New York man, and the chance that he might have sold out half his business to him. "But, of course, I had to let him know how it was about those fellows."

"Of course," said Bellingham, not seeing till afterwards the full significance of Lapham's action.

Lapham said nothing about Rogers and the Englishmen. He believed that he had acted right in that matter, and he was satisfied; but he did not care to have Bellingham, or anybody, perhaps think he had been a fool.

All those who were concerned in his affairs said he behaved well, and even more than well, when it came to the worst. The prudence, the good sense, which he had shown in the first years of his success, and of which his great prosperity seemed to have bereft him, came back; and these qualities, used in his own behalf, commended him as much to

his creditors as the anxiety he showed that no one should suffer by him; this even made some of them doubtful of his sincerity. They gave him time, and there would have been no trouble in his resuming on the old basis, if the ground had not been cut from under him by the competition of the West Virginia company. He saw himself that it was useless to try to go on in the old way, and he preferred to go back and begin the world anew where he had first begun it, in the hills at Lapham. He put the house at Nankeen Square, with everything else he had, into the payment of his debts, and Mrs. Lapham found it easier to leave it for the old farmstead in Vermont than it would have been to go from that home of many years to the new house on the water side of Beacon. This thing and that is embittered to us, so that we may be willing to relinquish it; the world, life itself, is embittered to most of us, so that we are glad to have done with them at last; and this home was haunted with such memories to each of those who abandoned it that to go was less exile than escape. Mrs. Lapham could not look into Irene's room without seeing the girl there before her glass, tearing the poor little keepsakes of her hapless fancy from their hiding-places to take them and fling them in passionate renunciation upon her sister; she could not come into the sitting-room, where her little ones had grown up, without starting at the thought of her husband sitting so many weary nights at his desk there, trying to fight his way back to hope out of the ruin into which he was slipping. When she remembered that night when Rogers came, she hated the place. Irene accepted her release from the house eagerly, and was glad to go before and prepare for the family at Lapham. Penelope was always ashamed of her engagement there; it must seem better somewhere else, and she was glad to go too. No one but Lapham, in fact, felt the pang of parting in all its keenness. Whatever regret the others had was softened to them by the likeness of their flitting to many of those removals for the summer which they made in the late spring when they left Nankeen Square; they were going directly into the country instead of to the seaside first; but Lapham, who usually remained in town long after they had gone, knew all the difference. For his nerves there was no mechanical sense of coming back; this was as much the end of his proud, prosperous life as death itself could have been. He was returning to begin life anew, but he knew, as well as he knew that he should not find his vanished youth in his native hills, that it could never again be the triumph that it had been. That

was impossible, not only in his stiffened and weakened forces, but in the very nature of things. He was going back, by grace of the man whom he owed money, to make what he could out of the one chance which his successful rivals had left him.

In one phase his paint had held its own against bad times and ruinous competition, and it was with the hope of doing still more with the Persis Brand that he now set himself to work. The West Virginia people confessed that they could not produce those fine grades, and they willingly left the field to him. A strange, not ignoble friendliness existed between Lapham and the three brothers; they had used him fairly; it was their facilities that had conquered him, not their ill-will; and he recognized in them without enmity the necessity to which he had yielded. If he succeeded in his efforts to develop his paint in this direction, it must be for a long time on a small scale compared with his former business, which it could never equal, and he brought to them the flagging energies of an elderly man. He was more broken than he knew by his failure; it did not kill, as it often does, but it weakened the spring once so strong and elastic. He lapsed more and more into acquiescence with his changed condition, and that bragging note of his was rarely sounded. He worked faithfully enough in his enterprise, but sometimes he failed to seize occasions that in his younger days he would have turned to golden account. His wife saw in him a daunted look that made her heart ache for him.

One result of his friendly relations with the West Virginia people was that Corey went in with them, and the fact that he did so solely upon Lapham's advice, and by means of his recommendation, was perhaps the Colonel's proudest consolation. Corey knew the business thoroughly, and after half a year at Kanawha Falls and in the office at New York, he went out to Mexico and Central America, to see what could be done for them upon the ground which he had theoretically studied with Lapham.

Before he went he came up to Vermont, and urged Penelope to go with him. He was to be first in the city of Mexico, and if his mission was successful he was to be kept there and in South America several years, watching the new railroad enterprises and the development of mechanical agriculture and whatever other undertakings offered an opening for the introduction of the paint. They were all young men together, and Corey, who had put his money into the company, had a proprietary interest in the success which they were eager to achieve.

"There's no more reason now and no less than ever there was," mused Penelope, in counsel with her mother, "why I should say Yes, or why I should say No. Everything else changes, but this is just where it was a year ago. It don't go backward, and it don't go forward. Mother, I believe I shall take the bit in my teeth—if anybody will put it there!"

"It isn't the same as it was," suggested her mother. "You can see that Irene's all over it."

"That's no credit to me," said Penelope. "I ought to be just as much ashamed as ever."

"You no need ever to be ashamed."

"That's true, too," said the girl. "And I can sneak off to Mexico with a good conscience if I could make up my mind to it." She laughed. "Well, if I could be *sentenced* to be married, or somebody would up and forbid the banns! I don't know what to do about it."

Her mother left her to carry her hesitation back to Corey, and she said now they had better go all over it and try to reason it out. "And I hope that whatever I do, it won't be for my own sake, but for—others!"

Corey said he was sure of that, and looked at her with eyes of patient tenderness.

"I don't say it is wrong," she proceeded, rather aimlessly, "but I can't make it seem right. I don't know whether I can make you understand, but the idea of being happy, when everybody else is so miserable, is more than I can endure. It makes me wretched."

"Then perhaps that's your share of the common suffering," suggested Corey, smiling.

"Oh, you know it isn't! You know it's nothing. Oh! One of the reasons is what I told you once before, that as long as father is in trouble I can't let you think of me. Now that he's lost everything——" She bent her eyes inquiringly upon him, as if for the effect of this argument.

"I don't think that's a very good reason," he answered seriously, but smiling still. "Do you believe me when I tell you that I love you?"

"Why, I suppose I must," she said, dropping her eyes.

"Then why shouldn't I think all the more of you on account of your father's loss? You didn't suppose I cared for you because he was prosperous?" There was a shade of reproach, ever so delicate and gentle, in his smiling question, which she felt.

"No, I couldn't think such a thing of you. I—I don't know what I meant. I meant that——" She could not go on and say that she had felt herself more worthy of him because of her father's money; it would not have been true; yet there was no other ex-

planation. She stopped and cast a helpless glance at him.

He came to her aid. "I understand why you shouldn't wish me to suffer by your father's misfortunes."

"Yes, that was it; and there is too great a difference every way. We ought to look at that again. You mustn't pretend that you don't know it, for that wouldn't be true. Your mother will never like me, and perhaps—perhaps I shall not like her."

"Well," said Corey, a little daunted, "you won't have to marry my family."

"Ah, that isn't the point!"

"I know it," he admitted. "I won't pretend that I don't see what you mean; but I'm sure that all the differences would disappear when you came to know my family better. I'm not afraid but you and my mother will like each other—she can't help it!" he exclaimed, less judicially than he had hitherto spoken, and he went on to urge some points of doubtful tenability. "We have our ways, and you have yours; and while I don't say but what you and my mother and sisters would be a little strange together at first, it would soon wear off on both sides. There can't be anything hopelessly different in you all, and if there were it wouldn't be any difference to me."

"Do you think it would be pleasant to have you on my side against your mother?"

"There won't be any sides. Tell me just what it is you're afraid of."

"Afraid?"

"Thinking of, then."

"I don't know. It isn't anything they say or do," she explained, with her eyes intent on his. "It's what they are. I couldn't be natural with them, and if I can't be natural with people, I'm disagreeable."

"Can you be natural with me?"

"Oh, I'm not afraid of you. I never was. That was the trouble from the beginning."

"Well, then, that's all that's necessary. And it never was the least trouble to me!"

"It made me untrue to Irene."

"You mustn't say that! You were always true to her."

"She cared for you first."

"Well, but I never cared for her at all!" he besought her.

"She thought you did."

"That was nobody's fault, and I can't let you make it yours. My dear——"

"Wait. We must understand each other," said Penelope, rising from her seat to prevent an advance he was making from his; "I want you to realize the whole affair. Should you want a girl who hadn't a cent in the world, and felt different in your mother's company, and had cheated and betrayed her own sister?"

"I want you!"

"Very well, then, you can't have me. I should always despise myself. I ought to give you up for all these reasons. Yes, I must." She looked at him intently, and there was a tentative quality in her affirmations.

"Is this your answer?" he said. "I must submit. If I asked too much of you, I was wrong. And—good-bye."

He held out his hand, and she put hers in it. "You think I'm capricious and fickle!" she said. "I can't help it—I don't know myself. I can't keep to one thing for half a day at a time. But it's right for us to part—yes, it must be. It must be," she repeated; "and I shall try to remember that. Good-bye! I will try to keep that in my mind, and you will too—you won't care, very soon! I didn't mean *that*—no; I know how true you are; but you will soon look at me differently, and see that even if there hadn't been this about Irene, I was not the one for you. You do think so, don't you?" she pleaded, clinging to his hand. "I am not at all what they would like—your family; I felt that. I am little, and black, and homely, and they don't understand my way of talking, and now that we've lost everything—No, I'm not fit. Good-bye. You're quite right not to have patience with me any longer. I've tried you enough. I ought to be willing to marry you against their wishes if you want me to, but I can't make the sacrifice—I'm too selfish for that." All at once she flung herself on his breast. "I can't even give you up! I shall never dare look any one in the face again. Go, go! But take me with you! I tried to do without you! I gave it a fair trial, and it was a dead failure. Oh, poor Irene! How could *she* give you up?"

Corey went back to Boston immediately, and left Penelope, as he must, to tell her sister that they were to be married. She was spared from the first advance toward this by an accident or a misunderstanding. Irene came straight to her after Corey was gone, and demanded, "Penelope Lapham, have you been such a ninny as to send that man away on my account?"

Penelope recoiled from this terrible courage; she did not answer directly, and Irene went on, "Because if you did, I'll thank you to bring him back again. I'm not going to have him thinking that I'm dying for a man that never cared for me. It's insulting, and I'm not going to stand it. Now, you just send for him!"

"Oh, I will, 'Rene," gasped Penelope. And then she added, shamed out of her prevarication by Irene's haughty magnanimity, "I have. That is—he's coming back——"

Irene looked at her a moment, and then, whatever thought was in her mind, said fiercely, "Well!" and left her to her dismay—her dismay and her relief, for they both knew that this was the last time they should ever speak of that again.

The marriage came after so much sorrow and trouble, and the fact was received with so much misgiving for the past and future, that it brought Lapham none of the triumph in which he had once exulted at the thought of an alliance with the Coreys. Adversity had so far been his friend that it had taken from him all hope of the social success for which people crawl and truckle, and restored him, through failure and doubt and heartache, the manhood which his prosperity had so nearly stolen from him. Neither he nor his wife thought now that their daughter was marrying a Corey; they thought only that she was giving herself to the man who loved her, and their acquiescence was sobered still further by the presence of Irene. Their hearts were far more with her.

Again and again Mrs. Lapham said she did not see how she could go through it. "I can't make it seem right," she said.

"It *is* right," steadily answered the Colonel.

"Yes, I know. But it don't *seem* so."

It would be easy to point out traits in Penelope's character which finally reconciled all her husband's family and endeared her to them. These things continually happen in novels; and the Coreys, as they had always promised themselves to do, made the best, and not the worst, of Tom's marriage.

They were people who could value Lapham's behavior as Tom reported it to them. They were proud of him, and Bromfield Corey, who found a delicate, æsthetic pleasure in the heroism with which Lapham had withstood Rogers and his temptations,—something finely dramatic and unconsciously effective,—wrote him a letter which would once have flattered the rough soul almost to ecstasy, though now he affected to slight it in showing it. "It's all right if it makes it more comfortable for Pen," he said to his wife.

But the differences remained uneffaced, if not uneffaceable, between the Coreys and Tom Corey's wife. "If he had only married the Colonel!" subtly suggested Nanny Corey.

There was a brief season of civility and forbearance on both sides, when he brought her home before starting for Mexico, and her father-in-law made a sympathetic feint of liking Penelope's way of talking, but it is questionable if even he found it so delightful as her husband did. Lily Corey made a little, ineffectual sketch of her, which she put by

with other studies to finish up some time, and found her rather picturesque in some ways. Nanny got on with her better than the rest, and saw possibilities for her in the country to which she was going. "As she's quite unformed socially," she explained to her mother, "there is a chance that she will form herself on the Spanish manner, if she stays there long enough, and that when she comes back she will have the charm of not olives, perhaps, but *tortillas*, whatever they are: something strange and foreign, even if it's borrowed. I'm glad she's going to Mexico. At that distance we can — correspond."

Her mother sighed, and said bravely that she was sure they all got on very pleasantly as it was, and that she was perfectly satisfied if Tom was.

There was, in fact, much truth in what she said of their harmony with Penelope. Having resolved, from the beginning, to make the best of the worst, it might almost be said that they were supported and consoled in their good intentions by a higher power. This marriage had not, thanks to an overruling Providence, brought the succession of Lapham teas upon Bromfield Corey which he had dreaded; the Laphams were far off in their native fastnesses, and neither Lily nor Nanny Corey was obliged to sacrifice herself to the conversation of Irene; they were not even called upon to make a social demonstration for Penelope at a time when, most people being still out of town, it would have been so easy; she and Tom had both begged that there might be nothing of that kind; and though none of the Coreys learned to know her very well in the week she spent with them, they did not find it hard to get on with her. There were even moments when Nanny Corey, like her father, had glimpses of what Tom had called her humor, but it was perhaps too unlike their own to be easily recognizable.

Whether Penelope, on her side, found it more difficult to harmonize, I cannot say. She had much more of the harmonizing to do, since they were four to one; but then she had gone through so much greater trials before. When the door of their carriage closed and it drove off with her and her husband to the station, she fetched a long sigh.

"What is it?" asked Corey, who ought to have known better.

"Oh, nothing. I don't think I shall feel strange amongst the Mexicans now."

He looked at her with a puzzled smile, which grew a little graver, and then he put his arm round her and drew her closer to him. This made her cry on his shoulder. "I only meant that I should have you all to myself." There is no proof that she meant more, but it

is certain that our manners and customs go for more in life than our qualities. The price that we pay for civilization is the fine yet impassable differentiation of these. Perhaps we pay too much; but it will not be possible to persuade those who have the difference in their favor that this is so. They may be right; and at any rate the blank misgiving, the recurring sense of disappointment to which the young people's departure left the Coreys is to be considered. That was the end of their son and brother for them; they felt that; and they were not mean or unamiable people.

He remained three years away. Some changes took place in that time. One of these was the purchase by the Kanawha Falls Company of the mines and works at Lapham. The transfer relieved Lapham of the load of debt which he was still laboring under, and gave him an interest in the vaster enterprise of the younger men, which he had once vainly hoped to grasp all in his own hand. He began to tell of this coincidence as something very striking; and pushing on more actively the special branch of the business left to him, he bragged, quite in his old way, of its enormous extension. His son-in-law, he said, was pushing it in Mexico and Central America: an idea that they had originally had in common. Well, young blood was what was wanted in a thing of that kind. Now, those fellows out in West Virginia: all young, and a perfect team!

For himself, he owned that he had made mistakes; he could see just where the mistakes were—put his finger right on them. But one thing he could say: he had been no man's enemy but his own; every dollar, every cent had gone to pay his debts; he had come out with clean hands. He said all this, and much more, to Mr. Sewell the summer after he sold out, when the minister and his wife stopped at Lapham on their way across from the White Mountains to Lake Champlain; Lapham had found them on the cars, and pressed them to stop off.

There were times when Mrs. Lapham had as great pride in the clean-handedness with which Lapham had come out as he had himself, but her satisfaction was not so constant. At those times, knowing the temptations he had resisted, she thought him the noblest and grandest of men; but no woman could endure to live in the same house with a perfect hero, and there were other times when she reminded him that if he had kept his word to her about speculating in stocks, and had looked after the insurance of his property half as carefully as he had looked after a couple of worthless women who had no earthly claim on him, they would not be

where they were now. He humbly admitted it all, and left her to think of Rogers herself. She did not fail to do so, and the thought did not fail to restore him to her tenderness again.

I DO not know how it is that clergymen and physicians keep from telling their wives the secrets confided to them; perhaps they can trust their wives to find them out for themselves whenever they wish. Sewell had laid before his wife the case of the Laphams after they came to consult with him about Corey's proposal to Penelope, for he wished to be confirmed in his belief that he had advised them soundly; but he had not given her their names, and he had not known Corey's himself. Now he had no compunctions in talking the affair over with her without the veil of ignorance which she had hitherto assumed, for she declared that as soon as she heard of Corey's engagement to Penelope, the whole thing had flashed upon her. "And that night at dinner, I could have told the child that he was in love with her sister by the way he talked about her; I heard him; and if she had not been so blindly in love with him herself, she would have known it too. I must say, I can't help feeling a sort of contempt for her sister."

"Oh, but you must not!" cried Sewell. "That is wrong, cruelly wrong. I'm sure that's out of your novel-reading, my dear, and not out of your heart. Come! it grieves me to hear you say such a thing as that."

"Oh, I dare say this pretty thing has got over it—how much character she has got!—and I suppose she'll see somebody else."

Sewell had to content himself with this partial concession. As a matter of fact, unless it was the young West Virginian who had come on to arrange the purchase of the Works, Irene had not yet seen any one, and whether there was ever anything between them is a fact that would need a separate inquiry. It is certain that at the end of five years after the disappointment which she met so bravely, she was still unmarried. But she was even then still very young, and her life at Lapham had been varied by visits to the West. It had also been varied by an invitation, made with the politest resolution by Mrs. Corey, to visit in Boston, which the girl was equal to refusing in the same spirit.

Sewell was intensely interested in the moral spectacle which Lapham presented under his changed conditions. The Colonel, who was more the Colonel in those hills than he could ever have been on the Back Bay, kept him and Mrs. Sewell over night at his house; and he showed the minister minutely round the Works

and drove him all over his farm. For this expedition he employed a lively colt which had not yet come of age, and an open buggy long past its prime, and was no more ashamed of his turnout than of the finest he had ever driven on the Milldam. He was rather shabby and slovenly in dress, and he had fallen unkempt, after the country fashion, as to his hair and beard and boots. The house was plain, and was furnished with the simpler movables out of the house in Nankeen Square. There were certainly all the necessaries, but no luxuries, unless the statues of Prayer and Faith might be so considered. The Laphams now burned kerosene, of course, and they had no furnace in the winter; these were the only hardships the Colonel complained of; but he said that as soon as the company got to paying dividends again,—he was evidently proud of the outlays that for the present prevented this,—he should put in steam-heat and naphthagas. He spoke freely of his failure, and with a confidence that seemed inspired by his former trust in Sewell, whom, indeed, he treated like an intimate friend, rather than an acquaintance of two or three meetings. He went back to his first connection with Rogers, and he put before Sewell hypothetically his own conclusions in regard to the matter.

"Sometimes," he said, "I get to thinking it all over, and it seems to me I done wrong about Rogers in the first place; that the whole trouble came from that. It was just like starting a row of bricks. I tried to catch up, and stop 'em from going, but they all tumbled, one after another. It wa'n't in the nature of things that they could be stopped till the last brick went. I don't talk much with my wife any more about it; but I should like to know how it strikes you."

"We can trace the operation of evil in the physical world," replied the minister, "but I'm more and more puzzled about it in the moral world. There its course is often so very obscure; and often it seems to involve, so far as we can see, no penalty whatever. And in your own case, as I understand, you don't admit—you don't feel sure—that you ever actually did wrong this man."

"Well, no; I don't. That is to say——"

He did not continue, and after a while Sewell said, with that subtle kindness of his, "I should be inclined to think—nothing can be thrown quite away; and it can't be that our sins only weaken us—that your fear of having possibly behaved selfishly toward this man kept you on your guard, and strengthened you when you were brought face to face with a greater"—he was going to say temptation, but he saved Lapham's pride, and said—"emergency."

"Do you think so?"

"I think that there may be truth in what I suggest."

"Well, I don't know what it was," said Lapham; "all I know is that when it came to the point, although I could see that I'd got to go under unless I did it, that I couldn't sell out to those Englishmen, and I couldn't let that man put his money into my business without I told him just how things stood."

As Sewell afterwards told his wife, he could see that the loss of his fortune had been a terrible trial to Lapham, just because his

prosperity had been so gross and palpable; and he had now a burning desire to know exactly how, at the bottom of his heart, Lapham still felt. "And do you ever have any regrets?" he delicately inquired of him.

"About what I done? Well, it don't always seem as if I done it," replied Lapham. "Seems sometimes as if it was a hole opened for me, and I crept out of it. I don't know," he added thoughtfully, biting the corner of his stiff mustache—"I don't know as I should always say it paid; but if I done it, and the thing was to do over again, right in the same way, I guess I should have to do it."

THE END.

W. D. Howells.

TYPICAL DOGS.

THE WATER-SPANIEL.

THIS breed is derived from the now extinct water-dog, a large, curly-coated dog, and the land-spaniel or springer. Although dogs extremely various in size and general appearance have been designated as water-spaniels by old authorities in canine lore, only two distinct types are recognized by sportsmen of the present day as having a claim to the certain fixed characteristics which entitle any family to the specific term of a "breed." These are the "English water-spaniel" and the "Irish water-spaniel." Owing to neglect the former has degenerated so much that very few typical specimens now exist of that once popular and handsome breed of sporting dogs.

The *English water-spaniel* is a strong and thick-set dog, considerably smaller than the average setter, and weighing from thirty to forty pounds. The prevailing color is liver, or liver and white. The coat should be very curly, in texture similar to that of the black curly-coated retriever; the curls should be tight and close, not open or woolly. The ears are very large and long, heavily feathered. The head is long, handsome, wise, and carried lightly and gracefully. The hair clothing the face and head is short and smooth, but immediately behind the "poll" it becomes long and curly like the body-coat. The neck is moderately long, and strongly joined to powerful shoulders. The legs are of medium length, considerably longer than those of the field-spaniel, but shorter and thicker proportionately than a setter's, straight in front, and furnished with abundance of bone and muscle; hind-quarters muscular, with well-turned thighs and hocks. The feet should be of good size, with strong, horny soles, and the tail carried in a gentle

curve nearly level with the back. The stern is frequently docked, but it is a great mistake to shorten the tail of a water-spaniel, who requires to use it as a rudder in swimming. It should be covered with a rather bushy and curly flag.

The *Irish water-spaniel* has been much more carefully bred and preserved, and possesses distinguishing points of breeding that mark him unmistakably as an aristocrat amongst dogs. He has an air of dash and vigor that betokens high courage and a lively temperament, and, in his vocation as a water-retriever, exhibits that utter forgetfulness of personal discomfort which renders him invaluable as an aid to the wild-fowl shooter. Hardly any training is necessary to teach him to retrieve, and when a mere puppy he delights in carrying sticks, or even stones, in his mouth, if his master encourages him to "fetch and carry." Extremely solicitous to please, he is transported with delight when he finds he is earning the approval of his owner; and no dog, excepting perhaps the poodle,—which is undoubtedly a cousin-german of his,—can be so readily taught to perform tricks, or make himself useful in the hands of a judicious instructor. He revels in the company of children, and joins in their boisterous sports with great zest.

His thick and closely curled coat enables him to resist the chilling effects of exposure to icy-cold water, and his impetuous courage in jumping into the coldest water, as frequently as he is required to do so, and often from a great height, surpasses that of any other breed. With such attributes it is no wonder he is highly prized by the duck-shooter, who without his aid would lose a large percentage of his game, that fall amongst the almost impenetrable rice-beds or muddy shores of lakes and rivers.

The historical origin of the Irish water-spaniel is not very clear, and to Mr. Justin McCarthy belongs the credit of introducing him to popular notice as a distinct variety, with well-accented marks of good breeding. Since then they have been very much inbred, and perhaps in consequence of this, although showing no signs of deterioration in size from this cause,—indeed, many modern show-bench specimens are much too large for practical use,—the puppies are rather difficult to rear; but once over the trials and ailments of puppyhood, they are a singularly hardy and long-lived race. The writer has known a pure-bred Irish water-spaniel to attain the age of twenty-one years.

The eager impetuosity, which seems an appropriate Irish element in their character, renders them apt to be hard-mouthed and liable to bite the game they are sent to retrieve, especially if the bird is only wounded and struggles to escape; so it is necessary to break them carefully of any tendency in this direction, but their docility is such that in proper hands they readily become tender-mouthed retrievers.

The following detailed description of the "points" of the Irish water-spaniel is based upon personal familiarity with, and a thorough and careful study of, some of the acknowledged best specimens of the present day.

General Appearance.—A smart, strongly built dog, about as big as a medium-sized pointer or setter, hardly so tall at the shoulder, but stouter and more compact in body, which cobbliness of appearance is added to by his heavy curly coat. His most striking characteristics—the absence of any one of which determines, to the eye of a *connoisseur*, the presence of alien blood—are: Long ears, clothed with long twisted ringlets; a profuse "top-knot" of curls, longer and more open in curl than the coat on his body; heavily feathered legs and feet; smooth face, and tail almost as short-coated and tapering as that of a well-bred pointer.

Head.—Skull and muzzle should be of good size, but not heavy in proportion to general bulk; the former showing good brain capacity, long and fairly wide, divided into two lobes by a well-defined furrow or groove running up the skull, which, although not visible to the eye, owing to exuberant top-knot of long, overhanging curls exhibited by a full-grown dog, is distinctly discernible when examined by the hand. The eyebrows are well marked by evenly curved bony ridges, though not heavy or beetling. The eyes have a quaint and very intelligent expression, dark, bold, and merry. The face is very peculiar, being smooth-coated, long, rather wedge-shaped, but

not snipy or weak, generally having a comical, half-laughing look that is intensely Irish, especially when with half-open mouth he regards his master out of a corner of his cunning eye, with his head inclined to one side, watching inquisitively all his actions. The jaws should meet evenly in front, and the teeth ought to be large, white, and sound. The lips are not by any means pendulous or pouchy at the corners, but should be sufficiently loose to give the muzzle a square and strong appearance. The nose should be large and moist, of a dark liver color.

Top-knot.—This is seldom full-grown till the dog attains the age of two and one-half years. It is composed of long loose curls on the top of the skull, and grows down to a distinct point between the eyes.

Ears.—Are long and lobe-shaped in the leather, hanging quite flat to the cheeks, and covered with long twisted curls, that are apt to get daggled and matted if not properly cared for. The leather should reach beyond the point of the nose when pulled forward; and in a good specimen the feather, from the tip of one ear to the tip of the other, will measure from twenty-five to thirty inches.

Neck.—Should be fairly long, strong and arching, carrying the head well above the level of the back, and strongly set into the shoulders.

Shoulders and Chest.—The shoulders are very powerful, and are apt to be too straight and cloddy, which gives a cramped, short stride. The chest should be large in girth, with ribs well sprung behind the shoulders, not too wide or round between the fore-legs, a fault frequently met with.

Back and Loins.—The back should be short and very powerfully coupled to the hind-quarters. Ribs carried well back, and loins deep and wide, but not long. The flank should be well filled in, and the whole body should appear round and barrel-shaped.

Hind-quarters.—Very strong. Stifles and hock-joints are often too straight and stilty in appearance, and are thus wanting in "spring" and graceful movement.

Legs and Feet.—The fore-legs should be strong in bone and muscle, straight, with arms well let down, and carrying the fore-arm at elbow and knee in a straight line with point of shoulders. The feet should be of good size and somewhat spreading, but by no means splay-footed or weak in knuckles.

Coat.—Should be dense and very curly. Any woolliness or openness of curl is very bad. The curls should be crisp and tight, and the feather on fore-legs should not be confined to a fringe on the back part, like that of a setter or land-spaniel, but should also be abundant

all round the leg, although shorter in front than at the sides and back. Below the hock the hind-legs may be smooth on the front. Plenty of feather should spring from between the toes, but not to the same extent as in the field-spaniel.

Color.—Should be a very dark brown or liver. Red or rusty and sandy-colored coats are frequently seen, but they are to be greatly condemned. The proper shade has a plum-colored light in it when the coat is fresh, and even when moulting and faded it should remain very dark, although much exposure to the sun and wind while the coat is wet tends to bleach even the darkest coat.

Stern.—The tail is a very marked index to the pure breeding of most dogs, and particularly is this the case in the Irish water-spaniel. It should be strong and thick where it joins the body, and, gradually tapering, should end in a fine point. It must not be long enough to reach the hock-joint, and ought to be carried nearly level with the back almost in a straight line. A very gentle curve is permissible. For three or four inches from the body it has short curls, but almost immediately the coat becomes smooth and nearly as close as that on the stern of a pointer.

Symmetry.—Should be considerable, although strength and endurance are more apparent in his make-up than the lines of elegance or speed. He should have a bold, determined, and dashing eagerness of temperament that saves him from any dull or commonplace look.

J. F. Kirk.

THE COLLIE.

COLLIES, sheep-dogs, or shepherd-dogs, as they are variously termed, are divided into two classes: the rough-coated, in which the outer coat is long and rough, expanding into a frill or ruff about the neck, while a second or under coat is soft and woolly, very warm, and, like seal-skin, impervious to moisture; and the smooth-coated, in which the coat is short, hard, and very compact.

In both classes the coat is weather-resisting; for the collie's duties compel him to be out on the windy moors and bleak hill-sides in all sorts of rough weather.

In color he is black and tan, black, tan, and white, black and white, or, as the fashion now demands, sable, and sable and white. The head is long and sharp, not domed in skull or snipy in muzzle; ears small and semi-erect; chest deep, with plenty of lung room; back broad and muscular; fore-legs well under him, and should be strong and straight, not heavy; hind-legs well bent; tail bushy and carried low; in general form lithe, symmetrical, and

graceful, and fairly light, giving one the idea of great pace; altogether a handsome dog—one that poets have celebrated in their verse and artists loved to paint.

His carriage is dainty and natty, as that of a fox; nor does the likeness end there. Take the humanlike intelligence ascribed to the hero of the old romance of "Reynard the Fox," let the craft and duplicity be refined and transmuted into devotion to his master, and you have the characteristics of the collie's nature. Beauty, intelligence, and usefulness are all to be counted in the highest degree to his credit.

In sagacity he excels all others of the dog family. His is not the intelligence of the trick dog; one look into his "gay wyse" eyes will tell you that for antics and pranks like those of the showman's "troupe of canine artists" your collie has the supremest contempt; a dog's life is to him quite too serious to be wasted in such frivolities; his mission is hard work; he has duties to perform, as had generations of his ancestors before him. His one particular task is to care for flocks of sheep, and because he does this and does it so well, he may take rank as the most useful of all dogs. Indeed, certain parts of Scotland and England owe all their value for sheep-raising purposes to the collie. "Without him," writes Hogg, the Ettrick Shepherd, "the mountainous land of England and Scotland would not be worth sixpence. It would require more hands to manage a flock of sheep, gather them from the hills, force them into houses and folds, and drive them to market, than the profits of the whole are capable of maintaining." He drives out the sheep to pasture, confines them to their allotted territory (where there are no fences), keeps the flocks separate, picks out from another band and brings back to its own a straying sheep; at command, collects into one place the sheep that may be scattered for miles around; watches his charge faithfully through night and storm; is unyielding with the headstrong rams, and considerate of the tender lambs; displays courage, caution, patience, and tact in handling the flock; and will move the sheep or force them into a fold quicker, more surely, and with less demonstration than a dozen men.

A well-trained and experienced collie appears to rule a flock of sheep by the force of his dominant nature, just as a good horseman controls a horse. He is often equally successful in managing unruly cattle, and sometimes exercises the same supremacy over other dogs. One of my collies, champion "Tweed II.," now retired from active sheep-herding service decorated like a war veteran with medals, and conscious (I fancy) of having performed his allotted share

IRISH WATER-SPANIEL, "CHAMPION BARNEY."

of toil, is a veritable Sir Dignity in fur and frills, haughty, pompous, and important. He never forgets his dignity save when, as self-constituted high sheriff of all the other dogs, he goes in swift and dire pursuit of a canine fugitive. Once, when the dogs were being removed from one town to another, a beagle hound escaped from his box, and, alarmed at finding himself in a strange country, forthwith disappeared in a cloud of dust down the road. Tweed, who was trotting along at the side of the wagon, not a word being said, at once set out after him, overhauled the fugitive, took him into custody, and calmly held him down, with his back to the ground, until the party came up.

I had at one time a large number of pointers in my kennels, and it was a favorite entertainment of visitors to the kennels to dispatch Tweed, to bring in these dogs, which were far away romping in the fields; when the four-footed official appeared among them, they stopped their gambols and came in, and woe to the laggard or straggler among them who had the temerity to evade the summons. The old dog who has driven many a flock of a thousand sheep to market, thirty or forty miles a day, is not at all the customer for a wayward dog to hold in contempt without serious consequences.

Of late years the collie has been brought into public notice by the sheep-dog trials held in various parts of Great Britain. In such competitions the best working dogs have been entered to exhibit their skill in herding and folding sheep, and their wonderful displays of sagacity have been witnessed by many thousands of spectators who would never have the opportunity to see the dog in his native home.

The natural and direct result of this making his merits known is that the collie has been

taken up by society as a pet; he has exchanged the pasture for the parlor, and where once he had kicks now finds caresses; his lines have fallen in pleasanter places, and with all his good fortune his coat is growing more glossy, and his disposition sweeter. His amiable traits make him specially fitted to be a companion for ladies and children. The collie is to-day, perhaps, the most fashionable dog in England. Americans are prone to follow their British cousins in such affairs, and the collie is fast becoming fashionable in this country, and is now often to be seen on the lawn or sedately promenading the city avenues.

Several hundred choice specimens have been imported; the collie classes at the bench shows have been creditably filled, and have shown that the breed is rapidly growing in numbers and quality. In some parts of the West and South the collie is extensively employed by cattle and sheep breeders.

If the American farmer had a better understanding of the collie's usefulness as a protector of his property, gentle, affectionate, and faithful guardian and playmate for his children, and assistant in the care of his stock, I am persuaded that many a worthless, sheep-worrying cur of uncertain breed would speedily end his days to give place to the worthier shepherd-dog.

"He was a gash and faithful tyke
As ever lap a sheugh or dike;
His honest, sonsie, bawns'nt face
Aye gat him friends in ilka place."

Thomas H. Terry.

ENGLISH WATER-SPANIEL. (FROM A PHOTOGRAPH BY PACH.)

THE FOX-TERRIER.

THERE seems at last to be a fair prospect of the neat, bright, and companionable fox-terrier receiving his proper share of attention. For several years the Messrs. L. and W. Rutherford, of New York, did their utmost to popularize this dog, with but little success; but now the accession of Mr. Edward Kelly, of New

tain Thomas Brown, author of various works on conchology, ornithology, etc., published in Edinburgh and London in 1829, no reference is made to the fox-terrier. He says, "There are two kinds of terrier, the rough-haired Scotch and the smooth English," and then describes "three distinct varieties of the Scotch terrier." The first is a long, low dog on short stout legs, with half-pricked ears and

COLLIE-DOG, "LADD." (FROM A PICTURE BY J. M. TRACY, BY PERMISSION OF C. KLACKNER.)

York, Mr. Frank Kinney, of Staten Island, Mr. Prescott Lawrence, of Groton, Mass., and Mr. John E. Thayer, of Lancaster, Mass., to the ranks of the fox-terrier exhibitors has given the breed the necessary impetus. There is every reason why the fox-terrier should become popular both as a house-dog in the city and as a country companion, for he embodies all the requisites to make him so. His clean jacket, contrasting so admirably with the black-and-tan markings on head and body, enables the fox-terrier to lay claim to more beauty than most of the more favored house-pets. Good looks are, however, only one of his many qualities, for he is clean and neat about the house, always full of life, has a high order of intelligence, is a good watch-dog where one is most valuable, inside the house, and his pluck is undeniable.

Although by no means an old-established breed, the origin of the fox-terrier is not so clearly demonstrated as would seem to be possible. In "Anecdotes of Dogs," by Cap-

a large head in proportion to his body, and a hard coat,—a fairly good description of the hard-haired terrier of the present day. Then there is another almost the same size, he says, but with a longer coat, and somewhat flowing, "the prevailing breed of the Western Islands of Scotland." There is no doubt of this being the now well-known Skye terrier. The third variety is described as much larger, with a hard and wiry coat much shorter than that of the others. Captain Brown adds it is from this latter breed that the best bull-terriers have been produced. Of the English terrier, however, the author mentions but one breed, the black-and-tan, and gives a very accurate description of it. "Black on the back, sides, upper part of the head, neck, and tail; the belly and the throat are of a very bright reddish brown, with a spot of the same color over each eye. The hair is short and somewhat glossy, the tail rather truncated and carried slightly upwards; the ears are small, somewhat erect, and reflected at the tips; the

head is little in proportion to the size of the body, and the snout is moderately elongated."

It is evident from the foregoing careful description that Captain Brown was an accurate observer; indeed, the illustrations in the book are his own, and if there had been any such dog as the present fox-terrier then in existence, it is strange no allusion is made thereto. Instead of that, we read in the description of the black-and-tan terrier, "This dog, or the wire-haired Scotch terrier, is indispensably necessary to a pack of fox-hounds for the purpose of unearthing the game." White, according to Captain Brown, was inadmissible in a terrier; indeed, he says of the Scotch terrier, "When white or pied, it is a sure mark of impurity of the breed." Captain Brown was evidently a Scotchman, and although it is certain that he traveled in Ireland, and presumably in England, he was probably not fully conversant with all the different terriers to be met with throughout Britain. His evidence, however, may be accepted, that white and pied rough terriers, which "Stonehenge" speaks of in 1878 as existing up to within the last thirty years, "were not entitled to the name of Scotch."

"Stonehenge" (Mr. J. H. Walsh), with all the opportunity he has had of gaining knowledge of the fox-terrier breed, can give but little history of it. What he says is briefly this: Two or three masters of fox-hounds owned terriers which had gained a reputation some forty years ago—say 1840. In color they were white, with the red ears or patch. In these days, he says, a black-and-tan fox-terrier was never seen, and yet he tells us that these pied terriers were crossed with the Duke of Rutland's black-and-tan terriers, and produced the hound markings. There was actually no class provided for fox-terriers in England until 1863, when Old Jock won at Birmingham, and his father was a black-and-tan dog. Jock had a remarkably successful career, and stamped the black-and-tan markings on his numerous descendants. The first fashion in fox-terriers was for color, an evenly marked black-and-tan head atoning in many people's estimation for many faults. Breeding for color was followed by the inevitable result, weediness; and then the cry was for a cobby dog, until the cobby fashion reached cloddiness. Then there has been a cry for coat and a workmanlike terrier, until finish became almost extinct, and again legs and feet became the cry. The Spice furor, which is somewhat dying out now, was one of legs and feet. For a certainty this branch of the Belgrave Joe family has not improved the dog as a terrier,—short, wedgy heads, indifferently carried ears, poor necks, upright

shoulders, narrow quarters, and woolly coats being too characteristic of the Spice strain. Still they have excellent legs and feet, and transmit that meritorious quality to their progeny. In view, therefore, of the many changes of fashion, and each yet having its votary, the new-comers picking up the prevailing fashion, it is not an easy matter to give a description of a fox-terrier that will please all exhibitors; indeed, in the divergence of type the fox-terrier stands alone in the dog world. No dog depends more for his success upon that indescribable something called character than the fox-terrier; and when that exists in a marked degree, the eye of the terrier man glistens as he says, "There is a terrier for you!" To possess this, he should have a cleanly built head, neither so long and narrow as to suggest weakness, nor short and wedgy. The head and neck should spring from the shoulders, suggestive of the gamy appearance of the game-cock, and the small, bright, sparkling eye adds to the let-me-get-at-him look. Neatly placed ears are a great consideration, and they should be V-shaped and carried forward, dropping close to the cheek. A prick or nose ear is a disqualification. The shoulders should be sloping and long, and the chest not too wide to throw the elbows out. To stand like a terrier is a common expression, and means that the elbows should be close to the sides and the dog stand *on* his legs, which should be plumb straight. The hind legs and quarters must be strong and muscular. The feet should show no spreading of the toes, but be round and compact, with the toes arched. The ribs should be well sprung and the back ones deep, to avoid the very common, tucked-up weak-loin appearance. As to coat opinions differ, some wanting a half-bred wire-haired-terrier look; but for my part I prefer the strength and density of the coat, to be found out mainly by the fingers while to the eye it is smooth.

Size is also another rock on which fanciers split, but a well-built, symmetrical dog seldom shows his weight; and the continued cry a few years ago, that a dog over sixteen pounds could not go to ground after a fox, was scattered to the winds by a table published in an English paper, showing that the majority of the real working terriers in use by various packs of hounds averaged over eighteen pounds. Color matters very little, so long as there is no brindle. Of course, white predominates, but the old-time cry of "evenly marked black-and-tan head" is no longer heard, and several of the best of the coming dogs in England have heads nearly all black, or black-and-tan.

James Watson.

THE SCOTCH DEER-HOUND OR STAG-HOUND.

THIS species of dog is one of the oldest and purest in existence, and has been used longest for hunting, yet, strangely enough, is the one least known to sportsmen and naturalists to-day.

The breed was at one time nearly extinct, but is now comparatively plentiful in all Highland districts, owing to the care taken

eyes half hidden by hair. He tapers gradually towards the powerfully formed loins; he has exceedingly muscular limbs, round and firmly set feet, and well-developed quarters. His general appearance is strikingly aristocratic.

The height of the dog should be from twenty-nine to thirty-one inches, his girth about thirty-four inches; the forearm below the elbow should measure eight inches and a

FOX-TERRIER, "RICHMOND OLIVE."

by proprietors of preserves to collect and breed these noble dogs.

The deer-hound has great strength, and is a swift runner and graceful jumper. His frame, although covered with a shaggy coat, is as elegant as that of the greyhound, and his speed nearly as great, but, owing to his superior size, he is unable to make such quick turns.

His head is long and lean, widest behind the ears, and is carried particularly high, giving him a noble appearance. He has a long arched neck, short ears somewhat pendulous at the tips, and very bright, penetrating

quarter, and he should weigh from ninety-five to one hundred and ten pounds. The disproportion in size between the sexes is greater than in any other breed of dogs. The female should be twenty-six inches in height, twenty-nine in girth, and should weigh from sixty-five to seventy-five pounds.

The coat should be coarse and thick, and three or four inches long. Some breeders hold that a dog without a rough head and plentiful beard is worthless.

The color varies from nearly black, through dark brindle, blue, light brindle, gray, fawn,

STAG-HOUND "JAHL." (FROM A PICTURE BY LUCY T. FENNER.)

and cream of all shades, to white. The dark brindle are commonest in this country. It is an almost hopeless undertaking to breed for color. I have bred dark brindle dogs together, hoping to get some brindle puppies; but out of a litter of eight there was only one brindle. I have done this not once, but several times, with but little better success.

The scent is remarkably keen; these dogs have been known to follow a wounded deer for two successive days. When slipped at a wounded deer they pursue it by scent, the nose lowered as they run; and when it is brought to bay they utter low, sharp barks, which are continued till the master appears.

A stag in full possession of his powers is beyond the reach of any dog from the front, and no well-bred deer-hound makes an attempt unless he sees an opening from behind.

A gentleman named Glengarry, finding his

breed deteriorating, resorted to several crosses, among them the Cuban blood-hound and Pyrenean wolf-dog. His action was loudly condemned, but he deemed it necessary thus to resuscitate his strain, and from the latter cross he derived great advantages. From this strain came Sir Walter Scott's famous Maida and other celebrated dogs.

Some breeders made a cross with the bulldog, thus obtaining more courage, but also the peculiarity of the bull-dog, which is to make the attack at the head. So many valuable dogs were killed by rushing at the stag's head, that this cross was abandoned.

There are not many fine deer-hounds in this country; they are mostly under-size, and lack coat and bone. But the intelligence of this noble and faithful dog is fast winning recognition, and it is to be hoped he may soon become a general favorite.

John E. Thayer.

PANFORTE DI SIENA.

FIRST PAPER.

I.

PMONTH out of our winter at Florence we gave to Siena, whither we went early in February. At that time there were no more signs of spring in the landscape than there were in December, except for here and there an almond-tree, which in the pale pink of its thronging blossoms showed delicately as a lady's complexion in the unfriendly air. The fields were in their green arrest, but the trees were bare, and the yellow river that wandered along beside the railroad looked sullen and cold under the dun sky.

After we left the Florentine plain, we ran between lines of reddish hills, sometimes

thickly wooded, sometimes showing on their crests only the stems and tops of scattering pines and poplars, such as the Tuscan painters were fond of putting into their Judean backgrounds. There were few tokens of life in the picture; we saw some old women tending sheep and spinning with their distaffs in the pastures; and in the distance there were villages cropping out of the hill-tops and straggling a little way down the slopes. At times we whirled by the ruins of a castle, and nearer Siena we caught sight of two or three walled towers which had come down from the middle ages apparently with every turret in repair. Our course was south-westward, but we were continually mounting into the cold, thin air of the volcanic hill country, at the summit of which the old Ghibelline city still sits capital, proud of her past, beautiful and noble even among Italian towns, and wearing in her mural crown the cathedral second in splendor and surprise only to the jewel-church in the belt of Venice.

A MOUNTAIN TOWN.

It is not my habit to write such fine rhetoric as this, the reader will bear me witness; and I suspect that it is a prophetic tint from an historical sketch of Siena, to which, after ascertaining the monotony of the landscape, I could dedicate the leisure of our journey with a good conscience. It forms part of "La Nuova Guida di Siena," and it grieves me that the title-page of my copy should have been lost, so that I cannot give the name of an author whose eloquence I delight in. He says: "Siena is lifted upon hills that rise alluring and delicious in the center of Tuscany. . . . Its climate is soft, temperate, and wholesome. The summer sojourn is very grateful there on account of the elevated position and the sea breezes that, with an agreeable constancy, prevail in that season. . . . The panorama of the city is something enchanting. . . . Every step reveals startling changes of perspective, now lovely, now stern, but always stamped with a physiognomy of their own, a characteristic originality. From all points is seen the slim, proud tower of the Mangia, that lifts among the clouds its battle-mented crest, its arrowy and exquisite shaft. Viewed from the top of this tower, Siena presents the figure of a star — a figure formed by the diverse rays or lines of its streets traced upon the shoulder of the hills. The loveliest blue of the most lovely Italian sky irradiates our city with the purest light, in which horizons magnificent and vast open upon the eye. . . . The hills and the plain are everywhere clothed with rich olive groves, festive orchards, luxuriant vineyards, and delightful bosks of oak, of chestnut, and of walnut, which form the umbrageous breathing-places of the enchanting landscape, and render the air pure and oxygenated." The native inhabitants of this paradise are entirely worthy of it. "No people in Italy, except, perhaps, the Neapolitans, has the wide-awake-mindedness, the liveliness of character, the quickness of spirit, the keen-witted joyousness of the Sieneſe. . . . The women dress modestly, but with taste. They are gracious, amiable, inclined to amusement, and affectionate in their families. In general their honesty gives no ground for jealousy to their husbands; they are extremely refined in manner, and renowned for their grace and beauty. The comeliness of their figures, the regularity of their lineaments, as well as their vivid coloring, which reveals in them an enviable freshness of fiber and good blood purified by the mountain air, justly awaken the admiration of strangers. . . . In the women and the men alike exist the sweetness of pronunciation, the elegance of phrase, and the soft clearness of the true Tuscan accent. . . . Hospitality and the cordial

reception of strangers are the hereditary, the proverbial virtues of the Sieneſe. . . . The pride of the Sieneſe character is equal to its hospitality; and this does not spring from roughness of manners and customs, but is a noble pride, magnanimous, worthy of an enlightened people with a self-derived dignity, and intensely attached to its own liberty and independence. The Sieneſe, whom one historian has called the French of Italy, are ardent spirits, enthusiastic, resolute, energetic, courageous, and prompt beyond any other people to brandish their arms in defense of their country. They have a martial nature, a fervid fancy, a lively imagination; they are born artists; laborious, affable, affectionate, expansive; they are frank and loyal friends, but impressionable, impetuous, fiery to exaltation. Quick to anger, they are ready to forgive, which shows their excellence of heart. They are polite, but unaffected. Another trait of their gay and sympathetic character is their love of song, of the dance, and of all gymnastic exercises. . . . Dante called the Sieneſe *gente vana* (a vain people). But we must reflect that the *altissimo poeta* was a Florentine, and though a sublime genius, he was not able to emancipate himself from that party hate and municipal rivalry, the great curse of his time."

But for that final touch about Dante, I might have thought I was reading a description of the Americans, and more especially the Bostonians, so exactly did my author's eulogy of the Sieneſe embody the facts of our own character. But that touch disillusioned me: even Dante would not have called the Bostonians *gente vana*, unless he had proposed to spend the rest of his life in London. As it was, I was impatient to breathe that wondrous air, to bask in that light, to behold that incomparable loveliness, to experience that proverbial hospitality and that frank and loyal friendship, to mingle in the song and dance and the gymnastic exercises; and nothing but the sober-minded deliberation of the omnibus-train, which was four hours in going to Siena, prevented me from throwing myself into the welcoming embrace of the cordial city at once.

II.

I HAD time not only to reflect that perhaps Siena distinguished between strangers arriving at her gates, and did not bestow an indiscriminate hospitality, but to wander back with the "New Guide" quite to the dawn of her history, when Senio, the son of Remus, flying from the wrath of his uncle Romulus, stopped where Siena now stands and built himself a

A STREET IN SIENA.

castle. Whether the city got her name from Senio or not, it is certain that she adopted the family arms; and to this day the she-wolf suckling the twins is as much blazoned about Siena as about Rome, if not more. She was called *Urbs Lupata* even by the Romans, from the wolf-bearing seal of her chief magistrate; and a noble Roman family sent one of its sons as early as 303 to perish at Siena for the conversion of the city to Christianity. When the empire fell, Siena suffered less than the other Tuscan cities from the barbarian incursions; but she came under the rule of the

Longobard kings, and then was one of the "free cities" of Charlemagne, from whose counts and barons, enriched by his gifts of Sieneſe lands and castles, the Sieneſe nobility trace their descent. These foreign robbers, whose nests the Florentines went out of their gates to destroy, in their neighborhood, voluntarily left their castles in the Sieneſe territory, and came into the city, which they united with the bishops in embellishing with beautiful palaces and ruling with an iron hand, till the commons rose and made good their claim to a share in their own government. Immunities and privileges were

granted by Cæsar and Peter, and at the close of the twelfth century a republican government, with an elective magistracy, was fully developed, and the democratized city entered upon a career of great material prosperity. "But in the midst of this potent activity of political and commercial life, Siena more than any other Italian city was afflicted with municipal rivalries, intestine discords. To-day the nobles triumphed and hurled the commons from power; to-morrow the people took a bloody revenge and banished every patrician from the city. Every change of administration was accompanied by ostracism, by violence, by public tumults, by continual upheavals;" and these feuds of families, of parties, and of classes were fostered and perpetuated by the warring ambitions of the popes and emperors. From the first, Siena was Ghibelline and for the emperors, and it is odd that one of her proudest victories should have been won against Henry the son of Barbarossa. When that emperor threatened the free cities with ruin, Siena was the only one in Tuscany that shut her gates against him; and when Henry laid siege to her, her people sallied out of Fontebranda and San Marco, and fell upon his Germans and put them to flight.

The Florentines, as we have seen, were of the pope's politics; or, rather, they were for their own freedom, which they thought his politics favored, and the Sienese were for theirs, which they believed the imperial success would establish. They never could meet upon the common ground of their common love of liberty, but kept battling on through four centuries of miserable wars till both were enslaved. Siena had her shameful triumph when she helped in the great siege that restored the Medici to Florence in 1530, and Florence had her cruel revenge when her tyrant Cosimo I. entered Siena at the head of the imperial forces fifteen years later. The Florentines met their first great defeat at the hands of the Sienese and of their own Ghibelline exiles at Montaperto (twelve miles from Siena) in 1260, when the slaughter was so great, as Dante says, "*che fece l'Arbia colorata in rosso*"; and in 1269 the Sienese were routed by their own Guelph exiles and the Florentines at Colle di Val d'Elsa.

A story is told of an official of Siena to whom the Florentines sent in 1860 to invite his fellow-citizens to join them in celebrating the union of Tuscany with the kingdom of Italy. He said, Yes, they would be glad to send a deputation of Sienese to Florence, but would the Florentines really like to have them come? "Surely! Why not?" "Oh, that affair of Montaperto, you know,"—

as if it were of the year before, and must still, after six hundred years, have been ranking in the Florentine mind. But perhaps in that time it had become confused there with other injuries, or perhaps the Florentines of 1860 felt that they had sufficiently avenged themselves by their victory of 1269. This resulted in the triumph of the Guelphs in Siena, and finally in the substitution of the magistracy of the Nine for that of the Thirty. These Nine, or the Noveschi, ruled the city for two hundred and fifty years with such unscrupulous tyranny and infamous corruption that they "succeeded in destroying every generous sentiment, in sapping the noble pride of character in the Sienese population, and if not in extinguishing, at least in cooling, their ardent love of liberty," and preparing them for the rule of the ever-dreaded one-man power, which appeared in the person of Pandolfo Petrucci in 1487. He misruled Siena for twenty-five years, playing there, with less astuteness and greater ferocity, the part which Lorenzo de' Medici had played a century earlier in earlier rotten Florence. Petrucci, too, like Lorenzo, was called the Magnificent, and he, too, passed his life in sensual debauchery, in political intrigues ending in bloody revenges and reprisals, and in the protection of the arts, letters, and religion. Of course he beautified the city, and built palaces, churches, and convents with the money he stole from the people whom he gave peace to prosper in. He, too, died tranquilly of his sins and excesses, his soul reeking with treasons and murders like the fascinating Lorenzo's; and his sons tried to succeed him like Lorenzo's, but were deposed like Pietro de' Medici and banished. One of his pleasing family was that Achilles Petrucci who, in the massacre of St. Bartholemew at Paris, cut the throat of the great Protestant admiral, Coligny.

After them, the Sienese enjoyed a stormy and intermittent liberty within and varying fortunes of war without, till the Emperor Charles V., having subdued Florence, sent a Spanish garrison to Siena with orders to build him a fort in that city. The Spaniards were under the command of Don Hurtado de Mendoza, who was not only, as my "New Guide" describes him, "ex-monk, astute, subtle, fascinating in address, profound dissimulator," but also the author of the "History of the War of Granada," and of one of the most delightful books in the world, namely, "The Life of Lazarillo de Tormes," Spanish rogue and beggar, for whose sake I freely forgive him on my part all his sins against the Sienese; especially as they presently drove him and his Spaniards out of the city and demolished his fort.

The Sieneſe had regained their freedom, but they could hope to keep it only by the help of the French and their allies the Florentine exiles, who were plotting under the Strozzi againſt the Medici. The French frienſhip came to little or nothing but promiſes, the exiles were few and feeble, and in 1554 the troops of the Emperor and of Duke Coſimo — him of the terrible face and the blood-ſtained ſoul, murderer of his ſon, and father of a family of adultereſſes and aſſaſſins — came and laid ſiege to the doomed city. The ſiege laſted eighteen months, and until the Sieneſe were waſted by famine and peſtilence, and the women fought beſide the men for the city which was their country and the laſt hope of liberty in Italy. When the famine began they drove out the *uſe-
leſſ mouths (bocche inutili)*, the old men and women and the orphan children, hoping that the enemy would have pity on theſe hapleſſ creatures; the Spaniards maſſacred moſt of them before their eyes. Fifteen hundred peaſants, who tried to bring food into the city, were hung before the walls on the trees, which a Spaniſh writer ſays “ſeemed to bear dead men.” The country round about was laid waſte; a hundred thouſand of its inhabitants periſhed, and the fields they had tilled laſped into peſtilential marſhes breathing fever and death. The inhabitants of the city were reduced from forty to ſix thouſand; ſeven hundred families preferred exile to ſlavery.

Charles V. gave Siena as a fief to his ſon Philip II., who ceded it to Coſimo I., and he built there the fort which the Spaniards had attempted. It remained under the good Lorraineſe dukes till Napoleon made it capital of his Department of the Ombrone, and it returned to them at his fall. In 1860 it was the firſt Tuſcan city to vote for the union of Italy under Victor Emmanuel — the only honeſt king known to hiſtory, ſays my “New Guide.”

III.

IT is a “New Guide” full of the new wine of our epoch, and it brags not only of the warriors, the ſaints, the popes, the artiſts, the authors, who have illuſtrated the Sieneſe name, but of the two great thinkers in religion and politics who have given her truer glory. The bold pontiff Alexander III., who put his foot on the neck of the Emperor at Venice, was a Sieneſe; the meek, courageous St. Catherine, daughter of a dyer, and the envoy of popes and princes, was a Sieneſe; Salluſtio Bandini, the inventor of the principle of Free Trade in commerce, was a Sieneſe; and Socinus, the inventor of Free Thought in religion, was a

Sieneſe. There is a ſtatue to Bandini in one of the chief places of Siena, but when my “New Guide” was written there was as yet no memorial of Socinus. “The fame of this glorious apoſtle,” he cries bitterly, “who has been called the father of modern rationaliſm, is cheriſhed in England, in France, in Italy, in Switzerland, in Holland, in Poland, in America. Only Siena, who ſhould remember with noble pride her moſt illuſtrious ſon, has no ſtreet named for him, no buſt, no ſtone. Rightly do the ſtrangers who viſit our city marvel at neglect which denies him even a commemorative tablet in the houſe where he was born — the Casa Sozzini, now Palazzo Malavolta, 21 Via Ricasoli.” The juſtneſſ of this cenſure is not impugned by the fact that the tablet has ſince been placed there; perhaps it was the ſcorn of my “New Guide” which laſhed the Sieneſe to the act of tardy recognition. This has now found ſtately utterance in the monumental Italian which is the admiration and deſpair of other languages:

“In the firſt Half of the 17th Century
Were born in this Houſe
Lelio and Fausto Sozzini,
Scholars, Philoſophers, Philanthropiſts.
Strenuous Champions of the Liberty of Thought,
Defenders of Human Reaſon againſt the Supernatural,
They founded the celebrated Socinian School,
Forecasting by three Centuries
The doctrine of Modern Rationaliſm.
The Sieneſe Liberals, Admiring, Reverent,
Placed this Memorial.
1877.”

I wandered into the court of the old palace, now involuntarily pea-green with mold and damp, and looked out from the bow-shaped terrace bulging over the garden behind, and across the olive orchards — But I forgot that I was not yet in Siena.

IV.

BEFORE our arrival I had time to read all the “New Guide” had to ſay about the preſent condition of this city. What it was ſocially, morally, and perſonally I knew already, and what it was induſtrially and commercially I learned with regret. The proſperity of Siena had reached its height in the thirteenth century, juſt before the great peſt appeared. Her people then numbered a hundred thouſand, from which they were reduced by the plague to twenty thouſand. Whole diſtricts were depopulated within the walls; the houſes fell down, the ſtreets vaniſhed, and the plow paſſed over the ruins; wide gardens, olive orchards, and vineyards ſtill flouriſh where traffic was buſy and life was abundant. The

"New Guide" does not say so, but it is true that Siena never fully recovered from this terrible stroke. At the time of the great siege, two hundred years after the time of the great pest, she counted only forty thousand souls within her gates, and her silk and woolen industries, which still exist, were vastly shrunken from their old proportions. The most evident industry in Siena now is that of the tanners, which hangs its banners of leather from all the roofs in the famous region of Fontebranda, and envelops the birthplace of St. Catherine in an odor of tan-bark. There is also a prosperous fabric of iron furniture, principally bedsteads, which is noted throughout Italy; this, with some cotton-factories and carpet-looms on a small scale, and some agricultural implement works, is nearly all that the "New Guide" can boast, till he comes to speak of the ancient marchpane of Siena, now called Panforte, whose honored name I have ventured to bestow upon these haphazard sketches of its native city, rather because of their chance and random associations of material and decorative character than because of any rivalry in quality to which they can pretend. I often saw the panforte in shop-windows at Florence, and had the best intention in the world to test its excellence, but to this day I know only of its merits from my "New Guide." "This specialty, wholly Sienese, enjoys, in the article of sweetmeats, the primacy in Italy and beyond, and forms one of the principal branches of our industry. The panforte of Siena fears no competition or comparison, either for the exquisiteness of its flavor or for the beauty of its artistic confection: its brown paste, gemmed with broken almonds, is covered in the *panfortes de luxe* with a frosting of sugar, adorned with broderies, with laces, with flowers, with leaves, with elegant figures in lively colors, and with artistic designs, representing usually some monument of the city."

v.

IT WAS about dark when we reached Siena, looking down over her wall upon the station in the valley; but there was still light enough to give us proof, in the splendid quarrel of two railway porters over our baggage, of that quickness to anger and readiness to forgive which demonstrates the excellence of heart in the Sienese. These admirable types of the local character jumped furiously up and down in front of each other, and then, without striking a blow, instantly exchanged forgiveness and joined in a fraternal conspiracy to get too much money out of me for handling my trunks. I willingly became a party to their plot

myself in gratitude for the impassioned spectacle they had afforded me; and I drove up through the steeply winding streets of the town with a sense of nearness to the middle ages not excelled even in my first visit to Quebec. Of Quebec I still think when I think of Siena; and there are many superficial points of likeness in the two cities. Each, as Dante said of one, "*torregia e siede*" ("sits and towers" is no bad phrase) on a mighty front of rock, round whose precipitous slopes she belts her girdling wall. The streets within wander hither and thither at will; in both they are narrow and hemmed in with the gray façades of the stone houses; without spreads a mighty valley—watered at Quebec with the confluent St. Lawrence and St. Charles, and walled at the horizon with primevally wooded hills; dry at Siena with almost volcanic drought, and shut in at the same far range by arid and sterile tops bare as the skies above them, yet having still the same grandeur and nobility of form. After that there is all the difference you will—the difference of the North and South, the difference of the Old World and the New.

I have always been a friend of the picturesque of the Cathedral Place at Quebec, and faithful to it in much scribbling hitherto, but nothing—not even the love of pushing a parallel—shall make me pretend that it is in any manner or degree comparable to the old and deeply memoried Piazza Vittorio Emanuele at Siena. This was anciently Piazza del Campo, but now they call it Piazza Vittorio Emanuele, because, since the Unification, they want some piazza of that dear name in every Italian city, as I have already noted; and I walked to it through the Via Cavour which they must also have, and how it was I failed to traverse a Via Garibaldi I do not understand. It was in the clearness that follows the twilight when, after the sudden descent of a vaulted passage, I stood in the piazza and saw the Tower of the Mangia leap like a rocket into the starlit air. After all, that does not say it: you must suppose a perfect silence, through which this exquisite shaft forever soars. When once you have seen the Mangia, all other towers, obelisks, and columns are tame and vulgar and earth-rooted; that seems to quit the ground, to be not a monument but a flight. The crescent of the young moon, at half its height, looked sparsely over the battlements of the Palazzo Communale, from which the tower sprang, upon the fronts of the beautiful old palaces whose semicircle incloses the grand space before it, and touched with its silver the waters of the loveliest fountain in the world, whose statues and bas-reliefs darkled above and

around a silent pool. There were shops in the basements of some of the palaces, and there were lamps around the piazza, but there seemed no one in it but ourselves, and no figure broke the gentle slope in which the ground shelves from three sides towards the Palazzo Communale, where I left the old republic in full possession when I went home through the thronged and cheerful streets to bed.

I observed in the morning that the present Italian Government had taken occasion over night to displace the ancient Siennese signiory, and had posted a sentry at the palace door. There had also sprung up a picturesque cluster of wooden-roofed market-booths where peasant women sat before heaps of fruit and vegetables, and there was a not very impressive show of butter, eggs, and poultry. Now I saw that the brick-paved slope of the piazza was moss-grown in disuse, and that the noble Gothic and Renaissance palaces seemed half of them uninhabited. But there was nothing dilapidated, nothing ruinous in the place; it had simply a forsaken look, which the feeble stir of buying and selling at the market-booths scarcely affected. The old Palace of the Commonwealth stood serene in the morning light, and its Gothic windows gazed tranquilly upon the shallow cup before it, as empty now of the furious passions, the mediæval hates and rivalries and ambitions, as of the other volcanic fires which are said once to have burned there. These, indeed, still smolder beneath Siena, and every August a tremor of earthquake runs through her aged frame; but the heart of her fierce, free youth is at peace forevermore.

VI.

WE waited at the hotel forty-eight hours for the proverbially cordial reception of strangers which the "New Guide" had boasted in his Siennese. Then, as no deputation of citizens came to offer us the hospitality of the city, we set about finding a lodging for ourselves. At this distance of time I am a little at a loss to know how our search, before it ended, had involved the complicity of a *valet de place*; a short, fat, amiable man of no definite occupation; a barber; a dealer in bricabrac; a hunchbackling; a mysterious *facchino*; and a were-wolf. I only know that all these were actually the agents of our domiciliation, and that without their intervention I do not see how we could ever have been settled in Siena. The valet had come to show us the city, and no caricature of him could give a sufficient impression of his forlorn and anxious little face, his livid silk hat, his threadbare coat,

his meager body, and his evanescent legs. He was a terribly pathetic figure, and I count it no merit to have employed him at once. The first day I gave him three francs to keep away, and went myself in search of a carriage to drive us about in search of rooms. There were no carriages at the stand, but an old man who kept a book-store let the lady of the party have his chair and his *scaldino* while I went to the stable for one. There my purpose somehow became known, and when the driver mounted the box, and I stepped inside, the were-wolf mounted with him, and all that morning he directed our movements with lupine persistence and ferocity, but with a wolfishly characteristic lack of intelligence. He had an awful face, poor fellow, but I suspect that his ravenous eyes, his gaunt cheeks, his shaggy hair, and his lurking, illusive looks, were the worst of him; and heaven knows what dire need of devouring strangers he may have had. He did us no harm beyond wasting our time upon unfurnished lodgings in spite of our repeated groans and cries for furnished ones. From time to time I stopped the carriage and drove him down from the box; then he ran beside us on the pavement, and when we came to a walk on some uphill street he mounted again beside the driver, whom he at last persuaded to take us to a low tavern darkling in a sunless alley. There we finally threw off his malign spell, and driving back to our hotel, I found the little *valet de place* on the outlook. He hopefully laid hold of me, and walked me off to one impossible apartment after another,—brick-floored, scantily rugged, stoveless, husk-mattressed, mountain-bedstedded, where we should have to find our own service, and subsist mainly upon the view from the windows. This was always fine; the valet had a cultivated eye for a prospect, and there was one of these lodgings which I should have liked to take for the sake of the boys playing *mora* in the old palace court, and the old lady with a single tooth rising like an obelisk from her lower jaw, who wished to let it.

A boarding-house, or *pension*, whose windows commanded an enchanting panorama of the Siennese hills, was provided with rather too much of the landscape indoors; and at another, which was cleanly and attractive, two obdurate young Englishmen were occupying the sunny rooms we wanted and would not vacate them for several days. The landlord conveyed a vivid impression of the violent character of these young men by whispering to me behind his hand, while he gently tried their door to see whether they were in or not, before he ventured to show me their apartment. We could not wait, and then he tried

to get rooms for us on the floor above, in an apartment belonging to a priest, so that we might at least eat at his table; but he failed in this, and we resumed our search for shelter. It must have been about this time that the short fat man appeared on the scene, and lured us off to see an apartment so exquisitely unsuitable that he saw the despair and reproach in our eyes, and, without giving us time to speak, promised us a perfect apartment for the morrow, and vanished round the first corner when we got into the street. In the very next barber's window, however, was a notice of rooms to let, and the barber left a lathered customer in his chair while he ran across the way to get the keys of a shoemaker. The shoemaker was at dinner, and his shop was shut; and the barber having, with however great regret, to go back to the customer left steeping in his lather, we fell into the hands of the most sympathetic of all bricabrac dealers, who sent us to the apartment of a French lady,—an apartment with a northern exposure as sunless as fireless, from which we retreated with the vague praises and promises of people swearing in their hearts never to be caught in *that* place again. The day went on in this vain quest, but as I returned to the hotel at dusk I was stopped on the stairs by a mysterious *facchino* in a blouse; he had been waiting there for me, and he whispered that the priest, whose rooms the keeper of the pension had tried to get, now had an apartment for me. It proved that he had not quite this, when I went to visit him after dinner, but he had certain rooms, and a lady occupying an apartment on the same floor had certain others; and with these and one more room which we got in the pension below, we really sheltered ourselves at last. It was not quite a realization of the hereditary Sienese hospitality, but we paid almost nothing for very comfortable quarters; and I do not see how a party of five could be better housed and fed for twenty-five francs a day in the world.

We must have been almost the first lodgers whom our good ecclesiastic and his niece had ever had, their enterprise being so new; the rooms were pretty and fresh, and there was a comfortable stove in our little parlor—a *franklinetto* which, three days out of four, did not smoke—and a large kerosene lamp for our table included in the price of two francs a day which we paid for our two rooms. We grieved a good deal that we could not get all our rooms of Don A., and he sorrowed with us, showing us a jewel (*giojello*) of a room which he would have been so glad to give us if it were not already occupied by a young man of fashion and his dog. As we stood looking at it, with its stove in the corner,

its carpet, its chest of drawers, and its other splendors, the good Don A. holding his three-beaked classic lamp up for us to see better, and his niece behind him lost in a passion of sympathy, which continually escaped in tender Ohs and Ahs, we sighed again, "Yes, if we could only have this, too!"

Don A. nodded his head and compressed his lips. "It would be a big thing!" ("*Sarebbe un' affarone!*") And then we all cast our eyes to heaven, and were about to break into a common sigh, when we heard the key of the young man of fashion in the outer door; upon which, like a party of guilty conspirators, we shrank breathlessly together for a moment, and then fled precipitately into our own rooms. We parted for that night with many whispered vows of esteem, and we returned in the morning to take possession. It was in character with the whole affair that on the way we should be met by the hunchbackling (whom I find described also in my notes as a wry-necked lamb, probably from some forcible contrast which he presented to the were-wolf) with a perfectly superb apartment, full of sun, in the Piazza Vittorio Emmanuele, looking squarely upon the Palazzo Communale and the Tower of the Mangia. I was forced to confess that I had engaged my rooms.

"A pity for you!" cried the hunchbackling, passionately.

"I have promised," I faltered. "One must keep one's promises, no?"

"Oh, you are right, you are right," said the hunchbackling, and vanished, and I never saw him more. Had he really the apartment to which he pretended?

VII.

NO MORE, probably, than I had the virtue which I affected about keeping my promises. But I have never been sorry that I remained true to the word I had given Don A., and I do not see what harm there can be in saying that he was an ex-monk of the suppressed convent of Monte Olivetto, who was eking out the small stipend he received for his priestly offices in the next parish church by letting these lodgings. All the monks of Monte Olivetto had to be of noble family, and in one of our rooms the blessed candle and crucifix which hung on one side of the bed were balanced by the blazon of our host's arms in a frame on the other. Yet he was not above doing any sort of homely office for our comfort and convenience; I saw him with his priest's gown off, in his shirt-sleeves and knee-breeches, putting up a bedstead; sometimes I met him on the stairs with a load of fire-

wood in his arms, which I suspect he must have been sawing in the cellar. He bowed to me over it with unabashed courtesy, and he and Maddalena were so simply proud and happy at having filled all their rooms for a month, that one could not help sharing their cheerfulness. Don A. was of a mechanical turn, and I heard that he also earned something by repairing the watches of peasants who could not or would not pay for finer surgery. Greater gentleness, sweeter kindness never surrounded the inmates of hired lodgings than enveloped us in the manners of this good priest and his niece. They did together all the work of the apartment, serving us without shame and without reluctance, yet keeping a soft dignity withal that was extremely pretty. May no word of mine offend them, for every word of theirs was meant to make us feel at home with them; and I believe that they will not mind this public recognition of the grace with which they adorned their gentle poverty. They never intruded, but they were always there, saluting our outgoing and incoming, and watchful of our slightest wish. Often before we could get our key into the outer door Maddalena had run to open it, holding her *lucerna* above her head to light us, and hailing us with a "*Buona sera Loro!*" (Good-evening to them — our lordships, namely) to which only music could do justice.

But the landlord of the pension below, where we took our meals, was no less zealous for the comfort of his guests, and at that table of his, good at any price, and wonderful for the little they gave, he presided with a hospitality which pressed them to eat of this and that, and kept the unstinted wine a-flowing, and communicated itself to Luigi, who, having cooked the dinner, hurled on a dress-coat of impenetrable antiquity and rushed in to help serve it; and to Angiolina, the house-keeper, who affected a sort of Yankee old-maid's grumpiness, but was as sweet of soul as Maddalena herself. More than once has that sympathetic spirit, in passing me a dish, advised me with a fine movement of her clasping thumb which morsel to choose.

We took our rooms in the belief that we were on the sunny side of the house; and so we were; the sun obliquely bathed that whole front of the edifice, and I never can understand why it should not have got indoors. It did not; but it was delightful in the garden which stretched from the rear of our palace across to the city wall. Just under our windows — but far under, for we were in the fourth story — was a wide stone terrace, old, moss-grown, balustraded with marble, from which you descended by two curving flights of marble steps into the garden. There, in the early March

weather, which succeeded a wind-storm of three days, the sun fell like a shining silence, amidst which the bent figure of an old gardener stirred, noiselessly turning up the earth. In the utmost distance the snow-covered Apennines glistened against a milky white sky growing pale blue above; the nearer hills were purplish; nearer yet were green fields, gray olive orchards, red plowed land, and black cypress-clumps about the villas with which the whole prospect was thickly sown. Then the city houses outside the wall began, and then came the beautiful red brick city wall, wandering wide over the levels and heights and hollows, and within it that sunny silence of a garden. While I once stood at the open window looking, brimful of content, tingling with it, a bugler came up the road without the wall, and gayly, bravely sounded a gallant *fanfare*, purely, as it seemed, for love of it and pleasure in it.

I call our garden a garden, but it was mostly a succession of fields, planted with vegetables for the market, and closed round next the city wall with ranks of olive-trees. Still, next the palace there were flowers, or must have been in summer; and on another morning, another heavenly morning, a young lady, doubtless of the ancient family to which the palace belonged, came out upon the terrace from the first floor with an elderly companion, and, loitering listlessly there a moment, descended the steps into the garden to a stone basin where some serving-women were washing. Her hair was ashen blonde; she was slimly cased in black silk, and as she slowly walked, she pulled forward the skirt a little with one hand, while she drew together with the other a light shawl, falling from the top of her head, round her throat; her companion followed at a little distance; on the terrace lingered a large white Persian cat, looking after them.

VIII.

THESE gardens, or fields, of Siena occupy half the space her walls inclose, and the olives everywhere softly embower the borders of the shriveled and shrunken old city, which once must have plumply filled their circuit with life. But it is five hundred years since the great pest reduced her hundred thousand souls to fifteen thousand; generation after generation the plow has gone over the dead streets, and the spade has been busy obliterating the decay, so that now there is no sign of them where the artichokes stretch their sharp lines, and the tops of the olives run tangling in the wind. Except where the streets carry the lines of buildings to the ten gates, the city is

completely surrounded by these gardens within its walls; they drop on all sides from the lofty ledge of rocks to which the edifices cling, with the cathedral preëminent, and cover the slopes with their herbage and foliage; at one point near the Lizza, flanking the fort which Cosimo built where the Spaniards failed, a gaunt ravine—deep, lonely, shadowy—pushes itself up into the heart of the town. Once, and once only, so old is the decay of Siena, I saw the crumbling foundations of a house on a garden slope; but again and again the houses break away, and the street which you have been following ceases in acreages of vegetation. Sometimes the varied and ever-picturesquely irregular ground has the effect of having fallen away from the palaces; the rear of a line of these, at one point, rested on massive arches, and buttresses sprung fifty or seventy-five feet from the lower level; and on the lofty shoulders of the palaces, here and there, was caught a bit of garden, and lifted with its overhanging hedge high into the sun. There are abundant evidences of that lost beauty and magnificence of Siena—she has kept enough of both—not only in the great thirteenth and fourteenth century structures in the Via Cavour, the Via del Capitano, and the neighborhood of the Palazzo Communale, but in many little wandering, darkling streets, where you come upon exquisite Gothic arches walled up in the fronts of now ordinary houses, which before some time of great calamity must have been the portals and windows of noble palaces. These gave their pathos to walks which were bewilderingly opulent in picturesqueness; walks that took us down sharp declivities dropping under successive arches between the house-walls, and flashing out upon sunny prospects of gardens; up steep thoroughfares climbing and crooking up from the gates below, and stopping as if for rest in successive piazzas, till they reach the great avenue which stretches along the high spine of the city from Porta Camollia to Porta Romana. Sharp turns everywhere bring your nose against some incomparable piece of architecture, or your eye upon some view astonishingly vast, and smiling or austere, but always enchanting.

The first night we found the Via Cavour full of people, walking and talking together; and there was always the effect of outdoor liveliness in the ancient town, which is partly to be accounted for by the pungent strength of the good air. This stirs and sustains one like the Swiss air, and when not in too rapid motion it is delicious. In March I will own that its motion was often too rapid. It swept cold from the Apennines, and one night it

A HIGH BREEZE.

sifted the gray depths of the streets full of snow. The next morning the sun blazed out with that ironical smile which we know here as well as in Italy, and Via Cavour was full of people lured forth by his sarcastic glitter, though the wind blew pitilessly. "*Marzo matto!*" (Crazy March!) said the shopman, with a sympathetic smile and impressive shrug, to whom I complained of it; and I had to confess that March was no better in America. The peasants, who took the whole breadth of Via Cavour with their carts laden with wine and drawn by wide-horned dun oxen, had their faces tied up against the blast, which must have been terrible on their hills; and it roared and blustered against our lofty eyrie in Palazzo Bandini-Piccolomini with a force that penetrated it with icy cold. It was quite impossible to keep warm; with his back planted well into the fire-place blazing with the little logs of the country, and fenced about on the windward side with mattresses and sofa-pillows, a suffering novelist was able to complete his then current fiction only at the risk of freezing.

But before this, and after it, we had weather in which the streets were as much a pleasure to us as to the Sienese; and in fact I do not know where I would rather be at this moment than in Via Cavour, unless it were on the Grand Canal at Venice—or the Lungarno at Florence—or the Pincio at Rome—or Piazza Brà at Verona. Any of these places would do, and yet they would all lack the strictly mediæval charm which belongs to Siena, and which perhaps you feel most when you stand before the Tolomei palace, with its gray Gothic façade, on the richly sculptured porch of the Casino dei Nobili. At more than one point the gaunt Roman wolf suckles her adoptive twins on the top of a pillar; and the olden charm of prehistoric fable mingles with the interest of the city's proper life, when her peo-

ple fought each other for their freedom in her streets, and never trusted one another except in some fiery foray against the enemy beyond her gates.

Let the reader not figure to himself any broad, straight level when I speak of Via Cavour as the principal street; it is only not so narrow and steep and curving as the rest, and a little more light gets into it; but there is one level, and one alone, in all Siena, and that is the Lizza, the public promenade, which looks very much like an artificial level. It is planted with pleasant little bosks and trim hedges, beyond which lurk certain cafés and beer-houses, and it has walks and a drive. On a Sunday afternoon of February, when the military band played there, and I was told that the fine world of Siena resorted to the Lizza, we hurried thither to see it; but we must have come too late. The band were blowing the drops of distilled music out of their instruments and shutting them up, and on the drive there was but one equipage worthy of the name. Within this carriage sat a little refined-looking boy,—delicate, pale, the expression of an effete aristocracy; and beside him sat a very stout, gray-mustached, side-whiskered, eagle-nosed, elderly gentleman, who took snuff out of a gold box, and looked like Old Descent in person. I felt, at sight of them, that I had met the Sienese nobility, whom otherwise I did not see; and yet I do not say that they may not have been a prosperous fabricant of panforte and his son. A few young bucks, with fierce trotting-ponies in two-seated sulkies, hammered round the drive; the crowd on foot was mostly a cloaked and slouch-hatted crowd, which in Italy is always a plebeian crowd. There were no ladies, but many women of less degree, pretty enough, well-dressed enough, and radiantly smiling. In the center of the place shone a resplendent group of officers, who kept quite to themselves. We could not feel that we had mingled greatly in the social gayeties of Siena, and we wandered off to climb the bastions of the old Medicean fort—very bold with its shield and *palle* over the gateway—and listened to the bees humming in the oleander hedge beneath.

This was toward the end of February; a few days later I find it recorded that in walking half-way round the city outside the wall I felt the sun very hot, and heard the birds singing over the fields, where the peasants were breaking the clods with their hoes. The almond-trees kept blossoming with delicate courage all through February, like girls who brave the lingering cold with their spring finery; and though the grass was green, with here and there daring dandelions in it, the landscape generally had a pathetic look of

winter weariness, when we drove out into the country beyond the wall.

It is this wall with the color of its red brick which everywhere warms up the cold gray tone of Siena. It is like no other city wall that I know, except that of Pisa, and is not supported with glacis on the inside, but rises sheer from the earth there as on the outside. With its towers and noble gates it is beautiful always; and near the railway station it obligingly abounds in repaired spots which look as if they had been holes knocked in it at the great siege. I hope they were.

It is anywhere a study for a painter,—preferably a water-colorist, I should say,—and I do not see how an architect could better use his eyes in Italy than in perusing the excellent brick-work of certain of the smaller houses, as well as certain palaces and churches, both in the city and the suburbs of Siena. Some of the carved brick there is delightful, and the material is treated with peculiar character and feeling.

IX.

THE ancient palace of the republic, the Palazzo Communale, is of brick, which allegorizes well enough the multitude of plebeian wills and forces that went to the constitution of the democratic state. No friend of popular rule, I suppose, can boast that these little mediæval commonwealths of Italy were the homes of individual liberty. They were popular tyrannies; but tyrannies as they were, they were always better than the single-handed despotisms, the *governo d'un solo*, which supplanted them, except in the one fact only that they did not give continuous civil peace. The crater of the extinct volcano before the Palazzo Communale in Siena was always boiling with human passions, and for four hundred years it vomited up and ingulfed innumerable governments and forms of government, now aristocratic and now plebeian. From those beautiful Gothic windows many a traitor has dangled head downwards or feet downwards, as the humor took the mob; many a temporizer or usurper has hurtled from that high balcony ruining down to the stones below.

Carlo Folletti-Fossati, a Sienese citizen of our own time, has made a luminous and interesting study of the "Costumi Sienese" of the middle ages, which no reader of Italian should fail to get when he goes to Siena, for the sake of the light which it throws upon that tumultuous and struggling past of one of the bravest and doughtiest little peoples that ever lived. In his chapters on the "Daily Life" of the Sienese of those times, he speaks first of the world-wide difference between the American

UNDER THE ARCHES IN SIENA.

democracy and the mediæval democracies. He has read his De Tocqueville, and he understands, as Mr. Matthew Arnold is beginning to understand, that the secret of our political success is in the easy and natural fit of our political government, the looseness of our social organization; and he shows with attractive clearness how, in the Italian republics, there was no conception of the popular initiative, except in the matter of revolution, which was extra-constitutional. The government once established, no matter how democratic, how plebeian its origin, it began at once to interfere with the personal affairs of the people. It regulated their household expenses; said what dishes and how many they might have at dinner; clipped women's gowns, and forbade the braid and laces on their sleeves and stomachers; prescribed the fashion of men's hats and cloaks; determined the length of coats, the size of bricks, and the

dimensions of letter-paper; costumed the different classes; established the hours of pleasure and business; limited the number of those who should be of this or that trade or profession; bothered in every way. In Siena, at a characteristic period, the Signiory were chosen every two months, and no man might decline the honor and burden of office except under heavy fine. The government must have been as great a bore to its officers as to its subjects, for, once elected, the Signiory were obliged to remain night and day in the public palace. They could not leave it except for some grave reason of state, or sickness, or marriage, or the death of near kindred, and then they could only go out two at a time, with a third for a spy upon them. Once a week they could converse with the citizens, but solely on public business. Then, on Thursdays, the Signiory — the Nine, or the Twelve, or the Priors, whichever they chanced to

be — descended from their magnificent confinement in the apartments of state to the great hall of the ground floor, and heard the petitions of all comers. Otherwise, their official life was no joke: in the months of March and April, 1364, they consumed in their public labors eleven reams of paper, twenty-one quires of parchment, twelve pounds of red and green sealing-wax, five hundred goose-quills, and twenty bottles of ink.

Besides this confinement at hard labor, they were obliged to suffer from the shrieks of the culprits, who were mutilated or put to death in the rear of the palace; for in those days prison expenses were saved by burning a witch or heretic, tearing out the tongue of a blasphemer, striking off the right hand of a perjurer or bigamist, and the right foot of a highwayman. The Sieneſe in course of time became ſo refined that they expelled the mutilated wretches from the city, that they might not offend the eye, after the infliction of their penalties; but in the mean while the Signiory could not bear the noiſe of their agony, eſpecially while they ſat at dinner; and the execution-grounds were finally changed to a remote quarter.

It is well enough for the tourist to give a thought to theſe facts and conditions of the times that produced the beautiful architecture of the Palazzo Comunale and the wonderful frescoes which illumine its dim-vaulted halls and chambers. The maſters who wrought either might have mixed the mortar for their bricks, and the colors for their ſaints and angels, and allegories and warriors, with human blood, it flowed ſo freely and abundantly in Siena. Poor, ſplendid, ſtupid, glorious paſt! I ſtood at the windows of the people's palace and looked out on the ſpace in the rear where thoſe culprits uſed to diſturb the Signiory at their meals, and thanked heaven that I was of the nineteenth century. The place is flanked now by an immense modern priſon, whoſe ample caſements were crowded with captives preſſing to them for the ſun; and in the diſtance there is a beautiful view of an insane aſylum, the laſt and moſt populous in Italy.

I ſuppoſe the reader will not apprehend a great deal of comment from me upon the frescoes, inexpressibly quaint and rich, from which certain faces and certain looks remain with me yet. The pictures figure the great ſcenes of Sieneſe hiſtory and fable. There are the battles in which the republic triumphed, to the diſadvantage chiefly of the Florentines; there are the victorious encounters of her ſon Pope Alexander III. with Barbaroſſa; there are allegories in which her chief citizens appear. In one of theſe — I think it is that

repreſenting “ Good and Bad Government,” painted by Lorenzetti in 1337 — there is a proceſſion of Sieneſe figures and faces of the moſt curious realistic intereſt, and above their heads ſome divine and auſtine ideal ſhapes,—a Wiſdom, from whoſe ſtrange eyes all miſtery looks, and a Peace and a Fortitude which, for an unearthly dignity and beauty, I cannot remember the like of. There is alſo, ſomewhere in thoſe duſky halls, a moſt noble “ St. Victor ” by Sodoma; and I would not have my readers miſs that ſly rogue of a ſaint (“ We are famous for our ſaints in Siena,” ſaid the ſardonic cuſtodian, with a ſhrug) who is repreſented in a time of interdict ſtealing a bleſſing from the pope for his city by having concealed under his cloak a model of it when he appears before the pontiff! For the reſt, there is an impreſſion of cavernous gloom left from many of the rooms of the palace which characterizes the whole to my memory; and as I look back into it, beautiful, myſtical, living eyes glance out of it; noble preſences, ſolemn attitudes, forms of grandeur faintly appear; and then all is again a hovering twilight, out of which I am glad to emerge into the laughing ſunſhine of the piazza.

x.

A MONUMENT of the old magnanimity of Siena is that Capella di Piazza in front of the palace, at the foot of the tower, which the tourist goes to ſee for the ſake of Sodoma's fresco in it, but which deſerves to be alſo revered as the memorial of the great peſt of 1348; it was built in 1352, and thrice demoliſhed and thrice rebuilt before it met with public approval. This and the beautiful Fonte Gaja — as beautiful in its way as the tower — make the piazza a place to linger in and come back to at every chance. The fountain was deſigned by Giacomo della Quercia, who was known thereafter as Giacomo della Fonte, and it was called the Gay Fountain in memory of the feſtivities with which the people celebrated the introduction of good water into their city in 1419. Seven years the artiſt wrought upon it, and three thouſand florins of gold the republic paid for the work, which after four hundred years has been reſtored in all its firſt lovelineſs by Tito Sarocchi, an admirable Sieneſe ſculptor of our day.

There are ſix fountains in all, in different quarters of the city; and of theſe, the fineſt are the two oldeſt, Fonte Branda of the twelfth century, and Fonte Nuova of the fourteenth. Fonte Branda I will allow to be the more famous, but never ſo beautiful as Fonte Nuova.

FOUNTAIN OUTSIDE OF THE WALL AT SIENA.

They are both as practicable now as when they were built, and Fonte Nuova has a small house atop of its arches, where people seem to live. The arches are Gothic, and the delicate carved brick-work of Siena decorates their sharp spring. Below, in the bottom of the four-sided structure, is the clear pool from whose affluent pipes the neighborhood comes to draw its water (in buckets hammered from solid copper into antique form), and in which women seem to be always rinsing linen, or beating it with wooden paddles in the Latin fashion.

Fonte Branda derives a world-wide celebrity from being mentioned by Dante and then having its honors disputed by a small stream of its name elsewhere. It, too, is a lovely Gothic shape, and whenever I saw it wash-day was in possession of it. The large pool which the

laundresses had whitened with their suds is used as a swimming-vat in summer; and the old fountain may therefore be considered in very active use still, so many years after Dante dedicated the new fountain to disputed immortality with a single word. It was one of those extremely well-ventilated days of March when I last visited Fonte Branda; and not only was the linen of all Siena blowing about from balconies and house-tops, but, from a multitude of galleries and casements, hides of leather were lustily flapping and giving out the pungent aroma of the tan. It is a region of tanneries, and some of them are of almost as august a presence as the Fonte Branda itself. We had not come to see either, but to pay our second visit to the little house of St. Catherine of Siena, who was born and lived a child in this neighborhood, the good Contrada

WASHING-DAY — SIENA.

dell' Oca, or Goose Ward, which took this simple name while other wards of Siena called themselves after the Dragon, the Lion, the Eagle, and other noble beasts and birds. The region has therefore the odor of sanctity as well as of leather, and is consecrated by the memory of one of the best and bravest and meekest woman's lives ever lived. Her house

here is much visited by the curious and devout, and across a chasmed and gardened space from the fountain rises high on the bluff the high-shouldered bulk of the church of San Domenico, in which Catherine was first rapt in her beatific visions of Our Lord, conversing with him, and giving him her heart for his in mystical espousals.

W. D. Howells.

FROM THE CATHEDRAL.

·THE·GLORY· OF ·THE·YEAR·

·CHANT·ROYAL·

WHEN Spring came softly breathing o'er the land,
With warmer sunshine and sweet April shower;
Bidding the silken willow leaves expand;
Calling to hill and meadow, bee and flower,
Bright with new life and beauty; on light wing
Bringing the birds again to love and sing;
And waking in the heart its joy amain,
With old fond hopes and memories in its train;
Childishly glad mid universal cheer,
How oft we sang the half-forgotten strain:
"Now we behold the glory of the year!"

WHEN Summer by her gentle breezes fanned,
With footstep free and proud in restless power,
With plump, round cheek to ruddy beauty tanned,
In blooming loveliness came to her bower,
Her golden tresses loosely wandering
In wild luxuriance,—then pretty Spring
Seemed but a playful sister, pettish, vain.
How well we loved the passionate Summer's reign!
How day by day our empress grew more dear!
"Beyond," we asked, "what fairer can remain?"
Now we behold the glory of the year!"

BUT when grave Autumn's ever bounteous hand
 Poured round our feet the riches of her dower;
 The pulpy fruit, the nut's sweet ripened gland,
 The largess free to gleaner and to plower,
 And all the Summer sought in vain to bring;
 When stood the hills in glorious garmenting,
 Shadowed by low-hung skies of sober grain,
 No more could our ennobled thoughts sustain
 Regretful memory of Summer sere,—
 "What of the past!" we cried in quick disdain;
 "*Now* we behold the glory of the year!"

✦ WINTER ✦ CHASES ✦ AUTUMN: ✦

THEN before mighty Winter, stern and grand,
 We saw defenseless Autumn shivering, cower,
 Changed to Duessa by his potent wand,
 Shorn of her loveliness, in Fortune's lower
 Naked for Winter's scourge to smite and sting.
 How godlike came the world's new sceptered King!
 He fettered fast her torrents with his chain,
 Bound with his manacles the moaning main,
 Yea, wrought his will with all things far and near.
 "At last," we said, "what more can Time attain?
Now we behold the glory of the year!"

NEGLECTED Spring, despised, insulted, banned!
 Poor weakling! came again one April hour.
 The tyrant struck his tent at her command;
 She laughed,—down tumbling fell his frosty tower;
 At one light finger-touch his captives fling
 Their shackles off, and make the valleys ring
 With praises to the conqueror of pain.
 All the lost lives that languishing have lain,
 Leaves, grasses, buds, and birds again appear.
 “O now!” we cried again and yet again,
 “*Now* we behold the glory of the year!”

PRINCE, while Spring sports with sunbeam, flower, and rain,—
 While wanton Summer riots on the plain,—
 Neath Autumn's calm, or Winter's frown severe,
 Change only clearer chants the old refrain,
 “Now we behold the glory of the year!”

Ernest Whitney.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

XXII.

AS he sat with Mrs. Luna, in her little back drawing-room, under the lamp, he felt rather more tolerant than before of the pressure she could not help putting upon him. Several months had elapsed, and he was no nearer to the sort of success he had hoped for. It stole over him gently that there was another sort, pretty visibly open to him, not so elevated nor so manly, it is true, but on which he should after all, perhaps, be able to reconcile it with his honor to fall back. Mrs. Luna had had an inspiration; for once in her life she had held her tongue. She had not made him a scene, there had been no question of an explanation; she had received him as if he had been there the day before, with the addition of a spice of mysterious melancholy. She might have made up her mind that she had lost him as what she had hoped, but that it was better than desolation to try and keep him as a friend. It was as if she wished him to see now how she tried. She was subdued and consolatory, she waited upon him, moved away a screen that intercepted the fire, remarked that he looked very tired, and rang for some tea. She made no inquiry about his affairs, never asked if he had been busy and prosperous; and this reticence struck him as unexpectedly delicate and discreet; it was as if she had guessed, by a subtle feminine faculty, that his professional career was nothing to boast of. There was a simplicity in him which permitted him to wonder whether she had not improved. The lamp-light was soft, the fire crackled pleasantly, everything that surrounded him betrayed a woman's taste and touch; the place was curtained and cushioned in perfection, delightfully private and personal, the picture of a well-appointed home. Mrs. Luna had complained of the difficulties of installing one's self in America, but Ransom remembered that he had received an impression similar to this in her sister's house in Boston, and reflected that these ladies had, as a family trait, the art of making themselves comfortable. It was better for a winter's evening than the German beer-cellar (Mrs. Luna's tea was excellent), and his hostess herself appeared to-night almost as amiable as the variety actress. At the

end of an hour he felt, I won't say almost marriageable, but almost married. Images of leisure played before him, leisure in which he saw himself covering foolscap paper with his views on several subjects and with favorable illustrations of Southern eloquence. It became tolerably vivid to him that if editors wouldn't print one's lucubrations, it would be a comfort to feel that one was able to publish them at one's own expense.

He had a moment of almost complete illusion. Mrs. Luna had taken up her bit of crochet; she was sitting opposite to him, on the other side of the fire. Her white hands moved with little jerks as she took her stitches, and her rings flashed and twinkled in the light of the hearth. Her head fell a little to one side, exhibiting the plumpness of her chin and neck, and her dropped eyes (it gave her a little modest air) rested quietly on her work. A silence of a few moments had fallen upon their talk, and Adeline—who decidedly *had* improved—appeared also to feel the charm of it, not to wish to break it. Basil Ransom was conscious of all this, and at the same time he was vaguely engaged in a speculation. If it gave one time, if it gave one leisure, was not that in itself a high motive? Thorough study of the question he cared for most—was not the chance for *that* an infinitely desirable good? He seemed to see himself, to feel himself, in that very chair, in the evenings of the future, reading some indispensable book in the still lamp-light—Mrs. Luna knew where to get such pretty mellowing shades. Should he not be able to act in that way upon the public opinion of his time, to check certain tendencies, to point out certain dangers, to indulge in much salutary criticism? Was it not one's duty to put one's self in the best conditions for such action? And as the silence continued he almost fell to musing on his duty, almost persuaded himself that the moral law commanded him to marry Mrs. Luna. She looked up presently from her work, their eyes met, and she smiled. He might have believed she had guessed what he was thinking of. This idea startled him, alarmed him a little, so that when Mrs. Luna said, with her exceedingly sociable smile, "There is nothing I like so much, of a winter's night, as a cozy *tête-à-tête*

by the fire. It's quite like Darby and Joan; what a pity the kettle has ceased singing!"—when she uttered these insinuating words, he gave himself a little imperceptible shake, which was, however, enough to break the spell, and made no response more direct than to ask her, in a moment, in a tone of cold, mild curiosity, whether she had lately heard from her sister, and how long Miss Chancellor intended to remain in Europe.

"Well, you *have* been living in your hole!" Mrs. Luna exclaimed. "Olive came home six weeks ago. How long did you expect her to endure it?"

"I am sure I don't know; I have never been there," Ransom replied.

"Yes, that's what I like you for," Mrs. Luna remarked, sweetly. "If a man is nice without it, it's such a pleasant change."

The young man started, then gave a natural laugh. "Lord, how few reasons there must be!"

"Oh, I mention that one because I can tell it. I shouldn't care to tell the others."

"I am glad you have some to fall back upon, the day I should go," Ransom went on. "I thought you thought so much of Europe."

"So I do; but it isn't everything," said Mrs. Luna, philosophically. "You had better go there with me," she added, with a certain inconsequence.

"One would go to the end of the world with so fair a lady!" Ransom exclaimed, falling into the tone which Mrs. Luna always found so unsatisfactory. It was a part of his Southern gallantry,—his accent always came out strongly when he said anything of that sort,—and it committed him to nothing in particular. She had had occasion to wish, more than once, that he wouldn't be so beastly polite, as she used to hear people say in England. She answered that she didn't care about ends, she cared about beginnings; but he didn't take up the declaration; he returned to the subject of Olive, wanted to know what she had done over there, whether she had worked them up much.

"Oh, of course, she fascinated every one," said Mrs. Luna. "With her grace and beauty, her general style, how could she help that?"

"But did she bring them round, did she swell the host that is prepared to march under her banner?"

"I suppose she saw plenty of the strong-minded, plenty of vicious old maids, and fanatics, and frumps. But I haven't the least idea what she accomplished,—what they call 'wonders,' I suppose."

"Didn't you see her when she returned?" Basil Ransom asked.

"How could I see her? I can see pretty

far, but I can't see all the way to Boston." And then, in explaining that it was at this port that her sister had disembarked, Mrs. Luna further inquired whether he could imagine Olive doing anything in a first-rate way, as long as there were inferior ones. "Of course she likes bad ships,—Boston steamers,—just as she likes common people, and red-haired hoydens, and preposterous doctrines."

Ransom was silent a moment. "Do you mean the — a — rather striking young lady whom I met in Boston a year ago last October? What was her name? — Miss Tarrant? Does Miss Chancellor like her as much as ever?"

"Mercy! didn't you know she took her to Europe? It was to form *her* mind she went. Didn't I tell you that last summer? You used to come to see me, then."

"Oh, yes, I remember," Ransom said, rather musingly. "And did she bring her back?"

"Gracious, you don't suppose she would leave her! Olive thinks she's born to regenerate the world."

"I remember you telling me that, too. It comes back to me. Well, is her mind formed?"

"As I haven't seen it, I can't tell you."

"Aren't you going on there to see —"

"To see whether Miss Tarrant's mind is formed?" Mrs. Luna broke in. "I will go if you would like me to. I remember your being immensely excited about her that time you met her. Don't you recollect that?"

Ransom hesitated an instant. "I can't say I do. It is too long ago."

"Yes, I have no doubt that's the way you change about women! Poor Miss Tarrant, if she thinks she made an impression on you!"

"She won't think about such things as that, if her mind has been formed by your sister," Ransom said. "It does come back to me now, what you told me about the growth of their intimacy. And do they mean to go on living together forever?"

"I suppose so — unless some one should take it into his head to marry Verena."

"Verena — is that her name?" Ransom asked.

Mrs. Luna looked at him with a suspended needle. "Well! have you forgotten that too? You told me yourself you thought it so pretty, that time in Boston when you walked me up the hill." Ransom declared that he remembered that walk, but didn't remember everything he had said to her; and she suggested very satirically, that perhaps he would like to marry Verena himself — he seemed so interested in her. Ransom shook his head sadly, and said he was afraid he was not in a position to marry; whereupon Mrs. Luna asked him what he meant — did he mean

(after a moment's hesitation) that he was too poor?

"Never in the world — I am very rich; I make an enormous income!" the young man exclaimed; so that, remarking his tone, and the slight flush of annoyance that rose to his face, Mrs. Luna was quick enough to judge that she had overstepped the mark. She remembered (she ought to have remembered before) that he had never taken her in the least into his confidence about his affairs. That was not the Southern way, and he was at least as proud as he was poor. In this surmise she was just; Basil Ransom would have despised himself if he had been capable of confessing to a woman that he couldn't make a living. Such questions were none of their business (their business was simply to be provided for, practice the domestic virtues, and be charmingly grateful), and there was, to his sense, something almost indecent in talking about them. Mrs. Luna felt doubly sorry for him as she perceived that he denied himself the luxury of sympathy (that is, of hers), and the vague but comprehensive sigh that passed her lips as she took up her crochet again was unusually expressive of helplessness. She said that of course she knew how great his talents were — he could do anything he wanted; and Basil Ransom wondered for a moment whether, if she were to ask him point-blank to marry her, it would be consistent with the high courtesy of a Southern gentleman to refuse. After she should be his wife he might of course confess to her that he was too poor to marry, for in that relation even a Southern gentleman of the highest tone must sometimes unbend. But he didn't in the least long for this arrangement, and was conscious that the most pertinent sequel to her conjecture would be for him to take up his hat and walk away.

Within five minutes, however, he had come to desire to do this almost as little as to marry Mrs. Luna. He wanted to hear more about the girl who lived with Olive Chancellor. Something had revived in him — an old curiosity, an image half effaced — when he learned that she had come back to America. He had taken a wrong impression from what Mrs. Luna said, nearly a year before, about her sister's visit to Europe; he had supposed it was to be a long absence, that Miss Chancellor wanted perhaps to get the little prophetess away from her parents, possibly even away from some amorous entanglement. Then, no doubt, they wanted to study up the woman question with the facilities that Europe would offer; he didn't know much about Europe, but he had an idea that it was a great place for facilities. His knowledge of Miss Chan-

cellor's departure, accompanied by her young companion, had checked at the time, on Ransom's part, a certain habit of idle but none the less entertaining retrospect. His life, on the whole, had not been rich in episode, and that little chapter of his visit to his queer, clever, capricious cousin, with his evening at Miss Birdseye's, and his glimpse, repeated on the morrow, of the strange, beautiful, ridiculous, red-haired young *improvisatrice*, unrolled itself in his memory like a page of interesting fiction. The page seemed to fade, however, when he heard that the two girls had gone, for an indefinite time, to unknown lands; this carried them out of his range, spoiled the perspective, diminished their actuality; so that for several months past, with his increase of anxiety about his own affairs, and the low pitch of his spirits, he had not thought at all about Verena Tarrant. The fact that she was once more in Boston, with a certain contiguity that it seemed to imply between Boston and New York, presented itself now as important and agreeable. He was conscious that this was rather an anomaly, and his consciousness made him, had already made him, dissimulate slightly. He did not pick up his hat to go; he sat in his chair taking his chance of the tax which Mrs. Luna might lay upon his urbanity. He remembered that he had not made, as yet, any very eager inquiry about Newton, who at this late hour had succumbed to the only influence that tames the untamable, and was sleeping the sleep of childhood, if not of innocence. Ransom repaired his neglect in a manner which elicited the most copious response from his hostess. The boy had had a good many tutors since Ransom gave him up, and it could not be said that his education languished. Mrs. Luna spoke with pride of the manner in which he went through them; if he did not master his lessons, he mastered his teachers, and she had the happy conviction that she gave him every advantage. Ransom's delay was diplomatic, but at the end of ten minutes he returned to the young ladies in Boston; he asked why, with their aggressive programme, one hadn't begun to feel their onset, why the echoes of Miss Tarrant's eloquence hadn't reached his ears. Hadn't she come out yet in public? was she not coming to stir them up in New York? He hoped she hadn't broken down.

"She didn't seem to break down last summer, at the Female Convention," Mrs. Luna replied. "Have you forgotten that too? Didn't I tell you of the sensation she produced there, and of what I heard from Boston about it? Do you mean to say I didn't give you that 'Transcript,' with the report of her great

speech? It was just before they sailed for Europe; she went off with flying colors, in a blaze of fireworks." Ransom protested that he had not heard this affair mentioned till that moment, and then, when they compared dates, they found it had taken place just after his last visit to Mrs. Luna. This, of course, gave her a chance to say that he had treated her even worse than she supposed; it had been her impression, at any rate, that they had talked together about Verena's sudden bound into fame. Apparently she confounded him with some one else, that was very possible; he was not to suppose that he occupied such a distinct place in her mind, especially when she might die twenty deaths before he came near her. Ransom demurred to the implication that Miss Tarrant was famous; if she were famous, wouldn't she be in the New York papers? He hadn't seen her there, and he had no recollection of having encountered any mention at the time (last June, was it?) of her exploits at the Female Convention. A local reputation doubtless she had, but that had been the case a year and a half before, and what was expected of her then was to become a first-class national glory. He was willing to believe that she had created some excitement in Boston, but he shouldn't attach much importance to that till one began to see her photograph in the shops. Of course, one must give her time, but he had supposed Miss Chancellor was going to put her through faster.

If he had taken a contradictory tone on purpose to draw Mrs. Luna out, he could not have elicited more of the information he desired. It was perfectly true that he had seen no reference to Verena's performances in the preceding June; there were periods when the newspapers seemed to him so idiotic that for weeks he never looked at one. He learned from Mrs. Luna that it was not Olive who had sent her the "Transcript," and in letters had added some private account of the doings at the convention to the testimony of that amiable sheet; she had been indebted for this service to a "gentleman friend," who wrote her everything that happened in Boston, and what every one had every day for dinner. Not that it was necessary for her happiness to know; but the gentleman she spoke of didn't know what to invent to please her. A Bostonian couldn't imagine that one *didn't* want to know, and that was their idea of ingratiating themselves, or, at any rate, it was his, poor man. Olive would never have gone into particulars about Verena; she regarded her sister as quite too much one of the profane, and knew Adeline couldn't understand why, when she took to herself a bosom friend, she should have been at such pains to select her in just

the most dreadful class in the community. Verena was a perfect little adventuress, and quite third-rate into the bargain; but, of course, she was a pretty girl enough, if one cared for hair of the color of cochineal. As for her people, they were too absolutely awful; it was exactly as if she, Mrs. Luna, had struck up an intimacy with the daughter of her chiropodist. It took Olive to invent such monstrosities, and to think she was doing something great for humanity when she did so; though, in spite of her wanting to turn everything over, and put the lowest highest, she could be just as contemptuous and invidious, when it came to really mixing, as if she were some grand old duchess. She must do her the justice to say that she hated the Tarrants, the father and mother; but, all the same, she let Verena run to and fro between Charles street and the horrible hole they lived in, and Adeline knew from that gentleman who wrote so copiously that the girl now and sometimes spent a week at a time at Cambridge. Her mother, who had been ill for some weeks, wanted her to sleep there. Mrs. Luna knew further, by her correspondent, that Verena had — or had had the winter before — a great deal of attention from gentlemen. She didn't know how she worked that into the idea that the female sex was sufficient to itself; but she had grounds for saying that this was one reason why Olive had taken her abroad. She was afraid Verena would give in to some man, and she wanted to make a break. Of course, any such giving in would be very awkward for a young woman who shrieked out on platforms that old maids were the highest type. Adeline guessed Olive had perfect control of her now, unless indeed she used the expeditions to Cambridge as a cover for meeting gentlemen. She was an artful little minx, and cared as much for the rights of women as she did for the Panama Canal; the only right of a woman she wanted was to climb up on top of something, where the men could look at her. She would stay with Olive as long as it served her purpose, because Olive with her great respectability could push her, and counteract the effect of her low relations, to say nothing of paying all her expenses, and taking her the tour of Europe. "But, mark my words," said Mrs. Luna, "she will give Olive the greatest cut she has ever had in her life before! She will run off with some lion-tamer; she will marry a circus man!" And Mrs. Luna added that it would serve Olive Chancellor right. But she would take it hard; look out for tantrums then!

Basil Ransom's emotions were peculiar while his hostess delivered herself, in a manner at once casual and emphatic, of these

rather insidious remarks. He took them all in, for they represented to him certain very interesting facts; but he perceived at the same time that Mrs. Luna didn't know what she was talking about. He had seen Verena Tarrant only twice in his life, but it was no use telling him that she was an adventuress — though, certainly, it *was* very likely she would end by giving Miss Chancellor a cut. He chuckled, with a certain grimness, as this image passed before him; it was not unpleasing, the idea that he should be avenged (for it would avenge him to know it) upon the wanton young woman who had invited him to come and see her, in order simply to slap his face. But he had an odd sense of having lost something in not knowing of the other girl's appearance at the Women's Convention — a vague feeling that he had been cheated and trifled with. The complaint was idle, inasmuch as it was not probable he could have gone to Boston to listen to her; but it represented to him that he had not shared, even dimly and remotely, in an event which concerned her very closely. Why should he share, and what was more natural than that the things which concerned her closely should not concern him at all? This question came to him only as he walked home that evening; for the moment it remained quite in abeyance: therefore he was free to feel also that his imagination had been rather starved by his ignorance of the fact that she was near him again (comparatively), that she was in the dimness of the horizon (no longer beyond the curve of the globe), and yet he had not perceived it. This sense of personal loss, as I have called it, made him feel, further, that he had something to make up, to recover. He could scarcely have told you how he would go about it; but the idea, formless though it was, led him in a direction very different from the one he had been following a quarter of an hour before. As he watched it dance before him, he fell into another silence, in the midst of which Mrs. Luna gave him another mystic smile. The effect of it was to make him rise to his feet; the whole landscape of his mind had suddenly been illuminated. Decidedly, it was *not* his duty to marry Mrs. Luna, in order to have means to pursue his studies; he jerked himself back, as if he had been on the point of it.

"You don't mean to say you are going already? I haven't said half I wanted to!" she exclaimed.

He glanced at the clock, saw it was not yet late, took a turn about the room, then sat down again in a different place, while she followed him with her eyes, wondering what was the matter with him. Ransom took good care

not to ask her what it was she had still to say, and perhaps it was to prevent her telling him that he now began to talk, freely, quickly, in quite a new tone. He staid half an hour longer, and made himself very agreeable. It seemed to Mrs. Luna now that he had every distinction: she had known he had most; that he was really a charming man. He abounded in conversation, till at last he took up his hat in earnest; he talked about the state of the South, its social peculiarities, the ruin wrought by the war, the dilapidated gentry, the queer types of superannuated fire-eaters, ragged and unreconciled, all the pathos and all the comedy of it, making her laugh at one moment, almost cry at another, and say to herself throughout that when he took it into his head there was no one who could make a lady's evening pass so pleasantly. It was only afterwards that she asked herself why he had not taken it into his head till the last, so quickly. She delighted in the dilapidated gentry; her taste was completely different from her sister's, who took an interest only in the lower class, as it struggled to rise; what Adeline cared for was the fallen aristocracy (it seemed to be falling everywhere very much; was not Basil Ransom an example of it? was he not like a French *gentilhomme de province* after the Revolution? or an old monarchical émigré from the Languedoc?), the despoiled patriciate, I say, whose attitude was noble and touching, and toward whom one might exercise a charity as discreet as their pride was sensitive. In all Mrs. Luna's visions of herself, her discretion was the leading feature. "Are you going to let ten years elapse again before you come?" she asked, as Basil Ransom bade her good-night. "You must let me know, because between this and your next visit I shall have time to go to Europe and come back. I shall take care to arrive the day before!"

Instead of answering this sally, Ransom said, "Are you not going one of these days to Boston? Are you not going to pay your sister another visit?"

Mrs. Luna stared. "What good will that do *you*? Excuse my stupidity," she added; "of course, it gets me away. Thank you very much!"

"I don't want you to go away; but I want to hear more about Miss Olive."

"Why in the world? You know you loathe her!" Here, before Ransom could reply, Mrs. Luna again overtook herself. "I verily believe that by Miss Olive you mean Miss Verena!" Her eyes charged him a moment with this perverse intention; then she exclaimed, "Basil Ransom, *are* you in love with that creature?"

He gave a perfectly natural laugh, not pleading guilty, in order to practice on Mrs.

Luna, but expressing the simple state of the case. "How should I be? I have seen her but twice in my life."

"If you had seen her more, I shouldn't be afraid! Fancy your wanting to pack me off to Boston!" his hostess went on. "I am in no hurry to stay with Olive again; besides, that girl takes up the whole house. You had better go there yourself."

"I should like nothing better," said Ransom.

"Perhaps you would like me to ask Verena to spend a month with me—it might be a way of attracting you to the house," Adeline went on, in the tone of exuberant provocation.

Ransom was on the point of replying that it would be a better way than any other, but he checked himself in time; he had never yet, even in joke, made so crude, so rude a speech to a lady. You only knew when he was joking with women by his superadded civility. "I beg you to believe there is nothing I would do for any woman in the world that I wouldn't do for you," he said, bending, for the last time, over Mrs. Luna's plump hand.

"I shall remember that and keep you up to it!" she cried after him, as he went. But even with this rather lively exchange of vows he felt that he had got off rather easily. He walked slowly up Fifth Avenue, into which, out of Adeline's cross-street, he had turned, by the light of a fine winter moon; and at every corner he stopped a minute, lingered in meditation, while he exhaled a soft, vague sigh. This was an unconscious, involuntary expression of relief, such as a man might utter who had seen himself on the point of being run over and yet felt that he was whole. He didn't trouble himself much to ask what had saved him; whatever it was, it had produced a reaction, so that he felt rather ashamed of having found his outlook of late so blank. By the time he reached his lodgings, his ambition, his resolution, had rekindled; he had remembered that he formerly supposed he was a man of ability, that nothing particular had occurred to make him doubt it (the evidence was only negative, not positive), and that at any rate he was young enough to have another try. He whistled that night as he went to bed.

XXIII.

THREE weeks afterward he stood in front of Olive Chancellor's house, looking up and down the street and hesitating. He had told Mrs. Luna that he should like nothing better than to make another journey to Boston; and it was not simply because he liked it that he had come. I was on the point of saying that a happy chance had favored him,

but it occurs to me that one is under no obligation to call chances by flattering epithets when they have been waited for so long. At any rate, the darkest hour is before the dawn; and a few days after that melancholy evening I have described, which Ransom spent in his German beer-cellar, before a single glass, soon emptied, staring at his future with an unremunerated eye, he found that the world appeared to have need of him yet. The "party," as he would have said (I cannot pretend that his speech was too heroic for that), for whom he had transacted business in Boston so many months before, and who had expressed at the time but a limited appreciation of his services (there had been between the lawyer and his client a divergence of judgment), observing, apparently, that they proved more fruitful than he expected, had reopened the affair and presently requested Ransom to transport himself again to the sister city. His errand demanded more time than before, and for three days he gave it his constant attention. On the fourth he found he was still detained; he should have to wait till the evening—some important papers were to be prepared. He determined to treat the interval as a holiday, and he wondered what one could do in Boston to give one's morning a festive complexion. The weather was brilliant enough to minister to any illusion, and he strolled along the streets, taking it in. In front of the Music Hall and of Tremont Temple he stopped, looking at the posters in the doorway; for was it not possible that Miss Chancellor's little friend might be just then addressing her fellow-citizens? Her name was absent, however, and this resource seemed to mock him. He knew no one in the place but Olive Chancellor, so there was no question of a visit to pay. He was perfectly resolved that he would never go near *her* again; she was doubtless a very superior being, but she had been too rough with him to tempt him further. Politeness, even a largely interpreted "chivalry," required nothing more than he had already done; he had quitted her, the other year, without telling her that she was a vixen, and that reticence was chivalrous enough. There was also Verena Tarrant, of course; he saw no reason to dissemble when he spoke of her to himself, and he allowed himself the entertainment of feeling that he should like very much to see her again. Very likely she wouldn't seem to him the same; the impression she had made upon him was due to some accident of mood or circumstance; and, at any rate, any charm she might have exhibited then had probably been obliterated by the coarsening effect of publicity and the desiccating influence of his kinswoman. It will be

observed that in this reasoning of Basil Ransom's the impression was freely recognized, and recognized as a phenomenon still present. The attraction might have vanished, as he said to himself, but the mental picture of it was yet vivid. The greater the pity that he couldn't call upon Verena (he called her by her name in his thoughts — it was so pretty) without calling upon Olive, and that Olive was so disagreeable as to place that effort beyond his strength. There was another consideration, with Ransom, which eminently belonged to the man: he believed that Miss Chancellor had conceived, in the course of those few hours, and in a manner that formed so absurd a sequel to her having gone out of her way to make his acquaintance, such a dislike to him that it would be odious to her to see him again within her doors; and he would have felt indelicate in taking warrant from her original invitation (before she had seen him) to inflict on her a presence which he had no reason to suppose the lapse of time had made less offensive. She had given him no sign of pardon or penitence in any of the little ways that are familiar to women — by sending him a message through her sister, or even a book, a photograph, a Christmas card, or a newspaper, by the post. He felt, in a word, not at liberty to ring at her door; he didn't know what kind of a fit the sight of his long Mississippian person would give her, and it was characteristic of him that he should wish so to spare the sensibilities of a young lady whom he had not found tender; being ever as willing to let women off easily in the particular case as he was fixed in the belief that the sex in general requires watching.

Nevertheless, he found himself, at the end of half an hour, standing on the only spot in Charles street which had any significance for him. It had occurred to him that if he couldn't call upon Verena without calling upon Olive, he should be exempt from that condition if he called upon Mrs. Tarrant. It was not her mother, truly, who had asked him, it was the girl herself; and he was conscious, as a candid young American, that a mother is always less accessible, more guarded by social prejudice, than a daughter. But he was at a pass in which it was permissible to strain a point, and he took his way in the direction in which he knew that Cambridge lay, remembering that Miss Tarrant's invitation had reference to that quarter, and that Mrs. Luna had given him further evidence. Had she not said that Verena often went back there for visits of several days — that her mother had been ill and she gave her much care? There was nothing inconceivable in her being engaged at that hour (it was getting to be one o'clock)

in one of those expeditions — nothing impossible in the chance that he might find her in Cambridge. The chance, at any rate, was worth taking; Cambridge, moreover, was worth seeing, and it was as good a way as another of keeping his holiday. It occurred to him, indeed, that Cambridge was a big place, and that he had no particular address. This reflection overtook him just as he reached Olive's house, which, oddly enough, he was obliged to pass on his way to the mysterious suburb. That is partly why he paused there; he asked himself for a moment why he shouldn't ring the bell and obtain his needed information from the servant, who would be sure to be able to give it to him. He had just dismissed this method, as of questionable taste, when he heard the door of the house open, within the deep embrasure in which, in Charles street, the main portals are set, and which are partly occupied by a flight of steps protected at the bottom by a second door, whose upper half, in either wing, consists of a sheet of glass. It was a minute before he could see who had come out, and in that minute he had time to turn away and then to turn back again, and to wonder which of the two inmates would appear to him, or whether he should behold neither or both.

The person who had issued from the house descended the steps very slowly, as if on purpose to give him time to escape; and when at last the glass doors were divided they disclosed a little old lady. Ransom was disappointed; such an apparition was so scantily to his purpose. But the next minute his spirits rose again, for he was sure that he had seen the little old lady before. She stepped on the sidewalk, and looked vaguely about her, in the manner of a person waiting for an omnibus or a street-car; she had a dingy, loosely-habited air, as if she had worn her clothes for many years, and yet was even now imperfectly acquainted with them; a large, benignant face, caged in by the glass of her spectacles, which seemed to cover it almost equally everywhere, and a fat, rusty satchel, which hung low at her side, as if it wearied her to carry it. This gave Ransom time to recognize her; he knew in Boston no such figure as that save Miss Birdseye. Her party, her person, the exalted account Miss Chancellor gave of her, had kept a very distinct place in his mind; and while she stood there in dim circumspection, she came back to him as a friend of yesterday. His necessity gave a point to the reminiscences she evoked; it took him only a moment to reflect that she would be able to tell him where Verena Tarrant was at that particular time, and where, if need be, her parents lived. Her eyes rested on him, and

as she saw that he was looking at her she didn't go through the ceremony (she had broken so completely with all conventions) of removing them; he evidently represented nothing to her but a sentient fellow-citizen in the enjoyment of his rights, which included that of staring. Miss Birdseye's modesty had never pretended that it was not to be publicly challenged; there were so many bright new motives and ideas in the world that there might even be reasons for looking at her. When Ransom approached her and, raising his hat with a smile, said, "Shall I stop this car for you, Miss Birdseye?" she only looked at him more vaguely, in her complete failure to seize the idea that this might be simply Fame. She had trudged about the streets of Boston for fifty years, and at no period had she received that amount of attention from dark-eyed young men. She glanced, in an unprejudiced way, at the big parti-colored human van which now jingled toward them from out of the Cambridge road. "Well, I should like to get into it, if it will take me home," she answered. "Is this a South End car?"

The vehicle had been stopped by the conductor, on his perceiving Miss Birdseye; he evidently recognized her as a frequent passenger. He went, however, through none of the forms of reassurance beyond remarking, "You want to get right in here—quick," but stood with his hand raised, in a threatening way, to the cord of his signal-bell.

"You must allow me the honor of taking you home, madam; I will tell you who I am," Basil Ransom said, in obedience to a rapid reflection. He helped her into the car, the conductor pressed a fraternal hand upon her back, and in a moment the young man was seated beside her and the jingling had recommenced. At that hour of the day the car was almost empty, and they had it virtually to themselves.

"Well, I know you are some one; I don't think you belong round here," Miss Birdseye declared, as they proceeded.

"I was once at your house—on a very interesting occasion. Do you remember a party you gave, a year ago last October, to which Miss Chancellor came, and another young lady, who made a wonderful speech?"

"Oh, yes! when Verena Tarrant moved us all so! There were a good many there; I don't remember all."

"I was one of them," Basil Ransom said; "I came with Miss Chancellor, who is a kind of relation of mine, and you were very good to me."

"What did I do?" asked Miss Birdseye, candidly. Then, before he could answer her,

she recognized him. "I remember you now, and Olive bringing you! You're a Southern gentleman—she told me about you afterwards. You don't approve of our great struggle—you want us to be kept down." The old lady spoke with perfect mildness, as if she had long ago done with passion and resentment. Then she added, "Well, I presume we can't have the sympathy of all."

"Doesn't it look as if you had my sympathy, when I get into a car on purpose to see you home—one of the principal agitators?" Ransom inquired, laughing.

"Did you get in on purpose?"

"Quite on purpose. I am not so bad as Miss Chancellor thinks me."

"Oh, I presume you have your ideas," said Miss Birdseye. "Of course, Southerners have peculiar views. I suppose they retain more than one might think. I hope you won't ride too far—I know my way round Boston."

"Don't object to me, or think me officious," Ransom replied. "I want to ask you something."

Miss Birdseye looked at him again. "Oh, yes, I place you now; you conversed some with Doctor Prance."

"To my great edification!" Ransom exclaimed. "And I hope Doctor Prance is well."

"She looks after every one's health but her own," said Miss Birdseye, smiling. "When I tell her that, she says she hasn't got any to look after. She says she's the only woman in Boston that hasn't got a doctor. She was determined she wouldn't be a patient, and it seemed as if the only way not to be one was to be a doctor. She is trying to make me sleep; that's her principal occupation."

"Is it possible you don't sleep yet?" Ransom asked, almost tenderly.

"Well, just a little. But by the time I get to sleep I have to get up. I can't sleep when I want to live."

"You ought to come down South," the young man suggested. "In that languid air you would doze deliciously!"

"Well, I don't want to be languid," said Miss Birdseye. "Besides, I have been down South, in the old times, and I can't say they let me sleep very much; they were always round after one!"

"Do you mean on account of the negroes?"

"Yes, I couldn't think of anything else then. I carried them the Bible."

Ransom was silent a moment. Then he said, in a tone which evidently was carefully considerate, "I should like to hear all about that!"

"Well, fortunately, we are not required now; we are required for something else."

And Miss Birdseye looked at him with a wandering, tentative humor, as if he would know what she meant.

"You mean for the other slaves!" he exclaimed, with a laugh. "You can carry them all the Bibles you want."

"I want to carry them the Statute-book; that must be our Bible now."

Ransom found himself liking Miss Birdseye very much, and it was quite without hypocrisy or a tinge too much of the local quality in his speech that he said: "Wherever you go, madam, it will matter little what you carry. You will always carry your goodness."

For a minute she made no response. Then she said: "That's the way Olive Chancellor told me you talked."

"I am afraid she has told you little good of me."

"Well, I am sure she thinks she is right."

"Thinks it?" said Ransom. "Why, she knows it with supreme certainty! By the way, I hope she is well."

Miss Birdseye stared again. "Haven't you seen her? Are you not visiting?"

"Oh, no, I am not visiting! I was literally passing her house when I met you."

"Perhaps you live here now," said Miss Birdseye. And when he had corrected this impression, she added, in a tone which showed with what positive confidence he had now inspired her, "Hadn't you better drop in?"

"It would give Miss Chancellor no pleasure," Basil Ransom rejoined. "She regards me as an enemy in the camp."

"Well, she is very brave."

"Precisely. And I am very timid."

"Didn't you fight once?"

"Yes; but it was in such a good cause!"

Ransom meant this allusion to the great Secession, and, by comparison, to the attitude of the resisting male (laudable even as that might be), to be decently jocular; but Miss Birdseye took it very seriously, and sat there for a good while as speechless as if she meant to convey that she had been going on too long now to be able to discuss the propriety of the late rebellion. The young man felt that he had silenced her, and he was very sorry; for, with all deference to the disinterested Southern attitude toward the unprotected female, what he had got into the car with her for was precisely to make her talk. He had wished for general, as well as for particular, news of Verena Tarrant; it was a topic on which he had proposed to draw Miss Birdseye out. He preferred not to broach it himself, and he waited awhile for another opening. At last, when he was on the point of expressing himself by a direct inquiry (he reflected that the exposure would in any case not be

long averted), she anticipated him by saying, in a manner which showed that her thoughts had continued in the same train, "I wonder very much that Miss Tarrant didn't affect you that evening!"

"Ah, but she did!" Ransom said, with alacrity. "I thought her very charming!"

"Didn't you think her very reasonable?"

"God forbid, madam! I consider women have no business to be reasonable."

His companion turned upon him, slowly and mildly, and each of her glasses, in her aspect of reproach, had the glitter of an enormous tear. "Do you regard us, then, simply as lovely baubles?"

The effect of this question, as coming from Miss Birdseye, and referring in some degree to her own venerable identity, was such as to move him to irresistible laughter. But he controlled himself quickly enough to say, with genuine expression, "I regard you as the dearest thing in life, the only thing which makes it worth living!"

"Worth living for—you! But for us?" suggested Miss Birdseye.

"It's worth any woman's while to be admired as I admire you. Miss Tarrant, of whom we were speaking, affected me, as you say, in this way,—that I think more highly still, if possible, of the sex which produced such a delightful young lady."

"Well, we think everything of her here," said Miss Birdseye. "It seems as if it were a real gift."

"Does she speak often—is there any chance of my hearing her now?"

"She raises her voice a good deal in the places round—like Framingham and Billerica. It seems as if she were gathering strength, just to break over Boston like a wave. In fact, she did break last summer. She is a growing power since her great success at the convention."

"Ah! her success at the convention was very great?" Ransom inquired, putting discretion into his voice.

Miss Birdseye hesitated a moment, in order to measure her response by the bounds of righteousness. "Well," she said, with the tenderness of a long retrospect, "I have seen nothing like it since I last listened to Eliza P. Moseley."

"What a pity she isn't speaking somewhere to-night!" Ransom exclaimed.

"Oh, to-night she's out in Cambridge. Olive Chancellor mentioned that."

"Is she making a speech there?"

"No; she's visiting her home."

"I thought her home was in Charles street?"

"Well, no; that's her residence—her principal one—since she became so united to

your cousin. Isn't Miss Chancellor your cousin?"

"We don't insist on the relationship," said Ransom, smiling. "Are they very much united, the two young ladies?"

"You would say so if you were to see Miss Chancellor when Verena rises to eloquence. It's as if the chords were strung across her own heart; she seems to vibrate, to echo with every word. It's a very close and very beautiful tie, and we think everything of it here. They will work together for a great good!"

"I hope so," Ransom remarked. "But in spite of it, Miss Tarrant spends a part of her time with her father and mother."

"Yes, she seems to have something for every one. If you were to see her at home, you would think she was all the daughter. She leads a lovely life!" said Miss Birdseye.

"See her at home? That's exactly what I want!" Ransom rejoined, feeling that if he was to come to this he needn't have had scruples at first. "I haven't forgotten that she invited me, when I met her."

"Oh, of course she attracts many visitors," said Miss Birdseye, limiting her encouragement to this statement.

"Yes; she must be used to admirers. And where, in Cambridge, do her family live?"

"Oh, it's on one of those little streets that don't seem to have very much of a name. But they do call it—they do call it——" she meditated audibly.

This process was interrupted by an abrupt allocution from the conductor. "I guess you change here for *your* place. You want one of them blue cars."

The good lady returned to a sense of the situation, and Ransom helped her out of the vehicle, with the aid, as before, of a certain amount of propulsion from the conductor. Her road branched off to the right, and she had to wait on the corner of a street, there being as yet no blue car within hail. The corner was quiet and the day favorable to patience—a day of relaxed rigor and intense brilliancy. It was as if the touch of the air itself were gloved, and the street-coloring had the richness of a superficial thaw. Ransom, of course, waited with his philanthropic companion, though she now protested more vigorously against the idea that a gentleman from the South should pretend to teach an old abolitionist the mysteries of Boston. He promised to leave her when he should have consigned her to the blue car; and meanwhile they stood in the sun, with their backs against an apothecary's window, and she tried again, at his suggestion, to remember the name of Doctor Tarrant's street. "I guess if you ask for Doctor Tarrant, any one can tell you," she said; and

then suddenly the address came to her—the residence of the mesmeric healer was in Monadnoc Place.

"But you'll have to ask for that, so it comes to the same," she went on. After this, she added, with a friendliness more personal, "Ain't you going to see your cousin too?"

"Not if I can help it!"

Miss Birdseye gave a little ineffectual sigh. "Well, I suppose every one must act out their ideal. That's what Olive Chancellor does. She's a very noble character."

"Oh, yes, a grand nature."

"You know their opinions are just the same—hers and Verena's," Miss Birdseye placidly continued. "So why should you make a distinction?"

"My dear madam," said Ransom, "does a woman consist of nothing but her opinions? I like Miss Tarrant's lovely face better, to begin with."

"Well, she *is* pretty-looking." And Miss Birdseye gave another sigh, as if she had had a theory submitted to her—that one about a lady's opinions—which, with all that was unfamiliar and peculiar lying behind it, she was really too old to look into much. It might have been the first time she really felt her age. "There's a blue car," she said, in a tone of mild relief.

"It will be some moments before it gets here. Moreover, I don't believe that at bottom they *are* Miss Tarrant's opinions," Ransom added.

"You mustn't think she hasn't a strong hold of them," his companion exclaimed, more briskly. "If you think she is not sincere, you are very much mistaken. Those views are just her life."

"Well, *she* may bring me round to them," said Ransom, smiling.

Miss Birdseye had been watching her blue car, the advance of which was temporarily obstructed. At this, she transferred her eyes to him, gazing at him solemnly out of the pervasive window of her spectacles. "Well, I shouldn't wonder if she did! Yes, that will be a good thing. I don't see how you can help being a good deal shaken by her. She has acted on so many."

"I see; no doubt she will act on me." Then it occurred to Ransom to add: "By the way, Miss Birdseye, perhaps you will be so kind as not to mention this meeting of ours to my cousin, in case of your seeing her again. I have a perfectly good conscience in not calling upon her, but I shouldn't like her to think that I announced my slighting intention all over the town. I don't want to offend her, and she had better not know that I have been in Boston. If you don't tell her, no one else will."

"Do you wish me to conceal——?" murmured Miss Birdseye, panting a little.

"No, I don't want you to conceal anything. I only want you to let this incident pass—to say nothing."

"Well, I never did anything of that kind."

"Of what kind?" Ransom was half vexed, half touched by her inability to enter into his point of view, and her resistance made him hold to his idea the more. "It is very simple, what I ask of you. You are under no obligation to tell Miss Chancellor everything that happens to you, are you?"

His request seemed still something of a shock to the poor old lady's candor. "Well, I see her very often, and we talk a great deal. And then—won't Verena tell her?"

"I have thought of that—but I hope not."

"She tells her most everything. Their union is so close."

"She won't want her to be wounded," Ransom said, ingeniously.

"Well, you *are* considerate." And Miss Birdseye continued to gaze at him. "It's a pity you can't sympathize."

"As I tell you, perhaps Miss Tarrant will bring me round. You have before you a possible convert," Ransom went on, without, I fear, putting up the least little prayer to heaven that his dishonesty might be forgiven.

"I should be very happy to think that—after I have told you her address in this secret way." A smile of infinite mildness glimmered in Miss Birdseye's face, and she added: "Well, I guess that will be your fate. She *has* affected so many. I would keep very quiet if I thought that. Yes, she will bring you round."

"I will let you know as soon as she does," Basil Ransom said. "Here is your car at last."

"Well, I believe in the victory of the truth. I won't say anything." And she suffered the young man to lead her to the car, which had now stopped at their corner.

"I hope very much I shall see you again," he remarked, as they went.

"Well, I am always round the streets in Boston." And while, lifting and pushing, he was helping again to insert her into the oblong receptacle, she turned a little and repeated, "She *will* affect you! If that's to be your secret, I will keep it," Ransom heard her subjoin. He raised his hat and waved her a farewell, but she didn't see him; she was squeezing further into the car, and making the discovery that this time it was full and there was no seat for her. Surely, however, he said to himself, every man in the place would offer his own to such an innocent old dear.

XXIV.

A LITTLE more than an hour after this he stood in the parlor of Doctor Tarrant's suburban residence, in Monadnoc Place. He had induced a juvenile maid-servant, by an appeal somewhat pathetic, to let the ladies know that he was there; and she had returned, after a long absence, to say that Miss Tarrant would come down to him in a little while. He possessed himself, according to his wont, of the nearest book (it lay on the table, with an old magazine and a little japanned tray containing Tarrant's professional cards—his denomination as a mesmeric healer), and spent ten minutes in turning it over. It was a biography of Mrs. Ada T. P. Foat, the celebrated trance-medium, and was embellished by a portrait representing the lady with a surprised expression and innumerable ringlets. Ransom said to himself, after reading a few pages, that much ridicule had been cast upon Southern literature; but if that was a fair specimen of Northern!—and he threw it back upon the table with almost as contemptuous a gesture as if he had not known perfectly, after so long a residence in the North, that it was not, while he wondered whether this was the sort of thing Miss Tarrant had been brought up on. There was no other book to be seen, and he remembered to have read the magazine; so there was finally nothing for him, as the occupants of the house failed still to appear, but to stare before him, into the bright, bare, common little room, which was so hot that he wished to open a window, and of which an ugly, undraped cross-light seemed to have taken upon itself to reveal the poverty. Ransom, as I have mentioned, had not a high standard of comfort, and noticed little, usually, how people's houses were furnished—it was only when they were very pretty that he observed; but what he saw while he waited at Doctor Tarrant's made him say to himself that it was no wonder Verena liked better to live with Olive Chancellor. He even began to wonder whether it were for the sake of that superior softness she had cultivated Miss Chancellor's favor, and whether Mrs. Luna had been right about her being mercenary and insincere. So many minutes elapsed before she appeared that he had time to remember he really knew nothing to the contrary, as well as to consider the oddity (so great when one did consider it) of his coming out to Cambridge to see her, when he had only a few hours in Boston to spare, a year and a half after she had given him her very casual invitation. She had not refused to receive him, at any rate; she was free to, if it didn't please her. And not only this, but she was apparently making herself

fine in his honor, inasmuch as he heard a rapid footstep move to and fro above his head, and even, through the slightness which in Monadnoc Place did service for an upper floor, the sound of drawers and presses opened and closed. Some one was "flying round," as they said in Mississippi. At last the stairs creaked under a light tread, and the next moment a brilliant person came into the room.

His reminiscence of her had been very pretty; but now that she had developed and matured, the little prophetess was prettier still. Her splendid hair seemed to shine; her cheek and chin had a curve which struck him by its fineness; her eyes and lips were full of smiles and greetings. She had appeared to him before as a creature of brightness, but now she lighted up the place, she irradiated, she made everything that surrounded her of no consequence; dropping upon the shabby sofa with an effect as charming as if she had been a nymph sinking on a leopard-skin, and with the native sweetness of her voice making him listen till she spoke again. It was not long before he perceived that this added luster was simply success; she was young and tender still, but the sound of a great applauding audience had been in her ears—it made an element in which she felt buoyant and floated. Still, however, her glance was as pure as it was direct, and that fantastic fairness hung about her which had made an impression on him of old, and which reminded him of unworldly places—he didn't know where—convent-cloisters or vales of Arcady. At that other time she had been parti-colored and bedizened, and she had always an air of costume, only now her costume was richer and more chastened. It was her line, her condition, part of her expression. If at Miss Birdseye's, and afterwards in Charles street, she might have been a rope-dancer, to-day she made a "scene" of the mean little room in Monadnoc Place, such a scene as a prima donna makes of daubed canvas and dusty boards. She addressed Basil Ransom as if she had seen him the other week, and his merits were fresh to her, though she let him, while she sat smiling at him, explain in his own rather ceremonious way why it was he had presumed to call upon her on so slight an acquaintance—on an invitation which she herself had had more than time to forget. His explanation, as a finished and satisfactory thing, quite broke down; there was no more impressive reason than that he had simply wished to see her. He became aware that this motive loomed large, and that her listening smile, innocent as it was, in the Arcadian manner, of mockery, seemed to accuse him of not having the courage of his inclination.

He had alluded especially to their meeting at Miss Chancellor's; there it was that she had told him she should be glad to see him in her home.

"Oh, yes, I remember perfectly, and I remember quite as well seeing you at Miss Birdseye's the night before. I made a speech—don't you remember? That was delightful."

"It was delightful, indeed," said Basil Ransom.

"I don't mean my speech; I mean the whole thing. It was then I made Miss Chancellor's acquaintance. I don't know whether you know how we work together. She has done so much for me."

"Do you still make speeches?" Ransom asked, conscious, as soon as he had uttered it, that the question was below the mark.

"Still? Why, I should hope so; it's all I'm good for! It's my life—or it's going to be. And it's Miss Chancellor's too. We are determined to do something."

"And does she make speeches too?"

"Well, she makes mine—or the best part of them. She tells me what to say—the real things, the strong things. It's Miss Chancellor as much as me!" said the singular girl, with a generous complacency which was yet half ludicrous.

"I should like to hear you again," Basil Ransom rejoined.

"Well, you must come some night. You will have plenty of chances. We are going on from triumph to triumph."

Her brightness, her self-possession, her air of being a public character, her mixture of the girlish and the comprehensive, startled and confounded her visitor, who felt that if he had come to gratify his curiosity he should be in danger of going away still more curious than satiated. She added in her gay, friendly, trustful tone,—the tone of facile intercourse, the tone in which happy, flower-crowned maidens may have talked to sunburnt young men in the golden age,—“I am very familiar with your name; Miss Chancellor has told me all about you.”

"All about me?" Ransom raised his black eyebrows. "How could she do that? She doesn't know anything about me!"

"Well, she told me you are a great enemy to our movement. Isn't that true? I think you expressed some unfavorable idea that day I met you at her house."

"If you regard me as an enemy, it's very kind of you to receive me."

"Oh, a great many gentlemen call," Verena said, calmly and brightly. "Some call simply to inquire. Some call because they have heard of me, or been present on some occasion when

I have moved them. Every one is so interested."

"And you have been in Europe," Ransom remarked, in a moment.

"Oh, yes, we went over to see if they were in advance. We had a magnificent time—we saw all the leaders."

"The leaders?" Ransom repeated.

"Of the emancipation of our sex. There are gentlemen there, as well as ladies. Olive had splendid introductions in all countries, and we conversed with all the earnest people. We heard much that was suggestive. And as for Europe!"—and the young lady paused, smiling at him and ending in a happy sigh, as if there were more to say on the subject than she could attempt on such short notice.

"I suppose it's very attractive," said Ransom, encouragingly.

"It's just a dream!"

"And did you find that they were in advance?"

"Well, Miss Chancellor thought they were. She was surprised at some things we observed, and concluded that perhaps she hadn't done the Europeans justice; she has got such an open mind, it's as wide as the sea!—while I incline to the opinion that on the whole *we* make the better show. The state of the movement there reflects their general culture, and their general culture is higher than ours (I mean taking the term in its broadest sense). On the other hand, the *special* condition—moral, social, personal—of our sex seems to me to be superior in this country; I mean regarded in relation—in proportion as it were—to the social phase at large. I must add that we did see some noble specimens over there. In England we met some lovely women, highly cultivated, and of immense organizing power. In France we saw some wonderful, contagious types; we passed a delightful evening with the celebrated Marie Verneuil; she was released from prison, you know, only a few weeks before. Our total impression was that it is only a question of time—the future is ours. But everywhere we heard one cry—'How long, O Lord, how long?'"

Basil Ransom listened to this considerable statement with a feeling which, as the current of Miss Tarrant's facile utterance flowed on, took the form of an hilarity charmed into stillness by the fear of losing something. There was indeed a sweet comicality in seeing this pretty girl sit there and, in answer to a casual, civil inquiry, drop into oratory as a natural thing. Had she forgotten where she was, and did she take him for a full house? She had the same turns and cadences, almost the same gestures, as if she had been on the platform; and the great queerness of it was

that, with such a manner, she should escape being odious. She was not odious, she was delightful; she was not dogmatic, she was genial. No wonder she was a success, if she speechified as a bird sings! Ransom could see, too, from her easy lapse, how the lecture-tone was the thing in the world with which, by education, by association, she was most familiar. He didn't know what to make of her; she was an astounding young phenomenon. The other time came back to him afresh, and how she had stood up at Miss Birdseye's; it occurred to him that an element, here, had been wanting. Several moments after she had ceased speaking he became conscious that the expression of his face presented a perceptible analogy to a broad grin. He changed his posture, saying the first thing that came into his head. "I presume you do without your father now."

"Without my father?"

"To set you going, as he did that time I heard you."

"Oh, I see; you thought I had begun a lecture!" And she laughed, in perfect good humor. "They tell me I speak as I talk, so I suppose I talk as I speak. But you mustn't put me on what I saw and heard in Europe. That's to be the title of an address I am now preparing, by the way. Yes, I don't depend on father any more," she went on, while Ransom's sense of having said too sarcastic a thing was deepened by her perfect indifference to it. "He finds his patients draw off about enough, any way. But I owe him everything; if it hadn't been for him, no one would ever have known I had a gift—not even myself. He started me so, once for all, that I now go alone."

"You go beautifully," said Ransom, wanting to say something agreeable, and even respectfully tender, to her, but troubled by the fact that there was nothing he could say that didn't sound rather like "chaff." There was no resentment in her, however, for in a moment she said to him, as quickly as it occurred to her, in the manner of a person repairing an accidental omission, "It was very good of you to come so far."

This was a sort of speech it was never safe to make to Ransom; there was no telling what retribution it might entail. "Do you suppose any journey is too great, too wearisome, when it's a question of so great a pleasure?" On this occasion it was not worse than that.

"Well, people *have* come from other cities," Verena answered, not with pretended humility, but with pretended pride. "Do you know Cambridge?"

"This is the first time I have ever been here."

"Well, I suppose you have heard of the college; it's so celebrated."

"Yes—even in Mississippi. I suppose it's very fine."

"I presume it is," said Verena; "but you can't expect me to speak with much admiration of an institution of which the doors are closed to our sex."

"Do you then advocate a system of education in common?"

"I advocate equal rights, equal opportunities, equal privileges. So does Miss Chancellor," Verena added, with just a perceptible air of feeling that her declaration needed support.

"Oh, I thought what she wanted was simply a different inequality—simply to turn out the men altogether," Ransom said.

"Well, she thinks we have great arrears to make up. I do tell her, sometimes, that what she desires is not only justice but vengeance. I think she admits that," Verena continued, with a certain solemnity. The subject, however, held her but an instant, and before Ransom had time to make any comment, she went on, in a different tone: "You don't mean to say you live in Mississippi *now*? Miss Chancellor told me when you were in Boston before, that you had located in New York." She persevered in this reference to himself, for when he had assented to her remark about New York she asked him whether he had quite given up the South.

"Given it up—the poor, dear, desolate old South! Heaven forbid!" Basil Ransom exclaimed.

She looked at him for a moment with an added softness. "I presume it is natural you should love your home. But I am afraid you think I don't love mine much; I have been here—for so long—so little. Miss Chancellor *has* absorbed me—there is no doubt about that. But it's a pity I wasn't with her to-day." Ransom made no answer to this; he was incapable of telling Miss Tarrant that if she had been he would not have called upon her. It was not, indeed, that he was not incapable of hypocrisy, for when she had asked him if he had seen his cousin the night before, and he had replied that he hadn't seen her at all, and she had exclaimed, with a candor which, the next minute, made her blush, "Ah, you don't mean to say you haven't forgiven her!"—after this, I say, he put on a look of innocence sufficient to carry off the inquiry, "Forgiven her for what?"

Verena colored at the sound of her own words, "Well, I could see how much she felt that time at her house."

"What did she feel?" Basil Ransom asked with the natural provokingness of a man.

I know not whether Verena was provoked, but she answered with more spirit than se-

quence: "Well, you know you *did* pour contempt on us, ever so much; I could see how it worked Olive up. Are you not going to see her at all?"

"Well, I shall see about that; I am here only for three or four days," said Ransom, smiling as men smile when they are perfectly unsatisfactory (through being, perhaps, in the right).

It is very possible that Verena *was* a little provoked, inaccessible as she was, in a general way, to irritation; for she rejoined in a moment, with a little deliberate air: "Well, perhaps it's as well you shouldn't go, if you haven't changed at all."

"I haven't changed at all," said the young man, smiling still, with his elbows on the arms of his chair, his shoulders pushed up a little, and his thin brown hands interlocked in front of him.

"Well, I have had visitors who were quite opposed!" Verena announced, as if such news could not possibly alarm her. Then she added, "How then did you know I was out here?"

"Miss Birdseye told me."

"Oh, I am so glad you went to see *her*!" the girl cried, speaking again with the impetuosity of a moment before.

"I didn't go to see her. I met her in the street, just as she was leaving Miss Chancellor's door. I spoke to her, and accompanied her some distance. I passed that way because I knew it was the direct way to Cambridge—from the Common—and I was coming out to see you any way—on the chance."

"On the chance?" Verena repeated.

"Yes; Mrs. Luna, in New York, told me you were sometimes here, and I wanted, at any rate, to make the attempt to find you."

It may be communicated to the reader that it was very agreeable to Verena to learn that her visitor had made this arduous pilgrimage (for she knew well enough how people in Boston regarded a winter journey to the academic suburb) with only half the prospect of a reward; but her pleasure was mixed with other feelings, or at least with the consciousness that the whole situation was rather less simple than the elements of her life had been hitherto. There was the germ of disorder in this invidious distinction which Mr. Ransom had suddenly made between Olive Chancellor, who was related to him by blood, and herself, who had never been related to him in any way whatever. She knew Olive by this time well enough to wish not to reveal it to her, and yet it would be something quite new for her to undertake to conceal such an incident as her having spent an hour with Mr. Ransom during a flying visit he had made to Boston. She had spent hours with other gentlemen, whom Olive didn't see; but that was different, because her friend knew about her doing it

and didn't care, in regard to the persons — didn't care, that is, as she would care in this case. It was vivid to Verena's mind that now Olive *would* care. She had talked about Mr. Burrage, and Mr. Pardon, and even about some gentlemen in Europe, and she had not (after the first few days, a year and a half before) talked about Mr. Ransom.

Nevertheless there were reasons, clear to Verena's view, for wishing either that he would go and see Olive or would keep away from *her*; and the responsibility of treating the fact that he had not so kept away as a secret seemed the greater, perhaps, in the light of this other fact, that so far as simply seeing Mr. Ransom went — why, she quite liked it. She had remembered him perfectly after their two former meetings, superficial as their contact then had been; she had thought of him at moments, and wondered whether she should like him if she were to know him better. Now, at the end of twenty minutes, she did know him better, and found that he had a rather curious, but still a pleasant way. There he was, at any rate, and she didn't wish his call to be spoiled by any uncomfortable implication of consequences. So she glanced off, at the touch of Mrs. Luna's name; it seemed to afford relief.

"Oh, yes, Mrs. Luna — isn't she fascinating?"

Ransom hesitated a little. "Well, no, I don't think she is."

"You ought to like her — she hates our movement!" And Verena asked, further, numerous questions about the brilliant Adeline; whether he saw her often, whether she went out much, whether she was admired in New York, whether he thought her very handsome. He answered to the best of his ability, but soon made the reflection that he had not come out to Monadnoc Place to talk about Mrs. Luna; in consequence of which, to change the subject (as well as to acquit himself of a social duty), he began to speak of Verena's parents, to express regret that Mrs. Tarrant had been sick, and fear that he was not to have the pleasure of seeing her. "She is a great deal better," Verena said; "but she's lying down; she lies down a great deal when she has got nothing else to do. Mother's very peculiar," she added in a moment; "she lies down when she feels well and happy, and when she's sick she walks about — she roams all round the house. If you hear her on the stairs a good deal, you can be pretty sure she's very bad. She'll be very much interested to hear about you after you have left."

Ransom glanced at his watch. "I hope I am not staying too long — that I am not taking you away from her."

"Oh, no; she likes visitors, even when she can't see them. If it didn't take her so long

to rise, she would have been down here by this time. I suppose you think she has missed me, since I have been so absorbed. Well, so she has, but she knows it's for my good. She would make any sacrifice for affection."

The fancy suddenly struck Ransom of asking, in response to this, "And you? would you make any?"

Verena gave him a bright natural stare. "Any sacrifice for affection?" She thought a moment, and then she said: "I don't think I have a right to say, because I have never been asked. I don't remember ever to have had to make a sacrifice — not an important one!"

"Lord! you must have had a happy life!"

"I have been very fortunate, I know that. I don't know what to do when I think how some women — how most women — suffer. But I must not speak of that," she went on, with her smile coming back to her. "If you oppose our movement, you won't want to hear of the suffering of women!"

"The suffering of women is the suffering of all humanity," Ransom returned. "Do you think any movement is going to stop that — or all the lectures from now to doomsday? We are born to suffer — and to bear it, like decent people."

"Oh, I adore heroism!" Verena interposed.

"And as for women," Ransom went on, "they have one source of happiness that is closed to *us* — the consciousness that their presence here below lifts half the load of our suffering."

Verena thought this very graceful, but she was not sure it was not rather sophistical; she would have liked to have Olive's judgment upon it. As that was not possible for the present, she abandoned the question (since learning that Mr. Ransom had passed over Olive, to come to her, she had become rather fidgety), and inquired of the young man, irrelevantly, whether he knew any one else in Cambridge.

"Not a creature; as I tell you, I have never been here before. Your image alone attracted me; this charming interview will be henceforth my only association of the place."

"It's a pity you couldn't have a few more," said Verena, musingly.

"A few more interviews? I should be unspeakably delighted!"

"A few more associations. Did you see the colleges as you came?"

"I had a glimpse of a large inclosure, with some big buildings. Perhaps I can look at them better as I go back to Boston."

"Oh, yes, you ought to see them — they have improved so much of late. The inner life, of course, is the greatest interest, but there is some fine architecture, if you are not familiar with Europe." She paused a moment,

looking at him with an eye that seemed to brighten, and continued quickly, like a person who had collected herself for a little jump, "If you would like to walk round a little, I shall be very glad to show you."

"To walk round—with you to show me?" Ransom repeated. "My dear Miss Tarrant, it would be the greatest privilege—the greatest happiness—of my life. What a delightful idea—what an ideal guide!"

Verena got up; she would go and put on her hat; he must wait a little. Her offer had a frankness and friendliness which gave him a new sensation, and he could not know that as soon as she had made it (though she had hesitated too, with a moment of intense reflection), she seemed to herself strangely reckless. An impulse pushed her; she obeyed it with her eyes open. She felt as a girl feels when she commits her first conscious indiscretion. She had done many things before which many people would have called indiscreet, but that quality had not even faintly belonged to them in her own mind; she had done them in perfect good faith, and with a remarkable absence of palpitation. This superficially ingenuous proposal to walk around the colleges with Mr. Ransom had really another color: it deepened the ambiguity of her position, by reason of a prevision (in her own heart) which I shall presently mention. If Olive was not to know that she had seen him, this extension of their interview would double her secret. And yet, while she saw it grow—this monstrous little mystery—she couldn't feel sorry that she was going out with Olive's cousin. As I have already said,

she had become nervous. She went to put on her hat, but at the door of the room she stopped, turned round, and presented herself to her visitor with a small spot in either cheek, which had appeared there within the instant. "I have suggested this, because it seems to me I ought to do something for you—in return," she said. "It's nothing, simply sitting there with me. And we haven't got anything else. This is our only hospitality. And the day seems so splendid."

The modesty the sweetness, of this little explanation, with a kind of intimated desire, constituting almost an appeal, for rightness, which seemed to pervade it, left a fragrance in the air after she had vanished. Ransom walked up and down the room, with his hands in his pockets, under the influence of it, without taking up even once the book about Mrs. Ada Foat. He occupied the time in asking himself by what perversity of fate or of inclination such a charming creature was ranting upon platforms and living in Olive Chancellor's pocket, or how a ranter and sycophant could possibly be so engaging. And she was so ridiculously beautiful, too. This last fact was not less evident when she came down arranged for their walk. They left the house, and as they proceeded he remembered that he had asked himself earlier how he could do honor to such a combination of leisure and ethereal mildness as he had waked up to that morning—a mildness that seemed the very breath of his own latitude. This question was answered now; to do exactly what he was doing at that moment was an observance sufficiently festive.

(To be continued.)

Henry James.

TIDES.

THROUGH the still dusk how sighs the ebb-tide out,
 Reluctant for the reed-beds! Down the sands
 It washes. Hark! Beyond the wan gray strand's
 Low limits how the winding channels grieve,
 Aware the evasive waters soon will leave
 Them void amid the waste of desolate lands,
 Where shadowless to the sky the marsh expands,
 And the noon-heats must scar them, and the drought!

Yet soon for them the solacing tide returns
 To quench their thirst of longing. Ah, not so
 Works the stern law our tides of life obey!
 Ebbing in the night-watches swift away,
 Scarce known ere fled forever is the flow,
 And in parched channel still the shrunk stream mourns.

Charles G. D. Roberts.

A STORY WITH A HERO.

HALE sat in his upper room busily writing. It was late afternoon, and growing dusk in the streets, though light enough up here. The door opened, and he looked up and saw his friend little Bantry coming in.

There was always something ludicrous in Bantry's gait and appearance: his clothes were fine and well made, but his hat was usually pushed back, his coat sagging off one shoulder, one glove half on, with the fingers sticking awry; in brief, he had the air of being a general misfit. But you perceived that one reason for this was that he did not trouble himself much about his clothes, and you quickly discovered that he was no simpleton, but a handy, serviceable, self-contained fellow. Now he looked more awry than ever before.

Bantry's father had been a successful inventor, and had made a fortune, to which Bantry was heir. He inherited also a passion for mechanics, of which he made a regular pursuit. Hale liked to hear him talk about his hobby, went sometimes to see him in his private workshop, and admired his experiments and inventions. And Bantry found so little intelligent appreciation of his work, outside of cut-and-dried machinists, that he valued Hale's interest extremely. Beyond that, he admired Hale's cleverness in other things, and showed a real fondness for him, which Hale returned in his own lighter way. They had been in the navy together toward the end of the war, Hale as assistant surgeon and Bantry as engineer, in the same ship.

Bantry had lately come to care more for one thing than for mechanics, and that was a friend of Hale's named Ethel Starr. He had made her more intimate acquaintance during a long recent absence of Hale's, and since his return Bantry had not found it nearly as pleasant as before and had not grown fonder of Hale. The relation of firmly rooted regard and confidence which he observed between Ethel and Hale stopped the flow of a certain eccentric humor which had pleased Ethel in him, and turned him serious when with her, which naturally did not advance him in her favor; and thereupon he became still more serious. In fact, when he looked back at this time afterward, he seemed to himself to have been a little out of his head.

He had been brooding now over an idea until he had worked himself up to a dangerous pitch of excitement that gave him a

drunken look as he came in upon Hale. Hale glanced up at him curiously, but only said:

"Oh, you, Bantry? Sit down a minute."

He went on with his work, and Bantry stood opposite, across the table, till he looked up and met his stare with curious inquiry. Then Bantry broke out with an incoherent tirade, intended to convey the information that he was in very deep water about some one whom it was unnecessary to name; that he had kept his footing very well as long as Hale staid away; that Hale's long-standing friendship gave him an assured position which, in addition to his natural superiority of gifts, put Bantry at an unfair disadvantage; that it was a life-and-death matter with him, and could not possibly be of equal importance to Hale, or he would have long ago decided it, one way or the other; and, in short, that he wanted Hale to stand aside awhile and give him a fair chance.

When Bantry had made an end of his muddled exposition of that modest demand, Hale sat staring a moment, then put down his head and laughed. At that Bantry became thoroughly desperate. He turned ghastly white; his teeth rattled in his head; he supported himself with one hand on the table, drew out a pistol, and said, as well as his violent trembling would let him, that if Hale laughed at him again he would kill him, and that he must have his promise before he went out of there. Hale saw then it was no laughing matter, but he answered, calmly:

"Bantry, you don't know what you're about. What would you do if a man came up to your place and made such a proposition to you?"

And Bantry looked at him fixedly a minute or two, then replied:

"I'd tell him to shoot."

"Well," Hale said, and sat still.

Bantry faced him awhile, leaning sidewise on the table; then he threw down the pistol, dropped into a chair, covered his face, and sat doubled up in a ridiculous attitude, that was so much more than ridiculous that Hale presently rose, locked the revolver in a drawer, came round and sat down near him, and waited without touching or speaking to him. It was a good while before Bantry looked up into Hale's face, as grave if not so disturbed as his own.

"See here, Bantry," Hale said, his dry, even voice betraying his effort at self-control,

"you and I are in the same boat. That seems a singular reason for quarreling when you think of it; and it sounds rather strange to me to hear you talk of my having the advantage. If I had had anything to offer her, I suppose I should have taken my chance long before now, as you say. That's what I'm working for."

Bantry regarded him steadily.

"I'll sign over every dollar I've got to you if you'll go away again for three months," he said.

Hale took no notice of the words. After a silence he continued in his former even, unnatural voice:

"You say it is a matter of life and death with you; with me it is a matter of all eternity. It goes down into the roots of my life, and is one of the principal things that make me believe in immortality; I can't feel that that can ever change or cease. It makes me very patient; I think I could wait a thousand years. But all the same I want no odds and will take no advantage; I will keep my side of the road and you can keep yours. I know she likes you; I have heard her speak of you very pleasantly."

He spoke like one talking in his sleep, as if his eyes were turned inward; and his words expressed rather a habit of determined conscientiousness and remembered thoughts than his real present feeling, which was one of intense distaste. He had not liked those pleasant words of hers about Bantry, and his hot feeling toward them came back now; but at the same time another self had contemned that aversion as a brutish instinct, and now again his pride trod it under foot.

"Let us shake hands on it, Bantry," he said, as he stood up. "You and I have got a rough piece of country to cross together: let's try to do it like gentlemen, and not like jockeys. I know you're an honest fellow, and I believe you've found me well-meaning. Don't let us easily let go of that settled conviction for a momentary and passionate prejudice."

He rested his hand on the little fellow's shoulder as they went down the stairs together, and shook his hand hard at parting, a twinge of pity combating with a sterner feeling in him and adding vigor to his grip.

That night, and more nights and days, Hale spent in an inward battle without result. He had never so longed to be with Ethel, yet he found he could not go. Without thinking it, Bantry had made his point, in spite of himself and his apparent discomfiture. Into the refuge of calm and pure light where Hale had hitherto found recourse from the tumult and obscurity of the world was suddenly thrown an element

of darkness and disturbance more vexing than the world's. He had silenced Bantry indeed, and put him to confusion, but in that very fact lay concealed the force of Bantry's argument, of which Bantry had himself lost track. Hale *had* the advantage of him: mentally and physically he was the better man. It was far from vanity with which he acknowledged it; now and again with a flash of rage he wished to heaven that Bantry was big and strong, so that he might defy and disregard him. Paradoxically, in Hale's thought Bantry came thus to have the advantage by being at a disadvantage; and perceiving this, Hale was tempted to give the paradox another turn and take to himself the benefit of being at the disadvantage; but he could not keep his clear brain from seeing that that was only recommencing the original process, and that it would immediately take one more turn of itself, like the loaded toys that always come the same side up again when you take off your hand. Honor, he found, was a bond which the thought of Ethel only riveted more securely.

He had been very well content hitherto with the relation of intimate confidence which had grown up between them, and which was none the less assured for its air of being lightly held; and he had worked away and bided his time, happy in the present and taking little counsel of the future.

He wondered now at his preoccupied blindness, and wished vehemently that he had made sure. He saw too clearly that that stage of the journey was behind for good and all; he knew that this great eagerness to be with her that came over him made an end for the present of all lightness in his relation to her. He felt that the tenderness which set him quivering at the thought of her could not be kept from showing through any pretense he might put on; yet to show her that now, before he had intended, would be to take advantage of Bantry's weakness to be before him with her, and to do that would be an odious meanness not to be entertained. He could neither go forward nor backward; at times a sudden fury overcame him to break through the metaphysical web that held him as sharply as a net-work of wires.

He could come to no other decision than the negative one of staying away, until fate decided for him by making it impossible to stay longer without equal misconstruction; then he went without having arrived at any consistent theory of conduct, and acted inconsistently by logical consequence, in a way that puzzled Ethel and vexed himself. He met Bantry there sometimes and treated him with somewhat excessive cordiality, coming away

laughingly, and leaving him there when he could, and when he could not, foiling Bantry's attempts to reciprocate by insisting on walking home with him, chaffing as they went with a joviality which was not forced on his part, but was not enjoyed by either.

Soon afterward Hale's friend, Lieutenant Lansing, made his appearance in town one day. He was a great, hearty fellow, looking down upon tall Hale, and broad in proportion, which Hale was not. He was under orders for the Arctic in the *Viking*, which was fitting out at this port. Hale found himself extremely glad to see his burly shipmate, and his jovial sea-talk dissipated a morbidness that Hale now saw had crept over him. Lansing was a distant connection of Ethel's, as it happened, and a family party of them made a day of it, near the end of the lieutenant's time, down at Surf Beach. Lansing took Hale with him; and in his hearty friend's and other good company, Hale broke through the vapors that had settled about him and was like his bright self again. But in the afternoon, as he was giving and taking his share of the gay banter, he caught sight suddenly, through the circling throng, of a face that made him feel as if he had found himself laughing at a funeral. He broke away and ran in pursuit, missed him, saw him, lost him again, and came on him unexpectedly face to face.

"Halloo, my fancy, whither wilt thou go?" he laughed out, catching him in his arms as he nearly ran over him. "I'm racing all over after you, Bantry; come up here and see Lansing; he was asking about you yesterday."

And he dragged him almost by main force into the midst of the company, and set Lansing to telling how neither he nor Hale would probably have been of this or any other party that day but for Bantry's bravery one perilous time on shipboard. Lansing put the little fellow to confusion by pointing out the marks of the scalding he had got; but Bantry protested, rather ungraciously, that he could not have done less without risk of being disgraced and cashiered, and, in short, did not add to the general hilarity.

That evening Lansing called on Hale in a sober humor, and after some random talk told him about a young lady he expected to marry some day.

"That makes it a little tough to go off up there," he said. "I believe you haven't any anchorage of that kind, Hale." Then he added abruptly, "By Jove, Hale, I wish you were coming with us! Dr. Cass has begged off on account of his wife's sickness, and I can get you his berth if you say the word."

Hale did not answer, but walked down to

the river with him and promised to come and bid him good-bye on board. Then, instead of going home, he strolled out into the country, full of troubled thoughts, past the Starr place; and by and by came back by another road and a cross lane which skirted the grounds about the Starr homestead.

It was late, but bright moonlight. The place was very quiet; through the trees he saw a light in an upper room, and stood a little, fancying her there. As he passed along slowly afterward, he suddenly turned his head and saw Ethel standing in a walk a little way off, where the moon shone full upon her, with her hand resting on the head of a large black dog. They stood quite motionless, both looking toward him. All was so still; the white sheen, illumining her face, her light hair and dress, gave her such a spectral look that Hale did not move till she softly spoke his name. Then he crossed the low fence and came and stood beside her.

"It is so beautiful," she said, "that I could not stay indoors. I was thinking just now that the peace and purity of heaven must be something like this."

As she looked up at him gently, he thought her not an unfit type of the denizens of that better country. Her calm, sweet tones were like balm to his sore brain. A strong impulse to tell her then all he thought and felt for her swayed him to the verge of self-control, but a hateful under-current of consciousness restrained him, and he strove to answer lightly.

"I was thinking something like that myself, as I looked in here from without. It was so still and seemed such a very possible paradise — all but Niger here — that I doubted if it was real till you spoke. I hardly suppose you believe good dogs go there?"

He spoke softly, and, though he smiled, his humor was very slight.

"I don't know," she answered thoughtfully, and looked down at the fine creature, that gazed up fondly at her.

"Good boy! good boy!" Hale said.

He patted the dog's head, and his hand touched Ethel's lying there. An overpowering wave of passion flowed over him. He was silent, looking down at her, till she looked up slowly to his face. Entire self-restraint then became an impossible thing. He laid his hand upon hers.

"Ethel," he said, "suppose you had come to heaven's gate and looked in, and yet knew that if you gained entrance there another at your side must be shut out, could you ask admittance?"

She looked at him earnestly; he felt her hand tremble, and she answered unsteadily:

"No, I don't see how I could."

He stood perfectly still, her answer filled him with so much to say; her answer set a seal upon his speech. He could not move lip or foot. He heard across the world the billows break and thunder round some lonely isle of palms; felt the sick-hearted longing of the castaway. Then a whip-poor-will began to call and call among the hills, filling the night with its piercing-sweet complaint. They stood and listened, till it ceased and left them quivering.

Still neither spoke. Slowly they moved along, the great dog pacing noiselessly between them. At a point where the walk diverged toward the gate and the house, they stopped and stood a little while. Hale turned away, turned back, made as if to speak, but only gave a look and twist of the lips, bent down and pressed his face on the dog's head where lay her hand, rose up, and went away. From the gate he looked back, and saw her standing spectral in the moonlight, as at first; then he plunged into the shadow of the trees along the road. Leaning at her window a few minutes afterward, Ethel heard loud and riotous laughter that jarred harshly on her humor and made her wonder at the hardened reveler that could profane the peace and beauty of so sweet a world.

As Hale came down the road he caught sight of some one prowling in the shadows; and thinking no one would be lurking there for any good at that hour, he lay in wait and then confronted the prowler, so suddenly that they laid hold of one another. The stranger was a small man; he struggled violently, called Hale by name, and excitedly bade him let him go.

"Bantry, by Time!" Hale exclaimed.

And Bantry cursed him and commanded him to take his hands off. But Hale held him still a minute by main force, looking down at him fixedly, then broke out into that riotous laughter, flung him off suddenly and ran, laughing loud and harshly, down the road.

He did not go home; afterward he could not remember just where he wandered the rest of the night; but in the early morning he came down to the river, and as soon as he could got himself rowed off to the *Viking* and into the presence of the lieutenant.

"Lansing," he said, "I'll come with you if you'll get me the place."

The *Viking* sailed very soon after, and passed two winters in the ice. Late in the third season she got into open water, lost her masts, and had her engines damaged in a storm. She was driven into a land-locked harbor and got fast in the ice again. Efforts to set her clear were again and again defeated; and when they were at last successful, the patched-up machinery broke down worse than before.

The men who could have repaired the damage were dead or disabled. In spite of the greatest exertions, the ship was caught in the ice once more. An attempt was then made to escape southward by the boats, but it quickly became evident that it was too late, and that the only hope lay in returning and standing by the ship. So they turned back with what heart they could muster. The officers put on a brave face, but the shadow of a third arctic night lay heavy upon all their hearts. Their numbers were already reduced and the sick-list was alarmingly large. But they went to work like brave men to make a good fight.

Lieutenant Lansing had set a worthy example all through the cruise. Every man knew that he asked no one to go where he would not go himself; and now he did double duty in the preparations for the ordeal ahead. But one day he took sick and went below. Then Hale felt that the ground was going from under them; if the lieutenant dropped out, he said to himself, he could not feel much assurance for the future. Hale had held an even, steadfast course, friendly with nearly every one, but keeping his own reserves; and he had the confidence of all. He did what was needed for the lieutenant, and before leaving him at night spoke to him very plainly.

"There is nothing in particular the matter with you; you're tired, and that's about all; this little trouble will be all right to-morrow. Lieutenant Lansing, the fate of this ship depends upon you; you can't go from under it. It is a mere matter of will; you can get up in the morning, and you must."

"Oh, that's all very fine, Hale," the lieutenant broke out petulantly. "Don't preach to me to-night; let me be weak once in a way, can't you? Hang it, I *am* tired — I'm tired of carrying this ship on my back and pretending to enjoy it. Hale, it's no joke to die like a rat here in this dashed hole. You don't seem to care; you're a kind of Socrates, I think, and life or death seems all one to you. I don't think you know what it means to us common fellows; may be it's because you haven't the same ties to life. See here, Hale, there is a girl down there in Pennsylvania that I was to marry when I got back." And he turned away his face.

Now, they all had long known about the lieutenant's Pennsylvania affair. Hale sat so still, then, that after a while the lieutenant turned back and eyed him curiously. Hale lifted his head and took a worn, sealed letter from his pocket, and showed the address to his friend, who took it and read:

"Miss Ethel Starr, Care of Lieutenant Henry Lansing."

"I had it ready to give to you," Hale said, "in case of separation, when you thought of trying it in two parties."

Lansing lay and looked at the letter and then at him. Finally he asked:

"Are you engaged?"

"No, I only know how it is on one side."

"You came away without asking? I can't understand that."

"That was why I came; I couldn't help asking if I staid."

He forgot Lansing then for a while, and the horrible waste of ice about their prison-house turned in his thought to a moonlit garden under whispering trees, where all sweetness breathed, and from the hills a whip-poor-will sang piercing-sweet.

But Lansing persisted, "Hale, what do you mean?"

"There was another fellow," Hale replied.

"That was a rather strange reason, wasn't it?" Lansing asked presently.

"He was a little fellow, and my friend."

Lansing lay looking at him, and after a while Hale continued:

"I was out on the ice alone yesterday, and you know it's a pretty miserable look-out there, but it occurred to me that if a certain person were going to spend the winter here, and there wasn't another soul in the arctic zone, I shouldn't care to go south."

"O my God, Hale, you make me ashamed!" Lansing cried out. "I'll get up right away."

But Hale ordered him to go to sleep and lie still till he should see him in the morning. The next day Lieutenant Lansing came on deck quite gayly and put new heart into the whole ship's company, although he was not very steady on his legs for a day or two, as they saw by his taking any opportunity to lean on his friend the doctor, laying his arm across his shoulders as they walked the deck together.

Most of the party found it quite lonely enough at the ship, but Hale had always felt the need of getting away by himself for an hour when he could; and even now, when the solitude took on a new dread that drew them all closer to one another, he would steal away with his gun and take a turn of a mile or so upon the ice. One day he was out, and had gone farther than usual in pursuit of some game. He turned at last, and a moment afterward heard quite distinctly the report of a gun in the opposite direction from the ship. Nothing more startling could have come to him than a shot from that quarter, and it set him trembling as if the cold had suddenly struck through him. Then he began to doubt his hearing and fired himself. In a moment the distant report came again unmistakably. It took away his breath. He fired again, and again

came the replying shot. He pushed on toward it, and by and by discovered a dog-team and sledge coming up from the south-west.

He advanced to meet it, and presently made out that there was only one man with the sledge. It came close and then stopped. The driver was a small man, and though his outlandish dress was a pretty thorough disguise, nothing could conceal that peculiar shouldering carriage, the sight of which filled Hale's throat and blinded his eyes. It was Bantry. Hale gave a shout and took him in his arms, and the two men clung to one another and cried, alone there in the midst of that awful desolation. A locked-up store of homesick longing broke out in Hale, and mingled with a great unmixed tenderness toward the little fellow, as a piece of that home for which he so yearned. And when he could speak, Hale cried out:

"O Bantry, what are you doing here?"

And Bantry answered, "I've come to bring you back."

Later it was learned that an expedition had been fitted out, largely at Bantry's instigation and expense, to go in search of the *Viking*; that Bantry had volunteered as engineer in the *Relief*; that they had found no trace of the missing ship until late in the season, when an exploring party came upon a record which described the position of the *Viking* when abandoned and the plans of her people in returning to her. But the officers of the *Relief* concluded from the sudden closing of the season that it was hopeless to pursue the search then, and that it was their duty to get the *Relief* out of her dangerous position while it was yet possible. Then Bantry had taken the risk and started northward alone. He well understood that his solitary journey of a hundred and fifty miles, with the chance of finding the ship gone if he succeeded in reaching the spot, was a desperate venture likely to have a most miserable ending, and he deliberately took the chance.

Hale knew nothing of all this then. He looked searchingly in Bantry's face and continued to question him.

"Where did you come from?"

"From home."

"But how did you get here?"

"I followed the directions you left at Point Kane."

"You came from Point Kane alone?"

"Yes, with the dogs."

"And suppose you had missed us? Don't you know it was a hundred to one that you'd starve or be frozen?"

"That wouldn't have mattered much if I hadn't found you. I couldn't go back without you."

They fell apart a little, and Hale wheeled half round and back. Then he grasped Bantry firmly and commanded :

"Bantry, tell me now; I can't wait."

Bantry's jaw fell and shut again, and he swayed in Hale's strong hold.

"Oh, she is all right," he broke out. "I was a fool; I saw it as soon as I heard you were gone. I went and spoke to her about it, and she asked me if I knew you were going, and I told her no; but she looked through and through me, and I had to tell her the whole truth. Then she turned her back on me, and afterward, though she tried to be kind, I seemed always to see her face turned away." He stopped and coughed hard. "Finally I couldn't bear it any longer, and there was only one thing to do; so I came to bring you back, that's all."

Hale saw that he could not have gone much farther then. He packed him on the sledge and got him to the ship, where his arrival caused naturally no little sensation. When he had done all he could for him and left him asleep, Hale satisfied the curiosity of his wondering comrades in a general way; but Lieutenant Lansing called him aside and asked him what it all meant. And Hale replied simply :

"Bantry's the other fellow."

The lieutenant asked no more questions, but looked down on Hale a minute or two and then commented :

"Well, it's my opinion that we ought to pull out of this yet." And he walked with Hale awhile, with his arm across his shoulders as before, though Hale did not look the stronger fellow then.

Rest and Hale's constant care soon set Bantry on his feet again. Then Hale said to him :

"I'm afraid you've made a mistake, Bantry, and only got yourself into the same trap with the rest of us."

"No, I haven't made any mistake this time," he replied. "If you're in a trap, that's where I belong. But it's about time for me to see after your machinery."

So he went below, found out the trouble, and had all the help they could give him to clear away and get to work on the damaged parts. The first night he reported a fair prospect of success. The following morning a heavy gale was blowing, and by evening Lieutenant Lansing sent for Bantry and asked him how long it would probably take him, saying there were appearances that if the gale held long enough there might be a break-up of the ice. Bantry called for fresh lights below and certain men to be detailed to aid him; and he went to work again after a very brief rest and kept at it nearly all night.

They were in great danger from the grinding of the ice in the days following, and for some time were in constant expectation that the ship would be crushed by the pressure and destroyed, but Bantry paid no heed. There was another bare possibility for which it was his business to prepare; and with the briefest intervals of rest, he worked away at his repairs as best he could.

Sure enough, the contingency for which Bantry was preparing came to pass. One night to their great joy the ice near them broke up and began moving with the wind. And when, with much difficulty, the officers and crew at last succeeded in getting the ship afloat, Bantry had got up steam, and he started the engines. Then with unspeakable thankfulness they saw their dismantled vessel get under motion, answer to her helm, and go thrusting her way slowly among the floes.

They had many delays and disheartenings, were cut off and caught fast more than once, but always succeeded in getting free again. The repaired engines worked steadily under Bantry's watchful supervision; and to be brief, they finally got clear of the ice just in time and pushed southward through open water, with what gratitude to the queer little engineer may be imagined. Every man in the ship felt as if Bantry had brought them out of the very grave, for without steam they knew well that their present escape would have been impossible, and they were ill prepared to face another winter and the chances of a succeeding summer.

The homeward voyage was a long one, the weakened engines being unable to carry much pressure and the coal soon giving out; but as long as it lasted such was Bantry's eagerness that Hale had to ask Lieutenant Lansing to compel him to take necessary rest and have some regard to his health. Hale kept a sharp watch upon him and did everything he could for his welfare, and Bantry manifested more than ever of his old dog-like attachment for Hale, seeming never to like to have him out of his sight. Hale was more than willing to humor him in this and spent as much of his time as he could in Bantry's company, talking with him interminably of all sorts of home subjects except the one of which both thought most. Of that they never spoke.

Finally the voyage came to an end, as the longest voyage must, and the battered *Viking* anchored at last in the nearest home port.

On the morning after their arrival the papers blazoned over the land the return of the Arctic steamer *Viking*, which had almost been given up for lost; displayed her adventures, perils, deaths, discoveries, and scientific results, her disasters and final rescue by the unexampled and romantic self-devotion of Engineer

Bantry of the *Relief*. Every officer in the ship had been interviewed, and all had the same story to tell of admiration and great friendliness toward their deliverer from death, as they all declared Bantry to be in their various ways. Bantry was the name at the beginning, middle, and end of all the staring, head-lined reports. It was added that a perfect ovation had been tendered him on board by the whole ship's company, but that he had with characteristic modesty withdrawn as soon as possible and made haste to hide himself from the gaze of an applauding world, in company with the much-loved comrade for whose sake he had outdone the far-famed deeds of friendship which have come down the ages from the pristine valor of the ancient world. And the only one who neither read nor cared for all this was the hero of it all.

The fact was simply that he had gone ashore with Hale as quickly as he could get him away, and with him had taken an early train going south. Hale said nothing, but let Bantry have his own way with him; and they made only necessary stoppages until they got down together at Ethel's gate.

They had hardly spoken all the journey. Bantry took the lead as by right, went ahead everywhere eager and sharp, attended to the tickets and checks, sat up straight and sleepless in the cars, hurried where they made connections though no time was gained by it, fretted at every delay. Hale lounged in his corner seemingly asleep much of the time, sunk in one long waking dream in which remembrance and vague forecast mingled with a thousand imaginings that shifted and swam into one another unceasingly. And now they were at last arrived at their common goal.

Bantry opened the gate and led the way still; but as he started up the walk he gasped and his feet wandered, and he caught hold of Hale's arm to steady himself, but then went on again. They climbed the steps, rang, and were shown in. Then they stood apart in the familiar room and waited; and then they heard on the stairs the steps which both listened for. Ethel paused at the door an instant, then she came in. She was flushed and tremulous; she glanced from one to the other, and caught her breath in visible agitation.

News had been received from the *Relief* a month before of her failure to rescue the *Viking's* party, and of Bantry's desperate attempt to join them; and upon this girl had fallen the burden of being the only person in the country to understand what the world either lauded as a simple act of sublime courage, or condemned as reckless bravado, but agreed in regarding as almost certainly fatal. So the news of their unexpected return, and

now their quickly succeeding appearance before her, affected her almost as if they had been raised from the dead, from a death to which both had consigned themselves on her account.

But after the first quick glance she took no more notice of Hale. Bantry stood forth, haggard and ghastly, wrought up beyond measure. He swung forward and back as if his feet were fast, tried to speak, but only made a spasmodic movement of the head and wave of the arm which held his hat. For months he had been straining toward this meeting; a thousand times he had heard himself saying as he advanced to her, "I have brought him back!" The ship's engines had sounded the refrain in his ears night and day,— "I have brought him, have brought him, have brought him!" The car-wheels had sung it all the journey,— "I have brought him back, brought him back, brought him back!" But now that the time had come at last, it seemed very different, and he could not speak.

And after a moment's pause, Ethel went forward quickly, took his hand in both of hers, and exclaimed:

"Oh, I am very glad—you ought to be very proud; a great many hearts are thankful to you to-night for friends they have mourned as lost, and the whole country honors you as its hero!"

"No," he answered, swaying on his feet and speaking in a corresponding kind of high sing-song,— "no, I'm no hero,— I haven't done anything for anybody's sake but my own. I made a great mistake; I think I must have been crazy. I don't know how I blundered so, but everything got twisted, and I went with my eyes shut till I tripped myself up. There was only one way to get up again, and I had to go that way whether I wanted to or not. All I cared for was to get back the right to stand up before you. And now—and now—"

Often as he had rehearsed his part in this scene, eagerly as he had striven for it, now that he had reached the performance he found little satisfaction in playing it. He broke off abruptly; his head went back and he made that spasmodic movement of the arm again. He fell into a seat and put up his hat before his face.

Ethel looked down upon him, filled with sharp sorrow. She stood a little while, then sat down close to him, remaining quite still and saying nothing, only comforting him by her near presence and her keenly felt regret. Hale came and hovered over them helplessly, but neither noticed him, and he went away softly and turned his back. And after a while, with a sudden impulse of tenderness, Ethel laid her hand on Bantry's forehead and pushed it

back till he looked in her face out of dry, hollow eyes. She pressed her fingers on them an instant pitifully, and spoke low and fervidly:

"Don't grieve so — I am not worth it: indeed I am not. I am not what you think me: I am only a weak, earthy creature, and unworthy of such great honor as you put upon me. I do not deceive you, I am speaking the sober truth. I won't mock you by saying I'm sorry — I am not sorry; I am proud to be so honored by so noble a heart. You must not contradict me; those who have seen your actions are brave, true men themselves, and know of what they speak. Your conduct *has* been most noble, and you ought to be glad and thankful. You have much to be glad of; you will never want for friends anxious to repay some of the kindness which they feel they owe you, and we who know you best will always love you very much."

She stood beside him in her eager protestation. Her words brought salutary moisture to his eyes, but created no illusion in his mind. He stood up, and a great quiet settled upon him.

"You must excuse me," he said; "I am very weak to-night. I did not intend to vex you, but I think I am tired out. You are very good to me. I will go away now. There is nothing more to be done."

"Oh, don't go," she besought, and as he persisted she turned about in distress and saw Hale.

Hale came forward and laid his hand on the knob of the door. Bantry asked him where he was going, and Hale said:

"I'm going home with you, Bantry."

But he answered: "No, I'm not going home."

Then they both remembered that he had no home, that he had put it all into the *Relief*.

"But don't think me crusty," he went on monotonously; "we've stuck by one another

pretty close, Hale, but we've come to the switching-off place."

Hale looked at him, troubled, and asked him:

"Where are you going now, Bantry?"

"Oh, not far," he answered. "I must see my cousins in the city, and then I have promised Lansing to go and stay awhile with him. He says he is going to get me a berth in his next ship."

Hale stood over him a minute or two in silence, then laid his hands on the little fellow's shoulders, bent down, and looked long and searchingly into his eyes. He kissed him on the cheek suddenly, stood up, and turned away.

Bantry looked after him forgetfully, then turned slowly to Ethel.

"You will let me go now?"

She looked full in his face.

"Yes," she responded. "It would be unkind of me to keep you now, and I want you to believe I can never be unkind to you, but shall always be deeply concerned in you. You must come back very soon." She paused, but still held him by her look. "But before I can let you go, you must promise me that you will take care of your health and live, for an example of truth and courage to the world — and for my sake."

They looked at one another as spirit to spirit, disguise and dissembling stripped from between them. All awkwardness had fallen away from Bantry; he stood straight, and the furrows of his worn face changed to lines of grace.

"I will," he answered, — "I will, for your sake!"

He bowed a moment over her hand, stood up and looked earnestly in her face once more, turned and went out and shut the door behind him, and left Hale and Ethel there together.

James T. McKay.

THE NIGHT IS STILL.

THE night is still, the moon looks kind,
The dew hangs jewels in the heath,
An ivy climbs across thy blind
And throws a light and misty wreath.

The dew hangs jewels in the heath,
Buds bloom for which the bee has pined;
I haste along, I quicker breathe,
The night is still, the moon looks kind.

Buds bloom for which the bee has pined,
The primrose slips its jealous sheath,
As up the flower-watched path I wind
And come thy window-ledge beneath.

The primrose slips its jealous sheath —
Then open wide that churlish blind,
And kiss me through the ivy wreath!
The night is still, the moon looks kind.

Edith M. Thomas.

ON HOTEL-KEEPING — PRESENT AND FUTURE.

HOME, perhaps, means more in England than anywhere else in the world. English literature abounds with praise of it. The homeless lyrist who wrote its best song has recently had his remains brought to his native America amid national and imposing honors. Yet we find also in literature down to the era of railways much hearty commendation of inns. Why this? How can supreme felicity and content be at home, and our warmest welcome at an inn? Has not the warmth of the welcome been heightened by the pleasure derived from agreeable company and new scenes? in good fare provided without foresight or supervision, until the moment of the bill, calling for as little thought or exertion as did the gathering of the manna which of old the heavens rained down plenteously upon a favored people? Or perhaps the laudation of inns comes of the promptness of trained servants, whom we see only long enough to admire their best behavior, leaving their second best all unknown. Whether at the call of duty or in search of health, adventure, or pleasure, your traveler usually puts aside for the time the habits of economy which necessity may impose upon him at home. He wishes to enjoy himself, and looks favorably upon everybody who contributes to that end. Hence the alacrity of landlord, of waiter, and of boots, all three not unmoved by golden or silvery anticipations of the results of their promptness and suavity. Scott, at the beginning of one of his chapters, brings back the old inn to us in a stanza:

“To every guest th’ appropriate speech was made,
And every duty with distinction paid;
Respectful, easy, pleasant, or polite,
Your honor’s servant, Mr. Smith, Good-night.”

INNS OLD AND NEW.

I WELL remember my first stay in an old English inn: the little dining-room, simple but not mean, its low, dingy ceiling, with the natural grain of its wood coming out through the filmy paint; the fare substantial and wholesome, served by a little miss who seemed steward, waiter, and clerk all in one; the prints on the walls depicting hunting scenes in the style of some remote pre-chromo age, with foxes in improbable yellow panting in the vain endeavor to elude hounds in impossible brown; the little windows of small

seamy panes looking forth on the village street, where all was quiet save when a squire’s gig or a farmer’s wagon for a moment rolled by. Inns such as that dusky little inn at Stratford-on-Avon used to be common in England. A few still linger in such favored hamlets as have escaped the grime of mining and the din of whirring wheels and steam-whistles.

George Stephenson was the magician who almost banished the inn from the face of the civilized world, and gave us in its stead the great modern hotel. Its existence was not warranted until the locomotive, making travel quick and cheap, provided the large number of travelers necessary to fill great hotels. Before railway days the highways, like the narrow way of wisdom, showed here and there a traveler, and for these the inn was ample enough. Here the wayfarer could, if he wished, form pleasant acquaintance with his host and fellow-sojourners. They could even form friendships, a thing which sounds strangely to our modern ears, accustomed as we are to be merged among hundreds of guests in a vast caravanserai, with its strange contrasts of gregariousness and solitude; scarcely aware, perhaps, of the proprietor’s name, and often admiring the smooth mechanism of a service which moves with automatic certainty and promptness without overheard command. In olden times the magnates of counties, the judge on circuit, the town solicitor or conveyancer, used to receive a homage at his inn which has become one of the things of past history. The millionaire or local celebrity now goes to an enormous hotel and finds himself reduced to a numeral among numerals: “339 goes south at 6.10”; “512 wants the Boston directory.” English lords come to America and are mistered. Dukes receive scarcely more attention than commercial travelers. Sentiment may sigh at the abolition of inns and their jovial Bonifaces, but picturesqueness and individuality in these things at least are doomed. Factory principles must now be applied in the lodging, sustenance, and attendance bestowed on the vast streams of travelers which the locomotive, the steamship, and the steamboat have called forth.

In Great Britain the inn stood on the high-road, where the stage-coach could easily stop. Hence we find in that country the new great hotels near the railway stations. John Bull sensibly holds that if steam-carriage is economical it should be made available to the ful-

lest extent possible. He therefore brings his rails into the heart of a city, and on the spot, or over against it, builds him his large hotel. The principal station in Birmingham, for instance, is beside the Exchange; and in that town, in Glasgow, York, Sheffield, Liverpool, and London, the best hotels are at the railway stations. The architects of these buildings contrive to render them free from the noise of trains; and as British railroads are operated without the whistling and bell-ringing so common in America, one can enjoy some peace and quietness in a British railroad hotel.

AMERICAN HOTELS.—CONSTRUCTION.

HOTELS in America are the best and most splendid in the world. The existence of an immense traveling population willing to pay the tariff of good houses, the cheap land available in many cities, the prevalent love of display, and the exigencies of an extreme and variable climate, have all contributed to this result. Hotel-designing has become a profession apart, and several eminent architects do very little other professional work. This branch of design demands, besides special knowledge growing out of the wants of hotel management, increased care in every direction wherein the good planner of residences exercises thought. As the height and capacity of a hotel exceed those of a dwelling, so do the penalties of its bad design and workmanship entail more grievous results. Hotel architecture has its special difficulties. In large cities land is very costly, so story must be speedily added to story, that much room may be provided, and the investment begin to pay a return at the earliest possible date. Hence the risk in case the land is made land, or the foundation rests upon anything but rock, that the lofty structure may settle unequally, with momentous derangement and loss. A hotel contains a labyrinth of flues, pipes, and wires, any break in which may be deadly to hapless guests and servants. Besides, the cracks and crannies of a huge building settling down invite rats and mice, pests impossible to banish when once in possession. Therefore, after securing a good position for a hotel, the principal thing is to have a thoroughly solid foundation. Next, the basement should be well cemented, and all the courses of the drain, gas, and water pipes made easily accessible for stated and frequent examination. Modern hotels of the best type have solid brick partition walls from ground to roof, dividing room from room. The walls conduce to safety in case of fire, and, with well-deafened floors, help the im-

portant cause of quiet. Whoever would see the American hotel, as far as architecture goes, in its utmost development, must cross the continent and visit the Palace at San Francisco. That vast house is built on the continental plan of having a large interior court accessible by carriages. This court is covered with glass, decorated with plants, and enlivened with music. To provide against the risk of earthquake, the structure is a thing of massive iron bolts and bands. Comparative cheapness of land has enabled the architect to make every room spacious, and each has bath, closet, and dressing-room attached. Every external room has a bay-window. Pneumatic tubes connect each floor with the office, for the rapid dispatch of letters and parcels. Yet, with all the vast outlay in construction, no sunlight enters its dining-rooms. The Palace, too, proves to have overpassed in dimensions the limits within which a sense of comfort is possible. Many travelers prefer houses less large, where the obliteration of the individual is less oppressive.

FIRE.

THE risk of fire has engaged the attention of hotel architects very seriously of late years. In truth, many leading houses throughout America, built twenty or thirty years ago, are mere fire-traps. It is better here to expend capital liberally at the first in every possible provision against disaster than to depend on makeshift appliances which, when emergency arises, demand discipline, intelligence, and abundant means of safety ready to hand. An excellent and common plan for safety is to drill the porters and hall-men regularly as a fire company. Thus, when flames have to be fought, the work is done by disciplined men. All the corridors of new hotels are commanded by hose attached to water-pipes on each floor. This safeguard, when steam is kept up day and night, is the most efficient possible. A good plan, adopted in many city hotels, is to make the local fire department thoroughly acquainted with the building. When a hotel is built with unity and clearness of design, much is done to render it safe from fire. With corridors broad and long, so that all or a large part of each floor can be commanded by a watchman, a fire is unlikely to remain long undetected.

The marking out of staircases by red lights is an important aid, too, in case of fire. In construction, the use of brick arches for ceilings, and the division of the wings of a building by wooden doors brightly tinned, are

frequently employed to insure safety. Still, with staircases and elevator-shafts, which must remain open, with finishings and furniture of wood, and, beyond all, the risk of deficient water supply and of panic, I see much wisdom in the choice of travelers who seek rooms near the ground.

Simplicity of design, I may incidentally say, also reduces the liability to theft and other breaches of the moral code. Of two hotels in a certain Northern city, one was built thirty years ago, and enlarged from time to time by annexation of adjoining houses; its corridors are short, tortuous, and on varying levels. The other is new, and was built all at once, on modern principles; its corridors are extensive and ample. Both hotels are, of course, liable to theft and other offenses; the new house, however, although much the larger, has much less trouble from this source than the other. Guests at a large hotel unintentionally form an effective police force. Their presence has an effect like that of the passers-by in a street, when a gas-light is the sole defense of premises stored with valuable goods.

PLUMBING.

As to plumbing, that subject so full of woful interest in this age of diphtheria. Experience has proved that baths and water-closets can be attached to bedrooms without injury. The conditions are careful workmanship on good methods and frequent examination. An immense quantity of water is used in a hotel, and its waste-pipes and drains are better flushed than those of ordinary houses. Physicians tell us that the germs of typhoid and diphtheria may enter the system in food and drink. Therefore, the great distance between sinks or closets and the places where the meals are prepared and served, may explain why hotels enjoy an immunity from the diseases mentioned which is denied to good residences. Water supply is an important point just here, and in lofty city hotels it is well to connect each floor separately with the street main. Thus, taps in the uppermost floor have none below them in unduly favorable competition for supply.

All well-designed hotels have gas, water, and waste pipes so arranged that throughout their whole course they are easy of access. The same channels may contain speaking-tubes and electric wires. Along the margins of the corridors of the newest houses there may be observed continuous hoard-strips uncarpeted; these cover troughs holding pipes and wires. From floor to floor, upright shafts serve the same purpose. When

a leak or break occurs, section after section is opened until, with the minimum of disturbance, the point for repair is discovered. These permanent ways should always be ample in size, that additional pipes or wires may easily be laid. The electric light as introduced requires its special cables, and if gas comes to be used as fuel, it will demand its special series of pipes.

WARMING.

GAS, as burnt in pretty grates of incandescent asbestos, introduced by the gas-companies, does away with the nuisance of coal-ashes, and, except in extremely cold weather, should serve even in the most northern latitudes. The late Doctor Siemens proposed abolishing London fogs by the use of gaseous fuel prepared as illuminating gas is now at large special works. Recent improvements in the production of this so-called water-gas may lead to its introduction as fuel in our hotels. Warming a large hotel in the Northern States or Canada is a difficult matter. It may have say six or seven floors, and since the inexorable tendency of heated air is to rise, it is practically impossible to keep the ground-floor comfortable in winter without overheating the uppermost story. The only remedy is to close off the staircases by partitions provided with doors. This plan, however, is too inelegant ever to be popular. In a hotel of six stories, heated by hot air, the ducts do not usually go above the fourth floor, the fifth and sixth being warmed by convection alone. If the building is loftier, the same proportions are observed. In some of the smaller cities of the Union, an altitude of hotel-building has been perpetrated which only metropolitan land-values can excuse. The risks in case of fire, the darkness of inner rooms, the difficulty of maintaining an even temperature in winter, all decide in favor of a moderate height for hotels. Of the various methods of warming a hotel, experience has shown that direct radiation from steam-pipes is best. Hot water cannot very well be introduced into a large building, and hot air supplied from furnaces or from steam-pipes in a basement is not easily regulated, has an unwholesome dryness, and frequently betrays its origin in a disagreeable way. Stale tobacco-smoke from a stoker's den is not pleasant in a parlor. Every room in modern hotels has its fire-place. No other means of heating affords people the satisfaction derived from an open grate. Economically considered, fire-places are very commonly badly designed and placed. Sometimes we find them built against an outer instead of a partition wall,

as if their mission were to heat the external atmosphere. Their perversion of fuel is exaggerated when they are constructed immediately under their chimneys, yielding the least possible warming effect in a room. In an improved form they come somewhat out from the wall; thus increased efficiency is attained without sacrifice of the charm all find in glowing coals. Since all the chimney-flues of a hotel except those from the working department are used only in cold weather, it appears to me that they should be built wholly or in part of some other material than non-conducting brick. Metallic flues of suitable design and decoration might usefully conduct a noteworthy quantity of heat now wasted into rooms and corridors.

VENTILATION.

THE open fire-place conduces somewhat to ventilation, but in a less degree than is commonly imagined. Above the level of the top of the grate the vitiated air is comparatively warm and light; there it is apt to remain injuriously pocketed. To exchange it for pure air, either a window must be opened, which leads to unpleasant draughts, or under the best methods special ventilation flues near the ceiling and floor are provided to exhaust foul air and admit fresh.

Ventilation is scarcely less important than plumbing; in fact, good systems of both require to be planned together. I have seen gorgeous moquette carpets, splendid mythological frescoes, and furniture of the most elaborate kind, through an atmosphere laden with odors from boiling vegetables. Worse than these odors are the subtle germs of disease which disjoined waste-pipes and untrapped drains may scatter through air breathed by people unwarned of danger by any appeal to their olfactories. The best means of ventilation is that which brings tainted air through ducts directly into a furnace fire. So-called natural draughts are untrustworthy, and, in our North American climate, come down very often when they ought to go up. The pull of a strong fire, with a lofty chimney, may be relied upon at all times. To neutralize poison is much better than to dilute it. Should a hotel be too large for this plan to be feasible, ventilation by steam-power employed to drive fans is the next best resource.

The principal need for ventilation in a hotel arises from the use of gas. No class in the community would have more reason than hotel-keepers to rejoice in such cheapening of the electric light as might make it generally available. It would be a great

economizer of fuel in our long winters, and a sturdy foe to the catarrhs and neuralgias which come of draughts unavoidable in admitting fresh air to crowded ball-rooms and banquet-halls. While gas is with us, I wonder some enterprising manufacturer of fixtures does not devise ornamental hoods and tubing to lead away the hot air from the flame, laden as it is with carbon dioxide and other deleterious substances. In two New York hotels the plan is adopted in some measure, and the results are most satisfactory. The most complete example of the kind within my knowledge is the new Infirmary in Edinburgh, where every gas-flame, like every coal-flame, is provided with its chimney.

SECURING QUIET.

ONE of the inevitable annoyances of a hotel is noise, and I do not think that the war against it has been waged seriously enough. The liberal use of rubber on staircases, landings, chair-legs, and truck-wheels has done much, and thickly padded carpets have done yet more, to quell the noise attending late arrivals and early departures. Still the nervous man hears noises that have no excuse for being, and that might be avoided by further improvement. First of all, why not make the doors leading from a corridor to a room much less pervious to sound than at present? This might be done by placing in a thick, hollow door some light deadening material, such as batting or saw-dust. Or a pair of doors could be substituted for a single one. This method is now adopted in our recently built hotels, in the room having a compartment for bath, etc. Parallel with the corridor door is a second one, hinged to the wall of the compartment. This serves two good ends, that of quiet and that of doubly secluding the conveniences; the compartment having a door of its own at right angles to the other two, and opening into the space between them. Pairs of doors are now commonly employed also between the rooms forming a suite. It has appeared to me for some years that an improved method of communicating between the rooms and office of a hotel is feasible, which would besides other advantages help the cause of quiet. By the ordinary system, when it is uncertain whether a guest is in his room or not, a servant must be sent to inquire. Or if, say, No. 419 wishes to know when the trains leave for Albany, the servant must first answer the electric bell, and repeat the long journey to the room, bearing the information desired. In very large hotels, such as the Palace in San Francisco, or the Grand Pacific in Chicago,

there is a local annunciator on each floor, having its attendant. In his care are the things most commonly wanted — stationery, iced water, directories, and time-tables. A speaking-tube connects each local attendant with the office. Instead of the systems now in use, I propose the introduction of a telephone in every room, connected with a special department in the office. The telephones need not be so elaborate and costly as those required for long city circuits. If attached to flexible wires, a sick or lazy user might speak through one of them in bed. A guest, without leaving his room or causing the special clerk to move from his office, might have his questions answered with as perfect economy of time as though the two stood face to face. The electric service might well include a small bell fixed, say, at the head of the bedstead, to give a guest notice that the office wished to speak to him. Its use would also serve to call him up for an early train. In this way none but the desired sleeper would be aroused in the cold, gray dawn, and a very large proportion of messages could pass through the wire instead of, as now, requiring a slow, noisy, and somewhat uncertain human vehicle, who gossips and wears out carpets. From notes taken of the various calls to which a hall-man responded in the course of a day, I estimate the saving of time by the use of this system to be nearly twenty per cent. Surely, with the creating of so large a field as that here indicated for the telephone, not only in hotels, but in other large buildings, those who own it might easily be induced to abate their terms of royalty. The nearest existing approach to the system proposed is that of the speaking-tubes, known as the oral annunciator. Its limitations, however, as to carrying distance, prevent its use in large hotels. It is cumbrous, and more liable to get out of order than a series of wires laid with a little slack, so as to yield in case the containing building settles down unequally. Summoning attendants by ringing bells makes many of the public rooms of hotels very noisy. Electricity might lend itself here to an improvement, by lighting an incandescent lamp. A luminous beam would call clerk, hall-man, or porter on the watch for its appearance, quite as effectively as the alarm-bell, which is heard by so many for whom it has no message.

WORK-ROOMS.

THE working department of a hotel comprises boiler-room, engine-room, butcher's shop, store-room, kitchen, wine-room, laundry, and workshops. All but kitchen and

laundry must be in the basement, except, perhaps, the store-room. The kitchen and laundry should either be in a separate building with extraordinary means of ventilation or in the attic. It is always washing-day in a hotel, and heated air from wash-tubs and ranges ascends, and bears with it offense and injury. In modern hotel kitchens and laundries, mechanical appliances greatly reduce drudgery. Vegetables and fruit are peeled and grated, peas and corn shelled, cherries pitted, eggs whisked, meat chopped, roasts turned, and ice-cream frozen by steam-power. In our newest hotels powerful engines furnish electric light, and are used to manufacture ice for the table and to chill brine for circulation through refrigerators. In the laundries all washing but that of fine linen-wear is effected by machinery with the aid of soap made from kitchen grease. Powerful centrifugal and rubber wringers press out moisture, and mangling is performed by cylinders heated with steam, so that linen is dried and ironed at one operation. A drying-room for such articles as are not mangled is superheated by exhaust steam from the engine; in this room work is done in a tithe the time required with outdoor exposure. Shirt-fronts, collars, and cuffs are glossed under a mechanical pressure much more severe than the most muscular Bridget could exert.

All large hotels are now provided with their own workshops for prompt execution of repairs and systematic renovation. Keys can be replaced, panes of glass inserted, leaks of gas and water stopped without the delay necessary in sending to a tradesman's shop. Upholsterers are constantly engaged in the renewals of carpets and coverings. At dull times it is usual to renovate, say, an entire floor, with carpets, curtains, and lambrequins. Painters at every opportunity are busy keeping walls, ceilings, and wood-work bright and fresh. Their work is now chiefly done in oil-colors, more wholesome and lasting than kalsomine. The shop staff, as it is called, commonly includes engineers, plumbers, gas and steam fitters, upholsterers, silversmiths, and an electrician, all being under the direct control of the proprietor.

APPOINTMENTS.

As to the furniture and decorations of hotels, great improvement has been made of late years. Time was when gaudiness reigned in hotel-parlors, and bareness made the rooms forbidding. This is fast passing away, and travelers of the best class now find pretty commonly at the best hotels such appointments and decorations as surround them at home. The most enterprising proprietors now place

good pictures and well-selected *bric-à-brac* in their parlors. These, with pleasant writing-desks, what-nots, and book-stands, are finding their way into the newly built houses. As ladies occupy their rooms much more than gentlemen, owners and managers do well to consult their taste when contracting for carpets, curtains, and upholstery. The opinion of a tradesman, even when he is competent, is apt to be unduly influenced by gainful considerations. To maintain the uniformity of a carpet laid on a particular corridor, it is usual to keep an extra piece on hand for repairs. So also when a parlor or reception-room is fitted up expensively in, say, the style of Louis XV., with everything to match, it is customary to keep the future necessity for renewals in view; for gas-globes are very liable to spontaneous fracture, ink will be unaccountably spilled, curtains singed, and other such accidents happen to destroy the completeness of appointments.

MANAGEMENT.

LET us suppose a hotel well placed, well built, and well furnished. We have scanned its walls for evidences of settlement and found none, or the effects have been rectified. We have poured peppermint abundantly down drain-pipes, sniffed at all the connections, and found neither break nor flaw. We have stolen abroad at night, listened for rats, and heard none. We have boiled onions in the kitchen, made soap in the laundry, and, with intervening doors wide open, have found only pure air upstairs. We have sounded the fire-alarm and brought a hose and ladder to the door in satisfactorily few seconds. We have overladen the elevators, worked them swiftly, and found them unaffected by the strain. We have adopted every means of safety and comfort known for the protection and enjoyment of the traveler. Next comes the question of management. The proprietor of a hotel should, first of all, be a gentleman, for many of his guests will be gentlemen, and he must manage his house to meet their approval. For all that the immensity of modern hotels has put landlord and guest asunder in comparison with old inn-keeping days, the popularity of a landlord continues to be a fact, and a pretty valuable fact. A stated circle of customers appreciate his welcome as they arrive at his house travel-worn and weary. He may be called upon to lay out tours, extend invitations, or give information as to the credit and standing of local people in commercial and professional life. At times angry disputes will be referred to him, and he must settle them with judgment and suavity.

A landlord should not only be a gentleman, but also a good man of business. The chief end of a hotel is to pay, and he should never lose sight of that. He has to meet heavy fixed charges, and control large expenditures. He must thoroughly understand his business in all its branches, and know how to observe and check dishonesty, waste, and extravagance. He has to select and supervise servants, and direct the purchase of all supplies, including the new machinery and devices constantly brought out with the alleged intention of saving his money. He should know the art of entertainment and the science whereby his business can be increased through the holding of conventions, the extension of excursion facilities, and the like. Whether his house is in the city, or by the sea, or perched on a mountain-summit, or where waters spout up for the healing of the nations, he should know how to put his guests in the way of enjoying the things of use, beauty, or interest which have attracted them to his door. He should be a good man in emergencies; know exactly what to do, and do it, when fires break out, thefts and outrages on propriety are committed, or any one under his roof develops insanity or infectious disease. Men who combine all these good points of character, ability, and manner are exceedingly rare,—not as rare, perhaps, as good poets, but about as rare as very good public speakers.

STAFF.

IN the organization of his service, the hotel-proprietor recognizes only his staff of superintendents. These are the head clerk, steward, head waiter, housekeeper, *chef*, head porter, and head laundress. Each of these officials engages his or her subordinates, and is responsible for their efficiency and good conduct. These superintendents need to have good points, and although not as rare as that very large diamond, the good landlord, they are rare enough to command very liberal salaries. Some people who keep house economically marvel at the cost of living at hotels, losing sight, among other considerations, of the price of efficient supervision, a service which their families receive gratuitously. In large hotels the proportion of salaries to wages is about one to four. The explanation of the cost of hotel-keeping consists, too, in the waste inevitable when a very large number of servants are employed in a vast building, where the close, personal, interested oversight of a private house is impossible. Again, I think it will be admitted that the fare at good hotels is more various and expensive than that at good

homes. In the fluctuating character of the business, and in the inordinate variety and quantity supplied at table, must also be found the reason why four to five dollars per day is usually charged by American hotels, in the presence frequently of active competition. When a residence is bought or leased for a family, its capacity usually meets the wants of its occupants. A hotel, however, may not, on an average, be more than half full the year round. A fraction much smaller than one-half represents the occupancy of hotels at summer or winter resorts. Even well-placed houses in great cities have their dull season of from two to four months, during which receipts do not meet expenses.

The modern method of numbering hotel-rooms has been well devised. Thus, in new houses, No. 346 is over 246, and under 446. All three rooms are alike in size and outlook. The number of the floor is told in the first number of the room: 246 is on the second floor, 346 on the third. As in numbering the houses in streets, 245 is opposite 246, and so on. A new servant thus is soon able to find a particular room, and a guest is much less likely to lose his way than if the strictly consecutive plan of numbering were in use as of old. The new system lends itself to the management of the great excursion parties, which are becoming more and more popular every year. When a large excursion party arrives at one of our new hotels, the members of it go directly to their rooms as fast as the elevators can take them. Each is provided beforehand with a card stating the number of his or her room; the first figure denotes the floor, and a hall-man, stationed at each landing, points each comer to the room sought, which is found with its door open. The register and other books are written up in advance from lists mailed to the manager. In every hotel-office the room-clerk has spread out before him a diagram of the rooms, all duly numbered, with particulars of their size, their conveniences, and the doors which may connect them together as suites.

THE TABLE.

WHEN I have seen the lengthy bill of fare so commonly furnished at large American hotels and thought of the waste entailed, I have often believed that a reformer might succeed, by establishing, say in New York, a hotel on a new plan, one that would afford the small, good variety that one finds at the smaller London hotels of the best class—a variety well cooked and served, through the cooks' attention not being dissipated among a

multitude of dishes. At two restaurants in New York, on Broadway and Fifth Avenue respectively, one gets an excellent *table d'hôte* dinner of this kind at the reasonable charge of one dollar and twenty-five cents, which includes a pint of *vin ordinaire*. The best hotels, it gives me pleasure to state, are fast moving in the direction of simplicity of bill of fare. In New York the leading house on the American plan does not provide its table with much more than one-half the variety of dishes one may have offered at second-rate, pretentious concerns throughout the country. The dietary, too, in America is unquestionably improving. Fruit and vegetables are consumed much more plentifully than before quick trains transported them cheaply and canning became a prodigious business. Baked joints and fowl, so often parboiled and sodden, are giving place to better things in the way of genuine roasts. The gridiron, thank goodness, has well-nigh driven the frying-pan out of the kitchen, and wholesome broiled steaks and chops have taken the place of the hard, greasy meats that spoiled so many digestions in the past. Pie, too, is going, and its exodus has had much to do with the genesis of fat. But hot bread and cakes still hold their own, and the baleful ice-pitcher remains, active for stomachic mischief. Porridge, however, is more easily had at a hotel in New York than in Edinboro', and, with cracked wheat, has gone abroad throughout the Union, crossed the Rockies, and visited the Pacific slope, doing good all the way. Salt fish, salt meat, and pork are now little used. Fresh fish and oysters are consumed very largely, and, exchanged for the game of distant backwoods and prairies, are carried from lake and sea to the most interior cities and towns of the continent—another blessing due to the rugged old Englishman who first put a boiler on wheels and sent it traveling about the country! Under the influence of improved diets and the custom of taking a vacation during the heated term, we are glad to learn from statisticians that the physique of our people is improving, and that they are living longer than their predecessors did. Adipose is being deposited on lanky forms, and although Brother Jonathan can scarcely yet be depicted as a plump person, he bids fair to become such if he keeps on adopting common-sense measures in food and rest.

LARDER AND KITCHEN.

HAVING frequently wondered at the unvarying excellence of the beef at the leading hotels of New York, I made it my business one day recently to call on the butcher who

supplies the principal houses. He makes two very different kinds of contracts supplement one another nicely. His customers are hotel-keepers and prison-superintendents. Thus the difficulty is overcome which, in the restricted market of a small city, prevents a butcher from supplying a hotel with as many choice cuts as it wants. He may not be able to find sale for the remainder of the carcasses. But the metropolitan purveyor, by cultivating the trade of the criminal classes, is enabled to cater satisfactorily to the best travel in the country. The sleek millionaire at the Astor and the haggard burglar wearing out his days at Blackwell's Island both dine off the same ox,—different portions of it, however, for the contract prices are in the one case twenty-eight cents and in the other eight to twelve cents per pound. In the daily practical working of a hotel, the main point is the seeing that all supplies, from the time they are received until consumed, are properly accounted for. The routine of the commissariat is something like this: The larder being duly stocked, the *chef* is told how many guests there are for breakfast. Experience teaches about at what hours they will come into the dining-room, and just about what proportions of fish, steak, chops, omelettes, etc., will be asked for. These, in the case of a large business, are prepared a little in advance of demand, to provoke the impatience of guests as little as possible. Other meals are arranged for in the same way. At dinner, when the range of time for service exceeds an hour, it is usual to go on preparing the dishes as the repast is in progress. When the first joints are served up, a second batch is being cooked, and so on. To secure the best results with asparagus, spinach, and such like vegetables, it is usual to keep on boiling fresh supplies every few minutes. Good hotel-caterers provide for the extra demand when salmon, spring lamb, or strawberries first appear, and never permit "All out, sir," to be said at their tables.

THE EUROPEAN PLAN.

THE *cuisine* of few hotels conducted on the American plan with the *table d'hôte* is as good as that of the best restaurant-hotels managed on what is called the European system. In some of the best of the hotels of this sort, such as the Brunswick, in New York, and Young's in Boston, every dish is cooked to order, and their system assesses waste and extravagance in ordering, as the American plan cannot. Its influence in legitimately curtailing an order is as decided as that of size on courage. It is usual at restaurant-hotels to serve larger quan-

tities of each dish than at hotels on the American plan, so that, should Benjamin travel with his wife, and put up at Parker's or the Buckingham, his double portion may suffice the twain, and his bill may be even less than if he went to the Vendôme or the Fifth Avenue. The most lucrative hotels in America, however, continue to be those having the fixed daily charge which can be popularly paid. Some large houses, like the Palmer in Chicago and the Murray Hill in New York, combine both plans, and find the American preferred. Since the guests of restaurant-hotels do not take all or perhaps any of their meals at their hotels, these houses often become dependent on chance custom for a measure of their support, a kind of patronage having its vicissitudes. Wet, stormy weather will affect the receipts of the Café Brunswick three hundred to four hundred dollars per day. Very costly has been the purchase of the reputations of the best of these concerns. The Brevoort attained its enviable name, among other excellences, by its coffee, which, at great expense, was made freshly every ten minutes during the hours of business.

WHERE THE MONEY GOES.

AN analysis of the cost of conducting a hotel on the American plan may be of interest. The house whose figures are given will fairly serve as a type of its class, and the expenses are given in ratios for 1883. Interest on the capital invested in land, buildings, and furniture; the assessments and taxes; heating, light, salaries, and wages for the least busy season of the year, together make up a fixed daily charge. Adding to this the cost of provisions, the total expense of the hotel divided by the least number of guests at any time of the year within it is a figure we agree to call one. During the busiest month, the extra outlay consists in buying more provisions, paying more servants, and expending more for fuel and light. Compared with the dullest month, the average guest then costs fifty-eight hundredths as much. We will now easily understand a point already referred to, namely, the great disadvantage in hotel-keeping when the average number of guests falls much below the capacity of a house. Hence the importance of cultivating its business in off seasons, of then organizing excursions, conventions, etc. All this, too, bears on the question of rates, and how they can best be adjusted to yield the largest possible return. Comparing small things with great, there are many considerations operative in railroad tariffs which obtain in those of hotels. In the house which has been

selected for analysis of expenses, the business varies very much during the four seasons of the year. In summer transient travel pays good rates, but there is usually, even then, room available for excursion parties, which can be attracted by a reduction of terms. Like his friend of the railways, Boniface knows a little profit to be better than none, and is glad to take it by the creation of a new department of business. In off seasons a number of families and individuals may make his house their home; and in fixing prices, beginning at the lowest for the least desirable quarters, care is taken not to go below the extra cost which an extra guest entails. Nor is sight lost of the fact that all classes of guests base their computations on the minimum rate, and wish to pay no more than such an advance upon that as may correspond with the difference between the accommodation they desire and the accommodations of the cheapest kind. If the minimum rate be made too low, much income will be lost derivable from the class of patrons who are able and willing to be liberal in payment.

Let us now take a glance at the expense-sheet for the year, which may exhibit some ratios of interest. Provisions cost eighty per cent. more than wages. Of provisions, meats were twenty-six per cent.; poultry and game, eleven per cent.; vegetables, nine per cent.; and fruit, seven per cent. Fuel cost one and nine-tenths as much as gas, and water only one-sixth as much. Ice cost one-fourteenth as much as coals, and the replacing of broken china and glass, worn-out linen and carpets, one-ninth as much as provisions. So far from wholesale buying being always advantageous, I know that this house has raised certain prices on itself. Its demand in a restricted market for the earliest fruits and vegetables, the best meats, butter, and eggs, has told upon cost; and were it to evaporate some fine morning, many competing housekeepers would rejoice. The same thing occurs at summer and winter hotels in country districts; in such cases the main supplies have to be brought from the great cities to which the best provisions go, and where large competitions prevent exorbitant prices being asked.

NEW YORK HOTELS.

WITHOUT doubt, New York has the best hotels in America, one reason being that the metropolis is the greatest labor-market in the country. As the chief port for arriving immigrants, as the most populous and wealthy city of the republic, it naturally attracts the best servants. At the Windsor, even when the

house is full, there are more servants than guests, yet the great staff of employees is controlled with ease. New York has trade societies of hotel cooks, bakers, butchers, and waiters, which can readily replace undesirable servants. As a rule, maintaining a high standard of character and efficiency among their members, they are held in much esteem. Hotel-keepers compared with householders have little trouble with servants, chiefly for two reasons. The hotel-servant has a definite duty, or small round of duties, which, once mastered, can be efficiently performed. No combination of cook, laundress, chambermaid, waitress, and scrubber is required. Again, the servants have definite hours for duty, after which they are free; and freedom is a boon dealt out very sparingly to the ordinary domestic drudge. Besides, too, a large regiment of servants working and living together, provides each with company of his or her own class,—a privilege of value, and one which solves the vexatious question of followers. Contrast this with the ceaseless toil and almost complete isolation of the ordinary domestic, and cease to wonder at the calm manner of a man who may have under his charge three to five hundred servants. The very extent of the staff lends aid to its management, as applicants for employment are constantly enrolling their addresses in a little book on the proprietor's desk. That little book is usually labeled "Next." Whisperings as to its contents have their effect in checking vicious tendencies and caprices, and in controlling impulsive resentments. The elaborateness of modern furniture and appointments, the refined nicety which demands constant painting, scouring, and washing, the increased detail of service and attention, have all combined within recent years to augment the number of servants required for a hotel of given size. In thirteen years, business for business, the pay-roll of the most lucrative house in New York has lengthened out one-third.

TIPS.

A FEW words as to the vexatious question of tipping. Travelers with an abundance of money and a desire for good attention from servants cannot be prevented from feeing them. Hence arises a calculation by the landlord, that as his servants' places are "worth" so much a month to them, their wages may very properly be reduced, or even a premium exacted, as is commonly the case with hotel-porters. This gives the servants, in turn, a *quasi* right to tips, so that at last, as a visitor to a popular watering-place told me last sum-

mer, the five dollars per day becomes simply an initiation fee, no attendance worthy the name being bestowed without extra payment. Competition alone can solve this question. The landlord who amply pays his staff and enforces their efficiency without tips will have an element of attraction to advertise more potent than electric light or nightly music.

SUMMER HOTELS.

*MORE astonishing than any city hotel for management are the huge concerns one sees at Saratoga, in the Catskills, or at the beaches near New York. They have to contend with the difficulty of engaging a new staff of servants every year, and they are usually remote from the markets for labor and provisioning. Their business is spasmodic, and in large part so very transient in character as to be plaintively termed "processional." Yet they are often conducted admirably by a stretch of enterprise truly American. Sometimes a partnership of three or four is required for the work done in the city by a single landlord. Frequently these houses are managed by the proprietor of a city hotel, who transfers a portion of his staff thither during the heated term, when the cities have scant travel. This meets the difficulty of service in some measure. Or a particular landlord may conduct a summer resort in the mountains of the North and a winter hotel amid the orange-groves of Florida. Since 1870 the development of summer hotels in the vicinity of our chief cities has been remarkable. Their rapid multiplication has told on the patronage of resorts at a distance, for men of business like their families to be near enough for a visit on Sundays, or whenever else their engagements may permit. Hotels of this description, which may almost be called suburban, have been largely promoted by steamboat and railway interests. So, also, have hotels in the White Mountains and along the smaller lakes of the North. It is part of the mission of an astute passenger agent of a railroad to get such points included in the long-excursion tickets offered for sale every summer throughout the country.

APARTMENT-HOUSES.

LET us return for a few moments to the large hotel of the cities. We shall find there a number of permanent patrons, who seek the advantages of good fare and attendance without the care of personal supervision. They are usually bachelors, widowers, or married couples with small families or none. Their

demands, as a class, have chiefly led to the building of the apartment-houses which are now discovering the sky in our great cities. Hotels designed to accommodate travelers can but imperfectly meet the wants of a class of patrons who desire not only the advantages of an architecture adapted to multiple tenancy and a service organized on a large scale, but also the privacy and quiet of home. Of late years the class who, in New York and Boston, used to live permanently in hotels, are more and more finding their way into apartment-houses of greater or less excellence. It is only habit and prejudice which have so long kept Anglo-Saxons and their American descendants to the perpendicular-wall theory of homes. Germans, Frenchmen, Italians, and Scotchmen live comfortably in flats, and why may not men of other race? The extremely high value of land in New York, and the preparation many of its citizens have had in hotel and club life, have made that city the pioneer in apartment-building on this continent. Within twenty years hundreds of vast structures have been erected for apartments, doubling and trebling the population accommodated on the land, and affording comforts impossible in the narrow, high residences of ordinary design. Swift elevators replace staircases, and a central boiler warms an immense block. The corridors are kept clean and lit at night by a service common to all. A *concierge* intercepts beggars, peddlers, and thieves. The newest and best of these structures contain apartments two stories in height, securing for the upper floor an increase of privacy and quiet. In some of them each apartment has a kitchen of its own. In others, a single large general kitchen provides for all the residents, either in public or private dining-rooms. Where the private kitchen is retained, I am informed that the number of servants required is one-third fewer than necessary in an ordinary house.

It is curious to note how long the organization of labor has been delayed in its application to domestic life. Time was when flax and wool were spun, linen woven, beer brewed, and men's clothing made at home. Now these employments are carried on under wholesale methods, with all the gain attending the use of machinery and the specialization of labor. I take it that cooking, laundering, and such general service as that which attends to a boiler, to an elevator, and to an office, might with equal advantage be conducted on wholesale principles. Of course the very rich can command, if they wish, elaborate private residences; but people of moderate and small means can find in combining their resources much more comfort than in the

present isolated home, with its retail harassments. As developed in some measure from the hotel, the apartment-house may look for some hints of value to its congener. From a hotel experience of some years, I would say to projectors of such structures, Insure that your house will be fully occupied before you build it. One of the chief losses of a hotel arises from fluctuating and discrepant custom. If meals are to be provided, supply them at an advance on cost, so that the question of loss may not arise. The profits can be divided periodically among the contributors thereto on some easily devised and equitable plan. In construction, in organization of service, the apartment-house cannot do better than embody the plans and methods of good hotels. One suggestion I would make, which might well be adopted in both hotel and apartment-houses, has occurred to me from very painful emergencies in my experience. Sometimes it occurs, when large numbers of people are gathered under one roof, that an individual may develop contagious disease of a malignant type, say small-pox. Now, to isolate the patient is scarcely possible; to remove him may be very dangerous; and hence risks may be run of an alarming kind. My suggestion is to have in every hotel and apartment-house a special room, designed with the

supervision of a competent physician, where such a patient as I have described might be safely nursed and treated. Special waste-pipes, ventilating shafts, and walls of glazed tile might form part of the plan, which carried out would do not a little for the recovery of the stricken one. With respect to safety in case of fire, I have observed in the latest-built apartment-houses in New York balconies, in some cases continuous, erected to incidentally serve as means of escape. Highly ornamental, they are in vivid contrast with the hideous skeleton work in iron which one sees around so many lofty buildings in the United States. Both kinds of addenda, however, while diminishing risk in case of fire, serve to invite marauders.

As practically embodying many elements of the coöperative principle, it is instructive to note that the apartment-house has been developed rather from the business motive to adapt hotel methods to home life, than from the speculative tendencies of coöperative philosophers. As improvements go on in the organization and design of apartment-houses, it may be fairly expected that they will loom up more and more on the streets and avenues of our great cities, as the pressure of population makes the single household more laborious and costly to maintain.

George Iles.

WILLIAM LLOYD GARRISON.

THE fiftieth anniversary of the "Garrison mob" of October 21, 1835, will revive the memory of the great reformatory leader who was, on that day, dragged through the streets of Boston with a rope round his neck, and was saved only by committing him to jail. This nation has seen mobs far more formidable, in a merely military sense, than that; indeed the antislavery agitation itself saw greater, in one of which Lovejoy lost his life. The peculiarity of the Boston mob, beyond all others that ever took place upon our soil, was that it enlisted the most cultivated and respectable class in a conservative city against a cause now generally admitted to have been that of truth and right; arousing moreover such a burst of unreasoning violence that the mayor thought it necessary to disperse a meeting of women, and to cause the sign of a "Female Anti-Slavery Society" to be taken down and thrown into the streets. Garrison himself, the immediate victim, was a non-combatant, being of the few men who were faithful to the "non-resistant" creed; and it was this contrast — women and non-combatants on the

one side, and the classes that wear broadcloth on the other — which gave to the whole affair that element of moral picturesqueness which is one of the very surest guarantees of historic permanence.

The career of Mr. Garrison contributed an important fact to elucidate the very philosophy of all reform; because it showed the controlling force of the moral sentiment, apart from all the other social factors with which it is usually found in combination. Strength of the moral nature was his one great and overwhelming contribution to the enterprise with which his whole life was identified. We can see now, in looking back, that the essential force of the antislavery agitation lay in the extreme simplicity of its propositions. Never was there a reform, perhaps, in which the essential principle was so easy to grasp. It needed no large induction, no difficult chain of inferences. Once concede that man cannot rightfully claim property in man, and the whole logic of the matter was settled. The thing needed was that this doctrine should find living embodiment in a man whose whole nature should be

strong and simple, like itself; who should spin no sophistries, tolerate no evasions, shrink from no consequences; who should use this principle as a sufficient test of all policies and reputations, who should refuse to be led away from it into any questions of casuistry or expediency; who should, in short, have a moral nature as clear and controlling as the doctrine he espoused. This man it found in Garrison.

He was not, of course, the first man in the community who had opposed or denounced slavery. Franklin, Jefferson, Rush, Hopkins, Lundy, and others had preceded him in that. But he was the first man who saw in its naked clearness the ethical axiom by which it was to be met and conquered. "Immediate, unconditional emancipation,"—this was what he wrote on the banner of the movement he headed; and that banner waved until slavery fell. And he stands out in the same distinct relief among his contemporaries as against his predecessors; for while others of his own party equaled or surpassed him in genius, wit, eloquence, personal attractiveness, social position, ingenuity of attack, brilliancy of defense; yet by his clearness and integrity of nature he surpassed them all, and was the natural leader of all. However keen others might be in moral discernment, he was keener; however ably others might deal with a sophist, his exposition was sure to be the most cogent and convincing. To preserve this mastery among his associates he used no manœuvres, exerted no devices, asked no favors. He never attitudinized, and he never evaded; but his power in his own circle was as irresistible as the law of gravitation. He was never hurried or disconcerted or even vexed; indeed, he did not expend himself on special contests or fret about particular measures. Where others fought to win he simply bore his testimony, which in the end proved the path to winning. I well remember how, at the height of some fugitive-slave case, when it seemed to his associates as if the very gate of freedom turned on keeping that particular slave from bondage, he would be found at his compositor's desk—for he always set up his own editorials—as equable as ever, and almost provokingly undisturbed by the excitement of that fleeting hour.

There exists an impression that he held this leadership among his associates through a visibly exacting and domineering disposition. However this may have been in his early life, I should confidently say that it was something that he had outgrown when, about the year 1843, I first came in contact with him. He was just then entering upon the most extreme phase of his political opinions, when he announced the "No Union with Slavehold-

ers" position, and proclaimed the United States Constitution to be, in Scriptural phrase, "a covenant with death, and an agreement with hell." To this attitude he thenceforth rigidly held until slavery itself fell; nor would any person have expected or even attempted to make him swerve from it. But the test of any man's personal breadth is not to be found in the tenacity of his own convictions; it is to be looked for in his ability to coöperate with those who differ from him. Now there were always speakers on the antislavery platform who stood there without pretending to accept this especial shibboleth of Mr. Garrison's, and who yet were cordially welcome; nor do I think that any one of these proselytes of the outer gate had reason to complain. Charles Sumner always boasted that he subscribed to the "Liberator" before Phillips did; Henry Wilson spoke at the "Garrisonian" meetings again and again without accepting their leader's full doctrine; so did Francis W. Bird; so did I myself. Surely persons so placed were in a position to feel the alleged intolerance and despotic habit of Mr. Garrison, had such things existed. I can only say, for one, that I never was conscious of any such atmosphere for a moment; all that he demanded was that a man should have "the root of the matter in him." If this was the case, that man might vote at every election and not receive a reproof from the great non-voting leader.

This hospitality to all shades of opinion was one reason why the meetings of the elder branch, so to speak, of the antislavery body were so much more eagerly sought by the public and were really so much more stirring than those of the Liberty Party or even of the Free-soil Party in its early days. I myself voted with those two successive political organizations, but it seemed to me that it was not usually at their meetings that the thorough and vital conversions were made. They reaped, after all, what Garrison sowed; and Henry Wilson used not only to admit this, but constantly to urge it, at the "Garrisonian" conventions. It was not that the political Abolitionists were less sincere or faithful than the others, but they were a little less free with their sword-play, because they had not thrown away the scabbard. They were apt to be somewhat constrained and hampered by policy,—by the necessity of making it plain at any given moment that they were orderly and law-abiding citizens. To pass from their meetings to those of the disunion party was like passing from within doors to the mountain air; the gods of Garrison were the gods of the hills, as Ethan Allen claimed for himself in the revolutionary days. After all, it was Garrison with his set, strong face of granite; his temperament,

meek only in the sense in which Moses was meek, and wielding, fearlessly as Moses, the terrors of the Lord; it was he and his immediate followers who made the antislavery voters that presently passed, rather against his will, into the army of political organization, and yet constantly came back to him for stimulus and strength. That army of voters it was which at last, multiplying in numbers, gave Lincoln and freedom to the nation; but it was Garrison, from beginning to end, who kept the most important recruiting-station.

He will, therefore, always stand, like Luther, as the personification of an epoch; and while slavery was doubtless overthrown at last by the carnal weapons that he deprecated, yet

the force which guided those weapons will be forever identified with him. The group of remarkable men and women under his leadership — a group in which Wendell Phillips was the most gifted, while George Thompson was the most brilliant foreign ally — was said by the English Earl of Carlisle to be engaged in a contest “without a parallel in the history of ancient or modern heroism.” More fortunate than most leaders, Garrison lived to see the final downfall of the wrong against which he fought; and the struggling victim of the mob of half a century ago will soon sit enthroned in monumental bronze, as one of the recognized heroes of Massachusetts.

Thomas Wentworth Higginson.

WILLIAM LLOYD GARRISON'S ORIGIN AND EARLY LIFE.

HIS ANCESTORS.

THE scenic glories of the River St. John, New Brunswick, are well past on the ascent when, on the right, the obscure outlet of the Jemseg is reached. Along the lowland margin from the Jemseg to the Nashwaak stretched, in the middle of the last century, a feeble line of French Acadian settlers. A couple of hundred souls were still clustered at the trading station of St. Ann's (now Fredericton) when, in the summer of 1761, Israel Perley, of Boxford, Essex County, Massachusetts, and a handful of companions, triumphing over the wilderness between Machias and the St. John, looked from the mouth of the Oromocto down over the gleaming waters and woody plains of this romantic region. Perley had been sent out by the Governor of Massachusetts (Bernard) on an exploring expedition. His report to his neighbors in praise of these alluvial prairies must have produced a sort of “Western fever” among them. Many of his listeners had no doubt served in the Nova Scotia campaigns against the French which culminated in the capture of Louisburg in 1758, followed by that of Quebec in 1759, and the British occupation of the St. John as far as the Nashwaak, and were already aware of the natural advantages of the territory.

The first Essex County migration to Nova Scotia (as New Brunswick was then called) took place in the spring of 1763. The following spring brought a reënforcement of colonists. The settlement now embraced families, more or less connected with each other, from Rowley, Boxford, Byfield, Ipswich, Marblehead, and adjacent towns, among whom the Perleys, Stickneys, Palmers, Bur-

pees, Barkers, Esteys, Hartts, and Peabodys were prominent in numbers or in influence. On October 31, 1765, the district having been officially surveyed by Charles Morris, sixty-five heads of families, resident or represented, were granted Tract No. 109 in Sunbury County. This tract, in the parish of Maugerville and Sheffield, known as the Maugerville Grant, and twelve miles square, extended from the head of Oromocto Island to the foot of Mauger's Island, and had been partially cleared by the Acadians. The twenty-second name on the list of grantees, for five hundred acres, was that of Joseph Garrison; the twenty-fourth that of his father-in-law, Daniel Palmer.

Daniel Palmer was great-grandson of Sergeant John Palmer (who, as a youth of seventeen, is reported to have come to Rowley in 1639) by a second wife, Margaret Northend. On the side of his mother, Mary Stickney, he was great-grandson of William Stickney, founder of that family in this country, and of Captain Samuel Brocklebank, who was slain, with nearly all his command, by the Indians at Sunbury, in King Philip's War. Born at Rowley in 1712, Daniel Palmer married in 1736 Elizabeth Wheeler, of Chebacco. He is yet remembered by close tradition as “a powerful man, of great muscular strength. Before he left for the east the Indians were troublesome, and there were three secreted in a house in Old Town, and no one dared pursue them. But he was fearless, and entered the house, where he opened a chamber window, and one by one he threw them out, regardless of life or limb, as though they were so many straws.” Six children survived to him, and the two oldest girls were married, when removal to the St. John was determined on. Leaving

these behind, he took with him his third daughter, Mary (born January 19th, 1741, in Byfield), and his three sons, and joined the company of townsmen and kinsmen who were to plant a Puritan settlement on the banks of the St. John.

There is no evidence that Joseph Garrison was of this number. All that can now be learned about him warrants the belief that he was an Englishman, who was found upon the spot by the second, if not already by the first, immigrants from Rowley. We know positively that on his thirtieth birthday, August 14th, 1764, he was married to Daniel Palmer's daughter, Mary. Sabine, who, with doubtful propriety, includes Joseph Garrison in his "Loyalists of the American Revolution," styles him "of Massachusetts"; but the name has not been met with in that State before the present century by the most diligent searchers of her archives. His comparatively early death will account for the diversity of traditions in regard to him among his own descendants, the most trustworthy of which is that he was not a native of the colonies, but of the mother country.

Five children had been born to Joseph and Mary Garrison, the youngest, Abijah, being an infant in arms—say in the spring of 1774—when the mother started in a boat down the river to pay her father a visit, taking her babe with her, and a lad who lived in the family.

"The river was clear of ice when she started, and she apprehended no danger. Long before she got to her journey's end, the ice broke further up the river and came down with such force against her boat as to break it badly, and compel her to exchange it for an ice-cake, which was driven ashore by a larger piece of ice. Like a mother, she wrapped her babe in all the clothes she could spare, and threw him into the snow on the shore. By the aid of a willow limb which overhung the river, she and the lad saved themselves. She took up her babe unharmed. As she was wandering in the woods, without guide or path, she saw the smoke from an Indian hut, and on going to it found there an Indian who knew her father. He entertained her with his best words and deeds, and the next morning conducted her safely to her father's."

This babe was the father of William Lloyd Garrison. It was not quite three years old when the progress of revolt in the colonies had infected the New England settlers on the St. John, and impelled them to a manifesto, issued at Maugerville on May 21, 1776, antedating the Declaration of Independence, imbued with the same spirit, "and, considering their insulated locality, and the vicinity to the old and well-fortified towns in possession of an English army and navy, . . . remarkably bold."

The record is silent as to the three or four residents of Maugerville who refused to subscribe to the resolves and the appeal to Massa-

chusetts for relief. It may be conjectured, however, that Joseph Garrison was one of these, having as his first motive his English birth, and the want of those New England connections which might else have made liberty to him also "that dearest of names"; and perhaps, as his second, his better sense of the hopelessness of such an unsupported outpost maintaining itself against the authority of the mother country. Mr. Sabine found Joseph's descendants admitting his loyalty, and we may suppose him to have been temporarily ostracized, according to the terms of the vote, on account of his standing aloof from the almost unanimous action of his neighbors. At all events, it required no little independence of character to incur the popular resentment; and this trait may have been inherited by his grandson as well as the spirit of the declaration of resistance to tyranny which Daniel Palmer subscribed.

His isolation, however, except in public sentiment, lasted hardly more than a year. Despite the good-will and assistance of Massachusetts, before a project of fortifying the mouth of the St. John could be carried out, in May, 1777, the British sloop *Vulture*, fourteen guns, from Halifax (a vessel afterwards famous for having been the refuge of Benedict Arnold on the discovery of his treason), sailed up the river with troops, and, as was reported in Machias on the 29th, compelled the settlers to take the oath of allegiance to his British Majesty. Many were robbed of their all; some were carried away. A vain attempt to reverse this was made by a Massachusetts expedition in the following month. Boston was too far away; Halifax was too near. Submission was unavoidable; but time never reconciled all of the inhabitants to the separation from their kindred in the old Massachusetts home, and their regrets have been handed down to their posterity. Shut off from further increase by immigration from the original hive, they could only perpetuate their numbers by intermarriage; and the tourist on the St. John to-day finds in Sunbury County not only familiar New England names, but perhaps as unmixed a Puritan stock as exists on the continent.

Of Joseph Garrison, except that he died at Jemseg in February, 1783, we know nothing more that is eventful. He passed for a disappointed man. Besides the strong-mindedness already indicated, there is no salient feature to distinguish the founder of the line. His children, in a settlement deprived of every literary and social advantage, proved exceptionally intelligent. They educated themselves with the slenderest facilities—learned the art of navigation, became teachers. "They did not accumulate much," says the local tradition,

"but they always left friends behind them." A fondness for music and natural aptitude for giving instruction in it have also been manifested in Joseph's posterity, among whom it has been handed down that he used to play the fiddle.

Mary Palmer Garrison long survived her husband, dying in 1822. In her later years her home was on the Jemseg with her son Silas, who cultivated the farm now shown as the Garrison homestead. At the time of her death she had been for many years the widow of Robert Angus. She is remembered late in life as a jolly sort of person,—portly, with round face and fair hair, of a sanguine temperament, and a great favorite with children, whom she amused with quaint stories. From her there ran in the veins of her offspring the emigrant Puritan blood of Palmer, Northend, Hunt, Redding, Stickney, Brocklebank, Wheeler, and other (unnamable) stirpes.

By her, Joseph Garrison became the father of nine children. The fifth in order, Abijah, must occupy our attention, to the exclusion of his brothers and sisters. He was born June 18, 1773, on the Jemseg, and named for his uncle Palmer. Except the romantic incident of his babyhood, already related, his early history is a blank. He alone of the family followed the sea. He became eventually a captain, and made many voyages, with his cousin Abijah Palmer as mate. His son, William Lloyd, who had no personal recollection of him, thus summed up the traditions in regard to Abijah Garrison :

"I was probably not more than three years old when he took his final leave of my mother. I remember vaguely to have been told that he had a fine physical development, a sanguine temperament, a bald head and a reddish beard, with a very noticeable scar on his face, a birth-mark; that he was very genial and social in his manners, kind and affectionate in his disposition, and ever ready to assist the suffering and needy; that he had a good theoretical and practical knowledge of navigation, and as a master of a vessel made many voyages coastwise and to the West Indies; and that he had a strong taste for reading, and evinced some literary talent. There is no doubt that his love for my mother was almost romantic; and it is questionable, when he deserted her, if he meant the separation to be final."

Romantic love had a romantic beginning. By some chance of coast navigation, Abijah found himself on Deer Island, N. B., in Passamaquoddy Bay (waters called Quoddy, for short), at a religious evening meeting. Here his eyes fell upon a strikingly beautiful young woman dressed in a blue habit. At the close of the services he followed her to the door, and boldly asked leave to accompany her home, accosting her, for want of her real name, as "Miss Bluejacket." Her reply was a rebuff. Nevertheless, Abijah lost no time in sending

her a letter, which, it is safe to say, surpassed in literary graces any she had ever received; and her reply confirmed a correspondence which ended infallibly in matrimony.

Frances Maria Lloyd was the daughter— one of a large family of children— of Andrew Lloyd, a native of Kinsale, County Munster, Ireland (about 1752). He came out to the province of Nova Scotia in 1771, as a 'prentice bound to the captain of the ship which also brought over John Lawless, an Englishman, who had been a sergeant under Wolfe at Quebec; his wife Catherine, said to have been a native of Limerick, Ireland; and their only daughter, Mary, who was certainly born there. The 'prentice is believed to have improved his time so well on the voyage that, young as they both were, he married Mary Lawless the day after they had landed on the island of Campobello. Andrew became a so-called branch (*i. e.*, commissioned) pilot at Quoddy, and died suddenly in the service in the year 1813. His wife, whom he survived, though not long, was reputed the first person buried on Deer Island, and on this unfertile but picturesque and fascinating spot Fanny Lloyd was born in 1776, and became the belle of the family.

"She was of a tall majestic figure, singularly graceful in deportment and carriage; her features were fine, and expressive of a high intellectual character; and her hair so luxuriant and rich that, when she unbound it, like that of Godiva of old, it fell around her like a veil. The outward being, however, was but a faint image of the angelic nature within; she was one of those who inspire at once love and reverence; she took high views of life and its duties; and, consequently, when adversity came upon her as an armed man, she was not overcome. Life had lost its sunshine, but not its worth; and, for her own and her children's sake, she combated nobly with poverty and sorrow. Her influence on her children, more especially on her son William, was very great: he venerated her while yet a child; not a word or a precept of hers was ever lost—his young heart treasured up all, unknowing that these in after life should become his great principles of action.

"To illustrate the conscientious and firm character of this admirable woman, we must be permitted to give an anecdote of her whilst yet young. Her parents were of the Episcopal Church, and among the most bigoted of that body. In those days the Baptists were a despised people, and it was reckoned vulgar to be of their community. One day, however, it was made known through the neighborhood where she lived that one of these despised sectaries would preach in a barn, and a party of gay young people, one of whom was the lovely and gay Fanny Lloyd, agreed for a frolic to go and hear him. Of those who went to scoff one remained to pray; this was Fanny Lloyd. Her soul was deeply touched by the meek and holy spirit of the preacher; she wept much during the sermon, and when it was over, the preacher spake kindly to her. From that day a change came over her mind. She would no longer despise and ridicule the Baptists; and before long announced to her astonished and indignant parents that she found it necessary for the peace of her soul to become publicly one of that de-

spised body. Nothing could equal the exasperation which followed this avowal. They threatened that if she allowed herself to be baptized, they would turn her out of doors. It was not a matter of choice but of stern duty with her; she meekly expostulated — she besought them with tears to hear her reasons, but in vain. She could not, however, resist that which she believed to be her duty to God; she was baptized, and had no longer a home under her parents' roof. She then took refuge with an uncle, with whom she resided several years. This early persecution only strengthened her religious opinions; and she remained through life a zealous advocate of those peculiar views for which she had suffered so much.”*

The date of Abijah Garrison's marriage is uncertain, except that it was nearly at the close of the last century, and on the 12th day of December. The place of the ceremony is equally unknown; neither has it been ascertained where was the first home of the young couple. Not improbably it may have been among the husband's relatives on the Jemseg, and here perhaps was born a daughter who died in infancy. In 1801 they were settled in Duke street, St. John, where a son, James Holley, was born to them, and possibly also a second daughter. Subsequently they removed to Granville, Nova Scotia, in the neighborhood of Fanny's sister Nancy (Mrs. Delap).

On April 4, 1805, Abijah announces in these words to his mother and stepfather his intention to return to the old home of the Puritan settlers on the St. John — to Essex County, Massachusetts:

“This perhaps is the last you may Expect from me dated at Granville, as I am about to remove to Newbury Port in the United States, Where I Expect to Spend the remainder of my days. I have been following the Rule of false Position, or rather permutation, these Seven Last years, and have never been able to Solve the Question to my Satisfaction till now. Not that I am disaffected towards Government, but the barrenness of these Eastern Climates rather Obliges me to seek the welfare of my family in a more hospitable Climate, where I shall be less expos'd to the Ravages of war and stagnation of business, which is severely felt in Nova Scotia. The Prohibition of the American trade may in time help this Country, but from want of circulating Cash this Country will long lay bound in Extreme difficulties and Perpetual Lawsuits. [The] last winter was attended with distress among a great number of Poor people in this Place. The scarcity of bread and all kind of vegetables was too well known in this Part of Nova Scotia, the Great Drought Last summer Cut off all the farmers Expectations, and People in general Experienc'd the want of hay Equal to that of Bread; the smiling spring has at last return'd but brings nothing with it as yet substantial for the present support of Man. I speak not this of myself, but of many of my Neighbours; I thank God I have a Competency at present, but the times forbode greater distress ahead. I have in the Conclusion settled my Business here and am now about to remove.”

* As Mr. Garrison, on his visit to England in 1846, must have furnished Mary Howitt with these facts in regard to his mother, they are reproduced here (from the “People's Journal” of September 12, 1846) as more authentic than any later recollections could have been.

The same Providence by which slavers made their impious voyages in safety attended the ship from Nova Scotia to Newburyport in the spring-time of 1805. On the 10th of December, in a little frame house still standing on School street, between the First Presbyterian church, in which Whitefield's remains are interred, and the house in which the great preacher died,—and so in the very bosom of orthodoxy,—a man-child was born to Abijah and Fanny Garrison, and called, after an uncle who subsequently lost his life in Boston Harbor, William Lloyd Garrison.

Wendell Phillips Garrison.

THE BOYHOOD OF WILLIAM LLOYD GARRISON.

FEW men have had a stronger attachment for their birthplace and the home of their youth than William Lloyd Garrison; and the lovely old town of Newburyport, Massachusetts, in which he spent the first twenty-one years of his life, was ever dear to him. As a boy, barefoot he rolled his hoop through its streets, played at marbles and at bat and ball, swam in the Merrimac in summer and skated on it in winter, and sometimes led the “South-end boys” against the “North-enders” in the numerous conflicts between the youngsters of the two sections. Every spot in the town had its associations for him: the little school-house on the Mall in which he obtained, in six months, all the grammar-school education he ever had; the wharves on which, with his comrades, he used to “sample” the West India molasses just landed; the modest house on School street in which he was born and spent his earliest years; the many dwellings which he was wont freely to visit, and which looked so unchanged, fifty years afterwards, that it seemed to him as if the familiar faces of their former inmates must greet him if he again entered their doors; Chain Bridge, on the road to Amesbury, which was regarded almost as an eighth wonder of the world when it was built, and was pictured in the geographies of that day, as the Brooklyn Bridge may be in the latest school-books; the suburb of Belleville, where he went to singing-school in company with “lots of boys and pretty girls,” and first learned “Wicklow” and other good old hymns; and last, but not least, the “Herald” office on State street, in which he served his long seven years' apprenticeship as a printer. He seldom visited the town without climbing its stairs, and he liked to tell how it was owing

BIRTHPLACE OF WILLIAM LLOYD GARRISON, AND GRAMMAR SCHOOL, NEWBURYPORT.
(FROM PHOTOGRAPHS BY S. C. REED AND H. P. MACINTOSH. DRAWN BY WILLIAM LATHROP.)

to his fondness for Newburyport, and his insupportable homesickness on two or three occasions when he was sent elsewhere to seek a livelihood, that he ever came to learn the printing business, and to master the weapon which enabled him to carry on his thirty years' warfare against American slavery.

He was less than three years old when his mother found herself left, by the desertion of her husband, with three young children to support,— the oldest a boy of seven and the youngest an infant daughter but a few weeks old. Up to that time she had enjoyed such exuberant health that she was wont to say that "only a cannon-ball could kill Fanny Garrison"; but though she resolutely set herself to the task of maintaining herself and her little ones, the blow of this desertion was one from which she never recovered, and it shadowed the remaining years of her life. The struggle for existence became a severe and bitter one. The day of Newburyport's prosperity had passed, and the years of the embargo and of the war of 1812 brought disaster and ruin to its business and commerce. It was no easy

matter, therefore, to find the remunerative employment which would feed so many mouths. The little house in School street still afforded them shelter, thanks to the sisterly devotion of its owner and occupant, Martha Farnham, who assured them that while she had a roof to cover her they should share it. When circumstances permitted, Mrs. Garrison took up the calling of a monthly nurse, and during her necessary occasional absences from home the children were under the motherly care of their "Aunt Farnham." When Lloyd (as he was always called) was older, his mother used to send him, on election and training days, to sell the nice sticks of molasses candy which she was an adept in making, and he thus earned a few pennies towards the common support.

With all her sorrow at heart, his mother maintained her cheerful and courageous demeanor. She had a fine voice — "one of the best," her son was wont to say — and was ever singing at her work; and in the Baptist church meetings, at which she and Martha Farnham were constant and devoted attendants (some-

FROM SWAIN'S PORTRAIT OF GARRISON WHEN YOUNG.

times opening their own house for an evening gathering), she sang with fervor the soul-stirring hymns which have been the inspiration and delight of the devout for generations. She was mirthful, too, and possessed a quick sense of the ludicrous.

During the war of 1812 she went to Lynn to pursue her vocation, taking James, her favorite son, a boy of much beauty and promise, with her, that he might learn shoemaking. Little Elizabeth, the daughter, was left in Mrs. Farnham's protecting care, while Lloyd went to live with Deacon Ezekiel Bartlett and family, worthy people and faithful members of the little Baptist church. The good deacon, who was in very humble circumstances, sawed

wood, sharpened saws, made lasts, and even sold apples from a little stand at his door, to win a subsistence for his family; and Lloyd, who was an exemplary and conscientious boy, and warmly attached to his kind friends, dutifully tried to earn his board and do all he could to lighten their burden of poverty.

During their mother's absence in Lynn the children heard frequently from her by letter, and Lloyd was able to write to her in reply. Her little notes to him were full of tender affection, and earnest hope that he would be a good and dutiful boy. Already her health and strength were beginning to fail under her arduous struggle to maintain herself and her children, and her inability

now to do continuous work made it all the more imperative that they should learn trades that would enable them to become self-supporting. So Lloyd was brought to Lynn to learn shoemaking, and was apprenticed to Gamaliel W. Oliver, an excellent man and a member of the Society of Friends, who lived on Market street, and had his work-shop in the yard adjoining his house. There the little boy, who was only nine years old, and so small that his fellow-workmen called him "not much bigger than a last," toiled for several months until he could make a tolerable shoe, to his great pride and delight. He was much too young and small for his task, however, and it soon became evident that he lacked the strength to pursue the work.

In October, 1815, Mrs. Garrison removed to Baltimore, where she spent the remaining years of her life, pursuing her calling as nurse until disabled by a painful disease, which caused her long helplessness and suffering before death brought a merciful release. Her two boys accompanied her; but James, soon tiring of the shoemaker's bench, ran away and took to the sea, and Lloyd became so homesick for Newburyport that his mother, unable to find employment for him in Baltimore, permitted him to return to Deacon Bartlett's care. He again did what a small boy of ten or eleven years could towards earning his board, and obtained a little more (and what proved to be his final) schooling at the South Grammar-school. He was very happy in this, and in returning to the only place that had ever seemed like home to him; but his poor mother missed him sorely, and as no situation could be found for him in Newburyport, she proposed, at the end of a year, that he should return to Baltimore. Her hope of securing a place for him there, however, was disappointed.

After a time Lloyd was apprenticed to Moses Short, a cabinet-maker at Haverhill, Massachusetts, who took the boy into his family and treated him with much kindness. The work was not unpleasant to him, and he soon learned to make a toy bureau and helped at veneering; but his old homesickness for Newburyport seized him, and he became so unhappy that he resolved, at the end of six weeks, to make his escape. Watching his opportunity, one morning when his employer had gone to the shop, he tied his shirt and other worldly possessions in a handkerchief, threw the bundle down among the pumpkin vines from his window, and then going down and recovering it started for home on foot. He had calculated the time it would take him to cross the long bridge, and when the stage-coach came up with him he seized

the rack behind, and ran and swung himself by turns to facilitate his progress. When the stage paused at a stopping-place, he trudged on until it again overtook him, when he repeated the operation, and in this way accomplished several miles. The passengers in the coach, meanwhile, were wondering how so small a lad could keep along with it. But the fugitive was missed at Haverhill, and, as he was wont to tell the story in after years, his employer took a "short" cut by which he saved time and distance over the stage-road, and recaptured his apprentice. He bore him no ill-will, however, and, when Lloyd confessed his homesickness, promised to release him if he would only return to Haverhill and take his leave in a regular and proper manner, that neither of them might be compromised. He kept his word, and Lloyd again took up his abode at Deacon Bartlett's.

Repeated efforts were made to find a situation for him, but without success until the autumn of 1818, when Mr. Ephraim W. Allen, editor and proprietor of the Newburyport (semi-weekly) "Herald," wishing a boy to learn the printer's trade, Lloyd was presented as a candidate for the place and accepted, and, having been duly apprenticed for the usual term of seven years, he entered the office of the "Herald" on the 18th of October, 1818.

The boy had not been many days in the printing-office before he was convinced that he had at last found his right place, but his first feeling was one of discouragement as he watched the rapidity with which the compositors set and distributed the types. "My little heart sank like lead within me," he afterwards said. "It seemed to me that I never should be able to do anything of the kind." He was so short at first that when he undertook to work off proofs, he had to stand on a "fifty-six-pound weight" in order to reach the table. He quickly grew expert and accurate as a compositor, and was much liked and trusted by his master, of whose family he now became a member, as was the custom with apprentices in those days. In course of time he became the foreman of the office, made up the pages of the "Herald," and prepared the forms for the press. He was noted for his rapidity and accuracy as a compositor, his clean proofs, and his taste in job-work, and he was also an excellent pressman on the hand-presses of those days. Throughout his life it was a delight and, as he used to express it, "a positive recreation" to him to manipulate the types; and the last time that he ever handled the composing-stick was in that same "Herald" office just sixty years from the day on which he had first entered it as an apprentice.

GEORGE THOMPSON, WILLIAM LLOYD GARRISON, AND WENDELL PHILLIPS.
(FROM A DAGUERRETYPE (ABOUT 1851) IN THE POSSESSION OF MR. GARRISON'S FAMILY.)

Lloyd early evinced a taste for poetry, and was fond of works of fiction and romance. His favorite poets at that time were Byron, Moore, Pope, Campbell, and Scott, and, over and above all these, Mrs. Hemans, whose writings he knew by heart; and when he subsequently published a paper of his own, there was scarcely an issue which did not contain one of her poems. It was natural that in such a stronghold of the Federalists as Newburyport still was (though the party had ceased to have a national existence), with party feeling throughout the State running so high at each annual election, he should also take an interest in politics and imbibe the prevailing sentiment of his locality, and he became an ardent Federalist. He studied the writings of Junius and Fisher Ames, and was a fervent admirer of Timothy Pickering and Harrison Gray Otis. While yet in his teens he wielded his pen in defense of the two latter when they were under fire, and their political fortunes under a cloud; but his first attempt at writing for the press was not in a political direction. In May, 1822, he wrote in a disguised hand, and sent through the post-office, his first communication to the "Herald," under the *nom de guerre* of "An Old Bachelor." It was entitled "Breach of Marriage Promise," and professed to be the reflections of a bachelor

on reading the recent verdict in a breach-of-promise case in Boston, by which a young man who had "kept company" with a girl for two years, and then refused to marry her, was fined seven hundred and fifty dollars. While freely conceding that any man who had actually broken an express promise should "feel the effects of the law in a heavy degree," he maintained that the very fact of a man's having "kept company with," or paid attention to, one of the opposite sex for a year or two, was not conclusive evidence of a promise or engagement, but rather indicated that he desired to be assured of the wisdom of his choice before taking such a momentous step as matrimony involved; and the "old bachelor" of sixteen then discoursed in this cynical fashion:

"The truth is, however, women in this country are too much idolized and flattered; therefore they are puffed up and inflated with pride and self-conceit. They make the men to crouch, beseech and supplicate, wait upon and do every menial service for them to gain their favor and approbation: they are, in fact, completely subservient to every whim and caprice of these changeable mortals. Women generally feel their importance, and they use it without mercy. For my part, notwithstanding, I am determined to lead the 'single life' and not trouble myself about the ladies."

Lloyd was at work at the case when his master received and opened this youthful

production, and he awaited anxiously the verdict as to its acceptance. It happened to strike Mr. Allen's fancy, and, after reading it aloud for the edification of others in the office, he unsuspectingly handed it to its author to put in type, and it filled nearly a column of the "Herald." Elated by this first success, the boy wrote a second communication in a similar vein, which appeared three days later; and a week after this he furnished a highly imaginative account of a shipwreck, which was so palpably the work of one innocent of the sea and of ships, that it is rather surprising that it was accepted; but the editor was probably equally innocent, if many of his seafaring patrons and readers were not.

The signature appended to this article was abbreviated to the initials A. O. B.,* over which most of his subsequent articles for the "Herald" were written. He still, and for nearly the whole of the ensuing year, concealed his authorship, although his master was so well pleased with the communications of his unknown correspondent that he wrote him through the post-office, requesting him to continue them, and expressing a desire for an interview with him!

To his mother alone did Lloyd confide his secret, and she received it with mingled pride and misgiving, as appears by the following letter, dated July 1, 1822:

"I have had my mind exercised on your account, and please to let me know the particulars in your next. You write me word that you have written some pieces for the 'Herald.' Anonymous writers generally draw the opinion of the publick on their writing, and frequently are lampoon'd by others. If Mr. Allen approves of it, why, you have nothing to fear, but I hope you consulted him on the publication of them. I am pleased, myself, with the idea, provided that nothing wrong should result from it. You must write me one of your pieces, so that I can read [it] on one side of your letter, and I will give you my opinion whether you are an old bachelor, or whether you are A. O. B., as A may stand for Ass, and O for Oaf, and B for Block-head. Adieu, my dear. You will think your Mother is quizzing. Your dear Mother until death."

Lloyd continued his anonymous communications to the "Herald," discussing successively South American affairs, Massachusetts politics (supporting Harrison Gray Otis for Governor against Mr. Eustis, the successful Democratic candidate), and the state of Europe,—this last in three articles remarkably well written for a boy of seventeen.

In the previous month of December (1822) Mr. Allen had gone to Mobile for the winter, leaving Lloyd in charge of the office, while Caleb Cushing attended to the editorial con-

duct of the "Herald," and it was the latter who now first discovered that the author of these and previous articles under the same signature was no other than Mr. Allen's senior apprentice. He instantly commended and encouraged him, lending him books, and calling attention editorially to the papers on Europe. It is probable that the boy's interest in foreign affairs was largely due to Mr. Cushing himself, who had written at the beginning of the year a series of articles for the "Herald," giving a résumé of the political situation and outlook at home and abroad. In a letter written to his mother in May, 1823, Lloyd gives this account of his year's performances as a writer for the press:

"Since I have received your letter, my time has been swallowed up in turning author. I have written in the 'Herald' three long political pieces under the caption of 'Our Next Governor,' and the signature of 'One of the People,'—rather a great signature, to be sure, for such a small man as myself. But vain were the efforts of the friends and disciples of Washington, the true Federal Republicans of Massachusetts; Democracy has finally triumphed over correct principles, and this State may expect to see the scenes of 1811-12 revived in all their blighting influences;—may they be as short-lived as they were at that period. You will undoubtedly smile at my turning politician at the age of *eighteen*, but, 'true 'tis,' and (*perhaps*) 'pity 'tis 'tis true,' and I cannot but help smiling myself at the thought. I have likewise published another political communication under the same signature. Besides these, I have written three other communications under the head of 'A Glance at Europe'—analyzing the present state of political affairs between Spain and the Holy Alliance—and which called forth a very handsome notice of the same from Mr. Cushing, the Editor of the 'Herald.'—But I am at last discovered to be the author, notwithstanding my utmost endeavors to let it remain a secret. It is now but partially known, however, and has created no little sensation in town—so that I have concluded to write no more at present.

"Thus you perceive, my dear mother, that my leisure moments have been usefully and wisely employed;—usefully, because it is beneficial in cultivating the seeds of improvement in my breast, and expanding the intellectual powers and faculties of my mind; wisely, because it has kept me from wasting time in that dull, senseless, insipid manner, which generally characterizes giddy youths. It is now about one year since I commenced writing for the 'Herald,' and in that time I have written about fifteen communications. When I peruse them over, I feel absolutely astonished at the different subjects which I have discussed, and the style in which they are written. Indeed, it is altogether a matter of surprise that I have met with such signal success, seeing I do not understand *one single rule of grammar*, and having a very inferior education.—But enough of my scribblings, in all conscience, for the present, to something that is more important and interesting."

Circumstances now arose to prevent Lloyd's writing further for the press for a considerable period. In September, 1822, his sister Elizabeth had died in Baltimore, leaving the mother

* Experts in the tender passion will readily discern in "A. O. B.'s" pretensions of frigidity a rather susceptible temperament.

bereft and desolate; and as the spring of 1823 advanced, disease had made such inroads upon her that she became conscious that she could not long survive. She accordingly sent an earnest appeal to Mr. Allen to allow her son to make her a farewell visit, and wrote to Lloyd directing him how to find her on his arrival in Baltimore. In the same letter she acknowledged the letter from him just quoted, and endeavored to conceal her pride and interest in his literary efforts by warning him of the dangers and difficulties he was liable to encounter; but her exhortation ended with a blessing, and a request that he would bring his productions for her to read. This letter, which bears date June 3, 1823, was probably the last she ever wrote to him:

"Next, your turning Author. You have no doubt read and heard the fate of such characters, that they generally starve to death in some garret or place that no one inhabits; so you may see what fortune and luck belong to you if you are of that class of people. Secondly, you think your time was wisely spent while you was writing political pieces. I cannot join with you there, for had you been searching the scriptures for truth, and praying for direction of the holy spirit to lead your mind into the path of holiness, your time would have been far more wisely spent, and your advance to the heavenly world more rapid. But instead of that you have taken the Hydra by the head, and now beware of his mouth; but as it is done, I suppose you think you had better go and seek the applause of mortals. But, my dear L., lose not the favour of God; have an eye single to his glory, and you will not lose your reward." . . .

As soon after receiving the above letter as his master would release him, Lloyd embarked for Baltimore, where he landed, after a stormy and boisterous voyage of a fortnight, on the 5th of July. "You must imagine," he wrote to Mr. Allen, "my sensations on beholding a beloved mother after an absence of seven years. I found her in tears, but, O God, so altered, so emaciated, that I should never have recognized her, had I not known that there were none else in the room."

The next two or three weeks, during which Lloyd was able to remain with his mother, were precious to both, for they had many things to talk over before their final separation: Lloyd's prospects for the future; the mystery attending his father's disappearance; the recent death of his sister; and the possible fate of his wayward brother James, from whom nothing had been heard for years, and who was destined, poor waif! to be tossed and driven about the sea, suffering incredible hardships, for a dozen years longer, before he was finally discovered and rescued by his brother. After Lloyd parted from his mother she steadily sank, and finally passed away on the 3d of September, 1823.

With three exceptions, of trifling and unim-

portant verses, Lloyd wrote nothing for the "Herald" during the next year; but in June, 1824, he was moved by the publication of Timothy Pickering's "Review of John Adams's Letters to William Cunningham," to send two long communications to the Salem "Gazette," under the signature of "Aristides." These were highly eulogistic of Mr. Pickering, whose pamphlet in defense of himself against the attacks of Mr. Adams had caused a wide sensation, and led to an acrimonious war of words between the partisans of those venerable statesmen. Walsh's "National Gazette" of Philadelphia was the mouthpiece of the Adams party, while the Salem "Gazette" was understood to speak by authority for Mr. Pickering; and such was the interest in the discussion that raged for a time, that the letters of the Newburyport apprentice attracted much notice, and were believed to have come from a maturer hand. The controversy had an indirect bearing on the impending Presidential election, in which John Quincy Adams was a candidate, and the Pickering party aimed their darts at the son, therefore, quite as much as at the father. The youthful "Aristides," who four years later ardently advocated his reëlection, now joined in decrying him. His conception of the character of General Andrew Jackson was much more clear and accurate, and his next contribution to the "Gazette" was an open letter to that military chieftain, endeavoring to convince him of his utter unfitness for the office of President, and the hopelessness of his efforts to gain that position. This letter was forcible, dignified, and mature in thought and expression.

His remaining contributions to the "Gazette" were a series of six articles entitled "The Crisis," which appeared at intervals between the beginning of August and end of October, and discussed the political situation. The importance of united action on the part of the Federalists, now so largely in the minority, was emphasized, and their support of William H. Crawford for the Presidency in opposition to John Quincy Adams was strongly urged; but while "Aristides" had much to say in depreciation of the latter, he evidently knew very little of the former, and simply supported him because he was the candidate of the Pickering faction.

Aside from his great sorrow in the loss of his mother and sister, the last three years of Lloyd's apprenticeship were very happy years to him. Trusted by his master with the entire supervision of the printing-office, and with the editorial charge of the "Herald" when the former was absent; devoting his spare hours to reading and study; encouraged by the recognition of merit in his various essays at writing

for the press, and by the ready acceptance and insertion of his articles and communications; fond of social intercourse, and a universal favorite with his friends of both sexes; full of health, vigor, cheerfulness, and ambition; known and respected by all his townspeople as an exemplary and promising young man,—success in life seemed easily within his grasp. An oil portrait taken about this period by Swain, a local artist, represents him with a smooth face, abundant black hair, a standing collar, and ruffled shirt-bosom. His surviving associates, of that period speak with enthusiasm of his manly beauty and his popularity with the fair sex.

At one time Lloyd had a boyish desire to go to Greece and join the forces of the revolutionists against Turkish tyranny, and he also thought of seeking a military education at West Point. He was enthusiastic over Lafayette's visit to Newburyport, at the end of August, 1824, and was among the thousands who awaited his arrival late at night in a drenching rain. He used to narrate how Lafayette, who was deeply moved by the sight, begged the people, with tears in his eyes, not to longer expose themselves so for his sake, but to come

and shake him by the hand the next morning; and he was one of the multitude who availed themselves of that privilege.

On the 10th of December, 1825, he completed his apprenticeship of seven years and two months in the "Herald" office, and under the (as it subsequently appeared, mistaken) impression that the year of his birth was 1804, and that he had now attained his majority, he signalized the event by a fervid poem of eight stanzas, entitled "Twenty-one!"

He remained a few weeks longer in the "Herald" office, as a journeyman, and his last contribution to that paper bore, like his first, his bachelor *nom de guerre* (A. O. B.), and was devoted to a similar theme, being an "Essay on Marriage," which he discussed with the same affectation of cynicism as at first, declaring that "of all the conceits that ever entered into the brains of a wise man, that of marriage is the most ridiculous." And with this light and trivial conclusion to his boyish essays, he graduated from the office of the "Herald," and went forth to establish a paper of his own, and to see what place in the world he could now show himself able to fill.

Francis Jackson Garrison.

THE INDIAN COUNTRY.

THE modern idea of an Indian country — a scope of territory set apart for the occupancy of the aboriginal tribes — was first suggested by President Jefferson. As early as 1803, referring to the then recent Louisiana purchase, he wrote: "Above all, the best use we can make of the country for some time to come will be to give establishments in it to the Indians of the east side of the Mississippi in exchange for their present country, and open land-offices in the last, and thus make this acquisition a means of filling up the eastern side instead of drawing off the population. When we shall be full on this side, we can lay off a range of States on the western bank from the head to the mouth, and so range after range, advancing compactly, as we multiply." It will be observed that he did not recommend permanency as a feature of this movement; it was to be "for some time" only, and subject to the possible demands of the march of white population westward. And yet there is room to suspect that his prophecy of "range after range" of States beyond the Mississippi was a bit of rhetorical bombast, and that in reality he believed that if the "perishing" tribes, as they were called, could all be sent wandering into this vast indeterminate waste of "Louis-

iana," — one million one hundred and sixty thousand square miles of far-away and vague wilderness, — civilization would not be likely to overtake them, and the Indian problem would solve itself by the easy delays of time and circumstance.

It is well to reflect, also, that the public mind of 1803 had no conception of the extent and value, or even the general geographical outlines, of Mr. Jefferson's Louisiana purchase; and the prevailing opinion dismissed it as unavailable and worthless. The price paid for it was at the rate of about a hundred acres for a cent, and out of it have been carved eight strong and opulent States; but Mr. Jefferson himself did not dream what a bargain he had secured, and only a fear of Spain reconciled the people to what they regarded, so far as the land was concerned, a foolish trade. So lightly did they esteem the country that they lacked ordinary curiosity about it. In point of fact, they knew little more of the greater portion of it than we know to-day of the moon, and they manifested no desire to explore it or to be informed of its nature or quality. The Mississippi itself was an unsolved enigma to them north of St. Louis; the Missouri, the Osage, the Platte, the Ar-

kansas were guess-work and trappers' rumors; the Rocky Mountains were but the shapeless talk of a man in his sleep. It was not until 1805 that Lieutenant Pike was sent to search "if haply he might find" the source of the Father of Waters. Not until 1806-7 did the first Americans, under this same intrepid officer, venture into what is now Kansas, which Pike declared mostly unfit for settlement or cultivation, and useful only as "a restriction of our population to certain limits, and thereby a continuation of the Union"; and to-day Kansas contains over a million of happy and prosperous people, and produces enough wheat alone in a single year to exceed the Jeffersonian cost of all Louisiana.

It is not difficult, therefore, to understand that a proposal to utilize this immense and uncomprehended domain, deemed to be desert and extraneous, as an abiding-place for the Indians, met with little opposition. But negotiations to that end with the Indians progressed slowly, and the inauguration of the project was not brought about until 1830, when Congress enacted the law which has served us ever since as an excuse and a precedent in our real-estate transactions with the red man. The story from then until now is a familiar and significantly consistent one. Mr. Jefferson's lucky device can hardly be said to have operated at all times in a way to vindicate the Scriptures; but his prophecy has been amply fulfilled, after a fashion of its own; his far-reaching rhetoric, idly as he may have uttered it, has become history. The original intention of the law of 1830 applied only to the removal of tribes from the east of the Mississippi to a defined and distant portion of the Louisiana purchase; the contingency of having to disturb the occupancy of tribes already west of the Mississippi was thought of, if at all, as too remote and improbable for serious consideration. But the great river did not long check the migratory instinct of the white race. Pike's notion of restriction was soon proved to be a folly and a snare. The prairies enticed instead of repelling the restless argonauts who are forever going westward. Civilization laid claim to more and more room; the "removal" theory of extinguishing aboriginal land-titles, and at the same time smoothing the aboriginal pathway toward the setting sun, was gradually enlarged and quickened; and Mr. Jefferson's "range after range" of new States pushed the Indians on step by step, until at last, after fifty years, we find that almost the only Indian country proper is the corner first set apart in 1830, wherein are now congregated not only the wasting tribes originally sent there, but also most of the tribes, or subdued remnants of

tribes, that once held sway over the whole empire of the Louisiana purchase.

This shrunken residue of the old dominion of the native race—known on the maps as the Indian Territory—is three hundred and eighty-two miles long and two hundred and eight miles wide, embracing about seventy thousand square miles. The character of the country is pleasing and diversified, with now and then a touch of the picturesque, the general effect being suggestive of a continuation and blending of Kansas and Texas, which adjoin it on the north and south. It is well supplied with rivers, so called; but, excepting the Arkansas and the Canadian, they are of little consequence beyond their convenience as boundary lines. Timber of good quality—ash, oak, pine, walnut, hickory, and cottonwood—abounds on most of the streams, and deposits of coal, iron, copper, and lead are said to exist in places. Salt is found plentifully, in springs and on the plains, and large quantities of it were obtained by the South during the War of the Rebellion. The best of the lands lie in the "bottoms"; in fact, it is safe to say that the agricultural possibilities of the Territory are chiefly confined to those localities. The soil of the uplands is thin and hard, as a rule, and pinched by drought. A thorough survey would probably divide the country into three nearly equal parts: one of more than average value for farming; one unreliable for cultivation, but admirably adapted to stock-grazing; and one practically worthless for any purpose. The climate is delightful, and suited to the growing of both northern and southern products. Grass remains green in the valleys all winter, there is rarely any snow or severely cold weather, and spring begins in February. Wild fruits, such as plums, grapes, and berries, thrive luxuriantly, and the wild flowers are among the most beautiful known to botany. It should be, from appearances, a very pleasant and healthy region to live in, but it is said that residents not born there are more or less subject to miasmatic and tubercular affections.

The Territorial lands are apportioned to the different tribes in specified districts or reservations, each tribe having a sort of supremacy over its own domain, subject to treaty stipulations with the United States. All lands are held in common, and titles in severalty are not known or authorized. Individuals are permitted to settle and remain upon particular premises, and their heirs may inherit the privilege after them; but it is a privilege only, and confers no vested right, nor does the privilege extend to members of other tribes, nor to intruding white men. The five civilized tribes, the Cherokees, the Chickasaws, the

Choctaws, the Creeks, and the Seminoles,—the “first settlers” of the country,—hold and control nearly one-half of the lands, or, in round numbers, twenty million acres, including the principal share of those portions most applicable to the uses of agriculture. Other considerable tracts are possessed by the leading wild tribes, the Arapahoes, the Cheyennes, the Comanches, the Kiowas, and the Osages, amounting in all to some nine and a half million acres; and the remainder, exclusive of such as still remains unassigned, is parceled out in diminished measure to the various smaller tribes that have been “removed” to the Territory from time to time.*

For many years after their location here, the five civilized tribes, though embarrassed by internal feuds, waxed powerful and prosperous. When the civil war began, in 1861, they were a notably wealthy people. They had large farms of corn and cotton, hemp and tobacco, with comfortable buildings, and their herds of cattle and horses were incredibly numerous and profitable. It was not uncommon for a single individual to own thousands of cattle; indeed, the man who owned less than five or six hundred cattle, or two or three hundred horses, was considered poor and shiftless. Their trade was principally with New Orleans and other Southern cities, and was eagerly sought after. They owned many slaves, and drove costly carriages, and wore rich clothing and a profusion of jewelry. But the war stripped them of everything movable, and left them only their naked fields and pastures. Their

unlucky location, and their divided sympathies between the North and South, exposed them to the ravages of both armies. Worse than all, a majority of them having borne arms for the Confederacy, or otherwise given aid and comfort to the rebellion, their treaties were forfeited. But, promptly upon the close of the war, they signified an anxiety to be restored to their former relations with the Government, and accordingly, at a council held with them only six months after Lee's surrender, new treaties were negotiated by which they resumed their old position; and they at the same time abolished slavery (before any Southern State had accepted emancipation), proclaimed unqualified amnesty, and consented to the settlement of other Indians on portions of their lands. They were humbled in spirit, however, and very poor; and their progress since that time has been relatively slow and precarious. Their crops are lighter and more uncertain than they formerly were, and stock-raising has become more expensive and markets less stable and remunerative. Still, they are all self-supporting, and the thrifter among them are doing as well as average white farmers in the States. They are intelligent, too, and many of them are educated and able; their annual expenditures for school purposes closely approximate two hundred thousand dollars, or about three dollars and thirty-three cents per capita of the total population.

The aggregate membership of the five civilized tribes is, in round numbers, sixty thousand, including six thousand manumitted negro slaves.* Their form of tribal, or “national,” government is republican in theory,

* The following table shows the size, in square miles and acres, of the different tribal reservations in the territory:

| Tribe. | Sq. miles. | Acres. |
|--------------------------------------|---------------|-------------------|
| Cherokee | 7,861 | 5,031,351 |
| Cheyenne and Arapahoe | 6,715 | 4,297,771 |
| Chickasaw | 7,267 | 4,650,935 |
| Choctaw | 10,450 | 6,688,000 |
| Creek | 5,024 | 3,215,495 |
| Kaw | 156½ | 100,137 |
| Kiowa and Comanche | 4,639 | 2,968,893 |
| Modoc | 6 | 4,040 |
| Osage | 2,297 | 1,470,059 |
| Ottawa | 23½ | 14,860 |
| Pawnee | 442 | 283,026 |
| Peoria and Miami | 78½ | 50,301 |
| Ponca and Nez Percé | 317 | 192,626 |
| Pottawatomie | 900 | 575,877 |
| Quapaw | 88½ | 6,685 |
| Sac and Fox | 750 | 479,667 |
| Seminole | 312½ | 200,000 |
| Seneca | 81 | 51,958 |
| Shawnee | 21 | 13,048 |
| Wichita | 1,162 | 743,610 |
| Wyandotte | 33½ | 21,406 |
| Tribal lands outside of reservations | 15,611 | 9,285,711 |
| Total | 64,236 | 41,100,915 |

* The total population of the Indian Territory, according to the latest accessible data, is 78,403, distributed by tribes as follows:

| | | | |
|------------------------|---------------|-----------------|---------------|
| Apaches | 340 | Brought forward | 68,505 |
| Arapahoes | 2,314 | Nez Percés | 322 |
| Caddoes | 553 | Osages | 1,950 |
| Cherokees | 20,336 | Otoes | 274 |
| Cheyennes | 4,255 | Ottawas | 115 |
| Chickasaws | 6,000 | Pawnees | 1,251 |
| Choctaws | 16,000 | Penetethkas | 165 |
| Comanches | 1,407 | Peorias | 144 |
| Creeks | 15,000 | Poncas | 542 |
| Delawares | 80 | Pottawatomies | 480 |
| Iowas | 86 | Quapaws | 48 |
| Kaws | 285 | Sacs and Foxes | 90 |
| Keechies | 78 | Senecas | 322 |
| Kiowas | 1,176 | Seminoles | 2,700 |
| Kickapoos | 418 | Shawnees | 793 |
| Kaskaskias | 20 | Tocawonies | 152 |
| Miamis | 60 | Wacoos | 49 |
| Modocs | 97 | Wichitas | 214 |
| | | Wyandottes | 287 |
| Carried forward | 68,505 | Total | 78,403 |

There are a few Chippewas married into the Sac and Fox tribe; the Ionias and Omahas have joined the same tribe, and some Sioux are with the Pawnees, and some Utes among the Wichitas.

tempered by native traditions and certain irrelevant provincial tendencies. Each tribe has a chief, or governor, and a vice-chief, elected for a term of four years, and a legislature, composed of senate and council, chosen every two years; the judiciary is modeled after our system of State courts. The legislatures meet annually; and there is also a yearly general council, for consultation merely, and without any legislative power, to which each tribe in the Territory, civilized or otherwise, sends one delegate, and additional delegates according to population. These tribal governments, within the jurisdiction of the United States, and yet in a sense politically distinct,—exercising separate sovereignty and yet dependent upon and subject to treaties,—are anomalous of course, and in some respects ridiculous. They have no inherent and original power to levy war, or repel invasion, or contract diplomatic relations, or acquire or dispose of territory. Their lands belong to them only by sufferance and in equity, and they cannot convey an acre in fee simple; they cannot so much as transfer and exchange rights of occupancy without the approval of the United States. They have authority only over “the persons and property” of their own citizens; and though based fundamentally upon the idea that white men shall not enter their several precincts, they have no right to evict or arrest intruders, but must appeal to the Great Father at Washington. No court of their creating can try a case where an Indian is one party and a white man or corporation is the other. On the other hand, it is due and proper to say, these abnormal, rattle-and-straw governments, so far as they reach, are respectably conducted and effective; and no doubt they have contributed materially to the tribal peace, safety, and happiness.

The Cherokees are regarded as the most apt and advanced of all the Indians, and they are certainly the most adroit and ambitious. They may be said to be the governing tribe. Their leading men are exceptionally capable, and the people in general are remarkable for their vigor and alertness of intellect. They maintain admirable public schools, two seminaries, and an orphan asylum; and they have a well-conducted weekly newspaper, printed mainly in their own language, after an alphabet invented by a Cherokee genius named Sequoyah, who became so frightened at the effects of his contrivance, the Indians say, and felt so apprehensive that the “bad medicine” of reading which he had introduced would break up the old native habits and destroy his people, that he lapsed into a settled melancholy, and, wandering off to Mexico, died there of a broken heart. The Choctaws and

Chickasaws are next in the scale of enlightenment to the Cherokees. Both of these tribes support good schools, and the Chickasaws now have more high schools or seminaries, and more students in them, than any other of the five tribes. The Choctaws appear to understand trading and money-making better than any of their brethren, though the Chickasaws are also shrewd business men. The Creeks and Seminoles have not improved as much as the three other tribes, and are not considered so bright and energetic; but they are represented to be gaining every year, and their schools are excellent and well attended, and the Creeks have recently distinguished themselves by subscribing three thousand dollars toward the founding of a seminary for the ex-slaves of the tribes.

The contrast between the five civilized tribes and the numerous wild and uncivilized tribes and fragments of tribes in the Territory is wide and striking. It requires an effort of the imagination to connect them as kindred. The former are the Indians of Cooper and Longfellow, of tradition and sentiment. The latter are the Indians of current frontier experience, of the blanket and the scalping-knife. These wild tribes still cling tenaciously to their savage customs and prejudices, and yield but doggedly to civilization. Their hostility to the white race is pronounced and deadly. The arts of peace and industry seem to them a surrender of all that makes life worth living. They are born nomads. Unlike the pastoral tribes, who are predisposed to homes and soil-tilling, they have always pursued the chase, and their country has been to them only a hunting-ground and a place to pitch the flitting tents of a day. Hence their reclamation involves not simply a change of habits, but almost a reversal of nature. It is probably yet an open question whether a wild Indian of pure blood has ever been thoroughly and permanently civilized. Father Schoenmaker, of the Osage Mission, said it took him fifteen years to get the blanket off of Joseph Pawneopasshe, afterward chief of the Osage tribe, “and it took Joseph just fifteen minutes to get it on him again.” The five principal wild tribes,—the Arapahoes, the Cheyennes, the Comanches, the Kiowas, and the Osages,—and several of the smaller tribes, all preserve their old tribal organizations, costumes, and diversions; and their attitude toward their present surroundings is that of haughty and thinly concealed challenge.

The uncivilized tribes are governed by a system of agencies, under charge of United States civil officers, with United States soldiers in the background. That these agencies are doing a good work among the

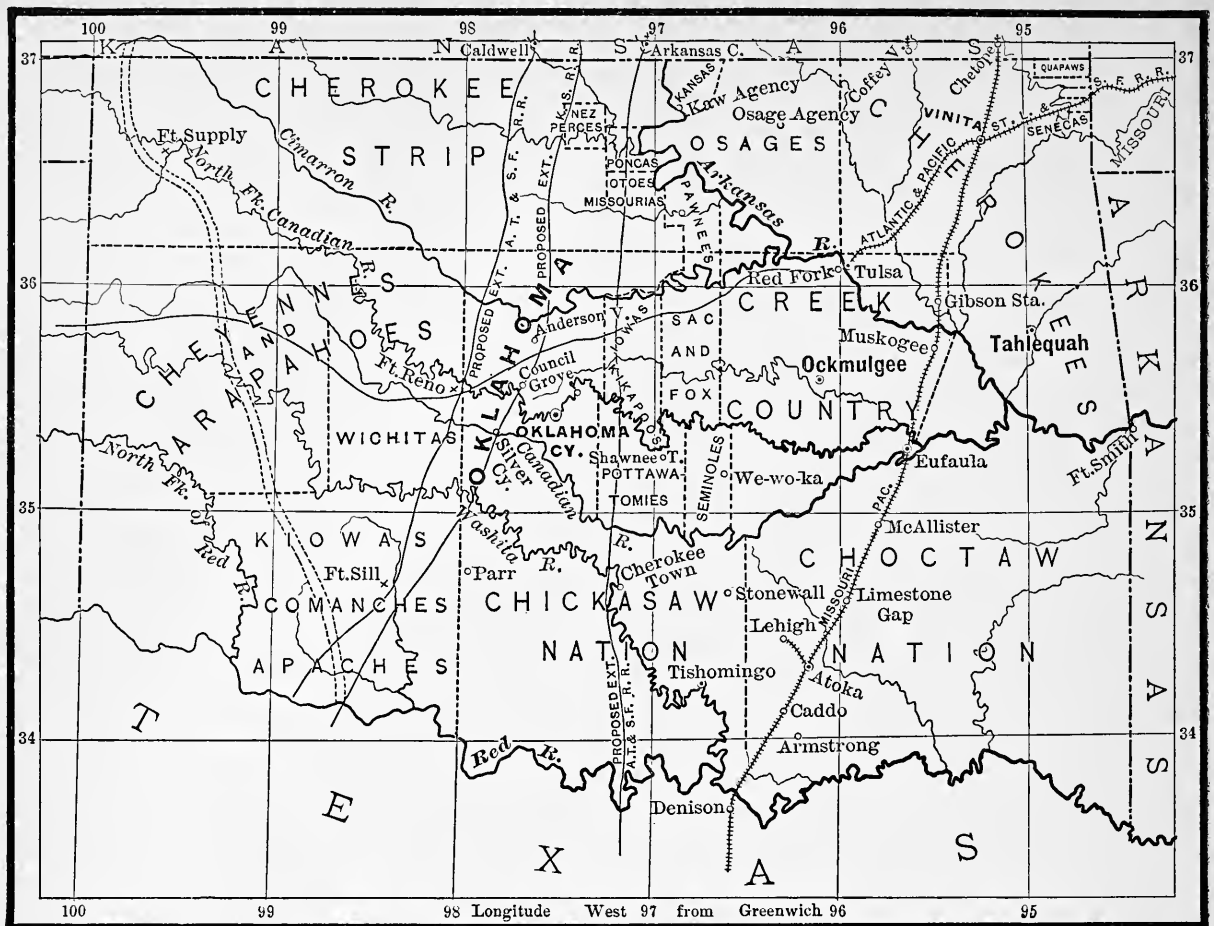

Indians is not to be disputed; but it is a task that drags and is full of difficulties. The Indians do not care for houses, but prefer their tents and lodges of skins and blankets, and they will work only under spur of necessity and at fitful intervals. They cultivate annually an average of something over half an acre per head, and produce about one-half of the cost of their maintenance; much of the labor is performed, however, by white men, who farm the Indian land for a share of the crops. The wonder is, not that they are doing so little, but that they do so much; and these figures may fairly be called encouraging, since every forward step is a point gained. They cannot be expected to take much interest in education, and it is not surprising that several of the chiefs stoutly denounce and antagonize it; but the agents and missionaries have established schools for most of the tribes, commonly of the manual labor form, and the average annual enrollment of pupils includes about thirty per cent. of the children of school age. The immorality of the wild Indian goes without saying; and this, added to his indolence and improvidence, is a besetting and serious obstacle to any scheme for his civilization. He treats women as beasts of burden, buys and sells wives, and practices indiscriminate polygamy; he is an inveterate gambler, and a drunkard of phenomenal capacity; and his death, nine times out of ten, is the direct penalty of persistent and loathsome personal excesses.

They are not an attractive spectacle, these vanishing contingents of once famous and mighty peoples. It is hard to fit them into the history which they represent. And yet we know, and cannot be unmoved by the thought, that here are the tattered and poverty-stricken handfuls of what were, but a brief lifetime ago, the tribes that mustered their warriors by formidable thousands, and counted their possessions by months of travel beyond the great river. The proudest among them now are pensioners; the vast regions they once held and roamed over have slipped from their grasp like the rolling up of a scroll. Not all the tribes that occupied Missouri and Kansas, Iowa and Nebraska, could to-day put men enough in the field to stand against a regiment of our cavalry. The Senecas, the Delawares, the Miamis, the Sacs and Foxes, and others of heroic memory, of song and story, are now hardly sufficient in numbers to equal the euphonious names they have furnished us for our towns and streams. It is destiny, to be sure; and the nations of which these poor squads are the last lineal types and shadows have retreated before the influences of a better and fitter order of things. But, for all

that, there is a certain nameless pathos in it — a sense of rout and ruin, of trampled banners and the peace that is a settled despair — which arrests attention and compels salutation and sympathy.

And what of the future? These people can go no farther; that much is settled. Will they be permitted to retain the strip that is left of the old Indian country, and exercise over it a perpetual tribal sovereignty? It must be said that the signs do not point that way. The Territory is hemmed in on three sides by encroaching States; the eager tide of immigration has touched its borders, and is a swelling menace. One railroad already runs through it from north to south, and others are waiting just over the line to penetrate it in various directions. Several thousands of white speculators and adventurers have obtained a foothold in the Territory by sly evasions of law, and are sedulously fomenting strife and encouraging the intrusion of settlers. Powerful corporations, hungry for land-grants and increased commercial facilities, are manufacturing public opinion against the policy that keeps up this barrier to trade and intercourse. The fact is being pointed to and artfully dwelt upon, that here is an inviting tract of country, larger than all New England, from which homeless white men are excluded, while the Indians occupy nearly seven hundred acres per capita, of which they do not cultivate one acre in five hundred, but draw upon the Government for food and clothing. Finally, the Indians themselves are divided in sentiment about the course they should favor for their own safety and profit; and, altogether, the outlook is thick with complications and perplexities.

The most prolific source of disturbance and apprehension is the frail legal tenure by which the Indians hold their lands. It has been the unvarying practice of our Congress and courts to treat these titles as rights of occupancy, merely, on the part of the tribes as tribes, without privilege of division or alienation, save with the consent and coöperation of the United States. This exposes them to continual question, and invites attempts to annul or contravene them. Already, an organized movement, known as "the Oklahoma boom," has been made to seize and colonize a large body of the territorial lands, on the ground that the Seminoles, having transferred said lands to the United States "in compliance with desire to locate other Indians thereon," they became *ipso facto* public lands, subject to homestead and preëmption entries, in so far as they were not really allotted to "other Indians"; that is to say, the Seminole title of occupancy having been extinguished by this trans-

THE INDIAN TERRITORY.

fer, the lands ceased to be "Indian country," and the bulk of them, remaining unoccupied by "other Indians," became open to white settlement. This movement has embraced at one time and another several hundreds of families, encamped on the Kansas border, with stock and tools, arms and provisions, awaiting a favorable chance to elude military surveillance and push over into the Territory. In fact, small parties have several times succeeded in reaching the lands in question,—on the North Fork of the Canadian River, just west of the Sac and Fox reservation,—and have been arrested and ejected therefrom by the troops. The leader of the enterprise was tried at the May term, 1881, of the United States court for the western district of Arkansas, and convicted of having unlawfully entered the Territory, for which he was fined \$1000. In rendering this decision, the court held that in purchasing these lands for a specific purpose,— "the location of other Indians thereon," to wit,—the Government thus "set apart" and "reserved" them for such specific purpose, and that they still remain "Indian country," even if not actually allotted to or occupied by Indians. The latest and most formidable attempt to effect an occupancy of this tract

was made in the winter of 1884–85, and threatened for a time to result in bloodshed; but prudent counsels prevailed at last, and the adventurous colonists submitted to military removal, as in former cases — with the advantage of a good deal of public sympathy on their side, and the effect of securing action by Congress to authorize negotiations for the adjustment of the controversy and the opening of these particular lands to white settlement.

This series of persistent experiments in the direction of gaining possession of "Oklahoma" by abrupt and irregular means has served both to advertise the Indian country in an exaggerated way, and to weaken respect for the general Indian right of occupancy to more land than is required for ordinary farming purposes. There is, in truth, no lack of room for homeseekers in the West outside of the Indian Territory. An abundance of land of good quality is still vacant in Kansas, Nebraska, and other States. The Oklahoma "boomers," on their way to the Kansas border, passed over desirable thousands of acres, convenient to markets and schools, which they might have had at low rates and on long credits. But the pioneers of the period have a special craving for Indian lands, and lands "kept out of market";

the simple denial of their privilege to enter this Territory is sufficient to make them think it the fairest portion of the universe; the tangled and doubtful state of things there only tends to inflame their zeal, and urge them forward in season to get first choice of "claims." This is the aggressive element that has peopled and developed so much of Mr. Jefferson's Louisiana purchase, and it will not stop or turn aside. It looks with impatience upon the whole business of treating with Indians as sovereign powers, and giving over to them large tracts of land which they leave to grass and weeds; it is not tolerant of the Indians as a people, unfortunately, and believes that they are dealt with too leniently and sentimentally. This element is what we call "the vanguard of civilization," and experience has taught that it encounters obstacles only to overcome them, and marches toward forbidden areas only to grasp and dominate them. It will take the Indian Territory sooner or later, in one way or another: that is inevitable. The only question is, how it can be delayed or regulated, and how the interests of the Indians can best be guarded and promoted.

Unquestionably the first necessity of the situation is to strengthen, perfect, and make uniform the land-titles of the Territory. This can most safely and successfully be accomplished, it is believed, by allotting lands to the Indians in severalty,—at the rate, say, of one hundred and sixty acres per head;—and giving them personal titles thereto, inalienable for a stipulated number of years; and providing for the disposal, at Government prices, of the unallotted and remaining portions of their reservations, for their benefit, to white settlers. In an allotment of this kind, twelve million two hundred and fifty thousand acres would give each Indian, male and female, adult and child, one hundred and sixty acres, leaving over two-thirds of the whole Territory to be sold on their account—enough to bring them, at a low estimate, forty million dollars, or more than five hundred dollars per capita. Such allotment and issuance of individual patents would involve, of course, the dissolution of tribal relations—another desirable step in the adjustment of the general question; and the Indian would thus be put upon an even footing with the white man as to the opportunities and advantages of personal independence. At the same time, the laws common throughout the States for the punishment of crime and the enforcement of contracts should be extended over the Territory, and courts established to administer them. In short, the flimsy theory of tribal sovereignty should be extirpated, the reservation system replaced by fee-simple grants in severalty, the surplus

lands opened to white settlement, and the Indians placed under the restraint and protection of ordinary and impartial laws, with a view to making them self-reliant and self-supporting.

The adoption of a policy like that here crudely outlined could not fail, if judiciously pursued, to satisfy all parties concerned. It would insure peace, to begin with, by guaranteeing substantial rights to the Indians, and removing all cause of complaint, or incitement to unlawful land-grabbing, on the part of the whites. The provision made for permanent homes for the Indians would be ample and just; and there would be plenty left to fill any reasonable measure of demand by immigrants. Furthermore, it would redeem the Indian Territory and its inhabitants from their present anomalous and equivocal position, and put them in harmony with their environment. It will not do to contend that the whites and Indians could not live together under equal laws and with common rights and privileges. There is no valid reason why they should not do so; and the policy here advocated would make it their special interest to neighbor amicably. The five civilized tribes are already sufficiently advanced to take care of themselves in every way; and they number nearly two-thirds of all the Indians in the Territory, and would probably be the predominant class there for many years to come. The wild tribes would be at some disadvantage, on obvious accounts; but their situation, at worst, would be an improvement over the existing one, and their civilization—granting that they are capable of such an outcome—would be accelerated rather than retarded. It is fair to presume, also, that the characteristic enmity of the two races would be materially softened by such a radical change in their relations; and it is more than likely that the Territory, once made free to travel and settlement, would cease to excite the pioneer instinct except in a legitimate way and for ends entirely laudable.

This policy would be incomplete, however, unless supplemented by a rigid and vigorous system of education. The instruction of all Indian children in good schools, during a given period in each year, should be made compulsory. In that direction lies the one great hope of modifying and ameliorating the Indian character. It is uncertain, to say the most, whether the adult members of the wild tribes can ever be induced or constrained to raise themselves from their abject savagery to the level of any fixed idea of education. Some impression may be made upon them, doubtless, by patient years of experiment, and the experiment is worth pursuing; but it is manifestly idle to predict any very shining results. If they can be relegated to a pas-

toral form of life, and fitted to earn their daily bread by their own labor, it will be as much as we are justified in expecting for them. But the rising generation is plastic, and can be molded effectually, and to higher uses. The education of the children goes to the core of the problem. We must begin at the cradle if

we would conquer barbarism and lift a race to a height beyond itself. It is a slow process, but the only sure one; and the sooner we recognize and apply it, the sooner will the troublesome issue of civilizing the Indians be relieved of its clogs and doubts, and put in the way of ultimate practical settlement.

Henry King.

THE WIND UPON THE SUMMIT OF MOUNT WASHINGTON.

NO man comes here with bearded sickle keen,
 Amid these shining acres of gray stone,
 To reap the harvest which the wind has sown
 So many ages; in this air, I ween,
 No cornfields ever wave, no maidens glean;
 But mightier harvests from this height are blown
 Of storm and shower; here with deep organ tone
 The tempest sounds,—this is the wind's demesne.
 Like some unfettered spirit through the hills
 He wanders, shepherding his rocky fold;
 Hark, hear his voice, where far beneath he shrills
 With airy whisper round some lonesome peak,
 A sound that makes the beating heart grow cold,
 Ear-piercing, sharp as flayed Marsuas' shriek.

W. P. Foster.

A VIRGINIA GIRL IN THE FIRST YEAR OF THE WAR.

THE only association I have with my old home in Virginia that is not one of un-mixed happiness relates to the time immediately succeeding the execution of John Brown at Harper's Ferry. Our homestead was in Fairfax, at a considerable distance from the theater of that tragic episode; and, belonging as we did to a family among the first in the State to manumit slaves—our grandfather having set free those which came to him by inheritance, and the people who served us being hired from their owners and remaining in our employ through years of kindest relations—there seemed to be no especial reason for us to share in the apprehension of an uprising by the blacks. But there was the fear—unspoken, or pooh-poohed at by the men who served as mouth-pieces for our community—dark, boding, oppressive, and altogether hateful. I can remember taking it to bed with me at night, and awaking suddenly oftentimes to confront it through a vigil of nervous terror of which it never occurred to me to speak to any one. The notes of whip-poor-wills in the sweet-gum swamp near the stable, the mutterings of a distant thunder-storm, even the rustle of the night wind in the oaks that shaded my window, filled me with nameless dread. In the day-time it seemed impossible to as-

sociate suspicion with those familiar tawny or sable faces that surrounded us. We had seen them for so many years smiling or saddening with the family joys or sorrows; they were so guileless, so patient, so satisfied. What subtle influence was at work that should transform them into tigers thirsting for our blood? The idea was preposterous. But when evening came again, and with it the hour when the colored people (who in summer and autumn weather kept astir half the night) assembled themselves together for dance or prayer-meeting, the ghost that refused to be laid was again at one's elbow. Rusty bolts were drawn and rusty fire-arms loaded. A watch was set where never before had eye or ear been lent to such a service. Peace, in short, had flown from the borders of Virginia.

I cannot remember that, as late as Christmas-time of the year 1860, although the newspapers were full of secession talk and the matter was eagerly discussed at our tables, coming events had cast any positive shadow on our homes. The people in our neighborhood, of one opinion with their dear and honored friend, Colonel Robert E. Lee, of Arlington, were slow to accept the startling suggestion of disruption of the Union. At any rate, we enjoyed the usual holiday gathering of kinsfolk in the usual fash-

ion. The old Vaucluse house, known for many years past as the center of cheerful hospitality in the county, threw wide open its doors to receive all the members who could be gathered there of a large family circle. The woods around were despoiled of holly and spruce, pine and cedar, to deck the walls and wreath the picture-frames. On Christmas Eve we had a grand rally of youths and boys belonging to the "clan," as they loved to call it, to roll in a yule log, which was deposited upon a glowing bed of coals in the big "red parlor" fire-place, and sit around it afterwards, welcoming the Christmas in with goblets of egg-nog and apple-toddy.

"Where shall we be a year hence?" some one asked at a pause in the merry chat; and, in the brief silence that followed, arose a sudden spectral thought of war. All felt its presence; no one cared to speak first of the grim possibilities it projected on the canvas of the future.

On Christmas Eve of the following year the old house lay in ruins, a sacrifice to military necessity; the forest giants that kept watch around her walls had been cut down and made to serve as breastworks for a fort erected on the Vaucluse property, but afterwards abandoned. Of the young men and boys who took part in that holiday festivity, all were in active service of the South,—one of them, alas! soon to fall under a rain of shot and shell beside his gun at Fredericksburg; the youngest of the number had left his mother's knee to fight in the battles of Manassas, and found himself, before the year was out, a midshipman aboard the Confederate steamer *Nashville*, on her cruise in distant seas!

My first vivid impression of war-days was during a ramble in the woods around our place one Sunday afternoon in spring, when the young people in a happy band set out in search of wild flowers. Pink honeysuckles, blue lupine, beds of fairy flax, anemones, and ferns in abundance sprung under the canopy of young leaves on the forest boughs, and the air was full of the song of birds and the music of running waters. We knew every mossy path far and near in these woods, every tree had been watched and cherished by those who went before us, and dearer than any other spot on earth was our tranquil, sweet Vaucluse. Suddenly the shrill whistle of a locomotive struck the ear, an unwonted sound on Sunday. "Do you know what that means?" said one of the older cousins who accompanied the party. "It is the special train carrying Alexandria volunteers to Manassas, and to-morrow I shall follow with my company." An awe-struck silence fell upon

our little band. A cloud seemed to come between us and the sun. It was the beginning of the end too soon to come.

The story of one broken circle is the story of another at the outset of such a war. Before the week was over, the scattering of our household, which no one then believed to be more than temporary, had begun. Living as we did upon ground likely to be in the track of armies gathering to confront each other, it was deemed advisable to send the children and young girls into a place more remote from chances of danger. Some weeks later the heads of the household, two widowed sisters, whose sons were at Manassas, drove in their carriage at early morning, away from their home, having spent the previous night in company with a half-grown lad digging in the cellar hasty graves for the interment of two boxes of old English silver-ware, heir-looms in the family, for which there was no time to provide otherwise. Although troops were long encamped immediately above it after the house was burnt the following year, this silver was found when the war had ended, lying loose in the earth, the boxes having rotted from around it.

The point at which our family reunited within Confederate lines was Bristoe, the station next beyond Manassas, a cheerless railway inn; a part of the premises was used as a country grocery; and there quarters were secured for us with a view to being near the army, a few miles distant. By this time all our kith and kin of fighting age had joined the volunteers. One cannot picture accommodations more forlorn than these eagerly taken for us and for other families attracted to Bristoe by the same powerful magnet. The summer sun poured its burning rays upon whitewashed walls unshaded by a tree. Our bedrooms were almost uninhabitable by day or night, our fare the plainest. From the windows we beheld only a flat, uncultivated country, crossed by red-clay roads, then knee-deep in dust. We learned to look for all excitement to the glittering lines of railway track, along which continually thundered trains bound to and from the front. It was impossible to allow such a train to pass without running out upon the platform to salute it, for in this way we greeted many an old friend or relative buttoned up in the smart gray uniform, speeding with high hope to the scene of coming conflict. Such shouts as went up from sturdy throats when the locomotive moved on after the last stop before Manassas, while we stood waving hands, handkerchiefs, or the rough woolen garments we were at work upon! Then fairly awoke the spirit that made of Southern women the inspiration of South-

ern men for the war. Most of the young fellows we were cheering onward wore the uniform of privates, and for the right to wear it had left homes of ease and luxury. To such we gave our best homage; and from that time forth, during the four years succeeding, the youth who was lukewarm in the cause or unambitious of military glory fared uncomfortably in the presence of the average Confederate maiden.

Thanks to our own carriage, we were able during those rallying days of June to drive frequently to visit our boys in camp, timing the expeditions to include battalion drill and dress parade, and taking tea afterwards in the different tents. Then were the gala days of war, and our proud hosts hastened to produce home dainties dispatched from the far-away plantations—tears and blessings interspersed amid the packing, we were sure; though I have seen a pretty girl persist in declining other fare, to make her meal upon raw biscuit and huckleberry pie compounded by the bright-eyed amateur cook of a well-beloved mess. Feminine heroism could no farther go.

And so the days wore on until the 17th of July, when a rumor from the front sent an electric shock through our circle. The enemy were moving forward! On the morning of the 18th those who had been able to sleep at all awoke early to listen for the first guns of the engagement of Blackburn's Ford. Abandoned as the women at Bristoe were by every masculine creature old enough to gather news, there was, for them, no way of knowing the progress of events during the long, long day of waiting, of watching, of weeping, of praying, of rushing out upon the railway track to walk as far as they dared in the direction whence came that intolerable booming of artillery. The cloud of dun smoke arising over Manassas became heavier in volume as the day progressed. Still, not a word of tidings, till towards afternoon there came limping up a single, very dirty soldier with his arm in a sling. What a heaven-send he was, if only as an escape-valve for our pent-up sympathies! We seized him, we washed him, we cried over him, we glorified him until the man was fairly bewildered. Our best endeavors could only develop a pin-scratch of a wound on his right hand; but when our hero had laid in a substantial meal of bread and meat, we plied him with trembling questions, each asking news of some staff or regiment or company. It has since occurred to me that this first arrival from the field was a humorist in disguise. His invariable reply, as he looked from one to the other of his satellites, was: "The — Virginia, marm? Why, of coase. They warn't no two ways o' thinkin' 'bout

that ar rig'ment. They just *kivered* tharselves with glory!"

A little later two wagon-loads of slightly wounded claimed our care, and with them came authentic news of the day. Most of us received notes on paper torn from a soldier's pocket-book and grimed with gunpowder, containing assurance of the safety of our own. At nightfall a train carrying more wounded to the hospitals at Culpeper made a halt at Bristoe; and, preceded by men holding lanterns, we went in among the stretchers with milk, food, and water to the sufferers. One of the first discoveries I made, bending over in that fitful light, was a young officer I knew to be a special object of solicitude with one of my fair comrades in the search; but he was badly hurt, and neither he nor she knew the other was near until the train had moved on. The next day, and the next, were full of burning excitement over the impending general engagement, which people then said would decide the fate of the young Confederacy. Fresh troops came by with every train, and we lived only to turn from one scene to another of welcome and farewell. On Saturday evening arrived a message from General Beauregard, saying that early on Sunday an engine and car would be put at our disposal, to take us to some point more remote from danger. We looked at one another, and, tacitly agreeing that the gallant general had sent not an order, but a suggestion, declined his kind proposal.

Another unspeakably long day, full of the straining anguish of suspense. Dawning bright and fair, it closed under a sky darkened by cannon-smoke. The roar of guns seemed never to cease. First, a long sullen boom; then a sharper rattling fire, painfully distinct; then stragglers from the field, with varying rumors. At last, the news of victory; and, as before, the wounded, to force our numbed faculties into service. One of our group, the mother of an only son barely fifteen years of age, heard that her boy, after being in action all the early part of the day, had through sheer fatigue fallen asleep upon the ground, where his officers had found him, resting peacefully amidst the roar of the guns, and whence they had brought him off, unharmed. A few days later we rode on horseback over the field of the momentous fight. The trampled grass had begun to spring again, and wild flowers were blooming around carelessly made graves. From one of these imperfect mounds of clay I saw a hand extended; and when, years afterwards, I visited the tomb of Rousseau beneath the Panthéon in Paris, where a sculptured hand bearing a torch protrudes from the sarcophagus, I thought of that mourn-

ful spectacle upon the field of Manassas. Fences were everywhere thrown down; the undergrowth of the woods was riddled with shot; here and there we came upon spiked guns, disabled gun-carriages, cannon-balls, blood-stained blankets, and dead horses. We were glad enough to turn away and gallop homeward.

With August heats and lack of water, Bristoe was forsaken for quarters near Culpeper, where my mother went into the soldiers' barracks, sharing soldiers' accommodations, to nurse the wounded. In September quite a party of us, upon invitation, visited the different headquarters. We stopped overnight at Manassas, five ladies, sleeping in a tent guarded by a faithful sentry, upon a couch made of rolls of cartridge-flannel. I remember the comical effect of the five bird-cages (an article without which no self-respecting female of that day would present herself in public) suspended upon a line running across the upper part of our tent, after we had reluctantly removed them in order to adjust ourselves for repose. Our progress during that memorable visit was royal; an ambulance with a picked troop of cavalymen had been placed at our service, and the convoy was "personally conducted" by a pleasing variety of distinguished officers. It was at this time, after a supper at the headquarters of the "Maryland line" at Fairfax, that the afterwards universal war-song, "My Maryland," was set afloat upon the tide of army favor. We were sitting outside a tent in the warm starlight of an early autumn night, when music was proposed. At once we struck up Randall's verses to the tune of the old college song, "Lauriger Horatius,"—a young lady of the party from Maryland, a cousin of ours, having recently set them to this music before leaving home to share the fortunes of the Confederacy. All joined in the ringing chorus, and when we finished a burst of applause came from some soldiers listening in the darkness behind a belt of trees. Next day the melody was hummed far and near through the camps, and in due time it had gained and held the place of favorite song in the army. No doubt the hand-organs would have gotten hold of it; but, from first to last during the continuance of the Confederacy, those cheerful instruments of torture were missing. (I hesitate to mention this fact, lest it prove an incentive to other nations to go to war.) Other songs sung that evening, which afterwards had a great vogue, were one beginning "By blue Patapsco's billowy dash," arranged by us to an air from "Puritani," and shouted lustily, and "The years glide slowly by, Lorena," a ditty having a queer little quavering triplet in the

heroine's name that served as a pitfall to the unwary singer. "Stonewall Jackson's Way" came on the scene afterwards, later in the war. Another incident of note, in personal experience during the autumn of '61, was that to two of my cousins and to me was intrusted the making of the first three battle-flags of the Confederacy, directly after Congress had decided upon a design for them. They were jaunty squares of scarlet crossed with dark blue, the cross bearing stars to indicate the number of the seceding States. We set our best stitches upon them, edged them with golden fringes, and when they were finished dispatched one to Johnston, another to Beauregard, and the third to Earl Van Dorn,—the latter afterwards a dashing cavalry leader, but then commanding infantry at Manassas. The banners were received with all the enthusiasm we could have hoped for; were toasted, fêted, cheered abundantly. After two years, when Van Dorn had been killed in Tennessee, mine came back to me, tattered and smoke-stained from long and honorable service in the field. But it was only a little while after it had been bestowed that there arrived one day at our lodgings in Culpeper a huge, bashful Mississippi scout,—one of the most daring in the army,—with the frame of a Hercules and the face of a child. He was bidden to come there by his general, he said, to ask if I would not give him an order to fetch some cherished object from my dear old home—something that would prove to me "how much they thought of the maker of that flag!" After some hesitation I acquiesced, although thinking it a jest. A week later I was the astonished recipient of a lamented bit of finery left "within the lines," a wrap of white and azure, brought to us by Dillon himself, with a beaming face. He had gone through the Union pickets mounted on a load of fire-wood, and while peddling poultry had presented himself at our town house, whence he carried off his prize in triumph, with a letter in its folds telling us how relatives left behind longed to be sharing the joys and sorrows of those at large in the Confederacy.

The first winter of the war was spent by our family in Richmond, where we found lodgings in a dismal rookery familiarly dubbed by its new occupants "The Castle of Otranto." It was the old-time Clifton Hotel, honeycombed by subterranean passages, and crowded to its limits by refugees like ourselves from country homes within or near the enemy's lines—or "fugees," as we were all called. For want of any common sitting-room, we took possession of what had been a doctor's office, a few steps distant down the hilly street, fitting it up to the best of our ability; and there we received

our friends, passing many merry hours. In rainy weather we reached it by an underground passageway from the hotel, an alley through the catacombs; and many a dignitary of camp or state will recall those "Clifton" evenings. Already the pinch of war was felt in the commissariat; and we had recourse occasionally to a contribution supper, or "Dutch treat," when the guests brought brandied peaches, boxes of sardines, French prunes, and bags of biscuit, while the hosts contributed only a roast turkey or a ham, with knives and forks. Democratic feasts those were, where major-generals and "high privates" met on an equal footing. The hospitable old town was crowded with the families of officers and members of the Government. One house was made to do the work of several, many of the wealthy citizens generously giving up their superfluous space to receive the new-comers. The only public event of note was the inauguration of Mr. Davis as President of the "Permanent Government" of the Confederate States, which we viewed, by the courtesy of Mr. John R. Thompson, the State Librarian, from one of the windows of the Capitol, where, while waiting for the exercises to begin, we read "Harper's Weekly" and other Northern papers, the latest per underground express. That 22d of February was a day of pouring rain, and the concourse of umbrellas in the square beneath us had the effect of an immense mushroom-bed. As the bishop and the President-elect came upon the stand, there was an almost painful hush in the crowd. All seemed to feel the gravity of the trust our chosen leader was assuming. When he kissed the Book a shout went up; but there was no elation visible as the people slowly dispersed. And it was thought ominous afterwards, when the story was repeated, that, as Mrs. Davis, who had a Virginia negro for coachman, was driven to the inauguration, she observed the carriage went at a snail's pace and was escorted by four negro men in black clothes, wearing white cotton gloves and walking solemnly, two on either side of the equipage; she asked the coachman what such a spectacle could mean, and was answered, "Well, ma'am, you tole me to arrange everything as it should be; and this is the way we do in Richmon' at funerals and sich-like." Mrs. Davis promptly ordered the outwalkers away, and with them departed all the pomp and circumstance the occasion admitted of. In the mind of a negro, everything of dignified ceremonial is always associated with a funeral!

About March 1st martial law was proclaimed in Richmond, and a fresh influx of refugees from Norfolk claimed shelter there. When the spring opened, as the spring does

open in Richmond, with a sudden glory of green leaves, magnolia blooms, and flowers among the grass, our spirits rose after the depression of the latter months. If only to shake off the atmosphere of doubts and fears engendered by the long winter of disaster and uncertainty, the coming activity of arms was welcome! Personally speaking, there was vast improvement in our situation, since we had been fortunate enough to find a real home in a pleasant brown-walled house on Franklin street, divided from the pavement by a garden full of bounteous greenery, where it was easy to forget the discomforts of our previous mode of life. I shall not attempt to describe the rapidity with which thrilling excitements succeeded each other in our experiences in this house. The gathering of many troops around the town filled the streets with a continually moving panorama of war, and we spent our time in greeting, cheering, choking with sudden emotion, and quivering in anticipation of what was yet to follow. We had now finished other battle-flags begun by way of patriotic handiwork, and one of them was bestowed upon the "Washington Artillery" of New Orleans, a body of admirable soldiers who had wakened to enthusiasm the daughters of Virginia in proportion, I dare say, to the woe they had created among the daughters of Louisiana in bidding them goodbye. One morning an orderly arrived to request that the ladies would be out upon the veranda at a given hour; and, punctual to the time fixed, the travel-stained battalion filed past our house. These were no holiday soldiers. Their gold was tarnished and their scarlet faded by sun and wind and gallant service—they were veterans now on their way to the front, where the call of duty never failed to find the flower of Louisiana. As they came in line with us, the officers saluted with their swords, the band struck up "My Maryland," the tired soldiers sitting upon the caissons that dragged heavily through the muddy street set up a rousing cheer. And there in the midst of them, taking the April wind with daring color, was our flag, dipping low until it passed us.

Well! one must grow old and cold indeed before such things are forgotten.

A few days later, on coming out of church—it is a curious fact that most of our exciting news spread over Richmond on Sunday, and just at that hour—we heard of the crushing blow of the fall of New Orleans and the destruction of our ironclads; my brother had just reported aboard one of those splendid ships, as yet unfinished. As the news came directly from our kinsman, General Randolph, the Secretary of War, there was no

doubting it; and while the rest of us broke into lamentation, Mr. Jules de St. Martin, the brother-in-law of Mr. Benjamin, merely shrugged his shoulders, with a thoroughly characteristic gesture, making no remark.

"This must affect your interests," some one said to him inquiringly.

"I am ruined, *voilà tout!*" was the rejoinder—a fact too soon confirmed.

This debonair little gentleman was one of the greatest favorites of our war society in Richmond. His cheerfulness, his wit, his exquisite courtesy, made him friends everywhere; and although his nicety of dress, after the pattern of the *boulevardier fini* of Paris, was the subject of much wonderment to the populace when he first appeared upon the streets, it did not prevent him from going promptly to join the volunteers before Richmond when occasion called, and roughing it in the trenches like a veteran. His cheerful endurance of hardship during a freezing winter of camp life became a proverb in the army later in the siege.

For a time nothing was talked of but the capture of New Orleans. Of the midshipman brother we heard that on the day previous to the taking of the forts, after several days' bombardment, by the United States fleet under Flag-Officer Farragut, he had been sent in charge of ordnance and deserters to a Confederate vessel in the river; that Lieutenant R——, a friend of his, on the way to report at Fort Jackson during the hot shelling, had invited the lad to accompany him by way of a pleasure trip; that while they were crossing the moat around Fort Jackson, in a canoe, and under heavy fire, a thirteen-inch mortar-shell had struck the water near, half filling their craft; and that, after watching the fire from this point for an hour, C—— had pulled back again alone, against the Mississippi current, under fire for a mile and a half of the way—passing an astonished alligator who had been hit on the head by a piece of shell and was dying under protest. Thus ended a trip alluded to by C—— twenty years later as an example of juvenile foolhardiness, soundly deserving punishment.

Aboard the steamship *Star of the West*, next day, he and other midshipmen in charge of millions of gold and silver coin from the mint and banks of New Orleans, and millions more of paper money, over which they were ordered to keep guard with drawn swords, hurried away from the doomed city, where the enemy's arrival was momentarily expected, and where the burning ships and steamers and bales of cotton along the levee made a huge crescent of fire. Keeping just ahead of the enemy's fleet, they reached Vicksburg,

and thence went overland to Mobile, where their charge was given up in safety.

And now we come to the 31st of May, 1862, when the eyes of the whole continent turned to Richmond. On that day Johnston assaulted the portion of McClellan's troops which had been advanced to the south side of the Chickahominy, and had there been cut off from the main body of the army by the sudden rise of the river, occasioned by a tremendous thunder-storm. In face of recent reverses, we in Richmond had begun to feel like the prisoner of the Inquisition in Poe's story, cast into a dungeon with slowly contracting walls. With the sound of guns, therefore, in the direction of Seven Pines, every heart leaped as if deliverance were at hand. And yet there was no joy in the wild pulsation, since those to whom we looked for succor were our own flesh and blood, standing shoulder to shoulder to bar the way to a foe of superior numbers, abundantly provided as we were not with all the equipments of modern warfare, and backed by a mighty nation as determined as ourselves to win. Hardly a family in the town whose father, son, or brother was not part and parcel of the defending army.

When on the afternoon of the 31st it became known that the engagement had begun, the women of Richmond were still going about their daily vocations quietly, giving no sign of the inward anguish of apprehension. There was enough to do now in preparation for the wounded; yet, as events proved, all that was done was not enough by half. Night brought a lull in the cannonading. People lay down dressed upon their beds, but not to sleep, while their weary soldiers slept upon their arms. Early next morning the whole town was on the street. Ambulances, litters, carts, every vehicle that the city could produce, went and came with a ghastly burden; those who could walk limped painfully home, in some cases so black with gunpowder they passed unrecognized. Women with pallid faces flitted bareheaded through the streets, searching for their dead or wounded. The churches were thrown open, many people visiting them for a sad communion-service or brief time of prayer; the lecture-rooms of various places of worship were crowded with ladies volunteering to sew, as fast as fingers and machines could fly, the rough beds called for by the surgeons. Men too old or infirm to fight went on horseback or afoot to meet the returning ambulances, and in some cases served as escort to their own dying sons. By afternoon of the day following the battle, the streets were one vast hospital. To find shelter for the sufferers a number of unused buildings were thrown open. I remember, especially,

the St. Charles Hotel, a gloomy place, where two young girls went to look for a member of their family, reported wounded. We had tramped in vain over pavements burning with the intensity of the sun, from one scene of horror to another, until our feet and brains alike seemed about to serve us no further. The cool of those vast dreary rooms of the St. Charles was refreshing; but such a spectacle! Men in every stage of mutilation lying on the bare boards with perhaps a haversack or an army blanket beneath their heads,—some dying, all suffering keenly, while waiting their turn to be attended to. To be there empty-handed and impotent nearly broke our hearts. We passed from one to the other, making such slight additions to their comfort as were possible, while looking in every upturned face in dread to find the object of our search. This sorrow, I may add, was spared, the youth arriving at home later with a slight flesh-wound. The condition of things at this and other improvised hospitals was improved next day by the offerings from many churches of pew-cushions, which, sewn together, served as comfortable beds; and for the remainder of the war their owners thanked God upon bare benches for every "misery missed" that was "mercy gained." To supply food for the hospitals the contents of larders all over town were emptied into baskets; while cellars long sealed and cobwebbed, belonging to the old Virginia gentry who knew good Port and Madeira, were opened by the Ithuriel's spear of universal sympathy. There was not much going to bed that night, either; and I remember spending the greater part of it leaning from my window to seek the cool night air, while wondering as to the fate of those near to me. There was a summons to my mother about midnight. Two soldiers came to tell her of the wounding of one close of kin; but she was already on duty elsewhere, tireless and watchful as ever. Up to that time the younger girls had been regarded as superfluities in hospital service; but on Monday two of us found a couple of rooms where fifteen wounded men lay upon pallets around the floor, and, on offering our services to the surgeons in charge, were proud to have them accepted and to be installed as responsible nurses, under direction of an older and more experienced woman. The constant activity our work entailed was a relief from the strained excitement of life after the battle of Seven Pines. When the first flurry of distress was over, the residents of those pretty houses standing back in gardens full of roses set their cooks to work, or better still, went themselves into the kitchen, to compound delicious messes for the wounded, after the appetizing old Vir-

ginia recipes. Flitting about the streets in the direction of the hospitals were smiling white-jacketed negroes, carrying silver trays with dishes of fine porcelain under napkins of thick white damask, containing soups, creams, jellies, thin biscuit, eggs à la crème, broiled chicken, etc., surmounted by clusters of freshly gathered flowers. A year later we had cause to pine after these culinary glories, when it came to measuring out, with sinking hearts, the meager portions of milk and food we could afford to give our charges.

As an instance, however, that quality in food was not always appreciated by the patients, my mother urged upon one of her sufferers (a gaunt and soft-voiced Carolinian from the "piney-woods district") a delicately served trifle from some neighboring kitchen.

"Jes ez you say, old miss," was the weary answer, "I ain't a-contradictin' you. It mout be good for me, but my stomick's kinder sot agin it. There ain't but one thing I'm sorter yarnin' arter, an' that's a dish o' greens en bacon fat, with a few molarses poured onto it."

From our patients, when they could syllable the tale, we had accounts of the fury of the fight, which were made none the less horrible by such assistance as imagination could give to the facts. I remember that they told us of shot thrown from the enemy's batteries into the advancing ranks of the Confederates, that plowed their way through lines of flesh and blood before exploding in showers of musketballs to do still further havoc. Before these awful missiles, it was said, our men had fallen in swaths, the living closing over them to press forward in the charge.

It was at the end of one of these narrations that a piping voice came from a pallet in the corner: "They fit right smart, them Yanks did, I tell *you!*" and not to laugh was as much of an effort as it had just been not to cry.

From one scene of death and suffering to another we passed during those days of June. Under a withering heat that made the hours preceding dawn the only ones of the twenty-four endurable in point of temperature, and a shower-bath the only form of diversion we had time or thought to indulge in, to go out-of-doors was sometimes worse than remaining in our wards. But one night, after several of us had been walking about town in a state of panting exhaustion, palm-leaf fans in hand, a friend persuaded us to ascend to the small platform on the summit of the Capitol, in search of fresher air. To reach it was like going through a vapor-bath, but an hour amid the cool breezes above the tree-tops of the square was a thing of joy unspeakable.

Day by day we were called to our windows by the wailing dirge of a military band preceding a soldier's funeral. One could not number those sad pageants: the coffin crowned with cap and sword and gloves, the riderless horse following with empty boots fixed in the stirrups of an army saddle; such soldiers as could be spared from the front marching after with arms reversed and crape-enfolded banners; the passers-by standing with bare, bent heads. Funerals less honored outwardly were continually occurring. Then and thereafter the green hillsides of lovely Hollywood were frequently upturned to find resting-places for the heroic dead. So much taxed for time and attendants were the funeral officials, it was not unusual to perform the last rites for the departed at night. A solemn scene was that in the July moonlight, when, with the few who valued him most gathered around the grave, we laid to rest one of my own nearest kinsmen, about whom in the old service of the United States, as in that of the Confederacy, it was said, "He was a spotless knight."

Spite of its melancholy uses, there was no more favorite walk in Richmond than Hollywood, a picturesquely beautiful spot, where high hills sink into velvet undulations, profusely shaded with holly, pine, and cedar, as well as by trees of deciduous foliage. In spring the banks of the stream that runs through the valley were enameled with wild flowers, and the thickets were full of May-blossom and dogwood. Mounting to the summit of the bluff, one may sit under the shade of some ample oak, to view the spires and roofs of the town, with the white colonnade of the distant Capitol. Richmond, thus seen beneath her verdant foliage "upon hills, girdled by hills," confirms what an old writer felt called to exclaim about it, "Verily, this city hath a pleasant seat." On the right, below this point, flows the rushing yellow river, making ceaseless turmoil around islets of rock whose rifts are full of birch and willow, or leaping impetuously over the bowlders of granite that strew its bed. Old-time Richmond folk used to say that the sound of their favorite James (or "Jeems," to be exact) went with them into foreign countries, during no matter how many years of absence, haunting them like a strain of sweetest music; nor would they permit a suggestion of superiority in the flavor of any other fluid to that of a draught of its amber waters. So blent with my own memories of war is the voice of that tireless river, that I seem to hear it yet, over the tramp of rusty battalions, the short imperious stroke of the alarm-bell, the clash of passing bands, the gallop of eager horsemen, the roar of battle or of flames leaping to devour

their prey, the moan of hospitals, the stifled note of sorrow!

During all this time President Davis was a familiar and picturesque figure on the streets, walking through the Capitol square from his residence to the executive office in the morning, not to return until late in the afternoon, or riding just before nightfall to visit one or another of the encampments near the city. He was tall, erect, slender, and of a dignified and soldierly bearing, with clear-cut and high-bred features, and of a demeanor of stately courtesy to all. He was clad always in Confederate gray cloth, and wore a soft felt hat with wide brim. Afoot, his step was brisk and firm; in the saddle he rode admirably and with a martial aspect. His early life had been spent in the Military Academy at West Point and upon the then north-western frontier in the Black Hawk War, and he afterwards greatly distinguished himself at Monterey and Buena Vista in Mexico; at the time when we knew him, everything in his appearance and manner was suggestive of such a training. He was reported to feel quite out of place in the office of President, with executive and administrative duties, in the midst of such a war; General Lee always spoke of him as the best of military advisers; his own inclination was to be with the army, and at the first tidings of sound of a gun, anywhere within reach of Richmond, he was in the saddle and off for the spot — to the dismay of his staff-officers, who were expected to act as an escort on such occasions, and who never knew at what hour of the night or of the next day they should get back to a bed or a meal. The stories we were told of his adventures on such excursions were many, and sometimes amusing. For instance, when General Lee had crossed the Chickahominy, to commence the Seven Days' battles, President Davis, with several staff-officers, overtook the column, and, accompanied by the Secretary of War and a few other non-combatants, forded the river just as the battle in the peach orchard at Mechanicsville began. General Lee, surrounded by members of his own staff and other officers, was found a few hundred yards north of the bridge, in the middle of the broad road, mounted and busily engaged in directing the attack then about to be made by a brigade sweeping in line over the fields to the east of the road and towards Ellerson's Mill, wherein a few minutes a hot engagement commenced. Shot, from the enemy's guns out of sight, went whizzing overhead in quick succession, striking every moment nearer the group of horsemen in the road, as the gunners improved their range. General Lee observed the President's approach, and was evidently annoyed at what

he considered a fool-hardy expedition of needless exposure of the head of the Government, whose duties were elsewhere. He turned his back for a moment, until Col. Chilton had been dispatched at a gallop with the last direction to the commander of the attacking brigade; then, facing the cavalcade and looking like the god of war indignant, he exchanged with the President a salute, with the most frigid reserve of anything like welcome or cordiality. In an instant, and without allowance of opportunity for a word from the President, the general, looking not at him but at the assemblage at large, asked in a tone of irritation:

“Who are all this army of people, and what are they doing here?”

No one moved or spoke, but all eyes were upon the President — everybody perfectly understanding that this was only an order for him to retire to a place of safety; and the roar of the guns, the rattling fire of musketry, and the bustle of a battle in progress, with troops continually arriving across the bridge to go into action, went on. The President twisted in his saddle, quite taken aback at such a greeting — the general regarding him now with glances of growing severity. After a painful pause the President said, with a voice of deprecation:

“It is not my army, general.”

“It certainly is not *my* army, Mr. President,” was the prompt reply, “and this is no place for it” — in an accent of command unmistakable. Such a rebuff was a stunner to the recipient of it, who soon regained his own serenity, however, and answered:

“Well, general, if I withdraw, perhaps they will follow,” and, raising his hat in another cold salute, he turned his horse’s head to ride slowly towards the bridge — seeing, as he turned, a man killed immediately before him by a shot from a gun which at that moment got the range of the road. The President’s own staff-officers followed him, as did various others; but he presently drew rein in the stream, where the high bank and the bushes concealed him from General Lee’s repelling observation, and there remained while the battle raged. The Secretary of War had also made a show of withdrawing, but improved the opportunity afforded by rather a deep

ditch on the roadside to attempt to conceal himself and his horse there for a time from General Lee, who at that moment was more to be dreaded than the enemy’s guns.

When on the 27th of June the Seven Days’ strife began, there was none of the excitement attending the battle of Seven Pines. People had shaken themselves down, as it were, to the grim reality of a fight that must be fought. “Let the war bleed, and let the mighty fall,” was the spirit of their cry.

It is not my purpose to deal with the history of those awful Seven Days. Mine only to speak of the rear side of the canvas where heroes of two armies passed and repassed as if upon some huge Homeric frieze, in the manoeuvres of a strife that hung our land in mourning. The scars of war are healed when this is written, and the vast “pity of it” fills the heart that wakes the retrospect.

What I have said of Richmond before these battles will suffice for a picture of the summer’s experience. When the tide of battle receded, what wrecked hopes it left to tell the tale of the Battle Summer! Victory was ours, but in how many homes was heard the voice of lamentation to drown the shouts of triumph! Many families, rich and poor alike, were bereaved of their dearest; and for many of the dead there was mourning by all the town. No incident of the war, for instance, made a deeper impression than the fall in battle of Colonel Munford’s beautiful and brave young son Ellis, whose body, laid across his own caisson, was carried that summer to his father’s house at nightfall, where the family, unconscious of their loss, were sitting in cheerful talk around the portal. Another son of Richmond whose death was keenly felt by everybody received his mortal wound while leading the first charge to break the enemy’s line at Gaines’s Mill. This was Lieutenant-Colonel Bradfute Warwick, a young hero who had won his spurs in service with Garibaldi. Losses like these are irreparable in any community; and so, with lamentations in nearly every household, while the spirit along the lines continued unabated, it was a chastened “Thank God” that went up from among us when Jackson’s victory over Pope had raised the siege of Richmond.

C. C. Harrison.

THE LAST OF THE SEVEN DAYS' BATTLES.*

MALVERN HILL, JULY 1ST, 1862.

FORT DARLING, ON THE JAMES, MIDWAY BETWEEN MALVERN HILL AND RICHMOND. (FROM PHOTOGRAPH.)

General McClellan's design. The present narrative will be confined to events coming under my own observation, and connected with my command, the Fifth Army Corps.

Saturday, June 28, 1862, the day after the battle of Gaines's Mill, my corps spent in bivouac at the Trent farm on the south bank of the Chickahominy. Artillery and infantry detachments guarded the crossings at the sites of the destroyed bridges. Our antagonists of the 27th were still north of the river, but did not molest us. We rested and recuperated as best we could, amid the noise of battle close by, at

Garnett's and Golding's farms, in which part of Franklin's corps was engaged, and the labor and bustle incident to the refilling of empty cartridge-boxes and haversacks, so as to be in readiness for immediate duty.

Our antagonists on the north bank of the river were apparently almost inactive. They seemed puzzled as to our intentions, or paralyzed by the effect of their own labors and losses, and, like ourselves, were recuperating for a renewal of the contest in the early future; though to them, as well as to us, it was difficult to conjecture where that renewal would be made. The only evidence of activity on their part was the dust rising on the road down the river, which we attributed, with the utmost unconcern, to the movements of troops seeking to interrupt our already abandoned communications with York River. The absence of any indication of our intention to maintain those communications, together with the rumble of our artillery, which that night was moving southward, opened the eyes of our opponents to the fact that we had accomplished the desired and perhaps necessary object of withdrawing to the south bank of the Chickahominy, and for the first time aroused their suspicion that we were either intending to attack Richmond or temporarily abandon the siege, during a change of base to the James River. But the active spurts on the 27th and 28th of June made by the defenders of that city against our left, created the false impression that they designed to attack the Second, Third, and

BEFORE the battle of Gaines's Mill (already described by me in these pages), a change of base from the York to the James River had been anticipated and prepared for by General McClellan. After the battle this change became a necessity, in presence of a strong and aggressive foe, who had already turned our right, cut our connection with the York River, and was also in large force behind the intrenchments between us and Richmond. The transfer was begun the moment our position became perilous. It now involved a series of battles by day, and marches by night, which brought into relief the able talents, active foresight, and tenacity of purpose of our commander, the unity of action on the part of his subordinates, and the great bravery, firmness, and confidence in their superiors on the part of the rank and file.

These conflicts from the beginning of the Seven Days' fighting were the engagement at Fair Oaks farm, the battles of Beaver Dam Creek and Gaines's Mill, the engagements at Golding's and Garnett's farms, and at Allen's farm or Peach Orchard; the battle of Savage's Station; the artillery duel at White Oak Swamp; the battle of Glendale (or Charles City Cross-roads); the action of Turkey Creek, and the battle of Malvern Hill. Each was a success to our army, the engagement of Malvern Hill being the most decisive. The result of the movement was that on the 2d of July our army was safely established at Harrison's Landing, on the James, in accordance with

* For an account of the Confederate part of the battle, see article by General D. H. Hill, July CENTURY.—ED.

FORT DARLING, LOOKING DOWN THE JAMES.

[In a report to General McClellan of the engagement at Fort Darling, which effectually stopped the advance of the Union gun-boats upon Richmond, Commander William Smith of the *Wachusett* says, in part: "On the 15th instant [May] the *Galena*, *Monitor*, *Naugatuck*, *Port Royal*, and *Aroostook* ascended this river to within about eight miles of Richmond, when they met with obstructions in the river which prevented their farther advance. The obstructions consisted of a row of piles driven across the channel, and three rows of vessels sunk also across the channel, among them the *Yorktown* and *Jamestown*. Just below these obstructions, on the south or west side of the river, were very formidable batteries, mounting fourteen guns, among them 11-inch shell, 100-pounder rifles, and nothing less than 8-inch shell guns. The river there is very narrow, the bank some two hundred feet high, and the guns so situated that they can be pointed directly down on the decks of the vessels. The sharpshooters can come on the banks and pick off the men on the vessels' decks. The gun-boats were engaged about four hours with the batteries, and then retired, having expended their ammunition. Our loss was twelve killed and

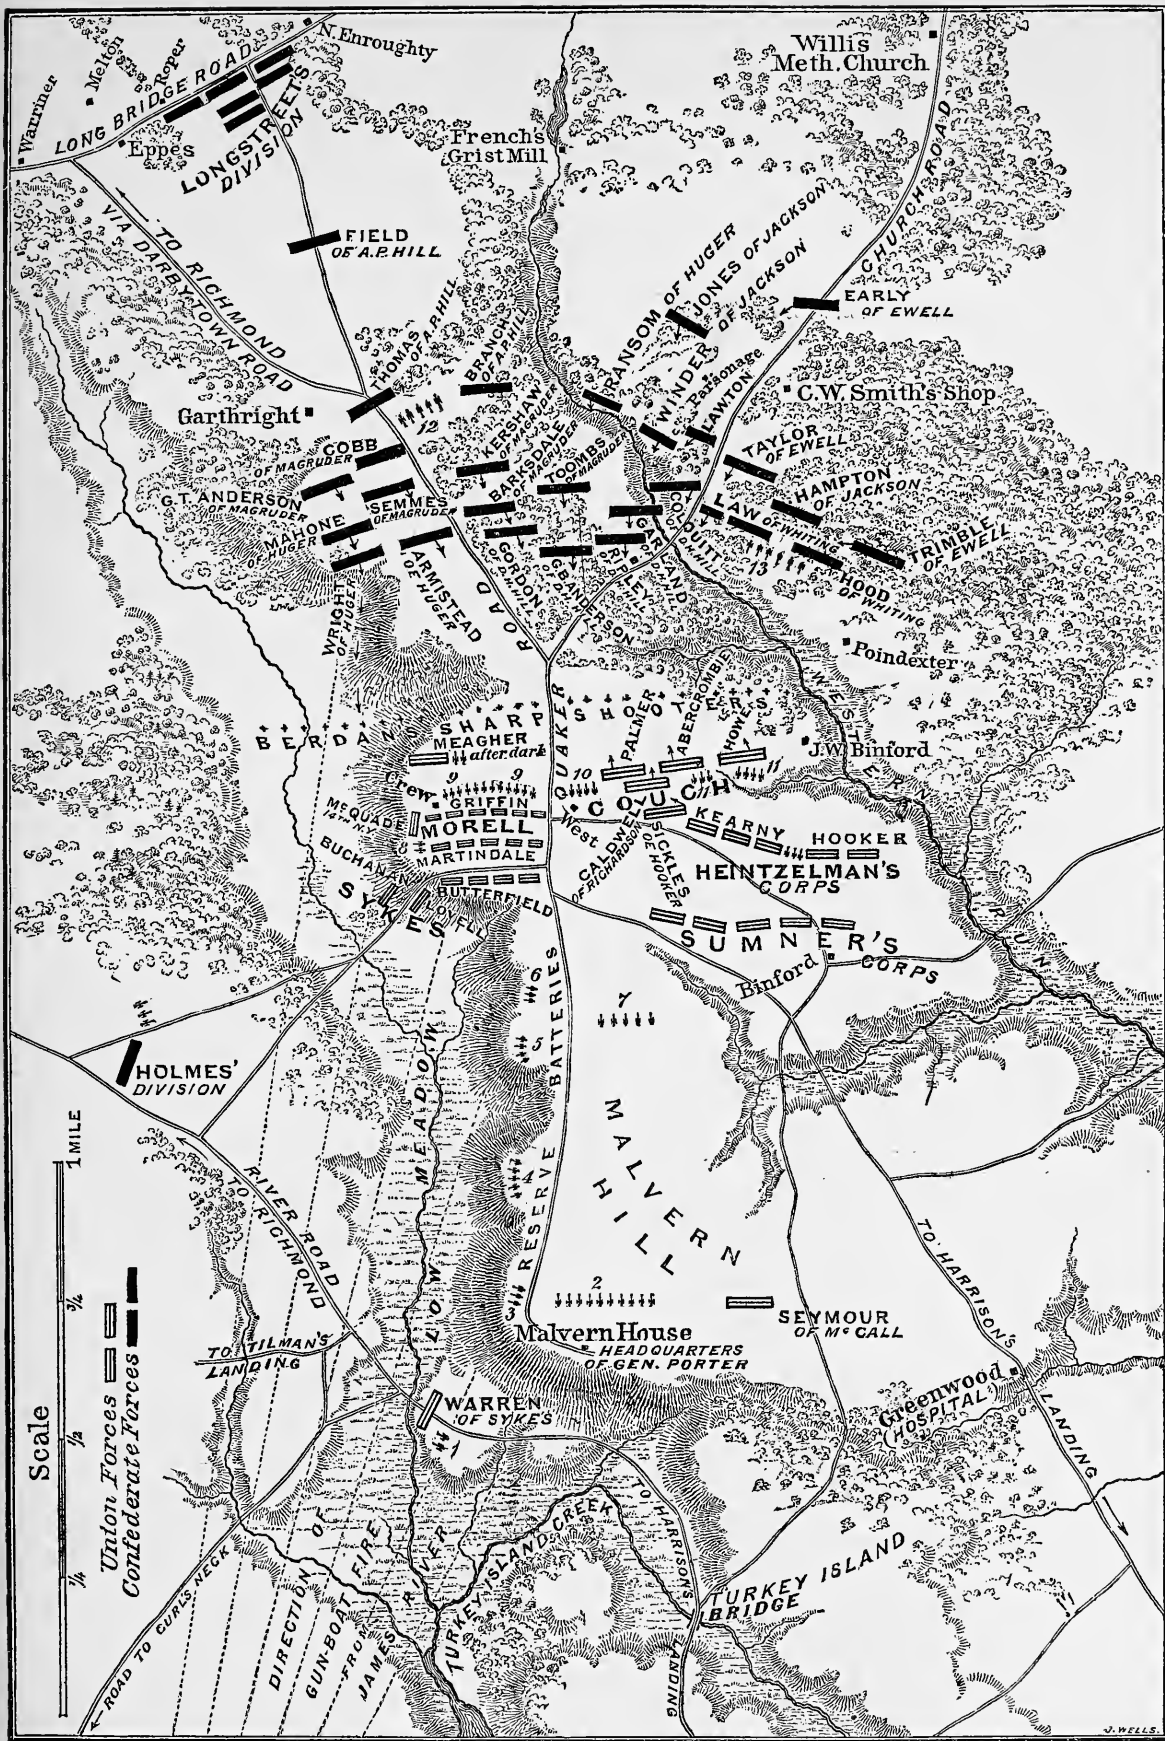

Fourth corps, and thereby succeeded in preventing an attack upon them. So, in order to thwart our plans, whatever they might be, promptly on the 29th, our opponents renewed their activity by advancing from Richmond, and by recrossing to the south bank of the river all their forces, lately employed at Gaines's Mill. But at that time the main body of our army was beyond their immediate reach, taking positions to cover the passage of our trains to the new base and to be ready again to welcome our eager and earnest antagonists.

OBSTRUCTIONS IN THE JAMES RIVER, NEAR FORT DARLING, ON DREWRY'S BLUFF. (FROM PHOTOGRAPHS.)

thirteen wounded; the vessels not much injured, except the *Galena*, which had eighteen shots through her sides and deck. The river is so narrow and crooked, and the banks so high, that the gun-boats cannot take a position for shelling the batteries except within a very short distance of them and directly under their guns. A gun-boat cannot turn under steam in the river. Commodore Rodgers of the *Galena*, who commanded the expedition, is decidedly of the opinion that the works cannot be reduced without the assistance of land forces."—EDITOR.]

Between 2 and 9 P. M. on the 28th, my corps was in motion, *via* Savage's Station, to the south side of White Oak Swamp; there, at the junction (Glendale) of the roads from Richmond, to be prepared to repel attacks from the direction of that city. Morell, leading, aided General Woodbury, of the engineer corps, to build the causeways and bridges necessary for the easy passage of the trains and troops over the swamps and streams. Sykes and McCall followed at five and nine o'clock, respectively; McCall being accompanied by Hunt's reserve artillery. We expected to reach

MAP OF THE BATTLE OF MALVERN HILL, SHOWING, APPROXIMATELY, POSITIONS OF BRIGADES AND BATTERIES.

[The Union batteries, as indicated on the map, were: 1, Martin's; 2, Tyler's; 3, 4, 5, 6, batteries in reserve; 7, Hunt's reserve artillery; 8 and 11, first and second positions of Waterman's (Weeden's); 9—9, Edwards's, Livingston's, Ames's, Kingsbury's, and Hyde's; 10, Snow's, Frank's, and Allen's; 11, Kingsbury's and Sealey's.

On the Union side the chief variations from these positions were the advance of a part of Butterfield's brigade, between Griffin and Couch, and the transfer of batteries from Morell to Couch. In repulsing Hill's attack, Couch advanced to the line which indicates the position of Berdan's sharpshooters (in the morning). During the afternoon Sickles's brigade took the place of Caldwell's, which had come up to Couch's aid and had suffered severely. The advance of Meagher was made about five o'clock, and was accom-

panied by 32-pounders, under General (then Colonel) Henry J. Hunt, which did terrible execution. It is said that the gun-boat fire and that of Tyler's artillery occasionally fell into Morell's lines.

On the Confederate side the brigades are placed on the map in the order of their moving to the attack; those marked with an arrow-head were actually in the charges or in the front line after dark; the arrow-head also indicates in each case the direction taken in going to the front. It is difficult to fix accurately the positions of the Confederate artillery. In general, 12 indicates Moorman's, Grimes's, and Pegram's; and 13 denotes the position of Balthis's, Poague's, and Carpenter's. In other positions, the batteries of Wooding (one section under Lieutenant Jones), Carrington, Hardaway, Boudurant, Hart, McCarthy, and the Baltimore Light Artillery were engaged to some extent — EDITOR.]

The Quaker road (as understood by the people living there) is the one leaving the road crosses the Crew farm, turns to the right (between the positions held by Martindale Long Bridge road at the position held by Longstreet's division (in reserve), and which receives the Church road (mistakenly called the Quaker road). Thence the Quaker road crosses the Crew farm, turns to the right (between the positions held by Martindale and Butterfield), crosses the meadow to the River road, and at Tilman's gate turns west again to Tilman's Landing, where, sixty years ago, there was a Quaker meeting-house.

our destination, which was only ten miles distant, early on the 29th; but, in consequence of the dark night and of the narrow and muddy roads, cut up and blocked by numerous trains and herds of cattle, either of which is always attended by embarrassing delays, the head of

and started anew. Fortunately I was at the head of the column to give the necessary orders, so that no delay occurred in retracing our steps.

Our new field of battle embraced Malvern Hill, just north of Turkey Creek and Crew's Hill, about one mile farther north. Both hills have given name to the interesting and eventful battle which took place on July 1st, and which I shall now attempt to describe.

The forces which on this occasion came under my control, and were engaged in or held ready to enter the contest, were my own corps, consisting of Morell's, Sykes's and McCall's divisions, Hunt's reserve artillery of one hundred pieces, including Tyler's siege Connecticut artillery, Couch's division of Keyes's corps, the brigades of Caldwell and Meagher of Sumner's corps, and the brigade of Sickles of Heintzelman's corps. Though Couch was placed under my command, he was left uncontrolled by me, as will be seen hereafter. The other brigades were sent to me by their respective division commanders, in anticipation of my needs or at my request.

This new position, with its elements of great strength, was better adapted for a defensive battle than any with which we had been favored. It was elevated, and more or less protected on each flank by small streams or swamps, while the portions of woods in front through which the enemy had to pass to attack us were in places marshy, and so thick that artillery could not penetrate and even troops moved with difficulty. Slightly in rear of our line of battle on Crew's Hill, the reserve artillery and infantry were held for immediate service. The Crew Hill concealed them from the view of the enemy and largely sheltered them from fire. These hills both to the east and west were connected with the adjacent valleys by gradually sloping plains except at the Crew house, where for a little distance the slope was quite abrupt, and was easily protected by a small force. The roads from Richmond, along which the enemy would be obliged to approach, except the River road, meet in front of Crew's Hill. This hill was flanked with ravines, enfiladed by our fire. The ground in front was cleared and sloping, but not steep, and over it our artillery and infantry, themselves protected by the crest and ridges, had clear sweep for their fire. In all directions, for several hundred yards, the land over which an attacking force must advance was almost entirely cleared of forest and generally cultivated.

I reached Malvern Hill some two hours before my command on Monday, June 30th; each portion of which, as it came upon the field, was assigned to a position from which,

MAJOR-GENERAL GEORGE W. MORELL.
(FROM A PHOTOGRAPH BY BRADY.)

the column arrived at 10 A. M., the rear not until midnight. McCall arrived latest, and all were greatly fatigued.

The enemy not having appeared at Glendale on the afternoon of the 29th, and other troops arriving to take the place of mine, General McClellan ordered me to move that night by the direct road to the elevated and cleared lands (Malvern Hill) on the north bank of Turkey Creek, there to select and hold a position behind which the army and all its trains could be withdrawn with safety. General Keyes was to move by a different road and form to my right and rear.

Again the dangers and difficulties of night marches attended us, followed by the consequent delay; which, though fortunately it was counterbalanced by the slowness of our opponents in moving to the same point, endangered the safety of our whole army. Although we started before dark, and were led by an intelligent cavalry officer who had passed over the route and professed to know it, my command was so delayed after dark that we did not reach Turkey Creek, which was only five miles distant, until 9 A. M. on the 30th. In fact, we were misled up the Long Bridge road towards Richmond until we came in contact with the enemy's pickets, when we returned

VIEW FROM MALVERN HILL, LOOKING TOWARD THE JAMES.
(DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY ANDERSON.)

[This view is taken from near the position of Tyler's siege-guns (see map). The engagement of Malvern Cliff, or Turkey Island bridge, on the 30th of June, between Generals Warren and Holmes, took place on a road at the foot of the hill which passes near the house in the middle-ground. The bridge is to the left on this road. The winding stream is Turkey Creek. In the middle distance is the position of the three gun-boats which shelled the woods at the right both on the 30th of June and the 1st of July.—Ed.]

MALVERN HILL, FROM THE DIRECTION OF TURKEY ISLAND
BRIDGE. (FROM SKETCH BY G. L. FRANKENSTEIN.)

in connection with the rest of the command, the approaches from Richmond along the River road and the debouches from the New Market, Charles City and Williamsburg roads, could be thoroughly covered. Warren, with his brigade, now of only about six hundred men, took position on the low lands to the left, to guard against the approach of the enemy along the River road, or over the low, extensive and cultivated plateau beyond and extending north along Crew's Hill. Warren's small brigade was greatly in need of rest from the fatigues of battle and constant motion for several days and nights. It was not expected that it would be called upon to perform much more than picket duty. It was large enough, however, for the purpose designed, as it was not probable that any large force would be so reckless as to advance on that road. Its diminished strength was due to the fact that it had suffered greatly at Gaines's Mill. Warren was supported by the Eleventh Infantry, under Major Floyd-Jones, and late in the afternoon was strengthened by Martin's battery of

twelve-pounders and a detachment of cavalry under Lieutenant Frank W. Hess.

On the west side of Malvern Hill, overlooking Warren, were some thirty-six guns, some of long range, having full sweep up the valley and over the cleared lands north of the River road. These batteries comprised Weed's, a New York battery, Edwards's, Carlisle's, Smead's and Voegelée's, with others in reserve. To these, later in the day, were added the siege-guns of the Connecticut Artillery, under Colonel Robert O. Tyler, which were placed on elevated ground immediately to the left of the Malvern House, so as to fire over our front line at any attacking force and to sweep the low meadow on the left.

To General (then Colonel) Henry J. Hunt, the accomplished and energetic chief of artillery, was due the excellent posting of these batteries on June 30th, and the rearrangement of all the artillery along the whole line on Tuesday (July 1st), together with the management of the reserve artillery on that day.

Major Lovell, commanding Chapman's

brigade of Sykes's division, supported some of these batteries, and, with Buchanan on his right, in a clump of pines, extended the line northward, near the Crew (sometimes called the Mellert) house.

teries as located on Tuesday, the day of the battle, were those of Edwards, Livingston, Kingsbury, Ames, part of Weeden's under Waterman, part of Allen's under Hyde, and Bramhall's. Other batteries as they arrived

THE MALVERN HOUSE. (DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY E. S. ANDERSON.)

[During the engagement at Turkey Island bridge and the battle of Malvern Hill, this house was the headquarters of General Porter, and was a signal-station in communication with the gun-boats in the James River, toward which it fronts. It was

built of imported English brick, of a dark but vivid red. The main battle-field is in the direction of the trees on the right and Tyler's siege-guns were near the small trees in the left distance.—EDITOR.]

Morell, prolonging Sykes's line on Crew's Hill, with headquarters at Crew's house, occupied the right of the line extending to the Quaker road. To his left front, facing west, was the Fourteenth New York Volunteers, under Colonel McQuade, with a section of Weeden's Rhode Island Battery, both watching the Richmond road and valley and protecting our left. On their right, under cover of a narrow strip of woods, skirting the Quaker road, were the brigades of Martindale and Butterfield, while in front of these, facing north, was Griffin's brigade. All were supporting batteries of Morell's division, commanded by Captain Weeden and others, under the general supervision of General Griffin, a brave and skilled artillery officer; these bat-

were posted in reserve south of Crew's Hill, and were used to replace batteries whose ammunition was exhausted; or, were thrown forward into action to strengthen the line. The different commands as soon as they were posted prepared to pass the night in securing the rest greatly needed both by man and beast.

Later on Monday Couch's division of Keyes's corps came on the field and took its place extending Morell's line to the right of the Quaker road. The greater part of the supply trains of the army and of the reserve artillery passed safely beyond Turkey Creek through the command thus posted; the movement only ceasing about four o'clock that afternoon.

About three o'clock on Monday the enemy

THE CREW HOUSE. (DRAWN BY HARRY FENN. THE UPPER PICTURE SHOWS THE OLD HOUSE, AND IS FROM A COLOR-SKETCH BY G. L. FRANKENSTEIN; THE NEW HOUSE SHOWN IN THE LOWER PICTURE FROM A RECENT PHOTOGRAPH BY E. S. ANDERSON.)

[The old building, sometimes called Dr. Mellert's house, was the headquarters of General Morell; and during the firing members of the Signal Corps were at work on the roof. It was burned after, and the new structure built on the same foundations. The view in each case is from the east.

The lane, in the lower picture, from the Quaker road was the line of Griffin's guns. McQuade's repulse of the attack on the hill took place behind the cabin on the left of the picture. The Crew farm is said to be one of the most fertile on the Peninsula.—EDITOR.]

was seen approaching along the River road, and Warren and Hunt made all necessary dispositions to receive them. About four o'clock the enemy advanced and opened fire from their artillery upon Warren and Sykes and on the extreme left of Morell, causing a few casualties in Morell's division. In return for this intrusion the concentrated rapid fire of the artillery was opened upon them, soon smashing one battery to pieces, silencing another, and driving back their infantry and cavalry in rapid retreat, much to the satisfaction of thousands of men watching the result. The enemy left behind in possession of Warren a few prisoners, two guns and six caissons, the horses of which had been killed. The battery which had disturbed Morell was also silenced by this fire of our artillery. On this occasion the gun-boats in the James made apparent their welcome presence and gave good support by bringing their heavy guns to bear upon the enemy. Though their fire caused a few casualties among our men, and inflicted but little, if any, injury upon the enemy, their large shells, bursting amid the enemy's troops far beyond

the attacking force, carried great moral influence with them, and naturally tended, in addition to the effect of our artillery, to prevent any renewed attempt to cross the open valley on our left. This attacking force formed a small part of Wise's brigade of Holmes's division. They were all raw troops, which accounts for their apparently demoralized retreat. This affair is known as the action of Turkey Island bridge or Turkey Creek.

The gun-boats located near the mouth of Turkey Creek and engaged at this time and the next day were the *Galena*, *Aroostook*, and *Mahaska*, under the special charge of Commodore John Rodgers of the navy. At the request of General McClellan they had been sent up the river by Admiral Goldsborough, to protect the vessels loaded with supplies which had been ordered up in the middle of June. The crews were eager and earnest in their work and their labors gave effective warning to the enemy to keep beyond the reach of their guns at other times and places.

Some idea may be formed from the following incident of how indifferent to noises or unconscious of sudden alarms one may

THE MAIN BATTLE-FIELD — VIEW OF THE CONFEDERATE POSITION FROM THE FEDERAL LINE NEAR THE WEST HOUSE. (DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY E. S. ANDERSON.)

[The Confederate advance was from the woods in the right and center of the background and from the meadow (not visible) on the left. The wooded knoll is supposed to be the point from which Generals Wright and Armistead reconnoitered the Federal position, as described by General Wright in his report. (See next page.) — Epiror.]

become when asleep, under the sense of perfect security or from the effect of fatigue. For several days I had been able to secure but little sleep, other than such as I could catch on horseback, or while resting for a few minutes. During this heavy artillery firing I was asleep in the Malvern house. Although the guns were within one hundred yards of me, and the windows and doors were wide open, I was greatly surprised some two hours afterwards, when informed that the engagement had taken place. For weeks I had slept with senses awake to the sound of distant cannon, and even of a musket-shot, and would be instantly aroused by either. But on this occasion I had gone to sleep free from care, feeling confident that however strong an attack might be made, the result would be the repulse of the enemy without much damage to us. My staff, as much in need of rest as myself, sympathized with me and let me sleep.

Our forces lay on their arms during the night, in substantially the positions I have described, patiently awaiting the attack expected on the following day.

McCall's division of Pennsylvania Reserves, under General Truman Seymour, arrived during the night and was posted just in front of the Malvern house, and was held in reserve, to be called upon for service only in case of absolute necessity. This division had reached me at New Market cross-roads, at midnight of the 29th, greatly in need of rest. This fact, and the necessity that a reliable force should hold that point until the whole army had crossed the White Oak Swamp and the trains had passed to the rear, compelled the assignment of McCall to the performance of that duty. During the afternoon of the 30th he was attacked by large forces of the enemy, which he several times repulsed, but failed to enjoy the advantages of his success through the recklessness and irrepressible impetuosity of his men or forgetfulness of orders by infantry subordinates. They were strictly cautioned, unless unusual fortune favored them, not to pass through a battery for the purpose of pursuing a repulsed enemy, and under no circumstances to return in face of one, so as to check its fire. In the excitement of presumed success at repulsing a heavy attack, a brigade pushed after a rapidly fleeing foe, and was impulsively joined by its neighbors who wished not to be excelled in dash or were perhaps encouraged by injudicious orders. Passing through their own batteries as they advanced, they lost the benefit of their fire, as they did also when returning after being repulsed and pursued by the enemy's reserves. Disregard of these principles at this time caused heavy losses of men and led to the demoralization at a critical moment of one good volunteer battery and the capture, through no fault of its captain, of one of the best batteries of the regular army. This battery was commanded by Captain A. M. Randol, a brave and accomplished artillery officer of the regular army. This division had otherwise suffered heavily. At Gaines's Mill it had lost, by capture, one of the ablest generals, John F. Reynolds, with other gallant and efficient officers and men, captured, killed, and wounded. Its misfortunes culminated in the capture at New Market cross-roads of McCall, the wounding of General George G. Meade, his able assistant, and the loss of many excellent subordinates. Fortunately the brave and experienced soldier, General Seymour, with his worthy officers, escaped to lead the survivors of the division to our camp,

THE MAIN BATTLE-FIELD—VIEW OF THE FEDERAL POSITION FROM THE WOODED KNOLL SHOWN IN THE PRECEDING PAGE. (DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY E. S. ANDERSON.)

[Morell's line extended from the Crew house on the right to the West house in the extreme left of the picture. Couch extended the line a third of a mile to the left of the West house. The ravine to the right of the barn and buildings in the middle-ground, descends to the meadow; it was by this ravine and the shelter of the out-buildings that the Confederates effected a lodgment on the hill, at dusk, compelling Griffin to shift his guns to avoid capture. Gen. A. R. Wright, who commanded a brigade in Huger's division, in his official report describes as follows the aspect of the Federal position, as seen from the wooded knoll shown on the previous page: "I suggested to General Armistead that we go forward to the edge of the field, and, under protection of a strong force of skirmishers, ascend a high knoll or hill which abruptly sprang from the meadow below and on our right, from the summit of which we would be able to observe the enemy's movements. Having reached this position, we were enabled to get a very complete view of McClellan's army. Immediately in our front, and extending one mile, stretched a field, at the farther extremity of which was situated the dwelling and farm buildings of Mr. Crew (formerly Dr. Mellert). In front and to our left the land rose gently from the edge of the woods up to the farm-yard, when it became high and rolling. Upon the right the field was broken

by a series of ridges and valleys, which ran out at right angles to a line drawn from our position to that of the enemy, and all of which terminated upon our extreme right in a precipitous bluff, which dropped suddenly down upon a low, flat meadow, covered with wheat and intersected with a number of ditches, which ran from the bluff across the meadow to a swamp or dense woods about five hundred yards farther to our right. This low, flat meadow stretched up to, and swinging around, Crew's house, extended as far as Turkey Bend, on James River. The enemy had drawn up his artillery (as well as could be ascertained about fifty pieces) in a crescent-shaped line, the convex line being next to our position, with its right (on our left) resting upon a road which passed three hundred yards to the left of Crew's house, on Malvern Hill, the left of their advanced line of batteries resting upon the high bluff which overlooked the meadow to the right (our right) and rear of Crew's house. Their infantry, a little in the rear of the artillery, and protected by the crest of the ridge upon which the batteries were placed, extended from the woods on our left along the crest of the hill and through a lane in the meadow on our right to the dense woods there. In rear of this and beyond a narrow ravine, the sides of which were covered with timber, and which ran parallel to their line of battle and but

a few rods in the rear of Crew's house, was another line of infantry, its right resting upon a heavy, dense woods, which covered the Malvern Hill farm on the east. The left of this line rested upon the precipitous bluff which overhung the low meadow on the west of the farm. At this point the high bluff stretched out to the west for two hundred yards in a long ridge or ledge (nearly separating the meadow from the low lands of the river), upon the extreme western terminus of which was planted a battery of heavy guns. This latter battery commanded the whole meadow in front of it, and by a direct fire was able to dispute the manoeuvring of troops over any portion of the meadow. Just behind the ravine which ran in rear of Crew's house, and under cover of the timber, was planted a heavy battery in a small redoubt, whose fire swept across the meadow. These two batteries completely controlled the movement of troops in large masses upon it. The whole number of guns in these several batteries could not have fallen far short of one hundred. The infantry force of the enemy I estimated at least twenty-five thousand or thirty thousand from what I saw. Large numbers, as I ascertained afterward, were posted in the woods on our extreme right and left, and the line of ditches across the meadow were lined with sharpshooters." — EBITOK.]

where they were welcomed by their sympathizing comrades.

Early on Tuesday our lines were re-formed and slightly advanced to take full advantage of the formation of the ground, the artillery

MAJOR-GEN. GEORGE SYKES. (FROM A PHOTOGRAPH BY BRADY.)

of the front line being reposted in commanding positions, and placed under General Griffin's command, but under Captain Weeden's* care, just behind the crest of the hill. The infantry was arranged between the artillery to protect and be protected by its neighbors, and prepared to be thrown forward, if at any time advisable, so as not to interfere with the artillery fire.

The corps of Heintzelman and Sumner had arrived during the night, and taken position in the order named to the right and rear of Couch's division, protecting that flank effectively towards Western Run. They did not expect to be seriously engaged, but were ready to resist attack and to give assistance to the

* Captain William B. Weeden, in a recent letter (May 24, 1885), says of the battle: "It was a fine afternoon, hot but tempered by a cooling breeze. The soldiers waited; patience, not courage, kept them steady. The ranks were full now; each knew that in himself he might be a possible victor or a possible victim at nightfall. Crew's deserted house, more hospitable than its owner, had furnished a luxury seldom enjoyed on the field. Water, not warm in the canteen, but iced, in a delf pitcher, with civilized glasses, was literally 'handed round.' Ganymedes there were none and of Hebes yet fewer, but Olympus never furnished more welcome nectar. Pickets and skirmishers had kept us informed of the opposing formations and of batteries going into position. The sharpshooters' bullets began to thicken. Action might begin at any moment, and between two and three o'clock it did begin. Out of the woods, puffs of smoke from guns and nearer light wreaths from their shells lent new colors to the green of woods and fields and the deep blue sky. The musketry cracked before it loudened into a roar and whizzing bullets mingled with ragged exploding shells. The woods swarmed with butternut coats and gray. These colors were worn by a lively race of men and they stepped forward briskly, firing as they moved. The regimental formations were plainly visible, with the colors flying. It was the onset of battle with the good order of a review. In this first heavy skirmish—the prelude of the main action—Magruder's right made a deter-

center and left, if circumstances should require it. At an early hour in the day Sumner kindly sent me Caldwell's brigade, as he thought I might need help. This brigade I placed near Butterfield, who was directed to send it forward wherever needed or called for. He sent it to Couch at an opportune moment early in the day.

General McClellan, accompanied by his staff, visited our lines at an early hour, and approved my measures and those of General Couch, or changed them where it was deemed advisable. Though he left me in charge of that part of the field occupied by Couch, I at no time undertook to control that general, or even indicated a desire to do so, but with full confidence in his ability, which was justified by the result of his action, left him free to act in accordance with his own judgment. I cooperated with him fully, however, having Morell's batteries, under Weeden, posted so as to protect his front, and sending him help when I saw he needed it. His division, though it suffered severely in the battle of Fair Oaks, had seen less service and met with fewer losses in these "seven days' battles" than any one of my three, and was prepared with full ranks to receive an attack, seeming impatient and eager for the fight. Its conduct soon confirmed this impression. Batteries of Hunt's reserve artillery were sent to him when needed—as well as Caldwell's brigade, voluntarily sent to me early in the day by Sumner, and also Sickles's brigade, borrowed of Heintzelman for the purpose.

About ten A. M. the enemy's skirmishers and artillery began feeling for us along our line; they kept up a desultory fire until about twelve o'clock, with no severe injury to our infantry, who were well masked, and who revealed but little of our strength or position by retaliatory firing or exposure.

Up to this time and to nearly one o'clock our infantry were resting upon their arms and waiting the moment, certain to come, when the column of the enemy rashly advancing

mined attack by way of the meadow to pierce Griffin's line to turn Ames's Battery and to break the solid advantages of position held by the Union forces.

The brunt of the blow fell upon Colonel McQuade's 14th New York. This was a gallant regiment which had suffered much in the rough work at Gaines's Mill. The Confederate charge was sudden and heavy. The New Yorkers began to give ground, and it looked for a moment as if the disasters of Gaines's Mill might be repeated. But only for a moment. The men stiffened up to the color line, charged forward with a cheer, and drove back the enemy. Weeden's Rhode Island Battery of three-inch rifled ordnance guns had lost three pieces at Gaines's Mill. The remaining guns, under command of Lieutenant Waterman, were stationed south and west of Crew's, fronting left and rearward. It was the angle of our position and so far west that Tyler's heavy guns mistook it for the enemy and fired 4½-inch shells into it. One caused severe casualties. The battery was withdrawn from this dangerous range, and later in the afternoon, when the main action was raging, Waterman's three guns, with two of the same type under Lieutenant Phillips of Massachusetts, relieved Kingsbury and Hazlitt's regular batteries of Parrotts on Couch's right. The service here was admirable. Waterman with only half a battery had a whole company of experienced gunners. When the ammunition gave out they were in turn relieved by a fresh battery."—EDITOR.

would render it necessary to expose themselves. Our desire was to hold the enemy where our artillery would be most destructive, and to reserve our infantry ammunition for close quarters to repel the more determined assaults of our obstinate and untiring foe. Attacks by brigade were made upon Morell, both on his left front and on his right, and also upon Couch; but our artillery, admirably handled, without exception, was generally sufficient to repel all such efforts and to drive back the assailants in confusion, after great losses.

While the enemy's artillery was firing upon us General Sumner withdrew part of his corps to the slope of Malvern Hill to the right of the Malvern house which descended into the valley of Western Run. Then, deeming it advisable to withdraw all our troops to that line, he ordered me to fall back to the Malvern house; but I protested that such a movement would be disastrous, and declined to obey the order until I could confer with General McClellan, who had approved of the disposition of our troops. Fortunately Sumner did not insist upon my complying with the order, and, as we were soon vigorously attacked, he advanced his troops to a point where he was but little disturbed by the enemy, but from which he could quickly render aid in response to calls for help or where need for help was apparent.

On one occasion, when I sent an urgent request for two brigades, Sumner read my note aloud, and, fearing he could not stand another draft on his forces, was hesitating to respond, when Heintzelman, ever prompt and generous, sprang to his feet and exclaimed: "By Jove! if Porter asks for help, I know he needs it and I will send it." The immediate result was the sending of Meagher by Sumner and Sickles by Heintzelman. This was the second time that Sumner had selected and sent me Meagher's gallant Irish brigade, and each time it rendered invaluable service. I served under General Heintzelman up to the capture of Yorktown, and learned to know him well, as he did me. I ever gratefully appreciated his act as the prompting of a thoughtful, generous, and chivalrous nature.

These spasmodic though sometimes formidable attacks of our antagonists, at different points along our whole front, up to about four o'clock, were presumably demonstrations or feelers, to ascertain our strength, preparatory to their engaging in more serious work. An

BRIG.-GENERAL LEWIS A. ARMISTEAD, C. S. ARMY. KILLED AT GETTYSBURG, FOREMOST IN THE FAMOUS CHARGE OF PICKETT'S DIVISION.

ominous silence, similar to that which had preceded the attack in force along our whole line at Gaines's Mill, now intervened, until, at about 5:30 o'clock, the enemy opened upon both Morell and Couch with artillery from nearly the whole of his front, and soon afterwards pressed forward his columns of infantry, first on one and then on the other, or on both. As if moved by a reckless disregard of life, equal to that displayed at Gaines's Mill, with a determination to capture our army, or destroy it by driving us into the river, regiment after regiment, and brigade after brigade, rushed at our batteries; but the artillery of both Morell and Couch mowed them down with shrapnel, grape, and canister; while our infantry, withholding their fire until the enemy were within short range, scattered the remnants of their columns, sometimes following them up and capturing prisoners and colors.

As column after column advanced, only to meet the same disastrous repulse, the sight became one of the most interesting imaginable. The fearful havoc of the rapidly bursting shells from guns arranged so as to sweep any position far and near, and in any direction, was terrible to behold. The terrific hail could not be borne,

THE WEST HOUSE, LOOKING TOWARDS THE CREW HOUSE. (DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY ANDERSON.)

[This house was the dividing point between Couch's division and Morell's line, the artillery fronting the fence and being nearly on the line indicated by it. The West house was occupied as headquarters by General Couch.—EDITOR.]

and such as were left of the diminished columns precipitately fled or marched rapidly to the rear, sometimes followed by our infantry, whose shots leveled many more of their brave men. Pressed to the extreme as they were, the courage of our men was fully tried. The safety of our army — the life of the Union — was felt to be at stake.

In one case the brigades of Howe, Abercrombie, and Palmer, of Couch's division, under impulse gallantly pushed after the retreating foe, captured colors, and advantageously advanced the right of the line, but at considerable loss and great risk. The brigades of Morell, cool, well disciplined, and easily controlled, let the enemy return after each repulse, but permitted few to escape their fire. Colonel McQuade, on Morell's left, with the Fourteenth New York, against orders and at the risk of defeat and disaster, yielding to impulse, gallantly dashed forward and repulsed an attacking party. Assisted by Buchanan of Sykes's division, Colonel Rice, with the Forty-fourth New York Volunteers, likewise drove a portion of the

enemy from the field, taking a flag bearing the motto "Seven Pines." Colonel Hunt, directing the artillery, was twice dismounted by having his horse shot under him, but though constantly exposed continued his labors until after dark. General Couch who was also dismounted, in like manner, took advantage of every opportunity to make his opponents feel his blows.

It is not to be supposed that our men, though concealed by the irregularities of the ground, were not sufferers from the enemy's fire. The fact is that before they exposed themselves by pursuing the enemy, the ground was literally covered with the killed and wounded from dropping bullets and bursting shells and their contents; but they bravely bore the severe trial of having to remain inactive under a damaging fire.

As Morell's ranks became thinned and ammunition was exhausted, other regiments eagerly advanced; all were stimulated by the hope of a brilliant and permanent success, and nerved by the approving shouts of their comrades and the cry of "Revenge, boys!" "Remember McLean!" "Remember Black!"

VIEW FROM THE MEADOW WEST OF THE CREW HOUSE. (DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY ANDERSON.)

[The Crew house is in the extreme right of the picture. The hill to the left is the high ground shown on page 622. The ravine between the two is the ravine shown in the right of the picture, page 623. At the time of the battle the low ground was in wheat, partly shocked, affording protection for the Union sharpshooters

under Berdan. Farther to the left, up this valley, and in the rear of the hill, was the right of the Confederate line, which late in the evening made several assaults upon the Crew Hill, by way of the ravine and meadow.—EDITOR.]

“Remember Gove!” or “Remember Cass!” The brave and genial Black and McLean and Gove had been killed at Gaines’s Mill; Woodbury and Cass (two noble heroes) were then lying before them. Colonel McQuade was the only regimental commander of Griffin’s brigade who escaped death during the Seven Days, and he only as by a miracle, for he was constantly exposed.

During that ominous silence of which I have spoken, I determined that our opponents should reap no advantage, even if our lines yielded to attack, and therefore posted batteries, as at Gaines’s Mill, to secure against the disaster of a break in our lines, should such a misfortune be ours. For this purpose I sent Weed, Carlisle, and Smead, with their batteries, to the gorge of the roads on Crew’s Hill, from which the enemy must emerge in pursuit if he should break our lines; instructing them to join in the fight if necessary, but not to permit the advance of the foe, even if it must be arrested at the risk of firing upon friends. To these Colonel Hunt added three batteries of horse artillery. Though they were all thus posted and their guns loaded with double canister, “they were,” as Captain Smead re-

ported, “very happy to find their services not needed on that occasion.”

It was at this time, in answer to my call for aid, that Sumner sent me Meagher and Heintzelman sent Sickles; both of whom reached me in the height of battle, when, if ever, fresh troops would renew our confidence and insure our success. While riding rapidly forward to meet Meagher, who was approaching at a “double-quick” step, my horse fell, throwing me over his head, much to my discomfort both of body and mind. On rising and remounting, I was greeted with hearty cheers, which alleviated my chagrin. This incident gave rise to the report, spread through the country, that I was wounded.

Fearing that I might fall into the hands of the enemy, and if so that my diary and dispatch-book of the campaign, then on my person, would meet with the same fate and reveal information to the injury of our cause, I tore it up, scattering the pieces to the winds, as I rode rapidly forward, leading Meagher into action. I have always regretted my act as destroying interesting and valuable memoranda of our campaign.

Advancing with Meagher’s brigade, accom-

panied by my staff, I soon found that our forces had successfully driven back their assailants. Determined, if possible, satisfactorily to finish the contest, regardless of the risk of being fired upon by our artillery in case of defeat, I pushed on beyond our lines into the woods held by the enemy. About fifty yards in front of us, a large force of the enemy suddenly rose and opened with fearful volleys upon our advancing line. I turned to the brigade, which thus far had kept pace with my horse, and found it standing, "like a stone wall," and returning a fire more destructive than it received and from which the enemy fled. The brigade was planted. My presence was no longer needed, and I sought General Sickles, whom I found giving aid to Couch. I had the satisfaction of learning that night that a Confederate detachment, undertaking to turn Meagher's left, was met by a portion of the Sixty-ninth New York Regiment, which, advancing, repelled the attack and captured many prisoners.

After seeing that General Sickles was in a proper position, I returned to my own corps, where I was joined by Colonel Hunt with some thirty-two-pounder howitzers. Taking

GENERAL JAMES McQUADE, DIED 1885. AT MALVERN HILL, COLONEL OF THE FOURTEENTH N. Y. (FROM A PHOTOGRAPH BY BRADY.)

MAJOR-GEN. WILLIAM MAHONE, C. S. ARMY. (FROM A PHOTOGRAPH BY BRADY.)

those howitzers, we rode forward beyond our lines, and, in parting salutation to our opponents, Colonel Hunt sent a few shells, as a warning of what would be ready to welcome them on the morrow if they undertook to disturb us.

Almost at the crisis of the battle — just before the advance of Meagher and Sickles — the gun-boats on the James River opened their fire with the good intent of aiding us, but either mistook our batteries at the Malvern house for those of the enemy, or were unable to throw their projectiles beyond us. If the former was the case, their range was well estimated, for all their shot landed in or close by Tyler's battery, killing and wounding a few of his men. Fortunately members of our excellent signal-service corps were present as usual on such occasions; and the message signaled to the boats, "For God's sake, stop firing," promptly relieved us from further damage and the demoralization of a "fire in the rear." Reference is occasionally seen in Confederate accounts of this battle to the fearful sounds of the projectiles from those gun-boats. But that afternoon not one of their projectiles passed beyond my headquarters; and I have always believed and said, as has General Hunt, that the enemy mistook the explosions of shells

from Tyler's siege-guns and Kusserow's thirty-two-pounder howitzers, which Hunt had carried forward, for shells from the gun-boats.

While Colonel Hunt and I were returning from the front about nine o'clock, we were joined by Colonel Colburn, of McClellan's staff. We all rejoiced over the day's success.

By these officers I sent messages to the commanding general, expressing the hope that our withdrawal had ended and that we should hold the ground we now occupied, even if we did not assume the offensive. From my stand-point I thought we could maintain our position, and perhaps in a few days could improve it by advancing. But I knew only the circumstances before me, and these were limited by controlling influences. It was now after nine o'clock at night. Within an hour of the time that Colonels Hunt and Colburn left me, and before they could have reached the commanding general, I received orders from him to withdraw, and to direct Generals Sumner and Heintzelman to move at specified hours to Harrison's Landing, and General Couch to rejoin his corps, which was then under way to the same point.

These orders were immediately sent to the proper officers, and by daybreak July 2d our troops, preceded by their trains, were well on their way to their destination, which they reached that day, greatly wearied after a hard march over muddy roads, in the midst of a heavy rain. That night, freed from care and oblivious of danger, all slept a long sleep; and they woke the next morning with the clear sun, a happier, brighter, and stronger body of men than that which all the day before, depressed and fatigued, had shivered in the rain.

The conduct of the rear-guard was intrusted to Colonel Averell, commander of the Third Pennsylvania Cavalry, sustained by Colonel Buchanan, with his brigade of regulars, and the Sixty-seventh New York Regiment. No trying trust was ever better bestowed or more satisfactorily fulfilled. At daybreak Colonel

Averell found himself accidentally without artillery to protect his command in its difficult task of preventing an attack before our rear was well out of range. He at once arranged his cavalry in bodies to represent horse batteries, and, manœuvring them to create the impression that they were artillery ready for

BERDAN'S SHARP-SHOOTERS (OF MORELL'S DIVISION) SKIRMISHING IN THE MEADOW WHEAT-FIELD.

action, he secured himself from attack until the rest of the army and trains had passed sufficiently to the rear to permit him to retire rapidly without molestation. His stratagem was successful, and without loss he rejoined the main body of the army that night. Thus ended the memorable "Seven Days' battles," which, for severity and for stubborn resistance and endurance of hardships by the contestants, were not surpassed during the war. Each antagonist accomplished the results for which he aimed: one insuring the temporary relief of Richmond; the other gaining security on the north bank of the James, where the Union army, if our civil and military authorities were

SCENE OF THE CONFEDERATE ATTACK ON WEST SIDE OF CREW'S HILL, LOOKING FROM THE CREW HOUSE SOUTH-WEST TOWARD THE JAMES RIVER. (DRAWN BY HARRY FENN, AFTER PHOTOGRAPH BY ANDERSON.)

[The Confederates came down the valley or meadow from the right, and advanced up this slope toward the two guns of Weeden, which were supported by the Fourteenth New York. The road across the meadow leads to Holmes's position on the River road.—EDITOR.]

disposed, could be promptly reënforced, and from whence only, as subsequent events proved, it could renew the contest successfully. Preparations were commenced and dispositions were at once made under every prospect, if not direct promise, of large reënforcements for a renewal of the struggle on the south side of the James, and in the same manner as subsequently brought a successful termination of the war.

In the Fifth Corps, however, mourning was mingled with rejoicing. Greatly injured by the mishap of a cavalry blunder at Gaines's Mill,* it had at Malvern, with the brave and gallant help of Couch and the generous and chivalric assistance of Heintzelman and Sumner, successfully repulsed the foe in every quarter, and was ready to renew the contest at an opportune moment. Our killed and wounded were numbered by thousands; the loss of the Confederates may be imagined.†

* It is proper to say here that General Philip St. George Cooke who commanded this cavalry has written to deny the statement made by General Porter in his paper on the battle of Gaines's Mill, that the loss of that battle was due in part to the charge of this body of cavalry. General Cooke's communication will appear in an early number of THE CENTURY.—EDITOR.

† It is impossible to estimate the casualties of each of these battles, so quickly did one battle follow an-

While taking Meagher's brigade to the front, I crossed a portion of the ground over which a large column had advanced to attack us, and had a fair opportunity of judging of the effect of our fire upon the ranks of the enemy. It was something fearful and sad to contemplate; few steps could be taken without trampling upon the body of a dead or wounded soldier, or without hearing a piteous cry, begging our party to be careful. In some places the bodies were in continuous lines and in heaps. In Mexico I had seen fields of battle on which our armies had been victorious, and had listened to pitiful appeals; but the pleaders were not of my countrymen then, and did not, as now, cause me to deplore the effects of a fratricidal war.

Sadder still were the trying scenes I met in and around the Malvern house, which at an early hour that day had been given up to the wounded, and was soon filled with our unfortunate men, suffering from all kinds of

other. Our total loss in these battles is recorded as 15,849 ("Official Records of the Union and Confederate Armies," Vol. XI., Part 2, page 37), while that of the Confederates sums up to 20,158 (*ibid.*, p. 973 to 984). The loss in the Fifth Corps was 7,601 of the 15,849 loss of the Union army. This does not include the losses of Slocum's division and Cooke's cavalry engaged with us at Gaines's Mill, nor of Couch's division and the brigades of Caldwell, Meagher, and Sickles serving with it at Malvern.—F. J. P.

wounds. At night, after issuing orders for the withdrawal of our troops, I passed through the building and the adjoining hospitals with my senior medical officer, Colonel George H. Lyman. Our object was to inspect the actual condition of the men, to arrange for their care and comfort, and to cheer them as best we could. Here, as usual, were found men mortally wounded by necessity left unattended by the surgeons, so that prompt and proper care might be given to those in whom there was hope of recovery. It seemed as if the physician was cruel to one in doing his duty by being merciful to another whose life might be saved.

While passing through this improvised hospital I heard of many sad cases. One was that of the major of the Twelfth New York Volunteers, a brave and gallant officer, highly esteemed, who was believed to be mortally wounded. While breathing his last, as was supposed, a friend asked him if he had any message to leave. He replied, "Tell my wife that in my last thoughts were blended herself, my boy, and my flag." Then he asked how the battle had gone, and when told that we had been successful he said, "God bless the old fla——" and fell back apparently dead. For a long time he was mourned as dead, and it was believed that he had expired with the prayer left unfinished on his closing lips. Though still an invalid, suffering from the

wound then received, that officer recovered to renew his career in the war, and now, for recreation, engages in lively contests of political warfare.

On the occasion of this visit we frequently met with scenes which would melt the stoutest heart: bearded men piteously begging to be sent home; others requesting that a widowed mother or orphan sisters might be cared for; more sending messages to wife or children, or to others near and dear to them. We saw the amputated limbs and the bodies of the dead hurried out of the room for burial. On every side we heard the appeals of the unattended, the moans of the dying, and the shrieks of those under the knife of the surgeon. We gave what cheer we could, and left with heavy hearts. There was no room then for ambitious hopes of promotion; prayers to God for peace, speedy peace, that our days might be thereafter devoted to efforts to avert another war, and that never again should the country be afflicted with such a scourge, filled our hearts as we passed from those mournful scenes.

At noon on the 4th of July the usual national salute was fired in honor of the day, and the different corps parading in front of their respective camps were reviewed by General McClellan. As he passed from brigade to brigade, the army showed its cheerful spirit and its confidence in its commander by hearty cheers.

REPULSE OF CONFEDERATES ON THE SLOPE OF CREW'S HILL. (SEE PREVIOUS PAGE.)

General McClellan, as opportunity offered, made a few remarks full of hope and encouragement, thanking the men in most feeling terms for their uniform bravery, fortitude, and good conduct, but intimating that this was not the last of the campaign.

that he was to have command of both armies after their junction,* but he preferred, as a speedy and the only practicable mode of taking Richmond, retention on the James, and the renewal of the contest from the south bank, for which he had commenced opera-

THE PARSONAGE, NEAR MALVERN HILL.

[This house was in the rear of the Confederate line, which was formed in the woods shown in the background. It was used as a Confederate hospital after the fight. The road is the Church road, and the view is from near C. W. Smith's,

which was for a short time the headquarters of General Lee. The trees of this neighborhood were riddled with bullets and torn with shell, and this spring the corn was growing out of many a soldier's grave.—EDITOR.]

Contrary; however, to his expectations, the Peninsular campaign of the Army of the Potomac for 1862 virtually ended on the 4th of July. From that date to August 14th, when the army took up its march for Fort Monroe, its commander was engaged in the struggle to retain it on the James, as against the determination of the Secretary of War to withdraw it to the line of the Rappahannock, there to act in conjunction with the Army of Virginia.

General McClellan was assured, in writing,

* At the time, it was publicly announced that General Halleck would assume command and take the field. General Pope had reason to believe that "he would eventually supersede McClellan," and McDowell had

tions. During this struggle he intelligently labored, omitting nothing which would insure the removal of the army without loss of men and material. This movement commenced at sundown on the 14th of August.

The withdrawal of the army changed the issue from the capture of Richmond to the security of Washington, transferred to the Federals the anxiety of the Confederates for their capital, and sounded an alarm throughout the Northern States.

Fitz John Porter.

been so satisfied of his future supremacy that he confided to a friend that "he would be at the highest round of the ladder."—F. J. P.

RECOLLECTIONS OF A PRIVATE.—V.*

RETIRING FROM THE CHICKAHOMINY.

THE CAMP KITCHEN. (FROM PHOTOGRAPH.)

ON the 25th of June preparations were made for a general advance from our position at Fair Oaks. Our pickets on the left were moved forward to an open field crossed by the Williamsburg road, and our lines then pushed forward beyond a swampy belt of timber, which for several days had been contested ground. Our troops, going in with a dash, met little serious resistance. The ground was so marshy in places that our men were obliged to cluster round the roots of trees or stand knee-deep in water. On the 27th (the day of the battle of Gaines's Mill) and the 28th the enemy in our front were unusually demonstrative, if not active. Our pickets were often so near the enemy's outposts as to hear them talk. One of my comrades told me of a conversation he overheard one night between two of the "Johnnies."

"Uncle Robert," said one, "is goin' to gobble up the Yankee army and bring 'em to Richmond."

"Well," said his comrade, with a touch of incredulity in his tones, "we uns 'll have a right smart of 'em to feed; and what are we uns goin' to do with 'em when we uns catch 'em?"

"Oh," said the other, with a touch of contempt, "every one of we uns will have a Yank to tote our traps!"

On the 27th one of my comrades, while on picket, heard orders given as if to a large body

of men—"From right of companies to rear into column—right face. Don't get into a dozen ranks there. Why don't they move forward up the path?" These commands excited our vigilance. What puzzled us was that we could not hear the tramp of men, which is usual in moving large bodies of troops, when near enough to hear their voices. Later we knew that the Confederates in our front were keeping up a big show with a small number of troops. We heard the heavy booming of cannon, which told of Porter's battle on the north side of the Chickahominy, and on that day a balloon was seen over the Confederate capital. Every sign pointed to unusual activity in our front. Then Porter followed us to the south side of the Chickahominy, and the whole aspect of affairs was changed.

Details were made to destroy such stores as could not easily be removed in wagons, and some of our officers, high in rank, set an unselfish example by destroying their personal baggage. No fires were allowed to be kindled in the work of destruction. Tents were cut and slashed with knives; canteens punched with bayonets; clothing cut into shreds; sugar and whisky overturned on the ground, which absorbed it. Some of our men stealthily imitated mother earth as regards the whisky. Most of our officers appreciated the gravity of the situation, and were considerate enough to keep sober, in more senses than one. Early on the morning of the 29th the work of destruction was complete, our picket-line was relieved, and with faces that reflected the gloom of our hearts we turned our backs upon Richmond, and started upon the retreat. The gloom was rather that of surprise than of knowledge, as the movement was but slightly understood by the mass of the army, or for that matter by most of the officers.

The weather was suffocatingly hot; dust rose in clouds, completely enveloping the marching army; it was inhaled into our nostrils and throats, and covered every part of our clothing as if ashes had been sifted upon us. About nine o'clock line of battle was formed near Allen's farm. Occasionally the report of a sharp-shooter's rifle was heard in the woods. Some of the troops took advantage of

such shade as was afforded by scattering trees and went to sleep. All were suddenly brought to their feet by a tremendous explosion of artillery. The enemy had opened from the woods south of the railroad, with great vigor and precision. This attack after some sharp fighting was repelled, and, slinging knapsacks, the march was again resumed over the dusty roads. It was scorching hot when they arrived at Savage's Station, and there again they formed line of battle.

Franklin's corps, which had fallen back from Golding's farm, joined us here, and a detail was made as at other places to destroy supplies; immense piles of flour, hard bread in boxes, clothing, arms, and ammunition were burned, smashed, and scattered. Two trains of railroad cars, loaded with ammunition and other supplies, were here fired, set in motion towards each other, and under a full head of steam came thundering down the track like flaming meteors. When they met in collision there was a terrible explosion. Other trains and locomotives were precipitated from the demolished Bottom's bridge. Clouds of smoke rose at various points north of us, showing that the work of destruction was going on in other places.

Here, awaiting the approach of the enemy, we halted, while wagons of every description passed over the road on the retreat. It was now five o'clock in the afternoon (though official reports put it as early as four), when dense clouds of dust, rising in long lines from the roads beyond, warned us of the approach of the enemy. Soon they advanced from the edge of the woods and opened fire from the whole mass of their artillery. Our guns responded. For nearly an hour not a musket was heard, but the air vibrated with the artillery explosions. Then the infantry became engaged in the woods. Even after the shadows of night covered the scene with their uncertain light, the conflict went on, until nine o'clock, when to the deep-toned Union cheers there were no answering high-pitched rebel yells.*

Our regiment occupied till after sundown a position opposite the hospital camp near the station. It was then ordered to charge the enemy, which was done under cover of the heavy smoke that hung over the field. At nine o'clock they began to care for the wounded, and to carry them to the amputating-table. Our "Little Day" was wounded through the

* At Savage's Station I had the ill-luck to be taken prisoner, and in consequence was "unavoidably absent" from our lines until August, when we were exchanged. I afterwards learned from my comrades their experiences and the gossip of the intervening half-dozen weeks, which is briefly outlined in what follows.—W. L. G.

arm, but bandaged it himself. Wad Rider got another slight scalp-wound, which led him to remark, "Them cusses always aim for my head." Pendleton got what he called a ventilator through the side of his hat, the bullet grazing his head. One of the chaplains was indefatigable in his care of the wounded, and finally preferred to be taken prisoner rather than desert them.

Turning their backs upon the battle-field and the hospital camp of twenty-five hundred sick and wounded, who were abandoned to the enemy, the troops resumed their march. The long trains, of five thousand wagons and two thousand five hundred head of beef, had by this time crossed White Oak Swamp. The defile over which the army passed was narrow, but it possessed the compensating advantage that no attack could be made on the flank, because of the morass on either side. As fast as the rear-guard passed, trees were felled across the road to obstruct pursuit. Before daylight the Grand Army was across the swamp, with the bridge destroyed in the rear.

GLENDALE.

DURING the early morning hours of Monday, June 30th, our regiment was halted near a barn used as a temporary hospital. The boys lay down weary and footsore with fighting and marching. They were aroused about eight o'clock and resumed their march. At eleven they were halted near Nelson's farm. The country here began to change from swamp and wood to cultivated fields.

McCall's division, now numbering only about six thousand men, was formed nearly parallel to the New Market road, with his batteries in rear of the infantry. Kearny was within supporting distance on his right, guarding the space between the New Market and Charles City roads, while our corps, Sumner's with Hooker's division, were formed in the rear of McCall's advance line. To force the Union army from this key position and divide it, Longstreet gave battle. At 2:30 P. M., advancing with A. P. Hill by the Charles City road, he attacked with fury McCall's division. A heavy force of the enemy, passing through the woods, was hurled upon General Seymour's brigade, holding the left, who maintained a stubborn fight for two hours, finally causing him to fall back. Knieriem's and Diederichs' batteries were badly demoralized at this point. One of their officers blubbered outright. "Are you wounded? Are you killed?" asked Hooker's ironical jokers. "No; mine battery disgraces me worse than det," was his reply.

When McCall's division gave way the enemy, who had turned the left of the Union line, came down upon Sumner's troops, who soon received the order, "Forward, guide right"; and at double quick, while the batteries in the rear threw shot and shell over their heads into the ranks of the enemy, they pressed forward upon them. For a few moments the

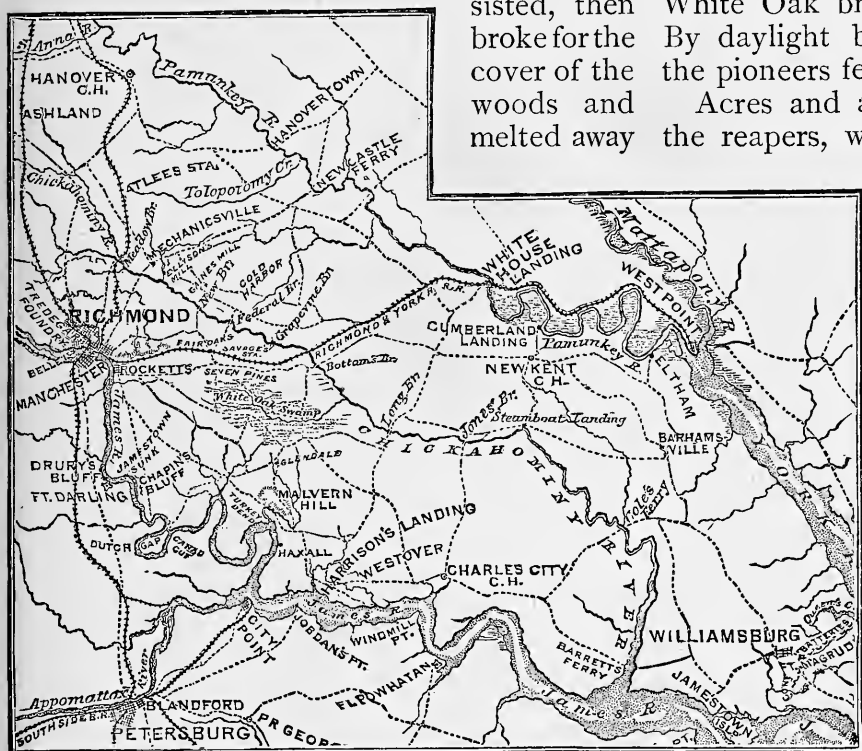

enemy resisted, then broke for the cover of the woods and melted away

were the prevailing colors. Some of them had a strip of carpet for a blanket, but the raggedness of their outfit was no discredit to soldiers who fought as bravely as did these men.

Franklin's force, which had been disputing the passage of White Oak Swamp during the day, at dark retreated from that position, which made it prudent to retire our whole force from Glendale, for Jackson's forces at White Oak bridge would soon be upon us. By daylight began our march to Malvern, the pioneers felling trees in the rear.

Acres and acres of waving grain, ripe for the reapers, were seen on every side. The

troops marched through the wheat, cutting off the tops and gathering them into their haversacks, for, except in more than ordinarily provident cases, they were out of rations and hungry, as well as lame and stiff from marching. The bands, which had been silent so long before Richmond, here began playing patriotic airs, which had a very inspiring effect. As they neared the James River and caught sight of our gun-boats, a cheer went up from each regiment. About eleven o'clock in the morning they took up position on the Malvern plateau.

THE CHANGE OF BASE FROM WHITE HOUSE TO HARRISON'S LANDING.
(SEE ALSO LARGE MAP, PAGE 453 OF THE JULY "CENTURY.")

in the twilight shadows gathering over the field. Our artillery continued to shell the woods, and the din of musketry did not cease until long after dark. This Union victory insured the safety of the army, which until that hour had been in peril.

During the night many of the enemy's stragglers were captured. Hooker's men, who heard them in the strip of woods calling out the names of their regiments, stationed squads at different points to answer and direct them into the Union lines, where they were captured. "Here by the oak," our men would say in answer to their calls, and thus gathered in these lost children of the Confederacy. Our regiment captured five or six stragglers in much the same manner. Many of them were under the influence of stimulants. It was current talk at that time—to account for the desperate, reckless charges made during the day—that the Confederates were plied with whisky. I am not of that opinion, as whisky will not make men brave. Those captured wore a medley of garments which could hardly be called a uniform, though gray and butternut

MALVERN HILL.

THE *morale* of the army, notwithstanding its toilsome midnight marches and daily battles, with insufficient sleep and scanty food, was excellent. Its comparatively raw masses were now an army of veterans, tried in the fire of battle.

Our stragglers, their courage revived by sight of the gun-boats, came up the hill, seeking their regiments. One squad encountered half a dozen of the enemy's cavalry and charged them with empty muskets. Another squad came in with a Confederate wagon, in which were several wounded comrades rescued from the battle-field. Another squad had their haversacks filled with honey, and bore marks of a battle with bees. During the morning long lines of men with dusty garments and powder-blackened faces climbed the steep Quaker road. Footsore, hungry, and wearied, but not disheartened, these tired men took their positions and prepared for another day of conflict. The private soldiers were quick to perceive the advantages which

the possession of Malvern Hill gave us, and such expressions as "How is this for Johnny Reb!" were heard on every hand. Wad Rider, complacently and keenly viewing the surroundings, said, "Satan himself couldn't whip

terrible. Soon it partly died away and was followed by roaring volleys, and then the irregular *snap, crack, crack* of firing at will of the musketry. It was the attack of G. B. Anderson's brigade of D. H. Hill's division upon

SUPPLYING THE HUNGRY ARMY AT HARRISON'S LANDING. (FROM SKETCH BY A. R. WAUD MADE AT THE TIME.)

us out of this!" As soon as it was in position near the north front of the hill, our regiment was given the order, "In place—rest," and in a few minutes the men were asleep, lying upon their muskets.

Early in the forenoon skirmishing began along the new line. Some of the troops, while going up the hill to take their positions on the field, were fired upon by the enemy's batteries. Small parties advanced within musket-shot, evidently reconnoitering our position, and fired from the cover of the woods on our men. Shells from our gun-boats on the James came hoarsely spluttering over the heads of the troops. Occasionally hostile regiments appeared from the woods below the crest of the hill, and were as often driven back by our artillery.

The fighting of the day might be described as a succession of daring attacks and bloody repulses. Heavy firing began at different points soon after noon, followed by a lull. About three o'clock there was heard an explosion of artillery, with the well-known rebel yell, followed by the cheering of our men. The crash of artillery was even at this time

Couch's front. In a hand-to-hand struggle at this time, the Thirty-sixth New York captured the colors of the Fourteenth North Carolina and a number of prisoners. Couch then advanced his line to a grove, which gave a stronger position and a better range for the musketry. An assault at the same time was made along the left, but was speedily repulsed by the batteries. At four o'clock there was quiet. But the storm of battle at six o'clock burst upon Malvern cliff. Brigade after brigade came up the hill with impetuous courage, breasting the storm of canister, grape, and shell which devastated their ranks. Half-way up they would break in disorder, before the destructive cannonade and the deadly volleys of musketry. Vainly they were rallied. It was more than human courage could endure.

After D. H. Hill, Magruder made his attack. Our guns, grouped around the Crew house, opened upon the Confederates, as with fierce yells they charged up the slope. In some instances our infantry, being sheltered by the inequalities of the ground in front of the guns, withheld their fire until the charging column was within a few yards of them.

A PART OF THE FORTIFIED CAMP AT HARRISON'S LANDING.
(AFTER SKETCH BY A. R. WAUD MADE AT THE TIME.)

Sometimes the enemy attacked from the cover of the ravine on the left, but they never reached the crest. Night came, yet the fight went on, with cheers answering to yells and gun answering to gun. The lurid flashes of artillery along the hostile lines, in the gathering darkness; the crackle of musketry, with flashes seen in the distance like fire-flies; the hoarse shriek of the huge shells from the gun-boats, thrown into the woods, made it a scene of terrible grandeur. The ground in front of Porter and Couch was literally covered with the dead and wounded. At nine o'clock the sounds of the battle died away, and cheer after cheer went up from the victors on the hill.

During the battle of Malvern Hill the infantry where my regiment was posted was not brought into active opposition to the enemy. They lay on the ground in front of the guns, which threw shot, shell, and canister over their heads. Several times after three o'clock brigades were sent from this position to act as supports where the attack was heaviest on Couch's lines. Just after three o'clock the artillery fire was heavy on our brigade, but the loss was light, owing to the protection afforded to the infantry by the inequalities of the ground. Between six and seven o'clock our company was detailed to guard prisoners; and about that time, as one of my comrades said, General Hooker rode by on his white horse, which formed a very marked contrast to his very red face. He rode leisurely and complacently, as if in no alarm or excitement, but looked very warm. Behind a bluff, not far from the Crew house, was the extemporized hospital towards which stretcher-bearers were carrying the wounded; those able to walk were hobbling, and in some instances were using a reversed musket for a crutch.

All of the prisoners were "played-out" men who had evidently seen hard service with marching, fighting, and short rations.

Some of them were morose and defiant. The most intelligent were generally the best natured. The Virginians would usually remark, "You uns will never conquer we uns." In general they were poorly clad.

Thus ended the Union advance on Richmond. The grand "Army of the Potomac" forced its way to within sight of the enemy's capital, only to fall back, in a desperate struggle of seven successive days, to the James River. Yet it preserved its trains, its courage, and its undaunted front, and inflicted upon the enemy heavier losses than it sustained. Though crowded back in the final movement, our army defeated the enemy on every battle-field but one during the seven days. The moral advantage was on the side of the Confederates; the physical on the side of the Federals. We had inflicted a loss of about 20,000 on the enemy, while sustaining a loss of but 15,849. The North was in humiliation over the result, while the Confederates rejoiced.

ON THE JAMES.

THE next morning at daybreak our regiment moved with its squad of prisoners down the road to Haxall's. Here, for some reason, they were halted for two or three hours while regiments, trains, and cattle moved over the narrow defile, jumbled in confusion together. There were loud discussions as to the right of way, and a deal of growling among the soldiers at retreating, after giving the "rebs" such a whipping; but most of them seemed to think "Little Mac" knew what he was about, and the enthusiasm for him grew in intensity rather than decreased. The halt gave leisure for talk with the prisoners. One of them was a good-looking, intelligent fellow about twenty-two years of age. He informed one of my comrades that he belonged to a North Carolina regiment. He was a college graduate, and the prospect of spending a summer at the North did not seem to displease him. He confidentially said that he had been a Union man just as long as he could, and finally went

into the Confederate army to save his property and reputation and to avoid conscription. He added: "There are thousands in the South just like me. We didn't want the war, and resisted the sentiment of secession as long as

march and some right smart fighting, for Old Jack is powerful on prayer just before a big fight."

"Did you ever see General Lee?" I inquired of one of them.

THE WESTOVER MANSION, CAMP AT HARRISON'S LANDING, JULY, 1862.

we could. Now it has gone so far we've got to fight or sever all the associations with which our lives are interlinked. I know it is a desperate chance for the South. Look at your men, how they are disciplined, fed, and clothed, and then see how our men are fed and clothed. They are brave men, but they can't stand it forever. Southern men have got fight in them, and you will find them hard to conquer."

One lean "Johnny" was loud in his praise of Stonewall Jackson, saying: "He's a general, he is. If you uns had some good general like him, I reckon you uns could lick we uns. 'Old Jack' marches we uns most to death; a Confed that's under Stonewall has got to march."

"Does your general abuse you—swear at you to make you march?" inquired one of his listeners.

"Swear?" answered the Confederate; "no. Ewell he does the swearing; Stonewall does the praying. When Stonewall wants us to march he looks at us soberly, just as if he was sorry for we uns, but couldn't help it, and says, 'Men, we've got to make a long march.' We always know when there is going to be a long

"Yes, I was a sort of orderly for 'Uncle Robert' for a while. He's mighty calm-like when a fight is going on."

About ten o'clock in the morning the regiment resumed its march. It reached Harrison's Landing about four in the afternoon, just as it began to rain in torrents. Here they were relieved from guard duty and allowed the privilege of making themselves as comfortable as possible under the circumstances. The level land which terminates in bluffs on the James River was covered with hundreds of acres of wheat ready for the harvest. The process of cutting for the army began without delay, and before night every blade of it was in use for bedding and forage; not a vestige remained to tell of the waving fields which had covered the plain a few hours previous. The fields whereon it stood were trampled under foot; not even a stubble stood in sight. Great fields of mud were the resting-place of the army. It was almost as muddy as if the waters of the deluge had just receded from the face of the earth. Mules, horses, and men were alike smeared and spotted with mire, and the ardor of the army was somewhat dampened thereby.

MCCLELLAN'S HEADQUARTERS, HARRISON'S LANDING, JAMES RIVER. (FROM SKETCH BY A. R. WAUD, 1862.)

This house was the birthplace of General (afterward President) William Henry Harrison. During the month of July, 1862, it was used as a hospital and as a signal-station, the scaffolding about the chimneys having been built for that purpose.

At Harrison's Landing the army settled down to a period of rest, which was much needed. The heat during the day was intolerable, and prevented much exercise. Men lay under their shelter, smoked, told stories, discussed the scenes and battles of the previous month, and when evening came on visited each other's camps and sang the popular songs of the day. Those vampires of the army, the sutlers, charged double prices for everything they had to sell, until the soldiers began to regard them as their natural enemies. No change smaller than ten cents circulated in camp. It was the smallest price charged for anything. Sutlers' pasteboard checks were in good demand as change, and were very useful in playing the game of "bluff." Thus the army whiled away the month of July.

During August some of the prisoners captured from us on the seven days' retreat arrived in our lines for exchange. They were a sorry-looking crowd — emaciated, hungry, sick, ragged, and dirty. They did not have a high opinion of the entertainment they had received at Belle Isle and Libby prison.

During one of those quiet, still August nights, dark, and as close and muggy as only a night in "dog days" can be, some time after midnight, the whole camp was roused by the furious and rapid bursting of shells in our very midst. Imagine, if you can, a midnight shelling of a closely packed camp of fifty thousand men, without giving them one hint or thought of warning; imagine our dazed appearance as we rolled from under our canvas

coverings, and the running and dodging here and there, trying to escape from the objective point of the missiles. Of course the camp was a perfect pandemonium during the half hour that the shelling lasted. We soon discovered that the visitors came from a battery across the James River, and in twenty minutes a few of our guns silenced them completely. Most of these shells burst over and amongst us who occupied the center of the camp, near the old Harrison's Landing road. This road was lined on either side with large shade-trees, which were probably of some assistance to the enemy in training their guns.

While at Harrison's Landing there was a great deal of sickness. But, more than any other ailment, homesickness was prevalent. It made the most fearful inroads among the commissioned officers. Many sent in their resignations, which were promptly returned disapproved. One, who had not shown a disposition to face the enemy proportionate to his rank, hired two men to carry him on a stretcher to the hospital boat; and this valiant officer was absent from the army nearly a whole year. We believed at that time that some of the hospitals at the North, for the sake of the money made on each ration, sheltered and retained skulkers. In contrast with this was the noble action of men who insisted on joining their commands before their wounds were fairly healed, or while not yet recovered from their sickness.

Bathing and swimming in the James was a luxury to us soldiers, and did much, no doubt

DUMMIES AND QUAKER GUNS LEFT IN THE WORKS AT HARRISON'S LANDING ON THE EVACUATION BY THE ARMY OF THE POTOMAC. (FROM SKETCH AT THE TIME BY A. R. WAUD.)

towards improving the health of the army. Boxes with goodies from home came by express in great numbers. One of my friends at one time received a whole cheese, and for a week was the envy of the company.

Hooker's brigade moved towards Malvern Hill on the second of August, and on the fourth attacked the enemy near Glendale. On the fifteenth all was bustle and confusion, getting ready for some movement—perhaps another advance on Richmond. But instead we took up our line of march down the Penin-

sula. The people on the way openly expressed hatred of us and sympathy with the rebellion. No guards were posted over the houses as heretofore, and we used the fences to cook our coffee, without reproach from our officers. At one house, near the landing, a notice was posted forbidding the burial of a Yankee on the estate. That house was very quickly and deliberately burned to the ground. Steamboats and wagons were crowded with our sick. After rapid marches we arrived at Hampton, and embarked again for Alexandria.

Warren Lee Goss.

MEMORANDA ON THE CIVIL WAR.

General Imboden's "Incidents of the Battle of Manassas."

THE series of War Papers now being published in *THE CENTURY* are of such extraordinary value as history and material for history, that it is desirable to have them as accurate as possible, and to correct even small errors of fact as they are stated. Allow me to correct two in General Imboden's article in the May *CENTURY*. The general could not have tossed "little Julia," the daughter and only child of Stonewall Jackson, in his arms three days after the battle of Bull Run, for she was not born until more than a year after that time. She might have been seen in "long dresses" near Fredericksburg, just before

her father was killed at Chancellorsville, for she was there making her first visit to the army, and was then only about six months old.

Again, General Jackson did not put General D. H. Hill under arrest while crossing the Potomac into Maryland at Leesburg. It was General A. P. Hill who was put under arrest on the day before we crossed the Potomac, Sept. 4th, for disobedience of orders in not moving his division as early in the morning as he was directed to do, and thereby delaying the prompt movement of the corps. I had given the order to General Hill fixing the hour for marching, and carried the order from General Jackson putting him under arrest. General Branch was in command of A. P. Hill's divis-

ion when we crossed the Potomac northward. I may add that General Jackson was seriously bruised and hurt by the falling of a vicious horse which was presented to him the day he crossed into Maryland; and being compelled to ride in an ambulance for a day, he turned the command of his corps over to General D. H. Hill for that day's march. After the battle of Sharpsburg, and while the army was encamped at Bunker Hill, the difficulty between Generals Jackson and A. P. Hill was revived, and they preferred charges against each other. Then General Lee took the matter up, and after an interview with each of them, the charges, which he had disapproved and returned, were mutually withdrawn, and that was the end of it—to all appearances.

General Imboden is right in his intimation that Major Harman was the only man who could swear before General Jackson with impunity. Jackson seemed to regard Harman's superior qualification in that line—and he was the most stalwart and stirring swearer I ever heard—as a necessary part of his equipment as quartermaster. Harman was the only quartermaster in the Confederacy who could have kept up with "Jackson's Foot Cavalry," but he and Jackson accomplished results by means and manners entirely different.

Hy. Kyd Douglas.

HAGERSTOWN, MD., May 15, 1885.

[Soon after the appearance of his article in the May CENTURY, General Imboden, in a letter which came too late for the July number, wrote to correct the two misstatements described above. He says that after the battle of Bull Run the camp was visited by the families of many officers, and that he had always supposed the child he saw at Stonewall Jackson's quarters to have been the general's daughter, Julia. In his anecdote of the arrest of General Hill, he confounded General D. H. Hill with General A. P. Hill, it having been the latter who was placed under arrest during that campaign, as explained by Colonel Douglas.—EDITOR.]

The Second Day at Seven Pines.

GENERAL D. H. HILL has called our attention to an error in General Gustavus W. Smith's paper in the May CENTURY, on "The Second Day at Seven Pines." General Smith quotes as follows from the Union general Mindil's account of the fighting on the second day (June 1):

"After Richardson's and Hooker's divisions and Birney's brigade had driven the Confederates well back from the railroad in front of the position held by Richardson during the night, Sickles' brigade united with these forces, and a general advance was made. No serious opposition was encountered, and Casey's camp was reoccupied before two o'clock P. M., the ground being covered with the rebel dead and wounded as well as our own."

The reports of both sides (Vol. XI., Part I., "War Records") show conclusively that the Confederates remained in possession of Casey's camp during the second day, and retired of their own accord the following night, their rear-guard withdrawing at sunrise of June 2.

EDITOR.

Subterranean Shells at Yorktown.

GENERAL J. E. JOHNSTON, in his article "Manassas to Seven Pines," published in the May CENTURY, in referring to Jefferson Davis's statement about planting sub-terra shells in the vicinity of the citadel of Yorktown when the enemy evacuated that place says,— . . . "This event was not mentioned in General D. H. Hill's report, although General Rains belonged to his division, nor was it mentioned by our cavalry which followed Hill's division. Such an occurrence would have been known to the whole army, but it was not; so it must have been a dream of the writer."

My recollection of that circumstance is as follows: I was at that time assistant adjutant-general to General Fitz John Porter, who was director of the siege of Yorktown. On the morning of May 4th, 1862, our pickets sent in a prisoner, who said he was a Union man, had been impressed into the rebel service, and was one of a party detailed to bury some shells in the road and fields near the works. General Porter sent the man under guard to General McClellan, with a letter recommending that he and other prisoners be sent to take up the shells. A cavalry detachment passing along the road leading to Yorktown had some of its men and horses killed and wounded by these shells. Our telegraph operator was sent into Yorktown soon after our troops had got possession of the place. He trod upon one of the buried shells, which burst and terribly mangled both of his legs, from which he died soon after in great agony.

The next morning (May 5th) I rode over the road leading to Yorktown, and saw the place where the shells had exploded, and also saw several places where the location of the buried shells had been marked by small sticks inserted in the ground, with pieces of white cotton cloth tied to the sticks. In the casemates and covered ways about the fortifications I saw a number of large shells, placed so that they could easily be fired by persons unaware of their presence. It was the subject of general remark at the time, that the planting of these sub-terra shells was due to the ingenuity of General Rains. The substance of the above narrative is taken from my diary of May 4-5, 1862.

Fred T. Locke.

NEW YORK, May 16, 1885.

General Johnston's Chief of Artillery at Bull Run.

BY inference, at least, General Imboden's paper in the May CENTURY, describing "Incidents of the Battle of Manassas," does injustice to the late General William N. Pendleton. General Imboden speaks of himself as the senior captain among the four captains of artillery of General Johnston's army. But, in fact, at the time of the march of the latter to reënforce Beauregard, Captain Pendleton, who was a West Pointer, had been promoted to be chief of artillery on General Johnston's staff with the rank of Colonel. General Imboden also says that up to the time he left the field with his exhausted battery, he did not see Colonel Pendleton with the latter's battery. But it is a fact that Colonel Pendleton was at times with his battery and active on the field as chief of artillery, as shown by the reports of

Generals Johnston, Beauregard, and Jackson, who comment on his services. Members of his battery have recently stated that he led them into the action.

The Rear-Guard after Malvern Hill.

IN the May CENTURY, page 149, referring to the retreat from Malvern Hill, July 2d, General McClellan gives Keyes's corps the credit of furnishing the entire rear-guard. You will find from the report of Colonel Averell, of the Third Pennsylvania Cavalry, the rear-guard was made his command and consisted of his regiment of Heintzelman's corps, first brigade of Regular Infantry, consisting of the Third, Fourth, Twelfth, and Fourteenth infantry, of Porter's corps, and the New York Chasseurs, of Keyes's corps. To confirm this statement, let me refer you to "Official Records of the Rebellion," Vol. XI., Part II., page 235. In the same volume, page 193, will be found Keyes's official report, but no mention of Averell. In fact, Averell was the rear-guard to Turkey bridge and a mile beyond that point, where he found General Wessells of Keyes's corps. The official reports of Fitz John Porter, Sykes, and Buchanan all speak of Averell as having covered this retreat. The undersigned was a first lieutenant in the Twelfth Infantry, served through the Peninsula Campaign, was in command of Company D, First Battalion, at Malvern Hill, and remembers distinctly that the first brigade Regular Infantry slept on the field on the night of July 1st in line of battle. We were surprised the next morning to find that the entire army had retreated during the night, leaving Averell with his small command as a rear-guard to cover the retreat, which was done in the masterly manner stated by General McClellan, but by Averell, and not by Keyes.

Henry E. Smith.

UNITED STATES CLUB, PHILADELPHIA, May 25, 1885.

Notes of the Congress-Merrimac Fight.

THE editorial note, on page 750 of the March number of THE CENTURY, giving the anecdote regarding Lieutenant Joseph B. Smith's death, and the sending of his sword to his father, by flag of truce, should be supplemented by another, which gives a glimpse of a curious phase of human nature.

After Lieutenant Smith was killed, at the foot of the after ladder, on the gun-deck of the *Congress*, the writer took from his body his watch and chain, and one shoulder-strap, the other having been torn off by the shell which killed him. These were, in due time, sent to his father. When we abandoned the burning

ship Smith's body was placed in a cot, and lowered out of the bill-port, the men supposing that it was one of the wounded. During the following summer Admiral Smith's house in Washington was entered by burglars, and, among other things, the much valued watch of his dead son was carried off by them. The newspapers, in reporting the robbery, dwelt upon the distress occasioned to the admiral by the loss of the memento. Soon after, to the surprise of the family, they received the watch by express, with a letter from the burglars, declaring that if they had known the history of the watch they had taken, nothing would have induced them to touch it.

With regard to another matter in this connection, I note that Colonel Wood repeats the statement so often made, that the *Congress* was set on fire by hot shot late in the day. This is true; but she had been on fire for a long time before the hot shot of which he speaks were fired. The first broadsides exchanged on that day were from the starboard side of the *Merrimac* and the port side of the *Congress*; for the ship had not yet swung to the young flood when the *Merrimac* passed up. The heavy guns of the latter did fearful work. One of the eight-inch guns of the *Congress*, amidships on the gun-deck, was dismantled by this broadside, and all the gun's crew killed or mortally wounded,—besides very many others. This broadside must have set the *Congress* on fire near the after magazine. It was in my room, the third one aft, on the port side, that the smoke of burning wood soon became apparent, and it was there that the carpenter's crew cut away the berth, and then the skin of the ship, to enable them to get the hose down; but that fire was never put out, and gained from the first.

On page 742, in the same article, Colonel Wood speaks of the *Congress* coming within range as the *Merrimac* swung; and that then "he got in three raking shells" with the after pivot-gun. I can tell him what two of those shells did. The first one dismantled and knocked the muzzle off the starboard chase-gun,—a thirty-two pounder,—and killed or wounded every man at it. The second ranged through the stern-frame lower down, passed through the ward-room pantry, on the starboard side, through the ward-room and steerage, and out upon the berth-deck, killing or mortally wounding, in its passage, every one of the "full-boxes"—that is, the cooks and ward-room boys, who were the powder passers from the after magazine.

The powder division of the *Congress* was under the command of Purser McKean Buchanan, the brother of Captain Buchanan, of the *Merrimac*.

TOPICS OF THE TIME.

Extend the Merit System!

THE spectacle of office-begging and office-giving now presented in Washington is not encouraging to the lover of his country. The President, the heads of departments, and all other officers having the power of selection or appointment, are almost overwhelmed by the hordes of office-seekers. Day after day and all day long their offices and ante-rooms are crowded with importunate place-seekers, delegations of Congressmen or other interested advisers, representatives of rival political factions, all clamoring for "recognition" by the bestowal of public office. The time of the President and of the members of his Cabinet is so consumed by the distribution of the patronage, that scarcely any is left for the real work of administration. The reforms, the retrenchments, the reorganization, the simplification of alleged wasteful and roundabout methods, which were promised, though not altogether neglected, are subordinated to the work of removal and appointment. The attention of the Administration is chiefly centered, not upon the proper running of the government, but upon the pulling apart and putting together again of the machinery by which it is run. At the time of writing some three months have elapsed since the new Administration came into power, and yet only a small fraction of the officers whose removal seems to be demanded by the policy adopted have been replaced with new men. At the present rate of progress a large part of the President's term must elapse before the contemplated changes are fully carried out, if indeed the end of that term does not find them still unfinished.

Under such a system mistakes are inevitable. The conditions under which the selections for office are made forbid careful choice or deliberate judgment. The only representations that are heard come from the place-seekers or their friends. The choice is necessarily limited to those who are pressing for appointment. There is no agency for ascertaining either the requirements of the place or the fitness of the applicants, much less whether the men whose "claims" are urged are the best qualified of all who are eligible for selection, even under the most rigid party conditions. In fine, the whole system is only one degree removed from barbarism, and is entirely unworthy of our American civilization. The turning loose of the clamorous applicants for a hundred thousand offices upon a dozen men, and requiring them to decide, without the aid of any system of selection, to whom all these places shall be given, imposes a duty which cannot be properly discharged. After going through all the struggle and turmoil of a Presidential election to select men ostensibly to govern the country, to administer the laws, to carry out great policies, we make of them mere machines for registering the "pressure" for office — mere scales in which to weigh the "influence" of rival applicants for place.

To say that these things are inevitable upon a transfer of power from one political party to another is simply to emphasize the condemnation of the present system. No matter how high the purpose which may be conceded as animating the President and his advisers, no matter how sincere their determination may be to choose only fit men for office, and to give the country an honest, economical, and business-like administration, the system under which they are compelled to act is in its essence, in its methods and results, the old, hateful, condemned system of spoils. Their aims are thwarted by the methods of selection imposed upon them. As a rational, practical, business-like means of selecting our public servants, the present system has utterly broken down. To quote Jefferson's phrase, "it keeps in constant excitement all the hungry cormorants for office"; it demoralizes the public service, and, aside from all considerations of principle, it imposes on the President and the other appointing officers a task whose proper performance is beyond human capacity. It is a task, too, which has never been attempted before. It is twenty-four years since there was a change in the party controlling the executive branch of the government. In that time the public service has grown five-fold in numbers and twenty-fold in intricacy and importance. Methods of appointment which were merely annoying and difficult a quarter of a century ago, are quite impracticable now.

Happily, the civil-service law and regulations, by providing a just and inflexible method of selection, have taken a large part of the subordinate places out of the operation of this wretched system. The holders of these places, so long as they are honest and efficient, are permitted to go on with their daily duties undisturbed by the scramble of the office-seekers. There is no incentive to get them out by cooked-up charges or partisan "pressure," for access to their places can be gained only through the gateway of impartial competitive examinations. At the same time the power of removal is not restricted, and the civil-service rules furnish no protection to a dishonest or inefficient clerk. Such vacancies as occur are filled in a quiet, orderly way through the Civil-Service Commission, or if not required to be filled, remain vacant, and the salaries are saved to the people. In the Treasury alone, more than sixty vacancies occurring under the present Administration remain unfilled, and more are likely to be added to them before the force of the department is brought down to a working basis. But for the civil-service rules these places would have been instantly filled with eager partisans, and every pretext which self-interest or partisanship could invent to make more vacancies would have been made use of. Indeed, it is impossible to picture how greatly the outside pressure and the inside demoralization would have been multiplied, had the places now protected by the civil-service act been thrown into the pool for whose prizes the place-hunters are struggling.

The obvious remedy is to extend the system of impartial selection to all places except those by which the policy of the Administration is shaped. But before this can be done, there must be rooted out of the public mind the notion that any public place can properly be bestowed as the reward of partisan service. The great administrative offices must be filled by adherents of the dominant party, not to reward them for their services to the party, but that the will of the majority of the people, as expressed at the polls, may be executed. But, in any broad public view, it is a matter of utter indifference whether the men who fill the minor ministerial, clerical, and laboring places belong to one party or the other. There is no difference in principle between the services required of civil officers and those performed by officers of the army and navy. All that is required in either case is honesty, capacity, and trained obedience to the Constitution, the laws, and the lawful orders of their superiors. The Jeffersonian test covers the whole ground: "Is he honest, is he capable, is he faithful to the Constitution?"

The chief obstacle to the extension of the merit system is the fact that for twenty-four years the public offices have been monopolized by one political party. It was to be expected that the opposition party on coming into power should wish to fill at least a part of these places with its own adherents. But it is plain that some check must be placed on the gratification of this wish, if we are to get any efficient work in the line of "retrenchment and reform" out of the present Administration. After the division of the public offices between the two parties has been in some degree equalized, there will be the best opportunity that has ever occurred of putting the whole public service, from high to low, the few great administrative offices alone excepted, on a permanent, non-partisan footing. To accomplish this, the lower grades in every branch of the service must be thrown open to impartial but searching competitive examinations, and all of the higher places, up to the very top, must be filled by the promotion of meritorious subordinates. This is the natural, logical, and, as we believe, inevitable outcome of the civil-service reform movement. Whether this goal can be reached in one administration remains to be seen; but when it is reached, one of the greatest political revolutions that this country has ever seen will have been accomplished. Our elections will then no longer be mere scrambles for the spoils of office, but, what our theory of government intends they shall be, pure contests of principle.

The Christian Congress and its Fruits.

THE Church Congress, lately held at Hartford, marks progress in the direction of Christian coöperation. It is true that the meeting was only a parliament, a talking convocation; and that the constitution on which it was called together expressly and in capital letters forbids the Congress to do anything whatever except talk. Like the Christian League of Connecticut, of which this Hartford Conference may, by some stretch of imagination, be regarded as the antitype, the rules of this body provide that "no topic discussed in the Congress, nor any question of doc-

trine arising out of any discussion, shall ever be submitted to vote, at any meeting of the Congress or of its Council."

It is not for legislation — even of an advisory sort — that the Congress is established, but for consultation and free discussion. It is not by voting that its power will be exerted; the vanity of voting in spiritual affairs is clearly recognized by those who have the charge of it. They understand that whatever may be the uses of the suffrage in governments whose foundation is physical force and whose ultimate appeal is the sword, a vote, which is merely an expression of will, settles nothing permanently in religion. They know that all substantial gains of Christian truth are made, not by counting heads or silencing minorities, but by free investigation and untrammelled speech.

The uselessness of talk as a means of promoting Christian union has often been asserted; but this judgment is true only of the insincere talk of those who profess unity while practicing schism, and who dissemble disagreements which in their hearts they feel to be vital. It may also be said that the value of discussion, as a means of promoting Christian unity, must be limited so long as the discussion is confined to topics on which the parties have already come to an agreement. Unity is reached by a frank comparison of differences, and a manly recognition by the interlocutors of the right to disagree.

Herein is the gain of the new Congress. "The Council has no intention," as its inaugural statement asserts, "of establishing a society, or organizing a plan of union, or putting forth a creed; it simply aims, by holding public meetings from time to time, to make provision for a full and frank discussion of the great subjects in which the Christians of America are interested, including those ecclesiastical and theological questions upon which Christians differ." Nothing of this sort has ever before been attempted. The former essays toward unity have been confined to those who could stand together upon a platform of doctrine previously laid down. Such endeavors as these have their uses. It is important that Christians who are called by various names, and who often regard one another with suspicion, should find out how many and how important are the truths in which they perfectly agree. To rehearse these agreements and to magnify them is a wholesome exercise. But so long as there remain disagreements which they feel to be important, and so long as they do not feel themselves free to speak of these disagreements, the unity achieved is superficial. When they are ready to meet and engage in a candid and tolerant comparison of their differences, the foundation of a deeper unity is laid.

The Congress at Hartford included not only those sects which have hitherto united in Christian work, but several that have not before been welcomed to such consultations. In the Council, among the officers, and on the list of essayists and speakers, were the names of Baptists, Congregationalists, "Christians," Disciples, Episcopalians, Friends, Methodists, Presbyterians, Swedenborgians, Unitarians, and Universalists. Among the speakers no attempt was made to suppress differences of opinion; each man spoke his own mind, courteously but frankly; every speaker approached the subject before the meeting from his own standpoint; and under so many cross-lights the topic was

well illuminated. Such discussions are of the highest value in an educational point of view. Very little tendency to controversy was observable; those who participated in the conference sought not to confute the views of others, but simply and clearly to express their own. An assembly of clear-headed Christians, of all the different persuasions, from which the polemical demon is exorcised, and in which each one temperately endeavors to set forth the truth as it appears to him, must be a great school in which to study the doctrine and the discipline of the church.

But the gains of knowledge, great as they must be, are less than the gains of charity. It was a wonderful advantage to the Episcopal communion in this country and in England when the Congress of that church was organized which brought Ritualists, and High Churchmen, and Low Churchmen, and Broad Churchmen all together on one platform, and called on every man to speak his inmost thought. The bonds of fellowship in that church have been visibly strengthened by this Congress; the danger of division is greatly lessened; all parties have come to regard each other not only with tolerance, but with respect and affection. It is to be hoped that the same result will be achieved through the Congress of Churches for the scattered and discordant sects. When "Father" Grafton, of Boston, one of the most thorough-going Ritualists in the country, comes upon its platform and frankly recognizes the clergymen of other names round about him not only as Christian men, but also as Christian ministers, those who listen open not only their eyes, but their hearts; and when he goes on to say that worship, in his understanding of it, includes sacrifice, and then to explain what he means by sacrifice, and what relation this sacrifice offered by the worshiper bears to the greater sacrifice on Calvary, a kindlier feeling toward him and those who stand with him at once finds expression. The listeners may not at all agree with his view, but they can see that it is much less preposterous than they had supposed, and that the man who utters it is not only a sincere and manly man, but has something to say for himself. When Dr. James Freeman Clarke sets forth his views of the historical Christ as the true center of theology, and when the Rev. Chauncey Giles, of the New Church, expresses his mind on the same subject, and when President Chase, of Haverford College, unfolds the doctrine of the Friends respecting worship, the assent may not be universal, but the courteous attention and the sympathetic friendliness are. Through the cultivation of this generous spirit, and the comparison of views on subjects that have hitherto been tabooed in Christian assemblies, the meetings of the Congress of Churches promise to prepare the way for a great increase of practical unity among Christians.

For this, it must be remembered, is the thing to be accomplished. The sentiment of fellowship needs to be cultivated, but sentiment without practice is dead, being alone. The Congress of Churches is not called on to devise plans of coöperation, but the men who take part in its discussions and mingle in its assemblies ought to go home and heal some of the unseemly and wasteful divisions existing in their neighborhoods. No difficulty will be found in devising ways of coöperation if there is only a disposition to coöperate.

It is pleasant to hear what seems like an echo of this Congress — that a Conference of Christians in Berkshire County, Massachusetts, where this Congress originated, has just taken in hand one of the little towns where four churches occupy a field barely large enough for one, with an urgent call for their consolidation. There are a thousand little towns in this country where the same conditions exist, and where the same remedy needs to be applied. Nothing is needed for the cure of the evil but a tincture of charity and a modicum of common sense.

The Revised Version of the Old Testament.

THE long, difficult, uncompensated labor of the Revisers is brought to an end. Be the final verdict what it may in regard to the merits of the Revision, it will stand as one of the principal literary achievements of the present generation, and an important index of the state of scholarship in this period. The Old Testament company have had at once an easier and a more serious task than the New Testament Revisers had before them. A translator must, first of all, get hold of the book which he intends to render into another tongue. He must settle the text which he will follow. This, in the case of the New Testament, was the most delicate and responsible part of the work of the Revisers. The advantages for textual criticism and the necessity for it forced on them this preliminary labor. On the whole, their most valuable service, as regards the amendment of the old version, lies just here, in the improvement of the text. Yet here is a matter where there is room for endless divergence of opinion as to particular points, and here is the place where the most fierce onslaught has been made upon them. In this attack, the old dread of admitting any uncertainty in the original text of the sacred volume, and a real, though it be an unavowed, disposition, both groundless and superstitious, to stand by the "received text," as far as it is in any way possible, underlie the angry crusade against this feature of the New Testament Revision. Yet nothing has done so much to shake confidence in it and to lessen for the time its currency and popularity. The Old Testament companies have followed the mediæval "Masoretic" text, as they have no ancient manuscripts to consult. In a few instances only have they been driven to a modified reading. They escape thus the onset of a swarm of unfriendly critics, which would no doubt have arisen had they undertaken to correct the Hebrew. They have, however, occasionally referred in the margin to the Septuagint and other ancient translations. It is worthy of notice that the American company on this subject are even more conservative than their English brethren, and would have blotted out this class of marginal references. While the Revisers have secured immunity from attack by this cautious policy, they have lessened the value of their work as it will be estimated by scholars and by coming generations. There ought to be, and there will be, a great deal done in the textual criticism of the Old Testament. The further study of the Septuagint and the rectification of its text, and the study of later ancient versions which are founded on manuscripts of the original that long ago perished, will in time yield valuable fruit. Whether the condi-

tion of these inquiries now is such as to justify the extreme prudence and reserve of the Revisers as regards the text, is a question on which there will be a difference of opinion. The first thing to be done is to dispossess the mind of the notion that the original text of the Scriptures is to be ascertained in any other way than by the means applicable to all other ancient writings. As long as a vague idea of a miraculous preservation of it, or an unreasoning timidity which debars scrutiny, is allowed to have an influence, the truth will not be reached.

The Old Testament Revisers have done an excellent service of a negative kind. In the first place, they have been able to *unload* Archbishop Usher's chronology, which has been connected with the editions of King James's version. Usher was a great scholar, and did a noble service in his day. His chronology, however, in important parts of it, was always a subject of more or less controversy. In the existing state of historical studies it is a burden and an encumbrance in our English Bibles. At best, it is of the nature of comment, and comment is out of place in a translation. In the second place, the Revisers have delivered us from the headings of the chapters. These uninspired and sometimes unintelligent assertions respecting the contents of the chapters are in their nature mere commentary, and it is high time that they were shoveled out of the way. The Protestant habit of inveighing against notes and glosses in the Roman Catholic versions, has been an example of the ease with which we condemn sins of which, in another form, we are guilty ourselves. Our editions of the English Bible have assumed to tell their readers what the prophets and apostles taught, including not a little which they did not teach.

With this improvement we may associate the gain derived from the grouping of the text into paragraphs. Here a minor ingredient of interpretation must sometimes come in, but here it is inevitable. The effect of the mechanical chipping of the Scriptures into little fragments called "verses" is in a large measure neutralized. The printing of poetry in a metrical form is another change of which a benefit in interpretation cannot fail to be one consequence.

With respect to language and style, the main objection which has been made to the Revised New Testament is that it has admitted trivial emendations, and in too many instances made a greater loss in spirit and force than it made a gain in minute accuracy. A certain petty and pedantic quality has been imputed, not wholly without foundation, to a considerable number of its alterations. The New Testament Revisers have a right to at least a partial defense against the prevalent criticism. The first thing to be said in behalf of them is that the authors of the old version allowed themselves more license than anybody allows at present to translators of ancient or modern writings. They wrote at a time when there was a great relish for sonorous English; and this we have in a noble abundance in King James's version. In not a few cases, the reflection cast on the Revisers is really a reflection on the original writers of the Scriptures, although it is not so intended. Not to mince the matter, there is more fine writing in King James's version than in the Greek of the Evangelists and Apostles; and the preference of King James to the Revisers is in some

cases a preference of King James to the original authors. Then it must be remembered that what is called *rhythm* is frequently the mere mode of reciting a passage which has been acquired by a long habit of modulating the voice in its frequent repetition. The *rhythmical* utterance of a verse from King James's translation often fails in just emphasis and felicity of pause, if the sense, and not the sound, is to be chiefly regarded. However, it is undeniable that the revision of the New Testament has a fault of the nature referred to, although it has been exaggerated by critics who prefer eloquence to truth and fidelity in the transference of thought from one language to another. The Old Testament companies, made wary by the outcry raised against their New Testament colleagues, who had first to bear the brunt of criticism, have adhered more closely to time-honored phraseology, and, generally speaking, have not aimed to be accurate overmuch. The English company have not been willing to part with "bolled," although not one man in five thousand knows what it means, and they express a pathetic reluctance at giving up "ear" for "plough." They almost imply that the provincial use of a word in some district of England is a sufficient reason for retaining it, and apparently do not reflect that their entire island contains only a fraction of the English-speaking nations who, it is to be hoped, will continue to read the Bible.

Perhaps the most notable change in the vocabulary of the English translation is the retention of "sheol"—the old Hebrew translation of the under-world, the abode of the departed, the realm of shadows—in the room of the word "hell," which once was understood, but is now, owing to a change of significance, become misleading. The English company, however, persisted in retaining "pit" or "grave" in some of the passages where it occurs, and contented themselves with printing the original "sheol" in the margin. The rule of translating an original word by an identical English term is without any good foundation, and efforts to follow such a rule are one main cause of the blemish in the New Testament Revision of which we have spoken above. It is a cramping, slavish canon that nobody would think of adopting, or of trying to adopt, in rendering a book from Greek or Latin, French or German, if it were not a sacred scripture. But in respect to "sheol," there was no need of departing from the custom of keeping this term, and there is a disadvantage. It is found requisite to warn the reader in the margin that it does not mean "a place of burial," and yet the warning is not clearly uttered. The use of "sheol" in the Revision will be useful in putting the readers of the Old Testament upon a right track in the study of it. The gradual unfolding of doctrine, the progressive revelation of spiritual truth, is what all Christians at the present day have special need to understand if they would comprehend their religion or defend it against assault.

There is one word which we have to add in relation to the fair treatment of the Revised Version as a whole. It is not enough to be dissatisfied with a rendering. Unless the critic is prepared to suggest a better one, or feels authorized to affirm that a better one could be found, he is bound to keep silent. Where is there a writer, ancient or modern, who can

be *satisfactorily* presented in another language than his own, if by *satisfaction* we mean the pleasure which a *perfect* equivalent affords a reader of critical taste? It will often happen that a particular rendering raises a misgiving, if it do not stir up a feeling akin to disgust, when the reader, on making the attempt to provide a substitute, has to give up the endeavor. The New Testament Revisers have a special claim to this kind of consideration, for they labor under another disadvantage greater than any of those we have enumerated, in comparison with the Old Testament company. The writings of the New Testament, especially the Epistles, are vastly more difficult to translate than the Hebrew Scriptures. The Old Testament company had no such obstacles to wrestle with as encountered the Revisers in the Epistles of Paul. If the Old Testament company are censured less, it is because their task was easier and because they have made hardly any attempt to improve the text. In truth, however, both groups of revisers are entitled to honor and gratitude for the measure of success which they have attained.

The fact that the Bible is a sacred book is attended by one incidental disadvantage. To a considerable extent, at least at the present day, it is taken out of literature. That is to say, the poems, the histories, etc., which compose it are massed in one volume instead of being separately published, and for this reason are less read by a numerous class who are not sufficiently alive

to their distinctively religious value. The book of Job is about the only one of the Scriptures which is ever published by itself in a form to attract literary readers. Whatever tends to freshen the pages of the Bible, to remind people that it is a composite collection, and not a single treatise, and that a treatise all in prose, is a benefit. The New Revision, it is possible to see, is not without an effect of this kind.

The revision of the early Protestant versions of the Bible in different countries, and the wide-spread interest felt in the work among all classes, are among the many signs that the Scriptures are not losing their hold upon the minds of men. The study of comparative religion does not operate to weaken, it rather tends to increase, the influence and authority of the Christian Bible. Let any one attempt to read the Koran, and he will rise from the effort with a profounder sense of the depth of power that belongs to the writings of the Prophets and Apostles. Editions of heathen scriptures and excerpts from heathen sages which have been sometimes put forth as rivals of the Bible bring no very large profit to editors or publishers. The Bible remains a well-spring of spiritual life. The conviction is not likely to be dislodged that within its hallowed pages life and immortality are in truth brought to light. The progress of culture and civilization in the lapse of ages does not lessen the worth of the treasure which they contain.

OPEN LETTERS.

What shall be Done with Our Ex-Presidents?

THIS question, which, though little discussed, has not a little exercised the minds of reflecting people in the United States of late years, was brought into special prominence at the last session of Congress by the introduction and passage of a bill extending special relief to ex-President Grant; though in this particular case it was, of course, the former military services and position of the general that enabled Congress to act effectively.

There are many who deem the present custom with regard to our ex-Presidents the most democratic—using the word in its general, and not in its partisan sense—and therefore the most fitting method. The President, they say, is taken from among the people to act as their chief servant for a brief period—on the expiration of which he resumes his place in the popular ranks, as he should. There are, indeed, some who do not believe in anything that will tend to further exalt or *personalize* the Presidential office, preferring as they do to foster a tendency towards the abolition of the Presidency, or its conversion into something like the Swiss executive system.

But of the various suggestions having to do with the institution as it is, the one printed below seems to us of especial practical suggestiveness and value. It is from the pen of one who always speaks upon public questions with authority, but whose name we suppress from a desire that his recommendation should be considered and judged, as such a question always should be, entirely upon its merits.—EDITOR OF THE CENTURY.

We have now (June 15, 1885) three ex-Presidents. Since the retirement of President Washington in 1797 we have never been without one or more. We never had more than four except for a single year, in 1861–62, when we had five. The average number for the eighty-eight years since Washington became our first ex-President has been less than two and one-half per annum. But in the whole expanse of the United States there is no class of citizens so difficult to classify, none whose position is in so many respects awkward and embarrassing. But yesterday a king; to-day “none so poor to do him reverence,”—at once the most conspicuous and one of the most powerless private citizens of the Republic. Though representing not only the eminence of character which called him to the chief magistracy, but the accumulated distinction which the discharge of its duties for one or more terms necessarily begets, he is relegated to the comparative obscurity of private life, unsupported by a single expression of the nation’s gratitude or the slightest official recognition of the loss the public service sustains in parting with his unique experience and trained familiarity with public affairs. He takes with him into retirement no official rank, no title, not even a ribbon, nor a perquisite unless it be the franking privilege, to distinguish him from the obscurest and least deserving of his countrymen. More unfortunate even than a good household servant, he cannot command a certificate from his last place. Neither has he the privileges and exemptions which attach to political obscurity. Like an *aërolite*, the height from which he has descended makes him an object of perpetual and costly curiosity. If a man of moderate means, as most of our Presidents

have been, he is condemned by the very eminence from which he descends to expenses to which no private citizen is liable,—expenses for which the State makes no provision, and expenses from which there is no graceful or dignified escape. The Presidency is the only office in the country which to a considerable extent unfits its incumbent for returning to an active prosecution of the profession or calling in which he may have been trained. He is expected to sustain the dignity of the first citizen of the Republic for the remainder of his life, without any of the resources or privileges which such a rank implies. At the very time when his availability as a public servant is presumably greatest, and when he deserves to be regarded as one of the nation's most valuable assets, he is not only cast out like the peel of an orange as worthless, but virtually disqualified for subordinate positions.

Is this as it should be? Is it just to our chief magistrates? Is it just to ourselves? Is it good economy? Is it good politics?

The time seems to have arrived when these questions should be considered, and something should be done to secure for our ex-Presidents a rank and position which shall make due account not only of the services they may have rendered the country, but those which they more than other persons are still capable of rendering. Congress has occasionally allowed itself to make some temporary provision for necessitous ex-Presidents; but, besides being transient in their operation, these expressions of national sympathy involve invidious discriminations, and they humiliate the beneficiary by granting as a favor or a benevolence what should be conceded only for an equivalent.

Without any pretension to have found the only or the most proper remedy for this great wrong to our chief magistrates,—a wrong resulting from no deliberate purpose, but from an oversight of the framers of our Constitution,—we have one to propose which commends itself to our most deliberate judgment, and to which as yet we have found no serious objections. It is very simple and not entirely new, though we are not aware that it has ever been formally submitted to the public.

We would suggest, then, that when a President's term of office expires, he shall become a senator of the United States for life, with half the salary he received as President. The very day that he hands over the key of the White House to his successor, he should be qualified to step into the upper house of our Federal legislature, and be joined to the other seventy-six statesmen whose duty it is to review his successor's policies and measures. From being the elect of a party, he would become the counselor and protector, not of one party, but of all parties; not of any political sect, but of the whole nation.

With no political ambitions ungratified, his independence as complete as it can or ought to be in this world, he would then occupy that position in which it

would be least difficult to consecrate himself entirely and disinterestedly to the service of his country. Having no patronage to bestow, he would be under no obligation to meddle with its disposition by those who had. His social position being assured, his income would amply provide for all his wants, and leave him no pretext or excuse for resorting to any methods, dignified or otherwise, for increasing it. Whether at home or abroad, he and his ex-Presidential colleagues would have a well-defined official rank only lower than that of the President himself.*

As the mode of constituting our legislative bodies is determined by the Constitution, the following amendment to that instrument, or something substantially like it, would be required to accomplish the result at which we are aiming:

SEC. 3, ART. I. of the Constitution shall be amended so as to read as follows:

The Senate of the United States shall be composed of two senators from each State, chosen by the legislature thereof for six years, *and of such persons as shall have served to the close of a term as President or acting President of the United States*, and each senator shall have one vote.

SEC. 5 of ART. I. shall be amended to read as follows:

The senators and representatives shall receive a compensation for their services, to be ascertained by law and paid out of the Treasury of the United States. *Each President-senator shall receive for his compensation a sum equal to one-half of the salary which has been allowed to him while President, to be paid also out of the Treasury of the United States.*

The following table will show who were ex-Presidents at one and the same time, and who, had they been entitled to them, would have occupied seats in the Senate from the year 1797 to the 4th of March, 1885:

| | | |
|---------------|--|---|
| 1797 to 1799, | Washington | 1 |
| 1801 | " 1809, J. Adams | 1 |
| 1809 | " 1817, Adams and Jefferson | 2 |

| 1880 | " 1885, U. S. Grant, Rutherford B. Hayes | 2 |

* When ex-President Grant arrived in England, he was invited by the Duke of Wellington to dinner. The diplomatic corps were also invited. The American minister insisted that the ex-President should take precedence and occupy the seat of honor. The ambassadors, who represent their sovereigns and claim the rights which would be accorded to their sovereigns if present, declined to attend the dinner if the precedence was given to Mr. Grant; taking the not unreasonable ground that Mr. Grant was not an officer of any government, that he had no rank but that of a private gentleman, that his country had given the world no evi-

dence that it expected him to be distinguished from any of its other citizens, and therefore that they would be derelict in allowing him to take precedence of their sovereigns, represented in their persons. The matter was finally compromised by the intervention of the Earl of Derby, then Minister of Foreign Affairs, by so distributing the guests that neither the ex-President nor the ambassadors could be said to have precedence nor to have surrendered it. There has been no other epoch in our history, probably, when even such a concession would have been made to any other ex-President of the United States.

The cost of these supplementary senators to the nation would have been a fraction less than fifty-two thousand dollars a year, considerably less than the cost of a President alone to-day.

For this sum of fifty-two thousand dollars yearly, the Senate and the nation would have profited by the counsel, experience, and example of Washington for more than two years longer; of John Adams for more than a quarter of a century; of Jefferson for more than seventeen years; of Madison for more than nineteen years; of John Quincy Adams for more than eighteen years; of Jackson for more than eight years; of Van Buren for more than twenty-one years; and of Grant for at least fifteen years.

However diverse may be the estimates which this generation would be disposed to place upon the services which the ex-Presidents of the United States would have rendered respectively as President-senators, it is difficult to suppose that any one of them could have failed to prove a very substantial acquisition to the legislative department of our government, or that the prospect of such a dignified termination of their public career would not have made most if not all of them better Presidents. What could contribute more than such a prospect to discourage any disposition to misuse the influence and patronage of the Executive for personal ends? The President would have every inducement to give the people as acceptable an administration as possible, for the purpose of strengthening his influence in the more enduring position of senator towards which he would be gravitating.* This would be a larger and more effectual contribution to the reformation and perfection of our civil service than any laws that Congress can enact, however faithfully executed. Then the people could not only safely but wisely restore to the President the power which he needs for the proper discharge of his constitutional duties, but of which of late years there has been a growing disposition to deprive him, because of the enormous temptations under our present system to abuse it. Till some provision like this is made for retiring Presidents, it is idle to expect them to be as indifferent about a reelection as it is desirable they should be, or that any system of civil-service reform will result in anything more or better than a succession of transient and disappointing expedients.

A.

Recent Fiction.f

QUITE a number of anonymous novels have lately appeared, perhaps not without some influence from the success which befell "The Bread-winners." The pleasure of guessing who wrote a book carried the No Name Series along for several years, and "The Bread-winners" called public attention to the anonymous novel for the first time on a very large scale. "The Buntling Ball," a sense-book with a satirical aim, written in verse, has gained much by the mystery as to its authorship. While unreasonably long, it has very clever things in it,

on secondary lines. The workmanship is careful, and the humorous parody on the chorus of the old Greek tragedies, first made popular here by Robert Grant, could not be better. In reading these, the writer has felt what an Ass (not to put too fine a point on it) is the Greek chorus in the bald light of the workaday world. In the same frame of mind, taking the unconventional view, we can look at the opera-singer, and find fun in his strutting and unnatural proceedings generally. This aspect of the opera-singer was once caught by Mr. Mitchell, the editor of "Life," in an early etching. On the large lines, as a satire on New York society, it must be confessed that "The Buntling Ball" is a failure.

Another surprise which has been sprung on us, instead of hanging fire like the last mentioned, was the authorship of "Where the Battle was Fought," by Mr. Charles Egbert Craddock. That young gentleman gave Boston what is very dear to it, a literary sensation, by appearing like a modern Rosalind from the depths of the Southern forests, no longer a male, but a woman genius! "Where the Battle was Fought" may not be equal in all its parts to several short stories of the Tennessee Mountains contributed by Miss Murfree to "The Atlantic," but it has very delightful chapters, and establishes her right to membership in that Society of Authoresses which has been urged as a necessity for New York and Boston. It places her beside Miss Woolson, Mrs. Mary Hallock Foote, and Mrs. Helen Hunt Jackson.

The last mentioned has appeared in her double character of romantic novelist and redresser of Indian wrongs. In the same romance she has more or less successfully welded together the aims of the novelist and of the reformer. It would be untrue to say that the place of juncture is invisible, or that parts of the book have not suffered as a romance from the holy zeal of the reformer. But when the cause is so good and the work itself so satisfactory, one must not pick flaws. "Ramona" is a book to read all day and far into the night; it is full of a youthful idealism; it has a charming warm love-story; certain characters, like that of the old priest and the business-like Mexican lady, are novel, well thought out, delightful.

Mr. Marion Crawford's "American Politician" is the reverse of this. Intended to belong to the carefully observant school of Messrs. Howells and James, it is only externally that there is a resemblance. To "make copy," as the journalists say, was Mr. Crawford's apparent aim. The society he represents is true to neither England nor America, Boston nor New York. The politics are as impossible for London as Washington; his hero is not merely a prig—he could not exist here. Mr. Crawford has been writing from a large fund of ignorance, and has been moreover possessed, unfortunately possessed, with the desire of saying amiable things about everybody. It is a mournful come-down from "The Roman Singer," his first, though not first-published, book; and from "Mr.

* It might be worth considering whether it would not be good policy to make a reelection to the Presidency, and even a candidature for reelection, work a forfeiture of all rights to a seat in the Senate. No President would be likely to accept a renomination on such conditions.

† The Bread-winners. New York: Harper & Bros.—The Buntling Ball. New York: Funk & Wagnalls.—Where the Battle was Fought, by Charles Egbert Craddock. Boston: James R. Osgood

Isaacs," pleasing from the unusual scenery, by which he made a name.

Mr. Crawford may be said to have already met the request for romance which he has denied to us in "An American Politician"; for his last book, "Zoroaster," returns to the general vein struck in "Mr. Isaacs," only that it is completely Oriental, and that it is historical to boot. The author moves with much ease in the difficult field of the historical novel, difficult not to make learned but to make interesting. Here Mr. Crawford succeeds admirably, for much of the "tall talk" he indulges in accords well enough with the scenes of Persian and Babylonian court life he depicts, a life that recalls the pageants of the opera, as if Mr. Crawford had taken the hint from the musical boards, while the passages where he goes beyond the mark are condoned by the rapidity and interest of the story. "Zoroaster" is one of Mr. Crawford's best romances, if not the best.

The romantic element is noticeable also in Mrs. Mary Mapes Dodge's latest story, "Donald and Dorothy," which might be called a novelette for young people, as it combines the complications and suspense of a definite plot with some charming pictures of home life. Though ostensibly for young people, the story, like its author's well-known "Hans Brinker," is of a kind to interest children of a larger growth. Not that there is any great resemblance between the two stories, however, as they are really written on widely different lines.

Mr. Julian Hawthorne has reprinted several stories which are practically new to us. "Archibald Malmaison" is perhaps the best thing he has produced, having an intricate plot which turns on a peculiarity of the brain of the hero. "The Pearl Shell Necklace" is a lovely story, with a good deal of plot and strong impressions of Nathaniel Hawthorne,—something that the son does not often have, notwithstanding all that easy-going reviewers may say, while "Archibald Malmaison" is, if anything, more akin to Edgar Allan Poe. Mr. Hawthorne writes like a man who has never yet found the place, the surroundings, the leisure to do his best; he is one of those workmen who impress you as capable of far stronger, deeper, more important literary work.

New as a writer of novels, but a journalist of some note, is Mr. Henry F. Keenan, author of "Trajan," which began to appear in a magazine that afterward suspended publication. The romantic element is strong in Mr. Keenan, so strong as to cause him sometimes to lose the perspective of to-day, but on the other hand giving to his work no little color and movement. The descriptions of Paris in the beginning of "Trajan" are picturesque and yet true; the characters are very uneven, often approaching silliness, and then startling one with an epigram, a thoughtful word, or a truth freshly and charmingly expressed.

Another journalist is Mr. Howe, author of "The Mystery of the Locks," a romance dripping with wet and murder, plunged in darkness and decay, redolent of ruined houses and tears. Mr. Howe manages to be readable, in spite of the lugubrious glasses through which he views everything; did he but know it, the strain of melancholy is so long drawn out that it loses its effect. His ostensible aim is realism, but were there such a pessimistic situation anywhere, the river, the halter, and the knife would soon

remove the citizens of his dreary town to another world. Mr. Howe's pessimism is too artificial to be hurtful.

A. B.

A Boy's Appetite for Fiction.

SOME time ago the papers reported the suicide of a young boy whose mind had become disordered through dime-novel reading; while more recently at Freehold, New Jersey, an organization of boys, calling themselves the "Jesse James Gang," were indicted for larceny to which they had been prompted by the same pernicious stuff. By way of remedy a bill was introduced in the New York Legislature prohibiting "dime" publications; but the bill was not passed, and it is doubtful at any rate whether the difficulty could be solved in this way.

Even if a boy does not incline to the dime novel or the weekly "penny dreadful," he is hardly less in danger from what we call the standard fiction, if he uses it—as too many do—without moderation. Dickens, Scott, and Charles Reade are not in themselves demoralizing; but to read half a dozen of Reade's largest novels in as many weeks, as I have known a boy to do, is a mental dissipation which cannot fail to be injurious. The prevalence of this form of dissipation is obvious, but hardly any one realizes the extent to which it prevails; and it is for the enlightenment of parents and teachers on this point that I propose giving the results of some inquiries which I have made among thirty or forty boys in a private boarding-school in the State of New York.

Of these, five or six confess at the start that they do not read at all. "I have never read a book," one small boy of ten writes, "but my mother has read some to me." Half a dozen more merely state their preferences in the various departments of literature, while eighteen or twenty furnish in addition a very full list of all the books, so far as they can remember, that they have ever read in their lives. It is from these that I have drawn my conclusions, which I feel justified in doing from the fact that the boys are fairly representative, in point of age, intelligence, and social position, of the school-going class all over the Eastern States. Some of them, I am sorry to find, are addicted to the pernicious literature of which I have already spoken. One has read the life of Jesse James, and prefers it to that of Garfield; four have perused one of Zola's vilest novels; the same number read the "Police Gazette," and two the "Police News"; a number indulge in dime novels, of which one has absorbed as many as fifty or sixty. I have no doubt, however, that as these boys have their taste educated they will abandon Beadle, Tousey, and Fox, for Scott and Dickens, as one of their companions has done already. "From the age of thirteen to fifteen," he says, "I read a great many half-dime novels, but now I have found out that it spoils my taste for solid reading, besides being a great waste of time, so I shall never read any more of them. I have begun to read Walter Scott, Dickens, etc., and shall try to read a good many of them."

What this lad proposes to do, however, in his reaction against sensationalism, may not be an unmixed benefit. Walter Scott and Dickens are, of course, vastly preferable to "Jack Harkaway," "Roaring Ralph Rockwood," and "Dick Lightheart"; but the

danger is that he will over-indulge himself, as many of his companions seem to be doing. Here, for instance, is a boy of fourteen who names sixty-nine books which he has read—all of them fiction—and mentions that he could give ninety-seven more. Another furnishes a list of seventy, also fiction; another, of forty; another, of fifty; another, of one hundred and thirty-six; while the most astonishing exhibit is made by a lad of seventeen, who enumerates the titles of four hundred and seven books which he has read, of which three hundred and ninety-five are novels. Assuming that he began when he was nine years old, he must have read one new book every week of his life since that time; and probably more than one, since after the four hundred and seven he adds the comprehensive words, “and many others.” The eighteen boys, it appears, have read in the aggregate about thirteen hundred books, of which twelve hundred are works of fiction; while the histories, biographies, etc., all told, number but one hundred, and of these as many as forty were read by one boy.

Now this is a startling disclosure, and yet it only presents in the concrete facts of which most people are already aware. The circulating libraries report the same state of things. Volumes of history, biography, travels, and essays lie on the shelves and accumulate dust, while *Optic*, *Castlemon*, *Alger*, *Jules Verne*, *Dickens*, and *Scott* change hands fifty-two times in a year, and are worn out with constant use. It is not my purpose to discuss the situation, or its threatening aspects. Every one agrees that too much fiction is as unwholesome as too much cake; the problem is to make the boy eat bread and butter. How are we going to solve the problem?

No one, of course, can present any solution that will cover every case, because the problem varies with the individual boy. With some it will be easier than with others. One lad naturally drifts toward study and investigation, and it will be necessary only to give his mind impulse in that direction to divert it from too much light literature. Another cares nothing about literature of any kind; it will not be difficult to keep him away from the danger. There are those, however, like the one mentioned, who are ravenous readers of anything from *Ouida* to *Gaboriau*, and in their case the problem becomes difficult and important. Without professing to solve it, I may be able to furnish one or two suggestions which lie in the way of its solution.

It is important, in the first place, to keep the boy employed. His lessons occupy him during the five or six hours he is at school. What engages his attention afterward? How many parents make any provision for the unemployed hours? How many know what their boys do in the afternoon? How many choose their sons' companions, or make sure at any rate that the boys do not fall into bad company? It is simply miraculous that so many grow up pure and honest, when one considers the temptations to which they are exposed, and the little pains taken by the parent to shield them from attack. One father whom I know, and whose case I take the liberty of citing because of the example which he sets to others, provides his son with a complete gymnastic apparatus in the grounds of his house, private telegraph wires to his friends' houses, and all sorts of mechanical appliances and games for indoor use, in the enjoyment of all

which the boy's friends and companions are made as welcome as himself. The lad himself plays the violin, and one or two others of his friends the banjo; several of them are addicted to chess; and for the more systematic pursuit of these employments they are encouraged to form clubs, of which I think there are as many as four in active operation. With all this occupation it may be imagined that the boys have little opportunity to read forbidden books, or engage in forbidden pleasures, even if they wanted to, which I do not believe they do. It may be urged, indeed, that they do not have much opportunity to read anything; and this is no doubt true, but for a school-boy occupied all day with his lessons reading is not an essential exercise, and as between sitting in the house over a novel or playing tennis out-of-doors, the latter is decidedly preferable.

If, however, the boy must be left to provide his own occupations, or if he does not take to out-of-door sports at all, and insists on spending his leisure over his books, then it becomes necessary to counteract the tendency toward too much fiction by stimulating his spirit of inquiry in other directions. There are few boys, however dull, indolent, or volatile, who cannot be interested in serious subjects if the attempt is only made in the right way. To illustrate this, let me give a bit of experience.

Not long ago a literary club was started among a small circle of boys in Brooklyn by their Sunday-school teacher, with a view to giving him a little closer access to his scholars in their secular pursuits. In a year and a half it grew from six members to fifteen,—at which the membership is limited,—and excited a degree of interest among the boys and their friends which fills the teacher, who is also the president, with constant gratification and surprise. Its meetings are held fortnightly in the president's house, and the exercises comprise readings, essays, declamation and debates, and the presentation by some previously appointed member of the current events of the fortnight gleaned from the newspapers, from which the organization takes its title of “The Newspaper Club.” In anticipation of the closing meeting before the summer vacation, the president distributed among the members a series of history questions, promising a prize to be awarded at that meeting to the one who should answer the greatest number within a fortnight. The queries, numbering twenty in all, have already been published in one of the newspapers, but two or three may be quoted here to show their general character: “What celebrated character after spending sixteen years in writing a history burned it up, and why?” “Who was the best of the Cæsars; when and how did he die?” “Who was called the White Rose of Scotland?” “When was a lunar rainbow supposed to foretell the death of a Prince of Wales?” etc., etc.

Difficult as they were, the boys attacked them with undismayed courage, took them to their teachers and friends, invoked the assistance of editors and literary men, besieged the Brooklyn, the Astor, and the Historical Society libraries, made the librarians' lives a burden, and in every possible way sought to obtain the answers. It is no exaggeration to say that for a fortnight the questions were the uppermost thought in their minds; and not so much for the sake of the prize as

from an ambitious desire to excel in the competition. The president was simply amazed. Boys who were not naturally studious spent hours over books which they had never opened before, in their lives; others who were fond of reading left fiction for history and biography; a few who did not participate could not fail to be interested in the efforts of their companions; while one who had watched the contest carefully did not hesitate to assert that the competitors got more knowledge of history out of it than they would get out of a year's study at school. It does not concern the discussion particularly, though it may be an interesting fact, that one boy answered correctly fifteen out of the twenty questions; another, fourteen; another, thirteen and a half; a fourth, thirteen; a fifth, twelve and a half; a sixth, twelve; and the seventh and eighth, eleven each.

Now this, it seems to me, suggests one antidote to the novel and the story-paper. It is only a suggestion, of course, and might not work with equal success under other circumstances. Methods of this sort have to be adapted to the exigency, and one who goes into the business of an educator — though only in an amateur way — must be fertile in expedients. But here, at least, is a single instance in which historical study became, for a time, of greater interest than fiction. And I think it may be taken for granted that whenever the boy becomes interested in the identity of the White Rose of Scotland, or the fate of the last Cæsar, or in the historical lunar rainbow, or in like subjects, the novel and the "penny dreadful" will have lost something of their charm.

Eliot McCormick.

Archæological Study in America.

IN past ages, despite such phenomena as the archæizing tendencies of late Egyptians and Greeks, and of the Romans, who were devoid of artistic originality, men did not interest themselves in old-fashioned details of custom or art — in antiquities. When the Greeks had repairs to make to an old temple, they did not seek, as we do now, to put back careful copies of the injured work; they added, as at Selinous, sculptures and columns in the prevailing style of the day, thus, to a modern eye, injuring the unity of the monument. So, in mediæval Europe, the majestic round-arched naves of Vézelay and Le Mans were completed a century or more later by the graceful lancets and soaring vaults of their magnificent choirs; and in 1514 the slender pinnacles and luxurious ornament of the lofty north spire of resplendent Chartres arose beside the noble simplicity of the companion spire, nearly four hundred years older. Archæology, discovered by Winckelmann in the last century, has become a science only within a few years, and is a characteristic acquisition of this encyclopædic age of patient research and reasoning endeavor — logical, if not always, unhappily, possessing the inspiration attending sincere conviction within narrower bounds.

Archæology is a purely intellectual science, without direct influence upon increase of material prosperity, and devoid of political affiliations. Hence, its pursuit is slow to gain foothold in a new civilization such as ours. Recently, however, American interest in archæology has been increasing very rapidly. This inter-

est is fostered particularly at Harvard — where for years the artistic and æsthetic side of the subject has been admirably expounded — and at Johns Hopkins. It is manifested by the growing popular concern in the aboriginal antiquities of our own land, now carefully preserved and intelligently studied, not without important aid from the Government. It is promoted by a number of local societies, such as those of Baltimore and New York, recently organized as component parts of the Archæological Institute of America, which has become, under amended regulations, a federation destined to unite the interests and energies of smaller bodies scattered throughout the country. The Institute, though young in years, has by the thorough work of its expedition to Assos rendered a service to classical study of which the acknowledged value will not be appreciated according to its full merit until the publication of the final report. It has brought to the Boston Museum of Fine Arts the first Hellenic sculptures of capital importance which have crossed the Atlantic; and these have now taken their place beside the admirably selected collection of casts which renders that museum, as Mr. Stillman has pointed out, one of the best schools in the world to-day for the study of classic sculpture. The Institute has rendered a still greater service to American learning in becoming the parent of the school at Athens, supported by a league of colleges formed in the common interest of knowledge. The school, though only three years old, has begun already with fruitful results its work of training a band of practical young archæologists to emulate their fellows who have done honor to France and Germany, and to follow in the footsteps of our own Stillman, Clarke, Bacon, and Waldstein. Our growing appreciation of antiquities is illustrated by the popular favor with which were received last spring the archæological lectures given in Baltimore and in New York, by the general prosperity of our museums, and by the foundation at Baltimore, with much enthusiasm and a bright prospect for success and usefulness, of the new "American Journal of Archæology," which aims to cover all departments of the science — prehistoric, Oriental, Egyptian, classical, mediæval, and American — more completely than they have been covered heretofore in any one periodical.

To turn to more active American work: As is well known, the Wolfe expedition to Babylonia is now in the field; the school at Athens has just published its first volume of Papers and a preliminary report of a journey through unexplored regions of Asia Minor by one of its students — a journey rich in geographic and epigraphic gain; and the Institute has issued a most valuable volume giving the results of the labors in Mexico of its representative, Mr. Bandelier, who in considering American aboriginal problems brings to bear common sense and scientific method, and sweeps aside with little ceremony the fanciful glamour in which such problems have been enveloped by untrained explorers. It is hoped, too, that means may soon be found by the immediate initiative of the New York Society of Archæology to continue the honorable record of Assos by sending out a thoroughly equipped expedition to some such site as Cyrene, rich in history and in ruins, whence may be brought not only credit, but notable increase to the scanty national store of original antiquities.

With the despicable cry of the vandal Congressman, "What have we to do with abroad?" still ringing in our ears, it is a peculiar satisfaction to know that the best text-book upon the history of ancient sculpture which has appeared in any language is the work of an American lady.* Mrs. Mitchell has passed years studying her subject in European museums; she manifests great familiarity with its mass of literature, and she has had the masterly guidance of perhaps the greatest living archæologist, Dr. Heinrich Brunn. The chief concern of us moderns is, of course, with Greek art, which must retain for all time the office which it assumed immediately upon its development after the Persian Wars—that of a prime factor in human civilization. But it is not now disputed that to understand adequately Hellenic art, it is necessary to become familiar with the antecedent civilizations of Egypt and Mesopotamia, and with the history of Phœnician traders; to learn what we may of mysterious Hittites, and to follow the mournful decadence, under Roman sway, of Greek ideals. Mrs. Mitchell covers the whole ground; and we surely have no right to complain that she fails to disguise the preëminence of her sympathy with the noblest part of her subject—that which treats of Greece. The book is abundantly illustrated; indeed, in this and kindred subjects the illustrations are almost as important to the student as the text. The cuts, unhappily, cannot be praised without reserve. The beautiful American engravings have suffered in the reprinting; the new German engravings are inferior; and the numerous "trade" cuts, German and English, used to Mrs. Mitchell's own regret, are painful relics of an unscholarly past. The phototypes, however,—both those in the book and those in the carefully selected portfolio,—are beyond praise in their delicate and artistic execution. In a work of such wide scope it would indeed be strange if the critic were unable to find some inaccuracies, and some opinions which he could not indorse. The inaccuracies in Mrs. Mitchell's book are very few. As instances may be mentioned her repetition of an exploded interpretation of the famous Palestrina vase, and the publication in Fig. 133, as an example of archaic work, of the beautiful archaic bronze statuette from Verona in the British Museum. She errs, perhaps, in not laying sufficient stress upon the familiar and popular side of Greek art as manifested in the terra cottas, lovely and quaint by turns, which do not represent divinities only, but illustrate all phases of daily life, grave and gay, of old and young. But Plate XI. of the portfolio gives three beautiful examples of these figures, chosen from among the best.

Mrs. Mitchell merits public gratitude for bringing together in one volume, and that not too bulky, the results of modern scholarship and discovery, which will appear in M. Perrot's admirable work only by slow installments and in perhaps eight volumes, each as large as her one. In her History are now accessible scientific achievements of which the record was before disseminated in a mass of periodicals and pamphlets in various tongues—the work of Mariette

and Maspero in Egyptian necropoleis; that of de Sazec at Chaldæan Tello, and of Ramsay among Phrygian monuments perhaps antecedent to Mycænæan lions; the discoveries by Greeks at prehistoric Spata, those of primitive Hellenic sculptures by the French at Delos, of priceless wealth of antiquity by the Germans at Olympia and Pergamon and by the Austrians at Lycian Gjolbaschi.

Thomas W. Ludlow.

Letter from a Southern Woman.

A movement has been set on foot among us to establish Sunday-schools for colored children to be taught by white people, and a church where services will be conducted by one of our own ministers. This is certainly a step in the right direction, and if it does no more it may at least tend to weaken the deep distrust with which negroes regard all movements of the whites in relation to themselves. It is evident that now their need is of moral training rather than religious instruction. The tendency of their religious training has been to divorce religion and morality—to make of religion an offering, an atonement for sins, a convenient substitute for the painful denial of a life of rectitude.

Now, what seems desirable is a system of day schools, taught by a Southern man or woman, where a common-school education shall be supplemented by plain lessons in cleanliness, truth, honesty, chastity, thrift; a system of visiting each pupil at home, a kindly interest in their daily lives, words of cheer to parents.

This course could and would elevate the colored race and strengthen the bands of friendship and mutual trust between the two classes. Hundreds of Southern women of fair education are so reduced as to accept gladly a position in the homes of friends or relatives equivalent to that of upper servant, without wages, yet not one can be found to fill the useful and honorable position of teaching a colored school because of the social ostracism which would follow. Let some more fortunate sister who has a living income set the example and teach for love; the path will be opened and will speedily be filled by hundreds who are now too timid to take such a step for themselves.

Let me do all honor to the noble women of the North, who, actuated by the purest missionary spirit, braved ostracism and malaria to do this work. In numbers they were too few to make much impression on the morals of the race, and in religion they were usually enthusiasts who looked to religion alone to save and elevate this people. I see no hope for the South in any sense save through the elevation of this people, and it must be done by our own hands. We must work together for our own good; to do this we must feel and think alike, and cordial relations must be established, freely, fully, universally, not in isolated instances as now. How can this be better begun than by our becoming their teachers and visitors? Believe me, I speak as one who knows and loves this people, who is bound by many ties to individuals among them and who appreciates their good qualities as a whole.

BRIC-À-BRAC.

A Lesson in Tennis.

THEY played at tennis that summer day—
Where was it? Oh, call it Mount Desert—
The place matters not; I will simply say,
They were playing tennis that summer day,
And she wore a short and striped skirt.

He played but ill—'twas his first essay—
And she his partner and coach was both:
Though perhaps not "up" in the points of play,
Yet she knew the game in a general way
And to give him points seemed nothing loath.

He did his best, but his best was poor;
The balls served to him on his side staid;
And thus it went on for a round or more,
Till, anxious, he ventured to ask the score.
"The score? Why, it's Thirty—Love," she said.

"And Love? What is love?" he fain would know,
Yet blushed to ask it, for he could see
What pardonless ignorance he must show;
But she calmly answered him, speaking slow,
"Why, Love is nothing, you know," said she.

The sun of that summer day is set;
That season is gone, as seasons go;
But his heart was caught in that tennis net,
And they might have been playing partners yet
Had she not given her answer, "No."

He plays no tennis at all, this year,
But he mopes, and moans, and sighs—heigho!—
That fate is so hard, and life is so drear;
And, worse than all else, he remembers clear
That "Love is nothing"—*she* told him so.

C. F. Coburn.

A Maiden Lady.

OF a summer afternoon,
In her parlor window there,
She would sit, her meek face showing
Delicately long and fair,
Sewing on some dainty garment, no one ever saw
her wear.

She'd be dressed in cool old muslin
With a lilac pattern dim;
Full soft skirt, and pointed body
Cut severely straight and prim—
Maiden-dress and maiden lady, sober, delicate and
prim.

She seemed not with love acquainted;
Half too fine to hold him dear.
Folk spoke shyly of love-matters,
With this maiden lady near,
With a feeling it were converse hardly suited to her
ear.

When she cried, poor, shy old maiden,
Her artless secret saw the sun:—
She had been with love acquainted,
Always, just like any one:—
But had kept him in a closet hidden, as a skeleton.

Mary E. Wilkins.

A Skit—Writ for "Miss Kit."

(WHO IS A VERY LITTLE LADY.)

IF you had a little lover,
Little Kitten—
A very little lover,
But *dreadfully* smitten—
What would you say,
And what would you do,
If this little lover
Were littler than you?

To love one below you
Never is right—
You could not look up to
A man of less height.
And then I remember
The refrain of a song—
If you loved him "little,"
Could you love him "long"?

A lover should reach—
The reason, you see—
Just up to your heart
When he's on his knee.
If he *stood* but that high,
I wonder, Miss Kitten,
Would you give sigh for sigh,
Or give him the mitten!

Charles Henry Webb.

Uncle Esek's Wisdom.

WHAT is simply curious will live just about as long
as what is simply false.

WHEN an old fellow marries a young wife, the love,
if there is any, is all on one side; but the folly is
about equally divided.

GRAB and Grip, when they hunt separately, are
weak; but when they hunt in couple, are two very
successful dogs.

ALL lies have some truth in them. If they have
not they're not lies.

HONESTY without capacity is like a dove with a
broken wing.

ALL the moral truths in existence could be put into
a pamphlet of five pages, and leave the first page
for a learned introduction and the last two for adver-
tisements.

ABUSE is what has made the heels of the mule
respectable.

THERE probably never have lived a dozen men yet
whom the world could, with safety, call back to live
their lives over again.

REVENGE is the coward's victory.

NEXT to the Bible, the looking-glass has done the
most to civilize the world.

IF a man really deserves a pedigree he doesn't want
one; and if he really wants one he doesn't deserve it.

Uncle Esek.

Luck and Work.

WHILE one will search the season over
To find a magic four-leaved clover,
Another, with not half the trouble,
Will plant a crop to bear him double.

Lass Lurline.

THE cock crew midnight three hours gone,
I'm well-nigh weary waiting;
The honest clock ticks bravely on
With pluck exasperating.
Pussy and I, left to ourselves,
Have plied the cushions and book-shelves
With profit: now, ere sleeping,
I'll spend a moment peeping
At daintiest maid by mortal seen —
The little sylph called Lass Lurline.

She turns the key, just from the ball;
Wide open, eyes, make ready!
Seize on her airy graces all
As boy would, but be steady.
The time is fitting—hark! She comes:
And what a dreamy strain she hums —
A love-song's tender measure
Running 'twixt pain and pleasure!
Her young heart has been grazed, I ween,
Long shot at — Enters Lass Lurline.

Come in, my dear. Who bent his knee,
To-night, the lowest; bowed him
To earth and sued most artfully;
Spent all his wits allowed him,
And then stood breathless? Girl, you smile
As if I'd lived on all this while
For nothing. Pray remember
'Tis clear air in December,
Good for far seeing — cold and keen:
These locks are frosted, Lass Lurline.

What youngster took most pains, I ask,
Posing, then bending double,
Putting his tailored back to task?
Who took most tortuous trouble,
And what his winnings? Did you give
Him look that bade him try and live
A few brief waltzes longer;
Or was it somewhat stronger
You answered? Picture me the scene
In faithful colors, Lass Lurline.

"A theme worn threadbare." — Girl, that heart
Of yours, where is it? Mainly
It plays another organ's part:
Placed howsoever, plainly
'Tis tough as gizzard, 'twill so tease
Daft beardlings dropped upon their knees.
Have care, the years are going;
Chance by and by (no knowing)
You'll rue some prank of gay eighteen:
Such things do happen, Lass Lurline.

"No time for preaching." — So? Let's see;
I've sermon worth the hearing:
An inventory it shall be
From slipper-tip to ear-ring.
Can't be the inside, hence the out,
Our goslings all go mad about.
What is your beauty made of?
What features, form? What shade of
Dry goods may deck the village queen?
Face toward the pulpit, Lass Lurline.

Eyes well apart and so-so bright;
Small nose, needing small notice;
A flexile mouth, teeth rowed there white;
Skin fair — snow where the throat is;
Dress delicate — a sea-shell pink
With gauze thrown on, worked in, I think,
With wedded flower and feather;
Shoes, satin — never leather;
Stockings flesh-like, as if between
The air and ankle naught, Lurline.

Your hair! bless me, what is that like?
Toy chapel with prim steeple
Rodded for lightning-bolts to strike —
How name it your *mode* people?
Soft pearls at ear-lobes and round neck,
Gold rings that twinkling somethings speck,
Cheeks tinted by deft brushes,
Belt-clasp of young boar's tushes:
All over fine, not one thing mean —
Voilà! the list complete, Lurlinae.

Thus they make beauties in these days;
It is a cunning process:
High art, but, as the proverb says,
No gains without some losses.
Your mother, girl, with aching head
From wash-tub toil, took to her bed
Some hours since. Is she sleeping,
My sweet one? No, still weeping.
I wonder what her great tears mean —
Dream on my sermon, Lass Lurline.

John Vance Cheney.

Uncle Gabe on Church Matters.

OLD Satan lubs to come out to de meetin's nowadays,
An' keeps his bizness runnin' in de slickes' kind o'
ways.
He structifies a feller how to sling a fancy cane
When he's breshin' roun' de yaller gals wid all his
might an' main;
He puts de fines' teches on a nigger's red cravat,
Or shoves a pewter quarter in de circulatin' hat.
He hangs aroun' de sisters too, an' greets 'em wid
a smile,
An' shows 'em how de white folks put on lots o'
Sunday style;
He tells de congregation, in a whisper sweet as
honey,
To hab de benches painted wid de missionary money,
Or to send de gospel 'way out whar de neckid In-
juns stay,
An' meet de bill by cuttin' down de parson's 'eerly
pay.
His voice is loud an' strong enough to make de
bushes ring,
An' he sets up in de choir jes' to show 'em how to
sing.
Den he drops de chune 'way down so low an' totes it
up so high,
Dat 'twould pester all de angels what's a-listenin'
in de sky;
An' he makes de old-time music sound so frolicsome
an' gay,
Dat 'twill hardly git beyon' de roof — much less de
Milky Way;
For dar's heap o' dese new-fashion' songs — jes' sing
'em how you please —
Dat 'ill fly orf wid de harrykin, or lodge ermongst
de trees,
Or git drownded in de thunder-cloud, or tangled in de
lim's;
For dey lack de steady wild-goose flop dat lif's de
good old hymns.
De wakenin' old camp-meetin' chunes is jes' de
things for me,
Dat start up fum a nigger's soul like blackbirds fum
a tree,
Wid a flutter 'mongst his feellin's an' a wetness
'round de eyes,
Tell he almost see de chimleys to de mansions in de
skies.

PANFORTE DI SIENA.

SECOND PAPER.

I.

EW strangers in Siena fail to visit the house where that great woman and saint Caterina Benincasa was born in 1347. She was one of a family of thirteen or fourteen children, that blessed the union of Giacomo and Lapa, who were indeed well-in-the-house as their name is,

being interpreted; for with the father's industry as a dyer, and the mother's thrift, they lived not merely in decent poverty, but in sufficient ease; and it was not from a need of her work nor from any want of piety in themselves that her parents at first opposed her religious inclination, but because (as I learn from the life of her written by that holy man, G. B. Francesia), hearing on every side the praises of her beauty and character, they hoped to make a splendid marriage for her. When she persisted in her prayers and devotions, they scolded and beat her, as good parents used to do, and made her the household drudge. But one day while the child was at prayer the father saw a white dove hovering over her head, and though she said she knew nothing of it, he was struck with awe and ceased to persecute her. She was now fourteen, and at this time she began her penances, sleeping little on the hard floor where she lay, scourging herself continually, wearing a

hair shirt, and lacerating her flesh with chains. She fell sick, and was restored to health only by being allowed to join a sisterhood, under the rule of St. Dominic, who were then doing many good works in Siena. After that our Lord began to appear to her in the Dominican church; she was likewise tempted of the devil; but Christ ended by making her his spouse. While her ecstasies continued she not only visited the sick and poor, but she already took an interest in public affairs, appealing first to the rival factions in Siena to mitigate their furies, and then trying to make peace between the Ghibellines of that city and the Guelphs of Florence. She pacified many family feuds; multitudes thronged to see her and hear her; and the Pope authorized her to preach throughout the territory of Siena. While she was thus dedicated to the salvation of souls, war broke out afresh between the Sieneese and Florentines, and in the midst of it the terrible great pest appeared. Then the saint gave herself up to the care of the sick, and performed miracles of cure, at the same time suffering persecution from the suspicions of the Sieneese, among whom question of her patriotism arose.

She now began also to preach a new crusade against the Saracens, and for this purpose appeared in Pisa. She went later to Avignon to beseech the Pope to remove an interdict laid upon the Florentines, and then she prevailed with him to remove his court to the ancient seat of St. Peter.

The rest of her days were spent in special miracles, in rescuing cities from the plague; in making peace between the different Italian states and between all of them and the Pope; in difficult journeys; in preaching and writing. "And two years before she died," says her biographer, "the truth manifested itself

so clearly in her, that she prayed certain scribes to put in writing what she should say during her ecstasies. In this manner there was soon composed the treatise on Obedience and Prayer, and on Divine Providence, which contains a dialogue between a Soul and God. She dictated as rapidly as if reading, in a clear voice, with her eyes closed and her arms crossed on her breast and her hands opened; her limbs became so rigid that, having ceased to speak, she remained a long hour silent; then, holy water being sprinkled in her face, she revived." She died in Rome in 1380; but even after her death she continued to work miracles; and her head was brought amidst great public rejoicings to her native city. A procession went out to receive it, led by the Senate, the Bishop of Siena, and all the bishops of the state, with all the secular and religious orders. "That which was wonderful and memorable on this occasion," says the *Diario Senese*, "was that Madonna Lapa, mother of our Seraphic Compatriot,—who had many years before restored her to life, and liberated her from the pains of hell,—was led to the solemn encounter."

It seems by all accounts to have been one of the best and strongest heads that ever rested on a woman's shoulders — or a man's, for the matter of that; apt not only for private beneficence, but for high humane thoughts and works of great material and universal moment; and I was willing to see the silken purse, or sack, in which it was brought from Rome, and which is now to be viewed in the little chamber where she used to pillow the poor head so hard. I do not know that I wished to come any nearer the saint's mortal part, but our Roman Catholic brethren have another taste in such matters, and the body of St. Catherine

THE RETURN FROM THE FOUNTAIN.

has been pretty well dispersed about the world to supply them with objects of veneration. One of her fingers, as I learn from the *Diario Senese* of Girolamo Gigli (the most confusing, not to say stupefying, form of history I ever read, being the collection under the three hundred and sixty-five several days of the year of all the events happening on each in Siena since the time of Remus's son), is in the Certosa at Pontignano, where it has been seen by many, to their great advantage, with the wedding-ring of Jesus Christ upon it. Her right thumb is in the church of the Dominicans at Camporeggi; one of her ribs is in the cathedral at Siena; another in the church of the Company of St. Catherine, from which a morsel has been sent to the same society in the city of Lima, in Peru; her cervical vertebra and one of her slippers are treasured by the Nuns of Paradise; in the monastery of Sts. Dominic and Sixtus at Rome is her right hand; her shoulder is in the convent of St. Catherine at Magnanopoli; and her right foot is in the church of San Giovanni e Paolo at Venice. In St. Catherine at Naples are a shoulder-bone and a finger; in other churches there are a piece of an arm and a rib; in San Bartolomeo at Salerno there is a finger; the Predicatori at Colonia have a rib; the Canons of Eau-Court in Artois have a good-sized bone (*osso di giusta grandezza*); and the good Gigli does not know exactly what bone it is they revere in the Chapel Royal at Madrid. But perhaps this is enough, as it is.

II.

THE arched and pillared front of St. Catherine's house is turned toward a street on the level of Fonte Branda, but we reached it from the level above, whence we clambered down to it by a declivity that no carriage could descend. It has been converted, up stairs and down, into a number of chapels, and I suppose that the ornate façade dates from the ecclesiastic rather than the domestic occupation. Of a human home there are indeed few signs, or none, in the house; even the shop in which the old dyer, her father, worked at his trade, has been turned into a chapel and enriched, like the rest, with gold and silver, gems and precious marbles.

From the house we went to the church of San Domenico, hard by, and followed St. Catherine's history there through the period of her first ecstasies, in which she received the stigmata and gave her heart to her heavenly Spouse in exchange for his own. I do not know how it is with other Protestants, but for myself I will confess that in the place where so many good souls for so many ages

A CITY GATE.

have stood in the devout faith that the miracles recorded really happened there, I could not feel otherwise than reverent. Illusion, hallucination as it all was, it was the error of one of the purest souls that ever lived, and of one of the noblest minds. "Here," says the printed tablet appended to the wall of the chapel, "here she was invested with the habit of St. Dominic; and she was the first woman who up to that time had worn it. Here she remained withdrawn from the world, listening to the divine services of the church, and here continually in divine colloquy she conversed familiarly with Jesus Christ, her Spouse. Here,

leaning against this pilaster, she was rapt in frequent ecstasies; wherefore this pilaster has ever since been potent against the infernal furies, delivering many possessed of devils." Here Jesus Christ appeared before her in the figure of a beggar, and she gave him alms, and he promised to own her before all the world at the Judgment Day. She gave him her robe, and he gave her an invisible garment which forever after kept her from the cold. Here once he gave her the Host himself, and her confessor, missing it, was in great terror till she told him. Here the Lord took his own heart from his breast and put it into hers.

You may also see in this chapel, framed and covered with a grating in the floor, a piece of the original pavement on which Christ stood and walked. The whole church is full of memories of her; and there is another chapel in it, painted in fresco by Sodoma with her deeds and miracles, which in its kind is almost incomparably rich and beautiful. It is the painter's most admirable and admired work, in which his genius ranges from the wretch decapitated in the bottom of the picture to the soul borne instantly aloft by two angels in response to St. Catherine's prayers. They had as much nerve as faith in those days, and the painter has studied the horror with the same conscience as the glory. It would be interesting to know how much he believed of what he was painting—just as it would be now to know how much I believe of what I am writing: probably neither of us could say.

What impresses St. Catherine so vividly upon the fancy that has once begun to concern itself with her is the double character of her greatness. She was not merely an ecstatic nun: she was a woman of extraordinary political sagacity, and so great a power among statesmen and princes that she alone could put an end to the long exile of the popes at Avignon, and bring them back to Rome. She failed to pacify her country because, as the Sienese historian Buonsignore confesses, "the germs of the evil were planted so deeply that it was beyond human power to uproot them." But nevertheless, "she rendered herself forever famous by her civic virtues," her active beneficence, her perpetual striving for the good of others, all and singly; and even so furious a free-thinker as the author of my "New Guide to Siena" thinks that, setting aside the marvels of legend, she has a right to the reverence of posterity, the veneration of her fellow-citizens. "St. Catherine, an honor to humanity, is also a literary celebrity: the golden purity of her diction, the sympathetic and affectionate simplicity of expression in her letters, still arouse the admiration of the most illustrious writers. With the potency of her prodigious genius, the virgin stainlessness of her life, and her great heart warm with love of country and magnanimous desires, inspired by a sublime ideal even in her mysticism, she, born of the people, meek child of Giacomo the dyer, lifted herself to the summit of religious and political grandeur. . . . With an overflowing eloquence and generous indignation she stigmatized the crimes, the vices, the ambition of the popes, their temporal power, and the scandalous schism of the Roman Church."

In the Communal Library at Siena I had

the pleasure of seeing many of St. Catherine's letters in the MS. in which they were dictated: she was not a scholar, like the great Socinus, whose letters I also saw, and she could not even write.

III.

A HUNDRED years after St. Catherine's death there was born in the same "noble Ward of the Goose" one of the most famous and eloquent of Italian reformers, the Bernardino Ochino whose name commemorates that of his native Contrada dell' Oca. He became a Franciscan, and through the austerity of his life, the beauty of his character, and the wonder of his eloquence he became the General of his Order in Italy, and then he became a Protestant. "His words could move stones to tears," said Charles V.; and when he preached in Siena, no space was large enough for his audience except the great piazza before the Public Palace, which was thronged even to the house-tops. Ochino escaped by flight the death that overtook his sometime fellow-dweller of Siena, Aonio Paleario, whose book, "Il Beneficio di Cristo," was very famous in its time and potent for reform throughout Italy. In that doughty little Siena, in fact, there has been almost as much hard thinking as hard fighting, and what with Ochino and Paleario, with Socinus and Bandini, the Reformation, Rationalism, and Free Trade may be said almost to have been invented in the city which gave one of the loveliest and sublimest saints to the Church. Let us not forget, either, that brave Archbishop of Siena, Ascanio Piccolomini, one of the ancient family which gave two popes to Rome, and which in this Archbishop had the heart to defy the Inquisition and welcome Galileo to the protection of an inviolable roof.

IV.

It is so little way off from Fonte Branda and St. Catherine's house that I do not know but the great cathedral of Siena may also be in the "Ward of the Goose"; but I confess that I did not think of this when I stood before that wondrous work.

There are a few things in this world about whose grandeur one may keep silent with dignity and advantage, as St. Mark's, for instance, and Nôtre Dame and Giotto's Tower, and the curve of the Arno at Pisa, and Niagara, and the cathedral at Siena. I am not sure that one has not here more authority for holding his peace than before any of the others. Let the architecture go, then: the inexhaustible treasure of the sculptured marbles, the ecstasy of Gothic invention, the splendor of the mosaics, the quaintness, the grotesqueness, the magnifi-

SIENESE WALLS AND GARDENS.

cence of the design and the detail. The photographs do well enough in suggestion for such as have not seen the church, but these will never have the full sense of it, which only long looking and coming again and again can impart. One or two facts, however, may be imagined, and the reader may fancy the cathedral set on the crest of the noble height to which Siena clings, and from which the streets and houses drop all round from the narrow level expressed in the magnificent stretch of that straight line with which the cathedral-roof delights the eye from every distance. It has a preëminence which seems to me unapproached, and this structure, which only partially realizes the vast design of its founders, impresses one with the courage even more than the piety of the little republic, now so utterly extinct. What a force was in men's hearts in those days! What a love of beauty must have exalted the whole community!

The Sieneſe were at the height of their work on the great cathedral when the great pestilence smote them, and broke them forever, leaving them a feeble phantom of their past glory and prosperity. "The infection," says Buonsignore, "spread not only from the sick, but from everything they touched, and the terror was such that selfish frenzy mounted to the wildest excess; not only did neighbor abandon neighbor, friend forsake friend, but the wife her husband, parents their children. In the general fear, all noble and endearing feelings were hushed. . . . Such was the helplessness into which the inhabitants lapsed that the stench exhaling from the wretched huts of the poor was the sole

signal of death within. The dead were buried by a few generous persons whom an angelic pity moved to the duty: their appeal was, 'Help us to carry this body to the grave, that when we die others may bear us thither!' The proportion of the dead to the sick was frightful; out of every five seized by the plague, scarcely one survived. Angelo di Tura tells us that at Siena, in the months of May, June, July, and August of the year 1348, the pest carried off eighty thousand persons. . . . A hundred noble families were extinguished." Throughout Italy, "three-fourths of the population perished. The cities, lately flourishing, busy, industrious, full of life, had become squalid, deserted, bereft of the activity which promotes grandeur. In Siena the region of Fonte Branda was largely saved from the infection by the odor of its tanneries. Other quarters, empty and forsaken, were set on fire after the plague ceased, and the waste areas where they stood became the fields and gardens we now see within the walls. . . . The work on the cathedral, which had gone forward for ten years, was suspended, . . . and when resumed, it was upon a scale adjusted to the diminished wealth of the city, and the plan was restricted to the dimensions which we now behold. . . . And if the fancy contemplates the grandeur of the original project, divining it from the vestiges of the walls and the columns remaining imperfect, but still preserved in good condition, it must be owned that the republic disposed of resources of which we can form no conception; and we must rest astounded that a little state, em-

broiled in perpetual wars with its neighbors, and in the midst of incessant party strife, should undertake the completion of a work worthy of the greatest and most powerful nations."

"When a man," says Mr. Addison, writing from Siena in the spirit of the genteel age of which he was an ornament, "sees the prodigious pains and expense that our forefathers have been at in these barbarous buildings, one cannot but fancy to himself what miracles of architecture they would have left us had they only been instructed in the right way; for when the devotion of those ages was much warmer than it is at present, and the riches of the people much more at the disposal of the priests, there was so much money consumed on these Gothic cathedrals as would have finished a greater variety of noble buildings than have been raised either before or since that time." And describing this wonderful cathedral of Siena in detail, he says that "nothing in the world can make a prettier show to those who prefer false beauties and affected ornaments to a noble and majestic simplicity."

The time will no doubt come again when we shall prefer "noble and majestic simplicity," as Mr. Addison did; and I for one shall not make myself the mock of it by confessing how much better I now like "false beauties and affected ornaments." In fact, I am willing to make a little interest with it by admitting that the Tuscan fashion of alternate

courses of black and white marble in architecture robs the interior of the cathedral of all repose, and that nowhere else does the godless joke which nicknamed a New York temple "the Church of the Holy Zebra" insist upon itself so much. But if my business were iconoclasm, I should much rather smash the rococo apostolic statues which Mr. Addison doubtless admired, perching on their brackets at the base of the variegated pillars; and I suspect they are greatly to blame for the distraction which the visitor feels before he loses himself in the in-

exhaustibly beautiful and delightful detail. Shall I attempt to describe this? Not I! Get photographs, get prints, dear reader, or go see for yourself! Otherwise, trust me that if we had a tithe of that lavish loveliness in one structure in America, the richness of that one would impoverish the effect of all the other buildings on the continent. I say this, not with the hope of imparting an idea of the beauty, which words cannot, but to give some notion of the wealth poured out upon this mere fragment of what was meant to be the cathedral of Siena, and to help the reader conceive not only of the piety of the age, but of the love of art then universally spread among the Italians.

The day was abominably cold, of course,—it had been snowing that morning,—when we first visited the church, and I was lurking about with my skull-cap on, my teeth chattering, and my hands benumbing in my pockets, when the little *valet de place* who had helped us not find a lodging espied us and leaped joyously upon us, and ran us hither and thither so proudly and loudly that one of the priests had to come and snub him back to quiet and decorum. I do not know whether this was really in the interest of decency, or of the succession of sacristans who, when the *valet* had been retired to the front door, took possession of us, and lifted the planking which preserves the famous engraved pavement, and showed us the wonderful pulpit and the rich chapels, and finally the library all frescoed by Pinturicchio with scenes from the lives of the two Sieneze Piccolomini who were Popes Pius II. and III.

This multiplicity of sacristans suffered us to omit nothing, and one of them hastened to point out the two flag-poles fastened to the two pillars nearest the high altar, which are said to be those of the great War Car of the Florentines, captured by the Sieneze at Montaperto in 1260. "How," says my "New Guide," "how on earth, the stranger will ask, do we find here in the house of God, who shed his blood for all mankind, here in the temple consecrated to Mary, mother of every sweet affection, these two records of a terrible carnage between brothers, sons of the same country? Does it not seem as if these relics from the field of battle stand here to render Divinity accomplice of the rage and hate and vengeance of men? We know not how to answer this question; we must even add that the crucifix not far from the poles, in the chapel on the left of the transept, was borne by the Sieneze, trusting for victory in the favor of God, upon the field of Montaperto."

I make haste to say that I was not a stranger disposed to perplex my "New Guide" with

A MEDIEVAL SIENESE.

AN ARCHWAY IN SIENA. ENGRAVED BY R. C. COLLINS FROM THE ETCHING BY JOSEPH PENNELL.

any such question, and that nothing I saw in the cathedral gave me so much satisfaction as these flag-poles. Ghibelline and Sienese as I had become as soon as I turned my back on Guelphic Florence, I exulted in these trophies of Montaperto with a joy which nothing matched except the pleasure I had in viewing the fur-lined canopy of the War Car, which is preserved in the Opera del Duomo, and from which the custodian bestowed upon my devotion certain small tufts of the fur. I have no question but this canopy and the flag-poles are equally genuine, and I counsel the reader by all means to see them.

There are many other objects to be seen in the curious museum of antique and mediæval art called the Opera del Duomo, especially the original sculptures of the Fonte Gaia; but the place is chiefly interesting as the outline, the colossal sketch in sculptured marble, of the cathedral as it was projected. The present structure rises amid the halting fragments of the mediæval edifice, which it has included in itself, without exceeding their extent; and from the roof there is an ineffable prospect of the city and the country, from which one turns again in still greater wonder to the church itself.

I had an even deeper sense of its vastness—the least marvelous of its facts—and a renewed sense of the domestication of the Italian churches, when I went one morning to hear a Florentine monk, famed for his eloquence, preach in the cathedral. An oblong canopy of coarse gray canvas had been stretched overhead in part of the great nave, to keep his voice from losing itself in the space around and above. The monk, from a pulpit built against one of the pillars, faced a dais, across the nave, where the archbishop sat in his chair to listen, and the planked floor between them was thronged with people sitting and standing, who came and went, as if at home, with a continued clapping of feet and banging of doors. All the time service was going on at several side-altars, where squads of worshipers were kneeling, indifferent alike to one another and to the sermon of the monk. Some of his listeners, however, wore a look of intense interest, and I myself was not without concern in his discourse, for I perceived that it was all in honor and compassion of the captive of the Vatican, and full of innuendo for the national government. It gave me some notion of the difficulties with which that government has to contend, and impressed me anew with its admirable patience and forbearance. Italy is unified, but many interests, prejudices, and ambitions are still at war within her unity.

VI.

ONE night we of the Pension T. made a sentimental pilgrimage to the cathedral, to see it by moonlight. The moon was not so prompt as we, and at first we only had it on the baptistry and the campanile—a campanile to make one almost forget the Tower of Giotto. But before we came away one corner of the façade had caught the light, and hung richly bathed, tenderly etherealized in it. What was gold, what was marble before, seemed transmuted to the luminous substance of the moonlight itself, and rested there like some translucent cloud that “stooped from heaven and took the shape” of clustered arch and finial.

On the way home we passed the open portal of a palace, and made ourselves the guests of its noble court, now poured full of the moon, and dimly lighted by an exquisite lantern of beaten iron, which hung near a massive pillar at the foot of the staircase. The pillar divided the staircase, and lost its branchy top in the vault overhead; and there was something so consciously noble and dignified in the whole architectural presence that I should have been surprised to find that we had not stumbled upon an historic edifice. It proved to be the ancient palace of the Captain of the People—and I will thank the reader to imagine me a finer name than Capitano del Popolo for the head of such a democracy as Siena, whose earliest government, according to Alessandro Sozzini, was popular, after the Swiss fashion. Now the palace is the residence and property of the Grattanelli family, who have restored it and preserved it in the mediæval spirit, so that I suppose it is, upon the whole, the best realization of a phase of the past which one can see. The present Count Grattanelli—who may be rather a marquis or a prince, but who is certainly a gentleman of enlightened taste, and of a due sense of his Siena—keeps an apartment of the palace open to the public, with certain of the rooms in the original state, and store of armor and weapons in which the consequence of the old Captains of the People fitly masquerades. One must notice the beautiful doors of inlaid wood in this apartment, which are of the count's or marquis's or prince's own design; and not fail of two or three ceilings frescoed in dark colors, in dense, close designs and small panels, after what seems a fashion peculiar to Siena.

Now that I am in Boston, where there are so few private palaces open to the public, I wonder that I did not visit more of them in Siena; but I find no record of any such visits but this one in my note-books. It was not for want of inscriptional provocation to pene-

Siena.

ONE OF THE LISTENERS.

trate interiors that I failed to do so. They are tableted in Siena beyond almost anything I have seen. The villa outside the gate where the poet Manzoni once visited his daughter records the fact for the passing stranger; on the way to the station a house boasts that within it the dramatist Pietro Cossa, being there "the guest of his adored mother," wrote his Cecilia and the second act of his Sylla; in a palace near that of Socinus you are notified that Alfieri wrote several of his tragedies; and another proclaims that he frequented it "holding dear the friendship" of the lady of the house! In spite of all this, I can remember only having got so far as the vestibule and staircase—lovely and grand they were, too—of one of those noble Gothic palaces in Via Cavour; I was deterred from going farther by learning it was not the day when uninvited guests were received. I always kept in mind, moreover, the Palazzo Tolomei for the sake of that dear and fair lady who besought the traveler through purgatory—

"Ricorditi di me, che son la Pia;
Siena mi fè, disfecemi Maremma,"—

and who was of the ancient name still surviving in Siena. Some say that her husband carried her to die of malaria in the marshes of the Maremma; some, that he killed her with his dagger; others, that he made his servants throw her from the window of his castle; and none are certain whether or no he had reason to murder her—they used to think there could be a reason for murdering wives in his day; even the good Gigli, of the Diario Senese, speaks of that "giusto motivo" Messer Nello may possibly have had. What is certain is that Pia was the most beautiful woman in Italy; and what is still more certain is that she was not a Tolomei at all, but only the widow of a Tolomei. Perhaps it was prescience of this fact that kept me from visiting the Tolomei palace for her sake. At any rate, I did not visit it, though I often stopped in the street before it, and dedicated a mistaken sigh to the poor lady who was only a Tolomei by marriage.

There were several other ladies of Siena, in past ages, who interested me. Such an one was the exemplary Onorata de' Principi Orsini, one of the four hundred Sienese noblewomen who went out to meet the Emperor Frederick III. in 1341, when he came to Siena to espouse Leonora, Infanta of Portugal; a column near Porta Camollia still commemorates the exact spot where the Infanta stood to receive him. On this occasion the fair Onorata was, to the thinking of some of the other ladies, too simply dressed; but she defended herself against their censure, affirming that the "Sienese gentlewomen should make a pomp of nothing but their modesty, since in other displays and feminine adornments the matrons of other and richer cities could easily surpass them." And at a ball that night, being asked who was the handsomest gentleman

ENNELL

10991/1091
1883

A HOME AT SIENA.

present, she answered that she saw no one but her husband there. Is the estimable Onorata a trifle too sage for the reader's sympathy? Let him turn then to the Lady Battista Berti, wife of Achille Petrucci, who, at

to immortalize your name so long as the book of Montluc shall live; for in truth you are worthy of immortal praise, if ever women were so. As soon as the people took the noble resolution of defending their liberty, the ladies

SIENESE FARM-HOUSE.

another ball in honor of the Emperor, spoke Latin with him so elegantly and with such spirit that he embraced her, and created her countess, and begged her to ask some grace of him; upon which this learned creature, instead of requesting the Emperor to found a free public library, besought him to have her exempted from the existing law which prohibited the wearing of jewels and brocade dresses in Siena. The careful Gigli would have us think that by this reply Lady Battista lost all the credit which her Latinity had won her; but it appears to me that both of these ladies knew very well what they were about, and each in her way perceived that the Emperor could appreciate a delicate stroke of humor as well as another. If there were time, and not so many questions of our own day pressing, I should like to inquire into all the imaginable facts of these cases; and I commend them to the reader, whose fancy cannot be so hard-worked as mine.

The great siege of Siena by the Florentines and Imperialists in 1554-5 called forth high civic virtues in the Siennese women, who not only shared all the hardships and privations of the men, but often their labors, their dangers, and their battles. "Never, Siennese ladies," gallantly exclaimed the brave Blaise de Montluc, Marshal of France, who commanded the forces of the Most Christian King in defense of the city, and who treats of the siege in his Commentaries, "never shall I fail

of the city of Siena divided themselves into three companies: the first was led by Lady Forteguerra, who was dressed in violet, and all those who followed her likewise, having her accouterment in the fashion of a nymph, short, and showing the buskin; the second by Lady Piccolomini, dressed in rose-colored satin, and her troops in the same livery; the third by Lady Livia Fausta, dressed in white, as was also all her following, and bearing a white ensign. On their flags they had some pretty devices; I would give a good deal if I could remember them. These three squadrons were composed of three thousand ladies — gentlewomen or citizenesses. Their arms were pickaxes, shovels, baskets, and fascines; and thus equipped, they mustered and set to work on the fortifications. Monsieur de Termes, who has frequently told me about it (for I had not then arrived), has assured me that he never saw in his life anything so pretty as that. I saw the flags afterwards. They had made a song in honor of France, and they sang it in going to the fortifications. I would give the best horse I have if I could have been there. And since I am upon the honor of these ladies, I wish those who come after us to admire the courage of a young Siennese girl, who, although she was of poor condition, still deserves to be placed in the first rank. I had issued an order when I was chosen Dictator that nobody, on pain of being punished, should fail to go on guard in his turn. This girl, seeing her

OUTSIDE A SIENESE GATE.

brother, whose turn it was, unable to go, takes his morion, which she puts on her head, his shoes, his buffalo-gorget; and with his halberd on her shoulders, goes off with the *corps de garde* in this guise, passing, when the roll is called, under the name of her brother, and stands sentinel in his place, without being known till morning. She was brought home in triumph. That afternoon Signor Cornelio showed her to me."

I am sorry that concerning the present ladies of Siena I know nothing except by the

scantiest hearsay. My chief knowledge of them, indeed, centers in the story of one of the Borghesi there, who hold themselves so very much higher than the Borghesi of Rome. She stopped fanning herself a moment while some one spoke of them. "Oh, yes; I have heard that a branch of our family went to Rome. But I know nothing about them."

What glimpse we caught of Sieneſe ſociety was at the theater—the lovely little theater of the Accademia dei Rozzi. This is one of the famous literary academies of Italy; it was

founded in the time of Leo X., and was then composed entirely of workingmen, who confessed their unpolished origin in their title; afterwards the Academies of the Wrapped-up, the Twisted, and the Insipid (such was the fantastic humor of the prevailing nomenclature) united with these Rude Men, and their academy finally became the most polite in Siena. Their theater still enjoys a national fame, none but the best companies being admitted to its stage. We saw there the Rossi company of Turin—the best players by all odds, after the great Florentine Stentorello, whom I saw in Italy. Commendatore Rossi's is an exquisite comic talent—the most delicately amusing, the most subtly defined. In a comedy of Goldoni's ("A Curious Accident") which he gave, he was able to set the house in an uproar by simply letting a series of feelings pass over his face, in expression of the conceited, willful old comedy-father's progress from profound satisfaction in the elopement of his neighbor's daughter to a realization of the fact that it was his own daughter who had run away. Rossi, who must not be confounded with the tragedian of his name, is the first comedian who has ever been knighted in Italy, the theory being that since a comic actor might receive a blow which the exigency of the play forbade him to resent, he was unfit for knighthood. King Humbert seems somehow to have got over this prodigious obstacle.

The theater was always filled, and between the acts there was much drama in the boxes, where the gentlemen went and came, making their compliments to the ladies, in the old Italian fashion. It looked very easy and pleasant; and I wish Count Nerli, whose box we had hired one evening when he sent the key to the ticket-office to be let, had been there to tell us something of the people in the others. I wish, in fact, that we might have known something of the count himself, whom, as it is, I know only by the title boldly lettered on his box-door. The acquaintance was slight, but very agreeable. Before the evening was out I had imagined him in a dozen figures and characters; and I still feel that I came very near knowing a Siense count. Some English people, who became English friends, in our pension, had letters which took them into society, and they reported it very charming. Indeed, I heard at Florence, from others who knew it well, that it was pleasantly characterized by the number of cultivated people connected with the ancient university of Siena. Again, I heard that here, and elsewhere in Italy, husbands neglect their wives, and leave them dismal at home, while they go out to spend their evenings at

the clubs and cafés. Who knows? I will not even pretend to do so, though the temptation is great.

A curious phase of the social life in another direction appeared in the notice which I found posted one day on the door of the church of San Cristoforo inviting the poor girls of the parish to a competitive examination for the wedding-portions to be supplied to the most deserving from an ancient fund. They were advised that they must appear on some Sunday during Lent before the parish priest, with a petition certifying to these facts:

"I. Poverty.

"II. Good morals.

"III. Regular attendance at church.

"IV. Residence of six months in the parish.

"V. Age between 18 and 30 years.

"N. B. A girl who has won a dower in this or any other parish cannot compete."

VIII.

THE churches are very rich in paintings of the Siense school, and the gallery of the Belle Arti, though small, is extremely interesting.

PICTURESQUE PEASANTS.

Upon the whole, I do not know where one could better study the progress of Italian painting, from the Byzantine period up to the great moment when Sodoma came in Siena. Oddly enough, there was a very lovely little Bellini in this collection, which, with a small Veronese, distinguished itself from the Tuscan canvases, by the mellow beauty of the Venetian coloring, at once. It is worse than useless to be specific about pictures, and if I have kept any general impression of the Siense work, it concerns the superior charm of the earlier frescoes, especially in the Public Palace. In the churches the best frescoes are at San Domenico, where one sees the exquisite chapel of St. Catherine painted by Sodoma, which I have already mentioned. After these one must reckon in interest the histories with which Pinturicchio has covered the whole library of the cathedral, and which are surpassingly de-

lightful in their quaint realism. For the rest, I have a vivid memory of a tendency in the Sienese painters to the more horrific facts of Scripture and legend; they were terrible fellows for the Massacre of the Innocents, and treated it with a bloodier carefulness of detail than I remember to have noticed in any other school; the most sanguinary of these slaughters is in the Church of the Servi. But there is something wholesome and human even in the most butcherly of their simple-minded carnages; it is where the allegorists get hold of horror that it becomes loathsome, as in that choir of a church, which I have forgotten the name of, where the stalls are decorated with winged death's heads, the pinions shown dropping with rottenness and decay around the skulls. Yet this too had its effectiveness; it said what some people of that time were thinking; and I suppose that the bust of a lady in a fashionable ruff, with a book in her hand, simpering at the bust of her husband in an opposite niche in San Vigilio, was once not so amusing as it now looks. I am rather proud of discovering her, for I found her after I had been distinctly discouraged from exploring the church by the old woman in charge. She was civil, but went back eagerly to her gossip with another crone there, after saying: "The pictures in the roof are of no merit. They are beautiful, however." I liked this church, which was near our pension, because it seemed such a purely little neighborhood affair; and I must have been about the only tourist who ever looked into it.

One afternoon we drove out to the famous convent of the Osservanza, which was suppressed with the other convents, but in which the piety of charitable people still maintains fifty of the monks. We passed a company of them, young and old, on our way, bareheaded and barefooted, as their use is, and looking very fit in the landscape; they saluted us politely, and overtaking us in the porch of the church, rang up the sacristan for us, and then, dropping for a moment on one knee before the door, disappeared into the convent. The chapel is not very much to see, though there is a most beautiful Della Robbia there,— a Madonna and St. Thomas,— which I would give much to see now. When we had gone the round of the different objects, our sacristan, who was very old and infirm, and visibly foul in the brown robes which are charitable to so much dirt, rose from the last altar before which he had knelt with a rheumatic's groans, and turning to the ladies with a malicious grin, told them that they could not be admitted to the cloisters, though the gentlemen could come. We followed him through the long, dreary galleries, yawning with hundreds of

empty cells, and a sense of the obsolescence of the whole affair oppressed me. I do not know why this feeling should have been heightened by the smallness of the garden court inclosed by the cloisters, or by the tinkle of a faint old piano coming from some room where one of the brothers was practicing. The whole place was very bare, and stared with fresh whitewash; but from the pervading smell I feared that this venerable relic of the past was not well drained — though I do not know that in the religious ages they valued plumbing greatly, anywhere.

IX.

IN this and other drives about Siena the peculiar character of the volcanic landscape made itself continually felt. There is a desolation in the treeless hills, and a wildness and strangeness in their forms, which I can perhaps best suggest by repeating that they have been constantly reproduced by the Tuscan painters in their backgrounds, and that most Judean landscapes in their pictures are faithful studies of such naked and lonely hills as billow round Siena. The soil is red, and but for the wine and oil with which it flows, however reluctantly, I should say that it must be poor. Some of the hills look mere heaps of clay, such as mighty geysers might have cast up until at last they hid themselves under the accumulation; and this seems to be the nature of the group amidst which the battle of Montaperto was fought. I speak from a very remote inspection, for though we started to drive there, we considered, after a mile or two, that we had no real interest in it now, either as Florentines or Sienese, and contented ourselves with a look at the Arbia, which the battle "colored red," but which had long since got back its natural complexion. This stream — or some other which the driver passed off on us for it — flowed down through the uplands over which we drove, with a small volume that seemed quite inadequate to slake the wide drought of the landscape, in which, except for the cypresses about the villas, no tree lifted its head. There were not even olives; even the vineyards had vanished. The fields were green with well-started wheat, but of other husbandry there was scarcely a sign. Yet the peasants whom we met were well dressed (to be sure it was Sunday), and there was that air of comfort about the farmsteads which is seldom absent in Tuscany. All along the road were people going to vespers, and these people were often girls, young and pretty, who, with their arms about one another's waists, walked three and four abreast, the wide brims of their straw hats lifting round their faces like

TOWER OF THE MANGIA.

the disks of sunflowers. A great many of them were blonde; at least one in ten had blue eyes and red hair, and they must have been the far-descended children of those seigneurs and soldiers among whom Charlemagne portioned his Italian lands, marking to this day a clear distinction of race between the citizens and the contadini. By and by we came to a little country church, before which in the grassy piazza two men had a humble show of figs and cakes for sale in their wagon-beds, and

another was selling wine by the glass from a heap of flasks on his stand. Here again I was reminded of Quebec, for the interior of this church was, in its bareness and poverty, quite like the poor little Huron village church at the Falls of Lorette.

Our drive was out from the Porta Pispini southward, and back to the city through the Porta Romana; but pleasure lies in any course you take, and perhaps greater pleasure in any other than this. The beauty of the scenery is wilder and ruggeded than at Florence. In the country round Siena all is free and open, with none of those high garden walls that baffle approach in the Florentine neighborhood. But it seems to have been as greatly loved and as much frequented, and there are villas and palaces everywhere, with signs of that personal eccentricity in the architecture and inscriptions for which the Italians ought to be as famous as the

English. Out of the Porta Camollia, in the Palazzo del Diavolo, which was the scene of stirring facts during the great siege, when the Sienese once beat Duke Cosimo's Florentines out of it, the caprice of the owner has run riot in the decoration of the brick front, where heads of Turks and Saracens are everywhere thrusting out of the frieze and cornice. At Poggio Pini an inscription on the porter's lodge declares: "Count Casti de' Vecchi, jealous conservator of the ornaments of the above-

situated villa Poggio Pini, his glory, his care, placed me guardian of this approach."

The pines thus tenderly and proudly watched would not strike the American as worthy so much anxiety, but perhaps they are so in a country which has wasted its whole patrimony of trees, as we are now so wickedly wasting ours. The variety of timber which one sees in Tuscany is very small: pines, poplars, oaks, walnuts, chestnuts—that is the whole story of the forest growth. Its brevity impressed us particularly in our long drive to Belcaro, which I visited for its interest as the quarters of the Marquis of Marignano, the Imperialist general during the siege. Two cannon-balls imbedded in its walls recall the fight, with an appropriate inscription; but whether they were fired by Marignano while it was occupied by the Sienese, or by the Sienese after he took it, I cannot now remember. I hope the reader will not mind this a great deal, especially as I am able to offer him the local etymology of the name of Belcaro: *bel* because it is so beautiful, and *caro* because it cost so much. It is now owned by two brothers, rich merchants of Siena, one of whom lives in it, and it is approached through a landscape wild, and sometimes almost savage, like that all around Siena, but of more fertile aspect than that to the southward. The reader must always think of the wildness in Italy as different from our primeval wildness; it is the wildness of decay, of relapse. At one point a group of cypresses huddling about the armless statue of some poor god thrilled us with a note, like the sigh of a satyr's reed, from the antique world; at another, a certain wood-grown turn of the road, there was a brick stairway, which had once led to some pavilion of the hoop and bagwig age, and now, grown with thick moss

and long grasses, had a desolation more exquisite than I can express.

Belcaro itself, however, when we came to it, was in perfectly good repair, and afforded a satisfying image of a mediæval castle, walled and fossed about, and lifting its mighty curtains of masonry just above the smooth level of the ilex-tops that hedged it loftily in. Our carriage was ordered back out of the way, and walking into the court-yard we found one of the owners of Belcaro, helping himself to hitch up the fine dapple-gray which he presently drove to Siena, leaving us free of his castle. There was not very much to see within it, except the dining-hall, painted by Peruzzi with the Judgment of Paris. After we had admired this we were shown across the garden to the little lodge which the same painter has deliciously frescoed with indecenter fables and allegories than any outside of the Palazzo del Te at Mantua. Beside it is the chapel in which he has indifferently turned his hand, with the same brilliant facility, to the illustration of holy writ and legend. It was a curious civilization. Both lodge and chapel were extraordinarily bright and cheerful.

From these works of art we turned and climbed to the superb promenade which crowns the wide wall of the castle. In the garden below, a chilly bed of anemones blew in the March wind, and the top where we stood was swept by a frosty blast, while the waning sunshine cast a sad splendor over the city on her hill seven miles away. A delicate rose-light began to bathe it, in which the divine cathedral looked like some perfect shape of cloud-land; while the clustering towers and palaces and gates and the wandering sweep of the city wall seemed the details of a vision too lovely for waking eyes.

W. D. Howells.

GOING TO TOWN.

THE SILENT SOUTH.

I. "A TIME TO SPEAK."

IN Tivoli Circle, New Orleans, from the center and apex of its green, flowery mound, an immense column of pure white marble rises in the fair unfrowning majesty of Grecian proportions high up above the city's house-tops into the dazzling sunshine and fragrant gales of the Delta. On its dizzy top stands the bronze figure of one of the world's greatest captains.

He is all alone. Not one of his mighty lieutenants stands behind or beside him or below at the base of his pillar. Even his horse is gone. Only his good sword remains, hanging motionless in its scabbard. His arms are folded on that breast that never knew fear or guile, and his calm, dauntless gaze meets the morning sun as it rises, like the new prosperity of the land he loved and served so masterly, above the far distant battle-fields where so many thousands of his ragged gray veterans lie in the sleep of fallen heroes.

Great silent one! who lived to see his standard furled and hung in the halls of the conqueror; to hear the victor's festal jubilations; to behold a redistribution of rights riding over the proud traditions of his people, and all the painful fruits of a discomfited cause shaken to the ground; to hear and see the tempestuous and oftentimes bloody after-strife between the old ideas and the new; to see, now on one side, now on the other, the terms of his own grand surrender and parole forgotten or ignored; to have his ear filled with the tirades and recriminations of journals and parties, and the babble of the unthinking million; to note the old creeds changing, and to come, himself, it may be,—God knows,—to respect beliefs that he had once counted follies; and yet, withal, never, before the world that had set him aside but could not forget him, never to quail, never to wince, never to redden with anger, never to wail against man or fate, or seek the salve of human praise or consolation; but silently amid the clamor of the times to stand and wait, making patience royal, with a mind too large for murmuring, and a heart too great to break, until a Messenger as silent as his bronze effigy beckoned Robert E. Lee to that other land of light and flowers where man's common inheritance of error is hidden in the merit of his honest purpose, and lost in the Divine charity.

So this monument, lifted far above our daily strife of narrow interests and often narrower passions and misunderstandings, becomes a

monument to more than its one great and rightly loved original. It symbolizes our whole South's better self; that finer part which the world not always sees; unaggressive, but brave, calm, thoughtful, broad-minded, dispassionate, sincere, and, in the din of boisterous error round about it, all too mute. It typifies that intelligence to which the words of a late writer most truly apply when he says concerning the long, incoherent discussion of one of our nation's most perplexing questions, "Amid it all the South has been silent."

But the times change—have changed. Whatever the merit or fault of earlier reticence, this mute, firm-rooted figure, with sheathed sword and folded arms, must yield a step, not backward, but forward. "Where it has been silent it now should speak." Nay, already it speaks; and the blessing of all good men should rest on this day if it reveals the Silent South laying off its unsundered sword, leaving brawlers to their brawls, and moving out upon the plain of patient, friendly debate, seeking to destroy only error, and to establish only truth and equity and a calm faith in their incomparable power to solve the dark problems of the future.

Within the last few months the voice of temperate discussion has been heard in well-nigh every quarter of our Southern States on themes that have scarcely been handled with patience and clemency these forty years. True, there has been some clamor, throwing stones, and casting dust; but calmer utterances have come from Memphis, from Louisville, Chattanooga, Lynchburg, Atlanta, Charleston, Dallas, and far San Angelo; some on one side, some on the other, of the debate, professing in common at least three quiet convictions: that recrimination and malignment of motive are the tactics of those who have no case; that the truth is worth more than any man's opinion; and that the domination of right is the end we are bound to seek.

Under these convictions the following pages are written; written in deprecation of all sectionalism; with an admiration and affection for the South, that for justice and sincerity yield to none; in a spirit of faithful sonship to a Southern State; written not to gratify sympathizers, but to persuade opponents; not to overthrow, but to convince; and begging that all harshness of fact or vehemence of statement be attributed entirely to the weight of the interests under debate.

II. POINTS OF AGREEMENT.

It is pleasant to note how much common ground is occupied by the two sides in this contest of opinions. By both it is recognized that the fate of the national Civil Rights bill has not decided and cannot dismiss the entire question of the freedman's relations; but that it puts upon trial in each Southern State a voluntary reconstruction which can never be final till it has established the moral equities of the whole case. Says one opponent, imputing his words to a personified South, "Leave this problem to my working out. I will solve it in calmness and deliberation, without passion or prejudice, and with full regard for the unspeakable equities it holds."* Says Mr. Watterson's paper, in Louisville, "We believe there is a general desire among the people of the South, that the negro shall have all the rights which a citizen of the United States, whatever be the color of his skin, is entitled to, but we know of no method to argue away or force down what may be called the caste of color. If we did . . . or if anybody else did, the dark problem as to the future of this unfortunate race would be more quickly and more easily solved. None more earnestly than the *Courier-Journal* desires to see this question happily settled."

Is not this progress? It seems scarce a matter of months since we were saying the question was dead and should be buried. Now it rises to demand a wider grave, which both the writers quoted admit it must have, though one thinks nobody knows how to dig it, and another insists it must be dug without cutting away any more ground.

But the common field of assertion and admission broadens as we move on. On this side it has been carefully demonstrated that, not from Emancipation or Enfranchisement, or anything else in or of the late war, or of Reconstruction, but from our earlier relation to the colored man as his master, results our view of him as naturally and irrevocably servile; and that hence arises our proneness to confuse his social with his civil relations, to argue from inferiority of race a corresponding inferiority of his rights, and to infer that they fall, therefore, justly under our own benevolent domination and, at times, even our arbitrary abridgment. The point is made that these views, as remnants of that slavery which, we all admit, has of right perished, ought to perish with it; and the fact is regretted that in many parts of the South they nevertheless still retain such force — though withal evidently weakening — that the laws affirming certain human rights discordant to the dominant race are

* "In Plain Black and White." April CENTURY, 1885.

sometimes openly evaded and sometimes virtually suffocated under a simulated acceptance of their narrowest letter. How plainly we feel the date of this discussion to be 1884-85 — not earlier — when we hear this evasion, once so hotly denied, admitted freely, nay, with emphasis, to be a "matter of record, and, from the Southern standpoint, mainly a matter of reputation."

And there are yet other points of agreement. As one who saw our great Reconstruction agony from its first day to its last in one of the South's most distracted States and in its largest city, with his sympathies ranged upon the pro-Southern side of the issue, and his convictions drifting irresistibly to the other, the present writer affirms of his knowledge, in the initial paper of this debate, that after we had yielded what seemed to us all proper deference to our slaves' emancipation and enfranchisement, there yet remained our invincible determination — seemingly to us the fundamental condition of our self-respect — never to yield our ancient prerogative of holding under our own discretion the colored man's *status*, not as a freedman, not as a voter, but in his daily walk as a civilian. This attitude in us, with our persistent mistaking his civil rights for social claims, this was the tap-root of the whole trouble. For neither would *his* self-respect yield; and not because he was so unintelligent and base, but because he was as intelligent and aspiring as, in his poor way, he was, did he make this the cause of political estrangement. This estrangement — full grown at its beginning — was the carpet-bagger's and scallawag's opportunity. They spring and flourish wherever, under representative government, gentility makes a mistake, however sincere, against the rights of the poor and ignorant. Is this diagnosis of the Reconstruction malady contested by the other side? Nay, it is confirmed. The South, it tells us, "accepted the emancipation and enfranchisement of her slaves as the legitimate results of war that had been fought to a conclusion. These once accomplished, nothing more was possible: 'Thus far and no farther,' she said to her neighbors in no spirit of defiance, but with quiet determination. In her weakest moments, when her helpless people were hedged about by the unthinking bayonets of her conquerors, she gathered them for resistance at this point. Here she defended everything that a people should hold dear. There was little proclamation of her purpose," etc.

Surely hope is not folly, as to this Southern question, when such admissions come from this direction. What salutary clearing of the ground have we here! Our common assertion in the South has long been that the base

governments of the Reconstruction period were overturned by force because they had become so corrupt that they were nothing but huge machines for the robbery of the whole public, a tangle of low political intrigues that no human intelligence could unravel; that our virtue and intelligence sought not the abridgement of any man's rights, but simply the arrest of bribery and robbery; that this could be done only by revolution because of the solid black vote, cast, we said, without rationality at the behest of a few scoundrels who kept it solid by playing upon partisan catchwords, or by promise of spoils. And especially among those whose faith is strongest in our old Southern traditions, it always was and is, to-day, sincerely believed that this was the whole issue. It was this profession that averted the interference of Federal arms. It was upon this profession that the manliest youth and intelligence of New Orleans went forth to stake their lives, and some to pour out their hearts' blood in internecine war on the levee of their dear city. Sad sight to those who knew that this was not the whole matter—that the spring of trouble lay yet deeper down. To such it brings no small or selfish gladness to hear, at length,—if one may without offense coin a term,—to hear Southern *traditionists* admitting a truth which the South has denied with sincere indignation ten thousand times,—that in all that terrible era the real, fundamental issue was something else which the popular Southern mind was hardly aware of. "Barely"—say these—"barely did the whispered word that bespoke her [the South's] resolution catch the listening ears of her sons; but for all this, the victorious armies of the North, had they been rallied again from their homes, could not have enforced and maintained among this disarmed people the policy indicated in the Civil Rights bill." This was the point at which, they say, and they say truly, the South "gathered for resistance."

Let us be sure these so gallantly spoken words are not misunderstood. There were two policies indicated in the Civil Rights bill: the policy of asserting congressional jurisdiction in the case; and the policy of legalizing, at all, such rights as it declared. One raised a question of State rights; the other, of Human rights. But the State-rights issue, by itself,—the mere question of whence the legislation should emanate, could never of itself make fierce strife. Any State could have settled that point by simply stepping ahead of Congress with the same legislation. No; the irreconcilable difference was not as to whence but as to *what* the law should be. The essential odium of the bill lay not in its origin, but in its definition of the black man's rights. In-

deed, the main object of most of those who have written on the other side in the present controversy has been to assert the resolution never to recognize the freedman's rights upon that definition of them. In the meantime a gentle movement of thought that sounds no trumpet before it is gradually pressing toward that very recognition.

III. THE STICKING POINT.

BUT now that we have clearly made out exactly *what* this immovable hostility is, the question follows—and half the nation are asking it to-day with perplexed brows—*why* is it? Yet the answer is simple. Many white people of the South sincerely believe that the recognition of rights proposed in the old Civil Rights bills or in "The Freedman's Case in Equity"* *would precipitate a social chaos*. They believe Civil Rights means Social Equality. This may seem a transparent error, but certainly any community in the world that believed it, would hold the two ideas in equal abomination; and it is because of the total unconsciousness and intense activity of this error at the South, and the subtle sense of unsafety that naturally accompanies it,—it is because of this, rather than for any lack of clearness in its statement of the subject, that the article on "The Freedman's Case in Equity" is so grossly misinterpreted even by some who undoubtedly wish to be fair. That this is the true cause of the misinterpretation is clear in the fact that from the first printing of the article until now the misconstruction has occurred only among those whose thinking still runs in the grooves of the old traditions.

Nothing in that paper touches or seeks to touch the domain of social privileges. The standing of the magazine in which it appears is guarantee against the possibility of the paper containing any such insult to the intelligence of enlightened society. Social equality is a fool's dream. The present writer wants quite as little of it as the most fervent traditionalist of the most fervent South. The North, the West, the East, and the rest of the intelligent world, want quite as little of it as the South wants. Social equality can never exist where a community, numerous enough to assert itself, is actuated, as every civilized community is, by an intellectual and moral ambition. No form of laws, no definition of rights, from Anarchy to Utopia, can bring it about. The fear that this or that change will produce it ought never to be any but a fool's fear. And yet there is this to be added; that no other people in America are doing so

much *for* Social equality as those who, while they warmly charge it upon others, are themselves thrusting arbitrary and cheap artificial distinctions into the delicate machinery of society's self-distribution as it revolves by the power of our natural impulses, and of morality, personal interest, and personal preferences. This, of course, is not the intention, and even these persons retard only incidentally, unawares and within narrow limits, nature's social distributions, while taking diligent and absolutely needless pains to hold apart two races which really have no social affinity at all.

Do we charge any bad intention or conscious false pretense? Not at all! They are merely making the double mistake of first classing as personal social privileges certain common impersonal rights of man, and then turning about and treating them as rights definable by law — which social amenities are not and cannot be.

For the sake of any who might still misunderstand, let us enlarge here a moment. The family relation has *rights*. Hence marital laws and laws of succession. But beyond the family circle there are no such things as social *rights*; and when our traditionists talk about a too hasty sympathy having "fixed by enactment" the negro's *social* and civil rights they talk — unwisely. All the relations of life that go by *impersonal right* are Civil relations. All that go by *personal choice* are Social relations. The one is all of right, it makes no difference who we are; the other is all of choice, and it makes all the difference who we are; and it is no little fault against ourselves as well as others, to make confusion between the two relations. For the one we make laws; for the other every one consults his own pleasure; and the law that refuses to protect a civil right, construing it a social privilege, deserves no more regard than if it should declare some social privilege to be a civil right. Social *choice*, civil *rights*; but a civil *privilege*, in America, is simply heresy against both our great national political parties at once. Now, "The Freedman's Case in Equity" pleads for not one thing belonging to the domain of social relations. Much less the family relation; it does not hint the faintest approval of any sort of admixture of the two bloods. Surely nothing that a man can buy a ticket for anonymously at a ticket-seller's hand-hole confers the faintest right to even a bow of recognition that any one may choose to withhold. But what says the other side? "The South will never adopt the suggestion of the *social intermingling** of the two races." So they beg the question of equity, and suppress a question of civil right by simply miscalling it "social intermingling"; thus claiming for it

* Italicized only here.

that sacredness from even the law's control which only social relations have, and the next instant asserting the determination of one race to "control the social relations," so-called, of two. Did ever champions of a cause with blanker simplicity walk into a sack and sew up its mouth? Not only thus, but from within it they announce a doctrine that neither political party in our country would venture to maintain; for no party dare say that in these United States there is any room for any one class of citizens to fasten arbitrarily upon any other class of citizens a *civil status* from which no merit of intelligence, virtue, or possessions can earn an extrication. We have a country large enough for all the *unsociality* anybody may want, but not for *incivility* either by or without the warrant of law.

"What history shows," says a sound little book lately printed, "is that rights are safe only when guaranteed against all arbitrary power and all class and personal interest." Class rule of any sort is bad enough, even with the consent of the ruled class; un-American enough. But the domination of one fixed class by another without its consent, is Asiatic. And yet it is behind this error, of Asian antiquity and tyranny, this arbitrary suppression of impartial, impersonal civil rights, that we discover our intelligent adversaries in this debate fortified, imagining they have found a strong position! "Neither race wants it," says one; alluding to that common, undivided participation in the enjoyment of civil rights, for which the darker race has been lifting one long prayer these twenty years, and which he absurdly miscalls "social intermingling." "The interest, as the inclination, of both races is against it," he adds. "Here the issue is made up."

But he mistakes. The issue is not made up here at all. It is not a question of what the *race* wants, but of *what the individual wants and has a right to*. Is that question met? No. Not a line has been written to disprove the individual freedman's title to these rights; but pages, to declare that his race does not want them and shall not have them if it does. Mark the contradiction. It does not want them — it shall not have them! Argument unworthy of the nursery; yet the final essence of all the other side's arguments. They say the colored race wants a participation in public rights separate from the whites; and that anyhow it has got to take that or nothing; "The white and black races in the South *must** walk apart." One writer justifies this on the belief of a natal race instinct; but says that if there were no such thing the South "would, by every means in its power, so strengthen the race *prejudice** that it would do the work and hold

* Italicized only here.

the stubbornness and strength of instinct." Could any one more distinctly or unconsciously waive the whole question of right and wrong? Yet this is the standpoint on which it is proposed to meet the freedmen's case *in equity*. Under the heat of such utterances how the substance melts out of their writer's later proposition for the South to solve the question "without passion or prejudice and with full regard for the unspeakable equities it holds."

It is not the Louisville gentlemen who are found at this untenable standpoint. They admit the desirability of extirpating the state of affairs condemned by "The Freedman's Case in Equity," and merely ask with a smile, "in what manner the writer expects that evil to disappear before high-sounding imperatives," etc. As to that we leave others on that side to give the answer; hear it, from Atlanta: "Clear views, clear statement, and clear understanding are the demands of the hour. Given these, the common sense and courage of the American people will make the rest easy."

IV. CIVIL RIGHT NOT SOCIAL CHOICE.

LET us then make our conception of the right and wrong of this matter unmistakable. Social relations, one will say, are sacred. True, but civil rights are sacred, also. Hence social relations must not impose upon civil rights nor civil rights impose upon social relations. We must have peace. But for peace to be stable we must have justice. Therefore, for peace, we must find that boundary line between social relations and civil rights, from which the one has no warrant ever to push the other; and, for justice, this boundary must remain ever faithfully the same, no matter whose the social relations are on one side or whose the civil rights are on the other.

Suppose a case. Mr. A. takes a lady, not of his own family, to a concert. Neither one is moved by compulsion or any assertion of right on the part of the other. They have chosen each other's company. Their relation is social. It could not exist without mutual agreement. They are strangers in that city, however, and as they sit in the thronged auditorium and look around them, not one other soul in that house, so far as they can discern, has any social relation with them. But see, now, how impregnable the social relation is. That pair, outnumbered a thousand to one, need not yield a pennyweight of social interchange with any third person unless they so choose. Nothing else in human life is so amply sufficient to protect itself as are social relations. Provided one thing,—that the law will protect every one impartially in his civil rights, one of the

foremost of which is that both men and laws shall let us alone to our personal social preferences. If any person, no matter who or what he is, insists on obtruding himself upon this pair in the concert-hall he can only succeed in getting himself put out. Why? Because he is trying to turn his civil right-to-be-there into a social passport. And even if he make no personal advances, but his behavior or personal condition is so bad as to obtrude itself offensively upon others, the case is the same; the mistake and its consequences are his. But, on the other hand, should Mr. A. and his companion demand the expulsion of this third person when he had made no advances and had encroached no more on their liberty than they had on his, demanding it simply on the ground that he was their social or intellectual inferior or probably had relatives who were, then the error, no matter who or what he is, would be not his, but theirs, and it would be the equally ungentle error of trying to turn their social choice into a civil right; and it would be simply increasing the error and its offensiveness, for them to suggest that he be given an equally comfortable place elsewhere in the house providing it must indicate his inferiority. There is nothing comfortable in ignominy, nor is it any evidence of high mind for one stranger to put it upon another.

Now, the principles of this case are not disturbed by any multiplication of the number of persons concerned, or by reading for concert-hall either theater or steamboat or railway station or coach or lecture-hall or street car or public library, or by supposing the social pair to be English, Turk, Jap, Cherokee, Ethiopian, Mexican, or "American." But note the fact that, even so, Mr. A. and his companion's social relations are, under these rulings, as safe from invasion as they were before; nay, even safer, inasmuch as the true distinction is made publicly clearer, between the social and the civil relations. Mr. A. is just as free to decline every sort of unwelcome social advance, much or little, as ever he was; and as to his own house or estate may eject any one from it, not of his own family or a legal tenant, and give no other reason than that it suits him to do so. Do you not see it now, gentlemen of the other side? Is there anything new in it? Is it not as old as truth itself? Honestly, have you not known it all along? Is it not actually the part of good breeding to know it? You cannot say no. Then why have you charged us with proposing "to break down every distinction between the races," and "to insist on their intermingling in all places and in all relations," when in fact we have not proposed to disturb any

distinction between the races which nature has made, or to molest any private or personal relation in life, whatever? Why have you charged us with "moving to forbid all further assortment of the races," when the utmost we have done is to condemn an *arbitrary* assortment of the races, crude and unreasonable, by the stronger race without the consent of the weaker, and in places and relations where no one, exalted or lowly, has any right to dictate to another because of the class he belongs to? We but turn your own words to our use when we say this battery of charges "is as false as it is infamous." But let that go.

Having made it plain that the question has nothing to do with social relations, we see that it is, and is only, a question of *indiscriminative civil rights*. This is what "The Freedman's Case in Equity" advocates from beginning to end, not as a choice which a *race* may either claim or disclaim, but as every citizen's individual yet impersonal right until he personally waives or forfeits it. The issue, we repeat, is not met at all by the assertion that "Neither race wants it." There is one thing that neither race wants, but even this is not because either of them is one race or another, but simply because they are members of a civilized human community. It is that thing of which our Southern white people have so long had such an absurd fear; neither race, or in other words nobody, wants to see the civil rewards of decency in dress and behavior usurped by the common herd of clowns and ragamuffins. But there is another thing that the colored race certainly does want: the freedom for those of the race who can to earn the indiscriminative and unchallenged *civil—not social*—rights of gentility by the simple act of being genteel. This is what we insist the best intelligence of the South is willing—in the interest of right, and therefore of both races—to accord. But the best intelligence is not the majority, and the majority, leaning not upon the equities, but the traditional sentiments of the situation, charge us with "theory" and "sentiment" and give us their word for it that "Neither race wants it."

Why, that is the very same thing we used to say about slavery! Where have these traditionists been the last twenty years? Who, that lived in the South through those days, but knows that the darker race's demand from the first day of the Reconstruction era to its last, was, "If you *will not give us* undivided participation in civil rights, *then and in that case* you must give us equal separate enjoyment of them"; and from the close of Reconstruction to this day the only change in its expression has been to turn its imperative demand

into a supplication. This was the demand, this is the supplication of American citizens seeking not even their civil rights entire, but their civil rights mutilated to accommodate not our public rights but our private tastes. And how have we responded? Has the separate accommodation furnished them been anywhere nearly equal to ours? Not one time in a thousand. Has this been for malice? Certainly not. But we have unconsciously—and what people in our position would not have made the same oversight?—allowed ourselves to be carried off the lines of even justice by our old notion of every white man holding every negro to a menial status.

Would our friends on the other side of the discussion say they mean only, concerning these indiscriminative civil rights, "Neither race wants them *now*"? This would but make bad worse. For two new things have happened to the colored race in these twenty years; first, a natural and spontaneous assortment has taken place within the race itself along scales of virtue and intelligence, knowledge and manners; so that by no small fraction of their number the wrong of treating the whole race alike is more acutely felt than ever it was before; and, second, a long, bitter experience has taught them that "equal accommodations, but separate" means, generally, accommodations of a conspicuously ignominious inferiority. Are these people opposed to an arrangement that would give them instant release from organized and legalized incivility?—For that is what a race distinction in civil relations is when it ignores intelligence and decorum.

V. CALLING THE WITNESSES.

THERE is another way to settle this question of fact. One side in this debate advocates indiscriminative civil rights; the other, separate—*racial* civil rights. It is not to be doubted that our opponents have received many letters from white men and women full of commendation and thanks for what they have written. Such, too, has been the present writer's experience. Such testimonials poured in upon him daily for four months, from east, west, north, and south. But how about the colored race? Have they written him, begging him to desist because "Neither race wants" the equities he pleads for? The pages of this magazine are precious, but we beg room for a few extracts from colored correspondents' letters, each being from a separate letter and no letter from any colored person whom the present writer has ever seen or known. One letter ends, "May all the spirits that aid justice, truth, and right constantly attend you in your effort." Another, "I hope that you will con-

tinue the work you have begun, and may God bless you." Another, "Accept this, dear sir, as the thanks of the colored people of this city." Another begins, "I am a negro. In behalf of the negroes and in behalf of equitable fair dealing on the principle of giving a dollar's worth for a dollar, without any possible reference to social matters, permit me to tender you my sincere thanks," etc. Says another, "The judicious fairness with which you have treated our case renders your thesis worthy of our adoption as a Bill of Rights." A letter of thanks from a colored literary club says, ". . . We thank you for your recognition of our capacity to suffer keenly under the indignities we are made to endure." A similar society in another town sent a verbal expression of thanks by its president in person. (Followed since by its committee's formal resolution ornamentally written and mounted.) In Louisville a numerous impromptu delegation of colored citizens called upon the writer and tendered a verbal address of thanks. Another letter says, "If the people of the South will only regard your article in the same spirit as I believe it was intended, then I know, sir, great and enduring good will be accomplished." In Arkansas, a meeting of colored people, called to express approval of the article on "The Freedman's Case in Equity," passed a resolution pronouncing its ideas "consonant with true religion and enlightened civilization," etc. Not one word of adverse criticism, written or printed, has come to him from a person of color. Has the same race given "In Plain Black and White," or "The Freedman's Case in Reality," or any of the less dignified mass of matter on that side of the question, a like cordial ratification? Or has only Mr. Jack Brown sent in his congratulations? *

* The Selma "Times," quoted in "The Freedman's Case in Equity" as rejoicing in the flogging of a colored preacher on a railway train for not leaving the passenger coach when ordered out by irresponsible ruffians, has since published a letter purporting to come from one "Jack Brown, colored," of Columbia, South Carolina. The letter denounces the present writer as one of the sort "that has brought on all the trouble between the white and colored people of the South. I do not know his initials or address," it continues, "or I would address him in person, as I am anxious to *test his sincerity.*" † "Now," says the Selma "Times," "the above article bears every imprint of honesty and truthfulness. We don't believe any one but a sharp negro could have written or did write it. The handwriting, the loose grammar, the postmark on the envelope, all mark it as a genuine document coming from the man it purports to have come from. Not only is this true of such external marks as we have named, but so is it likewise of its internal, essential substance. It sounds as if it could have been thought out and written by a negro *only*. We cannot conceive of a white man's putting himself so thoroughly into the place of a negro, mentally, as to have executed such a thing as a forgery. We shall find out if there is such a negro in Columbia, S. C., as Brown, and secure other proof that he wrote it, because we

But it may be asked, may not a great many individuals, and even some clubs, impromptu delegations and public meetings called for the purpose, approve certain declarations and yet the great mass of a people not sanction them? Then let us go one step farther. There are, it is said, eighty — some say a hundred — journals published in this country by colored men. They look to the colored race for the great bulk of their readers and subscribers. Hence they are bound to be in large degree the organs of popular thought among the reading part, at least, of that people. But *these papers are a unit for the ideas set forth in "The Freedman's Case in Equity."* Now, to believe the other side we should have to make two impossible assumptions; that among a people treated rigorously as one race, compacted by a common status, the intelligent and comparatively refined part numerous enough to send — in spite of its poverty — *twenty thousand students to normal schools and colleges* and to support eighty newspapers, this portion, moreover, associated with the less intelligent portion more cordially in every interest than two such classes are amongst any other people in the world unless it be the Jews — that such a lump of leaven as this has no power to shape the views of the rest on matters of common public right! Such a thing may be credible on some other planet, not on this. And the second impossible assumption: That the intelligent and sensitive portions of a people shall submit to an ignominious mutilation of their public rights because the *unintelligence* of their race chooses (?) to submit to it. This assumption is a crime against common justice; the other is a crime against common sense. It is simply a mistake that "the assortment of the races which has been described

know Mr. Cable and others are sure to challenge its authenticity. We confidently expect to be fully prepared to convince the most skeptical.

"The negro is right. Those of his race who have any sense cannot expect what Mr. Cable would give them, do not expect it, and would be unhappy and uncomfortable if, in any way, it could be forced upon them."

So if Jack Brown, colored, were a real person, nothing could be easier than to find him. Writing from a small inland city, getting through one hundred and seventy-five words of his letter before making a grammatical slip, a colored man in sympathy with the tritest sentiment of the dominant race and with a taste for public questions, — such a man could not be hid, much less overlooked, in Columbia. But on the present writer's desk lies his own letter to Mr. Jack Brown, colored, stamped "Return to the writer," after having lain in the Columbia post-office for nearly a month, unclaimed. An exhaustive search and inquiry amongst the people of both races by a white gentleman resident on the spot, fails to find any "Jack Brown" except — to quote the gentleman's letter, — "a poor, illiterate fellow, who cannot read or write his name," and who, instead of being "twenty-seven years of age," is — to quote another letter — "an aged man."

† So italicized originally.

as shameful and unjust . . . commands the hearty assent of both."

True, our traditionalist friends, who think they believe it, are glad to take the witness-stand and testify; but surely some of them should be lawyer enough to know that when they say the colored race *shall not have* the other thing in any event, their testimony as to which the colored race prefers is of no further account. At Atlanta, they are equally unfortunate in another witness. If the Georgia State Commissioner of Public Education will allow the personal mention from one who has met and admires him, we may say that throughout the United States he has won the high regard and praise of the friends of public education for the exceptional progress he — a man of the old South — has made in unlearning our traditional Southern prejudices. He stands a noble, personal refutation of the superficial notion that the world must look to the young South, only, for progressive ideas of human right among us. May be it was easy to make the mistake of calling this admirable gentleman to testify that "neither race wants it." But see how quickly Commissioner Orr provokes the reader to dismiss him, too, from the witness-stand: Speaking of mixed schools, which, he says, "both races would protest against"—but which, mark it, "The Freedman's Case in Equity" does not ask to have forced upon any community or forced by either race upon the other anywhere—Mr. Orr says, "I am so sure of the evils that would come from mixed schools that, even if they were possible, I would see the whole educational system swept away before I would see them established."

Ah! gentlemen, you are not before a Congressional investigating committee that gets Republican facts from Republican witnesses and Democratic facts from Democratic witnesses, and then makes two reports. You are before the judgment-seat of the world's intelligence; and if you cannot bring for evidence of a people's feelings their own spontaneous and habitual expressions to those who think with them; and, for the establishment of facts, the unconscious or unwilling testimony of your opponents, then it is high time you were taking your case out of this court.* As for us we can prove all we need prove by the gentlemen themselves.

Once only does the opposite side bring forward the actual free utterance of a colored

man professing to express a sentiment of his race; well nigh a magazine column of "negro eloquence" and adulation poured upon a conference of applauding "Bishops and Brethren" because of the amazing fact that when in the neighboring vestry-room, he had "thoughtlessly asked" the governor of the State if he could get a drink, that magnate sent for and handed him a glass of water! Unlucky testimony! which no candid mind can deny is an elaborate confession of surprised delight at being treated with indiscriminative civility. We are told, however, that it is offered simply to show the affectionate "feeling of that people toward their white neighbors." Thus a display of affection is utilized to give a color of justice to the *mutilation* of just such equal rights as this one whose unexpected recognition called forth this display of affection! So they go round and round their tether.

VI. GUNS THAT SHOOT BACKWARD.

OUR demonstration is complete; but there follows a short corollary: While the colored people always did and still do accept with alacrity an undivided enjoyment of civil rights with the white race wherever cordially offered, they never mistake them for social privileges, nor do they ever attempt to use them to compel social intercourse. We might appeal to the everyday street-car experience of hundreds of thousands of residents in New Orleans and other Southern cities; or to the uniform clearness with which civil rights are claimed and social advances disclaimed in the many letters from colored men and women that are this moment before the writer. But we need not. We need refer only to our opponents in debate, who bring forward, to prove their own propositions, a set of well-known facts that turn and play Balaam to their Balak. Hear their statement: "They"—the colored people—"meet the white people in all the avenues of business. They work side by side with the white bricklayer or carpenter in perfect accord and friendliness. When the trowel or hammer is laid aside, the laborers part, each going his own way. Any attempt to carry the comradeship of the day into private life would be sternly resisted by both parties in interest."

We prove, by the other side's own arguments, that the colored people always accept

* They might easily have brought in colored school-teachers. Many of these favor separate colored schools, for the obvious reason that those are the only schools they may teach in. They do bring in just two witnesses from a side avowedly opposed to them; but it is not our side, either. One is the late Bishop Haven, of whom we shall speak presently. The other, a young white woman on a railway train, who— forbidden to enjoy her civil rights and her peculiar social preferences

at the same time—threw away a civil right to retain the social preference; which was her business, not ours, and proves nothing whatever for or against anybody else; but whose expression of *pride* at being mistaken for a quadroon proves her an extremely silly person. They summon her for "the sole object" of suggesting that she and such as agree with her—which lets us out as plainly as it does the other side—are "unsafe as advisers and unfair as witnesses." Certainly they are.

the common enjoyment of civil rights and never confound civil with social relations. But in just one phase of life there is a conspicuous exception; and an exception especially damaging to the traditional arguments of our opponents. And who furnishes our evidence this time? Themselves again. We allude to the church relation. We are asked to confront the history of an effort made, they say, many times over, by Bishop Haven and the Northern Methodist church generally, soon after the late war; an effort to abolish racial discrimination in the religious worship of the church in the South composed of Northern whites and Southern blacks; its constant and utter failure; and the final separation of those churches into two separate conferences, and into separate congregations wherever practicable. These facts are brought forward to prove the existence of race instinct, intending to justify by race instinct the arbitrary control, by the whites, of the relations between the two races; and the conclusion is sanguinely reached at a bound, that the only explanation of these churches' separation on the color line is each race's race instinct, "that spoke above the appeal of the bishop and dominated the divine influences that pulsed from pew to pew." But the gentlemen are too eager. What in their haste they omit to do is to make any serious search at all for a simpler explanation. And how simple the true explanation is! Bishop Haven and his colleagues, if rightly reported, ought to have known they would fail. They were attempting under acute disadvantages what none of the Protestant churches in America, faithfully as they have striven for it, has ever been able extensively to accomplish. That is, *to get high and low life to worship together*. The character of much ritual worship and of nearly all non-ritual worship naturally and properly takes for its standard the congregation's average intelligence. But this good process of assortment, unless held in by every proper drawback, flies off to an excess that leaves the simple and unlearned to a spiritual starvation apparently as bad as that from which non-ritual worship, especially, professes to revolt. Bishop Dudley has lately laid his finger upon this mischief for us with great emphasis. But, moreover, as in society, so in the church, this intellectual standard easily degenerates toward a standard of mere manners or station. Thus the gate is thrown wide open to the social idea, and presently not our Dorcases only, but at times our very bishops, are busy trying to make the social relation co-extensive with the church relation. With what result? Little, generally, save the bad result of congregations trimming themselves down to fit the limitations of social

fellowship. See the case cited. Here were whites, cultured, and counting themselves, at least, as good as the best in the land; and here was an ignorant, superstitious race of boisterous worshipers just emerged from slavery; one side craving spiritual meat, the other needing spiritual milk, and both sides beset by our prevalent American error that social intimacy is one of the distinct *earnings* of church membership. Of course they separated.

It is but a dwarfed idea of the church relation that cramps it into the social relation. The church relation is the grandest fraternity on earth.* Social relations are good and proper, but can the social relation grasp all these conditions in one embrace? Can any one social circle span from the drawing-room to the stable, from the counting-room or professional desk to the kitchen, from the judge's bench to the tailor's and cobbler's, from the prince's crown to the pauper's bowl? Yet without any social intimacy the prince may be the pauper's best friend, and even the pauper the prince's; and the church relation ought to be so wide and high that all these ranks might kneel abreast in it in common worship, and move abreast in it in perfect, active, co-laboring fraternity and regard, gathering any or every social circle into its noble circumference, never pressing one injuriously upon another, and above all things never letting in the slender but mischievous error of confusing Christian fraternity with social equality. Yet the high and low nigh all our country over are kept apart in divine worship by just this error or the fear of it. Fifty thousand Bishop Havens could not, until they had overthrown the domination of this mistake, get the lofty and the lowly to worship together. How could they but separate? And the dragging in of a race instinct to account for the separation is like bringing a pole to knock down strawberries. Other things *will*, but a belief in instinct will *not*, keep the races apart. Look at the West Indies. But not even miscegenation — may the reader forgive us the disgusting word — could have saved such a scheme from failure.

The gentlemen prove absolutely nothing for their case, but much against it. For here is shown by actual experiment that even where there is not of necessity a social relation, yet when the social idea merely gets in by mistake of both classes, the effect will not be social confusion, but a spontaneous and willing separation along the strongest lines of social cleavage. The log — the church — will not split the wedge — the social impulse; but the wedge will split the log. The uncultured, be they white or

"There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female." Gal. iii : 28.

black, in North or South, will break away on one side with even more promptness and spontaneity than the cultured on the other, and will recoil, moreover, to a greater distance than is best for any one concerned. Thus far are we from having the least ground to fear from the blacks that emptiest of phantasms, social aggression. Thus far are we from needing for the protection of social order any assumption of race instinct. And so do the advocates of our traditional sentiments continually establish the opposite of what they seek to prove.

They cite, again, to establish this assumption of race instinct, the spontaneous grouping together of colored people in such social or semi-social organizations as Masonic lodges, military companies, etc. But there is no proscription of whites in the lodges of colored Odd-fellows or Masons. In Georgia, for example, the *law requires* the separation of the races in military companies. The gentlemen forget that the colored people are subject to a strong expulsive power from the whites, which they say must and shall continue whether it is instinct or not; and that the existence of a race instinct can never be proved or disproved until all expulsive forces are withdrawn and both races are left totally free to the influences of those entirely self-sufficient *social* forces which one of the gentlemen has so neatly termed "centripetal." But even if these overlooked facts were out of existence, what would be proved? Only, and for the second time, that the centripetal force of social selection operates so completely to the fulfillment of these gentlemen's wishes, that there is no longer any call to prove or disprove the existence of race instinct, or the faintest excuse for arbitrary race separations in the enjoyment of civil rights.

Thus, setting out with the idea that the social integrity of the races requires vigorous protection from without, they prove instead by every argument brought to establish it, that every relation really social, partially social, or even mistakenly social, takes — instinct or no instinct — the most spontaneous and complete care of itself. We are debating the freedman's title to a totally impersonal freedom in the enjoyment of all impersonal rights; and they succeed only in *saying*, never in bringing a particle of legitimate evidence to prove, that "Neither race wants it"; an assertion which no sane man, knowing the facts, can sincerely make until, like these gentlemen, he has first made the most woful confusion in his own mind between personal social privileges and impersonal civil rights.

VII. THE RIGHT TO RULE.

BUT they have yet one last fancied stronghold. They say, "The *interest* of both races

is against it"; that is, against a common participation in their civil rights; and that it is, rather, in favor of a separate enjoyment of them. Now, there are people — but their number is steadily growing less — who would mean by this merely that the interest of both races is against common participation because *they* are against it and have made separate participation the price of peace. But the gentlemen whom we have in view in this paper, though they must confess their lines often imply this, give a reason somewhat less offensive in its intention. They say common participation means common sociality, and common sociality, race-amalgamation. Have we not just used their own facts to show conclusively that this is not what occurs? Yet these two reasons, so called, are actually the only ones that scrutiny can find in all the utterances pledging these gentlemen to "the exactest justice and the fullest equity." Nay, there is another; we must maintain, they say, "the clear and unmistakable domination of the white race in the South." — Why, certainly we must! and we must do it honestly and without tampering with anybody's natural rights; and we can do it! But why do they say we must do it? Because "character, intelligence, and property" belong preëminently to the white race, and "character, intelligence, and property" have "the right to rule." So, as far as the reasoning is sincere, they are bound to mean that not merely being white entails this right, but the possession of "character, intelligence, and property." And the true formula becomes "the clear and unmistakable domination" of "character, intelligence, and property" "in the South." But if this be the true doctrine, as who can deny it is? then why — after we have run the color line to suit ourselves through all our truly social relations — why need we usurp the prerogative to run it so needlessly through civil rights, also? It is widely admitted that we are vastly the superior race in everything — as a race. But is every colored man inferior to every white man in character, intelligence, and property? Is there no "responsible and steadfast element" at all among a people who furnish 16,000 school-teachers and are assessed for \$91,000,000 worth of taxable property? Are there no poor and irresponsible whites? So, the color line and the line of character, intelligence, and property frequently cross each other. Then tell us, gentlemen, which are you really for; the color line, or the line of character, intelligence, and property that divides between those who have and those who have not "the right to rule"? You dare not declare for an inflexible color line; such an answer would shame the political intelligence of a Russian.

Another point just here. The right to rule :

What is it? It is not the right to take any peaceable citizen's civil right from him in whole or in part. It is not the right to decree who may earn or not earn any *status* within the reach of his proper powers. It is not the right to oppress. In America, to rule is to serve. There is a newspaper published in Atlanta called "The Constitution." The Instrument of which this name is intended to remind us, and of which it is well to keep us reminded, is founded on a simple principle that solves the problem of free government over which Europe sat in dark perplexity for centuries, shedding tears of blood; the principle that the right to rule is the consent of the ruled and is vested in the majority by the consent of all. It took ages of agony for the human race to discover that there is no moral right of class rule, and that the only safety to human freedom lies in the intelligence, virtue, and wealth of communities holding every right of every being in such sacred regard, and all claims for class or personal privilege in such uniform contempt, that unintelligence, vice, and poverty, having no potent common grievance, shall naturally invest intelligence, character, and property with the right to rule. It took ages for us to discover the necessity of binding intelligence, character, and property to the maintenance of this attitude by giving, once for all, to the majority the custody and right-of-assignment of this truly precious right to rule. Is this mere sentiment? A scheme in the clouds? Who says so cannot truly qualify as a whole American citizen. The safety of American government is that intelligence, virtue, and wealth dare not press any measure whose viciousness or tyranny might suspend the expulsive forces that keep unintelligence, vice, and poverty divided among themselves; and that intelligence and virtue hold themselves entirely free to combine now with wealth and now with poverty as now the lower million or now the upper ten shows the livelier disposition to impose upon the other. But the only way to preserve these conditions is to hold sacred the will and voice of the majority. Of course there are friction and imperfections in their working; but human wisdom has not yet found any other scheme that carries us so near to perfect government. The right to rule is a right to earn the confidence and choice of the majority of the whole unfettered people. Yet it is in the face of this fundamental principle of American freedom that our traditionist friends stand, compelling six million freedmen to mass together under a group of common grievances, within a wall of these gentlemen's own avowed building, then charging them with being

"leagued together in ignorance and irresponsibility," and then talking in large approval about "*minorities*"—not earning, but—"*asserting and maintaining control.*" And a proposition to set such antique usurpation of human rights aside, to remove the real grievances that make a common cause for six million distrusted and distrusting people, to pull down that wall of civil—*not social*—distinctions that tends to keep them "leagued together in ignorance and irresponsibility," to open to them the *civil*—not social—rewards of gentility and education, and the responsibilities of knowledge and citizenship, to arouse in them the same concern in common public interests that we feel, and to make all their fortunes subject to the same influences as ours,—this, we are told, is "against the interest of both races"! And this we have from men who, claiming a preëminent right to speak for the South, claim with it a "right to rule" that fails to signify anything better than the right of the white man to rule the black without his consent and without any further discrimination between intelligence and unintelligence or between responsibility and irresponsibility. In other words, a principle of political and civil selection such as no freeman could possibly choose and which cannot be the best interest of any American community. So the other side are our witnesses again. And now we may say to them, as the lawyers do in court,— "That will do."

VIII. SUMMING UP.

THE case is before the reader. The points of fact made in our November paper—the privations suffered by the colored people in their matters of civil rights—have been met with feeble half-denials equivalent to admissions by opponents in controversy too engrossed with counter statements and arguments, that crumble at the touch, to attend to a statement of facts. In the end they stand thus: As to churches, there is probably not a dozen in the land, if one, "colored" or "white," where a white person is not at least professedly welcome to its best accommodations; while the colored man, though he be seven-eighths white, is shut up, on the ground that "his race" prefers it, to the poor and often unprofitable appointments of the "African" church, whether he like it best or not, unless he is ready to accept without a murmur distinctions that mark him, in the sight of the whole people, as one of a despised caste and that follow him through the very sacraments. As to schooling, despite the fact that he is today showing his eager willingness to accept separate schools for his children wherever the white man demands the separation, yet

both his children and the white man's are being consigned to illiteracy wherever they are too few and poor to form separate schools. In some mountainous parts of Kentucky there is but one colored school district in a *county*. In railway travel the colored people's rights are tossed from pillar to post with an ever-varying and therefore more utterly indefensible and intolerable capriciousness. In Virginia they may ride exactly as white people do and in the same cars. In a neighboring State, a white man may ride in the "ladies' car," while a colored man of exactly the same dress and manners — nay, his wife or daughter — must ride in the notorious "Jim Crow car," unprotected from smokers and dram-drinkers and lovers of vile language. "In South Carolina," says the Charleston "News and Courier," on the other hand, "respectable colored persons who buy first-class tickets on any railroad ride in the first-class cars as a right, and their presence excites no comment on the part of their white fellow-passengers. It is a great deal pleasanter to travel with respectable and well-behaved colored people than with unmannerly and ruffianly white men." In Alabama the majority of the people have not made this discovery, at least if we are to believe their newspapers. In Tennessee the law *requires* the separation of all first-class passengers by race with equal accommodations for both; thus waiving the old plea of decency's exigencies and forcing upon American citizens adjudged to be first-class passengers an alienism that has thrown away its last shadow of an excuse. But this is only the law, and the history of the very case alluded to by our traditionist friends, in which a colored woman gained damages for being compelled to accept inferior accommodation or none for a first-class ticket, is the history of an outrage so glaring that only a person blinded to the simplest rights of human beings could cite it in such a defense.

A certain daily railway train was supplied, according to the law, with a smoking-car, and two first-class cars, one for colored and one for whites. The two first-class cars were so nearly of a kind that they were exchangeable. They generally kept their relative positions on the track; but the "ladies' car" of the morning trip became the "colored car" of the return, afternoon, trip, and *vice versa*. But the rules of the colored car were little regarded. Men, white and black, were sometimes forbidden, sometimes allowed, to smoke and drink there. Says the court, "The evidence is abundant to show that the rule excluding smoking from that car was but a nominal one, that it was often disregarded, that white passengers understood it to be a nominal rule, and that

adequate means were not adopted to secure the same first-class and orderly passage to the colored passengers occupying that car as was accorded to the passengers in the rear car. Nor was the separation of the classes of the passengers complete. There is no evidence tending to show that the white passengers were excluded from the car assigned to colored passengers, and it appears that whenever the train was unusually crowded it was expected that the excess of white passengers would ride, as they then did ride, in the forward one of the two first-class cars. So, too, it appeared that persons of color, of whom the plaintiff was one, had several times occupied seats in the rear car." A certain "person of lady-like appearance and deportment," one day in September, 1883, got aboard this train with a first-class ticket. She knew the train, and that, as the court states it, "in the rear car . . . quiet and good order were to so great an extent the rule that it was rarely if ever that any passenger gave annoyance by his conduct to his fellow-passengers." In the colored car there was at least one colored man smoking, and one white man whom she saw to be drunk. She entered the rear car and sat down, no one objecting. She was the only colored person there. The conductor, collecting his tickets, came to her. He was not disconcerted. Not long previously he had forbidden another colored person to ride in that car, who must also have been "of lady-like appearance and deportment," for when he saw this one he "supposed her to be the same person . . . intentionally violating the defendant's (Railroad's) rules and *seeking to annoy his other passengers*." Twice they exchanged polite request and refusal to leave the car; and then, in full presence of all those "other passengers" whom this person of lady-like appearance and deportment was erroneously suspected of "seeking to annoy," there occurred a thing that ought to make the nation blush. The conductor laid hands upon this defenseless woman, whose infraction of a rule was interfering neither with the running of the road, the collection of fares, nor the comfort of passengers, and "by force removed her from her seat and carried her out of the car. When near the door of the car the plaintiff promised that she would then, if permitted, leave the car rather than be forcibly ejected; but the conductor, as he says, told her that her consent came too late, and continued to remove her forcibly. On reaching the platform of the car, plaintiff left the train." Judgment was given for the plaintiff. But the point was carefully made that she would have been without any grievance if the "colored car" had only been kept first-class. In other words, for not providing separate first-class ac-

commodations, five hundred dollars damages; for laying violent hands upon a peaceable, lady-like, and unprotected woman, nothing; and nothing for requiring such a one publicly to sit apart from passengers of the same grade under a purely ignominious distinction. What! not ignominious? Fancy the passenger a white lady, choosing, for reasons of her own, to sit in a first-class "colored car"; infringing, if you please, some rule; but paying her way, and causing no one any inconvenience, unsafety, or delay. Imagine her, on insisting upon her wish to stay, drawn from her seat by force, and lifted and carried out by a black conductor, telling her as he goes that her offer to walk out comes too late. If this is not ignominy, what is it? To the commission and palliation of such unmanly deeds are we driven by our attempts to hold under our own arbitrary dictation others' rights that we have no moral right to touch, rights that in ourselves we count more sacred than property and dearer than life.

But we must not tarry. If we turn to the matter of roadside refreshment what do we see? Scarcely a dozen railroad refreshment-rooms from the Rio Grande to the Potomac,—is there one?—where the weary and hungry colored passenger, be he ever so perfect in dress and behavior, can snatch a hasty meal in the presence of white guests of any class whatever, though in any or every one of them he or she can get the same food, and eat with the same knife, fork, and plate that are furnished to white strangers, if only he or she will take a menial's attitude and accept them in the kitchen. Tennessee has formally "abrogated the rule of the common law" in order to make final end of "any right in favor of any such person so refused admission" to the enjoyment of an obvious civil right which no public host need ever permit any guest to mistake for a social liberty. As to places of public amusement, the gentlemen who say that "each [race] gets the same accommodation for the same money," simply—forget. The statement comes from Atlanta. But, in fact, in Atlanta, in Georgia, in the whole South, there is scarcely a place of public amusement—except the cheap museums, where there are no seated audiences—in which a colored man or woman, however unobjectionable personally, can buy, at any price, any but a second—sometimes any but a third or fourth class accommodation. During a day's stay in Atlanta lately, the present writer saw many things greatly to admire; many inspiring signs of thrift, stability, virtue, and culture. Indeed, where can he say that he has not seen them, in ten Southern States lately visited? And it is in contemplation of these evidences of greatness, prosperity,

safety, and the desire to be just, that he feels constrained to ask whether it must be that in the principal depot of such a city the hopeless excommunication of every person of African tincture from the civil rewards of gentility must be advertised by three signs at the entrances of three separate rooms, one for "Ladies," one for "Gentlemen," and the third a "Colored waiting-room"? Visiting the principal library of the city, he was eagerly assured, in response to inquiry, that no person of color would be allowed to draw out books; and when a colored female, not particularly tidy in dress, came forward to return a book and draw another, it was quickly explained that she was merely a servant and messenger for some white person. Are these things necessary to—are they consistent with—an exalted civilization founded on equal rights and the elevation of the masses?

And the freedman's rights in the courts. It is regarding this part of our subject that our friends on the other side make a mistake too common everywhere and very common among us of the South. That is, they assume the state of affairs in more distant localities to be the same as that immediately around them. A statement concerning certain matters in Florida or Maryland is indignantly denied in Tennessee or Texas because it is not true of those regions; and so throughout. It is in this spirit that one of these gentlemen explains that in Georgia negroes are not excluded from the jury lists except for actual incompetency, and thereupon "*assumes* that Georgia does not materially differ from the other States." But really, in Tennessee they may not sit in the jury-box at all, except that in a few counties they may sit in judgment on the case of a colored person. While in Texas, at the very time of the gentleman's writing, the suggestion of one of her distinguished citizens to accord the right of jury duty to the colored people, was being flouted by the press as an "innovation upon established usage," and a "sentimental and utterly impracticable idea." This in the face of a State constitution and laws that give no warrant for the race distinction. So much for assumption.

The same mistake is repeated by the same writer in discussing the question of the freedmen's criminal sentences. No fact or person is brought forward to prove or disprove anything except for Georgia. And even the prosecuting attorney for the Atlanta circuit, brought in to testify, says, for the State's cities and towns, that the negro there "gets equal and exact justice before the courts"; but he is not willing to deny "a lingering prejudice and occasional injustice" in remote counties. Why, with nearly 6,000,000 freed people getting "full and exact justice in the

courts whether the jury is white or black," why could there not be found *among them* two or three trustworthy witnesses to testify to this fact? Their testimony would have been important, for these lines are written within hand's reach of many letters from colored men denying that such is the case.

The present writer does not charge, and never did, that our Southern white people consciously and maliciously rendered oppressive verdicts against the freedman. On the contrary, it is plainly stated by him that they acted "not so maliciously as unreflectingly," and "ignorant of the awful condition of the penitentiaries." His only printed utterance on the subject is on record in "The Freedman's Case in Equity," and is too long to quote; but he cited the *official reports* of our Southern State prisons themselves, and asked how with their facts before us we are to escape the conviction that the popular mind had been seduced—as every student of American prison statistics knows it has—by the glittering temptations of our Southern convict-lease system; and not one word of reply have we had, except the assertion, which nobody would think of denying, that the black man, often in Georgia, and sometimes elsewhere, gets an even-handed and noble justice from white juries.

Have our opponents observed the workings of this convict-lease system? To put such a system as a rod of punishment into the hands of a powerful race sitting in judgment upon the misdemeanors of a feebler and despised caste would warp the verdicts of the most righteous people under the sun. Examine our Southern penitentiary reports. What shall we say to such sentences inflicted for larceny alone, as twelve, fourteen, fifteen, twenty, and in one case forty years of a penal service whose brutal tasks and whippings kill in an average of five years? Larceny is the peculiar crime of the poorest classes everywhere. In all penitentiaries out of the South the convicts for this offense always exceed and generally double the number of convicts for burglary. Larceny has long been called the favorite crime of the negro criminal. What, then, shall we say to the facts, deduced from official records, that in the Georgia penitentiary and convict camps there were in 1882 twice as many colored convicts for burglary as for larceny, and that they were, moreover, serving sentences averaging nearly twice the average of the white convicts' in the same places for the same crime? This, too, notwithstanding a very large number of short sentences to colored men, and a difference between their longest and shortest terms twice as great as in the case of the whites. For larceny the difference is five times as

great.* Shall we from these facts draw hasty conclusions? We draw none. If any one can explain them away, in the name of humanity let us rejoice to see him do so. We are far from charging any one with deliberately prostituting justice. We are far from overlooking "the depravity of the negro." But those who rest on this cheap explanation are bound to tell us which shows the greater maliciousness; for one man to be guilty of hog-stealing or for twelve jurors to send him to the coal mines for twenty years for doing it? In Georgia outside her prisons there are eight whites to every seven blacks. Inside, there are eight whites to every eighty blacks. The depravity of the negro may explain away much, but we cannot know how much while there also remain in force the seductions of our atrocious convict-lease system, and our attitude of domination over the blacks, so subtly dangerous to our own integrity. Here is a rough, easy test that may go for what it is worth: These crimes of larceny and burglary are just the sort—since they are neither the most trivial nor the most horrible—to incur excessive verdicts and sentences, if the prejudices of one class against another come into the account. Now, what is the fact in the prisons we have mentioned? Of all the inmates under sentence for these crimes nineteen-twentieths are classed as of that race which we "dominate" both out of and in the jury-box. We ask no opinion on these points from the stupid or vicious of either whites or blacks; but is it wise for us not to consider what may be their effect upon the minds of the property-holding, intelligent, and virtuous portion of the "dominated" race? Is it right?

IX. POLITICAL "SOLIDITY"—WHY AND TILL WHEN.

IN the same number of THE CENTURY that contains "In Plain Black and White," appears an open letter on "The Solid South." It tells us that political "solidity," founded on the merits neither of candidates nor questions, is an emphatic national and still greater local evil; but that the whites of the South "had to be solid," because they feared, and that they still fear, the supremacy of the blacks. That if this fear were removed the whites would divide. Hence, we must first procure the division of the blacks; this is what it calls "the prerequisite." Is it? Is that a wise or just arbitration? Must the side that is immeasurably the weaker begin the disarmament? Is "*noblesse oblige*" untranslatable into "American"? We are only told that "once divide the negro vote and the

* Without counting the exceptional forty years' sentence mentioned.

'solid South' is broken." True statement, but sadly antique. An old catchword pulled out of the rubbish of the Reconstruction strife. And why was the negro vote solid? The carpet-bagger and scalawag? It was so believed, and these—the most of them richly deserving their fate—were suppressed. What then? Less political activity among the blacks. But division? No. Then why were the blacks still "solid." The open letter gives two causes: first, gratitude to the Republican party; second, fear of the Democratic. But these sentiments, it says, are fading out. Will their disappearance reveal the solid blacks divided? That depends on the matter that forms—what the open letter does not touch—the solid bottom of this question. But the more ambitious article in the same number of the magazine boldly confesses it when it decrees *the subserviency of the freedman's civil rights to the white man's domination*. As long as that continues to be or to threaten, the blacks will be solid. We—any people—would be so—would have to be so, in their place. Such a decree is equivalent to saying they must and shall be solid. Only let it be withdrawn and the solidity will vanish from the white vote and the black at the same instant.

This is what is coming. There is to-day no political party in America that is "solid" for this un-American and tyrannical principle; and the reason why the negro vote is a divided vote in the North to-day and in the South shows more signs of dividing than ever before is that the Republican party has grown fat and lazy concerning civil rights, while *Democratic* legislatures and governors, north, east, west, have been passing and signing civil rights bills, rooting out of the laws and of popular sentiment this heresy of domination by fixed class and race, and throwing to the winds "legal discriminations on account of color [which] are not based on character or conduct and have no relation to moral worth and fitness for civic usefulness, but are rather relics of prejudice which had its origin in slavery. I recommend," says the present Democratic governor of Ohio, from whose message we are quoting, "I recommend their total repeal." It is but little over a year since the Democrats joined the Republicans in the legislature of Connecticut in making liable to fine and imprisonment "every person who subjects or causes to be subjected any other person to the deprivation of any rights, privileges, or immunities secured or protected by the Constitution of the State or of the United States, on account of such person being an alien or by reason of his color or race." The time is still shorter since a Democratic majority in the legislature of New Jersey passed

a bill of civil rights, as its own text says, "applicable alike to citizens of every race and color." Nor are they afraid of the names of things. "By direction of Governor Abbett," writes the executive clerk, "I send you copy of the Civil Rights bill as passed by the Legislature and approved by him." In Indiana, while these pages were being written, Democrats were endeavoring to pass a civil rights bill. In May of last year the legislature at Albany passed a bill removing the last remaining civil disabilities from the colored people in the city of New York, by a *unanimous vote*, "three-fifths being present"; and the governor who signed the act is now President of the United States.

"Ah!" some will say, "these Northern Democrats do this in their ignorance; they do not know the negro." Is this the whole truth? Do not we forget that they have only gradually put aside from their own minds the very worst opinion of the negro that ever we had? To get where they are they have left behind the very same prejudices and misconceptions of citizens' rights that we are called to lay aside, and no others. Nay, even we assert facts now, that twenty years ago we used to say no man who knew the negro could honestly believe.

"But"—the answer comes again—"if they had the negro among them numerically powerful, they would not venture to concede"—etc. Let us see: From Georgia, where, we are told, the freedman shall never enjoy "the policy indicated in the Civil Rights bill," pass across its eastern boundary, and lo, we are in a State under Southern Democratic rule, where the blacks are in the majority, yet which is not afraid to leave on the printed page, from the days of Reconstruction, a civil rights bill, not nearly so comprehensive, it is true, but "fully as stringent," says its leading daily journal, "as any that Congress ever placed upon the statute-books," and attending whose enforcement "there is no friction or unpleasantness." This, in South Carolina!

May the time be not long delayed when her strong, proud people, that are sometimes wrong but ever conscientious and ever brave, not content with merely not undoing, shall broaden the applications of that law until it perfectly protects white man and black man alike in the enjoyment of every civil right, and their hearts behind the law open to the freedman equally with the white man, as far as in him lies to achieve it, every civil reward of intelligence, wealth, and virtue. Then shall it still be as true as it is to-day that "No special harm has come of it." Not only so; but the freedman, free indeed, shall along with his other fetters cast off the preoccupation in this question of civil rights which now engrosses his best intelli-

gence, and shall become a factor in the material and moral progress of the whole land. Be the fault now where it may, he will not then outnumber the white man on the prison rolls eleven to one. And what is true of one Southern State is true of all. The temptations to which the negro—shut out from aspirations—now yields, will lose their power, and his steps be turned with a new hope and desire toward the prizes of industry, frugality, and a higher cultivation. Multiplying and refining his tastes, the rank energies of his present nature will not, as now, run entirely to that animal fecundity characteristic of all thriftless, reckless, unambitious populations; his increase in civic value will be quickened, his increase in numbers retarded to a rate more like our own. And neither all the crops our sun-loved South can yield, nor all the metals and minerals that are under the soil made sacred by the blood of her patriots, can bring us such wealth and prosperity as will this change in the hopes and ambitions of our once unambitious, time-serving slaves. The solid black will be solid no longer; but he will still be black.

X. THE GEOGRAPHY OF AMALGAMATION.

Is it not wonderful? A hundred years we have been fearing to do entirely right lest something wrong should come of it; fearing to give the black man an equal chance with us in the race of life lest we might have to grapple with the vast, vague Afrite of Amalgamation; and in all this hundred years, with the enemies of slavery getting from us such names as negrophiles, negro-worshippers, and miscegenationists; and while we were claiming to hold ourselves rigidly separate from the lower race in obedience to a natal instinct which excommunicated them both socially and civilly; just in proportion to the rigor, the fierceness, and the injustice with which this excommunication from the common rights of man has fallen upon the darker race, has amalgamation taken place. Look—we say again—at the West Indies. Then turn and look at those regions of our common country that we have been used to call the nests of fanaticism: Philadelphia, Boston, Plymouth Church, and the like, Look at Oberlin, Ohio. For years this place was the grand central depot, as one might say, of the “Underground Railway”; receiving and passing on toward Canada and freedom thousands of fugitive slaves; weeping over them, praying over them, feeding them, housing them, hiding them in her bosom, defying the law for them, educating them, calling them sir and madam, braving no end of public contumely, and showing them every exasperating consideration. Look at Berea,

Kentucky, where every kind thing contrivable that, according to our old ideas, could destroy a white man’s self-respect and “spoil a nigger” has been practiced. What is the final fact? Amalgamation? Miscegenation? Not at all. The letters of the presidents of these two famous institutions lie before the present writer, stating that from neither of them throughout their history has there resulted a single union of a white with a black person either within their precincts or elsewhere within the nation’s wide boundaries. And of the two towns in which they are situated, in only one have there been from first to last three or four such unions. How have they been kept apart? By law? By fierce conventionality? By instinct? No! It was because they *did not* follow instinct, but the better dictates of reason and the ordinary natural preferences of like for like. But, it is sometimes asked, admitting this much, will not undivided civil relations tend eventually—say after a few centuries—to amalgamation? Idle question! Will it help the matter to withhold men’s manifest rights? What can we do better for the remotest future than to be just in the present and leave the rest to the Divine Rewarder of nations that walk uprightly?

XI. THE NATURAL-GROWTH POLICY.

THERE is a school of thought in the South that stands midway between the traditionists and us. Its disciples have reasoned away the old traditions and are now hampered only by vague ideas of inexpediency. They pray everybody not to hurry. They have a most enormous capacity for pausing and considering. “It is a matter,” says one of them in a late periodical, “of centuries rather than decades, of evolution rather than revolution.” The heartlessness of such speeches they are totally unconscious of. Their prayer is not so much that our steps may be logical as geological. They propose to wait the slow growth of civilization as if it were the growth of rocks, or as if this were the twelfth or thirteenth century. They contemplate progress as if it were a planetary movement to be looked at through the telescope. Why, we are the motive power of progress! Its speed depends on our courage, integrity, and activity. It is an insult to a forbearing God and the civilized world for us to sit in full view of moral and civil wrongs manifestly bad and curable, saying we must expect this or that, and that, geologically considered, we are getting along quite rapidly. Such talk never won a battle or a race, and the hundred years past is long enough for us of the South to have been content with a speed that the rest of the civilized world has left behind. The tortoise won in the race with the hare, the race

didn't win itself. We have listened far too much already to those who teach the safety of being slow. "Make haste slowly," is the true emphasis. Cannot these lovers of maxims appreciate that "Delays are dangerous"? For we have a case before us wherein there is all danger and no safety in floating with the tide.

Our fathers had such a case when African slavery was first fastening its roots about the foundations of our order of society. They were warned by their own statesmen to make haste and get rid of it. "You must approach the subject," cried the great Jefferson. "You must adopt some plan of emancipation or worse will follow"; and all the way down to Henry Clay that warning was with more or less definiteness repeated. But our fathers were bitten with the delusion of postponement, and the practice of slavery became an Institution. It grew, until every element of force in our civilization — the political arena, the sacred desk, the legislative hall, the academical chair — all — were wrapped in its dark shadow. Where might not our beloved South be to-day, far on in front, but for that sad mistake? At length, suddenly, rudely, slavery was brought to an end. What that cost we all know; yet let us hope there are many of us who can say with our sainted Lee, not merely "I am rejoiced that slavery is abolished"; but "I would cheerfully have lost all I have lost by the war, and have suffered all I have suffered, to have this object attained."*

Such was our fathers' problem. The problem before us is the green, rank stump of that felled Institution. Slavery in particular — the slavery of the individual man to his one master, which rested upon the law, is by the law abolished. Slavery in general — the subordination of a fixed ruled to a fixed ruling class — the slavery of *civil caste*, which can only in part, and largely cannot, be legislated away, remains. Sad will it be for our children if we leave it for their inheritance.

A Southern man traveling in the North and a Northern man just returned from a commercial tour of the South lately fell into conversation on a railway train. Said the Northerner, "What the South needs is to import capital, induce immigration, develop her enormous latent wealth, and let politics alone." "Sir," said the Southerner, "I know you by that sign for a commercial man, as I might know a hard student by his glasses and peering eyes. With you all things else are subsidiary to commerce; hence, even commercially, you are near-sighted. It is true the South should seek those things you mention. They are for her better safety, comfort, and happiness. But what are politics? In this land, at least, simply

* See open letter in THE CENTURY for May, 1885.

questions concerning the maintenance or increase of our safety, comfort, and happiness; questions that cannot be let alone, but must be attended to as long as those things demand to be maintained or increased." — The train stopped in a depot. Men could be heard under the wheels, tapping them with their hammers to test their soundness. — "To ask us to let politics alone is to ask us to leave the wheels of our train untested, its engine unoiled, its hot boxes glowing, while we scurry on after more passengers and passengers' fares; — which is just the way not to get them. Do not ask it of us. Our scantiness of capital, meagerness of population, and the undeveloped condition of our natural resources are largely owing, this day, to our blindly insisting that certain matters in our politics shall be let alone. It was our letting them alone that brought Federal interference, and that interference has been withdrawn upon our pledge not to let them alone but to settle them."

About a year ago the present writer visited the thriving town of Birmingham, Alabama. Its smelting furnaces were viewed with special interest. It was fine to see the crude ore of the earth, so long trampled under foot, now being turned by great burnings and meltings into one of the prime factors of the world's wealth. But another thought came with this, at sight of the dark, brawny men standing or moving here and there with the wild glare of molten cinder and liquid metal falling upon their black faces and reeking forms. These were no longer simple husbandmen, companions of unfretted nature. If the subterranean wealth of the South is to be brought to the surface and to market all over the land, as now it is in this miniature of the great English Birmingham; if, as seems inevitable, the black man is to furnish the manual labor for this vast result, then how urgent is our necessity for removing from him all sense of grievance that we rightly may remove, and all impediment to his every proper aspiration, ere the bright, amiable influences of green fields and unsoiled streams, of leafy woods, clear sky, fragrant airs, and song of birds pass out of his life, and the sooty, hardening, dulling toils of the coal-pit and the furnace, and the huddled life that goes with it, breed a new bad knowledge of the power of numbers and a thirst for ferocious excitements, and make him the dangerous and intractable animal that now he is not. For our own interests, one and all of them, we ought to lose no time.

Our task is one whose difficulties can never be less, its facilities never be greater. We have no wars to distract and preoccupy. Here is a kindly race of poor men unlearned in the evil charms of unions, leagues, secret orders, strikes and bread-riots; looking not upon the capitalist as a natural enemy; stranger to all those hos-

ilities against the richer and stronger world around them which drive apart the moneyed man and the laborer wherever living has become a hard struggle. What an opportunity is ours to-day that will never return when once it goes from us. Look at Ireland.

XII. "MOVE ON."

WE occupy, moreover, a ground on which we cannot remain. It is not where we stood at the war's end. We approve the freedman's ownership of himself. We see and feel there is no going back from universal suffrage. And its advocate may make a point of tremendous strength in the fact that this very universality of suffrage is what has bred in the South a new sense of the necessity of public education for all and of whatever else will enlighten and elevate the lower mass. Ignorance, penury, unintelligence, and the vices that go with them—the bonds that hold the freedman down from beneath—we are helping them to cast off. But to cut these loose and still lay on the downward pressure of civil caste—is there any consistency in this? We cannot do it and respect our own intelligence. Socially we can do nothing for the freedman or against him by rule or regulation. That is a matter, as we might say, of specific gravity. But as to his civil rights, we cannot stay where we are. Neither can we go backward.

To go forward we must cure one of our old-time habits—the habit of letting error go uncontradicted because it is ours. It grew out of our having an institution to defend that made a united front our first necessity. We have none now. Slavery is gone. State rights are safer than ever before, because better defined; or, if unsafe, only because *we* have grown loose on the subject. We have nothing peculiar left save civil caste. Let us, neighbor with neighbor, and friend with friend, speak of it, think of it, write of it, get rid of it. Ruskin's words seem almost meant for our moment and region: "For now some ten or twelve years," he says, "I have been asking every good writer whom I know to write some part of what was exactly true, in the greatest of the sciences, that of Humanity." We speak for this when we speak truly against civil caste. It is caste that the immortal Heber calls "a system which tends . . . to destroy the feelings of general benevolence." As far, then, as civil rights are concerned, at least, let us be rid of it. This done, the words North and South shall mean no more than East or West, signifying only directions and regions, and not antipodal ideas of right and government; and though each of us shall love his own State with ardor, the finest word to our ear as citizens shall be America.

To her we see irreversibly assigned the

latest, greatest task in the "science of Humanity": to burst the last chrysalis of the national relation and consummate its last grand metamorphosis. Once it knew no wider bound than the tribal relation. But the day is on us at length, the problem is ours, and its great weight and responsibility and the honor of it when achieved rest and will rest on our Southern States. It is to make national harmony and unity broader than race; to crystallize into fact the truth that national unity need not demand unification of race; to band together—without one single class disability or privilege diminishing or enhancing any individual's intrinsic value—in that one common, undistinguished enjoyment of every human civil right which only can insure national harmony and unity, two antipodal races; two races that have no wish to, and for all we know never will, mingle their two bloods in one stream.

Nationalization *by* fusion of bloods is the maxim of barbarous times and peoples. Nationalization *without* racial confusion is ours to profess and to procure. It is not a task of our choosing. But our fathers, unawares, entailed it upon us, and we cannot but perform it. We cannot hold American principles in perfect faith and not do it. The good doctrine of liberty to all and license to none thrusts it inevitably into our hands. To make national unity without hybridity—the world has never seen it done as we have got to do it; but it is the business of every generation that comes into the world to bring into it better things than it has ever seen. We have got to build a nationality as free from all civil estrangement as from social confusion, yet wider than the greatest divergence of human races. This is the meaning of the great revolution upon us to-day. Daily the number increases of those who grasp it. A little while ago the whole nation rejected it. To reject it to-day is to be left behind the nation's best thought. How fast that thought is spreading in the South few know. Like the light of kindling watch-fires it is catching from mind to mind. The best men of the South are coming daily into convictions that condemn their own beliefs of yesterday as the antiquated artillery of an outgrown past; and to the present writer, as one who himself found this not easy, but hard, to do, it seems no improbability that our traditionist friends, even before this reply can reach them, may be found ranging themselves among that number, for the promotion of this revolution that everybody knows must come. To say what must, is to say what will be; and so shall the reproach of slavery, the greatest moral mistake made by the whole American nation, be swallowed up in the honor of this noble gain for the cause of humanity and universal peace.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

XXV.

THEY passed through two or three small, short streets, which, with their little wooden houses, with still more wooden door-yards, looked as if they had been constructed by the nearest carpenter and his boy,—a sightless, soundless, interspaced, embryonic region,—and entered a long avenue which, fringed on either side with fresh villas, offering themselves trustfully to the public, had the distinction of a wide pavement of neat red brick. The new paint on the square detached houses shone afar off in the transparent air: they had, on top, little cupolas and belvederes, in front a pillared piazza made bare by the indoor life of winter, on either side a bow-window or two, and everywhere an embellishment of little scallops, brackets, cornices, wooden flourishes. They stood, for the most part, on little eminences, lifted above the impertinence of hedge or paling, well up before the world, with all the good conscience which in many cases came, as Ransom saw (and he had noticed the same ornament when he traversed with Olive the quarter of Boston inhabited by Miss Birdseye), from a silvered number, affixed to the glass above the door, in figures huge enough to be read by the people who, in the periodic horse-cars, traveled along the middle of the avenue. It was to these convenient badges that many of the houses on either side owed their principal identity. One of the horse-cars now advanced in the straight, spacious distance; it was almost the only object that animated the prospect, which, in its large cleanness, its implication of strict business habits on the part of all the people who were not there, Ransom thought very impressive. As he went on with Verena he asked her about the Women's Convention, the year before; whether it had accomplished much work and she had enjoyed it.

"What do you care about the work it accomplished?" said the girl. "You don't take any interest in that."

"You mistake my attitude. I don't like it, but I greatly fear it."

In answer to this Verena gave a free laugh. "I don't believe you fear much!"

"The bravest men have been afraid of women. Won't you even tell me whether you enjoyed it? I am told you made an immense sensation there—that you leaped into fame."

Verena never waved off an allusion to her ability, her eloquence; she took it seriously, without any flutter or protest, and had no more manner about it than if it concerned the goddess Minerva. "I believe I attracted considerable attention; of course, that's what Olive wants—it paves the way for future work. I have no doubt I reached many that wouldn't have been reached otherwise. They think that's my great use—to take hold of the outsiders, as it were; of those that are prejudiced or thoughtless, or that don't care about anything unless it's amusing. I wake up the attention."

"That's the class to which I belong," Ransom said. "Am I not an outsider? I wonder whether you would have reached me—or waked up my attention!"

Verena was silent awhile, as they walked; he heard the light click of her boots on the smooth bricks. Then—"I think I *have* waked it up a little," she replied, looking straight before her.

"Most assuredly! You have made me wish tremendously to contradict you."

"Well, that's a good sign."

"I suppose it was very exciting—your convention," Ransom went on, in a moment; "the sort of thing you would miss very much if you were to return to the ancient fold."

"The ancient fold, you say very well, where women were slaughtered like sheep! Oh, last June, for a week, we just quivered! There were delegates from every State and every city; we lived in a crowd of people and of ideas; the heat was intense, the weather magnificent, and great thoughts and brilliant sayings flew round like darting fire-flies. Olive had six celebrated, high-minded women staying in her house—two in a room; and in the summer evenings we sat in the open windows, in her parlor, looking out on the bay, with the lights gleaming in the water, and talked over the doings of the morning, the speeches, the incidents, the fresh contributions to the cause. We had some tremendously

earnest discussions, which it would have been a benefit to you to hear, or any man who doesn't think that we can rise to the highest point. Then we had some refreshment — we consumed quantities of ice-cream!" said Verena, in whom the note of gayety alternated with that of earnestness, almost of exaltation, in a manner which seemed to Basil Ransom absolutely and fascinatingly original. "Those were great nights!" she added, between a laugh and a sigh.

Her description of the convention put the scene before him vividly; he seemed to see the crowded, overheated hall, which he was sure was filled with carpet-baggers, to hear flushed women, with loosened bonnet-strings, forcing their voices into ineffectual shrillness. It made him angry, and all the more angry that he hadn't a reason, to think of the charming creature at his side being mixed up with such elements, pushed and elbowed by them, conjoined with them in emulation, in unsightly strainings and clappings and shoutings, in wordy, windy iteration of inanities. Worst of all was the idea that she should have expressed such a congregation to itself so acceptably, have been acclaimed and applauded by hoarse throats, have been lifted up, to all the vulgar multitude, as the queen of the occasion. He made the reflection, afterwards, that he was singularly ill-grounded in his wrath, inasmuch as it was none of his business what use Miss Tarrant chose to make of her energies, and, in addition to this, nothing else was to have been expected of her. But that reflection was absent now, and in its absence he saw only the fact that his companion had been odiously perverted. "Well, Miss Tarrant," he said, with a deeper seriousness than showed in his voice, "I am forced to the painful conclusion that you are simply ruined."

"Ruined? Ruined yourself!"

"Oh, I know the kind of women that Miss Chancellor had at her house, and what a group you must have made when you looked out on the Back Bay! It depresses me very much to think of it."

"We made a lovely, interesting group, and if we had had a spare minute we would have been photographed," Verena said.

This led him to ask her if she had ever subjected herself to that process; and she answered that a photographer had been after her as soon as she got back from Europe, and that she had sat for him, and that there were certain shops in Boston where her portrait could be obtained. She gave him this information very simply, without pretense of vagueness of knowledge, spoke of the matter rather respectfully, indeed, as if it might be of some importance; and when he said that he

should go and buy one of the little pictures as soon as he returned to town, contented herself with replying, "Well, be sure and pick out a good one!" He had not been altogether without a hope that she would offer to give him one, with her name written beneath, which was a mode of acquisition he would greatly have preferred; but this, evidently, had not occurred to her, and now, as they went further, her thought was following a different train. That was proved by her remarking, at the end of a silence, inconsequently, "Well, it showed I have a great use!" As he stared, wondering what she meant, she explained that she referred to the brilliancy of her success at the convention. "It proved I have a great use," she repeated, "and that is all I care for!"

"The use of a truly amiable woman is to make some honest man happy," Ransom said, with a sententiousness of which he was perfectly aware.

It was so marked that it caused her to stop short in the middle of the broad walk, while she looked at him with shining eyes. "See here, Mr. Ransom, do you know what strikes me?" she exclaimed. "The interest you take in me isn't really controversial — a bit. It's quite personal!" She was the most extraordinary girl; she could speak such words as those without the smallest look of added consciousness coming into her face, without the least supposable intention of coquetry, or any visible purpose of challenging the young man to say more.

"My interest in you — my interest in you," he began. Then hesitating, he broke off suddenly. "It is certain your discovery doesn't make it any less!"

"Well, that's better," she went on; "for we needn't dispute."

He laughed at the way she arranged it, and they presently reached the irregular group of heterogeneous buildings — chapels, dormitories, libraries, halls — which, scattered among slender trees, over a space reserved by means of a low rustic fence, rather than inclosed. (for Harvard knows nothing either of the jealousy or the dignity of high walls and guarded gateways), constitutes the great university of Massachusetts. The yard, or college-precinct, is traversed by a number of straight little paths, over which, at certain hours of the day, a thousand undergraduates, with books under their arm and youth in their step, flit from one school to another. Verena Tarrant knew her way round, as she said to her companion; it was not the first time she had taken an admiring visitor to see the local monuments. Basil Ransom, walking with her from point to point, admired them all, and

thought several of them exceedingly quaint and venerable. The rectangular structures of old red brick especially gratified his eye; the afternoon sun was yellow on their homely faces; their windows showed a peep of flower-pots and bright-colored curtains; they wore an expression of scholastic quietude, and exhaled for the young Mississippian a tradition, an antiquity. "This is the place where I ought to have been," he said to his charming guide. "I should have had a good time if I had been able to study here."

"Yes; I presume you feel yourself drawn to any place where ancient prejudices are garnered up," she answered, not without archness. "I know by the stand you take about our cause that you share the superstitions of the old bookmen. You ought to have been at one of those really mediæval universities that we saw on the other side, at Oxford, or Göttingen, or Padua. You would have been in perfect sympathy with their spirit."

"Well, I don't know much about those old haunts," Ransom rejoined. "I guess this is good enough for me. And then it would have had the advantage that your residence isn't far, you know."

"Oh, I guess we shouldn't have seen you much at my residence! As you live in New York, you come, but here you wouldn't; that is always the way." With this light philosophy Verena beguiled the transit to the library, into which she introduced her companion with the air of a person familiar with the sanctified spot. This edifice, a diminished copy of the chapel of King's College, at the greater Cambridge, is a rich and impressive institution; and as he stood there, in the bright, heated stillness, which seemed suffused with the odor of old print and old bindings, and looked up into the high, light vaults that hung over quiet book-laden galleries, alcoves, and tables, and glazed cases where rarer treasures gleamed more vaguely, over busts of benefactors and portraits of worthies, bowed heads of working students, and the gentle creak of passing messengers — as he took possession, in a comprehensive glance, of the wealth and wisdom of the place, he felt more than ever the soreness of an opportunity missed; but he abstained from expressing it (it was too deep for that), and in a moment Verena had introduced him to a young lady, a friend of hers, who, as she explained, was working on the catalogue, and whom she had asked for on entering the library, at a desk where another young lady was occupied. Miss Catching, the first-mentioned young lady, presented herself with promptness, offered Verena a low-toned but appreciative greeting, and, after a little, undertook to explain to Ransom the

mysteries of the catalogue, which consisted of a myriad little cards, disposed alphabetically in immense chests of drawers. Ransom was deeply interested, and as, with Verena, he followed Miss Catching about (she was so good as to show them the establishment in all its ramifications), he considered with attention the young lady's fair ringlets and refined, anxious expression, saying to himself that this was in the highest degree a New England type. Verena found an opportunity to mention to him that she was wrapped up in the cause, and there was a moment during which he was afraid that his companion would expose him to her as one of its traducers; but there was that in Miss Catching's manner (and in the influence of the lofty halls), which deprecated loud pleasantry, and seemed to say, moreover, that if she were treated to such a revelation she should not know under what letter to range it.

"Now there is one place where perhaps it would be indelicate to take a Mississippian," Verena said, after this episode. "I mean the great place that towers above the others — that big building with the beautiful pinnacles, which you see from every point." But Basil Ransom had heard of the great Memorial Hall; he knew what memories it enshrined, and the worst that he should have to suffer there; and the ornate, overtopping structure, which was the finest piece of architecture he had ever seen, had moreover solicited his enlarged curiosity for the last half hour. He thought there was rather too much brick about it, but it was buttressed, cloistered, turreted, dedicated, inscribed, as he had never seen anything; though it didn't look old, it looked significant; it covered a large area, and it sprang majestic into the winter air. It was detached from the rest of the collegiate group, and stood in a grassy triangle of its own. As he approached it with Verena she suddenly stopped, to decline responsibility. "Now mind, if you don't like what's inside, it isn't my fault."

He looked at her an instant, smiling. "Is there anything against Mississippi?"

"Well, no, I don't think she is mentioned. But there is great praise of our young men in the war."

"It says they were brave, I suppose."

"Yes, it says so in Latin."

"Well, so they were — I know something about that," Basil Ransom said. "I must be brave enough to face them — it isn't the first time." And they went up the low steps and passed into the tall doors. The Memorial Hall of Harvard consists of three main divisions: one of them a theater, for academic ceremonies; another a vast refectory, covered

with a timbered roof, hung about with portraits and lighted by stained windows, like the halls of the colleges of Oxford; and the third, the most interesting, a chamber high, dim, and severe, consecrated to the sons of the university who fell in the long Civil War. Ransom and his companion wandered from one part of the building to another, and stayed their steps at several impressive points; but they lingered longest in the presence of the white, ranged tablets, each of which, in its proud, sad clearness, is inscribed with the name of a student-soldier. The effect of the place is singularly noble and solemn, and it is impossible to stand there without a lifting of the heart. It is erected to duty and honor, it speaks of sacrifice and example, seems a kind of temple to youth, manhood, and generosity. Most of them were young, all were in their prime, and all of them had fallen; this simple idea hovers before the visitor and makes him read with tenderness each name and place — names often without other history, and forgotten Southern battles. For Ransom these things were not a challenge nor a taunt; they touched him with respect, with the feeling of beauty. He was capable of being a generous foe, and he forgot, now, the whole question of sides and parties; the simple emotion of the old fighting-time came back to him, and the monument around him seemed an embodiment of that memory; it arched over friends as well as enemies, the victims of defeat as well as the sons of triumph.

"It is very beautiful—but I think it is very dreadful!" This remark, from Verena, called him back to the present. "It's a real sin to put up such a building, just to glorify a lot of bloodshed. If it wasn't so impressive, I would have it pulled down."

"That is delightful feminine logic!" Ransom answered. "If, when women have the conduct of affairs, they fight as well as they reason, surely for them too we shall have to set up memorials."

Verena retorted that they would reason so well they would have no need to fight — they would usher in the reign of peace. "But this is very peaceful too," she added, looking about her; and she sat down on a low stone ledge, as if to enjoy the influence of the scene. Ransom left her alone for ten minutes; he wished to take another look at the inscribed tablets, and read again the names of the various engagements, at several of which he had been present. When he came back to her she greeted him abruptly, with a question which had no reference to the solemnity of the spot. "If Miss Birdseye knew you were coming out to see me, can't *she* easily tell

Olive? Then won't Olive make her reflections about your neglect of herself?"

"I don't care for her reflections. At any rate, I asked Miss Birdseye, as a favor, not to mention to her that she had met me," Ransom added.

Verena was silent a moment. "Your logic is almost as good as a woman's. Do change your mind, and go and see her now," she went on. "She will probably be at home by the time you get to Charles street. If she was a little strange, a little stiff with you before (I know just how she must have been), all that will be different to-day."

"Why will it be different?"

"Oh, she will be easier, more genial, much softer."

"I don't believe it," said Ransom; and his skepticism seemed none the less complete because it was light and smiling.

"She is much happier now — she can afford not to mind you."

"Not to mind me? That's a nice inducement for a gentleman to go and see a lady!"

"Well, she will be more gracious, because she feels now that she is more successful."

"You mean because she has brought you out? Oh, I have no doubt that has cleared the air for her immensely, and you have improved her very much. But I have got a charming impression out here, and I have no wish to put another — which won't be charming, anyhow you arrange it — on top of it."

"Well, she will be sure to know you have been round here, at any rate," Verena rejoined.

"How will she know, unless you tell her?"

"I tell her everything," said the girl; and now, as soon as she had spoken, she blushed. He stood before her, tracing a figure on the mosaic pavement with his cane, conscious that in a moment they had become more intimate. They were discussing their affairs, which had nothing to do with the heroic symbols that surrounded them; but their affairs had suddenly grown so serious that there was no want of decency in their lingering there for the purpose. The implication that his visit might remain as a secret between them made them both feel it differently. To ask her to keep it so would have been, as it seemed to Ransom, a liberty, and, moreover, he didn't care so much as that; but if she were to prefer to do so, such a preference would only make him feel the more that his expedition had been a success.

"Oh, then, you can tell her this!" he said, in a moment.

"If I shouldn't, it would be the first —" And Verena checked herself.

"You must arrange that with your conscience!" Ransom went on, laughing.

They came out of the hall, passed down the steps, and emerged from the Delta, as that portion of the college precinct is called. The afternoon had begun to wane, but the air was filled with a kind of pink brightness, and there was a cool, pure smell, a vague breath of spring.

"Well, if I don't tell Olive, then you must leave me here," said Verena, stopping in the path, and putting out a hand of farewell.

"I don't understand. What has that to do with it? Besides, I thought you said you *must* tell," Ransom added. In playing with the subject this way, in enjoying her visible hesitation, he was slightly conscious of a man's brutality — of being pushed by an impulse to test her good-nature, which seemed to have no limit. It showed no sign of perturbation as she answered:

"Well, I want to be free — to do as I think best. And, if there is a chance of my keeping it back, there mustn't be anything more — there must not, Mr. Ransom, really."

"Anything more? Why, what are you afraid there will be — if I should simply walk home with you?"

"I must go alone, I must hurry back to my mother," she said, for all reply. And she again put out her hand, which he had not taken before.

Of course, he took it now, and even held it a moment; he didn't like being dismissed, and was thinking of pretexts to linger. "Miss Birdseye said you would convert me, but you haven't yet," it came into his head to say.

"You can't tell yet; wait a little. My influence is peculiar; it sometimes comes out a long time afterwards!" This speech on Verena's part was evidently perfunctory, and the grandeur of her self-reference jocular; she was much more serious when she went on quickly, "Do you mean to say Miss Birdseye promised you that?"

"Oh, yes. Talk about influence! you should have seen the one I obtained over her!"

"Well, what good will it do, if I'm going to tell Olive about your visit?"

"Well, you see, I think she hopes you won't. She believes you are going to convert me privately — so that I shall blaze forth, suddenly, out of the darkness of Mississippi, as a first-class proselyte: very effective and dramatic."

Verena struck Basil Ransom as constantly simple, but there were moments when her candor seemed to him preternatural. "If I thought that would be the effect, I might make an exception," she remarked, speaking as if such a result were, after all, possible.

"Oh, Miss Tarrant, you will convert me enough, any way," said the young man.

"Enough? What do you mean by enough?"

"Enough to make me dreadfully unhappy."

She looked at him a moment, evidently not understanding; but she tossed him a retort at a venture, turned away, and took her course homeward. The retort was that if he should be unhappy it would serve him right — a form of words that committed her to nothing. As he returned to Boston he saw how curious he should be to learn whether she had betrayed him, as it were, to Miss Chancellor. He might learn through Mrs. Luna; that would almost reconcile him to going to see her again. Olive would mention it in writing to her sister, and Adeline would repeat the complaint. Perhaps she herself would even make him a scene about it; that would be, for him, part of the unhappiness he had foretold to Verena Tarrant.

XXVI.

"MRS. HENRY BURRAGE, at home Wednesday evening, March 26th, at half-past nine o'clock." It was in consequence of having received a card with these words inscribed upon it that Basil Ransom presented himself, on the evening she had designated, at the house of a lady he had never heard of before. The account of the relation of effect to cause is not complete, however, unless I mention that the card bore, furthermore, in the left-hand lower corner, the words: "An address from Miss Verena Tarrant." He had an idea (it came mainly from the look and even the odor of the engraved pasteboard) that Mrs. Burrage was a member of the fashionable world, and it was with considerable surprise that he found himself in such an element. He wondered what had induced a denizen of that finer ether to send him an invitation; then he said to himself that, obviously, Verena Tarrant had simply requested that this should be done. Mrs. Henry Burrage, whoever she might be, had asked her if she shouldn't like some of her own friends to be present, and she had said oh, yes, and mentioned him in the happy group. She had been able to give Mrs. Burrage his address, for had it not been contained in the short letter he dispatched to Monadnoc Place soon after his return from Boston, in which he thanked Miss Tarrant afresh for the charming hour she had enabled him to spend at Cambridge? She had not answered his letter at the time, but Mrs. Burrage's card was a very good answer. Such a missive deserved a rejoinder, and it was by way of rejoinder that he entered the street-car which, on the evening of March 26th, was to deposit him at a corner adjacent to Mrs. Burrage's dwelling. He almost never went to evening parties (he knew scarcely any one

who gave them, though Mrs. Luna had broken him in a little), and he was sure this occasion was of festive intention, would have nothing in common with the nocturnal "exercises" at Miss Birdseye's; but he would have exposed himself to almost any social discomfort in order to see Verena Tarrant on the platform. The platform it evidently was to be,—private if not public,—since one was admitted by a ticket given away if not sold. He took his in his pocket, quite ready to present it at the door. It would take some time for me to explain the contradiction to the reader; but Basil Ransom's desire to be present at one of Verena's regular performances was not diminished by the fact that he detested her views and thought the whole business a pitiful mistake. He understood her now very well (since his visit to Cambridge); he saw she was honest and natural; she had queer, bad lecture-blood in her veins, and a comically false idea of the aptitude of little girls for conducting movements; but her enthusiasm was of the purest; her illusions had a fragrance, and so far as the mania for producing herself personally was concerned, it had been distilled into her by people who worked her for ends which to Basil Ransom could only appear insane. She was a touching, ingenuous victim, unconscious of the pernicious forces which were hurrying her to her ruin. With this idea of ruin there had already associated itself in the young man's mind, the idea—a good deal more dim and incomplete—of rescue; and it was the disposition to confirm himself in the view that her charm was her own, and her perversity, her absurdity, a mere reflection of unlucky circumstance, that led him to make an effort to behold her in the position in which he could least bear to think of her. Such a glimpse was all that was wanted to prove to him that she was a person for whom he might open an unlimited credit of tender compassion. He expected to suffer—to suffer deliciously.

By the time he had crossed Mrs. Burrage's threshold there was no doubt whatever in his mind that he was in the fashionable world. It was embodied strikingly in the stout, elderly, ugly lady, dressed in a brilliant color, with a twinkle of jewels and a bosom much uncovered, who stood near the door of the first room, and with whom the people passing in before him were shaking hands. Ransom made her a Mississippian bow, and she said she was delighted to see him, while people behind him pressed him forward. He yielded to the impulsion, and found himself in a great saloon, amid lights and flowers, where the company was dense, and there were more twinkling, smiling ladies, with uncovered bo-

soms. It was certainly the fashionable world, for there was no one there whom he had ever seen before. The walls of the room were covered with pictures—the very ceiling was painted and framed. The people pushed each other a little, edged about, advanced and retreated, looking at each other with differing faces,—sometimes blandly, unperceivingly, sometimes with a harshness of contemplation, a kind of cruelty, Ransom thought; sometimes with sudden nods and grimaces, inarticulate murmurs, followed by a quick reaction, a sort of gloom. He was now absolutely certain that he was in the best society. He was carried further and further forward, and saw that another room stretched beyond the one he had entered, in which there was a sort of little stage, covered with a red cloth, and an immense collection of chairs, arranged in rows. He became aware that people looked at him, as well as at each other, rather more, indeed, than at each other, and he wondered whether it were very visible in his appearance that his being there was a kind of exception. He didn't know how much his head looked over the heads of others, or that his brown complexion, fuliginous eye, and straight black hair, the leonine fall of which I mentioned in the first page of this narrative, gave him that relief which, in the best society, has the great advantage of suggesting a topic. But there were other topics besides, as was proved by a fragment of conversation between two ladies, which reached his ear while he stood rather wistfully wondering where Verena Tarrant might be.

"Are you a member?" one of the ladies said to the other. "I didn't know you had joined."

"Oh, I haven't; nothing would induce me."

"That's not fair; you have all the fun and none of the responsibility."

"Oh, the fun—the fun!" exclaimed the second lady.

"You needn't abuse us, or I'll never invite you," said the first.

"Well, I thought it was meant to be improving; that's all I mean; very good for the mind. Now, this woman to-night; isn't she from Boston?"

"Yes, I believe they have brought her on, just for this."

"Well, you must be pretty desperate when you have got to go to Boston for your entertainment."

"Well, there's a similar society there, and I never heard of their sending to New York."

"Of course not, they think they have got everything. But doesn't it make your life a burden, thinking what you can possibly have?"

"Oh, dear, no. I am going to hear Pro-

fessor Gougenheim — all about the Talmud. You must come.”

“Well, I’ll come,” said the second lady; “but nothing would induce me to be a regular member.”

Whatever the mystic circle might be, Ransom agreed with the second lady that regular membership must have terrors, and he admired her independence in such an artificial world. A considerable part of the company had now directed itself to the further apartment — people had begun to occupy the chairs, to confront the empty platform. He reached the wide doors, and saw that the place was a spacious music-room, decorated in white and gold, with a polished floor and with marble busts of composers, on brackets attached to the delicate panels. He forbore to enter, however, being shy about taking a seat, and seeing that the ladies were arranging themselves first. He turned back into the first room, to wait till the audience had massed itself, conscious that even if he were behind every one he should be able to make a long neck; and here, suddenly, in a corner, his eyes rested upon Olive Chancellor. She was seated a little apart, in an angle of the room, and she was looking straight at him; but as soon as she perceived that he saw her, she dropped her eyes, giving no sign of recognition. Ransom hesitated a moment, but the next he went straight over to her. It had been in his mind that if Verena Tarrant was there, *she* would be there; an instinct told him that Miss Chancellor would not allow her dear friend to come to New York without her. It was very possible she meant to “cut” him — especially if she knew of his having cut her, the other week, in Boston; but it was his duty to take for granted she would speak to him, until the contrary should be definitely proved. Though he had seen her only twice, he remembered well how acutely shy she was capable of being, and he thought it possible one of these spasms had seized her at the present time.

When he stood before her he found his conjecture perfectly just; she was white with the intensity of her self-consciousness; she was altogether in a very uncomfortable state. She made no response to his offers to shake hands with her, and he saw that she would never go through that ceremony again. She looked up at him when he spoke to her, and her lips moved; but her face was intensely grave, and her eye had almost a feverish light. She had evidently got into her corner to be out of the way; he recognized in her the air of an interloper, as he had felt it in himself. The small sofa on which she had placed herself had the form to which the French give the name of *causeuse*; there was room on it

for just another person, and Ransom asked her, with a cheerful accent, if he might sit down beside her. She turned towards him when he had done so, turned everything but her eyes, and opened and shut her fan while she waited for her fit of diffidence to pass away. Ransom himself didn’t wait; he took a jocular tone about their encounter, asking her if she had come to New York to rouse the people. She glanced round the room; the backs of Mrs. Burrage’s guests, mainly, were presented to them, and their position was partly masked by a pyramid of flowers which rose from a pedestal close to Olive’s end of the sofa and diffused a fragrance in the air.

“Do you call these the ‘people’?” she asked.

“I haven’t the least idea. I don’t know who any of them are, not even who Mrs. Henry Burrage is. I simply received an invitation.”

Miss Chancellor gave him no information on the point he had mentioned; she only said, in a moment: “Do you go wherever you are invited?”

“Why, I go if I think I may find you there,” the young man replied gallantly. “My card mentioned that Miss Tarrant would give an address, and I knew that wherever she is you are not far off. I have heard you are inseparable, from Mrs. Luna.”

“Yes, we are inseparable. That is exactly why I am here.”

“It’s a fashionable world, then, you are going to stir up.”

Olive remained for some time with her eyes fastened to the floor; then she flashed them up at her interlocutor. “It’s a part of our life to go anywhere — to carry our work where it seems most needed. We have taught ourselves to stifle repulsion, distaste.”

“Oh, I think this is very amusing,” said Ransom. “It’s a beautiful house, and there are some very pretty faces. We haven’t anything so brilliant in Mississippi.”

To everything he said, Olive offered at first a momentary silence, but the worst of her shyness was apparently leaving her.

“Are you successful in New York? do you like it?” she presently asked, uttering the inquiry in a tone of infinite melancholy, as if the eternal sense of duty forced it from her lips.

“Oh, successful! I am not successful as you and Miss Tarrant are; for (to my barbaric eyes) it is a great sign of prosperity to be the heroines of an occasion like this.”

“Do I look like the heroine of an occasion?” asked Olive Chancellor, without an intention of humor, but with an effect that was almost comical.

“You would if you didn’t hide yourself

away. Are you not going into the other room to hear the speech? Everything is prepared."

"I am going when I am notified — when I am invited."

There was considerable majesty in her tone, and Ransom saw that something was wrong, that she felt neglected. To see that she was as ticklish with others as she had been with him made him feel forgiving, and there was in his manner a perfect disposition to forget their differences as he said, "Oh, there is plenty of time; the place isn't half full yet."

She made no direct rejoinder to this, but she asked him about his mother and sisters, what news he received from the South. "Have they any happiness?" she inquired, rather as if she warned him to take care not to pretend they had. He neglected her warning to the point of saying that there was one happiness they always had — that of having learned not to think about it too much, and to make the best of their circumstances. She listened to this with an air of great reserve, and apparently thought he had wished to give her a lesson; for she suddenly broke out, "You mean that you have traced a certain line for them, and that that's all you know about it!"

Ransom stared at her, surprised; he felt, now, that she would always surprise him. "Ah, don't be rough with me," he said, in his soft, Southern voice; "don't you remember how you knocked me about when I called on you in Boston?"

"You hold us in chains, and then, when we writhe in our agony, you say we don't behave prettily!" These words, which didn't lessen Ransom's wonderment, were the young lady's answer to his deprecatory speech. She saw that he was honestly bewildered and that in a moment more he would laugh at her, as he had done a year and a half before (she remembered it as if it had been yesterday); and to stop that off, at any cost, she went on, hurriedly, — "If you listen to Miss Tarrant, you will know what I mean."

"Oh, Miss Tarrant — Miss Tarrant!" and Basil Ransom's laughter came.

She had not escaped that mockery, after all, and she looked at him sharply now, her embarrassment having quite cleared up. "What do you know about her? What observation have you had?"

Ransom met her eye, and for a moment they scrutinized each other. Did she know of his interview with Verena a month before, and was her reserve simply the wish to place on him the burden of declaring that he had been to Boston since they last met, and yet had not called in Charles street? He thought there was suspicion in her face; but in regard to Verena she would always be suspicious. If

he had done at that moment just what would gratify him, he would have said to her that he knew a great deal about Miss Tarrant, having lately had a long walk and talk with her; but he checked himself, with the reflection that if Verena had not betrayed him it would be very wrong in him to betray her. The sweetness of the idea that she should have thought the episode of his visit to Monadnoc Place worth placing under the rose, was quenched for the moment in his regret at not being able to let his disagreeable cousin know that he had passed *her* over. "Don't you remember my hearing her speak that night at Miss Birdseye's?" he said presently; "and I met her the next day at your house, you know."

"She has developed greatly since then," Olive remarked, drily; and Ransom felt sure that Verena had held her tongue.

At this moment a gentleman made his way through the clusters of Mrs. Burrage's guests and presented himself to Olive. "If you will do me the honor to take my arm, I will find a good seat for you in the other room. It's getting to be time for Miss Tarrant to reveal herself. I have been taking her into the picture-room; there were some things she wanted to see. She is with my mother now," he added, as if Miss Chancellor's grave face constituted a sort of demand for an explanation of her friend's absence. "She said she was a little nervous; so I thought we would just move about."

"It's the first time I have ever heard of that!" said Olive Chancellor, preparing to surrender herself to the young man's guidance. He told her that he had reserved the best seat for her; it was evidently his desire to conciliate her and to treat her as a person of importance. Before leading her away, he shook hands with Ransom and remarked that he was very glad to see him; and Ransom saw that he must be the master of the house, though he could scarcely be the son of the stout lady in the doorway. He was a fresh, pleasant, handsome young man, with a bright, friendly manner; he recommended Ransom to take a seat in the other room, without delay; if he had never heard Miss Tarrant he would have one of the greatest pleasures of his life.

"Oh, Mr. Ransom only comes to ventilate his prejudices," Miss Chancellor said, as she turned her back to her kinsman. He shrank from pushing into the front of the company, which was now rapidly filling the music-room, and contented himself with lingering in the doorway, where several gentlemen were stationed. The seats were all occupied, all, that is, save one, towards which he saw Miss Chancellor and her companion direct themselves, squeezing and edging past the people who

were standing up against the walls. This was quite in front, close to the little platform; every one noticed Olive as she went, and Ransom heard a gentleman near him say to another,—“I guess she’s one of the same kind.” He looked for Verena, but she was apparently keeping out of sight. Suddenly he felt himself smartly tapped on the back, and, turning round, perceived Mrs. Luna, who had been prodding him with her fan.

XXVII.

“You won’t speak to me in my own house—that I have almost grown used to; but if you are going to pass me over in public, I think you might give me warning first.” This was only her archness, and he knew what to make of that now; she was dressed in yellow and looked very plump and gay. He wondered at the unerring instinct by which she had discovered his exposed quarter. The outer room was completely empty; she had come in at the further door and found the field free for her operations. He offered to find her a place where she could see and hear Miss Tarrant, to get her a chair to stand on, even, if she wished to look over the heads of the gentlemen in the doorway; a proposal which she greeted with the inquiry,—“Do you suppose I came here for the sake of that little chatter-box? haven’t I told you what I think of her?”

“Well, you certainly did not come here for my sake,” said Ransom, anticipating this insinuation; “for you couldn’t possibly have known I was coming.”

“I guessed it—a presentiment told me!” Mrs. Luna declared; and she looked up at him with searching, accusing eyes. “I know what you have come for,” she cried in a moment. “You never mentioned to me that you knew Mrs. Burrage!”

“I don’t—I never had heard of her till she asked me.”

“Then why in the world *did* she ask you?”

Ransom had spoken a trifle rashly; it came over him, quickly, that there were reasons why he had better not have said that. But almost as quickly he covered up his mistake. “I suppose your sister was so good as to ask for a card for me.”

“My sister? My grandmother! I know how Olive loves you. Mr. Ransom, you are very deep.” She had drawn him well into the room, out of earshot of the group in the doorway, and he felt that if she should be able to compass her wish she would organize a little entertainment for herself, in the outer drawing-room, in opposition to Miss Tarrant’s address. “Please come and sit down here a

moment; we shall be quite undisturbed. I have something very particular to say to you.” She led the way to the little sofa in the corner, where he had been talking with Olive a few minutes before, and he accompanied her, with extreme reluctance, grudging the moments that he should be obliged to give to her. He had quite forgotten that he once had a vision of spending his life in her society, and he looked at his watch as he made the observation:

“I haven’t the least idea of losing any of the sport in there, you know.”

He felt, the next instant, that he oughtn’t to have said that either; but he was irritated, disconcerted, and he couldn’t help it. It was in the nature of a gallant Mississippian to do everything a lady asked him, and he had never, remarkable as it may appear, been in the position of finding such a request so incompatible with his own desires as now. It was a new predicament, for Mrs. Luna evidently meant to keep him if she could. She looked round the room, more and more pleased at their having it to themselves, and for the moment said nothing more about the singularity of his being there. On the contrary, she became freshly jocular, remarked that now they had got hold of him they wouldn’t easily let him go, they would make him entertain them, induce him to give a lecture—on the “Lights and Shadows of Southern Life,” or the “Social Peculiarities of Mississippi”—before the Wednesday Club.

“And what in the world is the Wednesday Club? I suppose it’s what those ladies were talking about,” Ransom said.

“I don’t know your ladies, but the Wednesday Club is *this*. I don’t mean you and me here together, but all those deluded beings in the other room. It is New York trying to be like Boston. It is the culture, the good form of the metropolis. You might not think it, but it is. It’s the ‘quiet set’; they *are* quiet enough; you might hear a pin drop in there. Is some one going to offer up a prayer? How happy Olive must be, to be taken so seriously! They form an association for meeting at each other’s houses, every week, and having some performance, or some paper read, or some subject explained. The more dreary it is and the more fearful the subject, the more they think it is what it ought to be. They have an idea this is the way to make New York society intellectual. There’s a sumptuary law—isn’t that what you call it?—about suppers, and they restrict themselves to a kind of Spartan broth. When it’s made by their French cooks it isn’t bad. Mrs. Burrage is one of the principal members—one

of the founders, I believe; and when her turn has come round formerly — it comes only once in the winter for each — I am told she has usually had very good music. But that is thought rather a base evasion, a begging of the question; the vulgar set can easily keep up with them on music. So Mrs. Burrage conceived the extraordinary idea — and it was wonderful to hear how Mrs. Luna pronounced that adjective — “of sending on to Boston for that girl. It was her son, of course, who put it into her head; he has been at Cambridge for some years — that’s where Verena lived, you know — and he was as thick with her as you please out there. Now that he is no longer there, it suits him very well to have her here. She is coming on a visit to his mother when Olive goes. I asked them to stay with me, but Olive declined, majestically; she said they wished to be in some place where they would be free to receive ‘sympathizing friends.’ So they are staying at some extraordinary kind of New Jerusalem boarding-house, in Tenth street; Olive thinks it’s her duty to go to such places. I was greatly surprised that she should let Verena be drawn into such a worldly crowd as this; but she told me they had made up their minds not to let *any* occasion slip, that they could sow the seed of truth in drawing-rooms as well as in workshops, and that if a single person was brought round to their ideas they should have been justified in coming on. That’s what they are doing in there — sowing the seed; but you shall not be the one that’s brought round, I shall take care of that. Have you seen my delightful sister yet? The way she *does* arrange herself when she wants to protest against frills! She looks as if she thought it pretty barren ground round here, now she has come to see it. I don’t think she thinks you can be saved in a French dress, anyhow. I must say I call it *very* base evasion of Mrs. Burrage’s — producing Verena Tarrant; it’s worse than the meretricious music. Why didn’t she honestly send for a *ballerina* from Niblo’s — if she wanted a young woman capering about on a platform? They don’t care a fig about poor Olive’s ideas; it’s only because Verena has strange hair, and shiny eyes, and gets herself up like a prestidigitator’s assistant. I have never understood how Olive can reconcile herself to Verena’s really low style of dress. I suppose it’s only because her clothes are so fearfully made. You look as if you didn’t believe me — but I assure you that the cut is revolutionary; and that’s a salve to Olive’s conscience.”

Ransom was surprised to hear that he looked as if he didn’t believe her, for he had found himself, after his first uneasiness, listening with

considerable interest to her account of the circumstances under which Miss Tarrant was visiting New York. After a moment, as the result of some private reflection, he propounded this question: “Is the son of the lady of the house a handsome young man, very polite, in a white vest?”

“I don’t know the color of his vest — but he has a kind of fawning manner. Verena judges from that that he is in love with her.”

“Perhaps he is,” said Ransom. “You say it was his idea to get her to come on.”

“Oh, he likes to flirt; that is highly probable.”

“Perhaps she has brought him round.”

“Not to where she wants, I think. The property is very large; he will have it all one of these days.”

“Do you mean she wishes to impose on him the yoke of matrimony?” Ransom asked, with Southern languor.

“I believe she thinks matrimony an exploded superstition; but there is here and there a case in which it is still the best thing; when the gentleman’s name happens to be Burrage and the young lady’s Tarrant. I don’t admire ‘Burrage’ so much myself. But I think she would have captured this present scion if it hadn’t been for Olive. Olive stands between them — she wants to keep her in the single sisterhood; to keep her, above all, for herself. Of course she won’t listen to her marrying, and she has put a spoke in the wheel. She has brought her to New York; that may seem against what I say; but the girl pulls hard, she has to humor her, to give her her head sometimes, to throw something overboard, in short, to save the rest. You may say, as regards Mr. Burrage, that it’s a queer taste in a gentleman; but there is no arguing about that. It’s queer taste in a lady, too; for she is a lady, poor Olive. You can see that tonight. She is dressed like a book-agent, but she is more distinguished than any one here. Verena, beside her, looks like a walking advertisement.”

When Mrs. Luna paused, Basil Ransom became aware that, in the other room, Verena’s address had begun; the sound of her clear, bright, ringing voice, an admirable voice for public uses, came to them from the distance. His eagerness to stand where he could hear her better, and see her into the bargain, made him start in his place, and this movement produced an outgush of mocking laughter on the part of his companion. But she didn’t say — “Go, go, deluded man, I take pity on you!” she only remarked, with light impertinence, that he surely wouldn’t be so wanting in gallantry as to leave a lady absolutely alone in a public place — it was so

Mrs. Luna was pleased to qualify Mrs. Burrage's drawing-room — in the face of her entreaty that he would remain with her. She had the better of poor Ransom, thanks to the superstitions of Mississippi. It was in his simple code a gross rudeness to withdraw from conversation with a lady at a party before another gentleman should have come to take one's place; it was to inflict on the lady a kind of outrage. The other gentlemen, at Mrs. Burrage's, were all too well occupied; there was not the smallest chance of one of them coming to his rescue. He couldn't leave Mrs. Luna, and yet he couldn't stay with her and lose the only thing he had come so much out of his way for. "Let me at least find you a place over there, in the doorway. You can stand upon a chair — you can lean on me."

"Thank you very much; I would much rather lean on this sofa. And I am much too tired to stand on chairs. Besides, I wouldn't for the world that either Verena or Olive should see me craning over the heads of the crowd — as if I attached the smallest importance to their perorations!"

"It isn't time for the peroration yet," Ransom said, with savage dryness; and he sat forward, with his elbow on his knees, his eyes on the ground, a flush in his sallow cheek.

"It's never time to say such things as those," Mrs. Luna remarked, arranging the frill of her dress.

"How do you know what she is saying?"

"I can tell by the way her voice goes up and down. It sounds so silly."

Ransom sat there five minutes longer, — minutes which, he felt, the recording angel ought to write down to his credit, — and asked himself how Mrs. Luna could be such a goose as not to see that she was making him hate her. But she was goose enough for anything. He tried to appear indifferent, and it occurred to him to doubt whether the Mississippi system could be right, after all. It certainly hadn't foreseen such a case as this. "It's as plain as day that Mr. Burrage intends to marry her — if he can," he said in a minute; that remark being better calculated than any other he could think of to dissimulate his real state of mind.

It drew no rejoinder from his companion, and after an instant he turned his head a little and glanced at her. The result of something that silently passed between them was to make her say, abruptly: "Mr. Ransom, my sister never sent you an invitation to this place. Didn't it come from Verena Tarrant?"

"I haven't the least idea."

"As you hadn't the least acquaintance with Mrs. Burrage, who else could it have come from?"

"If it came from Miss Tarrant, I ought at least to recognize her courtesy by listening to her."

"If you rise from this sofa, I will tell Olive what I suspect. She will be perfectly capable of carrying Verena off to China — or anywhere out of your reach."

"And pray what is it you suspect?"

"That you two have been in correspondence."

"Tell her whatever you like, Mrs. Luna," said the young man, with the grimness of resignation.

"You are quite unable to deny it, I see."

"I never contradict a lady."

"We shall see if I can't make you tell a fib. Haven't you been seeing Miss Tarrant, too?"

"Where should I have seen her? I can't see all the way to Boston, as you said the other day."

"Haven't you been there — on secret visits?"

Ransom started just perceptibly; but to conceal it, the next instant, he stood up.

"They wouldn't be secret if I were to tell you."

Looking down at her he saw that her words were a happy "hit," not the result of definite knowledge. But she appeared to him vain, egotistical, grasping, odious.

"Well, I shall give the alarm," she went on; "that is, I will if you leave me. Is that the way a Southern gentleman treats a lady? Do as I wish, and I will let you off!"

"You won't let me off from staying with you."

"Is it such a *corvée*? I never heard of such rudeness!" Mrs. Luna cried. "All the same, I am determined to keep you if I can!"

Ransom felt that she must be in the wrong, and yet superficially she seemed (and it was quite intolerable) to have right on her side. All this while Verena's golden voice, with her words indistinct, solicited, tantalized his ear. The question had evidently got on Mrs. Luna's nerves; she had reached that point of feminine embroilment when a woman is perverse for the sake of perversity, and even with a clear vision of bad consequences.

"You have lost your head," he relieved himself by saying, as he looked down at her.

"I wish you would go and get me some tea."

"You say that only to embarrass me." He had hardly spoken when a great sound of applause, the clapping of many hands, and the cry from fifty throats of "Brava, brava!" floated in and died away. All Ransom's pulses throbbed, he flung his scruples to the

winds, and after remarking to Mrs. Luna — still with all due ceremony — that he feared he must resign himself to forfeiting her good opinion, turned his back upon her and strode away to the open door of the music-room. “Well, I have never been so insulted!” he heard her exclaim, with exceeding sharpness, as he left her; and, glancing back at her, as he took up his position, he saw her still seated on her sofa, — alone in the lamp-lit desert, — with her eyes making across the empty space little vindictive points. Well, she could come where he was, if she wanted him so much; he would support her on an ottoman, and make it easy for her to see. But Mrs. Luna was uncompromising; he became aware, after a minute, that she had withdrawn, majestically, from the place, and he did not see her again that evening.

XXVIII.

HE could command the music-room very well from where he stood, behind a thick outer fringe of intently listening men. Verena Tarrant was erect on her little platform, dressed in white, with flowers in her bosom. The red cloth beneath her feet looked rich in the light of lamps placed on high pedestals on either side of the stage; it gave her figure a setting of color which made it more pure and salient. She moved freely in her exposed isolation, yet with great sobriety of gesture; there was no table in front of her, and she had no notes in her hand, but stood there like an actress before the footlights, or a singer spinning vocal sounds to a silver thread. There was such a risk that a slim provincial girl, pretending to fascinate a couple of hundred *blasé* New Yorkers by simply giving them her ideas, would fail of her effect, that at the end of a few moments Basil Ransom became aware that he was watching her in very much the same excited way as if she had been performing, high above his head, on the trapeze. Yet, as one listened, it was impossible not to perceive that she was in perfect possession of her faculties, her subject, her audience; and he remembered the other time at Miss Birdseye's well enough to be able to measure the ground she had traveled since then. This exhibition was much more complete, her manner much more assured; she seemed to speak and survey the whole place from a much greater height. Her voice, too, had developed; he had forgotten how beautiful it could be when she raised it to its full capacity. Such a tone as that, so pure and rich, and yet so young, so natural, constituted in itself a talent; he didn't wonder that they had made a fuss about her at the Female Convention, if she filled their

hideous hall with such a music. He had read, of old, of the *improvisatrice* of Italy, and this was a chastened, modern, American version of the type, a New England Corinna, with a mission instead of a lyre. The most graceful part of her was her earnestness, the way her delightful eyes, wandering over the “fashionable audience” (before which she was so perfectly unabashed), as if she wished to resolve it into a single sentient personality, seemed to say that the only thing in life she cared for was to put the truth into a form that would render conviction irresistible. She was as simple as she was charming, and there was not a glance or motion that didn't seem part of the pure, still-burning passion that animated her. She had indeed — it was manifest — reduced the company to unanimity; their attention was anything but languid; they smiled back at her when she smiled; they were noiseless, motionless when she was solemn; and it was evident that the entertainment which Mrs. Burrage had had the happy thought of offering to her friends would be memorable in the annals of the Wednesday Club. It was agreeable to Basil Ransom to think that Verena noticed him in his corner; her eyes played over her listeners so freely that you couldn't say they rested in one place more than another; nevertheless, a single rapid ray, which, however, didn't in the least strike him as a deviation from her ridiculous, fantastic, delightful argument, let him know that he had been missed and now was particularly spoken to. This glance was a sufficient assurance that his invitation had come to him by the girl's request. He took for granted the matter of her speech was ridiculous; how could it help being, and what did it signify if it was? She was none the less charming for that, and the moonshine she had been plied with was none the less moonshine for her being charming. After he had stood there a quarter of an hour, he became conscious that he shouldn't be able to repeat a word she had said; he hadn't definitely heeded it, and yet he hadn't lost a vibration of her voice. He had discovered Olive Chancellor by this time; she was in the front row of chairs, at the end, on the left; her back was turned to him, but he could see half her sharp profile, bent down a little and absolutely motionless. Even across the wide interval her attitude expressed to him a kind of rapturous stillness, the concentration of triumph. There were several irrepressible effusions of applause, instantly self-checked, but Olive never looked up, at the loudest, and such a calmness as that would only be the result of passionate volition. Success was in the air, and she was tasting it; she tasted it, as she did everything, in a way of her own. Success for Verena was

success for her, and Ransom was sure that the only thing wanting to her triumph was that he should have been placed in the line of her vision, so that she might enjoy his embarrassment and confusion, might say to him, in one of her dumb, cold flashes,—“*Now* do you think our movement is not a force—*now* do you think that women are meant to be slaves?” Honestly, he was not conscious of any confusion; it subverted none of his heresies to perceive that Verena Tarrant had even more power to fix his attention than he had hitherto supposed. It was fixed in a way it had not been yet, however, by his at last understanding her speech, feeling it reach his inner sense through the impediment of mere dazzled vision. Certain phrases took on a meaning for him—an appeal she was making to those who still resisted the beneficent influence of the truth. They appeared to be mocking, cynical men, mainly; many of whom were such triflers and idlers, so heartless and brainless that it didn't matter much what they thought on any subject; if the old tyranny needed to be propped up by *them*, it showed it was in a pretty bad way. But there were others whose prejudice was stronger and more cultivated, pretended to rest upon study and argument. To those she wished particularly to address herself; she wanted to waylay them, to say, “Look here, you're all wrong; you'll be so much happier when I have convinced you. Just give me five minutes,” she would like to say; “just sit down here and let me ask a simple question. Do you think any state of society can come to good that is based upon an organized wrong?” That was the simple question that Verena desired to propound, and Basil smiled across the room at her with an amused tenderness, as he gathered that she conceived it to be a poser. He didn't think it would frighten him much if she were to ask him that, and he would sit down with her for as many minutes as she liked.

He, of course, was one of the systematic scoffers, one of those to whom she said—“Do you know how you strike me? You strike me as men who are starving to death while they have a cupboard at home, all full of bread and meat and wine; or as blind, demented beings who let themselves be cast into a debtor's prison, while in their pocket they have the key of vaults and treasure-chests heaped up with gold and silver. The meat and wine, the gold and silver,” Verena went on, “are simply the suppressed and wasted force, the precious sovereign remedy, of which society insanely deprives itself—the genius, the intelligence, the inspiration of women. It is dying, inch by inch, in the midst of old superstitions which it invokes in vain, and yet

it has the elixir of life in its hands. Let it drink but a draught and it will bloom once more; it will be refreshed, radiant; it will find its youth again. The heart, the heart is cold, and nothing but the touch of woman can warm it, make it act. We *are* the Heart of humanity, and let us have the courage to insist on it! The public life of the world will move in the same barren, mechanical, vicious circle—the circle of egotism, cruelty, ferocity, jealousy, greed, of blind striving to do things only for *some*, at the cost of others, instead of trying to do everything for all. All, all? Who dares to say ‘all’ when we are not there? We are an equal, a splendid, an inestimable part. Try us and you'll see—you will wonder how, without us, society has ever dragged itself even this distance—so wretchedly small compared with what it might have been—on its painful earthly pilgrimage. That is what I should like above all to pour into the ears of those who still hold out, who stiffen their necks and repeat hard, empty formulas, which are as dry as a broken gourd that has been flung away in the desert. I would take them by their selfishness, their indolence, their interest. I am not here to recriminate, nor to deepen the gulf that already yawns between the sexes, and I don't accept the doctrine that they are natural enemies, since my plea is for a union far more intimate—provided it be equal—than any that the sages and philosophers of former times have ever dreamed of. Therefore I shall not touch upon the subject of men's being most easily influenced by considerations of what is most agreeable and profitable for *them*; I shall simply assume that they *are* so influenced, and I shall say to them that our cause would long ago have been gained if their vision were not so dim, so veiled, even in matters in which their own interests are concerned. If they had the same quick sight as women, if they had the intelligence of the heart, the world would be very different now; and I assure you that half the bitterness of our lot is to see so clearly and not to be able to do! Good gentlemen all, if I could make you believe how much brighter and fairer and sweeter the garden of life would be for you, if you would only let us help you to keep it in order! You would like so much better to walk there, and you would find grass and trees and flowers that would make you think you were in Eden. That is what I should like to press home to each of you, personally, individually,—to give him the vision of the world as it hangs perpetually before me, redeemed, transfigured, by a new moral tone. There would be generosity, tenderness, sympathy, where there is now only brute force and sordid rivalry. But you really do strike me as stupid even about

your own welfare! Some of you say that we have already all the influence we can possibly require, and talk as if we ought to be grateful that we are allowed even to breathe. Pray, who shall judge what we require if not we ourselves? We require simply freedom; we require the lid to be taken off the box in which we have been kept for centuries. You say it's a very comfortable, cozy, convenient box, with nice glass sides, so that we can see out, and that all that's wanted is to give another quiet turn to the key. That is very easily answered. Good gentlemen, you have never been in the box, and you haven't the least idea how it feels!"

The historian who has gathered these documents together does not deem it necessary to give a larger specimen of Verena's eloquence, especially as Basil Ransom, through whose ears we are listening to it, arrived, at this point, at a definite conclusion. He had taken her measure as a public speaker, judged her importance in the field of discussion, the cause of reform. Her speech, in itself, had about the value of a pretty essay, committed to memory and delivered by a bright girl at an "academy"; it was vague, thin, rambling, a tissue of generalities that glittered agreeably enough in Mrs. Burrage's veiled lamplight. From any serious point of view it was neither worth answering nor worth considering, and Basil Ransom made his reflections on the crazy character of the age in which such a performance as that was treated as an intellectual effort, a contribution to a question. He asked himself what either he or any one else would think of it if Miss Chancellor — or even Mrs. Luna — had been on the platform instead of the actual declaimer. Nevertheless its importance was high, and consisted precisely, in part, of the fact that the voice was not the voice of Olive or of Adeline. Its importance was that Verena was unspeakably attractive, and this was all the greater for him in the light of the fact, which quietly dawned upon him as he stood there, that he was falling in love with her. It had tapped at his heart for recognition, and before he could hesitate or challenge, the door had sprung open and the mansion was illuminated. He gave no outward sign; he stood gazing as at a picture; but the room wavered before his eyes, even Verena's figure danced a little. This did not make the sequel of her discourse more clear to him; her meaning faded again into the agreeable vague, and he simply felt her presence, tasted her voice. Yet the act of reflection was not suspended; he found himself rejoicing that she was so weak in argument, so inevitably verbose. The idea that she was brilliant, that she counted as a factor only

because the public mind was in a muddle, was not an humiliation but a delight to him; it was a proof that her apostleship was all nonsense, the most passing of fashions, the veriest of delusions, and that she was meant for something divinely different,— for privacy, for him, for love. He took no measure of the duration of her talk; he only knew, when it was over and succeeded by a clapping of hands, an immense buzz of voices and shuffling of chairs, that it had been deliciously bad, and that her personal success, wrapping it about with a glamour like the silver mist that surrounds a fountain, was such as to prevent its badness from being a cause of mortification to her lover. The company — such of it as did not immediately close together around Verena — filed away into the other rooms, bore him in its current into the neighborhood of a table spread for supper, where he looked for signs of the sumptuary law mentioned to him by Mrs. Luna. It appeared to be embodied mainly in the glitter of crystal and silver, and the fresh tints of mysterious viands and jellies, which looked desirable in the soft circle projected by lace-fringed lamps. He heard the popping of corks, he felt a pressure of elbows, a thickening of the crowd, perceived that he was glowered at, squeezed against the table by contending gentlemen who observed that he usurped space, was neither feeding himself nor helping others to feed. He had lost sight of Verena; she had been borne away in clouds of compliment; but he found himself thinking — almost paternally — that she must be hungry after so much chatter, and he hoped some one was getting her something to eat. After a moment, just as he was edging away, for his own opportunity to sup much better than usual was not what was uppermost in his mind, this little vision was suddenly embodied — embodied by the appearance of Miss Tarrant, who faced him, in the press, attached to the arm of a young man now recognizable to him as the son of the house — the smiling, fragrant youth who an hour before had interrupted his colloquy with Olive. He was leading her to the table, while people made way for them, covering Verena with gratulations of word and look. Ransom could see that, according to a phrase which came back to him just then, oddly, out of some novel or poem he had read of old, she was the cynosure of every eye. She looked beautiful, and they were a beautiful couple. As soon as she saw him, she put out her left hand to him — the other was in Mr. Burrage's arm — and said: "Well, don't you think it's all true?"

"No, not a word of it!" Ransom answered, with a kind of joyous sincerity. "But it doesn't make any difference."

"Oh, it makes a great deal of difference to me!" Verena cried.

"I mean to me. I don't care in the least whether I agree with you," Ransom said, looking askance at young Mr. Burrage, who had detached himself and was getting something for Verena to eat.

"Ah, well, if you are so indifferent!"

"It's not because I am indifferent!" His eyes came back to her own, the expression of which had changed before they quitted them.

She began to complain to her companion, who brought her something very dainty on a plate, that Mr. Ransom was "standing out," that he was about the hardest subject she had encountered yet. Henry Burrage smiled upon Ransom in a way that was meant to show he remembered having already spoken to him, while the Mississippian said to himself that there was nothing on the face of it to make it strange there should be between these fair, successful young persons some such question of love or marriage as Mrs. Luna had tattled about. Mr. Burrage was successful, he could see that in the turn of an eye; not perhaps as having a commanding intellect or a very strong character, but as being rich, polite, handsome, happy, amiable, and as wearing a splendid camelia in his button-hole. And that *he*, at any rate, thought Verena had succeeded was proved by the casual, civil tone, and the contented distraction of eye, with which he exclaimed, "You don't mean to say you were not moved by that! It's my opinion that Miss Tarrant will carry everything before her." He was so pleased himself, and so safe in his conviction, that it didn't matter to him what any one else thought; which was, after all, just Basil Ransom's own state of mind.

"Oh! I didn't say I wasn't moved," the Mississippian remarked.

"Moved the wrong way!" said Verena. "Never mind; you'll be left behind."

"If I am, you will come back to console me."

"*Back?* I'll never come back!" the girl replied, gayly.

"You'll be the very first!" Ransom went on, feeling himself now, and as if by a sudden clearing-up of his spiritual atmosphere, no longer in the vein for making the concessions of chivalry, and yet conscious that his words were an expression of homage

"Oh, I call that presumptuous!" Mr. Burrage exclaimed, turning away to get a glass of water for Verena, who had refused to accept champagne, mentioning that she had never drunk any in her life and that she associated a kind of iniquity with it. Olive had no wine in her house (not that Verena gave this explanation) but her father's old madeira

and a little claret; of the former of which liquors Basil Ransom had highly approved the day he dined with her.

"Does he believe in all those lunacies?" he inquired, knowing perfectly what to think about the charge of presumption brought by Mr. Burrage.

"Why, he's crazy about our movement," Verena responded. "He's one of my most gratifying converts."

"And don't you despise him for it?"

"Despise him? Why, you seem to think I swing round pretty often!"

"Well, I have an idea that I shall see you swing round yet," Ransom remarked, in a tone in which it would have appeared to Henry Burrage, had he heard the words, that presumption was pushed to fatuity.

On Verena, however, they produced no impression that prevented her from saying simply, without the least rancor, "Well, if you expect to draw me back five hundred years, I hope you won't tell Miss Birdseye." And as Ransom did not seize immediately the reason of her allusion, she went on, "You know she is convinced it will be just the other way. I went to see her after you had been at Cambridge — almost immediately."

"Darling old lady — I hope she's well," the young man said.

"Well, she's tremendously interested."

"She's always interested in something, isn't she?"

"Well, this time it's in our relations, yours and mine," Verena replied, in the tone in which only Verena could say a thing like that. "You ought to see how she throws herself into them. She is sure it will all work round for your good."

"All what, Miss Tarrant?" Ransom asked.

"Well, what I told her. She is sure you are going to become one of our leaders, that you are very gifted for treating great questions and acting on masses of people, that you will become quite enthusiastic about our uprising, and that when you go up to the top as one of our champions, it will all have been through me."

Ransom stood there, smiling at her; the dusky glow in his eyes expressed a softness representing no prevision of such laurels, but which testified none the less to Verena's influence. "And what you want is that I shouldn't undeceive her?"

"Well, I don't want you to be hypocritical — if you *shouldn't* take our side; but I do think that it would be sweet if the dear old thing could just cling to her illusion. She won't live so very long, probably; she told me the other day she was ready for her final rest; so it wouldn't interfere much with your freedom.

She feels quite romantic about it — your being a Southerner and all, and not naturally in sympathy with Boston ideas, and your meeting her that way in the street and making yourself known to her. She won't believe but what I *shall* move you."

"Don't fear, Miss Tarrant, she shall be satisfied," Ransom said, with a laugh, which he could see she but partially understood. He was prevented from making his meaning more clear by the return of Mr. Burrage, bringing not only Verena's glass of water, but a smooth-faced, rosy, smiling old gentleman, who had a velvet waistcoat and thin white hair, brushed effectively, and whom he introduced to Verena under a name which Ransom recognized as that of a rich and venerable citizen, conspicuous for his public spirit and his large alms-giving. Ransom had lived long enough in New York to know that a request from this ancient worthy to be made known to Miss Tarrant would mark her for the approval of the respectable, stamp her as a success of no vulgar sort; and as he turned away a faint, inaudible sigh passed his lips, dictated by the sense that he himself belonged to a terribly small and obscure minority. He turned away because, as we know, he had been taught that a gentleman talking to a lady must always do that when a new gentleman is presented; though he observed, looking back, after a minute, that young Mr. Burrage evidently had no intention of abdicating in favor of the eminent philanthropist. He thought he had better go home; he didn't know what might happen at such a party as that, nor when the proceedings might be supposed to terminate; but, after considering it a minute, he dismissed the idea that there was a chance of Verena's speaking again. If he was a little vague about this, however, there was no doubt in his mind as to the obligation he was under to take leave first of Mrs. Burrage. He wished he knew where Verena was staying; he wanted to see her alone, not in a supper-room crowded with millionaires. As he looked about for the hostess it occurred to him that she would know, and that if he were able to quench a certain shyness sufficiently to ask her, she would tell him. Having satisfied himself presently that she was not in the supper-room, he made his way back to the parlors, where the company now was much diminished. He looked again into the music-room, tenanted only by half-a-dozen couples, who were cultivating privacy among the empty chairs, and here he perceived Mrs. Burrage sitting in conversation with Olive Chancellor (the latter, apparently, had not moved from her place), before the deserted scene of Verena's triumph. His search had been so little for Olive that at the sight of her he faltered

a moment; then he pulled himself together, as the phrase is, and advanced with a consciousness of the Mississippi manner. He felt Olive's eyes receiving him; she looked at him as if it was just the hope that she shouldn't meet him again that had made her remain where she was. Mrs. Burrage got up, as he bade her good-night, and Olive followed her example.

"So glad you were able to come. Wonderful creature, isn't she? She can do anything she wants."

These words from the elder lady Ransom received at first with a reserve which, as he trusted, suggested extreme respect; and it was a fact that his silence had a kind of Southern solemnity in it. Then he said, in a tone equally expressive of great deliberation:

"Yes, madam, I think I never was present at an exhibition, an entertainment of any kind, which held me more completely under the charm!"

"Delighted you liked it. I didn't know what in the world to have, and this has proved an inspiration — for me as well as for Miss Tarrant. Miss Chancellor has been telling me how they have worked together; it's really quite beautiful. Miss Chancellor is Miss Tarrant's great friend and colleague. Miss Tarrant assures me that she couldn't do anything without her." After which explanation, turning to Olive, Mrs. Burrage murmured: "Let me introduce Mr. — introduce Mr. —"

But she had forgotten poor Ransom's name, forgotten who had asked her for a card for him; and, perceiving it, he came to her rescue, with the observation that he was a kind of cousin of Miss Olive's, if she didn't repudiate him, and that he knew what a tremendous partnership existed between the two young ladies. "When I applauded I was applauding the firm — that is, you too," he said, smiling, to his kinswoman.

"Your applause? I confess I don't understand it," Olive replied, with much promptitude.

"Well, to tell the truth, I didn't myself!"

"Oh, yes, of course I know; that's why — that's why —" And this further speech of Mrs. Burrage's, in reference to the relationship between the young man and her companion, faded also into vagueness. She had been on the point of saying it was the reason why he was in her house; but she had thought herself, in time, that this ought to pass as a matter of course. Basil Ransom could see she was a woman who could carry off an awkwardness like that, and he considered her with a sense of her importance. She had a brisk, familiar, slightly impatient way,

and if she had not talked so fast, and had more of the softness of the Southern matron, she would have reminded him of a certain type of woman he had seen of old, before the changes in his own part of the world — the clever, capable, hospitable proprietress, widowed or unmarried, of a big plantation carried on by herself. “If you are her cousin, do take Miss Chancellor to have some supper — instead of going away,” she went on, with her infelicitous readiness.

At this Olive instantly seated herself again.

“I am much obliged to you; I never touch supper. I shall not leave this room — I like it.”

“Then let me send you something — or let Mr. —, your cousin, remain with you.”

Olive looked at Mrs. Burrage with a strange beseechingness, “I am very tired, I must rest. These occasions leave me exhausted.”

“Ah, yes, I can imagine that. Well, then, you shall be quite quiet — I shall come back to you.” And with a smile of farewell for Basil Ransom, Mrs. Burrage moved away.

Basil lingered a moment, though he saw that Olive wished to get rid of him. “I won’t disturb you further than to ask you a single question,” he said. “Where are you staying? I want to come and see Miss Tarrant. I don’t say I want to come and see you, because I have an idea that it would give you no pleasure.” It had occurred to him that he might obtain their address from Mrs. Luna — he only knew vaguely it was Tenth street — much as he had displeased her, she couldn’t refuse him that; but suddenly the greater simplicity and frankness of applying directly to Olive, even at the risk of appearing to brave her, recommended itself. He couldn’t, of course, call upon Verena without her knowing it, and she might as well make her protest (since he proposed to pay no heed to it) sooner as later. He had seen nothing, personally, of their life together, but it had come over him that what Miss Chancellor most disliked in him (had she not, on the very threshold of their acquaintance, had

a sort of mystical foreboding of it?) was the possibility that he would interfere. It was quite on the cards that he might; yet it was decent, all the same, to ask *her* rather than any one else. It was better that his interference should be accompanied with all the forms of chivalry.

Olive took no notice of his remark as to how she herself might be affected by his visit; but she asked in a moment why he should think it necessary to call on Miss Tarrant. “You know you are not in sympathy,” she added, in a tone which contained a really touching element of entreaty that he would not even pretend to prove he was.

I know not whether Basil was touched, but he said with every appearance of a conciliatory purpose, — “I wish to thank her for all the interesting information she has given me this evening.”

“If you think it generous to come and scoff at her, of course she has no defense; you will be glad to know that.”

“Dear Miss Chancellor, if you are not a defense — a battery of many guns!” Ransom exclaimed.

“Well, she at least is not mine!” Olive returned, springing to her feet. She looked round her, as if she were really pressed too hard, panting like a hunted creature.

“Your defense is your certain immunity from attack. Perhaps if you won’t tell me where you are staying, you will kindly ask Miss Tarrant herself to do so. Would she send me a word on a card?”

“We are in West Tenth street,” Olive said; and she gave the number. “Of course, you are free to come.”

“Of course I am! Why shouldn’t I be? But I am greatly obliged to you for the information. I’ll ask her to come out, so that you won’t see us.” And he turned away, with the sense that it was really insufferable, her attempt, always, to give him the air of being in the wrong. If that was the kind of spirit in which women were going to act when they had more power!

Henry James.

(To be continued.)

AMONG THE RED ROOFS OF SUSSEX.

WE had existed through a long dreary springtide in dear, dirty, smoky old London, and grown impatient with the incessant pattering rain, or the dull, heavy clouds that daily met our vision at early morning over the chimney-tops. The leaden skies took no pity on London's millions, who threaded the streets from week to week with ulster and umbrella. Finally June was ushered in with a burst of sunlight, which transformed the well-washed city in a few hours. Men and things instinctively felt that summer had come,—that summer for which we had all longed and planned many a month. None of us knew much of the genuine rural life of England, and we determined to be initiated. Kind friends discovered for us the very desire of our hearts at a picturesque old farm where rooms were to be had; and in a few days two rickety "four-wheelers," well capped with trunks and filled with happy faces, bore our party on the first stage of the journey toward the hills and vales of merrie England. The afternoon express train swiftly sped through straggling environs of the metropolis, through Surrey towns, pastures, chalk hills, birch and pine woods, for fifty miles, and then deposited us at a small, neat station with a long name. In the yard awaiting the passengers were vehicles of all sorts and sizes, from a luxurious landau drawn by dancing bays to a diminutive donkey-cart. We rather expected a grain-wagon to meet us, having been informed by letter that the farmer would bring his own

vehicle to convey us the rest of the journey. What was our surprise, not to say disillusion, when a genial, ruddy-faced man of about fifty-five, neatly arrayed in a pepper-and-salt suit of rural cut, approached, and after respectful greetings motioned us toward a trim carriage drawn by a chestnut mare. Although feeling more comfortable and dignified than would have been possible in a lumbering wagon, one of the party at least experienced a pang at this example of nineteenth-century rusticity. That was soon forgotten, however, when we had left behind us the red-brick box-like houses growing up around the depot, and were speeding on toward low, straggling cottages, which seemed nearly crushed to the ground by the weight of the brown thatched roofs. Then came a village green, and a queer little church round which clustered rustic dwellings, and the conventional smithy, from whose open door issued a glow of light which shot across the road, lit up the diamond-paned Gothic windows with flickering color, and by a final effort illuminated the ancient iron cross. After leaving the hamlet we crossed a noisy brook, climbed a steep hill, then entered a hedge-rowed lane, and were finally deposited at an old wooden gate, with high bramble-covered banks on either side. Here we found a terrace, overgrown with a tangle of poppies, oxeye daisies, flags, and roses. Following a path washed like the bed of a mountain torrent, we came in sight of the farmstead,—a long, low, red-tiled house of stone with great latticed windows and ivy-grown porch. All sorts of clinging plants stayed themselves against the rough walls, roses and nasturtiums in the front, variegated ivy at the side, clinging so tightly to the stones that without breaking the stem it was almost impossible to pluck a piece. Ferns nestled in a cool shady corner, while on the south wing were grape-vines, and peach and plum trees trained to the house.

Entering the living-room, it was a relief to see no monstrosity in the way of wall-papers, though a trifle depressing to find that the ceiling could be touched by the fingers of the masculine members of the family. Through the open window was a delightful dreamy picture. In the foreground lay the farm-yard in shadow, drowsy and noiseless, guarded by giant oaks. Beyond stretched a long green valley, with no sign of life, save small lazily curling wreaths of smoke from unseen cot-

IN THE KITCHEN.

tages. In the distance ranged bald dark hills, over which the sun had disappeared a few moments previous, leaving a soft after-glow to light our little upland world between day and night.

With the glamour still around us we retired early to rest, much pleased at the novelty of antiquated four-post bedsteads with hangings of spotless dimiti. To make the charm more perfect, when my candle was extinguished the moonlight shone through the lattice and cast its checkered light upon the floor.

Early next morning I was out in the old-fashioned garden, exploring every nook and corner. Beds of white pinks filled the air with perfume, and in every tree the song-birds were tuning up for the day. On the lawn groups of small spruce-trees were veiled in spider-webs laden down with dew. In the center bed a stately yucca reared its head in company with a few showy flowers, placed so that the passers-by might have a full view of their beauty, while the rest of the garden appeared to be allowed to follow its own sweet will. Near the kitchen I came upon a colony of bee-hives, each capped with an inverted earthen dish of red. Finding a little path leading from the garden, I mounted the pasture hill, to procure a fuller view of the valley. Surrounded

by mighty oak and beech trees, the farm seemed half buried at my feet,— just a glimpse here and there of red tiles and chimneys amid a wall of green. The long stretch of cultivated valley had wakened into life, though the browsing herds and white-shirted laborers scarcely appeared to move as I looked from my high vantage-ground. The great purple hills on the right, and upland furzy commons on the left, guarded this fertile vale from bleak east winds. A little silver line of water wandering in and out among the willows seemed to spread its fertilizing power to the very foot of the heather-clad ridge, beyond which all was as wild as a highland moor. I strolled back to the farm, with a great sense of delight in realizing that for months and months this calm and beauty were to surround our life.

The kitchen was a quaint old room, paved with red brick, having a low, heavily timbered ceiling, wooden walls, and an open hearth fire, with family chimney-seat. On the walls hung saddles, a couple of guns, a gorgeously illustrated almanac, and several engravings, it being the living-room of the family. Leading from the kitchen were the dairy, scullery, and "out-kitchen." The latter had only a mud floor, and contained an old brick bake-oven. In a dark corner one could just discern a

THE HOMESTEAD.

goodly pile of wine-barrels. The quality and variety of these home-made wines was a source of great pride to the family. They could hardly understand why any one wanted claret, when we could be served with pure currant wine far superior to a suspicious French decoction. Her gooseberry wine, Mrs. Stubble informed us, had a far finer flavor than most brands of champagne, while her rhubarb and elderberry answered to hock and port! Then there was nothing to surpass fine mead. What more could we desire! This wine-making consumed a great deal of time each summer. Several barrels were always emptied at haymaking and harvest time, wine and mead being given the laborers instead of the usual doles of small beer.

Within a stone's throw of the house were the barns and sheds,—old weather-beaten gray-stone buildings, with red-tiled roofs softened by a greenish velvety lichen, which dispersed

itself in a happy irregularity over cow-sheds, grain-barn, and wagon-shelter. During several weeks in the summer the gigantic doors of the main barn were thrown open back and front. Through this dark frame we often saw a bright picture of rural life. Lazy cows gathered around the pond; near by were clustered groups of sheep, some dark in shadow and others warm buff in the sunlight; geese dotted the bright meadows in the middle distance; and for a background there were wooded hill-side and gorse-grown upland.

The farm stock consisted of a large flock of sheep, eleven cows, six horses, half a score of big and many score of little pigs, numerous ducks, chickens, and geese; a heterogeneous stock, but Farmer Stubble liked to try

SHEEP-WASHING.

a little of everything, and consequently had not grown a rich man. At times the farm-yard would be fairly quiet, but when the inhabitants were all at home the noise was overpowering. Daisy, the pet Alderney, would often start them off with a solo; then the cocks and hens, and even the little chicks, set up a rival chorus, the calves introducing a monotonous bleat; and the black sows and brood bringing up the rear with fine staccato notes.

The geese were the only members of the farm-yard colony with whom I was on unfriendly terms. They always exasperated me with their ungainly waddle and suspicious manner. How is it the Orientals can revere and the Buddhists immortalize this sage-and-onioned biped?

We soon came to the conclusion that Farmer Stubble's lot was a trying one. He appeared in continual anxiety about the look of the sky for his crops, or the direction of the

wind for his flocks. Then misfortunes happened to the horses, the potatoes turned out badly, and so on. In March, so we learned, he always had an anxious time among the sheep, often spending whole nights with the shepherd in the fold, coming back at morn carrying half-dead new-born lambs, which had to be laid on straw near a fire. Many of them died, and others were fed for weeks on cows' milk, until they were strong enough to join the flock. What ungainly creatures young lambs are! It was quite pathetic to see the struggles of the sickly ones to take a few steps beyond the shed, the fruitless effort to manage those four long, thin legs, and still keep their equilibrium.

One morning, going down to the barn, I found two of the farm-laborers, Shadrach and Meshach (known among their brethren as Shed and Shach), raising a huge empty barrel into a wagon. In response to my inquiry one of the men said:

"We'se a-going ter wash them ewes, mum." A vision of "them ewes" being tumbled into the barrel and scoured seemed rather peculiar; so, on an invitation from Farmer Stubble, to "come and look on," I followed the procession. First went the lumbering, picturesque old cart, then the sheep were driven from the fold and turned into the lane, along which they crawled until they came to the mill-stream. I then found it was Shed and not the sheep that went into the barrel, which was placed in the water and lashed to the bank. The sheep were driven up on one side and guarded by several men, while the shepherd raised a great ewe in his arms and threw it head foremost into the rivulet. As it rose the watchful Shed, in the barrel, grasped it by the back and ducked it several times. Escaping from his hand, the poor half-drowned creature rushed toward a cut in the bank and so escaped

SHEEP-SHEARING.

to dry land. This process was gone through with all the sheep. Whether it was due to their natural stupidity or the muddling effect of water on the brain, many of them blundered

THE STUDIO.

into the stream again and tried to escape by a steep ascent on the other side. Then came the turn of the ruddy, cherub-like son of Shadrach, who, planted on the farther shore and armed with an iron hook on a ten-foot pole, crooked the wandering sheep to land. Many of them needed assisting up the slippery cut, and very comical it was to see their weak-kneed struggles to regain the meadow. They appeared utterly unable to account for the enormous additional weight of their water-soaked wool; and, as they stood huddled together in the puddles from their streaming sides, the bleating lambs did not appear to know their own mothers. The following day the flock was driven into a new fold in the hillside pasture, where the process of shearing commenced. All of the well-washed sheep were in turn deprived of their heavy winter coats. As they left the shearers' hands it did not seem possible that these poor, lean creatures could be the round balls of wool we were accustomed to see. Every shorn lamb gazed at its clipped and unclipped sisters with a vague, solemn look, wondering what *was* coming next. After the ordeal they were turned into the brightest meadow on the farm, and probably soon forgot the break of those two days in their monotonous life of nibbling. The numer-

ous flocks of sheep in Sussex give a charming pastoral effect to many of the delightful pictures of upland and lowland, so characteristic of southern England.

We soon became conversant with the "ins and outs" of our new life, and though the novelty gradually wore off, we were none the less happy in the old farmstead. With the determination to linger came the desire to make our rooms as homelike as possible. Very remarkable lithographs, representing Cromwell, Charles I., and other historical personages (in attitude and costume greatly suggestive of a "Punch and Judy" show), were banished from the walls to give place to Italian and Spanish sketches. A questionable studio carpet was replaced by Moorish rugs. Cabinets, bric-à-brac, and all an artist's paraphernalia arrived from London. Rooms were repapered, and the furniture covered with a Morris cretonne. With these more congenial surroundings we felt less dependent on outdoor enjoyment.

It was discovered in time that our beloved lattice windows had certain disadvantages! The center portion, which opens and shuts at will, was evidently constructed with an eye to ventilation. Being five hundred feet above the sea, and not a great distance from the

same, the spring and autumn gales from the ocean swept up the valley with great violence, more air than we cared about finding the way in from door and window, while on rainy days little rivulets would chase each other across the broad inner sill. Imagining that a miniature snow-drift would hardly be pleasant in one's dining-room, we hired the village carpenter, before winter set in, to construct an inner window of the clearest glass, to be as inconspicuous as possible, and yet to prevent these inconveniences. The effect was so successful that a few hours after its completion our fine collie-dog, seeing the middle portion open, as he thought, took his accustomed leap into the garden. He was not a little startled when the feat was accomplished, and he landed on the lawn bristling with broken splinters of glass.

In February we welcomed the twitter of the tiny fussy wren as a harbinger of good things to come. Great bunches of snowdrops brightened the winter hangings of our rooms, while the crocuses pushed their yellow buds through the mold to warn the great bare trees above them that spring had awakened from its long sleep. On the commons soon appeared the first burst of blossom from gorse and broom, followed by a transformation in the oaks and chestnuts from winter brownness to delicate greens and grays. Under foot the bracken peeped through the remains of autumn's russet clothing. In a week or so, when young leaves became a little more courageous, primroses and violets followed the example of their more stalwart leaders. Never have I seen such luxuriant growth of spring flowers as this little patch of Sussex woodland produced. It looked its best on a bright May morning, when the gnarled ivy-grown trunks of aged trees and the upright stems of younger ones alike threw shifting shadows across the path which wound up and up the flower-starred hillside until it appeared to meet the sky, where the budding trees outlined a delicate tracery of lace-work against the blue. Then in the meadows sprung the daffodils, and the hedges became laden with hawthorn bloom.

May-day has still a few devotees among the rural folks; children especially cling to its observance. Early on May-morning a party of little ones came to the farm, decked out with garlands and pink-paper rosettes. They sang May-songs, turning and twisting the while to give their audiences a full view of their adornments, and departed, the happy possessors of a dozen coppers. That is all of the good old May festival we ever saw. It would be difficult now to find a party of young people who would rise before dawn, as their grandparents did, to go a-Maying in the woods, and return "with

much blowing of horns ere the rising of the sun," with trophies of May boughs to deck every lattice and door. The harmless May-poles never recovered the death-blow given them by the Puritans' act of Parliament more than two hundred years ago, and I suppose we shall not see anything of the sort again. The country-folk of our day do not seem able to enjoy the reckless jollity and merriment we imagine as characteristic of their forefathers. The men care for nothing more boisterous than pipe and pint-pot at the village inn, while the young folk saunter through the lanes at evening, demure enough generally, until an occasional nudging from the youthful swain, or a suppressed giggle from the buxom maid, betrays the fact that they are enjoying themselves. One cannot wonder that some of the men find small inducement to hilarity, considering the struggle it must be to feed and clothe the many open-mouthed little ones belonging to them.

The little Gothic church over the common possessed quite a charm of its own. At the entrance was one of those characteristic lych gates, with its tiled and weather-toned roof and rusty iron bars and hinges. There was a sense of calm and peace about the elm-guarded grave-yard, that was very restful without being in the least melancholy. A great sun-dial silently measured out the hours on its stone face amid the moss-grown tombs of many generations. One mellow afternoon late in August I found the old sexton trimming the vines on the quaint rustic porch outside the church, and asked him how long the dial had been there. "There, now, mum, I couldn't at all say; long afore my father's time, I knows. I'm old-fashioned maybe, but me and mine allays clings ter the dials."

"You prefer them to clocks?" I said.

"Ay, ay, I do; but my darter's children says I'm fur behind the times. When I'm round here, like to-day, oftentimes I falls a-wonderin' how many more shadars it'll please the Lord ter mark on that old dial, 'fore I'm called home up yonder. My good wife's gone long ago, and though I've had a very good life, I aint never felt no dread 'bout being laid away. Then, yer see, this place is so natural-like to me." And thus the old man rambled on, snipping away the dead leaves from the creepers as we talked. Presently he wandered farther down the slope, leaving me to enjoy the glimpse of valley beyond "God's acre," where glistened a tiny lakelet with browsing cattle and sun-tipped beech-trees, the horizon bounded by the blue Sussex downs. Soon came the sound of the organ through the open door, and I sat for an hour listening to the chants and hymns the rector's

daughter was practicing for the next Sunday.

The interior of the church was very small, with vaulted roof and hammered stone walls. A fine time-worn oak screen divided the chancel from the nave. The school-children all sat grouped around the organ, that they might be under the eye of the rector's wife, who led the singing in a pure soprano voice. The tower contained but one bell, which was rung by the sexton from the nave. The strain on its voice in rousing the distant farmers for so many years each Sunday appeared to have had a very deleterious effect, if that account for the unmusical sounds evoked in its old age. One of the churches in a neighboring parish had eight fine bells. They were rung in the same way, the ropes coming down into the body of the church, where eight sturdy, white-jacketed men made the hills reëcho their powerful chimes.

Decorating the church for the yearly festivals was very pleasant work. The crumbling walls and old carved screen seemed always in sympathy with us, and aided all our endeavors. At Christmas we wreathed long trailing sprays of ivy round the pillars and windows, and placed shining masses of holly and evergreens in chancel and pulpit. At Easter-tide banks of moss filled the sloping stone window- ledges, daffo-

IN THE HAY-FIELD.

dils, primroses, and violets nestled in the worm-eaten crevices of the woodwork and encircled the pulpit. At Harvest all the creepers and foliage were ruddy, sunflowers reared their heads royally from dim corners, a great stack of wheat rose above the altar, while rosy-cheeked apples and other bright fruits were distributed in every available nook. The church kept up its prestige in its wedding garment also. Graceful ferns and hot-house flowers, white lilies and wreaths of spotless blossoms, borrowed a roseate glow from the reflection of St. Peter's red robe in the east window.

The rectory was a roomy, homelike old house. Its large hall, lined with massive bookshelves, contained many valuable works and copious folios of theological lore. Leading from the drawing-room was a bright conservatory, well filled with a fine collection of orchids and rare plants, with a background of passion-flower vine, which completely covered the wall. A great charm of the place was the garden, where every good old-fashioned flower had its place. We were not the only persons who appreciated the genial rector and his velvety lawns. Almost every fine afternoon some members of the county gentry drove over in time for that good English institution, five o'clock tea. Rattan chairs were placed under the huge elm-trees, and there the freshest of country waiting-maids handed round tea and cake in dainty china. The rector threw open his grounds to his little rustic parishioners at their annual school treat, which was looked upon by the juveniles as a great holiday. Early in the afternoon the children collected in groups near one of the rector's fields, all looking very much dressed up and terribly abashed at the phalanx of young ladies awaiting them. It was hard work at first to start the various games, but when the children became more used to us their spirits revived. They were soon laughing and screaming with perfect abandon. At half-past five they were placed in rank and marched through the tennis grounds to the lawn. Here they sang several songs and hymns. At a sign from the school-teacher all hats came off with a jerk, and heads were bowed while the rector said grace. The children responded with a loud Amen! and sat down in rows upon the grass. Then the feeding process began. The rector, assisted by several curates from neighboring parishes, distributed the tea, while the ladies passed round bread and butter. How the children did enjoy their food! Their capacity was something marvelous. Bread with jam was devoured with even more relish than the first course; and still they were ravenous when great lumps of currant cake appeared.

Vol. XXX.—76.

THE MAIL IN SUMMER.

At seven o'clock, after other games, the children were dismissed, and their day of pleasure was over. They wandered home in groups through the gathering twilight, all talking at once of the dissipation.

At Lynchmere the only connection we held with the outside busy world came through the daily visit of the post-boy. The sturdy little fellow trudged up the garden path shortly

THE MAIL IN WINTER.

after seven o'clock each morning. He had a round of some seventeen miles to make in order to reach the far outlying farmers, when they chanced to get a letter. The luxury of a second delivery would have been too startling for the little inland village, but of late years there was an afternoon post for those who cared to fetch it. Although only fifty odd miles from the metropolis, we felt that a hemisphere might lie between us and London. In our seclusion we never heard mentioned either wars or rumors of wars; the printed page of the press was the one and only source of knowledge. Sitting on a stile and reading of the latest play produced at the Lyceum made it seem as far off as the opera in New York. Walking to the post-office afforded a delightful stroll in summer, but a very unpleasant tramp in winter. If it rained the fields and road were muddy, and if it snowed the lane was full of drifts. In the warm weather we swung our Mexican hammocks beneath the oaks and fairly lived out-of-doors. Only two minutes' walk from the house was a little conical-shaped hill capped with larches and pines. The ground was overgrown with a mat of bracken and springy huckleberry. What could be pleasanter than such a couch as this! What luxurious hours were spent in watching the gentle rocking of the pines, with their rich prickly spears telling against the azure sky and feathery flying cloudlets! No sounds but those pertinent to the coppice were round us, the lulling murmurs of the trees, the hum of insects, or the occasional note of a songster. The harmony of color was complete too, for the red-topped

barns just beneath only added richness to the view between the pine-stems. Another favorite summer resort lay in the next valley. Four miniature lakes nestled side by side, with a stream running through them. The many gnarled and twisted trees growing at the water's edge had become undermined, and their trunks were slowly sinking, as if drawn down by magic. Some were three or four inches in the lake and others nearly touching. Woodland paths and little bosky clumps of foliage surrounded the lakes; a more perfect picnicking ground could not be imagined. Many of our party would creep out on the water-wooded trunks and start some well-known glee, which was caught up by each of these would-be birds, until the valley reëchoed with young voices. Coming home, instead of crossing the hill, we would skirt its base amid shadowed lanes, with here and there a glimpse of heathy down. Half-way to Lynchmere was a very quaint mill. Huge royal pines broke the rigid lines of its architecture, without obscuring a view of the powerful old wheel and the mellow-toned pool beneath. The mill had a haunted look by moonlight, though I doubt if that idea struck the inhabitants of the neighboring village, as it was a favorite trysting-place for rustic lovers.

Farmer Stubble took care that we should be interested in his farm as well as in the land surrounding it. At haymaking time it was very pleasant to go through the fields and watch the tossing grasses. On the breezy downs the hay was crisp and light, and flying about under the manipulation of the harvesters as if it were full of life. While the hay was piled in heaps preparatory to carting, after the laborers had departed we could make couches of it. Being far up on the hillside, all the fragrance of the lower fields rose to us as we watched the last golden streak of the after-glow beyond the silhouetted horizon-line before us. As the long English twilight set in, slight wreaths of mist wound themselves around the cottages in the valley at our feet, veiling them in a sort of poetic mystery. The mist slowly crept up, and when it had nearly reached us on the hill we reluctantly strolled home again, to find the evening primroses blown to their fullest, the farm-yard settlement gone to rest, and a light shining from the window to summon us in.

Adjoining the hay-fields were

“red apples in a sleepy orchard,
Whose trees have branches gnarled and tortured
By slow west winds that never cease.”

In contrast to the still calm life of our summers in Sussex comes the memory of blustering autumn days on the commons. I recollect

very vividly one walk in early November. There had been a heavy rain-storm, followed by strong wind. It was late in the afternoon, and the great rolling masses of gray cloud were still bordered with an angry-looking fringe of yellow as they were hurled along remorselessly. With each gust of wind the glistening russet trees bent and rebounded. A few remaining leaves were torn from the branches, whirled round and round, then dropped. The low-growing rough furze, the golden bracken, and patches of faded heath were hardly moved by the great wind that set the tree-tops waving. The rugged road stretched on and on as far as eye could reach, bounded on either side by great masses of somber undergrowth. Not a dwelling nor a human being was in sight. Finally amid the fast-scudding clouds came a gleam of watery sunshine, which disclosed a vermilion speck in the far distance. That, I knew, must be the royal mail-cart, which was being lazily drawn home by the old white mare after its day's journey across the hills.

As winter approached, the huntsmen awakened into life and donned the "pink." Scarlet coats were seen on every hand, fox-hunting being one of the greatest amusements of life to the county gentry. A favorite place for the meet was a quaint open square of a neighboring village. Six roads met at this place, as if they all led to the Anchor, a flourishing old-fashioned coaching-house and inn. By the way, why should the emblem of Hope be such a favorite symbol of the wayside publicans? Another tavern of the village rejoiced in the name of "The Green Man." The Anchor, however, utterly ignored the existence of the Green Man. The former had several times entertained a full-fledged lord, whereas the latter was merely the rendezvous of the rustic inhabitants. The Anchor was patronized by the best class of farmers on market days, and by weary pedestrians on fishing and shooting expeditions. Here the huntsmen met and took their "snack" in the long, lattice-windowed bar-room before the start. It was a very bright sight to see the sportsmen congregated beneath the huge oak porch of the inn, watching the arrival of the hounds. The pack rushed round the square at a wild rate, giving the whippers-in plenty of work to do to keep them together. There was a great commotion in mounting of horses, but finally all was ready, the signal was given, and the sportsmen trotted off.

About Christmas-time there were several light falls of snow, just enough to cover the brown earth and pile softly layer upon layer over the great, bare oak-branches round our farmstead. The sturdy little spruce-trees

bordering the lawn caught every flake on the wing, and left bare patches of mold beneath them. The saucy robin-redbreasts, who had earlier in the season refused our offers of friendship, now came in numbers and perched at the latticed casement for their breakfast. Later on we had an unusually heavy snow-storm, such a one as England seldom sees. It commenced slowly and quietly as usual, giving us no warning that we were to see a touch of our veritable American winter. Gradually it came thick and fast, creeping up under the doors and windows, and through the old tiles on the attic roof. By sunset the noise of the pines on the hill was borne to us, the wind rose and whirled the falling crystals in swift eddies. All night it stormed, and by morning we were shut in from the outside world by two feet of snow and a drift of ten feet in the lane. Neither butcher nor baker nor candle-stick maker could approach for two days. We were snow-bound. The third day a thaw came, and the villagers waded about to compare notes. They seemed to think they had been transported to the Arctic regions.

The nearest village boasting of more than one shop was between two and three miles distant. All the life and business of the place were centered in High street, a name which designates the principal thoroughfare in half the towns of England. Dividing the commercial and exclusive ends of the street was the White Horse Inn, with the doctor's house on one side and the grocer's shop on the other. It was all trim and prim and English-looking, but not half so picturesque as a road on the outskirts of the village which ran down a steep hill, taking the quaint little red-tiled houses with it. The dwellings were of the humblest, but sweet and clean, with dimity curtains hung at every window. The small gardens in front were filled with sunflowers, marigolds, and sweet-william. I once took some shoes to be mended at one of the houses, and had a very amusing conversation with the old cobbler. Just before leaving I said:

"This country is so hilly, every one ought to wear stout shoes for walking."

"Yes, mum, to be sure, you be quite right. It be very hilly; in fact, it 'ud be all hills if it wer'n't for the valleys."

All the tradespeople metaphorically pulled their forelock to the gentry, and patronized the peasantry by way of relief. We were treated with the degree of civility meted out to summer lodgers, until one little incident changed it to the servility shown to the aristocracy. I was seen driving down High street with one of the élite county families, and from that day the grocer, obsequious and

smiling, instead of his apron-smothered boy, came out to my wagonette for orders; the butcher touched his cap and carefully wiped his hands on his blue blouse, and the baker's little girl dropped a curtsy. I really believe the next sirloin of beef was a choicer cut because the butcher's cart intercepted a footman with a note issuing from our humble gate. Such is the power of caste!

We found that the indefatigable curiosity-hunters had succeeded in carrying off most

of the old china, carved oak, and quaint objects of household furniture from the neighborhood. In some cases, however, the owners remained obdurate, clinging with tenacity to their property, proof against the golden sovereigns exhibited by any siren who would charm away their heirlooms. It is not so much that they appreciate the beauty of their possessions, but in their conservatism they hate to part with anything used by their fathers before them. For instance, we noticed in the kitchen of a cottage an old carved linen-chest, used as a flour-bin. The owner seemed quite surprised when we admired it, and remarked it was only an old scratched thing. When, however, we offered to purchase it, she was reduced to tears at the prospect; so we departed, with expressions of sorrow for having mistaken her feeling on the subject. The following day a cart drew up at the farm containing the veritable chest. The woman's husband came to the door, saying his wife had changed her mind and would be glad to sell the box. Accordingly we took it, and several months after discovered that the

sensitive woman had been heard bemoaning her flour-bin.

Hundreds of these country people only fifty miles from London had never been near the metropolis. They had lived on from year to year, with no variety except the different duties entailed by change of seasons. One of their few annual treats is the Horticultural Show, to which the richest farmers and the poorest cottagers alike contribute. Tents are erected in a large green or field, and a chosen committee of gentlemen superintend the arrangements. On the morning of the fête-day all the contributions are displayed on long deal tables, and the prizes decided on by the committee. The county gentry all patronize the show, and every one turns out in holiday garb. This is the only chance the rustics have of mingling with the aristocracy, a fact which they fully comprehend and make the most of. The vegetable tent is always filled with rough, sunburnt men, who earnestly discuss the relative

size and merits of rival groups of potatoes, beans, carrots, etc. One burly giant I noticed looking ruefully at a huge turnip cut in half. This Samson had been confident that his turnip would eclipse all the others in glory, but he forgot that quality as well as quantity was to be considered. When bisected, it was found to be hollow and pithy, while the small round solid one by its side had carried off the prize. Samson's brother farmers were good-humoredly chaffing him on the subject.

"Sam, my boy," said a little man in dun-colored corduroy, "you do things on too big a scale. Fact is, you're too big yourself, old man. Mayhap you'd like ter make all them 'ere vegetables ter fit your size."

"Seems, maybe, y'ure thinkin' I'm as holler as that ther turnip," responded the giant, at which all the farmers grinned.

"Say, Sam," broke in another, "I guess you better go off ter Amerquey. Them Yankees is the fellers for big things."

ON THE COMMON.

butter-table was an art collection. In the center rested a large basket of flowers formed entirely of butter, molded by the hands of some deft farmer's wife. The only modeling instrument used was a large steel pin, with which the sculptress incised the pattern of straw plait and the veining of the leaves. This work of art had carried off the first prize. The petals of every blossom were carefully modeled, though I must confess they had a slightly stiff, unnatural appearance. I also noticed a prettily made gypsy bonnet with wreath of daisies, and two racing skiffs with Oxford and Cambridge favors attached. As I stood looking at the models a lady and gentleman approached who attracted my attention. The lady was young and dreamy-looking, and wore a clinging dress of sage-green embroidered with yellow flowers. He was a jolly-looking squire, and appeared slightly perplexed at what his companion was saying.

"It is painful, in fact," I heard her say, "this bringing the unbeauteous side of life to the front."

"But, Miss B——," replied the gentleman, "don't you like to look at vegetables? One

I did not stay to hear what followed, but passed on to the next tent, which was full of fruit and dairy produce. In local opinion the

must eat to live, and the better our food the better our life, say I.”

“We have no sympathy on this subject, I know,” sadly replied the lady. At this moment Miss B—— caught sight of the butter display. “What a beautiful mission it would be,” she exclaimed, “to teach these women the true beauty of form.”

“Well,” responded her companion, “I think all this is very pretty. If that basket were a classic urn, it would be better, you think. Why, you have actually imbued me with a poetic idea! Does not this table look as if the power of Midas had been transmitted to these dairy-maids, that what they touch has turned to gold?” With a hearty laugh at his inspiration the burly squire and fair æsthete passed on. I wonder if she enjoyed his Philistine mirth?

The flower-tents were really charming, from the collection of orchids and palms of the manor conservatory to the nosegays of wild flowers gathered by the school-children. I was as much interested in watching the people as in looking at the show. Several times I passed the squire and Miss B——, and noted that they seemed mutually bored. Quite late in the afternoon my attention was attracted by an antiquated-looking little gentleman and two equally aged little ladies. Each had an arm of the gentleman and were settling their old-fashioned little shiny silk dresses, which had been ruffled by the crowd.

“Josiah,” remarked one diminutive lady, “what is the name of that rose? it is charming, is it not, Dorothea?”

The trio paused in front of me, while obedient Josiah fumbled for his spectacles, and raised the card, on which was printed “Reine d’Angleterre.” Josiah looked, then coughed, then looked again; then seeing me standing near, he turned, and with a courtly bow said: “Excuse me, madam, might I trouble you to inform me what this word Reine signifies? It is doubtless a French word, but I have long since forgotten the smattering of that tongue gleaned in my boyhood.”

I gave the requested information, and Josiah, bending to the lady, said: “Queen! Queen! Why yes, of course. Queen d’Angleterre. Did you ever hear of her, Dorothea?”

Both of the ladies replied in the negative. Josiah stood a moment in deep thought, half turned again toward me, then moved back again, and took a pinch of snuff.

“Can’t say I ever heard of her,” he said. “Don’t suppose there ever was a queen with such a name! Just a fancy idea of the florist’s, depend upon it.”

About six o’clock there came the distribution of prizes by the ladies of the manor. Each successful competitor, answering to his or her name, came forward to receive an award, sometimes delivered in useful articles, but more generally in the solid coin of the realm. With speeches of commendation and encouragement from several of the leading gentlemen, the people dispersed, and the festival closed at nightfall.

Alice Maude Fenn.

“WHOM HE LOVETH, HE CHASTENETH.”

EVEN as the sculptor’s chisel, flake on flake,
Scales off the marble till the beauty pent
Sleeping within the block’s imprisonment
Beneath the wounding strokes begins to wake —
So love, which the high gods have chosen to make
Their sharpest instrument, has shaped and bent
The stubborn spirit, till it yields, content,
Its few and slender graces for love’s sake.
But the perfected statue proudly rears
Its whiteness for the world to see and prize,
The past hurt buried in forgetfulness;
While the imperfect nature, grown more wise,
Turns with its new-born good, the streaming tears
Of pain undried, the chastening hand to bless.

"YOU WILL PLEASE HAND MISS HUNTER IN TO SUPPER."

CROW'S NEST.*

PART I.

A FAIR May day in the spring of 1860 found two young men riding along a wood road of the border-land in Virginia, destined before long to echo with the ring of troopers' steel, with the tramp of hosts marching to war in mighty phalanx.

As yet, there was of the strife to come only a distant thunder growl in warning, and the ears that heard it were those of the watchdogs of the nation! Hoyt and Newbold, formerly chums at college, had drifted hither in the course of a Southern journey undertaken after Newbold's serious illness at his home in New York. Hoyt, wide-awake, blue-eyed, alert, and unimaginative, the mercantile element in his blood kept in check by the veneration of gracious Fortune, wondered at Newbold's vagrant fancy for by-ways and odd corners during their agreeably aimless jaunt. He would chaff his friend without ceasing over his fondness for lingering in churchyards, or losing his eye-glasses in dusty parish registers, to take hieroglyphic notes from some saffron page, while dislodging for the purpose the filmy skeletons of veritable book-worms, who had perished there, long since, of delightful satiety!

"And what if I love the seed-capsule and you the flower, Hoyt?" Newbold said, summing it all up. "You are a flower yourself, a splendid specimen, meant to bloom in the foremost *parterre* of our coming American Renaissance. Nature intended me for a nook or a niche somewhere, or else the bottom of a china jar set in a corner cupboard."

"I say!" Newbold continued, dreamily talking, "somehow or other, I feel at home down here on the threshold of a world that is neither New England, with her high-pressure life of invention, enterprise, smartness, and general good repair, nor yet old England, with her storied memories. I like to think I'm not likely to encounter a rising capitalist south of the Potomac. I've a pet vision of these old grandees, chipped out of colonial history, who will be found sitting beneath the umbrageous branches of their family trees, smoking good tobacco and sipping—what do they sip, Hoyt—Falernian?"

"For Falernian, read old rye," Hoyt answered. "Newbold, you are the most pre-

posterous dreamer and dawdler. I don't see what you make it out of. Look at these mud-holes, look at those crazy fences! Houses tumbling to pieces, old hats stuffed into the cabin windows, the negroes along the road like scarecrows, their children little nudities. Not a decent farm-house have we passed in three miles back; nothing but woods, woods, woods, before and behind."

"One pardons any heresy in a hungry man," Newbold answered. "Cheer up, comrade! Think of what that dear, delightful fellow Conway, who took us to his heart and club in Baltimore, promised us! A typical old border mansion (which should be hereabouts), and, for host, a relic of the pig-tailed gentry of a century ago. Conway, who is an eleventh cousin of these Hunters, felt himself quite free to bestow on us a letter of introduction to them. My knowledge of the topography of F—— County is limited, but, from the directions given by the hotel-keeper at Pohick, we must be somewhere near the Aspen River, which bounds the Hunter property on this side. What a bit of road for a canter, Hoyt, this alley just ahead!"

They were off at a gallop through the long green tunnel, made by oak and maple, sassafras and hemlock, sweet-gum and tulip tree, bending their boughs in leafy communion. Vines of wild grape clambered everywhere upon their stout-shouldered neighbors, hanging out banners of close-woven greenery and tassels of luscious bloom. Here the light of the afternoon sun was filtered across the mossy ground, and from the hidden bowers of undergrowth came the song of many a sweet, unfrightened bird.

Beyond this dense tract of woodland, the road came suddenly to a halt upon the steep bank of a rushing yellow stream, churned to mad activity by a recent freshet. In a thicket of pines, upon the opposite shore, stood a weather-beaten red cottage, apparently deserted,—with doors and windows shut. A line stretched across the stream, and a rude attempt at ferry-tackle directed attention to the flat-boat secured at the farther landing.

The two travelers sat their steeds, and exhausted every known species of war-cry, whoop, and jodel, but in vain. No answer, no sign of life from the ferry-house. Only the mocking note of a crow, as he rose from a

tion of the names throughout has been entirely a matter of fancy.

*The author desires to say that while the main incidents of this story are founded upon fact, the selec-

tree-top and sailed in tantalizing fashion across to the haven of their hopes.

"Confound the free-and-easy Virginian who undertakes this business!" Hoyt exclaimed, furiously flecking the mud from his trousers with his riding-whip. "It is all of a piece with the shiftless style of the neighborhood. Just let me get out of this box, and I'll expose him; I'll write to the papers about it; it's simply a disgrace to the State."

Newbold had been sitting with slackened rein and dreamy eye, taking in all the candid beauty of an afternoon in spring in this remote and dewy spot. He started, looked at Hoyt, a quizzical gleam came into his eyes, and Hoyt laughed, albeit unwillingly.

Just then Hoyt, the more far-sighted of the two men, saw a slight figure detached from the black shadow of a belt of pines behind the ferry-house, and, followed by another, come running to the bank. These were a boy and a girl, it soon appeared, and a shrill halloo across the swelling flood gave comforting assurance of relief at hand. To the surprise of the spectators, the creaking hulk of the ferry-boat was at once boarded by the two children, and was swung out, not unskillfully, into the eddying stream.

"By Jove!" Hoyt commented, admiringly, "the girl is doing the chief part of the work. There's pluck for you, and muscle too, Newbold. Look at the heave of that current, will you! Three cheers for the ferryman's daughter!"

Steadily the boat came on. Three cheers were given with a will, and, for answer, they could see the girl nod her head in quiet recognition.

"This is no ferryman's daughter," Newbold whispered, as the boat touched shore.

She was about sixteen, slender and shapely. Her hat, trimmed with an oak-leaf wreath, had fallen back from her flushed face, and now, her task done, she stood, her beautiful bare hands clasped lightly across her waist, her breath coming quickly with exertion. The boy, her comrade, was a handsome, spirited creature, a few years younger. Both young people were of that luxurious type of beauty one sees on the mellow canvases of Lely and his fellows, having the rich coloring, the short upper lip, that seems haughty when in repose, the cleft chin, the well-dilated nostril; and both were clad in clumsily made garments of striped blue-and-white domestic cotton.

"Now, mind, Pink, I'm to ride your Bonnie Bess to-morrow, without the curb, for letting you have first turn," the lad exclaimed; and at once his fancy was taken by Hoyt's mare, who had begun to give every evidence

in her power that she disliked boarding the ferry-boat.

"Let me get on her, *please*, while you lead her on, sir," he pleaded. Hoyt laughed, and acquiesced. Quick as thought, the boy was in the saddle and had gathered up the reins. The mare entered a final protest by rearing violently, while her rider, deftly slipping from the saddle, stood, with one foot in the stirrup, neck to neck with the dancing beast. Before Hoyt could interpose, the mare had touched ground, and the boy was back again on his perch, a bright, wild gleam in his laughing eye. With some difficulty our travelers succeeded in obtaining permission to share the labor of ferrying the boat back.

"Well, if you want to," the girl said, with evident reluctance. "But Dolph and I so seldom get a chance. Old Stubblefield's afraid papa will hear of it, I suppose; but we made him show us how. Stubblefield's gone to mill, you know. Very few people come this way, and Dolph and I just happened to be in the woods over there when we heard you call. I suppose you came by way of Pohick?"

Here the boy broke in eagerly, with a certain pride: "My sister has been to Pohick once, when she went to the springs with Aunt Betty Alexander. I'm going some day."

Hoyt laughed his jolly laugh. Newbold smiled at the thought of the prim, sleepy little town upon the turnpike road, where the railway station and telegraph office seemed as much out of place as a staring new label on a worn leather trunk. "Each mortal has his Carcassonne," he murmured. And then came the bustle of getting ashore, of depositing the absent Stubblefield's fee in a long-necked yellow gourd, hung behind a broken pane in the window of the red cottage.

"Now, if, before we part, you will add to your acts of friendship," Newbold said, "put us in the road leading to Colonel Hunter's house—I believe they call it Crow's Nest."

Dolph's laugh made the echoes ring. "Why, that's our house. You just keep along this wood road to the right for about three miles, and we'll meet you at the red gate. Come along, Pink; it's only a mile across the fields, our way. Let's see who'll be over that fence first."

They were off like a flash, and Newbold's eyes met Hoyt's.

"Original specimens of country gentry, aren't they?" Hoyt remarked. "I say, Newbold, it's getting deucedly on into the afternoon for a man who's had no lunch."

They plunged into the recesses of a cathe-

dral-vaulted pine forest, and Newbold fell to musing and murmuring aloud.

"What did you say?" asked Hoyt.

"I was merely asking you a question."

"I didn't catch it."

"It is this," answered his companion:

"Have you seen a bright lily grow,
Before rude hands have touched it?
Have you marked but the fall of the snow,
Before the soil hath smutched it?
Have you felt the wool of the beaver,
Or swansdown ever?
Or have smelt of the bud of the brier,
Or the nard in the fire?
Or have tasted the bag of the bee?
O! so white, O! so soft, O! so sweet is she!"

"I call that a great many questions," Hoyt rejoined.

At the red gate Dolph was in waiting. His sister had gone on, he said, to announce their coming to his father. Both men breathed freer on emerging from the endless reach of dusky pine woods.

A low stone house, straggling along the summit of a bleak hill, was Crow's Nest. A square porch in front, built of heavy timbers; many small windows, set with greenish panes of glass; a stack of outside chimneys; and, on each side of the door, two grim cedars, whose long arms year by year grew more long and gaunt, until they tapped the garret window-panes. Such were the distinguishing features of this old Virginian house, around which hung an air of pensive melancholy, as if it had long since become resigned to settle down into the gray of declining years. The visitors looked in vain for signs of feminine occupancy, a muslin curtain, or a flower-pot. All was chill, silent, and unsympathizing, quite out of keeping with rosy Dolph, who was then engaged in consigning their horses to a ragged negro groom.

"Pink scolded me," he said, confidently, as he ushered his guests within. "She said I never warned you about Black Jack."

"Black Jack! Is he a desperado who haunts your woods?" Newbold naturally asked.

"It's our mud-hole," the boy answered, innocently. "Just outside the red gate, don't you remember? You might have gone round, but it is right far to go round. I expect you'd rather have come right on, hadn't you? Black Jack's mighty bad in the spring!" And he wistfully surveyed the nether garments of his guests.

The inner hall of Crow's Nest was long and narrow, the walls hung with fishing-rods, with guns, with foxes' pads and brushes, with bows and arrows, rudely made. A few smoke-stained ancestors in red coats, and their ladies

in court-trains and toupets, hung near the ceiling. Along the skirting-board was ranged a row of men's boots, and a pair of antlers held men's hats, in every stage of disrepair. A half-dozen smiling negroes jostled each other in the background; and, starting from the wainscoting, it would seem, appeared an odd, old-time figure, in study-gown and cap, his hair worn in a queue, and his wrinkled face lit with cordial welcome.

"Welcome to Crow's Nest, gentlemen," he said, heartily. "I am pleased to see that Black Jack has let you off, the worse only for a little mud. Black Jack is apt to be formidable at this season of the year. Come into the dining-room, pray, and take something after your ride. You, Trip, go tell your aunt Judy to hurry with her supper."

To present a letter of introduction seemed a mere matter of moonshine in the face of such a greeting. Our travelers were at once conducted to a chill dimity-draped chamber, with a bed of state in either end of it, where they found a small imp of darkness already blowing up a shovelful of embers beneath some light-wood knots upon the hearth. A couple of beaming black boys were on hand to brush and polish, and even Hoyt's reluctant spirit began to own the magic of hearty welcome.

In a scanty room below, paneled with dark wood, and dotted with profile likenesses cut from sticking-plaster and pasted on a ground of white, together with faded Poonah paintings, pendent ostrich eggs, and many a smiling miniature, they presently found the daughter of the house. Pink had put on a muslin gown, and tied her truant locks beneath a scarlet bow. She received the two men without affectation, though a charming blush settled in each cheek. She did the honors by showing relics of the days of George and Anne that warmed the cockles of Newbold's antiquarian heart. In came the Colonel, in a well-brushed suit of black small-clothes; and a clanging bell announced the family meal.

"You will please hand Miss Hunter in to supper, sir," the old gentleman said, with a quaint wave of the hand. As Newbold obeyed, he fancied himself on tip-toe leading out a partner to the minuet!

As in most Virginian houses, the dining-room at Crow's Nest was the most habitable spot about the house. The light came through a number of narrow windows draped in turkey-red. Half a dozen doors opened and shut continually to admit processions of small darkies bearing offerings of smoking bread and cakes. Over a porch-shed thus disclosed grew a lilac-bush in full bloom. On the high

mantel-shelf stood home-made "dips," in massive silver candlesticks, ready to be lighted when the late amber daylight should fade. At one end of the long room stood a side-board covered with fine old silver plate. Cut-glass decanters, containing certain mysterious golden fluids, were open to every new-comer. Upon the wide table was seen the inevitable ham, bronzed with baking, fragrant with cloves, drenched in a bath of old Madeira. Grouped round it were broiled chickens, corn-pone and Sally Lunn, jams and jellies, and a host of like dainties. At the four corners stood silver jugs of cream; and a brave array of blue Canton china adorned the bare mahogany of the shining board. On guard behind his master's chair was an old mulatto, Jupiter, who, having grown gray and nearly blind in the service of Crow's Nest dining-room, was still, after Aunt Judy, the house-keeper, ruler of every festival, his children's children aiding him in attendance at the table. Behind the tea-board, where reigned supreme a large silver urn bedecked with the drop-and-garland of Queen Anne's time, the young hostess took her seat, having in waiting at her elbow an old colored woman with a kindly wrinkled face and clad in spotless homespun. A spectacle always amusing to Northern eyes was the hero of the peacock's-feather fly-brush, a small, serious darky, mounted on a three-legged stool, whose plaited twigs of hair stood erect with awe at his own importance.

As the guests entered the room, a number of tall, swarthy, black-bearded loungers rose up to give them greeting.

"My sons, gentlemen," said Colonel Hunter, with a wave of the hand, scattering the while a brace of fawning hounds from about his knees. Six of these stalwart youths there were, ranging in age from eighteen to twenty-eight. Shy and slow of speech, awkward and low-voiced, these props of a decaying house answered respectively to the names of Ludwell, Catlett, Peachy, Noblet, Bushrod, and Horatio. Only the family Bible knew how many additional high-stepping titles were allotted to each. The same profuse chronicle bore witness to the fact that, at the outset of her career, the sole daughter of Crow's Nest had been made to stagger under the combination of Edmonia Septimia Demoretta Fanshawe Crump! This burden, thanks to her negro mammy, had been speedily lightened to the infant sufferer.

"Come to its own mammy, den, my lamb! De Lawd knows, she don't favor old miss, nor old marse nuther—bress His name! My baby's dess as purty as a pink."

And the solitary Pink's petals had opened

day by day until her maiden fragrance filled the old gray house.

Three years after Pink's arrival had appeared a seventh boy. Despite his fair loveliness, rivaling that of his sister, Mrs. Hunter seemed to take alarm at the renewal of a male succession to her husband's line. She had made jam and bound up bruises and knit stockings for so many boys that the vehement protest might have been forgiven her. At any rate, she died at Dolph's birth and was laid to rest under a lean slab already gathering lichens in the family burial-plot upon a neighboring hillside.

Dolph's name was a parental tribute to that ancient fascinator, Mrs. Radcliffe—an abbreviation of Udolpho, of fame for mysteries. After bestowing upon his last-born this mark of attention, the old gentleman went back to his books, finding metal far more attractive in the rows of mildewed volumes—yellow-skinned or black-jacketed duodecimos, six-volumed editions of wearisome old fiction, dusty piles of bygone magazines, all heaped on the shelves of a so-called "office" in the yard,—a damp, low-studded, whitewashed room, with a mossy roof garnished with stonecrop.

In this asylum chiefly the remnant of old Octavius Hunter's days were gliding by. He was content to look at the theater of life through the large end of his glass. In his eyes, the world, outside of his inheritance of five thousand acres surrounding Crow's Nest, had subsided into vulgar commonplace when certain old-time luminaries in Virginian politics, most of them his blood relations, had become extinct. To prattle about the past glories of his family, who were tide-water Virginians of the old, aristocratic, profuse class,—hand-in-glove with the noblemen sent over to govern the colony, and themselves descendants of a distinguished English line,—was the solace of his life. The grand old river-places, furnished and equipped with English luxuries at a time when Crow's Nest was part of a dense virgin forest, had passed out of the extravagant hands of Colonel Hunter's predecessors, and there remained to him only this remote lodge in the wilderness. Here he was content to dwell, reverting to the days of his gay bachelor life, when he was an ornament of the State militia, as also an active member of the Fraternity of Free and Accepted Masons in the neighboring town of Alexandria. Standing on the hearth-rug, his spindle legs in black tights a little separated, a silver snuff-box in his hand, his parchment face glowing with animation, the Colonel would discourse to you by the hour about how his grandfather rode to hounds

with Washington, and how his aunt Betty had danced with the General at a birth-night ball. So in politics, the Colonel would have nothing modern. The consideration of party topics, just then agitating the broad extent of the United States, was of far less moment than the action taken by Washington about the free navigation of the Mississippi River, or Jefferson's renunciation of his favorite Embargo Act. If, after repeated efforts, one succeeded in dislodging the Colonel from his archæological eminence and bringing him to the consideration of present events, "Egad, sir," he would say, "it's arrant nonsense. Talk about breaking up the Union that was founded by the General! It can't be done, sir! Of one thing you may be certain, Virginia, Mother of Presidents, will stand firm, sir. Did I tell you of that little anecdote my father had from Light Horse Harry Lee, about the General?" The Washington intimacy was a source of undying pride. The father of the present owner of Crow's Nest had been a pall-bearer of the great republican, and a brass-bound clock upon the landing of the stairs still kept record of the hour of Washington's death, the hands remaining as they had been set upon the occasion of that national calamity.

The Colonel had married late in life, and the claims of a numerous family had not greatly incommoded the quiet current of his thought. In those days children had a comfortable fashion of growing up for themselves, untroubled by the endless aids to progress requisite now. The boys hunted, trapped, and fished, took what learning they chose to receive from a threadbare tutor forming part of the establishment, declined the college course proffered them by their father, and developed — as we have seen! Dolph took to his book eagerly, and he and Pink and the tutor had long, delightful seances in the school-room, — a round-tower dependence of the house, with stucco walls and a conical roof, dropped as if by accident in the yard, near the dining-room door.

Pink's childhood was a happy one. She lived abroad outside her school-hours — the housekeeper's scepter, dropped upon Mrs. Hunter's demise, having been triumphantly snatched up by Aunt Judy, the household autocrat. Pink was put on a barebacked horse to ride to water when she could hardly walk, and soon after learned to climb trees like a squirrel. The six big brothers were kind to both motherless children, who formed the romance of their monotonous lives. They petted them, broke colts for them, brought home trophies of the hunt for them, from an owl's nest to a fox's brush, saved for

them the earliest nuts and persimmons, and, at Pink's bidding, would smooth their ruffled manes and check the rioting of their speech at times of family reunion.

Such was the circle at Crow's Nest, now recruited by our two travelers. Whatever curiosity they might have experienced was soon merged into a solid enjoyment of Aunt Judy's good things. A Virginian hot supper, or "high tea," as it would now be called, was a thing to be remembered!

"We missed the canvasbacks in Baltimore," Newbold said, with a sigh to their memory, even amid such profusion.

"Very savory eating are canvasbacks," said his host. "But you must know the cook, sir. 'Let them fly twice through the fire, and eat them when singed,' was a saying of my maternal aunt, Mrs. Peggy Marshall, of Bush Hill. No currant jelly or wine sauce, either. Did you ever hear this little incident of General Washington's latter days, sir? He went once with my grandfather into Gadsby's tavern in Alexandria. Gadsby met them, rubbing his hands, with the announcement that he had just received a prime lot of fat canvasbacks. 'Very good, Mr. Gadsby,' rejoined his Excellency. 'Give us some canvasbacks, a chafing-dish, some hominy, and a bottle of your best Madeira, and I'll warrant you'll hear no grumbling from us!' Ha, ha! Have a slice of this ham, Mr. Newbold. Jupiter, hand Mr. Hoyt's plate. Come, no refusal. Of course you must — a thin slice of Crow's Nest ham never hurt anybody."

Jupiter handed the plate; and, in the act of carving, the Colonel held his knife in air, to explain how to make a really good ham.

"Mo' waffles, sir," said a piping voice at the guest's elbow. Newbold wanted to groan. The time for preserves and cream had not yet come, and already his satiated spirit cried "Enough."

One who has encountered the pressure of Virginian hospitality knows that there is nothing for it but to submit, body and baggage. Hoyt and Newbold made a feeble stand against extending their stay at Crow's Nest; but, betimes next morning, a cart drawn by a large cream-colored mule and driven by a negro lad (whose garments, made of guano-bags, commended Smith's fertilizer to the public gaze), set off in pursuit of their luggage at the tavern in Pohick. Thus beset, our travelers resigned themselves to a fortnight's loitering. Hoyt, an enthusiastic sportsman, found his chief amusement in the saddle, under convoy of the stalwart six, or in roaming the woods and fields. Newbold derived endless entertainment from the life, the place,

the people. Dolph and Pink led him captive everywhere. Aunt Judy was proud to show her various departments of baking, brewing, poultry-raising, hog-fattening, spinning, and weaving. He had called upon the new calf of the red-and-white cow; he had seen Judy make her wonderful "beat" biscuit; he had rifled her quince preserves in company with his allies. He liked best of all, perhaps, to pass hours in the old "office." In this retreat, common to most Virginian houses, the uncertain light came through small panes of glass, shadowed without by a massive clump of box-bushes, affording sanctuary where Aunt Judy dared not pursue her fowls fleeing for their lives from block and hatchet, and causing dusk to fall within at noonday. Above the door, where, entering, the visitor plunged headlong down an unsuspected step, grew syringas, gnarled and ancient, with hoary bark and sparse flowers. Sometimes a nest of young chimney-swallows, loosened by the rain, would fall upon the hearth, "pieping" for human sympathy. Hounds wandered in and out the door; mice sported on the bookshelves; not infrequently a young heifer sauntered down the flagged walk to set her fore feet on the mossy step and fix her serious gaze upon the occupant. Here Newbold liked to sit, opening moldy envelopes, exploring mouse-eaten documents, some bearing proud armorial seals, and taking notes from a family correspondence extending back to the time of England's merry monarch. The spring days glided by, till, on the eve of their departure, Pink summoned both her guests to a final round of "the quarter." Here, a number of whitewashed cabins, each boasting its separate patch of garden, growing corn, sweet potatoes, tomatoes, onions, and cabbage, were embowered in foliage and connected by a broad walk swept as clean as the deck of a man-of-war. A pleasant hum of business struck the ear. Through open doors were seen wheels, looms, hat-plaiting, basket-making. One or two negro patriarchs, with heads like ripe cotton-bolls, sat blinking in the sun before their doors. On the grass, on the walks, everywhere under foot, were jovial pick-aninnies, clad in a single garment. As the visitors passed down the line, smiles, bows, courtesies, and cordial good-byes were showered upon the young men, who had won a host of admirers in "the quarter."

Newbold lingered behind the others, and looked back. It was a fine elastic day, full of sweet, homely smells from wood and meadow and fresh-turned furrows of the earth,—a day when the air "nimble and sweetly recommends itself unto the gentle senses." From the farm-hands, at work on

the slopes bordered by dark lines of pine forest, came cheerful sounds mellowed by distance; in "the quarter" chattering tongues were heard, with the crowing of cocks and the clamorous joy of hens who had just acquitted themselves of their diurnal duty to society. It was all peaceful and pleasant enough. While Newbold mused with regret over their approaching departure, he heard a cry as if of pain from Pink, who, with her two companions, Hoyt and Dolph, had disappeared down a path leading to an isolated cottage. Newbold quickly followed, to be met by all three of the missing young people, Dolph having his arm around Pink, who looked pale and terrified.

"It is nothing," Hoyt explained. "We were idiotic enough to go into that old witch's cabin yonder to have our fortunes told, and the woman was either drunk or crazy, I don't know which, and frightened Miss Hunter with some of her nonsensical sayings—that's all."

"Oh! no," cried Pink. "Aunt Sabra never was like that before—never." And she shuddered involuntarily, clinging to her brother.

They had passed into the glen, a broad grassy valley, strewn with bowlders of rock set in ferns, where dogwood trees in full blossom made a blaze of white radiance in the shadow.

"Sit down upon one of these royal rocks," Newbold said to the young girl gently. "Tell me all about your fortune-hunting, and we will laugh at it together."

But Pink could not laugh. She looked from Hoyt to her brother, but did not speak. Hoyt, strangely enough for him, seemed to labor under a rare spell of embarrassment. Only Dolph laughed, like the light-hearted lad he was.

"All this because Aunt Sabra had what Mammy Psyche calls the highstrikes, Pink. It isn't worth worrying about. After all, I am the fellow to be worried, am I not, Mr. Hoyt?" and the lad looked up into his friend's face with a trustful smile.

"Oh! but she said—she said," Pink found voice to whisper, "that Dolph was—walking—across—his grave!"

"And that *I*, since Miss Hunter is too polite to continue the prophecy," Hoyt added, "that I am to be the grave-digger, or words to that effect. Pray, Miss Hunter, don't let this stupid accident mar the pleasure of our last day at Crow's Nest. Dolph here has shown that he believes in me. Won't you, too, be my friend?"

To Newbold's surprise, the color in Pink's face, as she placed her hand in Hoyt's, deepened to burning crimson.

PART II.

THREE years later, in February of 1863, an officer of the Union army, representing a brigade recently stationed at Three Fork Mills, in the county of —, Virginia, accompanied by his orderly, rode into the half-deserted village of Pohick.

Railway communication with that enlightened center had long since been cut off. The inhabitants nowadays would have been as much startled by the apparition of a locomotive as were the red men who first beheld one on the far Western plains. Many of the Pohick people had packed a few belongings and hastily gone over the border to share the weal or woe of the Confederacy. Those who remained would cower behind the closed green shutters of their frame-houses and listen to the clang of sabers in their one straggling street, not knowing whether this meant the advent of friend or foe; for the little town occupied debatable ground. Some days the people would wake up to see a splendid body of Union cavalry, all a-glitter with brave uniforms and polished steel, dash gallantly on and away into the dangerous region beyond; and again, be roused from their beds at night to give food and warmth to a weather-beaten band of ragged troopers in gray, who ate and drank like famished folk, who for nights past had slept by snatches when and where they could, wrapped in a blanket on the snow, and for days had lived in the saddle, scouring their desolate outposts, with ears alert and hands on pistol-butt!

More than once had the main street of Pohick been startled by the flash of a sudden fusillade, prelude to a skirmish short and sharp. The good citizens watched with clasped hands and bated breath, and presently, when the tide of battle flowed back from before their portals, leaving stranded there its flotsam and jetsam of dead and wounded men, the sealed doors flew open, and friend and foe were borne within to be tended till reclaimed.

Newbold had been among the earliest volunteers for the Union, and his years of experience in the invading army, although spent elsewhere than in these well-remembered haunts, had pretty well prepared him for the reception his blue uniform might expect to encounter here. He had anxiously awaited an opportunity to ride over to Pohick and make inquiry concerning certain old friends; but the opportunity had been slow in coming. A lull in border hostilities enabled him to pursue his investigations with tolerable security, apart from the general possibility of a stray Black Horseman's bullet. He had set out with

a strange excitement of spirit, amounting almost to exhilaration; but the aspect of affairs throughout the country where he passed saddened, then thoroughly depressed him. There was hardly anything to recall the ride of three years before. Nothing can so transform a landscape as the fall of timber; and here acres upon acres of forest giants had been laid low under the decree of war's necessity. For the most part the ground was bare and desolate, but here and there were thickets of noble trees degraded from their high estate. Upon hillsides once crowned with handsome homesteads or generous farm-houses, were now mere skeletons of framework, glaring with hollow eye-sockets, and showing ghastly blackened fronts, round which the bleak March wind swept drearily. Everywhere fences were gone, out-buildings had vanished, fields and orchards were laid waste. The roads were vast mud-holes, glazed with a thin crust of ice. Passing a forsaken campground, he saw the earth incrustated with a curious mosaic, proving to be the spot where a newly shod regiment had cast away their ancient shoes on breaking camp. For companions, during miles of this melancholy expedition, besides his orderly, he had only troops of crows, whose ominous note seemed a warning of evil to come. Last of all in the list of dispiriting influences were the unmarked graves, seaming the hillsides, scattered in the valleys,—mute records they, but oh! how eloquent of recent battle-fields,—though, alas! only a handful beside the countless number of those that, from Shenandoah to the sea, scar the green bosom of beautiful Virginia!

Newbold was not surprised at the scanty welcome he received on drawing rein before the long piazza of the tavern at Pohick. The hostler who appeared had a gray look of chronic apprehension invading the ebony of his once jolly countenance; and mine host, who of old had swaggered out to meet and pledge each new-comer, kept to himself behind the ill-supplied bar counter, the tide of his courteous verbosity curbed, and leaking out only in necessary monosyllables. The tavern folk, and those few who appeared upon the thoroughfare, were all guarded, suspicious, anxious, furtive. Newbold's hardly veiled eagerness of inquiry for news of the family at Crow's Nest met with evasive answers. They gave him such plain food and drink as they could furnish, and left him to himself in the long, chill dining-room, with its last summer's decoration of fly-specked paper-garlands still pendent from the ceiling. Newbold's appetite was not unduly tempted by the cold ham and scrambled eggs, the adulterated coffee and

sharp green pickles set before him. He rose up in a moment or two and strolled out into the stable-yard, to give an order concerning his horse.

Here he was confronted by an odd object he vaguely remembered to have seen before. It was a crippled negro, old and bent, who, broom in hand, was sweeping out the stalls. At Newbold's greeting, the old fellow looked at him, first curiously, then with sudden intelligence in his eyes.

"I knows you, marse, shua 'nuff; but you're fleshier and more conformabler den you was. 'Spect you disremembers Sam! You hain't forgot Crow's Nes', has ye? I'se Unk' Pilate's brer, wha' ye gin a quarter to, de day ye sont me cross Black Jack to open de red gate."

Like a flash the time alluded to came back. Newbold recalled the race on horseback to which Pink had challenged him—the quaint old fellow gathering underbrush along the roadside. The warm balsamic air of the pine woods seemed to blow upon him. He saw again the perfect poise of her light figure in the saddle. Her ringing laugh echoed in his ear.

"Sam, you're a trump," he said, with returning spirits. "Here's a dollar to keep the quarter company. Now tell me all you know about the Crow's Nest family, and how you came to be wandering off here to foreign parts."

The old negro looked around him apprehensively, as his long claws closed upon the greenback, and, shuffling, he led the way into a disused stall.

"Mighty curus times dese, marse. Can't tell yer right hand w'at yer lef' han's scrabblin' arter, 'pears to me."

Here he paused, coughed, looked wistfully into Newbold's face, and, extending his lean forefinger, touched the young man's shoulder-strap.

"Ye would'n' do no hurt, sir, to my ole marse, if ye does wear dis?"

"I wouldn't be fit to wear it if I did, Sam. I was a stranger and he took me in, remember," Newbold answered heartily. "Come, old man, out with your story. They are well, I hope. She—they have not been troubled in their home?"

"Dey's only tol'able, Marse Newbole," Sam said, scratching his head dejectedly. "When de wah fus' bruk out, 'pears like ole marse kinder disbelieved de news. He'd set dere in de office day in and day out, and w'en de papers cum twicet a week, he'd git kinder riled, and den 'pear like he forgit all 'bout it. De young marsters dey kep' gittin' mo' an' mo' oneasy. Dey confabulated 'mongst deyselves—ole marse he kep' on disbelievin'—twel

one mornin' de boys dess tuk an' lipt ober de fence, so to speak, an' jined de army ober yonder at Manassy Junction. Ole marse felt bad den, I reckon, w'en he found der worn't nobody to fill de ole house 'cep' little mistis and Marse Dolph. He tuk to walkin' up an' down de flo', and dar's whar he is now, I specs. Little mistis, her eyes tuk to shinin' brighter'n lightning-bugs, en she and Marse Dolph never rested widout dey knowed wot was goin' on in de camp. Dem two chillun 'ud ride down to de Junction ebery chance dey got. Little mistis 'ud keep all hands at wuk, sewin', knittin', en cookin' for de sojers. Dey warn't nuthin' talked 'bout but marchin' and drillin' and paradin', en how General Beauregard was a-gwine to save de Souf. Bymeby cum a day wha nobody down our way ain't a-gwine ter forgit dis side de Judgmen'. 'Twas hot summer wedder—de groun' a bakin' wid de sun—and w'en we fust heerd dat rumblin' long de groun', bress yer soul, sir, we tuk it fur de las' trump. Ef de fus' clap did'en bounce dat ole headen Si outen his cheer, en turn loose de wust skeertes' nigger on our plantashun!

"Den dey wuz mo' rumblin', en a lot of sharp cracklin' sounds way off to de norf of us. De fus we know, dar was little mistis runnin' out in de sun widout no hat, en her cheeks as red as peonies. Marse Dolph followed arter her, and tuk her hand. Ole marse kem out en stood on de poach, lookin' like he walkin' in he sleep. De cracklin' set in louder den befo', en little mistis she screech right out to her par dat de battle was begun. She looked peart enough to 'a' fit herself, bress yer soul, and de boy he stand dere wid his head up, en his ears cocked like a blood hoss w'en he hear a cone drop off de pine-trees. 'Twas a monsus long day, Marse Newbole; en w'en night kem nobody on dat plantation darsn't go to bed a-waitin' for de news. Bymeby a sojer rode up de wood road. He sot his hoss sorter droopy, en w'en one o' de boys run down to de hoss-block, dar it wuz Marse Noblet's own sorrel, and dat wuz Marse Noblet ridin' him. He med out so ez to walk to de poach, wha old marse kem out to meet him. Den Marse Noblet bruk down like a baby, en if Unk' Jupe hadn' bin dar to ketch him, he'd a-tumbled flat. 'De res' ob 'em is safe, father,' wuz what he med out fur to say, sir, 'but I'se hit in de side,' en den he fainted, en we kerried him into de charmber wha ole miss useter sleep, en dere he died fo' mornin'. 'Twas de blood-flow det finished him, de doctah 'lowed. Dat wuz only de beginnin', sir. Marse Noblet died o' Saturday, en o' Sunday de noise o' de guns begun ag'in bright en arly; en all day it kept rippin' en tearin'

like mad. Ole marse set wid his head on his bres by Marse Noblet's body, en dem chilluns did all de orderin' dey wuz to be did. Sun up, nex' mornin', shua ez you baun, sir, ef dar worn't one o' dem sort o' sick hearses a-turnin' in de red gate, en w'at you spose in it? Marse Bushrod en Marse Catlett *bof*, sir. Dey wuz shot dead a-fightin' side by side."

Sam paused, gave a gulp, of which he tried to seem ashamed, while in spite of him two large tears ran down his cheeks. These he quickly brushed away, using a wisp of hay for the purpose, and resumed his story.

"Well, sir, Mammy Lucy she laid 'em out, en we buried dem free alongside dere ma in de cedar patch; en little mistis she sont into Pohick en bought some black stuff en had Mammy Psyche make a frock for her. Ole marse quit readin' den, en tuk to walkin' up en down de flo'. Marse Dolph he seemed fit to bust, kase ther worn't no chance fer him to git inter de scrimmage on his own account. He en little miss couldn' ride about like dey useter, w'en de Yankees begun to scout aroun' permiscus; en dey was fearful restless en oneasy. Dar ent no use in me tekkin' up your time, Marse Newbole, wid tellin' you all 'bout de way things got a-runnin' down on de ole plantashun de secun year o' de wah. Arter de young marsters quit, dere worn't nobody to run de machine. Ole marse got one oberseer, po' white from de Coat-House, en he stole en cheated; den anudder feller, he cheated en stole. Byme-by, hog-meat gittin' skerser, craps failin', ole marse sent fur all han's to 'semble in de yard. Dar wuz we, in our Sunday bes'; dar wuz he in dat ole study-gound en his little cap; little mistis behine him, all pale en showed she'd bin a-cryin'; Marse Dolph holdin' on to her, en whisperin' now en then. 'Boys,' ole marse sez, speakin' perticular to Pilate, Jupe, en me, cos we wuz de oldest, 'you all see how 'tis wid me. Ye's sarved me true en faithful, en it's powerful hard to say it, but I hain't no call fer to starve my father's people, en so I'll give ye leave to go. We'er that near to Wash'n't'n it'll be easy fer them as wants ter to git through de lines. Them as has families to take wid 'em I'll give a little money to start 'em on de way, and what I can I'll do fur all on ye.'

"Dem niggers acted mighty queer, Marse Newbole. It cum as nateral as breathin' to want to holler out at dat. Dat wuz *freedom*, sir, dat wuz! But de sight o' our ole marse standin' up in de ole poach so feeble like, en dem po' young things behine him, wuz

mo' stronger; en we jist kep' still as if it wuz in preachin'! Den Mammy Psyche gin de fust wud by squealin' out en throwin' her arms aroun' dem two, Miss Pink en Marse Dolph, en prayin' ole marse, for God's sake, not to send her off from her lambs, her precious babies. Ole Unk Jupe put his hand on one o' de do' poses, en he sez: 'Tek dis here away, marse, but leave ole Jupiter.' En dat sorter bruk down de ceremony ob de 'cashun. De wimmen folks en de chillun cried en hollered, en de men stood on de groun' ez if dey wuz bin havin' der dogger-types tuk."

Again Sam had recourse to the wisp of straw. Newbold stood in silence beside him, his eyes fixed upon the ground.

"I'd like to tell you 'bout little mistis, sir," the old negro said, confidingly, after a time. "She waited a minnit to see ef her pa wuz gwine to say enny mo', en seein' him settle down like he wuz dreamin', she dess run out on de grass amongs' us, sir, wid dat same face she had w'en she wuz a-listenin' to de guns at Manassy; it wuz proud, an den agin it wuzn't.

"'I wornts you all to know dat my father en my brother en I loves you jes' ez well en trusses you jes' de same ez ever,' war what she say; 'en ef any one 'mong's ye wornts to stay en share our poverty, he's welcome; en ef any one of ye wornts to come back to Crow's Nes', he's welcome. I've growed up here amongs' ye, en I knows ye, big en little, ole en young. It's like pullin' my heart-strings out to see ye go away, en de ole place go to ruin. But ef it's got to be, my dear, dear frien's, I know you'll help——'"

At this point of his narrative, Sam made no further attempt to stem the current of fast-welling tears that streamed down the channels of his withered face. Presently he abandoned the wisp of hay as inadequate to the occasion, and took from his pocket a handkerchief emblazoned with the United States flag in all its bravery of colors.

"Dat was de beginnin' of de eend, Marse Newbole," he said. "De Crow's Nes' niggers cl'ared out arter dat, do de mos' ob 'em was mighty hard to stir. Unk Jupe en Mammy Psyche dey staid, o' co'irse, en dey kep' a couple o' boys to hope in de gyarden. Aunt Lucy she went off to nuss in de hossipittle at Culpeper. Aunt Judy,—she dat wuz house-keeper, sir,—why, she's cook at Marse Secretary——'s, dis minnit, in Wash'n't'n, en Unk Pilate, her husban', he drives de kerridge. Ole Unk Si he tuk his savin's en made tracks, fust off. Hain't nebber heard o' enny cullud gentleman wha's runnin' fo' Presiden', down

dar, has ye, sir? De way dat nigger baambilated off, ye'd a-thought he warn' gwine ter 'low Marse Linkum no chance, no how. Sum' on 'em has writ letters beggin' marse to take 'em home ag'in; some on 'em we ain't never heerd on. I'm a kyinder old tarrypin myself; en w'en little mistis 'vised me to be a-movin', I dess crawled dis fur, en 'ere I stopped. I gets my cawn-bread en my bacon en a bed to sleep on by de wuk I does fur Marse Jim Peters, wha' keeps dis here hotel; but dey's a mons'us difference. 'Pears like I ent got no self-respec', to be waitin' on po' whites, no-how; en de longes' I live, sir, I ent seen money tuk befo' fur a stranger's bode en lodgin'."

Thus far Newbold had heard without wishing to interrupt the simple old narrator, but a great longing to know more of her, toward whom his heart had been drawn during years of separation, overmastered him. He wrung Sam's hand, greatly to that worthy's astonishment, leaving in the horny palm another greenback — an act of beneficence that almost defeated his object by depriving the now smiling negro of his powers of speech.

"Your young mistress, Sam, how does she look? how does she bear her changed fortunes?"

"She's grow'd like a hickory saplin', Marse Newbole, en it's dess a wonder her sperret ent bruk, wid de pore eatin', en de worriment, en de hard work. I ent tole you, sir, dat Marse Peachey got killed at Malvern Hill, en Mas'r Ludwell lay down dere in the hoss-pittle at Richmond all las' summer, 'fo' he died o' de wounds he got at Seven Pines. W'en Marse Raish kem a-limpin' home on crutches wid one laig gone, en took to settin' on de back poach all de day (underneath de water-bucket wha de gourd hangs, sir, you 'members it?), en gev hisself up to bein' drefful onsperrated, seems like dat wuz de las' straw! Ole marse looked at him kinder far off, en he sez, sez he, 'I'm an old tree, en dey've lopt off all my branches; pretty soon de trunk'll fall, please God.' Den Marse Dolph en Miss Pink dey tuk de whole fambly in charge. Marse Raish allus was de perjinketest ob all de boys, en he's give 'em lots o' trouble sence, en ole marse 'pears to get childish like. Dat boy Dolph ez only fifteen, sir; but ef you'll b'leeve me, he's breakin' his heart to go enter de wah; en Miss Pink she wants de wust way ter please him, en but fer his pa I b'leeve he'd be off like a shot. . . . Dey's powerful po', sir," he added, with reluctant admission. "All dat lan' 's no good to marse, en de Yankees hez cut down acres o' his timber. But dey's great folks still, sir. Dey's Hunters, ebbery inch, en dey don't gib up."

NEWBOLD rode back to headquarters, turning over in his mind a variety of projects by which he could bring himself into communication with, and if possible aid, the family at Crow's Nest. A day or two afterward, he met his old friend Hoyt, now captain of New York volunteers, and, like himself, recently stationed in the Three Forks neighborhood. They dined together at Newbold's mess, and after dinner Newbold resolved to make an effort to break an awkward kind of reserve that his own feeling had established between them in regard to the visit at Crow's Nest. He gave Hoyt an outline of Sam's story.

"By Jove, it's too bad," Hoyt responded, heartily. "Of course we should do something; but what? Our hands are tied. Very likely they'd bar the door against us, and the girl would hurl secession eloquence at our heads from the upper windows. What a pretty creature she was, Newbold! Do you know, I believe my wife is to this day a trifle jealous of the spooney way I used to go on about old Virginia after our visit there. I sent Miss Hunter a lot of books and engravings, and wrote her a half-dozen rather sentimental letters from Europe that summer — and there the thing cooled off. You remember, it was just before I became engaged to Lilian —"

"I haven't forgotten anything about that time," Newbold said, with a sort of effort. "Perhaps I never told you, Hoyt, that I myself fell as irretrievably in love with Miss Hunter as an idiot could. I wrote and told her so, and asked her leave to revisit Crow's Nest in a different capacity. But —"

"She didn't agree with you, old fellow?" Hoyt said serenely. "Well, that's a chapter that comes in most of our lives, isn't it? I am so well set up in that matter that I can afford to sympathize with you old bachelors."

"Unfortunately, as you will agree," Newbold added, after a moment's deliberation, "I have a provoking way of not changing when I once make up my mind. I find myself to-day more than ever fixed in my regard for her. The story that old darky tells of her pluck and her endurance has filled me with a rash and unmanageable desire to go to her rescue."

Hoyt whistled.

"Excuse me, old fellow, but really — I — It's such an immense joke, don't you see? Why can't you have the common sense to know that now she would never look at you? These Southern girls are the very devil! Perhaps you'd better try it, though, if you are going in for a cure; or else wait awhile till we have settled this rebellion business, and affairs

assume a different complexion. For my part, I stand ready to do the Hunters any kindness or any courtesy that may be possible, if a chance presents. How Lilian will laugh when she hears I've run upon the Virginia flame again!"

ONCE again upon the banks of the Aspen River our two friends came to a halt. This time it was no May-day pleasuring beneath the flowery arches of the wood. Hoyt was in command of a scouting expedition, which Newbold, out of the very restlessness of his spirit, had volunteered to accompany. The long winter of inactivity made an opportunity like this a godsend to both men and officers. It was now toward the end of March, and, by one of the coquetries of Virginia climate at that season, a brisk snow-storm had set in, driving Hoyt's party into the shelter of a close growth of pine-trees for their noonday bivouac. Gathered round a tiny fire, whose thin blue curl of smoke they would have hidden from outside observation, they sat eating and chatting merrily — their horses tethered close at hand, comfortably munching provender beneath a thatch of snow.

Suddenly the soldier on guard without gave a note of warning to his comrades. In an instant every man's hand was on his rifle. In the dead silence that ensued, they could hear the long, even stride of horses galloping on the far side of the river-bank. From their ambush they saw a party of Confederates emerge from the undergrowth opposite and sweep down the steep descent to the ford. Their steeds plunged into the stream and rioted with the swift yellow current, wading breast-high, now swimming, again striking bottom, and so until the hoofs of their leader struck the shore immediately beneath the wooded height where lurked their foe.

What followed was the work of a moment. Newbold, looking out with a thrill of eager anticipation, saw the gray coats fare gayly forward to their certain doom — saw in the midst of them, first to breast the current, waving his arm aloft in boyish pride — joyous, gallant, and alert — good God! could this be little Dolph?

"Fire!" came the ring of Hoyt's clear voice.

Newbold was conscious of a mad movement of protest. Before the smoke attending the deadly volley had scattered, the ranks of the rebel cavalry were seen to split asunder. Two or three bodies plunged heavily from their saddles to the ground. In the skirmish that ensued the rest of them, surprised and outnumbered, made desperate fight in vain.

Those not slain or captured on the spot turned back to cross the ford, a rain of bullets following. More than one succeeded in crossing unhurt; some sank wounded on the far bank; and one poor fellow, struck in mid-stream, sat his horse gallantly until he had well-nigh mastered the buffeting of the flood, then, falling like a column, was lost to sight beneath the angry tide.

It was short work to look for Dolph. The boy lay by the roadside, his fair face looking heavenward, a bullet through his heart.

Hoyt, having a severe thigh-wound for his own share of the encounter, was carried by his men into the shelter they had recently quitted and laid on a bed made of leaves and blankets, while a messenger, accompanying the prisoners sent back under guard, was dispatched to headquarters in search of a surgeon. Into this retreat, where the wounded of both sides were lying, Newbold had caused Dolph's body to be borne. A faint hope, too soon extinguished, nerved him to continued efforts at resuscitation. Hoyt, on discovering the object of his friend's solicitude, was beyond measure shocked and grieved. In the intervals of his acute attacks of suffering, he would ask impatiently if nothing could be done to save the boy. From one of the wounded Confederates Newbold ascertained that this was young Hunter's first military service since his recent enlistment; and that the party, at his request, had stopped overnight at Colonel Hunter's house, where it was more than probable some one of the retreating men had even now borne the news of the lad's fate.

"But I reckon I'd rather be here as I am, than in his boots that tells the news," the soldier added, between gasps of pain.

Newbold, having done what he could for the sufferers, paced up and down the road in front of his improvised hospital, a prey, for once in his life, to blank uncertainty. While he strode back and forth, a soldier on the outpost signaled him, pointing in the direction of the far bank of the river. Going down the steep path, Newbold saw through the mist of swiftly falling snow the black hulk of the old ferry-boat push out from the opposite shore.

"There are only two people aboard, sir," the sentry said. "They've a white flag up. It's a woman and a nigger man, I guess."

Newbold's heart was filled with foreboding. He could make no answer; he could only watch and wait. The boat drew nearer. What he feared was realized. A gaunt old negro handled the ropes of the ferry-boat, and at his side a young girl stood directing him. A moment more, and Pink, her large eyes fixed and staring, no tear upon the white-

ness of her cheek, sprang to the shore and came swiftly up the bank.

"I have come to claim my dead," she said, in tones so strange and sad that, instinctively, every man who heard her doffed his cap and stood bareheaded in the snow-flakes. Newbold dared not answer; he could not tell whether she recognized him or not. In silence he led her, followed by old Jupiter, whose shambling steps found it difficult to make a footing, along the slippery path. Dolph's body had been removed a little apart from the others and laid on the moss at the foot of a tree. Newbold hesitated for a moment; then, drawing aside the sweeping bough that veiled it from their sight, he motioned the young girl to pass before him. He saw her swoop downward, like a mother-bird to its young, and then could look no more. She came out presently, the same marble creature who had entered there. Hoyt had aroused from his benumbed condition, and, dimly comprehending what had come to pass, begged Newbold to call her to his side.

"I must say—a word—you know. She may feel more kindly to see me—in this state."

He had raised himself upon his elbow and looked appealingly toward her. Pink's eyes met his. To Newbold's utter surprise, the young girl's face kindled with a momentary glow that was astonishment and joy and tenderness combined. She made a quick motion in Hoyt's direction, then as suddenly put both hands before her eyes and drew back.

"Pray speak to him, Miss Hunter," Newbold urged, in a voice that did not seem his own. "He is badly wounded, as you see, and your—sorrow—is the one disturbing thought he can't dismiss from his wandering brain. Surely, you will be merciful; surely, you will believe that this terrible day's work was one neither he nor I would have consciously wrought."

As he spoke, the girl trembled pitiably; through her clasped hands he could see a stain of vivid carmine dye her cheek, then vanish, leaving it pale as before. With sudden impulse, she crossed to Hoyt's side and bent down to him; but the wounded man,

exhausted by his efforts, had already fallen back in a stupor that might mean death.

Pink knelt for a moment gazing at him; then, rising, turned away. Newbold caught the murmur that escaped her lips.

"Better so," she whispered drearily.

"Better so," he echoed in his heart. "She will perhaps be spared a deeper pang."

Dolph's body was wrapped in his soldier's blanket; but, when the moment came to bear him forth, Newbold and the men who offered to assist were motioned back by the lean arm of Jupiter, who, mute and solemn, kept watch beside the dead.

"I ax yer pardon, sir, but dis is *my* place, and I has my mistis' orders," the old man said; and, lifting the body tenderly to his breast, he walked with majestic tread along the path—the girl, erect and tearless, following.

A cloth laid over the boy's face fluttered back. Those who in silent awe looked after the sad procession till it passed from view saw the gleam of his golden curls nestling in the protecting arms of Jupiter, even as the ferryboat pushed out from shore. Midway in the stream Newbold caught his last glimpse of them: the girl at her old place by the ropes, battling with wind and tide; the negro, on his knees beside her, striving to shield his burden from the storm. Then a mist came over the watcher's eyes; that and the falling snow blotted her forever from his sight.

A LITTLE while ago, Hoyt's young daughter, an airy fairy Lilian of seventeen, asked her father why their friend Mr. Newbold had never chanced to marry.

"He seems so solitary, papa," she said, from her favorite perch on the arm of Hoyt's library chair; "and sometimes, when he is here and we are all so happy, I can't help fancying it makes him sad to see us. I would like him to be happy too papa, for he is the kindest, truest——"

"Yes, that is it, Lilian. If such a thing can be, he is too true."

And there, in the twilight, Hoyt told to his darling the story I have told to you.

C. C. Harrison.

"I COME TO CLAIM MY DEAD."

MAP OF ALASKA AND PART OF BRITISH COLUMBIA, SHOWING THE YUKON RIVER FROM ITS SOURCE IN BRITISH COLUMBIA TO ITS MOUTH IN ALASKA, BEING THE COURSE OF LIEUTENANT SCHWATKA'S RAFT-JOURNEY IN 1883.

THE GREAT RIVER OF ALASKA.

EXPLORING THE UPPER YUKON.*

THE Yukon River naturally divides itself into three portions: the Upper Yukon, measuring about five hundred miles, and reaching from its source to Fort Selkirk, where it is joined by the Pelly; the Middle Yukon, extending from Fort Selkirk for another five hundred miles to Fort Yukon, at the junction of the Porcupine or Rat River; and the Lower Yukon, nearly a thousand miles in length, reaching from Fort Yukon to the river's many mouths in Bering Sea and Norton Sound. The middle and lower rivers had been traversed by Russian navigators or in the interest of the Hudson's Bay Company, thus completing the exploration of three-fourths of the Nile of Alaska; but the upper river was still unknown till the early summer of 1883. To describe briefly the Yukon and its exploration from Selkirk to its source, thus completing the chain, is the object of this article. Or, speaking more correctly, from its source to Fort Selkirk; for it was with the current that my little party floated on a raft over this part of the river. That Alaskan Indians of various tribes had broken through the different passes in the glacier-clad mountains which separate the Pacific from the head-waters of the Yukon, in order to trade with the Indians there, has been known for over a century. Why this route had not been picked out long ago by some explorer, who could thereby traverse the whole river in a single summer instead of combating its swift current from its mouth, seems singular, and can only be explained by supposing that those who would place sufficient reliance on the Indian reports to put in their maps the gross inaccuracies that fill even all our Government charts of the Yukon's source, would be very likely to place reliance on the same Indians; and these, from time immemorial, have united in pronouncing this part of the river unnavigable even by canoes, filled as it is with rapids, whirlpools, and cascades.

Arriving in Chilkat early in June, 1883, I found that miners had pioneered the way some distance down the river in search of gold, but no white person had as yet explored this part

of the river; and when I humbly suggested a raft as my future conveyance, and hoped to make the whole river in a summer's dash, I was hooted at and ridiculed by natives and white men alike.

There are four passes known to the Indians leading over from salt water to the sources of the Yukon. The one by way of Lynn Channel and Chilkoot Inlet is the best of all, and is the one that was undertaken by my party. For many years this pass had been monopolized by the Chilkoot Indians, who did not even allow their half-brothers, the Chilkats, to use it. Both bands united in opposing the migration of the interior tribes to the coast for trading purposes, wholly monopolizing this Alpine commerce. I used numbers of each of these three bands of Indians in packing my effects over the mountains. As I have intimated, the journey began on the 7th of June, when we left Chilkat with thirteen canoes, I believe, towed in a long, continuous string by a little steam-launch kindly placed at my disposal by Mr. Spuhn, the manager of the Northwest Trading Company. They formed a pretty sight as they were towed down the Lynn Channel and up the Chilkoot Inlet, some twenty miles to the Chilkoot mission, where four or five canoes full of the latter tribe of Indians were added to the already long chain. Leaving the Chilkoot Inlet and entering another that the Indians called the Dayay, we could fairly say that our explorations had begun.

This inlet, like so many in Alaska, has more the appearance of a large river than a salt-water estuary,—flanked on either side by immense precipitous mountains, covered nearly to their tops with a dense growth of spruce and pine and capped with snow-white glacier ice, which feeds a thousand silvery waterfalls, whose gleaming stripes down the shaggy mountain-side give a beautiful relief to the deep, somber green of the foliage. The mouth of the Dayay was reached that evening, and our effects of some three or four tons were lightered ashore by means of the Indian canoes;

* Lieutenant Schwatka's expedition to Alaska and the British Northwest Territory in 1883 had for its object the seeking of military information regarding the Indian tribes of those regions. A subordinate purpose was geographical exploration. The party consisted of seven

white men — two officers, four soldiers, and one citizen (Lieutenant Schwatka, Dr. Wilson, Topographical Assistant Homan, Sergeant Gloster, Corporal Shircliff, Private Roth, and Mr. McIntosh) — and such Indians as were added from time to time during the journey.

the launch steamed out of sight, and my little party of seven white men were left alone with nearly ten times that number of Indian allies, to fight our way over the mountain range whose eastern slopes feed the great river that we desired to explore. Up the swift current of the Dayay, only thirty to forty yards in width, the Indians transport-

CANOEING
UP THE DAYAY RIVER.

ed the load in canoes, two to each canoe, one pulling by a rope fastened to the bow and the other keeping the craft out in the stream by a long stiff pole reeved into the rope. Reaching the head of navigation at the foot of a boiling cascade, the canoes were unloaded and drawn out of water, and placed under cover of the dense willows that line the banks of this stream. Each human pack-mule now adjusted his load for the struggle ahead, the average weight of a pack being over a hundred pounds for the adults, one Indian carrying as much as one hundred and thirty-seven pounds; boys of fourteen or fifteen, who had eagerly solicited "a pack," carried from thirty to seventy pounds.

We followed the trail which led to the very head of the Dayay, where its waters poured beneath bridges and banks of snow, until we stood at the base of the pass, towering some three thousand to three thousand five hundred feet above us, capped with snow, and with long finger-like glaciers of clear blue ice extending down the granite gulches to our very level. Early on the morning of the 11th the pass was essayed, and it was an interesting sight to see our sixty odd packers strung out along the steep snow-covered mountain-side. In many places the ascent seemed almost perpendicular, the Indians using their hands and knees, and laying hold of the stunted juniper and spruce roots that stuck through the thin covering of snow. Along the steep drifts, where a misstep would have hurled them down the mountain-side, the foot-tracks of the leaders were made deep and inclining inward so as to give a firm foothold, and many of the party used rough alpenstocks to aid them. At the top of the pass, four thousand feet and more above the level of the sea, we were in the drifting fog that forever hangs over these vast fields of elevated ice, and which cut off the fine view

that we had anticipated from such a favorable height. The descent from Perrier Pass, as I called it, is very rapid for a few hundred yards, but it is a pleasant walk compared with the toilsome struggle to its summit. I noticed that the Indians in following a course on the snow, up-hill or on a level, or even on a slight descent, always step in each other's tracks, so that my sixty odd Indians made a trail that looked as if only five or six had passed that way; when going down a steep descent, however, each one would follow a separate course, and they would scatter out over many yards. I could not help being impressed with the idea that this would be worth remembering if one ever had occasion to estimate the number of a party of Indians that had traveled over a fresh trail.

Passing by a number of small lakes on our left, some few of which yet contained floating ice in small quantities, we sighted the main lake late in the afternoon, and in a couple of hours found ourselves upon its banks at the mouth of a beautiful clear stream, boiling down from the mountain-sides. This lake, which I named Lake Lindeman, was a beautiful sheet of water, some ten or twelve miles long, and looked not unlike a limited area of one of the broad inland passages traversed by the steamers plying to Alaskan ports farther south. Fish were very scarce in these cold glacier-fed streams and lakes, but we managed to vary the stereotyped fare of Government bacon with a few dusky grouse and equally tough ducks, for it was now getting to be the breeding season of all the feathered tribe. Flowers were in bloom on all sides, and the deciduous trees had long since put on their

spring and summer fashions, and robins and many other singing birds fluttered through the foliage, while gulls and tern hovered over the waters of the lake.

boiling cascade, but a few minutes' hard work sufficed to pry the raft off; and as we brought up on the gravelly beach in the still waters of Lake Bennett, we all felt grateful that the

PERRIER PASS.

Here we commenced building our raft. The logs were of the smallest kind, consisting of dwarfed spruce and contorted pine, and it was a question whether a raft 15 x 30 would carry our effects and all our party, white and Indian,—a question which was finally settled in the negative, by sending only three persons and a little over half the material on the first voyage of the raft, a Government tent serving the purpose of a sail, which was amply filled by a southern gale that in other respects made navigation quite hazardous.

On the 16th we steered the raft through the mile of rapids and cascades that make up the short river that connects Lake Lindeman with the lake to the north, called by me Lake Bennett. Once we were jammed between a protruding rock and the shore in a narrow

safe passage had saved us a few days' hard work. But it was a necessity to remodel the raft on a larger plan in order to carry all that must find passage on its corduroy decks. Larger logs were found near the Payer Portage, and our raft was built on the plan of 15 x 40, although really nearer 16 x 42. Two decks were built up, fore and aft, leaving spaces at the ends for bow and stern oars, while the central part of the raft between the decks gave working-room for two side oars, with which the unwieldy craft could be rowed on still water at the rate of about three-quarters of a mile an hour. Behind the forward decks was a strong nine-foot mast, and the sail was a wall-tent with its ridge-pole for a yard, and the projecting poles of the deck gave lashing-points for the ends of the tent as we trimmed

sail to vary our course before the wind; for, rude as our raft was, we could sail her for two or three points (about 40°) to the right or left from a straight-away course before the wind. Not one of the smallest discomforts of the trip was the necessity of standing all day in the water while building the raft. The water in the lake was icy, having just poured down from the glaciers and snow-fields that crown the surrounding mountains; ice-water and mosquitoes were a singular combination of discomforts. Caribou and bear tracks were found not far from the shores, but the animals themselves were never seen.

The morning of the 19th of June the new craft cast off bow and stern lines, and rowing a few hundred yards we set our primitive sail; and as the never-ceasing southern wind grew with the sun, we soon found ourselves lubbering over the beautiful lake at a speed of from two to two and a half miles an hour. Through the ice-fields capping the timbered mountains to the east protruded many a dull red rock and ridge surmounted again by the everlasting white fog. Specimens of this rock found in the terminal moraines of the little glaciers showed iron, and I named this bold range after that metal. By three in the afternoon the wind had increased to a gale, and the huge waves of the lake were sweeping the rear space of the stern oarsmen, and even at times breaking over the pole-deck itself; but still our faith in the queer sailer was sufficient to hold her head straight for the north. For two long hours we held our course, for a favorable wind over the lakes must be utilized to the last second possible; but the gale increased to a cyclone and threatened to carry away our mast; the white-capped seas swept both decks and deluged between so as to make rowing impossible; and the two ends of the craft worked like a hinged gate in the huge waves, for there was not a single log that extended much farther than half-way of the raft. When a few of the pins commenced snapping and a little sheltered cove was seen to our right, we turned the raft's head to the eastern shore, and in a little while were threatened with destruction in the seething breakers that broke upon the rough granite beach. A line was carried ashore by the Indians in a canoe, and with some to hold her off by means of stiff poles, the rest of us "tracked" or towed her back to the shelter of the cove. Here we remained a day and repaired the raft; four fine logs were found which would reach her whole length, and by their size so increased her strength and buoyancy that we thought she might be able to carry a name, and so dubbed her the *Resolute*, though I doubt if the name was heard half a dozen times afterwards.

The next afternoon by five o'clock we had

CREEPING THROUGH
THE FOG.

reached the north end of Lake Bennett, thirty miles long, and entered a short river that gave us a taste of the fact that drifting with the current also had its difficulties, for we were two hours prying the *Resolute* off a sand-bar at the mouth of this short river. This limited stream is known to the Tahk-heesh Indians as "the place where the caribou cross," and in certain seasons of the year many of these animals ford its wide, shallow current. The general trend of the new lake into which the river emptied was towards the east, and our old friend the south wind was of but little use; and though there were only three or four miles to traverse, it was three days before we got a favorable wind that carried us across. This little lake (Lake Nares), whose entire outline could be viewed from the high hills on the north, was the prettiest one we found nestling in these northern hills. The country was perceptibly opening, many level places could be seen, the hills were less steep, and the snow was disappearing from their crests. Many roses and wild violets were in bloom, and wild onions lined the lake shore in profusion and gave us a fair substitute for the vegetable diet that we had left behind; and everywhere there was a general change of verdure for the better. Grand terraces that looked like stairways for giants, symmetrical on opposite sides of the lake, showed its ancient and subsiding levels. These, too, in a less conspicuous

manner, had been noticed on the northern shores of Lake Bennett. Grouse abounded everywhere, and the little broods were met every few yards in walking over the hills, the tiny ones scampering off in the weeds while the mothers walked along, clucking anxiously, often only a few feet ahead of the intruder. Once out of the little lake through a short river of a hundred yards, we entered another lake, still trending to the east, and eight or nine miles long, which I called Lake Bove, and on whose limited shore-line I was compelled to make two camps and half a dozen landings, so baffling was our motive power, the wind.

At one time, when we had rowed ashore to avoid a sudden head-breeze, our Indians carelessly set fire to some of the dry dead spruce timber, and the flames, enveloping the living trees for hours afterwards, sent upward dense volumes of smoke that we saw from many miles beyond. Toward evening, some fifteen or twenty miles ahead, a smoke was seen curling upward, and our Indians told us that it was an answer to the one we had accidentally made on Lake Bove. These signal-smokes were quite common between the Chilkats and Tahk-heesh Indians, the former thus announcing to the latter that they had crossed the mountains and were in their country for trading purposes. An old trader on the Middle and Lower Yukon told me that this Chilkat-Tahk-heesh traffic was so great some years ago, that as many as eighty of the former tribe have been known to cross the Kotusk mountains by the Chilkat and Chilkoot trails twice a year; or, in brief, eight tons of trading material found its way over Perrier Pass and, ramifying from this as a center, spread over the whole north-west. Fort Selkirk, for a brief period a Hudson's Bay Company post, interfered with this commerce; but a war party of Chilkats in 1851 extended their trading tour five hundred miles in order to burn it to the ground, and the blackened chimneys still standing in a thick grove of poplars are monuments that attest how well they did their work. We had an immense volume with us purporting to be an authority on Alaskan matters, and as we read that it was but two days' journey ("nay, hardly a day and a half") for the Indians from here to Selkirk in their swift birch canoes, we thought that possibly the worst of our journey was behind us; until our Indians, some of whom had grown gray-headed traveling this country as traders, dashed our hopes with the information that there were three rapids aggregating five or six miles in length ahead of us, that the Indians here never used birch-bark canoes, and that the journey took them nearly two weeks in their cottonwood ones and would take us three,

if we ever got through with the raft at all; for though their wavering faith had been strengthened by the actions of the *Resolute* in the past, they were not yet perfectly settled. Instead of being one hundred and twenty miles from Tah-ko to Selkirk, as guessed at, it was four hundred and thirty-three. A roughly built Tahk-heesh house stood upon the banks, and is the only one on this part of the Yukon River for hundreds of miles on either side. The next lake is nearly thirty miles in length, and proportionally much broader than any we had passed. I called it Lake Marsh, after the well-known scientist of our country. The waters of this lake were much warmer than those we had passed, and we all refreshed ourselves with a few minutes' bathing on its shores. Nearing the beach at Lake Marsh during the two or three camps we made on it, we found it impossible to get much closer than fifty to one hundred yards, owing to the huge deposits of "glacier-mud" that had been brought down by the streams whose waters at their sources came out from under these colossal pulverizers of the mountain flanks. The *Resolute* drew about twenty inches, and the stage of water was just such that we were compelled to pack our camping material this distance through a species of mud that almost pulled our rubber boots from our feet as we floundered through its tenacious mass.

We were now having our longest days, and so close were we to the arctic circle that type like that of THE CENTURY Magazine could easily be read at midnight. On the night of the 28th of June we sailed till after midnight, so imperative was it to take advantage of every favorable breeze, and at that time but one star in the cloudless sky could be seen, which was made out to be Venus. Faint signs of terraces were still observable on the hill-sides, but they were lower, nearer together, and not so well marked. The trees on Lake Marsh, as had been often noticed before on the upper waters of the Yukon, all leaned, in more or less conspicuous inclinations, toward the north, or down-stream, thus plainly showing the prevailing direction of the stronger winds. About noon on the 28th, while sailing on Lake Marsh, we had an energetic thunder-shower, which lasted till past two in the afternoon, and which is worth noticing as the first thunder-shower ever recorded on the Yukon, they being unknown on the lower river. Many of the flat, level places on the eastern hills were still covered with last year's dense growth of dead yellow grass, that from the lake, as we slowly sailed by, looked strangely like stubble-fields of oats or wheat. The outlet from Lake Marsh was very annoying to our mode of navigation with its endless banks of "glacier-mud," most

THE GRAND CAÑON, UPPER YUKON.

of which was probably brought down by a large river—the McClintock—that here comes in from the east; a river so large that we were in some doubt as to its being the outlet, until its swift current settled all conjectures by swinging us around into the proper stream. This new river that we entered was much more picturesque than any we had so far met on this journey, and strongly resembled many of the streams of more favored climes. Its hillsides were covered with pine, hemlock, and spruce, with here and there little grass-covered prairies, while the valley was fringed with poplars and willows in the densest profusion. In fact these latter were so impenetrable and grew so close to the very water's edge that we were often baffled in finding good camping-places, unless some friendly ridge from the hills threw

out a pine-covered spur to the river-bank, that would allow a tent or two to be pitched under the evergreens, or at least give us room to bivouac and spread our blankets. The deck of the raft itself was preferred by many to the variety of uncomfortable beds that this country can offer to the traveler.

The exact location of the great rapids ahead of us was not known to our Indians, and we were in a nervous state of anxiety caused by watching for them in a craft that we could not get to shore for a landing in less than three hundred or four hundred yards run, and possibly a mile, if combinations should be unfavorable. The persistent fishing of the doctor and some of the men had occasionally been rewarded with success, and a few lake trout and graylings had been added to our slim fare. On the last

CASCADE NEAR THE END OF THE GRAND RAPIDS.

day of June, as we rounded a high bold bluff, we heard rapids ahead and saw that the current was getting swifter and the water much more shallow; and we ran our raft on shore with more haste than discretion, for an examination showed the rapids to be of the lightest character, with the worst part of them in the shape of a rocky reef some thirty or forty yards directly in front of the raft. It was, of course, impossible to clear this impediment when we cast loose, and so we floated against it, depending on a series of swingings outward until its end was reached and passed. As the raft brought up on the reef and the water was seething through the logs and the men preparing to get overboard to pry her around, a most

energetic splashing was heard on the farther side of the craft, and much to our astonishment a large grayling was seen floundering on the end of a fish-line that some one had left hanging over the raft in the hurry of more important duties. This was our initiation into the grayling fishing-grounds that gave us some four or five hundred of these delicious and "gamy" fellows in the next few days, until we actually tired of them. The fish caught that evening in the ripples along the river-banks were of two distinct sizes, with very few that could be called intermediate, the larger weighing about a pound and a quarter to a pound and a half and the smaller about one-fourth as much. The next day, the

1st of July, with a Tahk-heesh Indian whom we had picked up as a guide, we approached the great rapids of which we had heard so much. Our guide in his canoe had told us that he would inform us of their proximity in time enough to reach the shore, but we could not help fearing that he considered our craft about as easy to handle as one of their canoes and would give his information accordingly,—a supposition that we found to be correct, for had we not closely followed at considerable labor the eastern bank, which we knew to be the one on which we must camp, it is more than probable we would have gone through the cañon without warning and been wrecked. Even when the conspicuous mouth of the cañon was descried but a little distance ahead, our fate hung on a quarter-inch halliard with which we suddenly fastened our craft to a poplar-tree on the bank. The line fairly sang like a harp-string as the swift water poured over the logs and the huge craft swung slowly into the bank, where we were a very few seconds in making it snug and secure.

An inspection of the rapids showed them to be nearly five miles long, in places narrow and deep, then shoaling out and exposing dangerous rocks. The first quarter of a mile the swift river pours in boiling foam through a cañon fifty or sixty feet deep, and but little greater in width, the sides of the chute being regularly laid basaltic columns that in places rival human workmanship. It then widens out into a large basaltic basin full of seething whirlpools and curling eddies, and then again for a third of a mile passes through another cañon the exact duplicate of the first. The current again spreads out some quarter of a mile into shallow rapids, looking much less dangerous than the cañon, but being really much more so with its countless bowlders and swift-dancing current. After running along for three or four miles in this manner, it again courses through basaltic columns hardly twenty feet high and narrowed to a cascade not over thirty feet wide, with waves running four or five feet high. As we descended through this chute the banks grew higher, and so swift was the current and so narrow the passage that the water would run up these banks for a long distance on either side and pour back in solid sheets into the foaming current below, making veritable horse-shoe falls. A rafting party of three were sent ahead next morning to be stationed below the cascade and give assistance when the raft came by; and at 11:25 that morning we turned the *Resolute's* head toward the upper end of the Grand Cañon of the Yukon. After spinning around four or five minutes in an eddy, as if fully comprehending

and dreading the dangerous trip, she at last swung slowly into the current and then shot forward with its swift waters. We soon entered the narrow cañon, going at a rate and urged by a power that a dozen giants could not have controlled had they been aboard. The raft's first encounter was with the perpendicular western wall, striking a fearful blow that tore the inner log from the side; and like the philosophical experiment with the suspended ivory balls, the outer log shot far away with an echoing snap. It took the craft but a mere moment to swing on her basaltic pivot, and down again she started in the race. Nearly down to the fearful chute a couple of my Indians jumped on the flying raft from a canoe in which they had paddled out from the shore, and in a few seconds more the cascade was reached. First the clumsy bow was buried in the boiling foam and waves, and the next instant it was reared high in the air, the whole body of the craft standing at the angle of a fixed bayonet as it shot through the narrow neck and slowly subsided in the bubbling waters beyond. A rope was soon gotten to the shore, and although the first time it was fastened it snapped with a twang, the second effort was successful. For two days we were repairing and strengthening the raft, and putting on a couple of new decks made from the fine slender pine poles that were here abundant, and dry and light as pipe-stems, the result of a fire that had swept through them probably two or three years before. Like all the coniferæ growing in dense masses, these timber districts have their periodical devastations of fire that feed on their resinous foliage, burning the bark to a blackened crisp; and when the first severe gale comes from the south, the roots having been weakened by rotting, they are thrown prostrate, making a perfect labyrinth of matted limbs and tempest-torn trunks that have not half decayed nor ceased to be impassable *chevaux-de-frise* before the next generation has sprung up and grown sufficiently high to add confusion to disorder. A sort of poplar chaparral borders the ravines that cut across the trails, to vary the misery and keep it from getting monotonous. In and around the Grand Rapids the grayling are numerous beyond computation, and it was but the work of a few minutes to catch a plentiful mess for even our party of over twenty whites and Indians; and most singular of all, this was done despite the fact that myriads of small brown moths or millers filled the air during our fishing-days, while their bodies often floated by thousands down the river, to be food for the graylings. The trout flies we used were often the "brown miller" and "brown hackle." While the

graylings could be caught at any time, they would bite more freely during cloudy weather.

We had employed a few Tahk-heesh Indians to carry over the portage our valuable effects that we had taken from the raft to lighten it, and for safety in such a dangerous rapid. I could not but contrast the kindness they showed each other, and especially their women, with the ungenerous conduct of the more warlike Chilkats in their mutual intercourse. The latter when canoeing on the Dayay, after having left the launch and before reaching the head of canoe navigation, had a certain number, including even the boys, who were not provided with canoes; and although it would have added little to the labor of the canoemen to take the burdens of the others into their boats, they refused to do so. Those without canoes had to carry their loads on their backs, some ten or eleven miles. Nay, they would not ferry the porters across the rushing river in its serpentine windings from bluff to bluff, but forced them to wade the streams, often up to their middle, or make extended detours that would lengthen the direct ten miles to double that distance. Many other similar acts, shown even in cases of sickness, did much to strengthen this unfavorable impression. The mosquitoes were now thick beyond anything I have ever seen. As we crossed boggy places or the marshy rims of the numerous inland lakes, they rose in dense swarms. Hunting, the only object one could have in inland excursions, became impossible on account of these insects. Their stings could not be endured, and in looking through such swarms it was not possible to take sure sight at the game. The vigorous exercise needed to defend oneself was enough to fatigue the strongest to the verge of exhaustion; besides, these gesticulations would frighten the game. I believe this part of the Yukon country to be scarcely habitable in the summer on account of these pests, and think their numbers to be sufficient reason for the complete absence of game during that part of the year. On the lower river, beyond Fort Yukon, their numbers appreciably decrease; but as they are reënforced by the little black gnats and sand-flies, life for the traveler even there is not pleasant. It is not until the first severe frost comes, about the first of September, that this annoyance is abated completely, although for a short time before this the hopeful wanderer in these wilds thinks he notices a falling off in the census. Captain Petersen, a trader on the lower river, a person whom I found not given to exaggeration in any particular, says he has known Eskimo dogs to be killed by mosquitoes; and the Indians tell him, and he says he has no reason to doubt

them, that even the brown bear of Alaska, almost the peer of the grizzly, has been known in rare instances to be slain by them when he ventured into their swampy haunts. Captain Petersen and the Indians account for this by supposing, as the bodies show, that the bear, instead of securing safety by precipitate retreat from such places, fights them, bear style, reared up on his hind-quarters, until the stings near his eyes close them, and he is kept in this condition until starvation eventually causes death.

About eight o'clock in the evening, while camped a quarter of a mile below the cascades in the Grand Rapids, we could hear heavy concussions in single blows at two and three minute intervals. It was noticed by more than one, and thought by some to be distant thunder, although it sounded strangely unlike that noisy element in other climes, and there were no signs of a storm in the sky. A very light series of earthquakes also seemed a poor theory, and there was little or nothing else to which it could be attributed except the cascades, which I believe have been known to cause earth-tremblings and analogous phenomena.

The 5th of July we bade adieu to the worst cañon and rapids on the Yukon River. About noon we passed the mouth of the Tahk River (the Tahk-heen'-ah of the Chilkats), which measured probably two-thirds the size of the Yukon proper. It was flowing muddy water at the time, and our surmise that this would spoil our splendid grayling fishing proved to be correct. While the Tahk-heen'-ah noticeably flows less water than the Yukon, and therefore is not entitled to be called the river proper, its bed seems to correspond with the general characteristics of the Yukon from its mouth on. From the Grand Cañon to the Tahk River (*heen'-ah* in Chilkat signifying river) the banks of the Yukon are high and bold, and often broken into perpendicular bluffs of white sandy clay, while from here on the shores are much lower, similar to those of the Tahk-heen'-ah, and wooded to the water's edge.

We reached the last lake about five in the afternoon, and had the misfortune to stick in the apex of an acute-angled sand-bar at the mouth of the river, and this with a fair wind in our favor to help us over the like. Two hours and a half's steady work swung the *Resolute* clear of her sandy anchor, and we went into camp alongside our lightered cargo, wearier, wetter, and wiser men,—certainly wiser in the fact that a sand-bar was a much more formidable obstacle to our peculiar craft than a gravel-bar of equal depth. On the latter it was necessary only to be able to lift the raft by a series

IN THE RINK RAPIDS, UPPER YUKON.

of combined efforts, the swift current carrying it forward over even the widest bars, while with the former the raft would rapidly settle during the short rests that were rendered necessary by such fatiguing work, and could be pried forward only the short distance the current had cut out the sand ahead of the logs. On sand-bars a series of laborious swingings of the raft, end for end, even against the current, until the ponderous concern was clear, was generally the quickest solution of the problem, while the raft could be pried over gravel-bars with ten inches of water, although it drew double that amount. The new lake was called by my Indians the Kluk-tas'-si. Like all the

lower lakes, it was full of banks, occasioned by the deposition of the glacier-mud brought down by the mountain streams, for their outlets all become clear again until receiving the waters of some muddy river heading among the glaciers. It is a mere matter of geological time when these lakes will be filled by these deposits, and nothing but a river left coursing through bottom-lands. Such ancient lakes are noticeable on the course of the great stream farther on.

The right bank of Lake Kluk-tas'-si is composed of rounded cliffs of gray limestone, the gullies between being filled in with foliage, especially spruce and pine, and from the opposite side of the lake this effect is quite pretty and peculiar. On the west bank of the lake great towering red rocks culminate in what appears to be a picturesque island of this material, but an Indian with us says that these are part of the mainland; and near this comes

in a large river whose whole course is flanked by such scenes, from which the Indians give it the name of Red River. Not desiring to add another Red River to the geography of the world, I called these the Richthofen Rocks and River, although the latter we were not able to make out from our position on the lake as we sailed by, and the former from all points seemed strangely like an island. Quite a number of salmon-trout fell victims to our pot-hunting trout-lines, one of which weighed over eight pounds, the limit of the doctor's fish-scales.

The 9th of July saw us sail out of Kluk-tas'si, the last of the lakes, and as we hauled down the old wall-tent that had done us double duty as a sail and a tent, I think we were all light-hearted enough to make the *Resolute* draw an inch less water. The river was now very shallow, wide, and swift, and we were constantly grating over bars of gravel, and occasionally sticking on one, but so rapid was the current that merely jumping off the raft was sufficient to start it forward and override the most of these. On both sides of the river the forest fires had done considerable damage to the timber, and on every side were stumps of all shades of darkness, from the blackened crisp of this year's conflagration to the light-brown ones covered with moss and rotting to the earth's level. "How closely that one resembles a big grizzly bear!" remarked one of the party, pointing to a huge shaggy brown stump some

GENERAL VIEW OF THE RINK RAPIDS.

six or seven hundred yards ahead of us on the edge of a high clay-bank overlooking the river. The likeness to this animal was close, and as we rapidly floated down towards it and it came walking down the edge of the cliff, the resemblance was sufficient to produce two or three guns from their cases. At four hundred yards the "stump" got one good look at the formidable raft, evidently just bursting on his vision, and before we could fully realize how quickly he had done it, he disappeared in a grove of spruce, and we never saw him again. Every living thing avoided us as if we were a known pestilence, and grizzlies, the worst terror of the Indians in all this country, never felt satisfied until they had put a glacier or two between us. Rounding a bend a young lark, sitting on an overhanging bush turned its head, and in its hurry "to do something mighty quick," fell into the water and drowned.

THE RAFT.

while scraping along had no bad effect, and often slowed our gait to half its usual rate, until a line ashore would complete our stoppage and allow us to go into camp.

On the 9th we passed the mouth of the Newberry River, about one hundred

We were all congratulating ourselves on the swift current which was carrying us so speedily on, until along in the evening, when the subject of camping came up. Then we found the current too rapid to make a landing without possibly tearing a log or two off the shore side of the raft. The river was of a perfectly uniform width that would have done credit to a canal, and consequently not an eddy was to be found in which we could retard our motion; while a rank growth of willows springing from marshy ground, stretching for miles along the river, gave us but little desire to camp, even were it possible. We now instituted a system of "down-brakes" with the *Resolute*, which consisted in keeping the stern of the raft dragging along the shore with the rear oar, while the head was kept well out with the bow oar. Had she been struck bow first in such a current, it would have converted her shape into that of a lozenge at the expense of a log or two;

and thirty yards wide, and the Yukon at once became very much deeper, swifter, and the water of a darker hue, showing that the Newberry drained a considerable amount of *tundra* land, or land where the water, saturated with the dyes extracted from dead leaves and mosses, is prevented from percolating through the soil by an impervious substratum of ice, and is carried off superficially directly into the draining rivers. The 10th, forty miles farther on, we passed the mouth of D'Abbadie River, over one hundred and fifty yards wide at this point, and said to be over two hundred and fifty miles long to its head. The D'Abbadie is important in an economical sense as marking the point on the Yukon at which gold in placer deposits commences. From here on nearly to the mouth or mouths of the great Yukon, a panful of dirt taken from almost any bar or bank with any discretion will give several "colors," in miners' parlance. The Yukon, now widening out, was studded with numerous islands. It also became quite tortuous in its windings, and at one place where a grand river came in from the west (which I called Nordenskjöld) a bald prominent butte was seen no less than seven different times, directly ahead of the raft, on different stretches of the river. Tanta-

lus Butte marks the spot on the map. The very few Indians we now saw along the river were of the most abject appearance, living in houses formed of three poles, one of which, being much longer than the rest, was used as a support for a couple of well-ventilated caribou skins; and this dilapidated but simple arrangement was their residence in a country that abounded with good timber for log-cabins. The only use to which this timber was put, besides fuel, was in the construction of small rafts, canoes being almost unknown from the Grand Cañon to old Fort Selkirk. Their winter quarters are just above the latter point, and when in the spring they sally up the river to their hunting and fishing grounds, their household effects are of so simple a nature that they can be readily carried upon their backs. Returning in the fall, they build a small raft to carry the meager addition accumulated by the summer's hunt. Moose, caribou, black bear, and salmon form their principal diet. These rafts are collected from the dry drift-logs that accumulate on the upper end of each island in wooden bastions from ten to fifteen feet high, deposited during the spring (June) freshets. So uniform are these driftwood deposits that, in the many archipelagoes through which we had to pass, the islands would present an entirely different aspect as one looked up or down stream at them, having quite a pretty appearance in the former and looking like tumble-down and abandoned wood-yards in the latter case.

On the 11th one of my Indians told me that the next day we would have to shoot our fourth and last serious rapid; and while he had known Indians to accomplish this with their little rafts of a few small logs, he felt anxious regarding our ponderous craft. There were three channels through the rocks, the middle one being the widest and for most craft the best, but it had the serious disadvantage of having a sharp right-angled turn about half-way through and a projecting rock in its center. The rapids could be heard (on the 12th) quite a while before we reached them, and beaching the raft a few hundred yards above them, they were given an inspection of a hurried nature. This disclosed a most picturesque gorge with perpendicular columns of rocks forty or fifty feet high, standing in three or four groups in the very midst of the narrow rapid. The right-hand channel was the straightest, although quite narrow, and the waves were running high enough to make us fear they might sweep something from the decks. When we did finally essay this passage, it was amongst the greatest clattering of gulls, young and old, that one would care to hear. The summits of the rock islands were splendidly protected

from the invasions of any land animals, and hundreds of gulls had selected these fortresses of nature as their breeding-places, and we were saluted as we shot through as intruders of the worst character.

This right channel of the Rink Rapids, as I named them, is situated within a sharp bend of the river; so that a steam-windlass operated from a river steamer's deck could be worked to the very best advantage in ascending these rapids. Counting on such ascent, the Grand Cañon would be the true head of navigation on the Yukon, and thus the great river would be passable for light-draught river boats for eighteen hundred and sixty-six miles from the Aphoon or northern mouth, being the greatest length of uninterrupted navigation in any stream emptying into the Pacific Ocean.

On the 12th our first moose was seen,—a great awkward-looking animal that came rushing through the willows, his palmated horns making the first observer believe that it was an Indian swinging his arms in the air. We occasionally caught sight of these broad antlers and his brown sides, and I saved my reputation as a shot by the gun not going off when the hammer fell. That night we camped on the eastern bank of the river at the first true Indian village we had so far encountered, and even this was deserted, the inhabitants being up the river fishing and hunting, as already explained. It is in a most picturesque position, and is called Kitt-ah-gon, meaning "the town between two cañons." On one side comes in a small creek that drains a conspicuous and beautiful valley among high hills, and one which looks as if it would support a much larger stream than the twenty-yard creek that empties near Kitt-ah-gon. The village itself consists of but one log-house about 18x30 and a dozen or more of three-sided camping-places of poles and brush, which are houses to be covered in with skins. The next twenty miles, through an archipelago of islands which hardly gave us a chance to know our distance from the two banks, brought us to old Fort Selkirk, which we found on the left bank, despite the fact that the five or six maps we had consulted placed it at the junction of the Yukon and Pelly, a large stream that here comes in from the east. Its blackened chimneys, three in number, still held out against the elements after a third of a century, and were now almost lost in a little grove of poplars that had taken root since this frontier post of the Hudson's Bay Company had been burned to the ground in 1851. We were now on ground familiar to white men. Our journey to Fort Yukon, five hundred miles farther on, and thence to the river's mouth will be described in another article.

By Command of

FAC-SIMILE OF GENERAL GRANT'S DISPATCH ANNOUNCING THE SURRENDER OF GENERAL LEE.

At the request of the Editor, General Badeau has given the history of the dispatch in the following letter:

"On Sunday afternoon, the 9th of April, 1865, as General Grant was riding to his headquarters from the farm-house in which he had received the surrender of Lee, it occurred to him that he had made no report of the event to the Government. He halted at once and dismounted, with his staff, in a rough field, within the National lines. Sitting on a stone, he asked for paper. I happened to be

near, and offered him my memorandum-book, such as staff-officers often carry for orders or reports in the field. He laid the book on his knee and wrote the above dispatch in pencil; he handed it to me and told me to send it to the telegraph operator. I asked him if I might copy the dispatch for the operator and retain the original. He assented and I rewrote the paper, the original of which is in the keeping of THE CENTURY magazine. "TANNERSVILLE, N. Y., July 10, 1885. Adam Badeau."

PERSONAL MEMOIRS OF U. S. GRANT.*

THE SIEGE OF VICKSBURG.

THE city of Vicksburg was important to the Confederates on account of its railroad connections; the Vicksburg and Jackson railroad connecting it with all the Southern Confederacy east of the Mississippi river, and the Vicksburg and Shreveport railroad connecting it with all their country west of that great stream. It was important to the North because it commanded the river itself, the natural outlet to the sea of the commerce of all the Northwest.

The Mississippi flows through a low alluvial valley many miles in width, and is very tortuous in its course, running to all points of the compass sometimes within a few miles.

This valley is bounded on the east side by a range of high lands rising in some places more than two hundred feet above the general level of the valley. Running from side to side of the valley, the river occasionally washes the base of the high land, or even cuts into it, forming elevated and precipitous bluffs. On the first of these south of Memphis, and some four hundred miles distant by the windings of the river from that city, stands the city of Vicksburg.

On account of its importance to both North and South, Vicksburg became the objective point of the Army of the Tennessee in the fall of 1862. It is generally regarded as an axiom

* Copyright, 1885, by U. S. Grant. All rights reserved.

in war that all great armies in an enemy's country should start from a base of supplies, which should be fortified and guarded, and to which the army should fall back in case of disaster. The first movement looking to Vicksburg as an objective point was begun early in November, 1862, and conformed to this axiom. It followed the line of the Mississippi Central railroad, with Columbus, Kentucky, as a base; and soon after it started a coöperating column was moved down the river in transports, with Memphis as its base. Both of these movements failing, the entire Army of the Tennessee was transferred to the neighborhood of Vicksburg and landed on the opposite side of the river at Milliken's Bend.

Here, after spending about three months trying to get upon the high land, and also waiting for the waters of the Mississippi, which were very high this winter, to recede, I determined to march below Vicksburg, take Grand Gulf, hold it, and operate with the aid of Banks's army against Port Hudson, using New Orleans as my base of supplies; then to return against Vicksburg with the combined armies, retaining New Orleans as our base.

In pursuance of this determination, the army was marched to a point below Vicksburg on the Louisiana side, and the batteries were run by the fleet and some of the transports.

On the 29th of April the troops were at Hard Times, and the fleet, under Admiral Porter, made an attack upon Grand Gulf, while I reconnoitered the position of the enemy on a tug, to see if it was possible to make a landing. Finding that place too strong, I moved the army below Grand Gulf to De Shroon's, running the batteries there as we had done at Vicksburg. Learning here from an old negro that there was a good road from Bruinsburg up to Port Gibson, I determined to cross and move upon Grand Gulf from the rear.

April 30th was spent in transporting troops across the river. These troops were moved out towards Port Gibson as fast as they were landed. On the 1st of May the advance met the enemy under Bowen about four miles west of Port Gibson, where quite a severe battle was fought, resulting in the defeat of the enemy, who were driven from the field. On May 2d our troops moved into Port Gibson, and, finding that the bridges over Bayou Pierre were destroyed, spent the balance of the day in rebuilding and crossing them, and marching to the North Fork, where we encamped for the night. During the night we rebuilt the bridge across the North Fork, which had also been destroyed, and the next day (the 3d) pushed on, and, after considerable skirmishing, reached the Big Black,

near Hankinson's Ferry, and the Mississippi at Grand Gulf.

On the 3d I went into Grand Gulf, and spent the afternoon and until late that night in writing letters to Washington and orders for the next movement of the army. Here I also received a letter from Banks stating that he could not be at Port Hudson for some days, and then with an army of only fifteen thousand men. As I did not regard this force of as much value as the time which would be lost in waiting for it, I determined to move on to Vicksburg.

The 4th, 5th, and 6th of May were spent in reconnoitering towards Vicksburg, and also in crossing Sherman's troops over to Grand Gulf. On the 7th, Sherman having joined the main body of the army, the troops across the Big Black were withdrawn, and the movement was commenced to get in position on the Vicksburg and Jackson railroad so as to attack Vicksburg from the rear. This occupied the army from the 7th to the 12th, when our position was near Fourteen Mile creek, Raymond being our right flank, our left resting on the Big Black. To obtain this position we fought the battle of Raymond, where Logan's and Crocker's divisions of McPherson's corps defeated the Confederates under General Gregg, driving him back on Jackson; Sherman and McClelland both having some skirmishing where they crossed Fourteen Mile creek.

As the army under Pemberton was on my left flank, and that under General Joseph E. Johnston on my right at Jackson, I determined to move the army rapidly on Jackson, capturing and destroying that place as a military depot; then turn west and destroy the army under Pemberton, or drive it back into Vicksburg. The 13th was spent in making the first of these moves. On the 14th Jackson was attacked with Sherman's and McPherson's corps. The place was taken, and all supplies that could be of service to the enemy were destroyed, as well as the railroad bridge.

On the 15th the troops were faced to the west and marched towards Pemberton, who was near Edwards's Station. The next day, the 16th, we met the enemy at Champion's Hill, and, after a hard-fought battle, defeated and drove him back towards Vicksburg, capturing eighteen guns and nearly three thousand men. This was the hardest-fought battle of the campaign.

On the 17th we reached the Big Black, where we found the enemy intrenched. After a battle of two or three hours' duration we succeeded in carrying their works by storm, capturing much artillery and about twelve hundred men. In their flight the enemy de-

stroyed the bridge across the Big Black, so that the balance of the day and night was spent in building bridges across that stream.

We crossed on the morning of the 18th, and the outworks of Vicksburg were reached before night, the army taking position in their front. On the 19th there was continuous skirmishing with the enemy while we were getting into better positions. The enemy's troops had been much demoralized by their defeats at Champion's Hill and the Big Black, and I believed he would not make much of an effort to hold Vicksburg. Accordingly at two o'clock I ordered an assault. It resulted in securing more advanced positions for all our troops, where they were fully covered from the fire of the enemy, and the siege of Vicksburg began.

The 20th and 21st were spent in strengthening our position, and in making roads in rear of the army, from Yazoo river or Chickasaw bayou. Most of the army had now been for three weeks with only five days' rations issued by the commissary. They had had an abundance of food, however, but had begun to feel the want of bread. I remember that, in passing around to the left of the line on the 21st, a soldier, recognizing me, said in rather a low voice, but yet so that I heard him, "*Hard-tack.*" In a moment the cry was taken up all along the line, "*Hard-tack! hard-tack!*" I told the men nearest to me that we had been engaged ever since the arrival of the troops in building a road over which to supply them with everything they needed. The cry was instantly changed to cheers. By the night of the 21st full rations were issued to all the troops. The bread and coffee were highly appreciated.

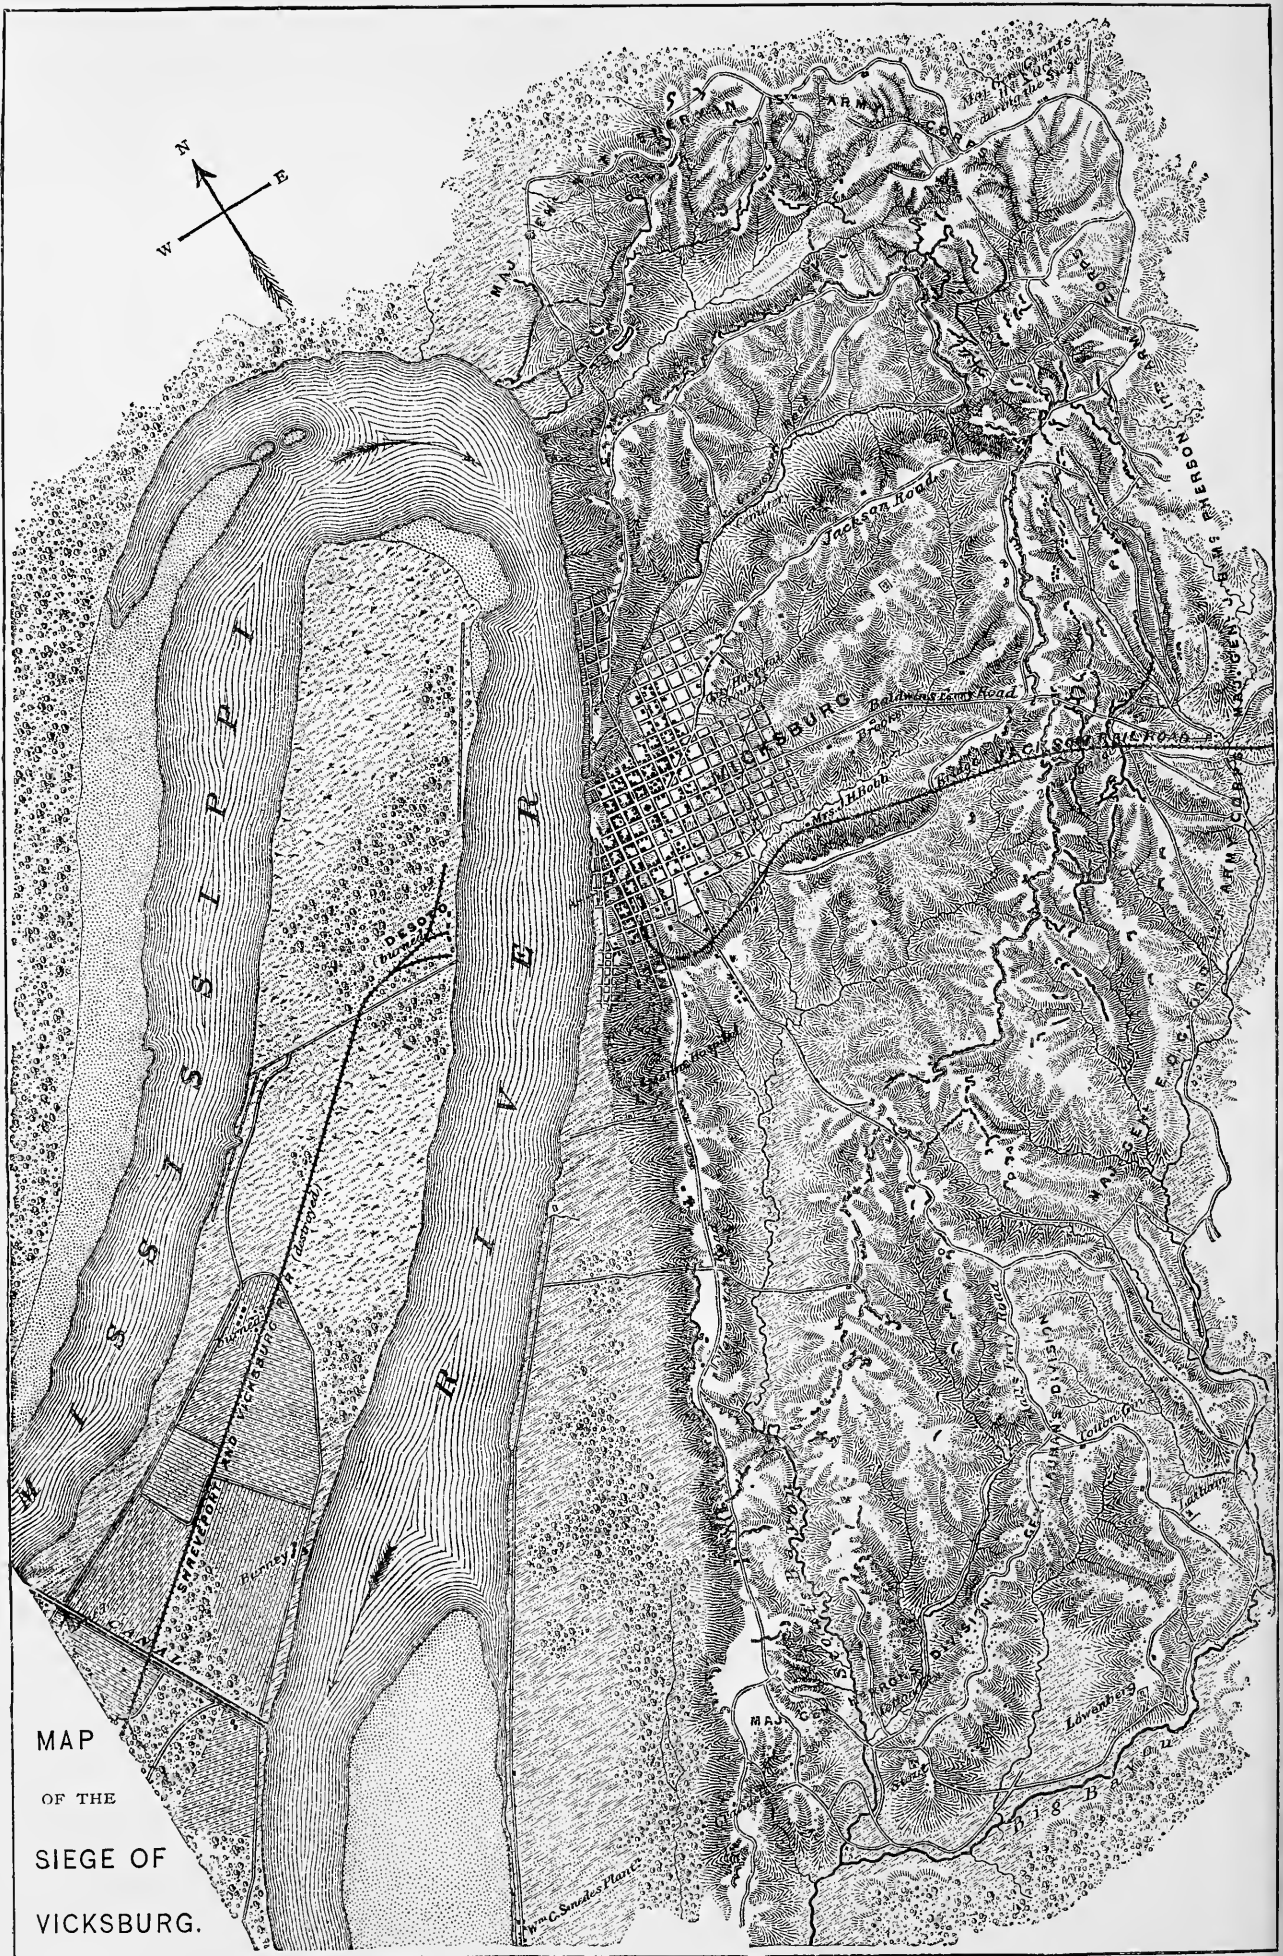

I now determined on a second assault. Johnston was in my rear, only fifty miles away, with an army not much inferior in numbers to the one I had with me, and I knew he was being reënforced. There was danger of his coming to the assistance of Pemberton, and after all he might defeat my anticipations of capturing the garrison, if, indeed, he did not prevent the capture of the city. The immediate capture of Vicksburg would save sending me the reënforcements which were so much wanted elsewhere, and would set free the army under me to drive Johnston from the State. But the first consideration of all was that the troops believed they could carry the works in their front, and would not have worked so patiently in the trenches if they had not been allowed to try.

The attack was ordered to commence on all parts of the line at ten o'clock A. M. on the 22d with a furious cannonade from every battery in position. All the corps commanders

set their time by mine, so that all might open the engagement at the same minute. The attack was gallant, and portions of each of the three corps succeeded in getting up to the very parapets of the enemy, and in planting their battle-flags upon them; but at no place were we able to enter. General McClernand reported that he had gained the enemy's intrenchments at several points, and wanted reënforcements. I occupied a position from which I believed I could see as well as he what took place in his front, and I did not see the success he reported. But his request for reënforcements being repeated, I could not ignore it, and sent him Quinby's division of the Seventeenth Corps. Sherman and McPherson were both ordered to renew their assaults as a diversion in favor of McClernand. This last attack only served to increase our casualties, without giving any benefit whatever. As soon as it was dark our troops that had reached the enemy's line and had been obliged to remain there for security all day were withdrawn, and thus ended the last assault on Vicksburg.

A regular siege was now determined upon,—to "out-camp the enemy," as it were, and to incur no more losses. The experience of the 22d convinced officers and men that this was best, and they went to work on the defenses and approaches with a will. With the navy holding the river, the investment of Vicksburg was complete. As long as we could hold our position, the enemy was limited in supplies of food, men, and munitions of war, to what he had on hand. These could not last always.

The crossing of troops at Bruinsburg had commenced April 30th. On the 18th of May the army was in rear of Vicksburg. On the 19th, just twenty days after the movement began, the city was completely invested and an assault had been made. Five distinct battles—besides continuous skirmishing—had been fought and won by the Union forces; the capital of the State had fallen, and its arsenals, military manufactories, and everything useful for military purposes, had been destroyed; an average of about one hundred and eighty miles had been marched by the troops engaged; but five days' rations had been issued, and no forage; over 6000 prisoners had been captured, and as many more of the enemy had been killed or wounded; twenty-seven heavy cannon and sixty-one field-pieces had fallen into our hands; and four hundred miles of the river, from Vicksburg to Port Hudson, had become ours. The Union force that had crossed the Mississippi river up to this time was less than forty-three thousand men. One division of these, Blair's, only arrived in time to take part in the battle of Champion's Hill, but was not engaged

MAP

(At the request of the Editor of THE CENTURY MAGAZINE.)

there, and one brigade, Ransom's, of McPherson's corps reached the field after the battle. The enemy had at Vicksburg, Grand Gulf, Jackson, and on the roads between these places, quite sixty thousand men. They were in their own country, where no rear-guards were necessary. The country was admirable for defense, but difficult to conduct an offensive campaign in. All their troops had to be met. We were fortunate, to say the least, in meeting them in detail: at Port Gibson, seven or eight thousand; at Raymond, five thousand; at Jackson, from eight to eleven thousand; at Champion's Hill, twenty-five thousand; at the Big Black, four thousand. A part of those met at Jackson were all that was left of those encountered at Raymond. They were beaten in detail by a force smaller than their own, upon their own ground. Our losses up to this time had been:

| | <i>Killed.</i> | <i>Wounded.</i> | <i>Missing.</i> |
|----------------------------|----------------|-----------------|-----------------|
| Port Gibson..... | 131 | 719 | 25 |
| South Fork, Bayou Pierre.. | | 1 | |

Of the wounded many were but slightly so, and continued on duty. Not half of them were disabled for any length of time.*

After the unsuccessful assault of the 22d, the work of the regular siege began. Sherman occupied the right, starting from the river above Vicksburg; McPherson the center (McArthur's division now with him); and McClernand the left, holding the road south to Warrenton. Lauman's division arrived at this time, and was placed on the extreme left of the line.

In the interval between the assaults of the 19th and 22d, roads had been constructed from the Yazoo river and Chickasaw Bayou, around the rear of the army, to enable us to bring up supplies of food and ammunition; ground had been selected and cleared on which the troops were to be encamped, and tents and cooking utensils were brought up. The troops had been without these from the time of crossing the Mississippi up to this time. All was now ready for the pick and spade. Prentiss and Hurlbut were ordered to send forward every man that could be spared. Cavalry especially was wanted to watch the fords along the Big Black, and to observe Johnston. I knew that

Johnston was receiving reënforcements from Bragg, who was confronting Rosecrans in Tennessee. Vicksburg was so important to the enemy that I believed he would make the most strenuous efforts to raise the siege, even at the risk of losing ground elsewhere.

My line was more than fifteen miles long, extending from Haines's Bluff to Vicksburg, thence to Warrenton. The line of the enemy was about seven. In addition to this, having an enemy at Canton and Jackson in our rear, who was being constantly reënforced, we required a second line of defense facing the other way. I had not troops enough under my command to man this. General Halleck appreciated the situation and, without being asked for reënforcements, forwarded them with all possible dispatch.

The ground about Vicksburg is admirable for defense. On the north it is about two hundred feet above the Mississippi river at the highest point, and is very much cut up by the washing rains; the ravines were grown up with cane and underbrush, while the sides and tops were covered with a dense forest. Farther south the ground flattens out somewhat, and was in cultivation; but here, too, it was cut by ravines and small streams. The enemy's line of defense followed the crest of a ridge, from the river north of the city, eastward, then southerly around to the Jackson road, full three miles back of the city. Deep ravines of the description given lay in front of these defenses. As there is a succession of gullies, cut out by rains, along the side of the ridge, the line was necessarily very irregular. To follow each of these spurs with intrenchments, so as to command the slopes on either side, would have lengthened their line very much. Generally, therefore, or in many places, their line would run from near the head of one gully nearly straight to the head of another, and an outer work, triangular in shape, generally open in the rear, was thrown up on the point. With a few men in this outer work, they commanded the approaches to the main line completely.

The work to be done to make our position as strong against the enemy as his was against us, was very great. The problem was also complicated by our wanting our line as near that of the enemy as possible. We had but four engineer officers with us. Captain Prime, of the Engineer Corps, was the chief, and the work at the beginning was mainly directed by him. His health, however, soon gave out, when he was succeeded by Captain Comstock, also of the Engineer Corps. To

* The official revised statements of losses soon to be published by Colonel Robert N. Scott of the War Records Office (of which the above table is a part), show that the aggregate Union losses from May 1 to July 4, were: killed, 1514; wounded, 7395; captured or missing, 453; —total, 9362 — EDITOR.

provide assistants on such a long line, I directed that all officers who were graduates at West Point, where they had necessarily to study military engineering, should, in addition to their other duties, assist in the work. The chief quartermaster and the chief commissary were graduates. The chief commissary, now the commissary-general of the army, begged off, however, saying that there was nothing in engineering that he was good for, unless he would do for a sap-roller. As soldiers require rations while working in the ditches as well as when marching and fighting, and as we should be sure to lose him if he was used as a sap-roller, I let him off. The general is a large man,— weighs two hundred and twenty pounds, and is not tall.

We had no siege-guns except six thirty-two pounders, and there were none at the West to draw from. Admiral Porter, however, supplied us with a battery of navy-guns of large caliber, and with these, and the field-artillery used in the campaign, the siege began. The first thing to do was to get the artillery in batteries where they would occupy commanding positions; then, to establish the camps, under cover from the fire of the enemy, but as near up as possible; and then to construct rifle-pits and covered ways, to connect the entire command by the shortest route. The enemy did not harass us much while we were constructing our batteries. Probably their artillery ammunition was short, and their infantry was kept down by our sharp-shooters, who were always on the alert and ready to fire at a head whenever it showed itself above the rebel works.

In no place were our lines more than six hundred yards from the enemy. It was necessary, therefore, to cover our men by something more than the ordinary parapet. To give additional protection, sand-bags, bullet-proof, were placed along the tops of the parapets, far enough apart to make loopholes for musketry. On top of these, logs were put. By these means the men were enabled to walk about erect when off duty, without fear of annoyance from sharp-shooters. The enemy used in their defense explosive musket-balls, thinking, no doubt, that, bursting over our men in the trenches, they would do some execution. I do not remember a single case where a man was injured by a piece of one of these shells. When they were hit, and the ball exploded, the wound was terrible. In these cases a solid ball would have hit as well. Their use is barbarous, because they produce increased suffering without any corresponding advantage to those using them.

The enemy could not resort to our method to protect their men, because we had an inexhaustible supply of ammunition to draw

upon, and used it freely. Splinters from the timber would have made havoc among their men behind.

There were no mortars with the besiegers, except those that the navy had in front of the city; but wooden ones were made by taking logs of the toughest wood that could be found, boring them out for six or twelve pounder shells, and binding them with strong iron bands. These answered as coehorns, and shells were successfully thrown from them into the trenches of the enemy.

The labor of building the batteries and of intrenching was largely done by the pioneers, assisted by negroes who came within our lines and who were paid for their work; but details from the line had often to be made. The work was pushed forward as rapidly as possible, and when an advanced position was secured and covered from the fire of the enemy, the batteries were advanced. By the 30th of June there were two hundred and twenty guns in position, mostly light field-pieces, besides a battery of heavy guns belonging to, and manned and commanded by, the navy. We were now as strong for defense against the garrison of Vicksburg as they were against us; but I knew that Johnston was in our rear, and was receiving constant reinforcements from the East. He had at this time a larger force than I had had at any time prior to the battle of Champion's Hill.

As soon as the news of the arrival of the Union army behind Vicksburg reached the North, floods of visitors began to pour in. Some came to gratify curiosity; some to see sons or brothers who had passed through the terrible ordeal; members of the Christian and Sanitary commissions came to minister to the wants of the sick and the wounded. Often those coming to see a son or brother would bring a dozen or two of poultry. They did not know how little the gift would be appreciated. The soldiers had lived so much on chickens, ducks, and turkeys, without bread, during the march, that the sight of poultry, if they could get bacon, almost took away their appetite.

Among the earliest arrivals was the Governor of Illinois, with most of the State officers. I naturally wanted to show them what there was of most interest. In Sherman's front the ground was the most broken and most wooded, and more was to be seen without exposure. I therefore took them to Sherman's headquarters and presented them. Before starting out to look at the lines—possibly while Sherman's horse was being saddled—there were many questions asked about the late campaign, about which the North had been so imperfectly informed. There was a

little knot around Sherman, and another around me, and I heard Sherman repeating in the most animated manner, "Grant is entitled to every bit of the credit for the campaign. I opposed it. I wrote him a letter opposing it." But for this speech it is not likely that Sherman's opposition would have ever been heard of. His untiring energy and great efficiency during the campaign entitled him to a full share of all the credit due for its success. He could not have done more if the plan had been his own.

On the 26th of May I sent Blair's division up the Yazoo to drive out a force of the enemy supposed to be between the Big Black and the Yazoo. The country was rich, and full of supplies of both food and forage. Blair was instructed to take all of it. The cattle were to be driven in for the use of our army, and the food and forage to be consumed by our troops or by fire; all bridges were to be destroyed, and the roads rendered as nearly impassable as possible. Blair went forty-five miles, and was gone nearly a week. His work was effectually done. I requested Admiral Porter at this time to send the Marine Brigade, a floating nondescript force which had been assigned to his command, and which proved very useful, up to Haines's Bluff to hold it until reënforcements could be sent.

On the 26th I received a letter from Banks, asking me to reënforce him with ten thousand men at Port Hudson. Of course I could not comply with his request, nor did I think he needed them. He was in no danger of an attack by the garrison in his front, and there was no army organizing in his rear to raise the siege.

On the 3d of June a brigade from Hurlbut's command arrived, General Nathan Kimball commanding. It was sent to Mechanicsburg, some miles north-east of Haines's Bluff, and about midway between the Big Black and the Yazoo. A brigade of Blair's division and twelve hundred cavalry had already, on Blair's return from up the Yazoo, been sent to the same place with instructions to watch the crossings of the Big Black river, to destroy the roads in his (Blair's) front, and to gather or destroy all supplies.

On the 7th of June our little force of colored and white troops across the Mississippi, at Milliken's Bend, were attacked by about three thousand men from Richard Taylor's trans-Mississippi command. With the aid of the gun-boats the enemy were speedily repelled. I sent Mower's brigade over with instructions to drive the Confederates beyond the Tensas Bayou, and we had no further trouble in that quarter during the siege. This was the first important engagement of the war in which colored troops were under fire. These men were very raw, having all been enlisted since the beginning of the siege, but they behaved well.

On the 8th of June a full division arrived from Hurlbut's command, under General Sooy Smith. It was sent immediately to Haines's Bluff, and General C. C. Washburn was assigned to the general command at that point.

On the 11th a strong division arrived from the Department of the Missouri under General Herron, which was placed on our left. This cut off the last possible chance of communication between Pemberton and Johnston, as it enabled Lauman to close up on McClermand's left, while Herron intrenched from Lauman to the water's edge. At this point the water recedes a few hundred yards from the high land. Through this opening, no doubt, the Confederate commanders had been able to get messengers under cover of night.

On the 14th General Parke arrived with two divisions of Burnside's corps, and was immediately dispatched to Haines's Bluff. These latter troops — Herron's and Parke's — were the reënforcements, already spoken of, sent by Halleck in anticipation of their being needed. They arrived none too soon.

I now had about seventy-one thousand men. More than half were disposed across the peninsula between the Yazoo, at Haines's Bluff, and the Big Black; while the division of Osterhaus was watching the crossings of the latter river farther south, from the crossing of the Jackson road to Baldwin's Ferry, and below.

There were eight roads leading into Vicksburg, along which, and to their immediate sides, our work was specially pushed and batteries were advanced; but no commanding point within range of the enemy was neglected.

On the 17th I received letters from Generals Sherman and McPherson, saying that their respective commands had complained to them of a fulsome congratulatory order, published by General McClermand to the Thirteenth Corps, which did great injustice to the other troops engaged in the campaign. This order had been sent north and published, and now papers containing it had reached our camps. The order had not been heard of by me, and certainly not by troops outside of McClermand's command, until brought in this way. I wrote at once to McClermand, directing him to send me a copy of this order. He did so, and I immediately relieved him from the command of the Thirteenth Army Corps, and ordered him back to Springfield, Illinois. The publication of his order in the press was in violation of War Department orders and also of mine.

On the 22d of June positive information was received that Johnston had crossed the Big Black river for the purpose of attacking our rear, to raise the siege and release Pemberton. The correspondence between Johnston and

Pemberton shows that all expectation of holding Vicksburg had by this time passed from Johnston's mind. I immediately ordered Sherman to the command of all the forces from Haines's Bluff to the Big Black river. These amounted now to quite half the troops about Vicksburg. Besides these, Herron's and A. J. Smith's divisions were ordered to hold themselves in readiness to reënforce Sherman. Haines's Bluff had been strongly fortified on the land side, and on all commanding points from there to the Big Black at the railroad crossing batteries had been constructed. The work of connecting by rifle-pits, when this was not already done, was an easy task for the troops that were to defend them.

Johnston evidently took in the situation, and wisely, I think, abstained from making an assault on us, because it would simply have inflicted loss on both sides without accomplishing any result. We were strong enough to have taken the offensive against him; but I did not feel disposed to take any risk of losing our hold upon Pemberton's army, while I would have rejoiced at the opportunity of defending ourselves against an attack by Johnston.

From the 23d of May the work of fortifying, and pushing forward our position nearer to the enemy, had been steadily progressing. At the point on the Jackson road in front of Ransom's brigade a sap was run up to the enemy's parapet, and by the 25th of June we had it undermined and the mine charged. The enemy had countermined, but did not succeed in reaching our mine. At this particular point the hill on which stood the rebel work rises abruptly. Our sap ran close up to the outside of the enemy's parapet. In fact this parapet was also our protection. The soldiers of the two sides occasionally conversed pleasantly across this barrier: sometimes they would exchange the hard bread of the Union soldiers for the tobacco of the Confederates, and at other times they threw over hand-grenades, the rebels throwing them first, and our men often catching them in their hands and returning them.

Our mine had been started some distance back down the hill; consequently, when it had extended as far as the parapet, it was many feet below it. This caused the failure of the enemy in his search to find and destroy it. On the 25th of June, at 3 o'clock, all being ready, the mine was exploded. A heavy artillery fire all along the line had been ordered to open with the explosion. The effect was to blow the top of the hill off and make a crater where it stood. The breach was not sufficient to enable us to pass a column of attack through. In fact, the enemy, having failed to reach our mine, had thrown up a line farther back, where

most of the men guarding that point were placed. There were a few men, however, left at the advance line, and others were working in the counter-mine, which was still being pushed to find ours. All that were there were thrown into the air, some of them coming down on our side, still alive. I remember one colored man who, having been under-ground at work when the explosion took place, was thrown to our side. He was not much hurt, but terribly frightened. Some one asked him how high he had gone up. "Dun no, massa, but t'ink 'bout t'ree mile," was his reply. General Logan commanded at this point, and took this colored man to his quarters, where he did service to the end of the siege.

As soon as the explosion took place the crater was seized by two regiments of our troops who were near by, under cover, where they had been placed for the express purpose. The enemy made a desperate effort to expel them, but failed, and soon retired behind his new line. From here, however, they threw hand-grenades, which did some execution. The compliment was returned by our men, but not with so much effect. The enemy could lay their grenades on the parapet, which alone divided the contestants, and roll them down upon us; while from our side they had to be thrown over the parapet, which was at considerable elevation. During the night we made efforts to secure our position in the crater against the missiles of the enemy, so as to run trenches along the outer base of their parapet, right and left; but the enemy continued throwing their grenades, and brought boxes of field ammunition (shells), the fuses of which they would light with port-fires, and throw them by hand into our ranks. We found it impossible to continue this work. Another mine was consequently started, which was exploded on the 1st of July, destroying an entire redan, killing and wounding a considerable number of its occupants, and leaving an immense chasm where it stood. No attempt to charge was made this time, the experience of the 25th admonishing us. Our loss in the first affair was about thirty killed and wounded. The enemy must have lost more in the two explosions than we did in the first. We lost none in the second.

From this time forward the work of mining and pushing our position nearer to the enemy was prosecuted with vigor, and I determined to explode no more mines until we were ready to explode a number at different points and assault immediately after. We were up now at three different points, one in front of each corps, to where only the parapet of the enemy divided us.

About this time an intercepted dispatch from Johnston to Pemberton informed me that

Johnston intended to make a determined attack upon us, in order to relieve the garrison of Vicksburg. I knew the garrison would make no formidable effort to relieve itself. The picket lines were so close to each other—where there was space enough between the lines to post pickets—that the men could converse. On the 21st of June I was informed, through this means, that Pemberton was preparing to escape by crossing to the Louisiana side under cover of night; that he had employed workmen in making boats for that purpose; that the men had been canvassed to ascertain if they would make an assault on the “Yankees” to cut their way out; that they had refused, and had almost mutinied because their commander would not surrender and relieve their sufferings, and had only been pacified by the assurance that boats enough would be finished in a week to carry them all over. The rebel pickets also said that houses in the city had been pulled down to get material to build these boats with. Afterwards this story was verified. On entering the city we found a large number of very rudely constructed boats.

All necessary steps were at once taken to render such an attempt abortive. Our pickets were doubled; Admiral Porter was informed, so that the river might be more closely watched; material was collected on the west bank of the river with which to light it up if the attempt was made; and batteries were established along the levee crossing the peninsula on the Louisiana side. Had the attempt been made, the garrison of Vicksburg would have been drowned, or made prisoners on the Louisiana side. General Richard Taylor was expected on the west bank to cooperate in this movement, I believe; but he did not come, nor could he have done so with a force sufficient to be of service. The river was now in our possession, from its source to its mouth, except in the immediate front of Vicksburg and of Port Hudson. We had pretty nearly exhausted the country, from a line drawn from Lake Providence to opposite Bruinsburg. The roads west were not of a character to draw supplies over for any considerable force.

By the 1st of July our approaches had reached the enemy's ditch at a number of places. At ten points we could move under cover to within from five to one hundred yards of the enemy. Orders were given to make all preparations for assault on the 6th of July. The debouches were ordered widened, to afford easy egress, while the approaches were also to be widened to admit the troops to pass through four abreast. Plank, and bags filled with cotton packed in tightly, were ordered prepared, to enable the troops to cross the ditches.

On the night of the 1st of July Johnston was between Brownsville and the Big Black, and wrote Pemberton from there that about the 7th of the month an attempt would be made to create a diversion to enable him to cut his way out. Pemberton was a prisoner before this message reached him.

On July 1st Pemberton, seeing no hope of outside relief, addressed the following letter to each of his four division commanders:

“Unless the siege of Vicksburg is raised, or supplies are thrown in, it will become necessary very shortly to evacuate the place. I see no prospect of the former, and there are many great, if not insuperable, obstacles in the way of the latter. You are, therefore, requested to inform me with as little delay as possible as to the condition of your troops, and their ability to make the marches and undergo the fatigues necessary to accomplish a successful evacuation.”

Two of his generals suggested surrender, and the other two practically did the same. They expressed the opinion that an attempt to evacuate would fail. Pemberton had previously got a message to Johnston suggesting that he should try to negotiate with me for a release of the garrison with their arms. The latter replied that it would be a confession of weakness for him to do so; but he authorized Pemberton to use his name in making such an arrangement.

On the 3d, about ten o'clock A. M., white flags appeared on a portion of the rebel works. Hostilities along that part of the line ceased at once. Soon two persons were seen coming towards our lines bearing a white flag. They proved to be General Bowen, a division commander, and Colonel Montgomery, aide-de-camp to Pemberton, bearing the following letter to me:

“I have the honor to propose an armistice for ——— hours, with the view to arranging terms for the capitulation of Vicksburg. To this end, if agreeable to you, I will appoint three commissioners, to meet a like number to be named by yourself, at such place and hour to-day as you may find convenient. I make this proposition to save the further effusion of blood, which must otherwise be shed to a frightful extent, feeling myself fully able to maintain my position for a yet indefinite period. This communication will be handed you, under a flag of truce, by Major-General John S. Bowen.”

It was a glorious sight to officers and soldiers on the line where these white flags were visible, and the news soon spread to all parts of the command. The troops felt that their long and weary marches, hard fighting, ceaseless watching by night and day in a hot climate, exposure to all sorts of weather, to diseases, and worst of all, to the gibes of many Northern papers that came to them saying that all their suffering was in vain—that Vicksburg would never be taken—were at

last at an end, and the Union was sure to be saved.

Bowen was received by General A. J. Smith, and asked to see me. I had been a neighbor of Bowen's in Missouri, and knew him well and favorably, before the war; but his request was refused. He then suggested that I should meet Pemberton. To this I sent a verbal message saying that, if Pemberton desired it, I would meet him in front of McPherson's corps at three o'clock that afternoon. I also sent the following written reply to Pemberton's letter:

"Your note of this date is just received, proposing an armistice for several hours, for the purpose of arranging terms of capitulation through commissioners, to be appointed, etc. The useless effusion of blood you propose stopping by this course can be ended at any time you may choose, by the unconditional surrender of the city and garrison. Men who have shown so much endurance and courage as those now in Vicksburg will always challenge the respect of an adversary, and I can assure you will be treated with all the respect due to prisoners of war. I do not favor the proposition of appointing commissioners to arrange the terms of capitulation, because I have no terms other than those indicated above."

At three o'clock Pemberton appeared at the point suggested in my verbal message, accompanied by the same officers who had borne his letter of the morning. Generals Ord, McPherson, Logan, A. J. Smith, and several officers of my staff, accompanied me. Our place of meeting was on a hillside within a few hundred feet of the rebel lines. Near by stood a stunted oak-tree, which was made historical by the event. It was but a short time before the last vestige of its body, root, and limbs had disappeared, the fragments being taken as trophies. Since then the same tree, like "the true cross," has furnished many cords of wood in the shape of trophies.

Pemberton and I had served in the same division in a part of the Mexican war. I knew him very well, therefore, and greeted him as an old acquaintance. He soon asked what terms I proposed to give his army if it surrendered. My answer was, "The same as proposed in my reply to your letter." Pemberton then said, rather snappishly, "The conference might as well end," and turned abruptly as if to leave. I said, "Very well." General Bowen, I saw, was very anxious that the surrender should be consummated. His manner and remarks while Pemberton and I were talking showed this. He now proposed that he and one of our generals should have a conference. I had no objection to this, as nothing could be made binding upon me that they might propose. Smith and Bowen accordingly had a conference, during which Pemberton and I were in conversation, moving a short distance away towards the enemy's lines.

After a while Bowen suggested that the Confederate army should be allowed to march out with the honors of war, carrying their small arms and field artillery. This was promptly and unceremoniously rejected. The interview then ended, I agreeing, however, to send a letter giving final terms by ten o'clock that night.

Word was sent to Admiral Porter soon after the correspondence with Pemberton commenced, so that hostilities might be stopped on the part of both army and navy. It was agreed on my parting with Pemberton that they should not be renewed until our correspondence ceased.

When I returned to my headquarters I sent for all the corps and division commanders who were with the army immediately confronting Vicksburg. Half the army was from eight to twelve miles off, waiting for Johnston. I informed these officers of the contents of Pemberton's letter, of my reply, and the substance of the interview, and told them I was ready to hear any suggestion, but would hold the power of deciding entirely in my own hands, even against a unanimous judgment. This was the nearest to a "council of war" I ever held. Against the general, almost unanimous, judgment of the council I sent the following letter:

"In conformity with agreement this afternoon, I will submit the following proposition for the surrender of the city of Vicksburg, public stores, etc. On your accepting the terms proposed I will march in one division as a guard, and take possession at 8 A.M. to-morrow. As soon as rolls can be made out and paroles be signed by officers and men, you will be allowed to march out of our lines, the officers taking with them their side-arms and clothing, and the field, staff, and cavalry officers one horse each. The rank and file will be allowed all their clothing, but no other property. If these conditions are accepted, any amount of rations you may deem necessary can be taken from the stores you now have, and also the necessary cooking utensils for preparing them. Thirty wagons also, counting two two-horse or mule teams as one, will be allowed to transport such articles as cannot be carried along. The same conditions will be allowed to all sick and wounded, officers and soldiers as fast as they become able to travel. The paroles for these latter must be signed, however, whilst officers are present authorized to sign the roll of prisoners."

By the terms of the cartel then in force prisoners captured by either army were required to be forwarded, as soon as possible, to either Aiken's Landing below Dutch Gap, on the James river, or to Vicksburg, there to be exchanged, or paroled until they could be exchanged. There was a Confederate commissioner at Vicksburg, authorized to make the exchange. I did not propose to take him prisoner, but to leave him free to perform the functions of his office. Had I insisted upon an unconditional surrender, there would have been over thirty thousand men to trans-

port up to Cairo, very much to the inconvenience of the army on the Mississippi; thence the prisoners would have had to be transported by rail to Washington or Baltimore; thence again by steamer to Aiken's, at very great expense. At Aiken's they would have had to be paroled, because the Confederates did not have Union prisoners to give in exchange. Then again Pemberton's army was largely composed of men whose homes were in the south-west. I knew many of them were tired of the war, and would get home just as soon as they could. A large number of them had voluntarily come into our lines during the siege, and had requested to be sent north where they could get employment until the war was over and they could go to their homes.

Late at night I received the following reply to my last letter:

"I have the honor to acknowledge the receipt of your communication of this date, proposing terms of capitulation for this garrison and post. In the main, your terms are accepted; but, in justice both to the honor and spirit of my troops, manifested in the defense of Vicksburg, I have to submit the following amendments, which, if acceded to by you, will perfect the agreement between us. At ten o'clock A.M. to-morrow, I propose to evacuate the works in and around Vicksburg, and to surrender the city and garrison under my command, by marching out with my colors and arms, stacking them in front of my present lines, after which you will take possession. Officers to retain their side-arms and personal property, and the rights and property of citizens to be respected."

This was received after midnight; my reply was as follows:

"I have the honor to acknowledge the receipt of your communication of 3d July. The amendment proposed by you cannot be acceded to in full. It will be necessary to furnish every officer and man with a parole signed by himself, which, with the completion of the roll of prisoners, will necessarily take some time. Again, I can make no stipulations with regard to the treatment of citizens and their private property. While I do not propose to cause them any undue annoyance or loss, I cannot consent to leave myself under any restraint by stipulations. The property which officers will be allowed to take with them will be as stated in my proposition of last evening; that is, officers will be allowed their private baggage and side-arms, and mounted officers one horse each. If you mean by your proposition for each brigade to march to the front of the lines now occupied by it, and stack arms at ten o'clock A. M., and then return to the inside and there remain as prisoners until properly paroled, I will make no objection to it. Should no notification be received of your acceptance of my terms by nine o'clock A. M., I shall regard them as having been rejected, and shall act accordingly. Should these terms be accepted, white flags should be displayed along your lines to prevent such of my troops as may not have been notified, from firing upon your men."

These terms Pemberton promptly accepted.

During the siege there had been a good deal of friendly sparring between the soldiers of the two armies on picket and where the lines were close together. All rebels were known as "Johnnies," all Union troops as "Yanks."

Often "Johnny" would call, "Well, Yank, when are you coming into town?" The reply was sometimes, "We propose to celebrate the 4th of July there." Sometimes it would be, "We always treat our prisoners with kindness and do not want to hurt them"; or "We are holding you as prisoners of war while you are feeding yourselves," etc. The garrison, from the commanding general down, undoubtedly expected an assault on the 4th. They knew from the temper of their men that it would be successful when made, and that would be a greater humiliation than to surrender. Besides, it would be attended with severe loss to them. The Vicksburg paper (which we received regularly through the courtesy of the rebel pickets) said prior to the 4th, in speaking of the Yankee boast that they would take dinner in Vicksburg that day, that the best receipt for cooking a rabbit was, "First ketch your rabbit." The paper at this time, and for some time prior, was printed on the plain side of wall paper. The last edition was issued on the 4th, and announced that we had "caught our rabbit."

I have no doubt that Pemberton commenced his correspondence on the 3d for a twofold purpose: first, to avoid an assault, which he knew would be successful; and second, to prevent the capture taking place on the great national holiday. Holding out for better terms, as he did, defeated his aim in the latter particular.

Pemberton says in his report: "If it should be asked why the 4th of July was selected as the day for surrender, the answer is obvious. I believed that upon that day I should obtain better terms. Well aware of the vanity of our foe, I knew they would attach vast importance to the entrance on the 4th of July into the stronghold of the great river, and that, to gratify their national vanity, they would yield then what could not be extorted from them at any other time." This does not support my view of his reasons for selecting the day he did for surrendering. It must be recollected that his first letter asking terms was received about ten o'clock A. M., July 3d. It then could hardly be expected that it would take twenty-four hours to effect a surrender. He knew that Johnston was in our rear for the purpose of raising the siege, and he naturally would want to hold out as long as he could. He knew his men would not resist an assault, and one was expected on the 4th. In our interview he told me he had rations enough to hold out for some time — my recollection is two weeks. It was this statement that induced me to insert in the terms that he was to draw rations for his men from his own supplies.

On the 3d, as soon as negotiations were commenced, I notified Sherman, and directed him to be ready to take the offensive against John-

ston, drive him out of the State, and destroy his army if he could. Steele and Ord were directed at the same time to be in readiness to join Sherman as soon as the surrender should take place, and of this Sherman was notified.

On the 4th, at the appointed hour, the garrison of Vicksburg marched out of their works, formed line in front, stacked arms, and marched back in good order. Our whole army present witnessed this scene without cheering, and without a single offensive remark that I ever heard of. Logan's division, which had approached nearest the rebel works, was the first to march in, and the flag of one of the regiments of his division was soon floating over the court-house. Our men were no sooner inside the lines than the two armies began to fraternize. We had had full rations from the time the siege commenced to the close. The enemy had been suffering, particularly towards the last. I myself saw our men taking bread from their haversacks and giving it to those whom they had so recently been engaged in *starving out*. It was accepted with avidity and with thanks.

I rode into Vicksburg with the troops, and went to the river to exchange congratulations with the navy upon our joint victory. At that time I found that many of the citizens had been living under-ground. The ridges upon which Vicksburg is built, and those back to the Big Black, are composed of a deep-yellow clay, of great tenacity. When roads and streets are cut through, perpendicular banks are left, and stand as well as if composed of stone. The magazines of the enemy were made by mining passageways into this clay, at places where there were deep cuts. Many citizens secured places of safety for their families by carving out rooms in these embankments. A doorway, in these cases, would be cut in a high bank, starting from the level of the road or street, and after running it in a few feet, a room of the size required would be carved out of the clay, the dirt being removed by the doorway. In some instances I saw where two rooms were cut out for a single family, with a doorway in the clay wall separating them. Some of these were carpeted and furnished with considerable elaboration. In these the occupants were fully secure from the shells of their enemy, which were dropped into the city night and day, without intermission.

In the afternoon I returned to my old headquarters outside, and did not move them into the town until the 6th. My dispatch announcing our victory to the Government was started for Cairo, by a dispatch boat (to be telegraphed from there), on the evening of the 4th. It was as follows:

"The enemy surrendered this morning. The only terms allowed is their parole as prisoners of war. This I regard as a great advantage to us at this moment. It saves, probably, several days in the capture, and leaves troops and transports ready for immediate service. Sherman, with a large force, moves immediately on Johnston, to drive him from the State. I will send troops to the relief of Banks, and return the Ninth Army Corps to Burnside."

At the same time I notified Banks, now before Port Hudson, of the capture and terms, and offered to send him all the troops he wanted. Banks had my letter printed, and through the kind offices of the pickets got several copies into the rebel lines. A copy getting into the hands of the commanding officer, General Gardner, he asked to have it authenticated and its reliability substantiated; this being done, he would deem it useless to hold out longer. Banks assured him that the surrender had taken place, and Gardner capitulated unconditionally.

Pemberton and his army were kept in Vicksburg until the whole could be paroled. The paroles were in duplicate, by organization, one copy for each, Nationals and Confederates, signed by the commanding officers of the companies or regiments. Duplicates were also made for each soldier, and signed by each individually, one to be retained by the soldier signing, and one to be retained by us. Several hundred refused to sign their paroles, preferring to be sent to the North as prisoners to being sent back to fight again. Others again kept out of the way, hoping to escape both alternatives.

Pemberton appealed to me in person to compel these men to sign their paroles, but I declined. It also leaked out that many of the men who had signed their paroles intended to desert and go to their homes as soon as they were out of our lines. Pemberton, hearing this, again appealed to me to assist him. He wanted arms for a battalion, to act as guards in keeping his men together while being marched to a camp of instruction, where he expected to keep them until exchanged. This request was also declined. It was precisely what I had expected and hoped that they would do. I told him, however, that I would see that they marched beyond our lines in good order. By the 11th, just one week after the surrender, the paroles were completed, and the rebel garrison marched out. Many deserted, and fewer of them were ever returned to the ranks to fight again than would have been the case had the surrender been unconditional and had the prisoners been sent to the James river to be paroled.

As soon as our troops took possession of the city, guards were established along the whole line of parapet, from the river above to

the river below. The prisoners were allowed to occupy their old camps behind the intrenchments. No restraint was put upon them, except by their own commanders. They were rationed about the same as our own men, and from our supplies. The men of the two armies fraternized as if they had been fighting for the same cause. When they passed out of the works they had so long and so gallantly defended, between lines of their late antagonists, not a cheer went up, not a retort was made that would give pain. Really, I believe there was a feeling of sadness just then in the breasts of most of the Union soldiers, at seeing the dejection of their late antagonists.

The day before the departure the following order was issued :

“ Paroled prisoners will be sent out here to-morrow. They will be authorized to cross at the railroad-bridge and move from there to Edwards Ferry, and on by way of Raymond. Instruct the commands to be orderly and quiet as these prisoners pass, to make no offensive remarks, and not to harbor any who fall out of ranks after they have passed.”

On the 8th a dispatch was sent from Washington by General Halleck, saying :

“ I fear your paroling the prisoners at Vicksburg without actual delivery to a proper agent, as required by the seventh article of the cartel, may be construed into an absolute release, and that the men will immediately be placed in the ranks of the enemy. Such has been the case elsewhere. If these prisoners have not been allowed to depart, you will detain them until further orders.”

Halleck did not know that they had already been delivered into the hands of Major Watts, Confederate commissioner for the exchange of prisoners.

At Vicksburg thirty-one thousand six hundred prisoners were surrendered, together with one hundred and seventy-two cannon, sixty thousand muskets, and a large amount of ammunition. The small arms of the enemy were far superior to the bulk of ours. Up to this time our troops at the West had been limited to the old United States flint-lock changed into percussion, the Belgian musket imported early in the war—almost as dangerous to the person firing it as to the one aimed at—and a few new and improved arms. These were of many different calibers, thus causing much trouble in distributing ammunition during an engagement. The enemy had generally new arms, which had run the blockade, and were of uniform caliber. After the surrender I authorized all colonels whose regiments were armed with inferior muskets to place them in the stack of captured arms, and to replace them with the latter. A large number of arms,

turned in to the Ordnance Department as captured, were arms that had really been used by the Union army in the capture of Vicksburg.

In this narration I have not made the mention I should of officers, dead and alive, whose services entitle them to special mention. Neither have I made that mention of the navy which its services deserve. I could not do justice to both in the limits of a magazine article. But suffice it to say, the close of the siege of Vicksburg found us with an army unsurpassed, in proportion to its numbers, taken as a whole, officers and men. A military education was acquired which no other school could have given. Men who thought a company was quite enough for them to command properly at the beginning, would have made good regimental or brigade commanders; most of the brigade commanders were equal to the command of a division, and one, Ransom, would have been equal to the command of a corps at least. Logan and Crocker ended the campaign fitted for independent commands.

General F. P. Blair, who commanded a division in the campaign, joined me at Milliken's Bend a full-fledged general, without having served in a lower grade. I had known Blair in Missouri, where I had voted against him for Congress in 1858. I knew him as a frank, positive, and generous man, true to his friends even to a fault, but always a leader. I dreaded his coming; I knew from experience that it is more difficult to command two generals desiring to be leaders than to command an army officered intelligently and with subordination. It affords me the greatest pleasure to record now my agreeable disappointment in his character. There was no man braver than he, nor was there any who obeyed all orders of his superior in rank with more unquestioning alacrity. He was one man as a soldier, another as a politician.

The navy, under Porter, was all it could be during the entire campaign. Without its assistance the campaign could not have been successfully made with twice the number of men engaged. It could not have been made at all, in the way it was, with any number of men without such assistance. The most perfect harmony reigned between the two arms of the service. There never was a request made, that I am aware of, either of the flag-officer or any of his subordinates, that was not promptly complied with.

The campaign of Vicksburg was suggested and developed by circumstances; and it now looks as though Providence had directed its course, while the Army of the Tennessee executed the decree.

U. S. Grant.

98 200, Army in the Field
Camp near Columbus, July 16th 1862

Gen. A. B. Buckner,
Confed. Army,
Sir, Yours of this date proposing
Amistice, and appointment of Commissioners
to settle terms of Capitulation is just received.
No terms except an unconditional and immediate
surrender can be accepted.

I propose to move immediately upon
your works. I am Sir, very respectfully

Your obt. Servt.

A. S. Bennett

Brig. Gen.

FAC-SIMILE OF THE ORIGINAL "UNCONDITIONAL SURRENDER" DISPATCH.

In THE CENTURY for December, 1884, was printed a facsimile of a copy of the famous "Unconditional Surrender" dispatch. That copy was written by General Grant for reproduction in the magazine, and bore the additional words, "copied by me October 29, 1884.—U. S. G.," so that it might not be mistaken for the original, which was supposed to be lost. But the publication of the copy called out information of the original, which is owned by the publishers of the "Memoirs." They obtained it from Dr. James K. Wallace, of Litchfield, Conn., who received it November 28, 1863, from his relative by marriage,

General John A. Rawlins, who, as chief of staff to General Grant, had the custody, after the capture, of General Buckner's papers. General Rawlins told Dr. Wallace that he was receiving the original dispatch, and advised him to take good care of it, as it might become valuable. The above is an exact reproduction of the original dispatch in every particular, except that, in order to adapt it to the width of the page, the word, "Sir," has been lowered to the line beneath, and the words, "I am, sir, very respectfully," have been raised to the line above.—EDITOR.

A WOMAN'S DIARY OF THE SIEGE OF VICKSBURG.

JUST a quarter of a century ago a young lady of New Orleans found herself an alien and an enemy to the sentiments of the community about her. Surrounded by friends and social companions, she was nevertheless painfully alone. In her enforced silence she began a diary intended solely for her own eye. A betrothed lover came suddenly from a neighboring State, claimed her hand in haste, and bore her away, a happy bride. Happy, yet anxious. The war was now fairly upon the land, and her husband, like herself, cherished sympathies whose discovery would have brought jeopardy of life, ruin, and exile. In the South, those days, all life was romantic. Theirs was full of adventure. At length they were shut up in Vicksburg. I hope some day to publish the whole diary; but the following portion is specially appropriate to the great panorama of battle in which a nation of readers is just now so interested. I shall not delay the reader to tell how I came by the manuscript, but only to say that I have not molested its original text. The name of the writer is withheld at her own request.

Geo. W. Cable.

UNDER FIRE FROM THE GUNBOATS.

WE reached Vicksburg that night and went to H——'s room. Next morning the cook he had engaged arrived, and we moved into this house. Martha's ignorance keeps me busy, and H—— is kept close at his office.

January 7th, 1863.—I have had little to record here recently, for we have lived to ourselves, not visiting or visited. Every one H—— knows is absent, and I know no one but the family we staid with at first, and they are now absent. H—— tells me of the added triumph since the repulse of Sherman in December, and the one paper published here, shouts victory as much as its gradually diminishing size will allow. Paper is a serious want. There is a great demand for envelopes in the office where H—— is. He found and bought a lot of *thick and smooth colored paper*, cut a tin pattern, and we have whiled away some long evenings cutting envelopes and making them up. I have put away a package of the best to look at when we are old. The books I brought from Arkansas have proved a treasure, but we can get no more. I went to the only book-store open; there were none but Mrs. Stowe's "Sunny Memories of Foreign Lands." The clerk said I could have that cheap, because he couldn't sell her books, so

I got it and am reading it now. The monotony has only been broken by letters from friends here and there in the Confederacy. One of these letters tells of a Federal raid to their place, and says, "But the worst thing was, they would take every tooth-brush in the house, because we can't buy any more; and one cavalryman put my sister's new bonnet on his horse, and said 'Get up, Jack,' and her bonnet was gone."

February 25th.—A long gap in my journal, because H—— has been ill unto death with typhoid fever, and I nearly broke down from loss of sleep, there being no one to relieve me. I never understood before how terrible it was to be alone at night with a patient in delirium, and no one within call. To wake Martha was simply impossible. I got the best doctor here, but when convalescence began the question of food was a trial. I got with great difficulty two chickens. The doctor made the drug-store sell two of their six bottles of port; he said his patient's life depended on it. An egg is a rare and precious thing. Meanwhile the Federal fleet has been gathering, has anchored at the bend, and shells are thrown in at intervals.

March 20th.—The slow shelling of Vicksburg goes on all the time, and we have grown indifferent. It does not at present interrupt or interfere with daily avocations, but I suspect they are only getting the range of different points; and when they have them all complete, showers of shot will rain on us all at once. Non-combatants have been ordered to leave or prepare accordingly. Those who are to stay are having caves built. Cave-digging has become a regular business; prices range from twenty to fifty dollars, according to size of cave. Two diggers worked at ours a week and charged thirty dollars. It is well made in the hill that slopes just in the rear of the house, and well propped with thick posts, as they all are. It has a shelf, also, for holding a light or water. When we went in this evening and sat down, the earthy, suffocating feeling, as of a living tomb, was dreadful to me. I fear I shall risk death outside rather than melt in that dark furnace. The hills are so honeycombed with caves that the streets look like avenues in a cemetery. The hill called the Sky-parlor has become quite a fashionable resort for the few upper-circle families left here. Some officers are quartered there, and there is a band and a field-glass. Last evening we also climbed the hill to watch the shelling, but found the view

not so good as on a quiet hill nearer home. Soon a lady began to talk to one of the officers: "It is such folly for them to waste their ammunition like that. How can they ever take a town that has such advantages for defense and protection as this? We'll just burrow into these hills and let them batter away as hard as they please."

"You are right, madam; and besides, when our women are so willing to brave death and endure discomfort, how can we ever be conquered?"

Soon she looked over with significant glances to where we stood, and began to talk at H——.

"The only drawback," she said, "are the contemptible men who are staying at home in comfort, when they ought to be in the army if they had a spark of honor."

I cannot repeat all, but it was the usual tirade. It is strange I have met no one yet who seems to comprehend an honest difference of opinion, and stranger yet that the ordinary rules of good breeding are now so entirely ignored. As the spring comes one has the craving for fresh, green food that a monotonous diet produces. There was a bed of radishes and onions in the garden, that were a real blessing. An onion salad, dressed only with salt, vinegar, and pepper, seemed a dish fit for a king, but last night the soldiers quartered near made a raid on the garden and took them all.

April 2d.—We have had to move, and thus lost our cave. The owner of the house suddenly returned and notified us that he intended to bring his family back; didn't think there'd be any siege. The cost of the cave could go for the rent. That means he has got tired of the Confederacy and means to stay here and thus get out of it. This house was the only one to be had. It was built by ex-Senator G——, and is so large our tiny household is lost in it. We only use the lower floor. The bell is often rung by persons who take it for a hotel and come beseeching food at any price. To-day one came who would not be denied. "We do not keep a hotel, but would willingly feed hungry soldiers if we had the food." "I have been traveling all night and am starving; will pay any price for just bread." I went to the dining-room and found some biscuits, and set out two, with a large piece of corn-bread, a small piece of bacon, some nice sirup, and a pitcher of water. I locked the door of the safe and left him to enjoy his lunch. After he left I found he had broken open the safe and taken the remaining biscuits.

April 28th.—I never understood before the full force of those questions—What shall we eat? what shall we drink? and wherewithal shall we be clothed? We have no prophet of the Lord at whose prayer the meal and oil

will not waste. Such minute attention must be given the wardrobe to preserve it that I have learned to darn like an artist. Making shoes is now another accomplishment. Mine were in tatters. H—— came across a moth-eaten pair that he bought me, giving ten dollars, I think, and they fell into rags when I tried to wear them; but the soles were good, and that has helped me to shoes. A pair of old coat-sleeves saved—nothing is thrown away now—was in my trunk. I cut an exact pattern from my old shoes, laid it on the sleeves, and cut out thus good uppers and sewed them carefully; then soaked the soles and sewed the cloth to them. I am so proud of these home-made shoes, think I'll put them in a glass case when the war is over, as an heirloom. H—— says he has come to have an abiding faith that everything he needs to wear will come out of that trunk while the war lasts. It is like a fairy-casket. I have but a dozen pins remaining, so many I gave away. Every time these are used they are straightened and kept from rust. All these curious labors are performed while the shells are leisurely screaming through the air; but as long as we are out of range we don't worry. For many nights we have had but little sleep, because the Federal gun-boats have been running past the batteries. The uproar when this is happening is phenomenal. The first night the thundering artillery burst the bars of sleep, we thought it an attack by the river. To get into garments and rush upstairs was the work of a moment. From the upper gallery we have a fine view of the river, and soon a red glare lit up the scene and showed a small boat towing two large barges, gliding by. The Confederates had set fire to a house near the bank. Another night, eight boats ran by, throwing a shower of shot, and two burning houses made the river clear as day. One of the batteries has a remarkable gun they call "Whistling Dick," because of the screeching, whistling sound it gives, and certainly it does sound like a tortured thing. Added to all this is the indescribable Confederate yell, which is a soul-harrowing sound to hear. I have gained respect for the mechanism of the human ear, which stands it all without injury. The streets are seldom quiet at night; even the dragging about of cannon makes a din in these echoing gullies. The other night we were on the gallery till the last of the eight boats got by. Next day a friend said to H——, "It was a wonder you didn't have your heads taken off last night. I passed and saw them stretched over the gallery, and grape-shot were whizzing up the street just on a level with you." The double roar of batteries and boats was so great, we never noticed the whizzing. Yesterday the *Cincinnati* attempted to go by in daylight,

but was disabled and sunk. It was a pitiful sight; we could not see the finale, though we saw her rendered helpless.

PREPARATIONS FOR THE SIEGE.

Vicksburg, May 1st, 1863.—It is settled at last that we shall spend the time of siege in Vicksburg. Ever since we were deprived of our cave, I had been dreading that H—— would suggest sending me to the country, where his relatives lived. As he could not leave his position and go also without being conscripted, and as I felt certain an army would get between us, it was no part of my plan to be obedient. A shell from one of the practicing mortars brought the point to an issue yesterday and settled it. Sitting at work as usual, listening to the distant sound of bursting shells, apparently aimed at the court-house, there suddenly came a nearer explosion; the house shook, and a tearing sound was followed by terrified screams from the kitchen. I rushed thither, but met in the hall the cook's little girl America, bleeding from a wound in the forehead, and fairly dancing with fright and pain, while she uttered fearful yells. I stopped to examine the wound, and her mother bounded in, her black face ashy from terror. "Oh! Miss V——, my child is killed and the kitchen tore up." Seeing America was too lively to be a killed subject, I consoled Martha and hastened to the kitchen. Evidently a shell had exploded just outside, sending three or four pieces through. When order was restored I endeavored to impress on Martha's mind the necessity for calmness and the uselessness of such excitement. Looking round at the close of the lecture, there stood a group of Confederate soldiers laughing heartily at my sermon and the promising audience I had. They chimed in with a parting chorus:

"Yes, it's no use hollerin, old lady."

"Oh! H——," I exclaimed, as he entered soon after, "America is wounded."

"That is no news; she has been wounded by traitors long ago."

"Oh, this is real, living, little, black America; I am not talking in symbols. Here are the pieces of shell, the first bolt of the coming siege."

"Now you see," he replied, "that this house will be but paper to mortar-shells. You must go in the country."

The argument was long, but when a woman is obstinate and eloquent, she generally conquers. I came off victorious, and we finished preparations for the siege to-day. Hiring a man to assist, we descended to the wine-cellar, where the accumulated bottles told of the "banquet-hall deserted," the spirit and glow of the festive hours whose lights and garlands were dead, and the last guest long since de-

parted. To empty this cellar was the work of many hours. Then in the safest corner a platform was laid for our bed, and in another portion one arranged for Martha. The dungeon, as I call it, is lighted only by a trap-door, and is so damp it will be necessary to remove the bedding and mosquito-bars every day. The next question was of supplies. I had nothing left but a sack of rice-flour, and no manner of cooking I had heard or invented contrived to make it eatable. A column of recipes for making delicious preparations of it had been going the rounds of Confederate papers. I tried them all; they resulted only in brick-bats, or sticky paste. H—— sallied out on a hunt for provisions, and when he returned the disproportionate quantity of the different articles obtained provoked a smile. There was a *hogshead* of sugar, a barrel of sirup, ten pounds of bacon and peas, four pounds of wheat-flour, and a small sack of corn-meal, a little vinegar, and actually some spice! The wheat-flour he purchased for ten dollars as a special favor from the sole remaining barrel for sale. We decided that must be kept for sickness. The sack of meal, he said, was a case of corruption, through a special providence to us. There is no more for sale at any price, but, said he, "a soldier who was hauling some of the Government sacks to the hospital offered me this for five dollars, if I could keep a secret. When the meal is exhausted perhaps we can keep alive on sugar. Here are some wax candles; hoard them like gold." He handed me a parcel containing about two pounds of candles, and left me to arrange my treasures. It would be hard for me to picture the memories those candles called up. The long years melted away, and I

"Trode again my childhood's track
And felt its very gladness."

In those childish days, whenever came dreams of household splendor or festal rooms or gay illuminations, the lights in my vision were always wax candles burning with a soft radiance that enchanted every scene. * * * And, lo! here on this spring day of '63, with war raging through the land, I was in a fine house, and had my wax candles sure enough, but, alas! they were neither cerulean blue nor rose-tinted, but dirty brown; and when I lighted one, it spluttered and wasted like any vulgar tallow thing, and lighted only a desolate scene in the vast handsome room. They were not so good as the waxen rope we had made in Arkansas. So, with a long sigh for the dreams of youth, I return to the stern present in this besieged town, my only consolation to remember the old axiom, "A city besieged is a city taken,"—so if we live through it we shall be out of the Confederacy. H—— is

very tired of having to carry a pass around in his pocket and go every now and then to have it renewed. We have been so very free in America, these restrictions are irksome.

May 9th.— This morning the door-bell rang a startling peal. Martha being busy, I answered it. An orderly in gray stood with an official envelope in his hand.

"Who lives here?"

"Mr. L——."

Very imperiously — "Which Mr. L——?"

"Mr. H—— L——."

"Is he here?"

"No."

"Where can he be found?"

"At the office of Deputy ——."

"I'm not going there. This is an order from General Pemberton for you to move out of this house in two hours. He has selected it for headquarters. He will furnish you with wagons."

"Will he furnish another house also?"

"Of course not."

"Has the owner been consulted?"

"He has not; that is of no consequence; it has been taken. Take this order."

"I shall not take it, and I shall not move, as there is no place to move to but the street."

"Then I'll take it to Mr. L——."

"Very well, do so."

As soon as Mr. Impertine walked off I locked, bolted, and barred every door and window. In ten minutes H—— came home.

"Hold the fort till I've seen the owner and the general," he said, as I locked him out.

Then Dr. B——'s remark in New Orleans about the effect of Dr. C——'s fine presence on the Confederate officials there came to mind. They are just the people to be influenced in that way, I thought. I look rather shabby now; I will dress. I made an elaborate toilet, put on the best and most becoming dress I had, the richest lace, the handsomest ornaments, taking care that all should be appropriate to a morning visit; dressed my hair in the stateliest braids, and took a seat in the parlor ready for the fray. H—— came to the window and said:

"Landlord says, 'Keep them out. Wouldn't let them have his house at any price.' He is just riding off to the country and can't help us now. Now I'm going to see Major C——, who sent the order."

Next came an officer, banged at the door till tired, and walked away. Then the orderly came again and beat the door — same result. Next, four officers with bundles and lunch-baskets, followed by a wagon-load of furniture. They went round the house, tried every door, peeped in the windows, pounded and rapped, while I watched them through the blind-slats. Presently the fattest one, a real Falstaffian man,

came back to the front door and rung a thundering peal. I saw the chance for fun and for putting on their own grandiloquent style. Stealing on tiptoe to the door, I turned the key and bolt noiselessly, and suddenly threw wide back the door and appeared behind it. He had been leaning on it, and nearly pitched forward with an "Oh! what's this!" Then seeing me as he straightened up, "Ah, madam!" almost stuttering from surprise and anger, "are you aware I had the right to break down this door if you hadn't opened it?"

"That would make no difference to me. I'm not the owner. You or the landlord would pay the bill for the repairs."

"Why didn't you open the door?"

"Have I not done so as soon as you rung? A lady does not open the door to men who beat on it. Gentlemen usually ring; I thought it might be stragglers pounding."

"Well," growing much blander, "we are going to send you some wagons to move; you must get ready."

"With pleasure, if you have selected a house for me. This is too large; it does not suit me."

"No, I didn't find a house for you."

"You surely don't expect *me* to run about in the dust and shelling to look for it, and Mr. L—— is too busy."

"Well, madam, then we must share the house. We will take the lower floor."

"I prefer to keep the lower floor myself; you surely don't expect *me* to go up and down stairs when you are so light and more able to do it."

He walked through the hall, trying the doors. "What room is that?" — "The parlor." "And this?" — "My bedroom." "And this?" — "The dining-room."

"Well, madam, we'll find you a house and then come and take this."

"Thank you, colonel; I shall be ready when you find the house Good-morning, sir."

I heard him say as he ran down the steps, "We must go back, captain; you see I didn't know they were this kind of people."

Of course the orderly had lied in the beginning to scare me, for General P—— is too far away from Vicksburg to send an order. He is looking about for General Grant. We are told he has gone out to meet Johnston; and together they expect to annihilate Grant's army and free Vicksburg forever. There is now a general hospital opposite this house and a small-pox hospital next door. War, famine, pestilence, and fire surround us. Every day the band plays in front of the small-pox hospital. I wonder if it is to keep up their spirits? One would suppose quiet would be more cheering.

May 17th.— Hardly was our scanty breakfast over this morning when a hurried ring drew

us both to the door. Mr. J——, one of H——'s assistants, stood there in high excitement.

"Well, Mr. L——, they are upon us; the Yankees will be here by this evening."

"What do you mean?"

"That Pemberton has been whipped at Baker's Creek and Big Black, and his army are running back here as fast as they can come and the Yanks after them, in such numbers nothing can stop them. Hasn't Pemberton acted like a fool?"

"He may not be the only one to blame," replied H——.

"They're coming along the Big B. road, and my folks went down there to be safe, you know; now they're right in it. I hear you can't see the armies for the dust; never was anything else known like it. But I must go and try to bring my folks back here."

What struck us both was the absence of that concern to be expected, and a sort of relief or suppressed pleasure. After twelve some worn-out-looking men sat down under the window.

"What is the news?" I inquired.

"Retreat, retreat!" they said, in broken English — they were Louisiana Acadians.

About three o'clock the rush began. I shall never forget that woful sight of a beaten, demoralized army that came rushing back, — humanity in the last throes of endurance. Wan, hollow-eyed, ragged, footsore, bloody, the men limped along unarmed, but followed by siege-guns, ambulances, gun-carriages, and wagons in aimless confusion. At twilight two or three bands on the court-house hill and other points began playing Dixie, Bonnie Blue Flag, and so on, and drums began to beat all about; I suppose they were rallying the scattered army.

May 28th.—Since that day the regular siege has continued. We are utterly cut off from the world, surrounded by a circle of fire. Would it be wise like the scorpion to sting ourselves to death? The fiery shower of shells goes on day and night. H——'s occupation, of course, is gone, his office closed. Every man has to carry a pass in his pocket. People do nothing but eat what they can get, sleep when they can, and dodge the shells. There are three intervals when the shelling stops, either for the guns to cool or for the gunners' meals, I suppose, — about eight in the morning, the same in the evening, and at noon. In that time we have both to prepare and eat ours. Clothing cannot be washed or anything else done. On the 19th and 22d, when the assaults were made on the lines, I watched the soldiers cooking on the green opposite. The half-spent balls coming all the way from those lines were flying so thick that they were obliged to dodge at every turn. At all the caves I

could see from my high perch, people were sitting, eating their poor suppers at the cave doors, ready to plunge in again. As the first shell again flew they dived, and not a human being was visible. The sharp crackle of the musketry-firing was a strong contrast to the scream of the bombs. I think all the dogs and cats must be killed or starved, we don't see any more pitiful animals prowling around. * * * The cellar is so damp and musty the bedding has to be carried out and laid in the sun every day, with the forecast that it may be demolished at any moment. The confinement is dreadful. To sit and listen as if waiting for death in a horrible manner would drive me insane. I don't know what others do, but we read when I am not scribbling in this. H—— borrowed somewhere a lot of Dickens's novels, and we reread them by the dim light in the cellar. When the shelling abates H—— goes to walk about a little or get the "Daily Citizen," which is still issuing a tiny sheet at twenty-five and fifty cents a copy. It is, of course, but a rehash of speculations which amuses a half hour. To-day he heard while out that expert swimmers are crossing the Mississippi on logs at night to bring and carry news to Johnston. I am so tired of corn-bread, which I never liked, that I eat it with tears in my eyes. We are lucky to get a quart of milk daily from a family near who have a cow they hourly expect to be killed. I send five dollars to market each morning, and it buys a small piece of mule-meat. Rice and milk is my main food; I can't eat the mule-meat. We boil the rice and eat it cold with milk for supper. Martha runs the gauntlet to buy the meat and milk once a day in a perfect terror. The shells seem to have many different names; I hear the soldiers say, "That's a mortar-shell. There goes a Parrott. That's a rifle-shell." They are all equally terrible. A pair of chimney-swallows have built in the parlor chimney. The concussion of the house often sends down parts of their nest, which they patiently pick up and reascend with.

Friday, June 5th. In the cellar.—Wednesday evening H—— said he must take a little walk, and went while the shelling had stopped. He never leaves me alone for long, and when an hour had passed without his return I grew anxious; and when two hours, and the shelling had grown terrific, I momentarily expected to see his mangled body. All sorts of horrors fill the mind now, and I am so desolate here; not a friend. When he came he said that passing a cave where there were no others near, he heard groans, and found a shell had struck above and caused the cave to fall in on the man within. He could not extricate him alone, and had to get help and dig him

out. He was badly hurt, but not mortally, and I felt fairly sick from the suspense.

Yesterday morning a note was brought H—— from a bachelor uncle out in the trenches, saying he had been taken ill with fever, and could we receive him if he came? H—— sent to tell him to come, and I arranged one of the parlors as a dressing-room for him, and laid a pallet that he could move back and forth to the cellar. He did not arrive, however. It is our custom in the evening to sit in the front room a little while in the dark, with matches and candle held ready in hand, and watch the shells, whose course at night is shown by the fuse. H—— was at the window and suddenly sprang up, crying, "Run!"—"Where?"—"Back!"

I started through the back room, H—— after me. I was just within the door when the crash came that threw me to the floor. It was the most appalling sensation I'd ever known. Worse than an earthquake, which I've also experienced. Shaken and deafened I picked myself up; H—— had struck a light to find me. I lighted mine, and the smoke guided us to the parlor I had fixed for Uncle J——. The candles were useless in the dense smoke, and it was many minutes before we could see. Then we found the entire side of the room torn out. The soldiers who had rushed in said, "This is an eighty-pound Parrott." It had entered through the front, burst on the pallet-bed, which was in tatters; the toilet service and everything else in the room smashed. The soldiers assisted H—— to board up the break with planks to keep out prowlers, and we went to bed in the cellar as usual. This morning the yard is partially plowed by a couple that fell there in the night. I think this house, so large and prominent from the river, is perhaps taken for headquarters and specially shelled. As we descend at night to the lower regions, I think of the evening hymn that grandmother taught me when a child:

"Lord, keep us safe this night,
Secure from all our fears;
May angels guard us while we sleep,
Till morning light appears."

Surely, if there are heavenly guardians we need them now.

June 7th. In the cellar.—There is one thing I feel especially grateful for, that amid these horrors we have been spared that of suffering for water. The weather has been dry a long time, and we hear of others dipping up the water from ditches and mud-holes. This place has two large underground cisterns of good cool water, and every night in my subterranean dressing-room a tub of cold water is the nerve-calmer that sends me to sleep in spite of the roar. One cistern I had to give

up to the soldiers, who swarm about like hungry animals seeking something to devour. Poor fellows! my heart bleeds for them. They have nothing but spoiled, greasy bacon, and bread made of musty pea-flour, and but little of that. The sick ones can't bolt it. They come into the kitchen when Martha puts the pan of corn-bread in the stove, and beg for the bowl she mixed it in. They shake up the scrapings with water, put in their bacon, and boil the mixture into a kind of soup, which is easier to swallow than pea-bread. When I happen in, they look so ashamed of their poor clothes. I know we saved the lives of two by giving a few meals. To-day one crawled on the gallery to lie in the breeze. He looked as if shells had lost their terrors for his dumb and famished misery. I've taught Martha to make first-rate corn-meal gruel, because I can eat meal easier that way than in hoe-cake, and I fixed him a saucerful, put milk and sugar and nutmeg — I've actually got a nutmeg. When he ate it the tears ran from his eyes. "Oh, madam, there was never anything so good! I shall get better."

June 9th.—The churches are a great resort for those who have no caves. People fancy they are not shelled so much, and they are substantial and the pews good to sleep in. We had to leave this house last night, they were shelling our quarter so heavily. The night before, Martha forsook the cellar for a church. We went to H——'s office, which was comparatively quiet last night. H—— carried the bank box; I the case of matches; Martha the blankets and pillows, keeping an eye on the shells. We slept on piles of old newspapers. In the streets the roar seems so much more confusing, I feel sure I shall run right in the way of a shell. They seem to have five different sounds from the second of throwing them to the hollow echo wandering among the hills, and that sounds the most blood-curdling of all.

June 13th.—Shell burst just over the roof this morning. Pieces tore through both floors down into the dining-room. The entire ceiling of that room fell in a mass. We had just left it. Every piece of crockery on the table was smashed up. The "Daily Citizen" to-day is a foot and a half long and six inches wide. It has a long letter from a Federal officer, P. P. Hill, who was on the gun-boat *Cincinnati*, that was sunk May 27th. Says it was found in his floating trunk. The editorial says, "The utmost confidence is felt that we can maintain our position until succor comes from outside. The undaunted Johnston is at hand."

June 18th.—To-day the "Citizen" is printed on wall paper; therefore has grown a little in size. It says, "But a few days more and Johnston will be here"; also that "Kirby Smith has

driven Banks from Port Hudson," and that "the enemy are throwing incendiary shells in."

June 20th.—The gentleman who took our cave yesterday to invite us to come to it, because, he said, "it's going to be very bad to-day." I don't know why he thought so. We went, and found his own and another family in it; sat outside and watched the shells till we concluded the cellar was as good a place as that hill-side. I fear the want of good food is breaking down H——. I know from my own feelings of weakness, but mine is not an American constitution and has a recuperative power that his has not.

June 21st.—I had gone upstairs to-day during the interregnum to enjoy a rest on my bed and read the reliable items in the "Citizen," when a shell burst right outside the window in front of me. Pieces flew in, striking all round me, tearing down masses of plaster that came tumbling over me. When H—— rushed in I was crawling out of the plaster, digging it out of my eyes and hair. When he picked up a piece large as a saucer beside my pillow, I realized my narrow escape. The window-frame began to smoke, and we saw the house was on fire. H—— ran for a hatchet and I for water, and we put it out. Another [shell] came crashing near, and I snatched up my comb and brush and ran down here. It has taken all the afternoon to get the plaster out of my hair, for my hands were rather shaky.

June 25th.—A horrible day. The most horrible yet to me, because I've lost my nerve. We were all in the cellar, when a shell came tearing through the roof, burst upstairs, tore up that room, and the pieces coming through both floors down into the cellar. One of them tore open the leg of H——'s pantaloons. This was tangible proof the cellar was no place of protection from them. On the heels of this came Mr. J——, to tell us that young Mrs. P—— had had her thigh-bone crushed. When Martha went for the milk she came back horror-stricken to tell us the black girl there had her arm taken off by a shell. For the first time I quailed. I do not think people who are physically brave deserve much credit for it; it is a matter of nerves. In this way I am constitutionally brave, and seldom think of danger till it is over; and death has not the terrors for me it has for some others. Every night I had lain down expecting death, and every morning rose to the same prospect, without being unnerved. It was for H—— I trembled. But now I first seemed to realize that something worse than death might come; I might be crippled, and not killed. Life, without all one's powers and limbs, was a thought that broke down my courage. I said to H——, "You must get me out of this horrible place; I

cannot stay; I know I shall be crippled." Now the regret comes that I lost control, because H—— is worried, and has lost his composure, because my coolness has broken down.

July 1st.—Some months ago, thinking it might be useful, I obtained from the consul of my birthplace, by sending to another town, a passport for foreign parts. H—— said if we went out to the lines we might be permitted to get through on that. So we packed the trunks, got a carriage, and on the 30th drove out there. General V—— offered us seats in his tent. The rifle-bullets were whizzing so *zip, zip* from the sharpshooters on the Federal lines that involuntarily I moved on my chair. He said, "Don't be alarmed; you are out of range. They are firing at our mules yonder." His horse, tied by the tent door, was quivering all over, the most intense exhibition of fear I'd ever seen in an animal. General V—— sent out a flag of truce to the Federal headquarters, and while we waited wrote on a piece of silk paper a few words. Then he said, "My wife is in Tennessee. If you get through the lines, send her this. They will search you, so I will put it in this toothpick." He crammed the silk paper into a quill toothpick, and handed it to H——. It was completely concealed. The flag-of-truce officer came back flushed and angry. "General Grant says no human being shall pass out of Vicksburg; but the lady may feel sure danger will soon be over. Vicksburg will surrender on the 4th."

"Is that so, general?" inquired H——. "Are arrangements for surrender made?"

"We know nothing of the kind. Vicksburg will not surrender."

"Those were General Grant's exact words, sir," said the flag-officer. "Of course it is nothing but their brag."

We went back sadly enough, but to-day H—— says he will cross the river to General Porter's lines and try there; I shall not be disappointed.

July 3d.—H—— was going to headquarters for the requisite pass, and he saw General Pemberton crawling out of a cave, for the shelling has been as hot as ever. He got the pass, but did not act with his usual caution, for the boat he secured was a miserable, leaky one—a mere trough. Leaving Martha in charge, we went to the river, had our trunks put in the boat, and embarked; but the boat became utterly unmanageable, and began to fill with water rapidly. H—— saw that we could not cross in it and turned to come back; yet in spite of that the pickets at the battery fired on us. H—— raised the white flag he had, yet they fired again, and I gave a cry of horror that none of these dreadful things had wrung from me. I thought H—— was struck. When we

landed H—— showed the pass, and said that the officer had told him the battery would be notified we were to cross. The officer apologized and said they were not notified. He furnished a cart to get home, and to-day we are down in the cellar again, shells flying as thick as ever. Provisions so nearly gone, except the hogshead of sugar, that a few more days will bring us to starvation indeed. Martha says rats are hanging dressed in the market for sale with mule meat,—there is nothing else. The officer at the battery told me he had eaten one yesterday. We have tried to leave this Tophet and failed, and if the siege continues I must summon that higher kind of courage—moral bravery—to subdue my fears of possible mutilation.

July 4th.—It is evening. All is still. Silence and night are once more united. I can sit at the table in the parlor and write. Two candles are lighted. I would like a dozen. We have had wheat supper and wheat bread once more. H—— is leaning back in the rocking-chair; he says:

“G——, it seems to me I can hear the silence, and feel it, too. It wraps me like a soft garment; how else can I express this peace?”

But I must write the history of the last twenty-four hours. About five yesterday afternoon, Mr. J——, H——’s assistant, who, having no wife to keep him in, dodges about at every change and brings us the news, came to H—— and said:

“Mr. L——, you must both come to our cave to-night. I hear that to-night the shelling is to surpass everything yet. An assault will be made in front and rear. You know we have a double cave; there is room for you in mine, and mother and sister will make a place for Mrs. L——. Come right up; the ball will open about seven.”

We got ready, shut up the house, told Martha to go to the church again if she preferred it to the cellar, and walked up to Mr. J——’s. When supper was eaten, all secure, and ladies in their cave night toilet, it was just six, and we crossed the street to the cave opposite. As I crossed a mighty shell flew screaming right over my head. It was the last thrown into Vicksburg. We lay on our pallets waiting for the expected roar, but no sound came except the chatter from neighboring caves, and at last we dropped asleep. I woke at dawn stiff. A draught from the funnel-shaped opening had been blowing on me all night. Every one was expressing surprise at the quiet. We started for home and met the editor of the “Daily Citizen.” H—— said:

“This is strangely quiet, Mr. L——.”

“Ah, sir,” shaking his head gloomily, “I’m

afraid (?) the last shell has been thrown into Vicksburg.”

“Why do you fear so?”

“It is surrender. At six last evening a man went down to the river and blew a truce signal; the shelling stopped at once.”

When I entered the kitchen a soldier was there waiting for the bowl of scrapings (they took turns for it).

“Good-morning, madam,” he said; “we won’t bother you much longer. We can’t thank you enough for letting us come, for getting this soup boiled has helped some of us to keep alive, but now all this is over.”

“Is it true about the surrender?”

“Yes; we have had no official notice, but they are paroling out at the lines now, and the men in Vicksburg will never forgive Pemberton. An old granny! A child would have known better than to shut men up in this cursed trap to starve to death like useless vermin.” His eyes flashed with an insane fire as he spoke. “Haven’t I seen my friends carted out three or four in a box, that had died of starvation! Nothing else, madam! Starved to death because we had a fool for a general.”

“Don’t you think you’re rather hard on Pemberton? He thought it his duty to wait for Johnston.”

“Some people may excuse him, ma’am, but we’ll curse him to our dying day. Anyhow, you’ll see the blue-coats directly.”

Breakfast dispatched, we went on the upper gallery. What I expected to see was files of soldiers marching in, but it was very different. The street was deserted, save by a few people carrying home bedding from their caves. Among these was a group taking home a little creature, born in a cave a few days previous, and its wan-looking mother. About eleven o’clock a man in blue came sauntering along, looking about curiously. Then two followed him, then another.

“H——, do you think these can be the Federal soldiers?”

“Why, yes; here come more up the street.”

Soon a group appeared on the court-house hill, and the flag began slowly to rise to the top of the staff. As the breeze caught it, and it sprang out like a live thing exultant, H—— drew a long breath of contentment.

“Now I feel once more at home in mine own country.”

In an hour more a grand rush of people setting toward the river began,—foremost among them the gentleman who took our cave; all were flying as if for life.

“What can this mean, H——? Are the populace turning out to greet the despised conquerors?”

“Oh,” said H——, springing up, “look! It is the boats coming around the bend.”

Truly, it was a fine spectacle to see that fleet of transports sweep around the curve and anchor in the teeth of the batteries so lately vomiting fire. Presently Mr. J—— passed and called:

"Aren't you coming, Mr. L——? There's provisions on those boats: coffee and flour. 'First come, first served,' you know."

"Yes, I'll be there pretty soon," replied H——.

But now the new-comers began to swarm into our yard, asking H—— if he had coin to sell for greenbacks. He had some, and a little bartering went on with the new greenbacks. H—— went out to get provisions. When he returned a Confederate officer came with him. H—— went to the box of Confederate money and took out four hundred dollars, and the officer took off his watch, a plain gold one, and laid it on the table, saying, "We have not been paid, and I must get home to my family." H—— added a five-dollar greenback to the pile, and wished him a happy meeting. The townfolk continued to dash through the streets with their arms full, canned goods predominating. Towards five Mr. J—— passed again. "Keep on the lookout," he said; "the army of occupation is coming along," and in a few minutes the head of the column appeared. What a contrast to the suffering creatures we had seen so long were these stalwart, well-fed men, so splendidly set up and accoutered. Sleek horses, polished arms, bright plumes,—this was the pride and panoply of war. Civilization, discipline, and order seemed to enter with the measured tramp of those marching columns; and the heart turned with throbs of added pity to the worn men in gray, who were being blindly dashed against this embodiment of modern power. And now this "silence that is golden" indeed is over all, and my limbs are unhurt, and I suppose if I were Catholic, in my fervent gratitude, I would hie me with a rich offering to the shrine of "our Lady of Mercy."

July 7th.—I did not enjoy quiet long. First came Martha, who announced her intention of going to search for her sons, as she was free now. I was hardly able to stand since the severe cold taken in the cave that night, but she would not wait a day. A colored woman came in and said she had asked her mistress for wages and she had turned her out (wanting a place). I was in no condition to stand upon ceremony then, and engaged her at once, but hear to-day that I am thoroughly pulled to pieces in Vicksburg circles; there is no more salvation for me. Next came two Federal officers and wanted rooms and board. To have some protection was a necessity; both armies were still in town, and for the past three days

every Confederate soldier I see has a cracker in his hand. There is hardly any water in town, no prospect of rain, and the soldiers have emptied one cistern in the yard already and begun on the other. The colonel put a guard at the gate to limit the water given. Next came the owner of the house and said we must move; he wanted the house, but it was so big he'd just bring his family in; we could stay till we got one. They brought boarders with them too, and children. Men are at work all over the house shoveling up the plaster before repairing. Upstairs they are pouring it by bucketfuls through the windows. Colonel D—— brought work for H—— to help with from headquarters. Making out the paroles and copying them has taken so long they wanted help. I am surprised and mortified to find that two-thirds of all the men who have signed made their mark; they cannot write. I never thought there was so much ignorance in the South. One of the men at headquarters took a fancy to H—— and presented him with a portfolio, that he said he had captured when the Confederates evacuated their headquarters at Jackson. It contained mostly family letters written in French, and a few official papers. Among them was the following note, which I will copy here, and file away the original as a curiosity when the war is over.

HEADQUARTERS DEPT. OF TENN.

TUPELO, Aug. 6, 1862.

CAPT: The Major-General Commanding directs me to say that he submits it altogether to your own discretion whether you make the attempt to capture General Grant or not. While the exploit would be very brilliant if successful, you must remember that failure might be disastrous to you and your men. The General commends your activity and energy and expects you to continue to show these qualities.

I am, very respectfully, yr. obt. svt.

Thomas L. Snead, A. A. G.

CAPT. GEO. L. BAXTER,
Commanding Beauregard Scouts.

I would like to know if he tried it and came to grief or abandoned the project. As letters can now get through to New Orleans I wrote there.

July 14th.—Moved yesterday into a house I call "Fair Rosamond's bower" because it would take a clue of thread to go through it without getting lost. One room has five doors opening into the house, and no windows. The stairs are like ladders, and the colonel's contraband valet won't risk his neck taking down water, but pours it through the windows on people's heads. We sha'n't stay in it. Men are at work closing up the caves; they had become hiding-places for trash. Vicksburg is now like one vast hospital—every one is getting sick or is sick. My cook was taken to-day with bilious fever, and nothing but will keeps me up.

July 23d.—We moved again two days ago.

MEMORANDA ON THE CIVIL WAR.

General Lew Wallace and General McCook at Shiloh.

SINCE the publication in *THE CENTURY* of my article on "The Battle of Shiloh" I have received from Mrs. W. H. L. Wallace, widow of the gallant general who was killed in the first day's fight at that battle, a letter from General Lew Wallace to him, dated the morning of the 5th. At the date of this letter it was well known that the Confederates had troops out along the Mobile & Ohio railroad west of Crump's landing and Pittsburg landing, and were also collecting near Shiloh. This letter shows that at that time General Lew Wallace was making preparations for the emergency that might happen for the passing of reinforcements between Shiloh and his position, extending from Crump's landing westward; and he sends the letter over the road running from Adamsville to the Pittsburg landing and Purdy road. These two roads intersect nearly a mile west of the crossing of the latter over Owl creek, where our right rested. In this letter General Lew Wallace advises General W. H. L. Wallace that he will send "to-morrow" (and his letter also says "April 5th," which is the same day the letter was dated and which, therefore, must have been written on the 4th) some cavalry to report to him at his headquarters, and suggesting the propriety of General W. H. L. Wallace's sending a company back with them for the purpose of having the cavalry at the two landings familiarize themselves with the road, so that they could "act promptly in case of emergency as guides to and from the different camps."

This modifies very materially what I have said, and what has been said by others, of the conduct of General Lew Wallace at the battle of Shiloh. It shows that he naturally, with no more experience than he had at the time in the profession of arms, would take the particular road that he did start upon in the absence of orders to move by a different road.

The mistake he made, and which probably caused his apparent dilatoriness, was that of having advanced some distance after he had found that the firing, which would be at first directly to his front and then off to the left, had fallen back until it had got very much in rear of the position of his advance. This falling back had taken place before I sent General Wallace orders to move up to Pittsburg landing, and, naturally, my order was to follow the road nearest the river. But my order was verbal, and to a staff-officer who was to deliver it to General Wallace, so that I am not competent to say just what order the general actually received.

General Wallace's division was stationed, the First brigade at Crump's landing, the Second out two miles, and the Third two and a half miles out. Hearing the sounds of battle, General Wallace early ordered his First and Third brigades to concentrate on the Second. If the position of our front had not changed, the road which Wallace took would have been somewhat shorter to our right than the River road.

In this article I state that General McCook, who commanded a division of Buell's army, expressed

some unwillingness to pursue the enemy on Monday, April 7th, because of the condition of his troops. General Badeau, in his history, also makes the same statement, on my authority. Out of justice to General McCook and his command, I must say that they left a point twenty-two miles east of Savannah on the morning of the 6th. From the heavy rains of a few days previous and the passage of trains and artillery, the roads were necessarily deep in mud, which made marching slow. The division had not only marched through this mud the day before, but it had been in the rain all night without rest. It was engaged in the battle of the second day, and did as good service as its position allowed. In fact an opportunity occurred for it to perform a conspicuous act of gallantry which elicited the highest commendation from division commanders in the army of the Tennessee. General Sherman in both his memoirs and reports makes mention of this fact. General McCook himself belongs to a family which furnished many volunteers to the army. I refer to these circumstances with minuteness because I did General McCook injustice in the article, though not to the extent one would suppose from the public press. I am not willing to do any one an injustice, and if convinced that I have done one, I am always willing to make the fullest admission.

U. S. Grant.

MOUNT MCGREGOR, N. Y., June 22, 1885.

Who Projected the Canal at Island Number Ten?

IN *THE CENTURY* for June, 1885, I have read Colonel J. W. Bissell's article on the "Sawing out a Channel above Island Number Ten." I desire to call attention to what he says:

"Some officer present making some suggestion about a 'canal,' I immediately pulled out my memorandum-book, and showing the sketch, said the whole thing was provided for."

This on the evening of March 19, 1862, which is the date of General Pope's letter to which Colonel Bissell refers in a foot-note, saying he did not receive the letter because he (Colonel Bissell) was on his return from the reconnaissance he had been ordered to make. To the public this reads as though the plan originated with Colonel Bissell, while I am ready to show that while the colonel directed the work, "some officer," as he says,—or, to be exact, I myself,—was the sole inventor of the project. My own official report, dated Headquarters Second Division Army of the Mississippi, Pittsburg Landing, April 22, 1862 (See "Rebellion Records," Vol. VIII., pages 101-105), reads as follows:

"Transports having reached us through a *channel* cut with enormous labor under the direction of Colonel Bissell, on a suggestion advanced by the subscriber, March 17, 1862, the Second Division embarked on them, April 7, to cross the Mississippi, which was accomplished in gallant style, but without opposition, the gun-boats *Carondelet* and *Pittsburgh*, under Captain Walke, having in dashing style silenced the enemy's shore batteries."

In the same volume, pages 78, 79, General Pope wrote to General Halleck, under date New Madrid, Mo., April 9, 1862:

"The canal across the peninsula opposite Island Number Ten, and for the idea of which I am indebted to General Schuyler Hamilton, was completed by Colonel Bissell's Engineer Regiment, and four steamers brought through on the night of the 6th."

General Pope again, in his official report to General Halleck (same volume, pages 85-87), dated "Head-quarters Army of the Mississippi, camp five miles from Corinth, Mississippi, May 2, 1862," writes:

"On the 16th of March I received your dispatch, directing me, if possible, to construct a road through the swamps to a point on the Missouri shore opposite Island No. 10, and transfer a portion of my force sufficient to erect batteries at that point to assist in the artillery practice on the enemy's batteries. I accordingly dispatched Col. J. W. Bissell, Engineer Regiment, to examine the country with this view, directing him at the same time, if he found it impracticable to build a road through the swamps and overflow of the river, to ascertain whether it were possible to dig a canal across the peninsula from some point above Island No. 10 to New Madrid, in order that steam transports might be brought to me, which would enable my command to cross the river. The idea of the canal was suggested to me by General Schuyler Hamilton in a conversation upon the necessity of crossing the river and assailing the enemy's batteries near Island No. 10 in the rear.

The New York "Herald," in its issue of April 13, 1862, published an article in reference to this channel, entitled "The Schuyler Hamilton Canal."

Schuyler Hamilton,

Late Major-General of Volunteers.

NEW YORK, JUNE 16, 1885.

The Charge of Cooke's Cavalry at Gaines's Mill.

IN THE CENTURY for June there is an article on the battle of Gaines's Mill, signed by Fitz John Porter, in which appear singular errors of statement regarding the action of the "Cavalry Reserve," affecting also the conduct and reputation of its commander. They are chiefly found at pp. 322-3:

"We lost in all twenty-two cannon; some of these broke down while we were withdrawing, and some ran off the bridges at night while we were crossing to the south bank of the Chickahominy. The loss of the guns* was due to the fact that some of Cooke's cavalry which had been directed to be kept, under all circumstances, in the valley of the Chickahominy, had been sent to resist an attack of the enemy upon our left. The charge, executed in the face of a withering fire of infantry, and in the midst of our heavy cannonading, as well as that of the enemy, resulted, as should have been expected, in confusion. The bewildered and uncontrollable horses wheeled about, and dashing through the batteries, satisfied the gunners that they were charged by the enemy. To this alone I always attributed the failure on our part to longer hold the battle-field, and to bring off all our guns in an orderly retreat. Most unaccountably this cavalry was not used to cover our retreat or gather the stragglers, but was peremptorily ordered to cross to the south bank of the river." [Foot-note: "See 'War of the Rebellion—Official Records,' Vol. XI., Part II., pp. 43, 223, 273, 272.—F. J. P."]

To silence forever the injurious statements and insinuation of the last sentence, I give here evidence of two witnesses who were present, and whose high character is known to all. Major General W. Merritt, colonel Fifth Cavalry, superintendent United States Military Academy, writes me, April 8, 1885:

"The cavalry remained, with you in immediate command, on that portion of the field, until after midnight on the 27th of June, 1862. It provided litter-bearers and

lantern-bearers for our surgeons who went over the field of battle, succoring and attending the wounded. . . . The cavalry was the last force to leave the field and to cross the Chickahominy, and the bridge on which it crossed, between 12 midnight on the 27th and 2 A. M. on the 28th of June, was, I think, rendered impassable by your order."

Brevet Lieutenant-Colonel J. P. Martin, assistant adjutant-general United States Army, wrote me from Fort Leavenworth, April 30, 1885:

"The artillery did not drive the enemy from his front; the enemy was not driven from his front, but the charge of your cavalry did *stop the advance* of the enemy, and this enabled Porter's troops to get off the field. I am by no means alone in the belief that the charge of the cavalry at Gaines's Mill, on June 27, 1862, *saved Fitz John Porter's corps from destruction*. . . . You did not direct your command at once to cross the river. There were no frightened men in your vicinity. All the frightened men were far to your right; you could not have reached the retiring crowd; and if *you* could have stopped them, you could have done more than Porter himself did do, and he was amidst them, for I saw him. Your command, at least a part of it, was the very last to cross the river. . . . Your reputation is made, and the afterthought of a defeated commander can never smirch it."

It should be observed that in the short extract from THE CENTURY, above, General Porter repeats the assertion that the cavalry caused the loss of the (22) guns,—emphasizes, makes plainer the meaning of the opening sentence: to the charge "*alone* I always attributed the failure on our part to longer hold the battle-field, and to bring off *all* our guns in an orderly retreat."

Captain Weeden, commanding battery C., Rhode Island Artillery, reports, page 282, "Rebellion Records," the loss of a section by stress of the enemy's attacks; the two other sections "held in support in rear of Griffin's brigade" opened fire; "the smoke had filled the whole field to the woods, and it was impossible to direct the fire. The batteries were limbering to the rear in good order" when, he says, the cavalry fugitives ran through them, but he only lost one more piece "mired in the woods." But General Griffin reports that the artillery "opened fire upon the enemy advancing upon our left; but it was too late; our infantry had already commenced to fall back, and nothing being left to give confidence to the artillerymen, it was impossible to make them stand to their work." And that was just when the cavalry did go in and give confidence to the three batteries on the left, and the saving work was done.

I have examined the "Official Records" and found reports of about twenty batteries engaged in the battle, and the above is the only mention of the cavalry fugitives to be found in them; their losses are attributed to other causes. Here I will give the account of the loss of whole batteries:

General Seymour reports, p. 402, of Captain Easton, "This gallant gentleman fell and his battery was lost with him."

Captain Mark Kerns was wounded, but "loaded and fired the last shots himself, and brought *four* of the guns off the field." Of another battery he reports, "No efforts could now repel the rush of a successful foe, under whose fire rider and horse went down and guns lay immovable on the field."

Captain I. H. Cooper, battery B., Pennsylvania Artillery, reports, p. 410:

* One is reminded of the mournful fate of the famous skaters,— "It so fell out they all fell in—the rest, they ran away." "We lost in all twenty-two cannon"; "the loss of the guns was due" "to Cooke's cavalry;" the *rest* "ran off the bridges," or "broke down."—P. St. G. C.

"The remaining infantry falling back, we were compelled to retire from our guns. The charge being too sudden and overpowering, it was impossible to remove them, many of the horses being killed by the enemy's fire."

Was General Porter prevented from bringing off *all* these guns by the cavalry charge?

General Porter says, p. 322:

"Just *preceding* this break" (in Morell's line) "I saw cavalry, which I recognized as ours, rushing in numbers through our lines on the left."

All the evidence goes to disprove this very deliberate statement, and that all the infantry on the left had broken and was fast disappearing before the first advance of the cavalry. Again he says:

"General Cooke was instructed to take position, with cavalry, under the hills in the valley of the Chickahominy — there with the aid of artillery to guard our left flank. He was especially enjoined to intercept, gather, and hold all stragglers, and under no circumstances to leave the valley for the purpose of coming upon the hill held by our infantry, or pass in front of our line on the left."

What strange folly of self-contradiction is betrayed between this order "to guard our left flank" and the violent condemnation in the first extract, which we have been considering, of the march "to resist an attack of the enemy on our left . . ." in a "charge executed in the face of a withering fire of infantry, and in the midst of our heavy cannonading as well as that of the enemy." Could a poet laureate say more?

"Cannon to right of them,
Cannon to left of them
Volley'd and thundered —

Then they rode back — "

Ay, there's the rub.

When I reported to General Porter before the battle, I remember that he proposed that I should take post in the narrow open meadow on the extreme left. I urged that that flank of the army was virtually covered by the Chickahominy; that, moreover, it was covered by three reserve batteries, and three twenty-pounder batteries on the opposite side of the river; while the position I had taken on the hill-slope was within view, and also within cavalry striking distance. If I had gone there, I should not have been able, when the time came, to *face*, and, with artillery aid, to stop the enemy in the flush of his success. To some such objections which I made General Porter evidently yielded, instead of "enjoining" me; for the cavalry *remained* quite near his first station, Adams's house; and I was there with him repeatedly. An order "under no circumstances to leave the valley for the purpose of coming on the hill" would have been to a general officer not only unprecedented, but insulting.

How strange, to military ears, would sound an order "to intercept, gather, and hold all stragglers," on the extreme front and flank! — and the warning not to "pass in *front* of our line on the left!" Such extravagance of action — marching with no earthly object, between two lines of fire — is seldom thus forestalled! Seriously, this passes the bounds of sanity. But it is emphasized by his map which represents my cavalry as actually making a flank march between the lines of battle, — Morell's and Longstreet's.

It seems necessary to add the statements of eye-witnesses, from different points of view, — men of well-known high character, — to corroborate my assertions and my corrections of the misrepresentations of the

part played by the cavalry and myself in the battle, as found in THE CENTURY article.

Next morning at Savage's Station the Prince de Joinville approached me with both hands extended, saying with *empressement*, "I saw you make your *charge*, yesterday"; and next day he wrote to the Duc d'Aumale [see "New York Times," August 13, 1862:]

. . . "Those fresh troops rush in good order upon our left, which falters, flies, and passing through the artillery draws on in disorder the troops of our center. The enemy advances rapidly. The fusillade and cannonade are so violent that the projectiles striking the ground raise a permanent cloud of dust. At that moment General Cooke charged at the head of his cavalry; but that movement does not succeed, and his horsemen on their return only increase the disorder. He makes every effort, aided by all who felt a little courage, to stop the panic, but in vain."

The Comte de Paris wrote to me, February 2, 1877:

. . . "I was with De Hart's battery on the crest of the hill when you advanced on our left. . . . The sacrifice of some of the bravest of the cavalry certainly saved a part of our artillery; as did, on a larger scale, the Austrian cavalry on the evening of Sadowa. . . . The main fact is, that with your cavalry you did all that cavalry could do to stop the rout."

General W. Merritt wrote me, February 2, 1877:

"I thought at the time, and subsequent experience has convinced me, that your cavalry and the audacity of its conduct at that time, together with the rapid firing of canister at short range by the battery mentioned, did much, if not everything, towards preventing the entire destruction of the Union army at Gaines's Mill. The circumstances were these:

"The enemy had emerged from a wood, where his ranks were more or less disorganized, into an open field. Instead of finding the way clear before him he was met by a determined charge of cavalry and a heavy artillery fire. In his mind a new line of fresh troops were before him. It was but natural, at that stage of our military experience, that he should hesitate and halt, to prepare for a new emergency. He did so; and that night the cavalry bivouacked as near the scene of these events as the enemy did."

Brevet Lieutenant-Colonel J. P. Martin wrote to me, March 24, 1870:

"It is my opinion that but for the charge of the Fifth Cavalry on that day, the loss in the command of General Fitz John Porter would have been immensely greater than it was; indeed, I believe that the charge, more than any other thing, was instrumental in saving that part of the army on the north bank of the Chickahominy.

"You were the last general officer of General Porter's command on the field on the left, General Porter himself leaving before you did; you had, therefore, an excellent opportunity of seeing what was going on."

Colonel G. A. H. Blake, United States Army, wrote me, June 16, 1879:

"About sundown you advanced the brigade under a warm fire and I deployed the Fifth and First cavalry in two lines, and a little to the rear of (the interval of) reserve batteries of artillery, which had opened a rapid fire. The infantry of the left wing had then disappeared from the top of the hill. You then rode off to a battery further to the left, where Rush's lancers had been ordered. The Fifth Cavalry soon charged, and I saw no more of them. You had ordered me to support them; there was a warm fire, and the smoke and dust made everything obscure. I saw none of the Fifth after it was broken, pass through the battery, which was very near. It was soon forced to retire, and was followed by the First in its rear."

Finally, General William N. Grier, United States Army, wrote me, July 19, 1879:

"The reserve was stationed on the hill . . . in full view of the slopes of the hill, down to the timber through which the enemy debouched in large numbers. The

United States batteries were on the slope of the hill, a little to our right front. You ordered the Fifth to make a charge, directing me to make a second charge after the Fifth would rally. I never saw that regiment again on that day, after it was enveloped in a cloud of dust, making the charge — but soon after saw a battery or two emerge from the dust . . . withdrawing from the contest. I then wheeled my squadrons into column of fours, at a trot along the top of the hill, until getting in rear of the batteries — receiving the enemy's fire at a loss of an officer and many men and horses — and, as I then supposed, saving the batteries from further loss."

The orders actually given were to support the batteries to the last moment, and then charge, if necessary, to save them.

P. St. George Cooke.

Brigadier and Brevet Major-General.
United States Army, Retired.

DETROIT, June, 1885.

RECOLLECTIONS OF A PARTICIPANT IN THE CHARGE.

Remembering clearly the incidents connected with the cavalry charge, I wish to clear up a point in regard to that charge, so far as the regiment (the Fifth Regular Cavalry) with which I had the honor of being connected was concerned.

The battle did not begin till noon. We were stationed on the left of our position. As the hours of the day passed by, the battle became more and more furious. At about five o'clock in the afternoon we were moved up near to the crest of the hill on our left, and within some twenty rods of the five or six batteries planted on the crest of the hill.

It was something marvelous to watch those brave men handle their guns; never a man flinched or was dismayed, though a most withering fire of musketry and artillery was poured upon them.

Just before dark, when we could tell by the sound of the musketry fire, and by the constantly advancing yells of the charging foe, that he was getting near the guns in our front, General Philip St. George Cooke, commanding the cavalry, rode to our front. I was on the right of the front line of the first squadron, and I heard his order to Captain Whiting, commanding the five companies of our regiment that were present on the field. He said, "Captain, as soon as you see the advancing line of the enemy, rising the crest of the hill, charge at once, without any further orders, to enable the artillery to bring off their guns." General Cooke then rode back around the right of our squadron.

Captain Whiting turned to us and said, "Cavalry! Attention! Draw saber!" then added something to the effect, "Boys, we must charge in five minutes." Almost immediately the bayonets of the advancing foe were seen, just beyond our cannon, probably not fifty rods from us. Captain Whiting at once gave the order, "Trot! March!" and as soon as we were fully under way he shouted, "Charge!"

We dashed forward with a wild cheer, in solid column of squadron front; but our formation was almost instantly broken by the necessity of opening to right and left to pass our guns. So furiously were our brave gunners fighting that I noticed this incident: The gun directly in my front had just been loaded; every man had fallen before it could be fired. As I bore to the right to pass this gun, I saw the man at the breech, who was evidently shot through the body, drawing himself up by the spokes of the wheel, and reaching for the lanyard, and I said, "He will fire that gun," and so

kept to the right, and almost immediately felt the shock of the explosion. Then I closed in to re-form the line, but could find no one at my left, so completely had our line been shattered by the musketry fire in front and the artillery fire in our rear. I rushed on, and almost instantly my horse reared upright in front of a line of bayonets, held by a few men upon whom I had dashed. My horse came down in front of the line, and ran away partly to our rear, perfectly uncontrollable. I dropped my saber, which hung to my waist by the saber-knot, and so fiercely tugged at my horse's bit as to cause the blood to flow from her mouth, yet could not check her. The gun I had passed, now limbered up, was being hauled off at a gallop. I could direct my horse a little to right or left, and so directed her toward the gun. As she did not attempt to leap the gun, I gained control of her, and at once turned about and started back upon my charge. After riding a short distance I paused. The firing of artillery and infantry behind and of infantry in front was terrific. None but the dead and wounded were around me. It hardly seemed that I could drive Lee's battle-scarred veterans alone, and so I rode slowly off the field. My regiment had only about two hundred and fifty men in action. Our commissioned officer was the only one not wounded, except some who were captured. Only about one hundred returned from that bloody field for duty the next day. Some were captured, but a large number fell in that terrible charge, and sleep with the many heroes who on that day gave their lives for the Union. So far as those of the Fifth Regular Cavalry present in this charge were concerned, we certainly did our whole duty, just as we were ordered. We saved *some* guns, and tried to save all.

Rev. W. H. Hitchcock.

FAIRVIEW, ILL., June 13, 1885.

"General Beauregard's Courier at Bull Run."

THE effort of Mr. Robert R. Hemphill (in the July CENTURY) to clear up the obscurity surrounding the fate of General Beauregard's missing courier at the First Battle of Manassas, only deepens the mystery which attaches to that now interesting person.

Mr. Hemphill thinks that he saw this courier, disabled by a fall from his horse, "lying helpless in rear of the (Confederate) line at Mitchell's Ford, badly used up and bleeding."

How is this possible? General Beauregard says that the courier started about 8 A. M. from "Camp Pickens, the headquarters," to go first to Holmes, then to Ewell. To seek either Holmes or Ewell by way of Mitchell's Ford would be nearly like going from New York to Brazil by way of London.

At a later hour General Beauregard rode from his headquarters to a hill in rear of Mitchell's Ford, and thence, near noon, a staff officer, accompanied by a courier, set out to go to Ewell with an order to move to the support of our left. Meeting with some accident, he sent the courier ahead to deliver the order. It was perhaps this officer whom Mr. Hemphill saw.

Campbell Brown.

SPRING HILL, TENN., July 5, 1885.

CONNECTICUT IN THE MIDDLE AGES.

IN the third week of January, 1833, the editor of the Boston "Liberator" received the following letter from a village in Windham County, Connecticut:

CANTERBURY, January 18th, 1833.

MR. GARRISON:

I am to you, sir, I presume, an entire stranger, and you are indeed so to me save through the medium of the public print. I am by no means fond of egotism, but the circumstances under which I labor forbid my asking a friend to write for me; therefore I will tell you who I am, and for what purpose I write. I am, sir, through the blessing of Divine Providence, permitted to be the Principal of the Canterbury (Conn.) Female Boarding School. I received a considerable part of my education at the Friends' Boarding School, Providence, R. I. In 1831 I purchased a large dwelling-house in the center of this village, and opened the school above mentioned. Since I commenced I have met with all the encouragement I ever anticipated, and now have a flourishing school.

Now I will tell you why I write you, and the object is this: I wish to know your opinion respecting changing white scholars for colored ones. I have been for some months past determined if possible during the remaining part of my life to benefit the people of color. I do not dare tell any one of my neighbors anything about the contemplated change in my school, and I beg of you, sir, that you will not expose it to any one; for if it was known, I have no reason to expect but it would ruin my present school. Will you be so kind as to write by the next mail, and give me your opinion on the subject; and if you consider it possible to obtain twenty or twenty-five young ladies of color to enter the school for the term of one year at the rate of \$25 per quarter, including board, washing, and tuition, I will come to Boston in a few days and make some arrangements about it. I do not suppose that number can be obtained in Boston alone; but from all the large cities in the several States I thought perhaps they might be gathered.

I must once more beg you not to expose this matter until we see how the case will be determined.

Yours, with the greatest respect,
PRUDENCE CRANDALL.

The response must have been favorable, for, ten days later, a note was placed in Mr. Garrison's hands, which ran thus:

BOSTON, January 29th, 1833.

MR. GARRISON:

The lady that wrote you a short time since would inform you that she is now in town, and should be very thankful if you would call at Mr. Barker's Hotel and see her a few moments this evening at 6 o'clock.

Yours, with the greatest respect,
P. CRANDALL.

The nature of this interview may be inferred from a third letter:

CANTERBURY, February 12th, 1833.

MR. GARRISON:

I can inform you that I had a very pleasant passage

home. Arrived here Saturday evening about 8 o'clock; saw Mr. Packer on Monday; told him the object of my visit to Boston.

He said he thought the object to be praiseworthy, but he was very much troubled about the result. He is fearful that I cannot be supplied with scholars at the close of one year, and therefore he thinks I shall injure myself in the undertaking.

If you have not yet sent on to New York the information you intend, I would thank you if you would do it immediately, for I am expecting to take the next boat for New York, and shall be in the city early on Friday morning. I have not the least acquaintance there, but a friend of mine will give me an introductory letter to Mr. Miller, one of the colored ministers in the city.

The evening after I left Boston I called on Mrs. Hammond, who soon collected some of her friends, among whom were Mr. George W. Benson and a brother of his, who appeared to possess hearts warmed with fellow-feeling and awake to the cause of humanity. They engaged to do all for me in their power, and I have no doubt they will. Saturday morning, called on Mrs. H. again, and she walked with me to the residence of three families of color, with whom I was much pleased. They seemed to feel much for the education of their children, and I think I shall be able to obtain six scholars from Providence. When I return from N. Y., I think I shall be able to lay the subject before the public.

Yours, etc.,

P. CRANDALL.

Why did Miss Crandall contemplate so revolutionary a step, and why did she seek counsel, before all others, of William Lloyd Garrison? Her own account is as follows:*

"The reason for changing my school of white pupils for a school for colored pupils is as follows: I had a nice colored girl, now Mrs. Charles Harris, as help in my family, and her intended husband regularly received the 'Liberator.' The girl took the paper from the office and loaned it to me. In that the condition of the colored people, both slaves and free, was truthfully portrayed, the double-dealing and manifest deception of the Colonization Society were faithfully exposed, and the question of Immediate Emancipation of the millions of slaves in the United States boldly advocated. Having been taught from early childhood the sin of slavery, my sympathies were greatly aroused. Sarah Harris, a respectable young woman and a member of the church (now Mrs. Fairweather, and sister to the before-named intended husband), called often to see her friend Marcia, my family assistant. In some of her calls I ascertained that she wished to attend my school, and board at her own father's house at some little distance from the village. I allowed her to enter as one of my pupils. By this act I gave great offense. The wife of an Episcopal clergyman who lived in the village told me that if I continued that colored girl in my school, it could not be sustained. I replied to her *That it might sink, then, for I should not turn her out.* I very soon found that some of my school would leave not to return if the colored girl was retained. Under these circumstances I made up my mind that if it were possible I would teach colored girls exclusively."

* The extract is from a private letter dated May 15, 1869, addressed to Miss Larned, author of the "History of Windham County, Connecticut." Mrs. Prudence Crandall Philleo is still living, in the full vigor of her faculties, at Elk Falls, Kansas.

PRUDENCE CRANDALL. FROM THE OIL-PAINTING, BY F. ALEXANDER (1838), IN THE LIBRARY OF CORNELL UNIVERSITY.

[In the latter part of March, 1838, at the suggestion of William Lloyd Garrison, the managers of the New England Anti-Slavery Society voted to request Miss Crandall to sit for her likeness. This she did in April, the painter being F. Alexander. A very inadequate steel engraving was afterwards made from the canvas by W. L. Ormsby, of which the plate is now in the possession of Mr. F. J. Garrison. The oil-portrait ultimately passed into the possession of the late Rev. Samuel J. May. Concerning its transfer to Cornell University, where it now is, President White kindly furnishes the following particulars:

"I first knew the portrait, as perhaps you did, when it hung in the parlor of Mr. May's old house at the top of James street hill in Syracuse. He had an especial affection for it, and told me the story of it, I being then in my boyhood. * * * On the last afternoon of Mr. May's life I called upon him. He was very cheerful, insisting that he had but a short time to live, that he was very glad of it, that he had seen slavery abolished, that his work was done, and that he would confess to some curiosity as to 'the beyond.' I insisted that we could not spare him for ten years yet, and in a jocose way he asked me if I could not compromise on from three to five years. He then called his daughter, and pointing to the picture above

him, told her that when he was gone that picture must be sent to me at Cornell University. The next morning, to my great surprise, news came that he was no longer living. * * *

"When Professor von Holst, of the University of Freiburg, the author of the well-known history of the United States, was in this country, I invited some gentlemen to meet him at dinner in New York, and next him sat the Honorable Lafayette S. Foster, formerly President of the United States Senate, and at one time, I think, Governor of Connecticut,—a man, as you will remember, very much respected throughout the country for his character and ability. In the course of our conversation he said something about Windsor in Connecticut, whereupon I asked him if he had ever known anything about the Prudence Crandall case. He smiled as he answered that he was her junior counsel, and gave me some interesting details regarding the matter. Thereupon I turned to von Holst and said, 'There is one point in American history which, I dare say, you never heard of,' when to my great surprise he showed me that he knew the whole case thoroughly in its details and bearings. I never realized till then how minute the knowledge of a German professor in his chosen department could be made. * * *

— W. P. G.]

PRUDENCE CRANDALL,
PRINCIPAL OF THE CANTERBURY, (CONN.) FEMALE
BOARDING SCHOOL.

RETURNS her most sincere thanks to those who have patronized her School, and would give information that on the first Monday of April next, her School will be opened for the reception of young Ladies and little Misses of color. The branches taught are as follows:—Reading, Writing, Arithmetic, English Grammar, Geography, History, Natural and Moral Philosophy, Chemistry, Astronomy, Drawing and Painting, Music on the Piano, together with the French language.

The terms, including board, washing, and tuition, are \$25 per quarter, one half paid in advance.

Books and Stationary will be furnished on the most reasonable terms.

For information respecting the School, reference may be made to the following gentlemen, viz.—

GEORGE BENSON,—PROVIDENCE, R. I.

Canterbury, Ct. Feb. 25, 1833.

The first publication of the intended change was made in the "Liberator" of March 2, 1833, when the editor announced, "with a rush of pleasurable emotions," the insertion of "the advertisement of Miss P. Crandall (a white lady), of Canterbury, Conn., for a High School for young colored Ladies and Misses. This is," he continued, "a seasonable auxiliary to the contemplated Manual Labor School for Colored Youth. An interview with Miss C. has satisfied us that she richly deserves the patronage and confidence of the people of color; and we doubt not they will give her both."

Already, however, the town of Canterbury had been thrown into an uproar by the news not only that Miss Crandall would not dismiss Sarah Harris, but would practically dismiss her white pupils instead, and make Canterbury the seat of the higher education of "niggers." "The good people of Canterbury," wrote Arnold Buffum from Providence, on March 4, "I learn, have had three town meetings last week, to devise ways and means to suppress P. Crandall's school, and I am informed that the excitement is so great that it would not be safe for me to appear there. George W. Benson, however, has ventured and gone there on Saturday afternoon last, to see what can be done in the case." Mr. Benson found that Miss Crandall had already been visited by a committee of gentle-

men, who represented "that by putting her design into execution she would bring disgrace upon them all." They "professed to feel a real regard for the colored people, and were perfectly willing they should be educated, provided it could be effected *in some other place!*—a sentiment," adds Mr. Benson, "you will say, worthy of a true colonizationist." He also learned of the calling of another town meeting for the 9th instant, at which the Rev. Samuel J. May, of the adjacent village of Brooklyn, had promised to be present as Miss Crandall's attorney, and his own services in the same capacity were gladly accepted. They were subsequently reënforced by Arnold Buffum. On the eve of the meeting Mr. Garrison wrote from Boston to Mr. Benson:

"Although distracted with cares, I must seize my pen to express my admiration of your generous and prompt defense of Miss Crandall from her pitiful assailants. In view of their outrageous conduct, my indignation kindles intensely. What will be the result? If possible, Miss C. must be sustained at all hazards. If we suffer the school to be put down in Canterbury, other places will partake of the panic, and also prevent its introduction in their vicinity. We may as well, 'first as last,' meet this proscriptive spirit, *and conquer it.* We—*i. e.*, all true friends of the cause—must make this a common concern. The New Haven excitement has furnished a bad precedent; a second must not be given, or I know not what we can do to raise up the colored population in a manner which their intellectual and moral necessities demand. In Boston we are all excited at the Canterbury affair. Colonizationists are rejoicing, and abolitionists looking sternly.

ARNOLD BUFFUM. FROM A PHOTOGRAPH TAKEN IN GAY'S GALLERY OF ART FROM A PAINTING MADE IN ENGLAND IN 1824.

"The result of the meeting to be held in C. to-morrow will be waited for by us with great anxiety. Our brother May deserves much credit for venturing to expostulate with the conspirators. If any one can make them ashamed of their conduct, he is the man. May the Lord give him courage, wisdom, and success!"

The result of the meeting was reported to the "Liberator" of March 16 by Henry E. Benson, in a letter to which Mr. Garrison gave the caption, "Heathenism Outdone," and prefixed a brief comment, saying:

"We put the names of the principal disturbers in black letters — black as the infamy which will attach to them as long as there exists any recollection of the colored race. To colonize these shameless enemies of their species in some desert country would be a relief and blessing to society. This scandalous excitement is one of the genuine flowers of the colonization garden."

The meeting, refusing to allow Messrs. May and Buffum to be heard on Miss Crandall's behalf, on the ground of their being foreigners and interlopers, voted unanimously their disapprobation of the school, and pledged the town to oppose it at all hazards.

The story of this remarkable case cannot be pursued here except in brief. It has been fully related in easily accessible works, and from this point Mr. Garrison's connection with the progress of events ceased from force of circumstances. It will be enough to say that the struggle between the modest and heroic young Quaker woman and the town lasted for nearly two years; that the school was opened in April; that attempts were immediately made under the law to frighten the pupils away, and to fine Miss Crandall for harboring them; that in May an act prohibiting private schools for non-resident colored persons, and providing for the expulsion of the latter, was procured from the Legislature, amid the greatest rejoicing in Canterbury (even to the ringing of church bells); that, under this act, Miss Crandall was in June arrested and temporarily imprisoned in the county jail, twice tried (August and October) and convicted; that her case was carried up to the Supreme Court of Errors, and her persecutors defeated on a technicality (July, 1834); and that pending this litigation the most vindictive and inhuman measures were taken to isolate the school from the countenance and even the physical support of the townspeople. The shops and the meeting-house were closed against teacher and pupils; carriage in the public conveyances was denied them; physicians would not wait upon them; Miss Cran-

REV. SAMUEL J. MAY.
FROM A PHOTOGRAPH IN POSSESSION OF MISS LUCY THAXTER, BOSTON.

dall's own family and friends were forbidden under penalty of heavy fines to visit her; the well was filled with manure, and water from other sources refused; the house itself was smeared with filth, assailed with rotten eggs and stones, and finally set on fire.

Such conduct on the part of a civilized and Christian community — the most respectable coöperating with the vilest citizens — was, after all, faintly described by Mr. Garrison's phrase, "heathenism outdone," applied, and justly applied, only to the initial proceedings. It was his last comment upon the affair, and very short, but the severity of it touched the Canterbury persecutors to the quick, particularly the five men whose names were printed in black letters — the magnates of the little village. "Your remarks in the last 'Liberator' were awfully cutting," wrote Henry Benson; and Miss Crandall herself interposed with a prudential consideration:

"Permit me to entreat you to handle the prejudices of the people of Canterbury with all the *mildness* possible, as everything severe tends merely to heighten the flame of malignity amongst them. 'Soft words turn away wrath, but grievous words stir up anger.' Mr. May and many others of your warm-hearted friends feel very much on this subject, and it is our opinion that you and the cause will gain many friends in this town and vicinity if you treat the matter with perfect mildness."

Mr. Garrison was, however, making war on the common enemy, and his "harsh language" was still in order. He had also put his finger

PRUDENCE CRANDALL PHILLEO.
FROM A PHOTOGRAPH FROM LIFE (1882) BY WILLIAM HADDOCK.

on the right spot when he declared the Canterbury mania to be "one of the genuine flowers of the colonization garden." "Be it so," cried Andrew T. Judson, one of the five, and then or shortly afterwards a life member of the American Colonization Society, as was also Dr. Andrew Harris, of the same black list. "Be it so," said Squire Judson, in an address to the Colonization Society signed by the civil authority and selectmen under date of March 22, 1833. "We appeal to the American Colonization Society, to which our statement is addressed—we appeal to every philanthropist, to every Christian—we appeal to the enlightened citizens of our native State and the friends of our country; and in making that appeal we assure them all that they may rely upon the facts here stated, and we ask them to apply to these facts those wholesome principles which we believe are unanimously cherished in New England, and the issue we will abide." He declared that the "school was to become an auxiliary in the work of *immediate abolition*," with the "Liberator" for its mouth-piece; that Miss Crandall had denounced colonization as a fraud; and that "once open this door, and New England will become the Liberia of America." As town clerk he recorded the vote of the town meeting on April 1 to petition for a law against the bringing of colored people from other towns and States for any purpose, "and more especially for the purpose of disseminating the principles and doctrines opposed to the benevolent colonization scheme;" and as one

of the committee he drew up the petition. He was, in fact, the soul of the persecution, for which he boldly invoked and secured the complicity of a Society whose hostility to any attempt to raise the condition of the colored people in the land of their nativity was once more shinningly demonstrated. It was his mission, also, in the pursuit of professional and political advancement, to illustrate the malevolence towards Mr. Garrison which now began, on the part of the Colonization managers, to assume a murderous intensity.

In February the Colonization agent, Danforth, in the midst of a public debate with Arnold Buffum at Lyceum Hall, Salem, taunted Mr. Garrison with not going South to preach to the slaveholders, and, recalling the handsome rewards offered for him, pointed him out in the audience, "with a significant gesture," as "this same William Lloyd Garrison" for whom he himself had been offered ten thousand dollars by an individual. This incentive to kidnapping was not a harmless device to throw odium on an adversary. Mr. Amasa Walker reported, at the annual meeting of the New England Anti-Slavery Society in Boston, that "he had lately heard all abolitionists denounced in State Street as mischievous men, and one had lately said to him that he wished he had the editor of the 'Liberator' in an iron cage—he would send him to the Governor of Georgia, who would know what to do with him." Nor did Danforth's malice end there. In a letter written from Boston under date of March 28, 1833, to Colonel William L. Stone, editor of the New York "Commercial Advertiser," and chairman of the executive committee of the Colonization Society in that city, he used the following still more "significant" language:

"In the midst of all these successful endeavors [to found Liberia and people it], there appears a young man within the last two years, of the name of Garrison, whose pen is so venomous that the laws enacted for the peace of the community and the protection of private character have, in one instance, actually confined him in jail, as they would a lunatic. This man, who, according to his own account, has only since 1830 turned against the Colonization cause, in favor of which he delivered his sentiments in public twelve years after the Society was formed; this man, who is considered such a disturber of the tranquillity of Southern society that \$10,000 reward have been offered me for his person, and the most touching appeals as well as official demands made to us in this region that he should be publicly discountenanced and even given up to justice; who is, in fact, this moment in danger of being surrendered to the civil authorities of some one of the Southern States; this man, in

connection with a few like-minded spirits, has been engaged in forming what they call 'The New England Anti-Slavery Society,' one object of which is, 'to effect the abolition of slavery in the United States.' . . .

"I have conversed freely with the Governor of this Commonwealth, and other leading men, on this subject, and they express a decided disapprobation of Garrison's course. For a while he tried the effect of his 'Liberator' upon the Governor by sending it to him. His Excellency, however, did not think it worth the postage, and ordered it stopped. Garrison is now preparing to go to England, doubtless to repeat *viva voce* the defamation of the South and the Colonization Society which has been already sent over in print, and reëchoed in this country as authentic British opinions."

The sequel will show that this clerical instigation to a forcible detention of Mr. Garrison, if nothing worse, was kept in mind by the colonizationists. The mission to England had been talked of during his tour in Maine the previous year, and hastily concluded upon, but was perforce postponed till the following spring. On Friday, April 5, Mr. Garrison set out from Boston to take ship in New York. His journey proved a sort of hegira. Henry Benson writes from Providence, on April 9, to Mr. Garrison's partner, Isaac Knapp :

"We had a very short but delightful visit from Mr. Garrison last week, though for the life of me I could not help feeling sorrowful on reflecting he was about to leave us for so long a period. On Friday evening he delivered a most excellent address before a large and highly respectable audience of our colored inhabitants, in which he took an affecting leave of them all. After the meeting the poor creatures wept and sobbed like children; they gathered round him anxious to express their gratitude for what he had done for them, and tell him how well they loved him. . . .

"On Saturday morning your partner and my brother started for Brooklyn, from whence he probably departed on Monday for Hartford. . . .

"P. S. My brother has returned; says our friend delivered a highly satisfactory address in Mr. May's meeting-house on Saturday evening, and has removed a mountain of prejudice. After he left Brooklyn on Monday noon, a sheriff came up from Canterbury with a writ. Do not know whether they proceeded to Hartford after him or not; brother said he could not ascertain. Believe they are going to take him up for the heading put to the letter of March 12th, respecting the town meeting, on the ground that it is libellous. My father says he will see that he has bonds (if necessary) to any amount required. Miss Crandall was at Brooklyn, and is in excellent spirits."

On April 11 Mr. Garrison writes from New Haven to Isaac Knapp :

"On Saturday friend G. W. Benson took me to Brooklyn in a chaise, where I tarried until Monday under the hospitable roof of his parents. My excellent brother May was delighted to see me, and my pleasure was equally great in taking him by the hand. I did not expect to deliver an address in B., but could not easily avoid a compliance with the wishes of my friends. Accordingly, I occupied Mr. May's pulpit on Saturday evening last. . . .

"Miss Crandall, having obtained information that I was to hold forth, came up from Canterbury with her sister (a beautiful girl, by the way). She is a wonderful

woman, as undaunted as if she had the whole world on her side. She has opened her school, and is resolved to persevere. I wish brother [Oliver] Johnson to state this fact, particularly, in the next 'Liberator,' and urge all those who intend to send their children thither to do so without delay.

"The stage for Hartford on Monday morning neglected to call for me; and half an hour had elapsed, after its departure, before I was aware of the fact. As time was precious, I took a common wagon, and followed on in pursuit, and at the end of the seventh mile overtook the stage. I was in a wretched plight, covered over with mud, and wet — for it rained heavily. I arrived in Hartford late that evening, and the next morning thought of starting for New Haven; but, at the urgent solicitations of the colored friends, I gave them an address in the evening in their church."

From Philadelphia, six days later, but on the same sheet, Mr. Garrison continues :

"I saw brother [Simeon S.] Jocelyn in New York. He showed me a letter which he had just received from Miss Crandall, in which she stated that I had not left Brooklyn more than half an hour before a sheriff from Canterbury drove up to the door of Mr. Benson at full speed, having five writs against me from Andrew T. Judson and company; and, finding that I had gone, he pursued after me for several miles, but had to give up the chase. No doubt the Colonization party will resort to some base measures to prevent, if possible, my departure for England. . . ."

To Miss Harriet Minot, on April 22, also from Philadelphia, Mr. Garrison wrote :

"On Friday afternoon I arrived in New York from this city, and had the pleasure of receiving your favor of the 9th inst. I was immediately told that the enemies of the abolition cause had formed a conspiracy to seize my body by legal writs on some false pretenses, with the sole intention to convey me South and deliver me up to the authorities of Georgia,—or, in other words, to abduct and destroy me. The agent who was to carry this murderous design into operation had been in New York several days, waiting my appearance. As a packet was to sail the next day for Liverpool from Philadelphia, my friends advised me to start early the next morning for this city, in the steamboat, hoping I might arrive in season to take passage therein, and thus baffle the vigilance of the enemy—but the ship sailed in the morning, and I did not get here till the afternoon; consequently, I failed to accomplish my purpose. My only alternative, therefore, is to return to New York to-morrow evening, and stealthily get away, if possible, in the Liverpool packet that sails the next morning. Probably I shall not start in the ship, but go down the river in a pilot-boat and overtake her.

"My friends are full of apprehension and disquietude, but I *cannot* know fear. I feel that it is impossible for danger to awe me. I tremble at nothing but my own delinquencies, as one who is bound to be perfect, even as my heavenly Father is perfect."

Returning to New York with some time still on his hands before sailing, Mr. Garrison passed to New Haven, where he sat for his portrait during three days to Nathaniel Jocelyn. All this time he was kept shut up by the artist in a room adjoining the studio, so arranged that in case of an attempt to seize him he could make a safe exit. Without such

precautions, in a city swarming with colonizationists and where his person was known to many, it would have been foolhardy to venture within reach of the truculent Judson, whom he may well have passed on the way thither. "I hope," writes Almira Crandall to Henry Benson from Canterbury, on April 30, "that our friend Garrison will be enabled to escape the fury of his pursuers. Our anxieties for him were very great at the time Judson went to New York, as we expected his business was to take Mr. G." Despite this and all other dangers, the time was consumed without molestation until the packet was ready to be boarded. On May 1, from New York harbor, Mr. Garrison wrote again to Miss Harriet Minot:

"I am now fairly embarked for Liverpool, on board the ship *Hibernia*, Captain Maxwell. We lie about ten miles below the city, at anchor; and here we must remain twenty-four hours. . . .

"Since the transmission of my last letter, I have been journeying from place to place, rather for the purpose of defeating the designs of my enemies than from choice. I expected to have sailed in the packet of the 24th ult., but applied too late, as every berth had been previously engaged. I do not now regret the detention, as it enabled the artist at New Haven to complete my portrait; and I think he has succeeded in making a very tolerable likeness. To be sure, those who imagine that I am a monster, on seeing it, will doubt or deny its accuracy, seeing no horns about the head; but my friends, I think, will recognize it easily. . . .

"Last evening I had a large audience of colored persons in the Methodist African Church in New York, who came to hear my farewell address. Alas, that the value of my labors in their behalf bears so small a proportion to their unbounded gratitude and love! — Mr. Finley, the General Agent of the Colonization Society, was present, and witnessed a tremendous assault upon his darling scheme."

The pursuit was not given over till the last moment. "About two and a half hours after friend Garrison went on board the ship," reports Arnold Buffum, who had gone to New York to see him off, "inquiry was made for him by a lad from a lawyer's office, from which we conclude that the distinguished gentlemen of Canterbury were in pursuit of him; but they happened to be a little too late."

For the moment, Mr. Garrison was safe from his persecutors; but on his return to his native land in the autumn, having ventured to revisit Brooklyn and Canterbury, he was overtaken. What befell him he thus reported in the "Liberator":

"ACKNOWLEDGMENT.—Just before midnight, on Sabbath evening last, in Brooklyn, Connecticut, the Deputy Sheriff of Windham County, in behalf of those zealous patrons of colored schools, those plain, independent republicans, those high-minded patriots, those practical Christians,

**ANDREW T. JUDSON,
RUFUS ADAMS,
SOLOMON PAINE,
CAPT. RICHARD FENNER,
DR. HARRIS,**

presented me with five indictments for a panegyric upon their virtuous and magnanimous actions, in relation to Miss Crandall's *nigger school* in Canterbury, inserted in the 'Liberator' of March 16, 1833. I shall readily comply with their polite and urgent invitation to appear at the Windham County Court on the second Tuesday of December, to show cause why, &c., &c. As they have generously given me *precept upon precept*, I shall give them in return *line upon line* — *here* (in the 'Liberator') a little, and *there* (in the court-room) a great deal."

These suits were never brought to trial.

Wendell Phillips Garrison.

NEW WINE.

A GAIN my hill-side reddens with the Fall:
Where woodland ivy swings to every breeze,
From the rude trellis of encroaching trees,
The ruddy grapes are bursting on the wall.
Those fertile vines hang heavy to my hand;
A wild aroma makes the morning sweet,
As, slowly purpling in the kindly heat,
Their fruity bunches crown the temperate land.

Give me no wine, for pleasure mixed with pains,—
A draught of fire that brings a thousand fears —
Too hot a cup for woman's earliest years,
When passion never played upon her veins.
I dare not drink to such a dangerous end:
A little yet the dizzy hour delay!
Give me no love to sweep my pride away,
But give me happy friendship, O my friend!

Dora Read Goodale.

THE TWILIGHT OF THE POETS.

IN writing upon the leaders of American song, I have sought to make our various studies as comprehensive as possible within due bounds. That they might be both critical and sympathetic, and afford new illustrations of the poetic principle and the temperament of poets, it has been my effort to approach the subject of each from his own ground,—to comprehend his motive and judge him at his best; at the same time, to see where he has failed of that standard and of the true spirit of ideal expression. Such an effort requires to be taken as a whole. Isolated phrases, and even sections, at times may have been misconstrued as unfair stricture or, on the other hand, as if biased by personal considerations. Yet, in the course of each study, I have tried to draw a just portrait, and so to analyze the work of its original as to obtain at least an approximately correct resultant.

For the present essay,—relating to various persons and questions of the time, and necessarily less cohesive and animate than those which it supplements,—I would ask that its parts be weighed together, if at all. It has a distinct purpose,—to glance at the existing condition of our poetry, and to speculate concerning the near future. Not to prophesy—we scarcely can forecast next month's weather from the numberless shifting currents of to-day. Yet one may hopefully surmise, for example, that a dull spell will not last beyond all reason and experience. The past teaches us what signs indicate the change,—where blue sky will first appear,—and that, if the wind "backs," or proves fickle, a brightening will be temporary and delusive. In the mood of a cautious weather-sage, then, let us examine the late reports from the signal-stations that together show the probabilities. In reviewing the poetry of England, the general drift was indicated more plainly by the choir at large than by the solos of a few striking and independent voices.

I.

WHEN some of our elder poets, their careers felicitously rounded, were taken from us, there soon arose a cry of foreboding. Who, it was asked, are to occupy the places of Bryant, Longfellow, Emerson? What younger men can equal the work executed by those pioneers when the latter were of corresponding age? A period of decline has been predicted. It may be noted, as we seek to determine whether

the prediction is well based, that a similar cry is heard from across the sea. The work of Tennyson and the Brownings, in their prime, is contrasted with that of their juniors, and critics are not boastful as to the promise of another sängerfest. I venture to recall that ten years ago I saw the beginning of a poetic dusk, and expressed a belief in its temporary continuance. It is now generally perceived and lamented; nevertheless it seems to me that it is near an end, and that we may begin to look for a new day. If this is to differ from the last,—if we who enjoyed the old fashion shall find it hard to accustom ourselves to the new,—the young will speedily interpret it for us. Their estimate of relative values will have its own gauge.

The rise of Poetry in America, its first noteworthy and somewhat original endeavor, was clearly marked, and singularly coincident with that of the Victorian School abroad. Before long, our poetry took its place with standard literature; its authors won the interest, even the affection, of an attentive public. The close of the term involved may not have been so clear to us. Literary periods shift with mingled sounds, like those of bands following one another at intervals in a procession. But, as in the case of the similar term abroad, it was defined sufficiently for us now to look back and recognize it. The influences to which was due a diversion of interest, and which brought poetic aims and methods into doubt, may be briefly recapitulated. They include all that we have seen prevailing throughout Christendom and resulting from its accelerated evolution of knowledge and energy: the radical change in the course of imagination, enforced by the advance of science,—the disturbance of tradition and convictions,—the leap from romance to realism. We must allow, too, for the diversion of genius to material conquests, adventure, the creation of fortunes; and for the growth of journalism, and of prose fiction answering to the demands of the time. All the resulting influences are fully as dynamic here as in the Old World, and some of them far more so. But other factors, peculiar to this country, must not be overlooked. The civil war was a general absorbent at the crisis when a second group of poets began to form. Their generation pledged itself to the most heroic struggle of the century. The conflict not only checked the rise of a new school, but was followed by a time of languor in which the songs

of Apollo seemed trivial to those who had listened to the shout of Mars. A manly reaction, from the taste for rhetoric and sentiment which existed before the war, degenerated into the indifferentism lately affected by our clever youths. Those whose lyrical instinct survived through all conditions, and still impelled them to sing, found themselves subject to a novel disadvantage. The favorite senior bards were still in voice; their very longevity, fitting and beautiful as it was, restrained the zeal and postponed the opportunities of pupils who held them in honor. Our common and becoming reverence prevented both the younger writers and the people from suspecting that these veterans were running in grooves and supplying little new; finally, when this was realized, and there was a more open field, it became evident that the public was satiated with verse and craved a change not merely of poets, but to some new form of imaginative literature. Original genius will find an outlet through all hindrances; be the air as it may, its flight will be the eagle's; but it will be apt, at such a time, to take some other direction than that of its predecessors. All in all, the subsequent incitement to lyrical effort was not so effective, nor was the opening so clear, as in the period that favored the rise of Longfellow and his compeers.

In the course of these studies I have referred at some length to a few poets next succeeding those veterans,—some who now, but for the regard shown them by younger contestants, would scarcely realize how surely they are becoming veterans themselves. Thus age succeeds to age, and still Poesy,

“blazoned as on heaven's immortal noon,
 . . . leads generations on.”

It only remains for us to take an outlook, and make note of what poetic activity is discoverable at the present time. With respect to my near associates, and to the increasing circle of fresh recruits, whose chances are all before them, I repeat my statement that it would be out of taste and purpose for me to assume the functions of a critical censor or appraiser. The situation can be studied, and some conjecture made of the future, upon a simple *record* of what a representative number of these have done and are doing, and I do not think our conclusions can be so well reached in any other way.

II.

WHITTIER and Holmes, the two oldest survivors of their group, find their audience still extending with the rapid spread of culture in this land. Their eyes are scarcely dimmed,

and their natural strength serves them for periodic flights of song. Lowell's apparent retirement in favor of younger writers, though doubtless only temporary, is the one courtesy they desire him to forego. From Whitman, more picturesque than ever, we have now and then some passing, half-broken, yet harmonic strain, striving to capture the substance of things seen and unseen. I have already written of Taylor, Stoddard, Boker, and their comrades, with whom our poetry began to show less of the ethical and polemic fervor that brought their predecessors into repute. No new cause required the lifting up of hands, and they meditated the Muse from simple love of beauty and song. Stoddard, although a hard-worked man of letters, has been true to his early vows, and adds to our songs of summer in the autumn of his life. Occasionally he writes, with his old finish and tranquil power, one of those sustained and characteristic blank-verse poems in which his faculty is at its highest. Of poets a decade younger, Hayne, Aldrich, Winter, Piatt, Howells, and a few others, still remain. It was their lot to begin at just the time when the country had forsworn peace and its pipings; but they none the less took heart, and did good service in keeping our minstrel line unbroken through good and evil days alike.

Winter's extreme poetic temperament, and his loyalty to an ideal, have made his frequent sketches of travel very charming, and have imparted to his dramatic criticisms the grace and proportion for which they are distinguished. The melody, ease, and sincere feeling of his personal tributes and occasional pieces for delivery, render them quite unique. The poem read at the dedication of the monument to Poe is an elevated production. His best lyrics have caught the spirit of the early English muse.

To Aldrich, now in his sunny prime,—the most pointed and exquisite of our lyrical craftsmen,—justly is awarded a place at the head of the younger art-school. He is a poet of inborn taste, a votary of the beautiful, and many of his delicately conceived pieces, that are unexcelled by modern work, were composed in a ruder time, and thus a forecast of the present technical advance. They illustrate the American instinct which unites a Saxon honesty of feeling to that artistic subtlety in which the French surpass the world. Though successful in a few poems of a more heroic cast, his essential skill and genius are found in briefer lyrics comparable to faultless specimens of the antique graver's art. Such pieces as the “Palabras Cariñosas” and the lines “On an Intaglio Head of Minerva” have a high-bred quality that still keeps them at the

head of our *vers de société*; nor is their author dependent for his effect on novel and elaborate forms. Apparently spontaneous, they are perfected with the touch of a Gautier. His quatrains and trifles expressive of fleeting moods rank with the best of our time. Aldrich's restraint in verse is a notable contrast to the sudden wit and fancy of his speech; as a writer, he never has stood in need of the injunction,—

“O Poet, then forbear
The loosely sandalled verse,
Choose rather thou to wear
The buskin straight and terse.”

His shorter tales and sketches are finished like so many poems in prose, sparkingly original, and delightful for the airy by-play, the refined *nuances*, of a captivating literary style.

Fawcett's verse displays tendencies which class him with the art-school, and an inclination to profit by the Gallic taste and motive. The poems in his two volumes are selected, I presume, from a copious store, as he has been from youth a prolific writer. In “Fantasy and Passion” were many cabinet pictures in rhyme, drawn with fastidious care, and an occasional lyric, like “The Meeting,” upon a weird theme and suggestively wrought. The leading pieces in “Song and Story” have fewer mannerisms,—a less fanciful, a freer and more imaginative, treatment. Mr. Fawcett's versatility leads him to essay almost every form of inventive, satirical, and critical literature, and as a playwright he has made not the least successful of his ventures. Two of our prominent New York authors seem, aside from their professional work as journalists, to have devoted themselves without reserve to poetry. Their characteristics are very dissimilar. Of Gilder I cannot speak here. The other, Charles de Kay, is conspicuous for height of aim, and certainly for a most resolute purpose. In these days it is bracing to see a man of his ability in earnest as a poet. It would be premature to judge of the strange, affluent and broadly handled *Visions*, “Nimrod” and “Esther,” at this near view, or until completed by the final section of their trilogy. “Hesperus” and the “Poems of Barnaval” show his impassioned and more subjective moods, and his resources for a prodigal display of varied, uneven, but often strongly effective lyrical work.

The deaths of Arnold and Dorgan, at ages when practice-work ended and individual traits began to appear, stilled two voices of no little promise. Among our Northern poets there are some whose verse is the expression of their choicest impulses rather than the most substantial portion of their literary outcome. Lathrop's too infrequent lyrics give

token of sensitive feeling and a beautiful poetic vein. Professor Boyesen's verse, like his prose, belongs so thoroughly to his adopted language, and is so fresh and classic, that we scarcely think of him as a Norwegian. The Oriental songs of Edward King are healthy and virile, and add variety to our recent product. Sill, Benton, Dr. Powers, Weir Mitchell, Professor Beers, Riordan, S. H. Thayer, W. S. Shurtleff, McKay, Abbey, Duffield, Blood, Proudfit, Saltus, Tilton, the late Robert Weeks, among our well-known writers of lyrical verse, represent widely different grades of motive and execution. Of the late Henry Work, that instinctive composer of songs (and their music) for the people, I have spoken elsewhere. Robert Grant has a frolic talent for satire, and something like that masterhood of current styles for which we still read Frere and Aytoun. Houghton's “St. Olaf's Kirk” is a good romantic poem, in the Tennysonian manner, finished with much care. Maurice Thompson's “Songs of Fair Weather” are well named; in breezy, out-of-door feeling he is a kinsman of Walter Mitchell, who wrote “Tacking Ship off Shore.” It is chiefly through a close observation of nature that the influence of the elder poets, especially of Emerson, is prolonged by the new choir. “Monte Rosa,” Nichols's long descriptive poem, is a not unworthy counterpart to “The Brook”—for which the late Dr. Wright is held in recollection. The transcendental instinct that follows upon nature's elusive and spiritual trails, survives in the thoughtful lines of her born communicant, John Albee, whose individuality is none the less apparent. Cheney's lyrics of nature and emotion have kindred yet distinct traits. McKnight's volume of sonnets on “Life and Faith” is fraught with poetic meditation. Montgomery and “Paul Hermes,” the former avowedly, are inspired by the marvels of the new learning, and find no surer tonic for the imagination than modern scientific discovery. Emerson's song was a verification of Wordsworth's faith in the identity of philosopher and poet. Our future imagery will shape itself unconsciously, without much need of a poet's willful effort, and will be his adjunct and vehicle rather than the object of his aim. Montgomery's command of rhythm is finely evident, and the young author of “Hermes” seems to have good service within his power.

Boyle O'Reilly attests his Irish blood by the *verve* and readiness of his ballads. He may be more justly claimed as an American than the late Dr. Joyce, whose “Deirdre” fulfilled the promise of a bard who in youth wrote the “Ballads of Irish Chivalry.” Among other and recent Celtic poets of this greater

Ireland, besides Maurice Egan, a sweet and true poet, have been the gallant O'Brien and Halpine, John Savage, and Father Ryan—whose emotional strains reach a larger audience than that which more studied verse is wont to gain.

A Scotch critic, whose resources as our literary historian are confined mostly to periods before the civil war, repeats an old fling at "the plague of American poetesses." This *vieux garçon* of letters, if acquainted with their work, might beseech us, like Benedick, not to flout at him for what he had said against them. Our daughters of song outnumber those in England, and some of them, like some of their brethren, have thin voices; but it is as just as true that much genuine poetry is composed by others, and that, while we have none whose notes equal those of at least one Englishwoman, in average merit they are not behind their fair rivals. Their lyrics, sonnets, ballads, are feminine and spontaneous, and often highly artistic. To be sure, our aspirants of either sex are attempting few works of invention; where all are sonneteering, it is not strange that women should hold their own. Yet their advance in discipline and range is apparent also in novels and other prose-work; they know more than of old, their thought is deeper, their feeling more healthy. The morale of their verse is always elevating; in other respects it fluently adapts itself to the conventions of the day.

Among these sweet-voiced singers, to some of whom I have alluded heretofore, Miss Larcum, with her orchard notes, well retains her popularity. Mrs. Cooke and Mrs. Stoddard are too seldom heard,—each so original, so true in verse and prose to characteristic types. The former's poetry always has been admired for motive and execution; Mrs. Stoddard's, though less in amount, has the condensed power and vivid coloring that render it difficult to mistake the source of anything from her hand. The work of Mrs. Jackson is more smoothly finished, though perhaps it sings the less for its union of intellectuality with a subtle feeling whose intenseness is realized only by degrees. Mrs. Spofford's various lyrics are rich in cadence; she has a fine choice of measures, and always interests us both with her theme and its treatment. Her passion is genuine, and unusual resources of diction, color, effect, are brought to play in her poems. Mrs. Fields, the most objective of these writers, veils her personality, except as it becomes revealed by a free rhythmical method, and an obvious inclination toward the classical and antique. The zest, the enchanting glamour, of Northern coast-life are known to Celia Thaxter, our daughter of the isles. Her sprayey stanzas give us the dip of the sea-bird's wing, the

foam and tangle of ocean, soulful interpretations of clambering sunrise mists and evening's fiery cloud above the main. Mrs. Allen, Mrs. Mapes Dodge, Mrs. Moulton, Nora Perry, Miss Coolbrith and Miss Shinn of California, are natural singers, in their several degrees. The stanzas of Mrs. Moulton and Mrs. Dodge are marked by charming fancy, and always tender and sweet. Miss Perry is an instinctive melodist, with a sure ear for the telling, original refrains that heighten the effect of such lyrics as "Cressid" and "Riding Down."

Our best-known Western poetess, Mrs. Piatt, though often obscure, has traits resembling those of Miss Rossetti,—a vivid consciousness of the mystery of life and death, a conjuring indirectness of style, and a gift, which she shares with Mrs. Dodge, of seeing into the hearts of children. She will not, however, be rightly measured by one who reads the wrong volume of her poems, or the wrong poem. Miss Phelps's deeply religious nature, warring with its own doubts, leads her on adventurous paths. That she is essentially a poet was evident from her prose, long before she made a collection of verse. She is the modern vine from a Puritan stock, subject to inherited tendencies, but yielding blossoms of feminine grace and aspiration. The names of the late Mrs. Hudson, of Mrs. Bradley, Marian Douglas, Mrs. Sangster, Miss Bushnell, Miss Woolsey, Mrs. Searing, Miss Bates, Mrs. Smith, Miss Bloede, Miss de Vere, Ella Dietz, Mrs. Rollins, Miss Proctor, Miss Osgood, and Miss Cone, may be cited in a list of those whose notes are pleasantly familiar. Miss Lazarus, to whose translations of Heine I have referred elsewhere, is on her own ground in rendering the Hebrew poets of old Spain; her minor pieces are written with a firm hand, and her tragedy, "The Dance of Death," is a work of much power. "Owen Innsley" has gained the favor of those who care for poetry of an artistic type, and Miss Thomas, that delightful confidante, yet betrayer, of the secrets of the nymphs and muses, has given us a volume of great beauty. The "Songs and Lyrics" of Miss Hutchinson, and even more her later pieces, striking for their melody, imagination, and unique sense of design, assure us that if she allots to poetry the devotion that has enriched her work in other fields, its very greenest wreath is at her command. There are still younger voices that give us fresh music—like Miss Guiney's, or, like those of the Goodale sisters, artless ditties of the woods and fields, and from which maturer notes are not unlikely to be heard.

In the South, we have Mrs. Preston's works, of an ambitious cast and strengthened by dramatic purpose and expression. Like Mrs.

Webster in England, she may be called a pupil of Browning. Local color, and much suggestion of the far Southern atmosphere and sentiment, are found in the volumes of Mrs. Townsend, of Louisiana.

These poets mostly sing for expression's sake, and therefore without affectation. They often excel the sterner sex in perception of the finer details of life and nature. The critic would be a renegade who, after paying his tribute to feminine genius in England, should not recognize with satisfaction what has been achieved by his own countrywomen. They have their shortcomings, not the least of which in some of them is that even perfection which is in itself a fault; but a general advance is just as evident in their poetry as in the prose fiction for which they now are held in honor throughout the English-speaking world.

A phase of our verse, illustrating its present station, reflects the new London vogue, and has been mentioned in comparison with Dr. Holmes's lighter vein. I refer to the plentitude of metrical trifles, society-verse, *belles choses* in the French forms that are so taking. Various new-comers make their entrance accordingly; scarcely one but turns you off his rondeau or ballade, and very cleverly withal. Ditties written gracefully, like those of Sherman, Minturn Peck, etc., are more agreeable than the prentice-work of sentimentalists. A sprightly *Mercutio* is better company than your juvenile Harold or Werter. They serve very well, moreover, for the travesties and "satire harming not" of the boulevard press. Our young collegians, of whom Loring, who died in his adventurous youth, was the precursor, are apt at such devices. It is curious to receive the same kind of rhymes from Cambridge, Massachusetts, and Cambridge, England, and Mr. Scollard's are just as well turned as Mr. Ropes's, and are not without signs of good omen. The line of advance for a poet, who is apt in this way, has been exemplified by the author of "Airs from Arcady." Bunner's verse, whether of the gayer kind, or rising to the merit of his more ideal lyrics and sonnets, is a hopeful inscription at the parting of the ways. It already commends itself to those who look for feeling under grace, and shows that he, also, can make his standing with the muse depend upon the constancy of his devotion.

Before discussing further the latest tendencies, let us see what is doing in those precincts to which we naturally turn for literature of a specific flavor. The South, once so ambitious, has been very barren of poetry during the last thirty years, either mindful of Poe's conviction that there was no equal chance for her native writers, or feeling that they were too remote from the world to keep up with

its progressive changes. I think that standard literature, including poetry, is read with more interest in the South than here, and oratory there is still more than a tradition. But the South has been unfortunate in the loss of promising writers. One such was Timrod, whose handiwork was skillful and often imaginative and strong. Timrod's "Cotton Boll" was a forerunner of the method of a still finer poet than he, whose career was equally pathetic. The name of Sidney Lanier brings him clearly to recollection — as I saw him more than once in the study of our lamented Deukalion; the host so buoyant and sympathetic; the Southerner nervous and eager, with dark hair and silken beard, features delicately molded, pallid complexion, hands of the slender, white, artistic type. The final collection of his writings, with an adequate and feeling memoir by Dr. Ward, confirms me in an already expressed belief that Lanier's difficulties were explained by the very traits which made his genius unique. His musical faculty was compulsive; it inclined him to override Lessing's law of the distinctions of art, and to essay in language feats that only the gamut can render possible. For all this, one now sees clearly that he was a poet, and bent upon no middle flight. He magnified his office, and took a prophetic view of its restored supremacy. The juvenile pieces here first brought together, although his biographer apologizes for them, have little in common with ordinary verse of the time. "Nirvâna," "Resurrection," and the songs for "The Jacquerie," are such as herald a new voice; and later efforts of the kind also show his gift unadulterated by meditations on rhythmical structure. Among these are the "Song of the Chattahoochee," almost as haunting as "Ulalume," — "The Revenge of Hamish," than which there are few stronger ballads, — "The Mocking Bird," "Tampa Robins," "The Stirrup-Cup," "The Bee," and "The Ship of Earth." But turn to the productions which he deemed far more significant, in view of their composition upon a new and symphonic method. In time he doubtless might have wrought out something to which these would seem but preliminary experiments. The Centennial cantata was written to be sung, and when rendered accordingly no longer appeared grotesque. We may surmise that the adaptation not of melody alone, but also of harmony and counterpoint, to the uses of the poet, was Lanier's ultimate design. Nor is it safe to gainsay the belief that he would have accomplished this more nearly, but for his early death and the hindrances of sickness and embarrassment that long preceded it. Compositions suggestive

and reverberant as "Sunrise" and "The Marshes of Glynn" go far toward vindicating his method. Yet even in these there is a surplusage, and an occasional failure to make not only outlines but impressions decidedly clear. "The Symphony," "Corn," and other over-praised ventures on the same plan, seem to me nebulous, and often mere recitative. The danger of too curious speculation is suggested by the strained effect of several ambitious failures, contrasted with the beauty of his unstudied work. An old foe, didacticism, creeps in by stealth when work upon a theoretical system is attempted. Let critics deduce what laws they may; it is not for the poet deliberately to set about illustrating them. The formulas devised by Poe and others often are found to suit, designedly or not, their inventor's personal capabilities. Lanier's movement to enlarge the scope of verse was directly in the line of his own endowment; he has left hints for successors who may avoid his chief mistake — that of wandering along in improvisation like some facile, dreamy master of the key-board. That remarkable piece of analysis, "The Science of English Verse," serves little purpose except, like Coleridge's metaphysics, to give us further respect for its author's intellectual powers.

Hayne's vitality, courage, and native lyrical impulse have kept him in voice, and his people regard him with a tenderness which, if a commensurate largesse were added, should make him feel less solitary among his pines. Various Southern poets,—Randall, Burns Wilson, Boner, and others, open vistas of the life of their region. Townsend's ballads, in their sturdy, careless way, speak for the poetic side of a peculiarly American writer, true to memories of a boyhood on "the Eastern shore." His tales, and the strongly dramatic fiction of Cable, Miss Murfree, Page, Johnston, etc., more clearly betoken the revived imagination of a glowing clime. The great heart of the generous and lonely South, too long restrained,—of the South once so prodigal of romance, eloquence, gallant aspiration,—once more has found expression. It enables us to know it, having begun at last to comprehend its true self.

That the public is always on the alert for what is both good and novel was illustrated by Bret Harte's leap into favor with his portraits of a new and scenic world. His prose idyls of the camp and coast, even more than his ballads, were the vouchers of a poet; familiar as the verse at once became, it is far less creative than the stories. The serious portion of it, excepting a few dialect pieces,—"Jim," "In the Tunnel," etc.,—is much like the verse of Longfellow, Whittier, and Taylor; the humorous poems, though never wanting in

some touch of nature, are apt to be what we do not recognize as American. But of either class it may be said that it is, like the rhyming of his master, Thackeray, the overflow of a rare genius, whose work must be counted among the treasures of the language. Mr. Harte may be termed the founder, and thus far has been the most brilliant exemplar, of our transcontinental school. Joaquín Miller is, first of all, a poet, if one may judge from the relative merits of his verse and prose,—the latter of which does not show his spirit and invention at their best. The "Songs of the Sierras," as a first book, was no ordinary production. Its metrical romances, notwithstanding obvious crudities and affectations, gave a pleasurable thrill to the reader. Here was something like the Byronic imagination, set aglow by the freedom and splendor of the Western ranges, or by turns creating with at least a sensuous *vraisemblance* an ideal of the tropics which so many Northern minstrels have dreamed of and sung. Miller still has years before him, and often lyrics from his pen suggest that, if he would add a reasonable modicum of purpose to his sense of the beautiful, the world would profit by the result. Among other poets of the Pacific Slope, Warren Stoddard and Phelps seem more indifferent to local flavor, and refine their work in the usual manner of the Eastern school.

Surveying the broad central region of tilth and traffic between the Mississippi River and the Appalachian Range,—the most fertile land on earth, and tenanted by a people whose average culture exceeds that of any race numerically equal,—we find it sensitive to music and art, but not yet fruitful of that poesy which, as Sidney declared, alone can outvie nature, and "make the too-much-loved earth more lovely." The Ohio valley lost two poets,—one in battle, the other after he had lived to write our most effective ballad of the war,—Lytle and Forceythe Willson, each of whom had unquestionable lyrical talent. John Piatt, the laureate of prairie and homestead life, has won a just reputation for his reflective and idyllic verse. He has a Wordsworthian sympathy with nature, and knowledge of its forms, and a sincere purpose. He transmits with much simplicity the air and bloom of the prairie, the fire-light in the settler's home, and the human endeavor of the great inland States he knows so well. Will Carleton struck a natural vein by instinct, in his farm-ballads, and has been rewarded for the tenacity with which he has pursued it. Others, like Venable and Harney, find their way to the households of a rural constituency; they have the merit of presenting that to which they are wonted — they know whereof they affirm.

John Hay, whose writings are at once fine and strong, has been so engrossed by a rare experience of "cities, . . . councils, governments," as scarcely to have done full justice to his brilliant gifts. With his taste, mental vigor and mastery of style, he may well be taken to task for neglecting a faculty exceptionally his own. The uncompromising dialect-pieces, which made a hit as easily as they were thrown off, are the mere excess of his pathos and humor. Such poetry as the blank-verse impromptu on Liberty shows the higher worth of a man who should rise above indifference, and the hindrance of his mood, and in these spiritless times take up the lyre again, nor fitfully touch the strings.

In places remote from the literary market, we often discover signs of hopeful energy. The best models are read by isolated poets, whose seclusion the capricious standards of the town oracles fail to influence. Mr. Snider's "Delphic Days," for example, a charming idyl in the elegiac distich, was printed in St. Louis, through a singular coincidence, at the same date with Munby's "Dorothy" in England,—the two being the only prolonged specimens of this measure, if I mistake not, which our language affords. "Agamemnon's Daughter," by the same hand, is another contrast to the narrow bounds of every-day song. Leighton's sterling dramas, "The Sons of Godwin" and "At the Court of King Edwin," are creditable to our literature. Their romantic themes, by inheritance and the liberties of art, plainly are within the usufruct of an American poet. A drama of like cast, and successfully adapted to the stage, is "Pendragon," the work of an Illinoisian, William Young.

The department of translation, which (as well as that of devotional verse) has been noted in a former article, is at present somewhat neglected, though there are minor contributions by Lea, Peterson, Mrs. Conant, and others. Perhaps the most suggestive of the late efforts in this field are Miss Preston's charming translations from the Provençal and her version of the Georgics. Howland's *Æneid* is rude and elegant by turns, but of interest to those who believe with me that the English accentuate hexameter is on the whole our best instrument for literal and lineal rendering of the classical measure. The translation of Virgil's complete works, by Wilstach, is more elaborate. It is written in flexible blank-verse, and enriched with copious and scholarly notes and a review of former English versions. This student is now translating "The Divine Comedy," upon a metrical system hitherto unessayed.

Few dialects of our tongue except those of Scotland, Lancashire and Dorset, have been more cleverly handled for metrical effect than

those peculiar to the United States. The Atlantic varieties have been used to good purpose, as we have seen, from the time of Fessenden's "Country Lovers" to that wherein are recorded the exploits of Hans Breitmann. Harte's and Hay's successes in a corresponding line increased the popular regard for their better work. Riley's Hoosier lyrics often are more terse and pointed than the numerous ballads of Carleton. Some of the most attractive and piquant of American folk-songs are in the dialect of our African population, North and South. Stephen Foster, the pioneer of "minstrel" song-writers, whose touching or humorous ditties were wedded to genuine melody, deserves remembrance. A group, with the author of "Uncle Remus" included, has diligently cultivated the art of writing plantation-verse. Mrs. Preston, Sidney and Clifford Lanier, the late Mrs. McDowell and Irwin Russell, Miss McLean, Macon, and many others, have contributed to this quaint anthology, which — at its extremes of humor, as in "Reb'rend Quacko Strong," or of melody and devotional pathos, as in "De Sheepfol" — certainly is an original outgrowth of the cis-Atlantic muse.

III.

SUCH is a fairly representative list of those to whom our recent poetry owes its being. A protest against so free a range of selection may be entered by some, who fail to consider that for each name here found a score of others could be cited. Doubtless many of the latter have equal claims to notice, this summary having been made with no design of completeness, but as a sufficient basis for remarks on the weakness, quite as much as on the strength, of our present movement, and on the chances of the near future.

At the outset it can be honestly asserted, in behalf of the writers named, that as a whole they do not show less favorably than the corresponding modern choir of Great Britain. It would be difficult to assort them in groups such as we have observed abroad: — apart from local differences of style they bear an almost monotonous relationship to one another. This common likeness, however, is an illusive something which renders their productions American. If their verse presents few absolutely novel types, it is more charged with national sentiment than that of the late English poets. It pays little regard to pseudo-classicism, middle-age restorations, and to themes borrowed from other lands and languages. It is sincere and impulsive, and has a New World mode of looking at things and considering them. Finally, the work of the most expert among these writers, both sexes included, is often as inter-

esting for technical merit as that of their distant compeers, although it may be that we have fewer in number who reach a faultless standard.

Granting or claiming thus much, a reviewer must put the question directly to his conscience — How does the most of this recent verse impress you? Upon the foregoing summary, what can one honestly declare of its force and significance? Its achievements have been noted; the side on which it is trivial or deficient must be as plainly shown, lest the narrator be forced hereafter to regret that he withheld his convictions. Nor is it easy to gloss over the dynamic insufficiency of our present metrical literature. The belief scarcely can be resisted that there is, if not a decadence, at least a poetic interregnum, as compared with the past and measuring our advance in sundry fields of activity. As I have said, the first influence is ended; there is a pause before the start and triumph of another. This may be frankly acknowledged; in fact, the situation is merely correlative with that observed, ten years ago, in our look across the sea. It is none the less one on which neither our poets nor their countrymen have much reason to plume themselves. If our poetry, since the time of Longfellow, has not kept pace with our general movement, this of itself implies an interregnum. I suspect that it is of less relative importance than if it had held the point already gained. Its new leaders, at all events, are not invested with the authority of those to whom these essays chiefly have been devoted. Their volumes scarcely receive the welcome — nor have they the bearing and import as an indispensable part of literature — that appertained to the “Poems of the Seaside and Fireside,” “Evangeline,” the “Voices of Freedom,” “Snow-Bound,” “The Biglow Papers,” “Under the Willows,” “Poems of the Orient,” and the “Poems” of the Concord sage. To the careful eye they seem less suggestive of changes and results than were “The Raven and other Poems,” “Songs of Summer,” and “Leaves of Grass.” They do not, like some of the books here named, supply either lay or professional classes with the most essential portion of their reading. We see that this is partly due to conditions which it is just as well should obtain for a season, and which the poets are not able to avert. Before recurring to this difficulty, let us see how far they are their own bafflers and justly to be held responsible.

Some of them have given such evidence of the faculty divine as to be sure of enrolment in the Parnassian registry. Others have composed charming bits of verse, — pledges, as yet unfulfilled, of something larger and more creative. We do not ask for masterpieces, but how few the recent poems which approach

in breadth and interest those of the veteran school! Do our poets really trust their calling, in defiance of temporal conditions, however discouraging? Do they not share in a measure the sentiment which regards ideality as an amiable weakness, the relic of a Quixotic period, and thus feel half-ashamed of their birthright? Few of them, at the best, cultivate the latter seriously, as their avowed means of expression; and of these few the majority perhaps are women. There are some who will be ungracious enough to say that a time when religion and poesy are sustained by the graceful, devoted, but distinctly minor services of women, is not one of supremacy for either the pulpit or the lyre. Those who demur to this, and who refer to the authors of the “Sonnets from the Portuguese” and “Romola,” will be told that Mrs. Browning and George Eliot were forerunners, not exemplars, of a golden era when it shall be no longer true.

Even if our poets are doing the best within their power, their misconception of relative values is much the same as that recently noted of the minor English school. To our predecessors the spirit of a work was all in all; the form was often marred by careless execution. It took years of Keats, Tennyson, and the study of their masters, to rectify this, and then the drift set quite too far in an opposite direction; until at last a Neo-Romantic group wreaked its thoughts upon details of sound and color, placed decoration above construction, the form of verse above its motive, — thus missing the impulsive cadence, the more ethereal structure, to which the evasive spirit of poetry mysteriously inclines. Heine’s assertion, that a poet must have natural tones in his lyrics and characters in his narrative or dramatic efforts, was sustained by the impotency of our own verse-makers before the time of Whittier and Longfellow. With them and their comrades American poetry took on at least the merit of being natural, and gained a foothold; but this merit is less apparent in our later verse, whose forms, though neatly mastered, breed a temper as artificial as their own. In brief, our lyrics of the past had the virtue of simplicity, but were less noteworthy for imagination; those which have succeeded them fail equally in poetry’s highest attribute, and their interest is due less to simplicity than to art — the art which, being a substitute for imaginative vitality, runs into artifices and mere technique. Over-refinement, through a strict interpretation of that excellent canon, “Art for Art’s sake,” is a vice of the period. Art is a language, and a seemingly careless workman may be a truer artist than his painstaking fellow. When one has little to say, his technics are a kind of pedantry, while

a faulty poem or picture may be great because a great thought or character is in it. The best workman is he who adapts means to the noblest end, and we tire of those who, with no message to deliver, elaborate their style. The oldest races have discovered that no labor is artistic, unless strictly to the purpose; a few sure lines, and the result may be attained. We see, however, that technical experts, though devoid of imagination, often have a sudden following among new men. This is because their skill is addressed to the profession rather than to the public, and also because the young recognize the dexterity which they must acquire, while the creative genius of true masters as yet escapes them. Hence the instant vogue of novel forms, requiring adroitness for their perfection, and so elegant as to conciliate even those they do not capture. When real additions to our English method, they will bear use and reproduction. But, after a few men of exquisite talents have employed them to advantage, the public grows weary of modes so peculiar that we are compelled to dwell upon the form and not the thought.

Thus we have in view, if not precisely a mob of gentlemen who write with ease, an increased number of those writing with the profusion of ease and the pain of curious labor, and often at a loss of individual distinction. Lyrics, sonnets, canzonets, are produced on every hand. The average is so good that, despite the beauty of an occasional piece, few can be said to stand out boldly from the rest. Considering the accumulated wealth of English poetry, it is questionable whether more sonnets, etc., are a real addition to it, and if a place worth having can be earned by polishing the countless facets of gems dependent on the fanciful analysis of love and other emotions. Again, some of our poets, like certain painters, avoid continued effort, and satisfy themselves with sketch-work — a facile way of keeping up expectation. Having mastered one's vocation, why not practice it with a determined hand? Too much assurance was the fault of our earlier period, but the ambition that went with it stimulated a few to real achievements. It is hard to account for our easy modern contentment. In older countries the mines have been so well worked that there is an excuse for resorting to the "tailings," but here there should be the broadest encouragement for prospectors. No doubt our reaction from the old-fashioned conceit has its effect on able men, and makes them cleave to ground of which they have no fear. Too much credit is awarded now to the knowledge of one's limitations. A poet, most of all, should not believe in limitations; by ignoring them,

a few will reach the heights. But our aspirants seem to feel that nothing better can be done than to amuse readers who consider poetry a diversion, and they either fear to put their fate to the touch "to gain or lose it all," or utterly fail to realize the chance at this moment existing. And so, if poetry has lost its hold, it is to this extent because no brilliant leader compels attention to it, devoting himself to the hazard of arduous and bravely ventured song.

The time, then, is not one of transition, save in the sense that all periods are transitional. It is intercalary, yet as well defined as the middle ring of Saturn, gaining its light and substance from a multitude of little quantities,—notable, in fact, for the profusion and excellence of its minor verse. And here it must be borne in mind that not a few of our idealists are directing their main efforts to prose composition. For example, one of the finest elegiac poems of recent years, "The North Shore Watch," is privately printed by Mr. Woodberry, who thus far has permitted the ordinary reader to know him only as a biographer and critical essayist. Among the chief Victorian writers, we found but two or three that might be classified as novelist-poets. Hood was almost the only journalist-poet of note, a true vocalist, jaded by hackwork. Nowadays, the conditions are reversed, the rhythmic art is more frequently an avocation. Among our novelists, however, Aldrich always seems the poet,—an author with whom song has the precedence. His tales are the prose of a poetic artist and owe to this fact their airy charm. Howells furnishes an instance of the apt recognition of existing tendencies. The wisdom he has displayed "in his generation" goes far to justify the diversion we are observing. His early verse, issued conjointly with that of his friend Piatt, bore unusual marks of promise, nor has he quite broken with the muse or ceased to hold her image in his heart. Otherwise his bent, like Mr. James's, was that of a critic, scholar, analyst; and the determined evolution of a masterly novel-writer, from a youth of the qualifications involved, might serve as a text for homilies on the power of the human will. His pen being his fortune, his chosen profession that of a man of letters, he manfully trained himself to the production of literature that he foresaw would be welcome and remunerative; this, in a series of works,—at first descriptive, then inventive,—constantly advancing in perception, in management of incident and character, until he now stands where we find him, in the front rank of those who impress observers with a sense of our literary progress. His poetic gift serves him well in translation, dramatic adaptation, and with respect to the feeling and artistic effect

of his tenderest episodes. Waiving discussion of Mr. Howells's method as a novelist, who can question that he has judged wisely, and has done far better for the public than if he had pursued the art that was his early choice?

By such examples more light is cast upon the reduced importance of our song-makers, and ground discovered for a belief that this is transitory and that a fresh departure will anon be made. Fancy and imagination are still rife, but their energy finds vent in new directions. Accomplished craftsmen, some of whom thirty years ago might have been numbered among the poets, now supply the public with its imaginative rations in the guise of prose fiction and romance. Through instinct or judgment, they have occupied the gap in our literature. The time has been opportune; famous innings were made by the elder minstrels; our school of fiction had been represented only by a few rare and exceptional names. So keen has been the new impulse, that the young neophyte of to-day, instead of shaping his vague conceptions into rhythm and imitating the poets within his knowledge, longs to emulate the foremost novelists. In the flush of our latest conquest, the rank and file naturally overrate the relative worth of prose fiction, which, at its best,—as will appear on a brief consideration of the world's literary master-pieces,—is not a more vital and enduring creation than the poet's song. Yet the movement has resulted in a decided gain to the prestige of our national authorship. With a staff of novelists and romancers well equipped in both invention and style,—Howells, Aldrich, Julian Hawthorne, Eggleston, Cable, James, Harte, Crawford, Bishop, Lathrop, Mrs. Stoddard, Miss Jewett, Miss Woolson, Mrs. Jackson, Miss Murfree, Miss Howard, Mrs. Foote, and others who also are adequate to cope with the transatlantic experts,—in view of the results already obtained from the field in which these popular authors are so active, none can assume that the diversion of creative energy thus exemplified has not brought with it a measurable compensation.

IV.

BOTH exterior and subjective conditions having thus determined the present office of the imagination, the breathing-spell of poetry is not without promise of a stronger utterance than ever when its voice shall be renewed. We shall have more poets yet, and some of those who have been named will contribute, I doubt not, to the hastening of that renewal. They can derive from our fiction itself a shrewd lesson for their guidance. Their predecessors fully met the need for idyllic verse, relating to home, patriotism, religion, and the worka-

day life of an orderly people. They did not scrutinize, and vividly present, the coils of individual being. Our people have outgrown their juvenescence, tested their manhood, and now demand a lustier regimen. They crave the sensations of mature and cosmopolitan experience, and are bent upon what we are told is the proper study of mankind. The rise of our novelists was the answer to this craving; they depict *Life* as it is, though rarely as yet in its intenser phases. Those who, besides meeting Mr. James's requirement that "the mind of the producer shall be displayed," do reflect life in something more than a commonplace aspect, are the chroniclers, chiefly, of provincial episodes, confined to sections so narrow that it is scarcely needful to linger in them throughout the narrative of a sustained work. Their welcome is partly due to the fact that their studies are bolder and more dramatic than those of the restrained Eastern school. The muster-roll of the latter has increased somewhat more rapidly than its market. We have seen poetry out of demand; the same thing begins to be observed of prose fiction. Renewed attention is given to history, memoirs, travels; but many signs declare that there never was a time when a live and glowing poet would have a better chance than now. In the multitude of ambitious novelists, distinction is less easily gained. Only the poet can excite the subtlest thrills, the most abiding sensations. The promise of his return lies in the truth that our spiritual nature does abhor a vacuum,—the need insures the supply. Though our public has resorted to prose literature for its wants, it now and then still reads a poem with avidity. The sudden popularity of Arnold's "Light of Asia"—the work of a scholar and enthusiast rather than of a strongly original hand—was of real significance. That production gave a sensuous and legendary idealization of the religious feeling of an impressible body of readers; it appealed to an existing sentiment; it focalized the rays in which the faiths of the East and the West are blending throughout the modern world. In short, it was most timely, and it was both attractive and dimensional. If, then, the people care little for current poetry, is it not because that poetry cares little for the people and fails to assume its vantage-ground? Busying itself with intricacies of form and sound and imagery, it scarcely deigns to reach the general heart. Your skill is admirable, say the people, and of interest to your own guild, but we ask that it shall be used to some purpose. Convey to us the intellect and passion wherewith poets are thought to be endowed, the gloom and glory of human life, the national aspiration, the pride of the past and vision of the future.

Rhythmical productions will be acceptable that compare with those of the past, as vigorous figure-paintings with the canvases of our elder artists. Even in landscape we have reached the stage where human feeling, and that American, pervades the most favored work. Nor will it be enough to depict life in aggregated and general types. Whitman has achieved this, conveying a national spirit in his symphonic echoes of the murmuring towns and forests and ocean-waves. He gives us life and movement, but the specific character, the personal movement, seldom animate his pages. Individuals, men and women, various and real, must be set before us in being and action,—above all, in that mutual play upon one another's destinies which results from what we term the dramatic purport of life. Thus rising above mere introspection and analysis, poetry must be not so much a criticism, as the objective portrayal and illumination, of life itself,—and that not only along the uneventful, quiescent flow of rural existence, but upon the tides of circumstance where men are striving for intense sensations and continuous development.

In other words, the time has come for poetry, in any form, that shall be essentially *dramatic*. This kind has rounded each recurring cycle in other literatures than our own. It is a symptom of maturity, and we, in our turn, approach the age when life attains fire and color and is full of experiences that give tone to art. I think that our future efforts will result in dramatic verse, and even in actual dramas for both the closet and the stage. I am aware that this belief has been entertained before, and prematurely; it was as strong in the time of Tyler and Dunlap and Payne, nor would our own experiments be much more significant than theirs, were it not for the recent and encouraging efforts of our younger authors, several of whom are among the poets already named. Playwrights still feel compelled to offer rudimentary work to their audiences. The primary and denominative element of the actor's art, that of action, with every aid of scenic effect, just now is all in all. The text is but an adjunct to the pantomime. Realism, also, is as conspicuous in our theaters as in the latest French and English novels. It was desirable to get beyond stale and absurd conventionality, yet certain conventions are indispensable to art; there is nothing ideal in a slavish, mechanical reproduction of speech and manners. Unduly favored as the text once may have been, we now err as plainly in the opposite way. A poet turns playwright, and there begins the inevitable conflict with the stage itself. He yields to the conviction of actor and manager that the text will never regain the critical interest of audiences. I

make bold to think otherwise; to hold that belief is to overlook the recorded equipoise of text and action at every epoch when the theater has been preëminent. The sentiment of the hour may be against the production of what are termed literary plays; yet nothing, after all, is surer to draw than some familiar tragedy or comedy of the great dramatic poets. In Italy, France, Germany, it is the same. The people want amusement, and in all times they prefer the best offered; when there were none but poetic dramas, they sustained them, and intelligently traversed the rendering of dialogue and phrase. On the other hand, wretched mounting and acting will make the finest text wearisome. The whole dispute turns largely upon circumstance and fashion. Notwithstanding Tennyson's undramatic cast of genius, he has succeeded,—but only, as was predicted long ago, after successive trials and by a *tour de force*,—in producing an excellent drama. "Becket," with respect to action, plot, and language, is greatly superior to many plays of the Knowles and Talfourd period, which still hold the stage; and yet the public, and various theatrical critics, will have none of it. The time has been simply unpropitious. Boker's "Francesca da Rimini" waited twenty-five years for an actor and a manager fully to utilize its possibilities.

We see that for the development of an ideal drama the public taste and sentiment must rise accordingly. The stage reflects these; but it also can anticipate and help to form them, through works of genius which the people in the end will appreciate. The ambitious playwright, on his part, must realize that his faculty is the greater when adaptable and inventive. Writer, actor, theater and public, must unite to give effect to any drama. Brander Matthews says that, "for a poetic play to have a success, it must be the work of one who is both poet and playwright; who is, in fact, playwright first and poet after,"—and cites the examples of Molière and Shakspeare and Hugo, and of lesser men. Playwrights not familiar with the stage from youth have succeeded only after failures. Our dramatists are likely to spring from those who, if not used to theatrical "business" and people, are thoroughly acquainted with town life. We know the retardant effect of society upon artists of exalted sensibility. Liszt's rival declares that social distractions have prevented the Abbé from being a great composer; that Bach's seclusion and Beethoven's deafness protected them from outside voices and made them hear the voice of God within. Yet the dramatist, whose theme is human action, must have observed that action under the excitements, and among the contrasted types of

civic life. The increase of our cities itself betokens a change from idyllic to dramatic methods in literary art.

But I have allowed my faith in the need of such a change to lead me into surmises concerning the rise of the stage-drama in America. The latter certainly would give a rapid impulse to the former. As it is, a young playwright like Mr. Carleton finds it prudent to adapt his labors to the immediate requirements of the stage, after testing his literary faculty by the composition of a metrical drama, "Memnon," a work indebted to Elizabethan models in its rhetoric and emblazonry, and not devoid of fine diction and poetic glow. Among the numerous plays offered to the managers, there probably are some of an elevated class that would be available under conditions which I think will not be long delayed. Meanwhile, under existing conditions, our few playwrights who combine tact with refinement,—and Bronson Howard should have the credit due to a pioneer who still works among the foremost,—probably have done the best that could be done, with a sense of what is now practicable, and a hopeful willingness to prepare the way for their successors, poetic or otherwise, in the early future. Time is all that is needed to give us the heroic temper and coadequate themes. Of the two, tradition is less essential to romance and the drama than a favoring atmosphere. The wreath must be held out by a public that delights in the Pythian games, and won by contestants worthy to receive it.

v.

THERE are questions that come home to one who would aid in speeding the return of "the Muse, disgusted at" the "age and clime." Can I, he asks, be reckoned with the promoters of her new reign? Yes, it will be answered, if your effort is in earnest and if you are in truth a poet. To doubt of this is almost the doubt's own confirmation. That writer to whom rhythmic phrases come as the natural utterance of his extremest hope, regret, devotion, is a poet of some degree. At the rarest crises he finds that, without and even beyond his will, life and death, and all things dear and sacred, are made auxiliary to the compulsive purpose of his art; just as in the passion for science, as if to verify the terrible irony of Balzac and Wordsworth, the alchemist will analyze his wife's tears, the Linnæan will botanize even upon his mother's grave:

"Alas, and hast thou then so soon forgot
The bond that with thy gift of song did go—
Severe as fate, fixed and unchangeable?
Dost thou not know this is the poet's lot!"

If, when his brain is in working humor, its chambers filled with imaged pageantry, the same form of utterance becomes his tricky servant, then he is a poet indeed. But if he has a dexterous metrical faculty, and hunts for theme and motive,—or if his verse does not say what otherwise cannot be said at all,—then he is a mere artisan in words, and less than those whose thought and feeling are too deep for speech. The true poet is haunted by his gift, even in hours of drudgery and enforced prosaic life. He cannot escape it. After spells of dejection and weariness, when it has seemed to leave for ever, it always, always, returns again—perishable only with himself.

Again he will ask, What are my opportunities? What is the final appraisal of the time and situation? We have noted those latter-day conditions that vex the poet's mind. Yet art is the precious outcome of all conditions; there are none that may not be transmuted in its crucible. Science, whose iconoclasm had to be considered, first of all, in our study of the Victorian period, has forced us to adjust ourselves to its dispensation. A scientific conflict with tradition always has been in progress, though never so determinedly as now. But the poet and artist keep pace with it, even forestall it, so that each new wonder leads to greater things, and the so-called doom of art is a victorious transition:

"If my bark sink, 'tis to another sea."

As to material conditions, we find that the practical eagerness of the age, and of our own people before all, has so nearly satisfied its motive as to beget the intellectual and æsthetic needs to which beauty is the purveyor. As heretofore in Venice and other commonwealths, first nationality, then riches, then the rise of poetry and the arts.—After materialism and the scientific stress, the demands of journalism have been the chief counter-sway to poetic activity. But our journals are now the adjuvants of imaginative effort in prose and verse; the best of them are conducted by writers who have the literary spirit, and who make room for ideal literature, even if it does not swell their lists so rapidly as that of another kind. The poet can get a hearing; our Chattertons need not starve in their garrets; there never was a better market for the wares of Apollo,—their tuneful venders need not hope for wealth, but if one cannot make his genius something more than its own exceeding great reward, it is because he mistakes the period or scorns to address himself fitly to his readers. Finally, criticism is at once more catholic and more discriminating than of old. Can it make a poet, or teach him his mission?

Hardly ; but it can spur him to his best, and point out the heresies from which he must free himself or address the oracle in vain.

Such being our opportunities, we have seen that the personal requirements are coequal, and their summing-up may well be the conclusion of the whole matter. Warmth, action, genuine human interest, must vivify the minstrel's art ; the world will receive him if he in truth comes into his own. Taste and adroitness can no longer win by novelty. Natural emotion is the soul of poetry, as melody is of music ; the same faults are engendered by over-study of either art ; there is a lack of sincerity, of irresistible impulse, in both the poet and the composer. The decorative vogue has reached its lowest grade — that of assumption for burlesque and persiflage ; just as Pre-Raphaelitism, at first a reform in art, extended to poetry, to architecture, to wall-decoration, to stage-setting, finally to the dress of moon-struck blue-stockings and literary dandies. What has been gained in new design will survive. But henceforth the sense of beauty must have something "far more deeply inter-fused" : the ideal, which, though not made with hands of artificers, is eternal on the earth as in the heavens, because it is inherent in the soul. There is also one prerequisite upon which stress was laid by Dr. Storrs, in his application to modern art of Goethe's reservation as to the worth of certain engravings ; "Still, something is wanting in all these pictures — the Manly. . . The pictures lack a certain urgent power, etc." Culture, I have said, will make a poet draw ahead of his unstudious fellows, but the resolve born of conviction is needed to sustain the advance. The lecturer rightly declared that only "courageous work will suit America, whose race is essentially courageous and stoical." Our key-note assuredly should be that of freshness and joy ; the sadness of declining races, only, has the beauty of natural pathos. There is no cause for morbidly introspective verse,—no need, I hope, for dilettanteism,—in this brave country of ours for centuries to come.

I think, too, we may claim that there is no better ideal of manhood than the American ideal, derived from an aggregation of characteristic types. Our future verse should be more native than that of the past, in having a flavor more plainly distinct from the motherland. Not that our former contingent misrepresented the America of its time. Even Longfellow's work, with so much of imported theme and treatment, conveyed a sentiment that came, say what we will, from no foreign source. The reason that a decidedly autochthonous kind was not then proffered, unless by Whitman, was that a distinction between the con-

ditions of England and America was not more strongly established. Since the war our novitiate has ended. We welcome home-productions ; our servility to foreign judgment has lessened, and we apply with considerable self-poise our own standards of criticism to things abroad. We have outlived the greed of a childhood that depends on sustenance furnished by its elders, and are far indeed from the senile atrophy which also must borrow to recruit its wasting powers. Our debt to acute foreign critics is none the less memorable. They, in truth, were the first to counsel us that we should lean upon ourselves ; to insist that we ought at least to escape Old World limitations,—the first to recognize so heartily anything purely American, even our sectional humor, as to bring about our discovery that it was not necessarily "a poor thing," although our "own."

It is agreed that sectional types, which thus have lent their raciness to various productions, are subsidiary to the formation of one that shall be national. A character formed of mingling components must undergo the phases of defective hybridity ; our own is just beginning to assume a coherence that is the promise of a similar adjustment in art. As local types disappear there may be special losses, yet a general gain. The lifting of the Japanese embargo was harmful to the purity of the insular art, but added something to the arts of the world at large. Even now our English cousins, seeking for what they term Americanism in our literature, begin to find its flavor stealthily added to their own.

Nothing will strengthen more rapidly the native bias of our literature than its increase of dramatic tone. Speech, action, and passion will be derived from life as here seen, from factors near at hand and stuff of which the writer himself is moulded. Our playwrights are now encouraged by a copyright royalty. All classes of literary workmen, however, still endure the disadvantage of a market drugged with stolen goods. Shameless as is our legal plundering of foreign authors, our blood is most stirred by the consequent injury to home literature,—by the wrongs, the poverty, the discouragement to which the foes of International Copyright subject our own writers. The nerve and vitality of the latter can have no stronger demonstration than by the progress which they make while loaded with an almost insufferable burden. When this shall at last be lifted, their forward movement may answer to the most sanguine conjecture. Of two things they already are assured : First, the perception, the inborn taste, of their countrymen stands in need of less tutorage than that of transatlantic Saxon races. Our people have blundered from isolation ; confront them

with the models of older lands, and they quickly learn to choose the fit and beautiful, and the time is now reached when the finest models are widely attainable. Secondly, our inheritance is a language that is relatively the greatest treasure-house of the world's literature: at once the most laconic and the most copious of tongues,— the sturdiest in its foundations of emotion and utility, the most varied by appropriation of synonyms from all languages, new and old; the youngest and most occidental of the great modes of speech, steadily diffusing itself about the globe, with no possible supplanter or successor except itself at further stages of maturity; finally, elastic and copious most of all in the land which adds to it new idioms, of cisatlantic growth, or assimilated from the dialects of many races that here contribute their diction to its own. A language whose glory is that even corruptions serve to speed its growth, and whose fine achievement long has been to make the neologism, even the solecisms, of one generation the classicism of the next. This is the potent and sonorous instrument which our poet has at his command, and the genius of his country, like Ariel, bids him

“ — take
This slave of music, for my sake.”

THE twilight of the poets, succeeding to the brightness of their first diurnal course, is

a favorable interval at which to review the careers of those whose work therewith is ended. Although at such a time public interest may set in other directions, I have adhered to a task so arduous, yet so fascinating to the critical and poetic student. When the luster of a still more auspicious day shall yield, in its turn, to the recurring dusk, a new chronicler will have the range of noble imaginations to consider, heightened in significance by comparison with the field of these prior excursions. But, if I have not wholly erred in respect to the lessons derivable from the past, he will not go far beyond them. The canons are not subject to change; he, in turn, will deduce the same elements appertaining to the chief of arts, and test his poets and their bequests by the same unswerving laws. And concerning the dawn which may soon break upon us unawares, as we make conjecture of the future of American song, it is difficult to keep the level of restraint — to avoid “rising on the wings of prophecy.” Who can doubt that it will correspond to the future of the land itself,— of America now wholly free and interblending, with not one but a score of civic capitals, each an emulative center of taste and invention, a focus of energetic life, ceaseless in action, radiant with the glow of beauty and creative power?

Edmund C. Stedman.

ABIGAIL BECKER.

[OFF LONG POINT ISLAND, CANADA, NOV. 24TH, 1854.]

THE wind, the wind where Erie plunged,
Blew, blew nor'-east from land to land;
The wandering schooner dipped and lunged,—
Long Point was close at hand.

Long Point — a swampy island-slant,
Where, busy in their grassy homes,
Woodcock and snipe the hollows haunt,
And musk-rats build their domes;

Where gulls and eagles rest at need,
Where either side, by lake or sound,
Kingfishers, cranes, and divers feed,
And mallard ducks abound.

The lowering night shut out the sight:
Careened the vessel, pitched and veered,—
Raved, raved the wind with main and might;
The sunken reef she neared.

She pounded over, lurched and sank:
Between two sand-bars settling fast,
Her leaky hull the waters drank,
And she had sailed her last.

Into the rigging, quick as thought,
Captain and mate and sailors sprung,
Clambered for life, some vantage caught,
And there all night they swung.

And it was cold—oh, it was cold!
The pinching cold was like a vise:
Spoondrift flew freezing,—fold on fold
It coated them with ice.

Now when the dawn began to break,
Light up the sand-path drenched and brown,
To fill her bucket from the lake,
Came Mother Becker down.

From where her cabin crowned the bank
 Came Abigail Becker tall and strong;
 She dipped, and lo! a broken plank
 Came rocking close along!

She poised her glass with anxious ken:
 The schooner's top she spied from far,
 And there she counted seven men
 That clung to mast and spar.

And oh, the gale! the rout and roar!
 The blinding drift, the mounting wave
 A good half-mile from wreck to shore,
 With seven men to save!

Sped Mother Becker: "Children! wake!
 A ship's gone down! they're needing me!
 Your father's off on shore; the lake
 Is just a raging sea!

"Get wood, cook fish, make ready all."
 She snatched her stores, she fled with haste,
 In cotton gown and tattered shawl,
 Barefoot across the waste,

Through sinking sands, through quaggy lands,
 And nearer, nearer, full in view,
 When shouting through her hollowed hands:
 "Courage! we'll get you through!"

Ran to and fro, made cheery signs,
 Her bonfire lighted, steeped her tea,
 Brought drift-wood, watched Canadian lines
 Her husband's boat to see.

Cold, cold it was — oh, it was cold!
 The bitter cold made watching vain:
 With ice the channel laboring rolled,—
 No skiff could stand the strain.

On all that isle, from outer swell
 To strait between the landings shut,
 Was never place where man might dwell,
 Save trapper Becker's hut.

And it was twelve and one and two,
 And it was three o'clock and more.
 She called: "Come on! there's nought to do,
 But leap and swim ashore!"

Blew, blew the gale; they did not hear:
 She waded in the shallow sea;
 She waved her hands, made signals clear,
 "Swim! swim, and trust to me!"

"My men," the captain cried, "I'll try:
 The woman's judgment may be right;
 For, swim or sink, seven men must die
 - If here we swing to-night."

Vol. XXX.—86.

Far out he marked the gathering surge;
 Across the bar he watched it pour,
 Let go, and on its topmost verge
 Came riding in to shore.

It struck the breaker's foamy track,—
 Majestic wave on wave up-hurled,
 Went grandly toppling, tumbling back,
 As loath to flood the world.

There blindly whirling, shorn of strength,
 The captain drifted, sure to drown;
 Dragged seaward half a cable's length,
 Like sinking lead went down.

Ah, well for him that on the strand
 Had Mother Becker waited long!
 And well for him her grasping hand
 And grappling arm were strong!

And well for him that wind and sun,
 And daily toil for scanty gains,
 Had made such daring blood to run
 Within such generous veins!

For what to do but plunge and swim?
 Out on the sinking billow cast,
 She toiled, she dived, she groped for him,
 She found and clutched him fast.

She climbed the reef, she brought him up,
 She laid him gasping on the sands;
 Built high the fire and filled the cup,—
 Stood up and waved her hands!

Oh, life is dear! The mate leaped in.
 "I know," the captain said, "right well,
 Not twice can any woman win
 A soul from yonder hell.

"I'll start and meet him in the wave."
 "Keep back!" she bade: "what strength
 have you?
 And I shall have you both to save,—
 Must work to pull you through!"

But out he went. Up shallow sweeps
 Raced the long white-caps, comb on comb:
 The wind, the wind that lashed the deeps,
 Far, far it blew the foam.

The frozen foam went scudding by,—
 Before the wind, a seething throng,
 The waves, the waves came towering high,
 They flung the mate along.

The waves came towering high and white,
 They burst in clouds of flying spray:
 There mate and captain sank from sight,
 And, clinching, rolled away.

Oh, Mother Becker, seas are dread,
 Their treacherous paths are deep and blind!
 But widows twain shall mourn their dead
 If thou art slow to find.

She sought them near, she sought them far,
 Three fathoms down she gripped them
 tight;
 With both together up the bar
 She staggered into sight.

Beside the fire her burdens fell:
 She paused the cheering draught to pour,
 Then waved her hands: "All's well! all's
 well!
 Come on! swim! swim ashore!"

Sure, life is dear, and men are brave:
 They came,—they dropped from mast and
 spar;
 And who but she could breast the wave,
 And dive beyond the bar?

Dark grew the sky from east to west,
 And darker, darker grew the world:
 Each man from off the breaker's crest
 To gloomier deeps was hurled.

And still the gale went shrieking on,
 And still the wrecking fury grew;
 And still the woman, worn and wan,
 Those gates of Death went through,—

As Christ were walking on the waves,
 And heavenly radiance shone about,—
 All fearless trod that gulf of graves,
 And bore the sailors out.

Down came the night, but far and bright,
 Despite the wind and flying foam,
 The bonfire flamed to give them light
 To trapper Becker's home.

Oh, safety after wreck is sweet!
 And sweet is rest in hut or hall:
 One story Life and Death repeat,—
 God's mercy over all.

Next day men heard, put out from shore,
 Crossed channel-ice, burst in to find
 Seven gallant fellows sick and sore,
 A tender nurse and kind;

Shook hands, wept, laughed, were crazy-glad;
 Cried: "Never yet, on land or sea,
 Poor dying, drowning sailors had
 A better friend than she.

"Billows may tumble, winds may roar,
 Strong hands the wrecked from Death
 may snatch:
 But never, never, nevermore
 This deed shall mortal match!"

Dear Mother Becker dropped her head,
 She blushed as girls when lovers woo:
 "I have not done a thing," she said,
 "More than I ought to do."

Amanda T. Jones.

TOPICS OF THE TIME.

Huddling in the Town and Living in the Country.

HOW can the tide of population be turned back from the cities to the farms? The economists have been diligently warning the country people against the cities now these twenty years; but in spite of their exhortations the cities are constantly growing at the expense of the country districts. In several of our most prosperous cities during the last winter, one-tenth of the population received charitable aid from voluntary associations or from the city authorities; and a considerable proportion of those who were thus started on the road to pauperism were formerly living in comfort in country places. The knowledge of this fact will not greatly check the movement toward the cities. The prospect of starvation does not daunt those who are tired of the loneliness of rural life, and long for the stir and contact of the denser populations. The spectacles, the diversions, the splendors, the ex-

citements of city life furnish an irresistible attraction; they would rather live on a crust in a city garret than fare plenteously in a farmer's kitchen. It is not from the hard labor of the farm that they flee, for they are ready to work harder in the city and with smaller remuneration: the force that draws them is the craving for society. Against this tendency of human nature it is not easy to set up an effectual barrier. It would seem that long periods of enforced idleness and frequent interviews with the bony specter of want would disenchant such persons, but they do not appear to be greatly affected by these experiences. Few of the poorest people in the cities are ready to remove to the farms. The Knights of Labor have a scheme on foot in some of the Western States by which tracts of land are to be purchased by the State, divided into small parcels, and distributed to any poor families that will accept and occupy them,—the title of the land remaining in the State, and the occupier having the right to dis-

pose of his improvements only. This socialistic experiment is not likely to be tried; but if it should be, two obstacles would be encountered — lack of capital to provide necessary buildings and implements, and unwillingness to leave the city. Not one in five of the families reported every winter as destitute in the cities could be induced to return to the country. The great majority of them are indeed wholly inexperienced in agriculture and fruit-culture, and could not gain a livelihood from the land if it were put into their hands well stocked and furnished. Those who have come into the city from the farms might successfully avail themselves of such an opportunity; but most of them would refuse it if it were offered them.

In England a great National Land Company has recently been formed, the object of which is to purchase large tracts of land and sell it in small holdings on easy terms, to actual settlers, assisting them also in obtaining the necessary outfit for occupancy and cultivation. This project has enlisted the best of the aristocracy, and the funds necessary for purchasing the land seem to be forthcoming. The reason of the movement is partly charitable and partly patriotic; it springs from a desire to help the poor people of the cities to obtain better homes in the country, and from a conviction, which is just now obtaining a strong hold of the minds of intelligent Englishmen, that the safety of society will be greatly promoted by a large increase in the number of land-holders. So much has come from Mr. Henry George's visit to England.

The basis on which the nobles of England are proceeding is much more practicable than that proposed by our Western Knights of Labor. They ask nothing from the state; their scheme is partly mercantile and partly benevolent, but not at all political. Whether they will find the crowded and starving denizens of the cities ready to avail themselves of the privileges they offer remains to be seen. The prospect of a ready response to such an overture is undoubtedly better in England than in this country, partly because the pressure of population upon subsistence is heavier in English cities than in our own, and partly because the charm of landed property is greater to an Englishman than to an American. Whatever may be the outcome, there is nothing to criticise, but everything to praise, in such voluntary organizations whose object is to bring the poor of the cities back to the healthier and homelier life of the country. The project is but another proof that the English aristocracy is trying to deserve its high calling, and that it is not wholly unmindful of the obligations of privilege and power.

The working of this English experiment should be watched and studied by American philanthropists. Nothing is clearer than that the poor of the cities cannot be removed to the country without wise encouragement and organized assistance. It is possible that increasing want and suffering may, after a while, make some of them willing to go; but the change cannot be made by those who most need to make it, unless they receive substantial help. The state cannot help them without infringing sound policy; but their case affords a great opportunity for philanthropic effort.

One enterprise which looks in this direction has been set on foot among the colored refugees of Kansas. Two hundred families of these refugees were

found huddled together in great destitution in Morris County. For their relief a school was planted among them, in which the young receive instruction, both intellectual and industrial. Not only are the children taught in the school, but the teachers, as the missionaries of domestic economy, go about among the people and give instruction in the practical arts of husbandry and housewifery. No mendicancy is encouraged; the old clothes contributed for their relief are not given, but sold to them; for everything they receive, except their schooling, they are expected to return a full equivalent of service. The projectors of this charity have purchased a tract of land in the vicinity of the school, and are selling it in five and ten acre lots to those who will buy. Living thus in close neighborhood and cultivating but small areas, it is found that a few teams and plows will serve many families; those who own the teams being remunerated either in work or in produce for the use of them in breaking up the ground. The charitable effort expended on these poor people has proved to be productive; they are learning thrift and industry and the methods of agriculture, and the steady improvement in the condition of many of them inspires all with hope. But the purpose of the leaders in this movement reaches beyond the people of this colony. They hope to organize a community here so prosperous and happy that the poorest class of blacks in the cities will be attracted toward it. They wish to gain possession of considerable land, to be resold in small lots, on easy terms, to those who will come out from the cities and join them. They hope that the school will prove to be the organizing center of the community; and that by its libraries, its free instruction, its active interest in the general welfare of the people and the promotion of a more stimulating social life, it will furnish an element in which rural life is generally wanting. Doubtless the work done by the founders of this school and the promoters of this colony must rest on a philanthropic basis; but is it not a wise and productive kind of philanthropy? If the helpless and wretched people of the cities, white and black, the class from which most of our criminals and paupers come, could by any means be attracted to the country, assisted in obtaining a footing on the land, taught the simpler methods of agriculture, and trained in self-help, would not this be a fruitful sort of missionary work?

Some Causes of the Present Depression.

THERE seems to be no reason whatever why this country should not now be continuously prosperous. Our acres are broad, our soil is productive, our mines are rich in all the minerals, our means of communication are ample, our factories are supplied with all the most improved machinery: why should we not have universal and uninterrupted plenty? Doubtless the idle and the improvident would suffer and ought to suffer in the most prosperous seasons; but it ought not to be possible to find in this country at the present time any considerable number of persons who are willing to work and who are suffering for the lack of employment. With such resources as we possess all our industrious people ought to be living in comfort, and the wheels of our industrial machine ought to move steadily and smoothly forward. This consum-

mation, so devoutly to be wished and so reasonably to be expected, keeps far from us. Occasionally a brief era of prosperity returns, when all willing workers find employment, when all our mills are running and all our mines are working, and our merchants report ready sales and satisfactory profits; but this is quickly succeeded by a long period of stagnation and stringency, when the machinery stops, and the freight-cars wait empty on the sidings, and the grain is heaped up in the elevators, and there is no demand for the fruits of the soil or the products of the factory, and the mechanics and operatives stand idle by thousands all the day long in the market-place because no man will hire them. The periods of prosperity seem to come less frequently, and the periods of stringency to be more protracted, as our civilization ripens.

What a strange spectacle this country presents at this very hour! Money is plenty,— fifty or sixty millions on deposit in the banks of New York city alone! Food is plenty; the granaries at the West are full of old wheat, and though the wheat crop of the present year does not promise well, the corn crop is likely to be larger than ever before; there is no fear of scarcity. Manufactured goods are plenty; the storehouses of the manufacturers and the shelves of the merchants are crowded with them. Labor is plenty; five hundred thousand idle men are asking for work. Yet in the midst of this abundance a great industrial and commercial depression has overtaken us. At the time of writing this, workmen are selling their labor at the lowest prices, and many are unable to sell it at any price; merchants and manufacturers find a dull market for their wares; the railroads report losses instead of gains; failures multiply.

The situation is not only pitiful, it is absurd. What is the explanation of it? Who is responsible for it? Is it the protectionists or the free-traders? Is it the "silver barons" or the "gold bugs"? Is it the freight-poolers or the iron-puddlers? Why should industry be crippled and trade paralyzed, and capital fettered and labor starved in America to-day? Who will read for us the riddle of our civilization? Three or four years ago our industries were busy and our trade was prosperous, but the stream of plenty suddenly began to diminish and disappear, like the Dry Fork of the Cheat River in midsummer. This condition of things is not natural. The action of the economical forces is morbid. There must be a remedy for these disorders. Who will discover and proclaim it? Somebody is bent on killing the goose that lays the golden egg. Who is it, and how shall he be brought to justice?

To all these questions many answers might be given; for several classes, we suspect, are engaged in this stupid conspiracy; we will content ourselves at this time with pointing out two of them.

The workmen who strike when the market is stagnant, and when there are but small profits of production to divide, may be safely reckoned among these witless destroyers. To shut up the mill or the mine that yields them a livelihood because it will yield them *only* a livelihood, when the condition of trade is such that additional expense of production means bankruptcy to the employer, is a species of fatuity quite too common among workingmen. The rightfulness of strikes is not contested; but the strike which wrecks an en-

terprise out of which the workmen were getting a living, and the employer was getting no more, is a flagrant case of killing the goose that lays the golden egg. Strikes, like revolutions, are justified by success. They may sometimes fail when they deserve to succeed; but they are very often undertaken when there are no possibilities of success, when the conditions of business are such that the demands of the workmen would ruin the enterprise. In all such cases they belong in the class of blunders that are akin to crime.

It is also a question for economists whether such strong combinations of capital as now exist, using their accumulated power, are not actually forcing the rate of wages down to a point at which all trade is injuriously affected; whether, indeed, the present depression of business is not partly due to this cause. Cheap labor may be a doubtful boon, after all, to the manufacturer. Doubtless he thinks it vitally important for him to buy his own labor in the cheapest market; but he can also see that it would be for his great advantage if all the rest of the workmen could sell their labor in the dearest market. If they could, they would have plenty of money to spend, and there would be a demand for his wares. Wage-workers are consumers of goods, and they constitute a considerable share of the population. Is it not for the interest of the producers of goods that there should be as large a class of consumers as possible, with plenty of money in their pockets? When labor is poorly paid trade must be dull. Combinations of capital to force down wages are thus avenged, to a certain extent, by the losses of trade. To what extent this occurs we are not wise enough to tell; it is clear, however, that a reaction of this sort constitutes no insignificant factor of the present depression.

Thus it becomes evident that selfishness, whether of capitalists or laborers, overreaches itself. He that will save his life shall lose it; and if in saving his own life he cares not how many other lives he destroys, he deserves to lose it. Some of the political economists have told us, how eloquently! that sheer selfishness is a beautiful and beneficent force; that it blesses him that grabs more than him that gives; that as soon as every man is as selfish as he can be, all men will come to their own. It begins to look as though there might be a screw loose in this logic. The general adoption, under the tutelage of certain canny economists, by employers and laborers alike, of "the good old rule" of Rob Roy,—

"the simple plan
That they should take who have the power,
And they should keep who can,"—

does not seem to bring the millennium so speedily as was expected.

The Sensitiveness of Cities.

CITIES have always been sensitive. Mr. Howells mentions, in his August "Panforte di Siena," a tribute to this sensitiveness on the part of an official of Siena. This gentleman delicately reminded the inviting Florentines that Florence might not, after all, like to have the Sieneese deputation actually present within her walls, on account of "that affair of Montaperto,"

where the Florentines had been so soundly thrashed by the aforesaid Siense,—a matter of six hundred years before. But in fact the history of wars, the chronicles of civilization in general, abound in instances of the jealousies, the suspicions, the sensitiveness of communities—large and small. It is not only cities, it is villages as well; it is the subdivisions, the social-geographical districts of all communities that illustrate this ancient and proverbial sensitiveness.

Here—in this peaceful country neighborhood where these lines are penned—there are an Upper and a Lower Landing not without their traditional jealousies and sensitiveness to the criticism of native or alien. Should these gentle undulations, deep woods, and quiet waters ever be so happy (or so unfortunate) as to produce a local novelist; and should that child of genius draw upon the life about him for suggestion and inspiration; and should he by direct intention or supposed implication dwell too obviously upon such points of character, manners, and scenery as were not, in the opinion of the Upper Landing, to be exposed to the gaze of the Lower, or were not, in the opinion of the Lower, to be rudely presented to the wide world of the Upper Landing and circumjacent villages: then we verily believe it would be better for that child of genius never to have been born—at either Landing.

These remarks were suggested by reflecting upon the tone of local criticism anent three novels, published serially in this magazine, whose scenes were laid in three widely different sections of this extremely wide and various country—one in the South, one in the West, one in the Far East. May that “good angel” who is supposed to preside over *THE CENTURY*, as over every other laudable enterprise, preserve us from coming any nearer to naming names than this! We will not mention, within a thousand miles at least, the precise locality of either of these three worthy and world-renowned communities. If they were sensitive, they were only exhibiting one distinguishing attribute of all organized communities; indeed, the more complete the organization, naturally the more delicate, so to speak, its nervous system. And again, it may not have been exclusively a matter of nerves. It was, we are sure, in each case, a question of art also; and as in these latter days, in the minds of many, art is nothing if not scientific, it was also a question of science. We know, in fact, nothing more interesting in modern literature than the sudden, almost in some cases violent, exhibition of the scientific temper displayed by one or two of the cities alluded to in their discussion of the niceties of dialect, the truths of history, and the *nuances* of social propriety and what not else, involved in the composition of these works of the imagination.

Nothing can be more stimulating to an author than this way of taking him in high seriousness, especially when there is no personal or political taint, and nothing in any way ill-tempered, in the criticism. The fact that the critics—we do not allude now to the formal and official criticisms of the press, but rather to the open academy of the club, the parlor, or the street—the fact, we say, that those serious and scientific critics may avow that they have never read, and, Heaven helping, never will read one line of the work criticised,

or any other work by the same writer, would seem only to show how the subtle principles both of art and of science in these latter days permeate the very atmosphere, and make laborious plodding over the printed page simply a work of supererogation.

On the whole, the sensitiveness of cities not only in literary and other art, but in the realm of politics and of social reform generally, is a valuable factor in the evolution of society. The streets of not many of our large towns are clean; but if it were not for the sensitiveness of cities, how much more unclean would they be! What if a few authors *are* occasionally sacrificed to the critical exactions of their anxious and righteously rigorous fellow townsmen?

General Grant's Papers in the War Series.

IN the present number we print the second of the four papers written for *THE CENTURY* by General Grant, the “Shiloh” having appeared in the number for February, 1885. The papers on “Chattanooga” and the “Wilderness Campaign” will be published, at intervals, during the coming winter and spring.

For the first time in the course of the series, it is necessary that we should make explanation of a departure from our published promises concerning its scope. General Grant's second paper, it was announced, would deal in detail with the campaign, as well as the siege, of Vicksburg. This announcement was made in good faith, for, as originally written and as delivered to us, such was the plan of the paper. General Grant's illness, however, having prevented him from elaborating this part of his military service for his forthcoming “Memoirs,” at his special request we have consented to accept as a substitute for the first half of his paper the *résumé* which precedes the description of the siege now printed, leaving the fuller narrative of the campaign for first publication in his volume. In order to accommodate General Grant's wishes for an early publication of his memoirs (of which in substance the contributions to *THE CENTURY* form a part), it is necessary that these papers should be printed in advance of their chronological order, and, as a consequence, without illustrations, which must be deferred to supplementary papers on the same topics.

In thus departing, for such a reason, from our original plans we have reckoned on the considerate indulgence of our readers; and, to judge from our correspondence, we are not reckoning in vain. From many and diverse sources come to us expressions of the sympathy and gratitude everywhere felt for the great soldier,—to whom, with Abraham Lincoln, the world is most indebted for the preservation of our national unity. No American can be indifferent to the requests of one who has deserved so well of the republic, and whose long suffering has been to his countrymen a daily source of personal grief, as the heroism with which he has met it will be an enduring source of national pride.

[July 23.—As these last pages of the September number are going to press, word comes of the end of General Grant's remarkable career, which, in some of its aspects, will be described and illustrated in the October *CENTURY*.]

OPEN LETTERS.

Family Religion.

THE increase of divorce has become a matter of great popular concern, and many have taken in hand to set forth the causes and the remedies of this social disorder. Disorder it surely is; to this even the evolutionists bear witness. The monogamous household is the social organism that has been developed out of all sorts of social experiments; this one has survived because it was fittest to survive; because in societies so organized the strongest and best men were bred; in the struggle for existence they prevailed. To attempt to reorganize society on the basis of polygamy or polyandry, or any sort of promiscuity, would be, therefore, to revert to a worn-out type,—to bring back a form of social life which Nature herself has discarded. Thus evolution confirms revelation. Any loss of sacredness or permanence suffered by the monogamous family is, therefore, a social calamity. No wonder, then, that the truest instincts and the strongest convictions of the most thoughtful men are in arms against the foes of the household now so numerous and so strenuous, and for the time being so successful in their warfare.

The reasons of this insurrection against the family are not easily expressed. Some of the more obvious among them have been frequently mentioned, but it is not at all clear that this ominous phenomenon has been fully accounted for. One of the more apparent causes is the decay of home life among the people of our cities. The proportion of married people who live in homes of their own has been steadily decreasing. The growing difficulty of obtaining competent domestic service partly explains this; the new fashion of commerce, which keeps a great army of salesmen constantly on the road, is a more important reason. The burden of housekeeping falls heavily upon the wife, when the husband is but an occasional visitor in his own house.

To a great multitude of the active business men of this country no true family life is possible under the present conditions. The steady rise in the scale of domestic expenditure makes it difficult also for young people of the middle classes to begin housekeeping. To set up an establishment that would seem at all adequate would require an outlay that is far beyond the means of many of them. They lack the courage to begin in a homely and frugal way; they are not ready to be dropped from the circles in which they have been moving. Confronting this problem which baffles their wit and breaks their resolution, many young men and women indefinitely postpone marriage; most of those who venture betake themselves to boarding-houses. Veritable caves of Adullam are many of these boarding-houses; those that are in distress and those that are in debt and those that are discontented find refuge in them; the woman who cannot afford to keep house, and the woman who has been worsted in the warfare with inefficient servants, and the woman whose husband spends his life on the highway, and the woman who is naturally indolent and inefficient, and the woman

whose soul is satisfied with reading Ouida and retailing gossip,—all these and various other types are thrown together in a promiscuous way for many idle hours, and brought into association every day with all sorts and conditions of men. Who could expect that the family life would be healthfully developed under such conditions? Who can wonder that the family bond is often sorely strained and finally broken?

Nothing is more evident than that family life requires for its best development the shelter and the privacy of the home.

If the Divorce Reform Leagues could secure the depopulation of the boarding-houses and the hotels, and the return of the families now herded together in them to some kind of home life, they would probably find their reform making considerable progress. It is not the solitary, in these days, that need to be set in families, so much as it is the flocks and droves of human beings that are losing, in their too gregarious life, those essential virtues which take root and flourish nowhere else but in the safe inclosure of the home.

To restore the home life, then, so far as it can be done; to give to it, in our teaching and our testimony, the honor and praise that belong to it; to discourage the breaking up of homes through indolence; to bestow our heartiest commendation on those young people who have courage to begin housekeeping in a small way, and to show them that they gain rather than lose respect by such a brave adjustment of themselves to their circumstances,—this is the duty of the hour. But the rehabilitation of the home in our social life will not be complete and permanent until some deeper sense of its sacredness shall be impressed upon the minds of the people. The foundations of the home must be laid in religion. The relations that constitute the home deserve the sanction and the consecration of religion. Marriage may not be a sacrament of the church, but it is the sacrament of the home; and what is begun with prayer ought to continue as it is begun. The solemn obligations of parentage—who can assume them without the divine guidance? It is in these relations of the home, when we turn away from the competitions of the world and enter the realm of unselfish affection, that we feel the power of those deeper motives through which religion appeals to us. In this human love, as in a mirror, darkly, we begin to discern something of the glory of the divine love. How strongly all this is said in a noble passage of Dr. Martineau's:

“All the pathetic appeals and reverent usages of life, the patient love, the costly pity, love shed on sorrow and infirmity, all the graceful ceremonies of the affections at the birth, the marriage, and the funeral assume that everywhere more *is* than *seems*; that whatever happens has holier meanings than we can tell; that the characters written on the screen are flung out by light behind. Take away the divine symbolism from our material existence, and let it stand only for what it can make good on its own account, and what is there to redeem it from selfishness and insignificance? The home sinks into a house, the meal into a mess, the grave into a pit; honor and veracity are appreciated chiefly as instruments of trade;

purity and temperance as necessities of health ; justice as the condition of social equilibrium ; mercy as the price of a quiet time. Does this literal aspect really satisfy you ? Does it give any adequate account of your natural feeling towards these several elements of life ? If this were all, would they stir you with such passion of love, of awe, of admiration, as sometimes carries you off your feet ? No ; we are not made upon this pattern ; and in our composition are colors mingled which are native to no earthly clay."

Now, it is in the home more clearly than anywhere else that the good man perceives the pattern on which his life is made, and feels the force of those intimate impulses which move him to lay hold on things unseen and eternal. A home that is destitute of all this "divine symbolism," of which Dr. Martineau speaks ; in which life has no holier or deeper meanings than those common utilities which appear upon the surface of it ; in which no word of prayer is ever heard, and no recognition of the Giver from whom all bounty comes, lacks the strongest bond of permanence. This exclusion of religion from the family life is in the deepest sense unnatural. It is only by a willful repression of the holiest instincts of our nature that it can be accomplished. The fatal effect of this exclusion may be seen in many broken households ; and they who desire to preserve the home and to make it a source of lasting benefit to the household and to society should seek to emphasize those holier meanings by which all its relations are sanctified, and to keep the fire always burning on its altar. Family worship — is the phrase old-fashioned ? Even so, it describes a custom by which the life of every household should be consecrated. Doubtless the failure to maintain it is due, not seldom, to a feeling of diffidence on the part of the heads of the family,—to a fancied inability to express with propriety and clearness the daily wants and aspirations of the household. For these there are manifold helps,—the beautiful volume, entitled "Home Worship," lately published by A. C. Armstrong & Company of this city, in which Scripture and comment and song and prayer are happily combined, being one of the best. The reverent use of some such manual daily would introduce into many homes an element in which they are now sadly deficient ; it would make the family discipline easier to maintain ; it would lighten the inevitable trouble ; it would strengthen the bond by which the family is held together. The only radical cure for the evils that now threaten the foundations of society is that which makes the home the temple of pure and undefiled religion.

Washington Gladden.

Political Education: What It Should Be.

A DEEPER study of political subjects is clearly shown by the present state of affairs in this country, and, indeed, throughout the world. There has never been a time when so many important questions were presented for thought, and so many problems for solution, as now ; and these questions and problems go down to the very depths of social life, and involve the most important interests of humanity. Some of them are strictly political in character, while others are rather moral and religious ; yet even these latter must eventually influence, in various ways, the politics of the world. Some of them, too, are of such a kind that

an early solution is urgently needed ; for, so long as they remain unsettled, they must continually disturb the peaceful current of affairs.

Again, while such matters require treatment at the hands of our public authorities, the men who wield authority have thus far shown themselves little capable of dealing even with the simpler questions of the time ; and the disparity thus revealed between the work to be done and the agents we have for doing it, is fitted to awaken solicitude in the minds of thoughtful men. It must be remembered, too, that it is in this country, probably, that the political problems of the future will have to be solved ; for it is here that the forces now at work in society are most untrammelled in their action. For these reasons I heartily agree with those who call for a deeper study of the social sciences and the problems of practical politics.

But I cannot but think that those who have undertaken to supply the demand show an inadequate sense of the work needing to be done. The courses of political study that have been opened in some of the colleges consist mainly of constitutional history and political economy,—subjects of great importance, no doubt, but forming but a small part of political or social science. Economical questions, indeed, can hardly be studied too thoroughly, and I would by no means detract from their importance ; but I think there are other aspects of affairs more important than the economical which our political educators are in danger of neglecting. The moral aspect of every question is by far the most important, and moral considerations are entitled to the precedence in all political action ; hence, it would seem that the study of politics should be based on moral philosophy.

It may be urged, perhaps, that there are different schools of moral philosophy, who disagree as to what the foundation of morals really is, and that the young student would only be confused by the study of such conflicting theories, without obtaining from them any guide to practical action. But, though writers on ethics are not agreed as to the ultimate basis of morals, they all agree substantially as to the chief duties of man, both public and private ; and it is only by studying the subject philosophically that one can arrive at a clear perception of moral principles and a realizing sense of their supreme importance in political affairs. To neglect such study, therefore, and give the precedence to economical science, is to place the material interests of society above the moral, the very thing which the colleges ought especially to avoid doing.

Again, the study of history, if properly pursued, is one of the most essential parts of political education ; but if confined, as it is apt to be, to the history and analysis of political institutions, its usefulness must be very materially diminished. Such studies have their interest and their importance, but they are by no means the most essential parts of historical science, nor have they much connection with the practical questions of the time. We Americans are not likely to make any essential change in our form of government, and whatever changes we do make can only be in the way of further developments of our present system ; and hence the study of older systems, or those of foreign countries, is of little use to us for

practical guidance. The study of history, in order to be really useful, ought to be directed to tracing the progress of civilization, not in political forms merely, but still more in those underlying principles, moral, philosophical, and others, which really shape and control political affairs themselves. If properly pursued, too, historical study is admirably fitted to inspire the student with the spirit of progress, and with that regard for justice and the common weal which is so essential to the right conduct of public affairs.

But there is a further consideration which seems to have escaped the notice of most of the advocates of political education. It seems to be thought by those who have planned courses of study in political science, that a knowledge of political economy and political history and a few related subjects is sufficient to fit a man for statesmanship, or for acting as a public counselor in political affairs; but is not this a mistake? The politician, whether leader or counselor, has his specialties, of course; but if he is nothing but a specialist, he is by no means fitted for the conduct of affairs. What he needs above all, after a spirit of justice, is a true conception of human life and of the relative value of the different elements that go to make up civilization. If he has been so superficially taught that he regards material good as the chief object of human endeavor, he will be wholly incompetent to govern a nation in the way most conducive to its well-being; for the end of life is not to amass and display wealth, but to cultivate those higher interests of science and art, literature, morals, and religion, which give to humanity all its dignity and worth.

How narrow and uncultivated men, if they happen to become legislators, may treat the higher interests of mankind, we have practical illustration in the conduct of our own Congress toward literature and art. Artists and others petition to have the tariff on works of art repealed, but Congress contemptuously increases the tariff. The same spirit is seen in the persistent refusal of our national authorities to secure an international copyright, while inventors of machinery are fully protected, and have their just rights in all civilized lands.

The truth is, the work of statesmanship is so broad and multifarious that no narrow special training can be an adequate preparation for it. A good general education ought to be added to the special one; and the political studies themselves ought to be so broadened as to include ethics especially, and such a study of history as will show the student the real springs of civilization, and the effects of good and bad government on the higher interests of mankind.

J. B. Peterson.

On the Printing of "The Century."

QUESTIONS have been asked and suggestions offered concerning the printing of *THE CENTURY*, which call for long explanations. May I ask you to print this as a general reply? These questions and suggestions are substantially:

1. Why do you not print *THE CENTURY* on the rough, hand-made papers now largely used for choice books? Etchings are well printed by Salmon on Whatman and Van Gelder papers. Why can't you print wood-cuts on the same or similar papers?

2. Why do you go to the other extreme and print on dry and smooth paper, which has, at times, an unpleasant glitter, and which does not hold ink as well as damp paper?

Hand-made paper cannot be used because it costs too much. The unprinted paper for one number of the magazine would cost much more than the thirty-five cents now paid for the printed and bound number. All publishers of books ask for copies on hand-made papers from three to five times more than for copies on smooth ordinary paper.

Rough-faced or plain-surfaced machine-made papers could be used for plain type-work, but not for printing the wood-cuts. A print on sail-cloth must be coarser than on satin; a print on rough paper cannot show the fine lines of relief engraving as well as a print on smooth paper. Seen through a magnifying glass, rough or plain paper has a surface on either side made up of fuzzy elevations and depressions, not unlike that of cotton cloth, but on a smaller scale. It is not a truly flat surface. But every wood-cut is as flat and smooth as skill can make it. A light impression against a wood-cut allows the elevations only of the rough paper to touch the cut. This makes the broken or "rotten" lines and spotty or "measly" blacks detested of all engravers. Full impression presses these elevations around the lines; it jams the paper in the cut; it thickens light lines, chokes white lines, and muddies color everywhere.

American printers of wood-cuts do but follow the lead of engravers on wood, who should be permitted to decide what kind and state of paper is best fitted to show their work. Whether printed on India paper by rubbing or on plate paper by press, the paper for the engraver's or "artist's" proof is always smooth and dry. American type-founders prefer to have their specimens of types printed on dry, smooth paper.

The reference to the successful use of Whatman's paper by Salmon is not to the point. Salmon's method, the copper-plate process, is entirely different. The etching is printed on a small sheet at the rate of six an hour; the profusely illustrated magazine sheet, more than four times as large, at the rate of six hundred an hour. The etching is printed from lines sunk below the surface of the copper-plate; the wood-cut from lines raised above the surface. The ink that makes the print in an etching is confined in little ditches that will not allow it to escape under pressure; the ink that makes the print of a wood-cut is spread in a thin film over the surface of the cut, and will spread or get thick from over-pressure.

The relative values of papers cannot be determined by their roughness or smoothness. The teachings of Art on this subject, as expounded by amateurs of printing, are contradictory. The rough, half-bleached, but honest linen papers in the books of the early Flemish and German printers were not esteemed in their own time. The book-buyers of the fifteenth century judged them vastly inferior to the smooth vellum of old manuscript books; and buyers of this day prefer the smoother paper and printing of the old Venetian printers and the French printers of missals and devotional books. At the end of the last century the Whatman mill was making excellent paper, but there were English bibliophiles who went to Bodoni

of Italy to get smooth paper and printing which they thought could not be had in England. The papers in the books of Baskerville, as well as in those of Dibdin and the Roxburghe Club, are below the standard of roughness now in fashion. When rough papers were common, the smooth paper was preferred. Now the tide has turned. Smooth papers being common enough, rough paper is "artistic." Price has something to do with artistic preferences. A spotty and cloudy smooth Japan paper is of more value than the rough hand-made linen; the wriggling vellum, too often greasily smooth, is highest of all in price. Is it the perception of really meritorious qualities in paper, or the intent to have what few can get, that makes the buyer at one time prefer, and at another reject, a smooth surface?

The opinion that dry paper does not hold ink as firmly as damp paper must have been obtained from some special or unfair experiment. Under the unwise and entirely unnecessary process of dampening the leaves (which will make them stick together), and of scrubbing or scraping these leaves together by violent beating under the book-binder's hammer, the ink will set off. Under this treatment any strongly printed work will lose its color, smear, or set off. But this is not a fault of printing, but of book-binding. Before leaving the bindery each copy of *THE CENTURY* magazine is tested by a direct (not a scraping) pressure of not less than a thousand pounds to every square inch of surface. Under this pressure any moisture or oiliness in the ink would at once be apparent. Twenty years ago the few black wood-cuts in books and magazines were faced with tissue paper to prevent smear. This tissue paper is no longer needed, although black wood-cuts are more frequently used, and are always printed with more ink and more clearness.

The best results are had from dryprinting. Prejudice has nothing to do with this conclusion. The printers whose experience teaches them that dry and smooth paper has the best surface for wood-cut printing prefer dampening when the cuts are to be printed on rough paper. If an American printer were required to produce a facsimile of an early book on rough paper, he would surely dampen it. But the water that softens a rough paper is injurious to smooth paper.

The dampening of any paper is a practical admission that it is, in its dry state, unfit for press-work. Then come the questions: Why should it be unfit? Is it not possible to make paper printable by giving it from the beginning a faultlessly smooth surface? These questions have been fairly answered by the paper-makers of *THE CENTURY*. The paper they furnish is printed without dampening, yet with a sharpness of line on cuts and type, with a fullness of black, and a uniformity and firmness of color, impossible on damp paper.

Wood-cuts of unusual fineness and shallowness, with a delicacy of silvery tint heretofore rated as "unprintable," have been shown in this magazine (see pages 701-720 of the last volume of *THE CENTURY*), with the blackest of backgrounds, and without any loss of engraved work. If there be any printer who thinks he can get as good a result from damp paper, I am sure that I can not.

The publisher selects smooth paper, not because he thinks it luxurious, but because it yields better

prints. He gets from it the result he seeks. It enables him to show a breadth, a beauty, and variety of engraving that cannot be shown by any other paper. He accepts the gloss on it in the same spirit that the book-collector accepts the specks and dinginess of India paper, the smoky cloudiness of Japan paper, the uneven thickness and variable color of vellum. He cannot get all the good qualities in any one fabric. He does not seek gloss. If he could get smoothness without gloss, he would have it.

Theodore L. De Vinne.

Recent Inventions.

IN the application of electricity to industry the tendency of recent work appears to be towards the construction of new forms of self-acting or self-controlling appliances. The opening or closing of a circuit at one point may cause the movement of an armature at a distant point in the same circuit. This is the underlying idea of the telegraph, fire and burglar alarms, and many other industrial applications of electricity, and a great number of inventions have been brought out seeking either to make the closing or breaking of the circuit at the transmitting end of the line, or the movement of the armature at the receiving end, automatic—self-acting, self-controlling, or self-recording. For instance, the rise of the mercury in a thermometer may close a circuit by touching a wire suspended in the upper part of the tube of the thermometer, and thus sound an alarm-bell. This idea is used in several forms of thermal alarms, and for another purpose in thermostats. The thermometer may be in a dry room or cold-storage warehouse, and the bell in a distant office, and serve a good purpose in reporting a dangerous rise in the temperature. The objection to such an alarm system is that it is too narrow in its range. It only reports the rise of the temperature to a known point, and tells nothing of the movements of the mercury above or below that point. One of the most recent inventions in this field seeks to make a self-reporting thermal indicator that shall give on a dial every movement of a thermometer at a distance.

For this purpose a metallic thermometer is used. It consists of a bar composed of two metals, having different rates of expansion and contraction, brazed together and twisted into the form of a spiral spring. By means of simple mechanism the bending of the bar, under the influence of heat and cold, is made to turn an index on a dial marked with the ordinary thermometer scale. In converting such a thermometer into an electrical apparatus for transmitting indications of the thermometer to a distance, a shaft moved by the variations in the instrument carries at one end a short arm. A sleeve, slipped over the shaft, carries the index of the thermometer, and also two arms placed one on each side of the arm on the shaft, and each connected with the line wire leading to the distant receiving station. There is also on the sleeve a toothed wheel, the arms and the wheel being insulated from the shaft. The receiving instrument consists of a shaft carrying a toothed wheel of the same size as the first, and also an index moving over a dial having a thermometer scale. On each side of the toothed wheel in each instrument are electro-magnets having armatures, that

by means of levers and pawls control the movements of the wheels. While at rest the arm on the shaft of the thermometer or transmitter stands between the two arms of the sleeve and insulated from each, the circuit being open. If now there is any movement in the thermometer, caused by a change in the temperature, the arm on the shaft will move in one direction or the other, strike one of the arms beside, it and close the circuit. Three magnets are then brought into play, one after the other. The first magnet attracts its armature, and its movement first closes a shunt round the two arms, that have just met to close the circuit, and secondly operates the pawl and moves the wheel one step. Instantly after, the magnet at the receiving station is affected, and its armature, by means of the pawl, advances the wheel one step in the same direction. A third magnet is then brought into play to open the circuit and restore everything to its normal condition. As the two wheels thus move together one step, the index on each points on the dials to the same figure of the scale, and both report the same movement of the thermometer, however wide apart they may be placed. The advance of the wheel in the transmitter also serves to draw the arms apart and restore the instrument to its normal position, ready for the next movement in either direction. It will be seen that the system, while apparently complex, is based upon a simple mechanical movement. The turning of the shaft in either direction moves the wheel of the distant receiving instrument, and its index shows continually on the dial every movement of the shaft, and consequently every change in the thermometer. The shaft may in like manner be made to turn under any mechanical movement, be it the rise or fall of a barometer, the movement of a weather-vane, the rise or fall of the tide, the changing pressure of steam, gas, or air, or any physical force that it may be desirable to measure or record. In the instruments examined, the apparatus was employed in connection with a thermometer, a barometer, a steam-gauge, and a float in a water-tank, the transmitting instrument being in each instance at a greater or less distance from the receiver. In all except the barometer, the index of the receiver appeared to respond with precision to every movement of the transmitter. The instruments were also all fitted with a device for signaling on a bell whenever the maximum or minimum points of pressure, height of water, etc., were reached. The mechanism for this part of the system is made adjustable, so that the bell can be made to ring at any point desired. This system of indicating at a distance physical changes, however large or small, promises to be of great scientific and commercial value, because it makes it possible to observe and record variations in temperature, pressure, and even work at a distance. It can be used to record in a ship's cabin every variation in the wind, the temperature of the sea, the pressure of the steam, the speed of the vessel and her direction; to give variations of pressure in compressors, caissons, steam-boilers, vacuum-tanks, etc.; to indicate the quantities of water or other liquids in tanks and vats; and to show any changes in speed or out-put of machines, however great, or however minute. By the addition of any form of recording apparatus, the system can also be used to record automatically every movement at the distant transmitting station.

Among new school appliances is a clock designed to show the time at any given moment in all parts of the world. The clock does not differ in mechanism from any other clock, the novel feature being the arrangement of the figures on the dials. Two dials are used, one over the other, the smaller being in the form of a ring, and moving over the other dial in unison with the hour-hand. The larger dial covers the whole clock-face, and is marked with four systems of figures. The first system, in Arabic numerals, stands next to the edge of the dial, and begins at the beginning of the universal day, or midnight. The first number is at the left of the lowest point of the dial, and the others are arranged at regular intervals around the dial to 24 o'clock, or midnight. Midday, or 12 o'clock, is at the top of the dial, all the numbers to the left being marked A. M., and all to the right, or from 13 to 24 o'clock, being marked P. M. Within the circle of figures is a circle of Roman numerals, beginning also at the same point, or midnight, and marking XII figures to midday, and then XII more till midnight. Within this circle is another circle of 60 figures and points to mark the minutes for the hour-hand. Within this circle is also another system of figures giving 15 degrees of longitude, or one hour, and divided into 60 parts. The second dial moves over the larger dial with the hour-hand, and is marked with the degrees of longitude east or west in groups of 15 degrees. The hour-hand is in two parts, a single hand pointing to the minutes, and a series of fifteen minor hands that move with it. Supposing the clock is to be used at some point, say on the 75th degree west of Greenwich, the smaller dial is adjusted so that the figure 75 is opposite the hour-hand. The dial now moves with the hour-hand, and to find the hour at any degree of longitude it is only necessary to find the hour opposite that degree. The minute-hand will also give the time before or after that hour. If the place at which it is desired to know the time is not on one of the numbered degrees of longitude, and is either east or west of these, the time, faster or slower, can be estimated from the supplementary minute-hands and the inner circle of figures on the dial. This dial system explains a number of interesting geographical and time questions, and will, no doubt, prove of value in schools.

Charles Barnard.

A Plea for National Aid to Education.

THE movement to give national aid to elementary education, which originated with the National Aid Association a few years ago, nearly reached a successful culmination in the Blair Bill, passed by the Senate, and now awaiting the assembling of the next Congress. As a living issue of national importance and a measure of public safety, it ought to receive the general attention of the press. The larger journals and magazines have set a good example, but the network of local publications, through which the masses are best reached, have barely touched upon the subject. It has engaged the support of some of the greatest minds in this country, and literature on the subject is not wanting, but the means of distributing the data already available is sadly lacking.

Of course, the South will receive the most direct

benefit if this appropriation is granted, because they have the most illiterates; but if ever our sister States needed help, it is now. The war left the South so desperately poor, that a tax equal to, and in many cases greater than, the Northern school tax barely keeps their schools open three months in the year; and to this fund the colored man, who receives over one-half the benefit, contributes next to nothing. It is no new idea that we owe the colored man an education. He is with us to stay, and we have made him a citizen, and as such he is entitled to an education, whether he contributes one cent to the school fund or not. The duty is a national one, but the burden now rests on the shoulders of the South, and the appropriation merely proposes to distribute the load. The essence of the measure is contained in the proposition, Shall we as a nation assume the burden, or shall we continue to shirk it on to the South?

A direct remedy lies in a thorough discussion of the subject by the thousands of newspapers and journals scattered throughout the land. We at the North are geographically too far removed to appreciate the necessity of extending this aid; but once let it be fully understood, the North will arise as a unit and demand that a measure so just be speedily carried into effect. But the benefits conferred will not be on the colored man alone. The framers of the Blair Bill anticipated the objections of the selfish few, who for the sake of a few pence would let ignorance inhabit and till the fairest fields of this country. The appropriation will be impartial to each State in proportion to the illiteracy within her limits, without regard to race.

Major R. Bingham, in his masterly paper entitled "The New South" (published by the Bureau of Education, Washington, D. C., in the proceedings of the meeting in February, 1884, of the superintendent's department National Education Association, and in the proceedings of the National Education Association, which met in Madison, Wisconsin, in July, 1884), has set forth the needs of our sister States far more forcibly and appropriately than I can, for he speaks whereof he knows. Widespread circulation of the sentiments contained in his paper, coming as they do from a prominent Southern educator, would do much; and as the day draws near when this cause shall live or die, I hope to see the press of our land, mustered under the banner of justice, prepare our people to give the Blair Bill, or some similar measure, when passed by our next Congress, a cordial reception.

C. N. Jenkins.

CEDAR RAPIDS, IOWA.

Women and Finance.

WE have just heard of the girl whose father had opened a bank account for her and given her a check-book, and who said she couldn't tell what the former was till she had written through the latter. And, long since, we knew her married sister, who always destroyed a receipt, "to make sure the bill wouldn't come up again." But while the wise virgins have smiled at these vagaries of the feminine mind, a hundred foolish ones have lifted innocent eyes at our hilarity. It is always a little difficult, knowing a thing one's self, to imagine a general ignorance of the subject; but one may safely put at the lowest the average feminine in-

telligence on business matters. Even among self-supporting women, a head for finance is the exception. They are usually the resigned victims of their male relatives who relieve them of the trouble of investments, and are apt, sooner or later, with the best intentions and the most affectionate dispositions, to lose their savings for them. "The most upright men will take advantage of a woman," a victim of a brother-in-law's wiles once said; but it was because of ignorance that she suspected treachery. On the other hand, the most upright men do not enjoy managing women's affairs, sure, early or late, to be confounded by feminine inconsequence or reproached by ignorance so dense that it seems to them intentional stupidity. For, though your fair friend knows all about Greek literature and Renaissance art, the music of the future and the proper thing in prayer-rugs, you are talking an unknown tongue when you hold forth on first and second mortgages, foreclosures and consolidations, incomes and "watered stock." She does not know, she hates to ask; and if she does, your explanations presuppose information she has not, and so are of no use to her. She has a vague sense that she has been cheated if your efforts do not bring that ready money which is to her the most comprehensible fact of business transactions. If she be a saint, she says nothing and forgives a wrong she never received. If a she have a temper, she quarrels, not with destiny and the trick of trade which sent those investments down instead of up, as prophesied, but with her unhappy agent.

When she takes matters in her own hand, she does not fare much better. She falls a victim to Mrs. Howe, the banker, and learns in the dear school of experience the simple first lesson that profit is in direct ratio to risk. Or she learns wisdom at a Woman's Exchange, whose methods may be exactly calculated to play upon her ignorance and develop all her superstitions as to the little god of Luck who rules in business. For intuitions break down before the laws of trade, and the finest feminine instincts prove poor guides in that unknown world.

Now, cannot something be done in the schools to remedy the ignorance which lies at the base of all this? Is it not possible to impress on the mind, at a time when all impressions are vivid and lasting, some first principles of business and the legal forms connected therewith? The law is a terror to women, and an understanding of its certainties alone frees them from their fear. And it is not a dull subject when clearly explained, and with proper treatment may be made almost as fascinating as its underlying delight, money-getting and money-spending. We may be told, of course, that women have no head for business, and that therefore all exertions are thrown away; but we have heard the same story about so many things which, on trial, proved not beyond the feminine mind. We are getting all sorts of things into the schools now; political economy, the Constitution, and physical culture being modest side-dishes in the intellectual feast. Let us have now lessons in the logic of business, duly seasoned with clearly explained law, and garnished with common sense as to the spending of money and keeping account thereof.

And, to the same purpose, one must put in a word on the injustice which brings up the daughters of the

rich in irresponsible spending of ready money, or that more irresponsible "making of bills" which gives such a pleasing sense of having all one wants. It is not only a question of accounts, though these are necessary and helpful; but why should Midas's daughter be so utterly dependent upon his golden touch? If he means to leave her fifty thousand some day,—providing his luck holds out,—why can't he give her a title of that now? It would be a possible resource against an evil day, and, what is much more important, could be made the basis of practical teaching as to the care of money. Why must she wait till it all comes to her encumbered by endless bewilderments as to securities and investments, with the risk of losing most of it in learning to manage it? Of course King Midas answers that he needs all his money in his business; that he cannot afford to tuck any of it away in a savings bank for Fragoletta, in these days of general untrustworthiness. But will fifty thousand some time, and no more idea than a baby what to do with it, equal the tact, experience, and development of judgment involved in managing for herself a smaller sum under his wise direction? Is it a father's duty to leave all the money he can to his children, minus his own power to keep or increase it? We all know the consequences. Fortunes built up by a life's labor are lost in a decade by children who were brought up chiefly to spend. It is a phase of democracy delightful in the abstract, but painful in experience, when Fragoletta goes to the lower end of the see-saw. And so we come back to the first proposition—to give her knowledge of these things through the schools, to which, nowadays, so large a part of the training of girls is intrusted.

Emily F. Wheeler.

The Serial Story.

THE continued story is a literary product characteristic of our time. "Blackwood's" was first among magazines to make the serial publication of fiction important; and though much fault has been found with the method, it has grown in favor and proved of use.

The flavor of the component parts of the novel is more distinctly appreciated when it is served up in a series of judiciously related courses. The hungry curiosity to follow the events, discover the plot, and swallow the book whole, which belonged to the world's younger days and long nights of novel-reading, is turned into the discriminating attention of a patient public, whose interest in the story does not preclude the study of underlying problems presented in a life-like and artistic way. The writer has reason to feel assured that his "gentle reader" is not hurrying him on to the finish with cries of blood and vengeance on the villain or with urgent appeal for the hero's prosperity, nor clamoring for poetical justice or conventional moral conclusions with a vehemence disproportioned to some concern for the inward laws of life and the requirements of true art.

Labyrinthine plots are now justly degraded to catchpenny uses. Events are treated as in themselves nothing,—as affecting character, everything. Big and startling circumstances lose their preëminence, for it is found that occurrences of the slightest every-day nature

are important enough to build up or disintegrate moral power, and that the excitement of following events is superficial dreariness compared with the excitement of following the meaning of events. Characters enlivened from the inside will make a story live in a reader's interest during a year of monthly magazines and beyond "Finis," more surely and clearly than the most cunningly contrived mock motions of pretty puppets jerked about in a vain search for the unexpected.

The "installment" method makes the work of entertaining the world more difficult, rather than easier, for the author. It defends the market against the demands of the market by making it harder than ever for any but the fittest novels to survive the passing purpose of filling a leisure hour; and it requires more strictly than ever before a consummate artistic skill in the choice and handling of material.

The modern reader will not sit easily in his chair while the novelist pursues pet digressions, elaborates irrelevant details, and blocks the progress of his chief characters with a throng of supernumeraries. The long-winded narrative of Fielding and Richardson, indulged with innocent zest, suited the old-school manners of a departed age. But the average magazine-reader will have none of it, under any circumstances. He must come to the point, understand the clearly marked issue, and get about his own business shortly. He requires the author to follow his plan so strictly that, on taking up a magazine to read the continuation of a novel, the first word shall at once recall the previous part and imply the whole train of the story. As to the philosophy,—the thought which animates the novelist's scheme,—the modern public will only find it absorbing if it has well-considered bearing upon the meaning and tendencies of new phases of life. His moral, like his plan, must be fully worked out in his own mind, never elaborated in the presence of his readers. The novel, once thought to be an instrument of moral corruption, is thus become an acknowledged aid to moral insight. It is growing morally suggestive without becoming clumsily didactic.

The change in the treatment of heroines signally illustrates the new position. The transfer of the author's attention from the story about his characters to the representation of the life within them has revealed the individuality of the heroine, and developed an altogether new estimate of woman's moral value. The old-time heroine was used merely as a tool of the plot, considered simply as "spoils" for the victor,—a lovely, passive thing for the hero to exercise his compelling force upon. Or, if she were not so passive, she was not so lovely. Round her centered the series of thrilling adventures; yet she herself was not the actual point of interest. She was often the prize for which the race was made, but the prize was at best a fine incident of a finer struggle; the race was the thing,—for that the onlookers cared.

The modern heroine fills a larger place. Over the circumstances of life and influences of love from which the novelist has framed his story, she asserts herself with force as well as favor. She takes herself in earnest, and the sincere treatment she gets shows at the first glance amusing contrasts, as to age and worldly experience, with the old lighter method. A blushing

débutante she used to be, very shrinking, entirely unsophisticated, and — somewhat insipid. Now she is a self-possessed and individual woman, whose capabilities ripen steadily in the contact with the general life. Writers of recent society novels have dared even to make her wife or widow, as world-weary in her own more graceful fashion as only heroes like Rochester or Lovelace were wont to be.

The ideal woman, the heroine worthy of the name, with all her new power of making strange situations becoming, must still be moved by conscience. Womanly intuitions and instinctive purity, however inconvenient at times to the masculine mind, are still ideally charming, and the more potent when enlightened by a ray of reason. The conscientiousness of Romola, Dorothea, Maggie Tulliver, Isabel Archer, Miss Woolson's Anne, Mrs. Burnett's Bertha Amory, or even poor life-thwarted Marcia Hubbard, is as remote as the twentieth century from the conscientiousness of Pamela, Clarissa Harlowe, Evelina, Amelia Sedley, or Dickens's strongest woman, Lizzie Hexam. The conscientiousness of these earlier heroines based its authority and privilege upon the conventions of church and state, and for the rest upon that weak and unenduring thing, womanly innocence. The modern heroine has further warrants of faith. She has ideals of her own of the life to be desired, ideals whose truest sanction lies in an educated as well as an implanted sense of the eternal fitness of things. She has proved that knowledge gives more advantages than innocence for the formation of healthy character and attainment of right action. A significant description is given in "The Portrait of a Lady" of the life Isabel sought:

"Her notion of the aristocratic life was simply the union of great culture with great liberty; the culture would give one a sense of duty, and the liberty a sense of enjoyment.

"She was driven to open recognition of conflict with Osmund, when she opposed the essentially aristocratic life for which she cared to that which was with her husband merely 'a thing of forms, of conscious, calculated attitudes.'"

What Laura Pendennis, what Amelia would have assumed to measure her hero's motives and judge his position? The utmost she could do would be to cast herself down before him because of things which her soul could not reverence, weeping and afflicted, but weak and submissive. The modern heroine suffers none the less in such evil case, but her independent withdrawal from any implication therein of her own self is as firm and unmistakable as Romola's was from Tito's moral inefficiency.

In Mr. Howells's Marcia or George Eliot's Gwendolen — both undisciplined, but both rudimentary women of the century, if one may speak so — an independent moral sense is wakened through the bitter trials and disappointments of their love. The awakening and development of this moral sense is more important to reader and writer than the love which is its instrument.

The heroine, as an image of ardent self-respecting womanly character, has become in herself of value. The development of her personal responsibility, expanding in contact with world-old customs, still powerful though waning, and with others stronger still that must forever live, — her spiritual growth and un-

determined influence, — suggest lines of present and absorbing interest fit to be continued in serial novels yet unwritten.

Charlotte Porter.

A New Solution of the Indian Question.

AT a public dinner in the capital town of one of the Western Territories, recently, I was seated beside a gentleman who had lived upon the frontier for twenty years, and had represented his Territory as a delegate in Congress for several terms. The conversation turned upon the problem of how to bring the Indians up to a tolerable degree of civilization and to make them self-supporting. My acquaintance had just returned from a visit to three of the largest reservations in the West. Knowing that few men had enjoyed a wider opportunity to become acquainted with Indian character, I drew him out as to his own plan for the management of the "wards of the nation." His ideas seemed sensible and practical. First, he condemned the large reservation system as encouraging vagabondism and barbarism. This system, with its concomitants of money annuities and the issue of rations in times when game is scarce and starvation imminent, makes of the Indian a pauper and a loafer. In the summer he revels in a continuous excursion and picnic, roaming over his reservation with his companions and his family, poling, hunting, and having a good time; and in winter he pitches his tepee close to the stone house of the agency, knowing that the Government will provide for his necessities. Place a few hundred white families of a low grade of intelligence upon an area as large as the State of New Jersey, keep everybody else off the territory, let these people know that the Government will provide them with blankets and with flour, beef, and sugar, if they are in want, and they or their descendants would become about as lazy and barbarous as the Indians in a short time.

So argued my neighbor at the table. He did not, however, favor the severalty system pure and simple as it is usually advocated in the West. He thought it should be introduced gradually in connection with small reservations. The Indians should be perseveringly encouraged to make permanent homesteads, till the land, and raise cattle. Every man showing an ambition to acquire land and support himself upon it should be given a patent to secure him his property rights. It would be too much to expect, however, that the whole body of a tribe, accustomed to a seminomadic life, idle, trifling, and childish by nature, could be made stable, independent farmers all at once by the combined influence of an act of Congress and impending starvation. They would simply starve, like so many wild animals deprived of their usual resources of sustenance, or, made frantic by hunger, they would engage in desperate forays upon their nearest white neighbors.

A continuance of the reservation system, but on a very much smaller scale than at present, combined with the steady, judicious introduction of the severalty system, was, in a word, my friend's solution of the Indian problem. By this plan, he thought that in another generation the reservations, having been steadily reduced from decade to decade by the increase of individual holdings and the restoration of unused land to the pub-

lic domain, might be abolished altogether, the Indians having by that time become self-supporting citizens.

I may add that my observations recently among the Crows and Flatheads of Montana the Umatillas of Oregon, and the Puyallups of Washington Territory confirm this view. In all these tribes I found Indians who had made creditable beginnings at agriculture or herding, and who complained that they could get no titles to the land they occupied, and thus could not, like white men, acquire property and leave it to their children. Such cases were exceptional, it is true. The great majority of the men were stalwart vagabonds, the women doing all the work required by the simple savage mode of life. The average Indian, however, is more intelligent than the average negro of the cotton States, and there is no reason to think he will not learn to work if made to feel the incentives of prosperity and comfort on the one hand, and the sharp spur of want on the other.

Eugene V. Smalley.

The Indian Schools of New Mexico.

IN the June CENTURY, page 197, I read:

In the New Mexico section are shown a curious batch of compositions written by Indian pupils in the Catholic schools.

There are no Catholic schools for Indians in New Mexico. One boarding-school (this one) and seven day-schools are conducted by the Home Mission Board of the Presbyterian Church. A new boarding-school has lately been started under Congregational auspices.

It is possible that a few Indians are taught in Catholic schools, but the Catholics have not only made no effort to educate the Indian, but the Jesuits here have frequently said that the Indians were better off without education.

This school had a large exhibit at New Orleans, both literary and mechanical.

Superintendent.

ALBUQUERQUE INDIAN SCHOOL, NEW MEXICO, June 8, 1885.

BRIC-À-BRAC.

Uncle Esek's Wisdom.

THERE is a great deal of intellectual activity that is nothing better than idle curiosity; like the fly, its only ambition is to buzz and get into things.

THE great art in getting rich is not in saving money, but knowing how to spend it.

DON'T mistake stupidity for patience; patience is the humility of wisdom.

ANY one may commit a blunder, but no one but a fool is bit twice by the same dog.

THE man whom idleness don't lead into mischief is either a very pure or a very stupid one.

NATURE makes her own laws, but can't break one if she tries.

ECONOMY is a kind of natural wealth; it is money ever at interest.

To give so as to bestow a favor and not create an obligation is a delicate art.

THE more ideas a man has got the fewer words he takes to express them. Wise men never talk to make time; they talk to save it.

EXPERIENCE costs more than it is worth, but most people refuse to learn at any less price.

ADVICE, just at present, is the greatest drug in the market; the supply has ruined the demand.

LIES are like certain horses; they can travel farther in one day than they can get back in two.

TAKE all the fun out of this world and every pound of life would weigh ten.

YOU can buy a dog for two dollars and a half, but there isn't money enough in the world to buy the wag of his tail.

THE poor are more extravagant than the rich, and this is just what keeps them poor; for the sake of one feast they are willing to starve three days.

A SUIT of clothes that fits a man perfectly is worth more to him than a pedigree that fits him indifferently.

WISDOM without learning is like a sword without a handle, and learning without wisdom is like a handle without a sword.

REFORM!! is the battle-cry of civilization,—reform for others, immunity for ourselves.

THE ridiculous side of life goes far toward making it endurable.

A FOOL may possibly amuse others, but he can't amuse himself.

BEWARE of the man who listens much and talks little; he is getting your thunder and saving his own lightning.

A PEACOCK's pedigree is all in the spread of his tail; a wet day takes the glory out of it.

CONDENSATION is almost omnipotent, single words are autocrats, and a sentence is law for all mankind.

MEN are very vain of their opinions, and yet there is scarcely any two of them who think alike.

WHAT the world wants just now is less civilization and more of the virtues.

BEWARE of the man of a few words; he always has something in reserve.

TRUTH can travel to the end of the earth all alone, but a lie must have company to keep up its courage.

RELIGION is most excellent to mix with business, but to mix business with religion is not safe.

WE get our vices from each other, but our virtues by cultivation.

MY friend, does it pay to be a great man? You must be hated by some, feared by many, and, at best, envied by all.

LABOR will buy anything that is in the market.

PEDIGREES seldom improve by age.

VICE and virtue began life together, and will leave the world when the last man does.

WISDOM can afford to go slow; but if a fool doesn't run he is sure to get left.

THE man who is ever muttering to himself is talking to a fool.

THE man who has no superstitions loses half the pleasures of life.

HONESTY, like charity, begins at home; the man who is not honest with himself cannot be with others.

Uncle Esek.

Aphorisms from the Quarters.

DE cow-bell can't keep a secret.

DE bes' road to de yaller-jacket nes' ain't been discovered yit.

A STUDY IN FINANCE.

Fond Sister: "Why so dejected, Alan?"

Alan: "I shall never marry!"

F. S.: "Never marry! How about Alice?"

A.: "That's all off."

F. S.: "What! Is she tender no longer?"

A.: "Aw, yes; tender enough; but no money."

F. S.: "Ah! I see! The trouble is, *you desire legal tender!*"

Blanche Rosalie Leeds.

King Redwald's Altars.*

WHEN Edwin reigned in Britain,
And Redwald reigned in Kent,
The news of Christ's religion
Throughout the country went.

Edwin embraced it warmly,
Unquestioning, content.
"I will not be too hasty,"
Said the canny King of Kent.

"It may be Christ is strongest,
And the Devil safely pent;
But till I am quite certain,"
Said Redwald King of Kent,

"I'll give to neither worship
Unqualified assent.
My temple has two altars";
(Oh, canny King of Kent!)

"The foremost and the biggest
To Christ henceforth is lent;
But the small one in the corner,"
Said Redwald King of Kent,

"I'll keep burning to the Devil,
That he may see I meant
To do him no dishonor,"
Said the canny King of Kent.

Christians rule now in Britain,
And Christians rule in Kent;
And men suppose the Devil
Is dead, or safely pent:

But in some secret corner
The most of them consent
To give him one small altar,
Like Redwald King of Kent.

Helen Jackson. (H. H.)

See-saw.

WE were playing at see-saw —
'Twas thirteen years ago —
Sweet little Patience Preston,
With her brow as white as snow,
With her eyes of sunny blue,
And her curls of golden shine;
I thought her the dearest little girl,
And vowed she should be mine!

But we were only five years old,—
Love was the prize we sought,—
That I was rich and she was poor,
We never gave a thought!
But we were only five years old,
And we are eighteen now,
And she is rich and I am poor,
And when we meet — we bow!

Jennie E. T. Dowe.

* We believe that in point of fact Kent was Christian long before Northumbria, where Edwin reigned, and his king in Edwin's time was Eadbald, son of St. Ethelbert. But this does not affect the point made in the poem.—EDITOR.

A Woman's "No."

SHE had a parcel, small and round,
One lovely afternoon last summer.
I offered, as in duty bound,
To take it from her.

She thanked me, with a gracious smile,
As sweet as rosy lips could make it;
It was *so* small, 'twas not worth *while*
To let me take it.

Again I offered, as before,
Of that slight burden to relieve her.
She'd rather not—"Pray say no more!"
'Twould *really* grieve her.

I ceased to plead—she seemed content—
The thing *was* small, and neatly corded.
And so along our way we went,
To where she boarded.

But when upon the stoop she stood,
And ere our last adieus were uttered,
She eyed me in a roguish mood,
And softly muttered,

As swung the door to let her through,
And left me there all unresisting:
"I don't think very much of you
For not *insisting*."

Arthur Graham.

At the Piano.

BEFORE the ivory keys she sat
And touched the notes,—but all of that
Was much like other people at
A grand piano;
But suddenly, when all was still,
Across my heart there came a thrill,
Responsive to a mellow trill
Of soft soprano.

Then all seemed changed. The little room
Was fragrant with a faint perfume,
As if a rose-bush burst in bloom
And showed a blossom:
'Twas only one, I knew full well,—
How happily it seemed to dwell,
While first it lifted, then it fell,
Upon her bosom.

Outstretched a little was her chin,
A solitary dimple in,
Which seemed to say: "When I begin
To change and alter,
Beware! Young Cupid lurketh near!"
Alas, I did not choose to hear,
And soon my lips a timid "Dear"
Began to falter.

And on, and on, throughout that song,—
The notes now faint, now clear and strong,—
My heart grew restless, till ere long
I touched her shoulder.
The fingers from the white keys dropped,—
Down from her lips the songster hopped,
The music note by note was stopped,
And then I told her.

Frank Dempster Sherman.

Getting Round Grandmamma.

GRANDMAMMA so full of cheer,
So pink and white at seventy year,
What a charm you must have been
When grandpa used to trip it in,
And hold your hand and chuck your chin,—
"My soncy lass, my bonny dear!"

Tell me not a mind so clear
Won't carry back good fifty year;
Tell me not you've quite forgot
What laddies did and lasses thought—
The cherry lip, the dimple-spot,
With "Ho, my lass, my bonny dear!"

Grandmamma, they're facts, I fear,
The pretty stories that I hear:
Eye so blue and hair so brown,
The trimmest foot, the jimpest gown,
The pride and talk of a' the town,—
"The soncy lass, the bonny dear."

Chance a trifle deaf the ear
That's heard but praise for seventy year;
Still, a book read upside down
Should not one's senses wholly drown.
You'd better smile, you cannot frown,—
"Ha, soncy lassie, bonny dear!"

Day is over, shadows near
As was their wont back fifty year;
Grandmamma, my work is through,
And I've a secret all for you—
For you, because she'll keep it true,
Once "soncy lass," aye "bonny dear."

Scottish blood now twenty year
Has fed *my* heart, good grandma dear,
Grandmamma so pink and white,
And you'll forgie me if to-night
Somebody greets me,—some braw wight,
"My soncy lass, my bonny dear!"

John Vance Cheney.

A Lesson in Courting.

"He who would the daughter win,
Should with the mother begin."
An Old Adage.

ONCE on a time I knew a girl
With bright blue eye and golden curl;
I lov'd to linger by her side,
And wish'd to gain her for my bride.

So at it, fair and square, I went,
To try and win her ma's consent;
When with much effort this was done,
I thought the daughter fully won.

But when the girl I did address,
And try to win from her a "Yes,"
She, with a twinkle in her eye,
Coquettishly did make reply:

"When next a girl you try to win,
You should, at first, with her begin;
For while *you've* been a-courting mother,
I have learned to love another."

THE CENTURY MAGAZINE.

VOL. XXX.

OCTOBER, 1885.

No. 6.

THE GREAT RIVER OF ALASKA. II.

EXPLORING THE MIDDLE AND LOWER YUKON.

OLD Fort Selkirk forms the connecting link between the article which appeared in the September CENTURY, entitled "The Great River of Alaska," and the present paper. (See map with the former article.) The fort had been erected as a trading-post by the Hudson's Bay Company on ground the Chilkat Indians claimed as their own trading ground. The Chilkats received their trading stores from the Russian Fur Company, and, having no use for Fort Selkirk, took the Indian method of weeding out competition.

The scenery around Selkirk is fine, though hardly so grand as the high ramparts a hundred miles below. From the mouth of the Pelly, across the river, a high basaltic bluff runs down the Yukon for nearly twelve miles, and is then lost among the bold hills that crowd upon the river. Beyond this bluff lie high, rolling hills, with their green grass tops contrasting vividly with the red ochreous soil of their steep sides that the land-slides leave bare.

Selkirk was first occupied by traders who came down the Pelly from the tributaries of the Mac-rough was the way down the Pelly to Selkirk, was finally supplied by the roundabout way of lower down the river. On the site of Selkirk, not unlike a very rough attempt one, and is probably borrowed from civilization. formerly buried their dead on rude scaffolds trees, like the Indians of the great Western when adopting the burial methods of the part, they cannot abolish the ever-present ing strips of many-colored rags, surmounted nates the clan, a fish, or a goose, or a bear, thing converted into an idol. As this pole is or twenty-five feet in height, the place for selected near the foot of some healthy young ing and peeling of the bark is, in this case, the

kenzie. So that the post Fort Yukon, kirk stands an at a civilized The Ayans among the plains. Even white man, in pole, with its flaunt- by the totem that desig- or some other earthly from fifteen to twenty the grave is generally spruce. A little prun- only labor. The graves are always near the river banks, but I never noticed any number of them together. At Selkirk several Ayan Indians met us and anxiously asked us to visit their village, but a short distance below. They were a far superior race to the abject tribe we had left behind us on the Upper Yukon. A conspicuously Hebrew cast of countenance was noticeable in this tribe, and some of its younger numbers were respectably neat and

A MEDICINE-MAN.

clean compared with Indians in general. Their canoes, of birch-bark covering and fragile cedar framework, were the smallest and lightest I had ever seen, except the skin canoes of the Eskimo, and they were well made to the smallest detail.

Though the grass was almost luxuriant on the plain about Selkirk, no signs of game were seen. It seemed fair to infer that the dense swarms of the omnipresent mosquito could alone account for the absence. This pest is sufficiently formidable in the summer months to put an end to all ideas of stock-raising as a possible future industry. Shortly after noon on the 15th of July the raft was cast loose, and we started down the picturesque river. So scattering had been the Indian population on the river above Selkirk, that we were greatly surprised, on rounding the lower end of an island, to see nearly two hundred Indians drawn up across the south channel of the river. We worked at our cumbersome oars valiantly, cheered on by the wildly frantic throng, that plainly feared that we, the supposed traders, would pass. Many excited Indians came out to assist us, and placing the prows of their canoes against the outer side of the raft, paddled us furiously towards shore. Our line was run out at last, and, seized by nearly two hundred Indians, who brought us to land with a crash. Shortly after our landing the throng formed a line, from one to three deep, the men on the left and the women and children on the right, and gave us a dance,—

the same old Indian monotonous *Hi-yi-yi* with the well-measured cadence as its only musical part, and with an accompanying swaying of the body from side to side, while their long mop-like hair swung round like a magnificent mosquito-brush.

After I had distributed a few insignificant articles among them, I tried to get a photograph of some attitude that was a part of the dance, and though I am sure my object was understood by the more intelligent, I did not succeed. Often, when ready to take the cap from the camera, we were foiled by some young man starting a low *Hi-yi-yi*. In an instant it ran the whole length of the combustible line, and all were swaying like leaves in the wind. A similar attempt to get a picture of the three head men, Kon-it'l, his son the hereditary chief, and the medicine man, was almost equally futile, until I formed the center to the group. The tube of the camera had a gun-like appearance that made some of them uneasy. My willingness to sit with them was sufficient assurance of no danger. The village proved to be a much ruder affair than the improved appearance of the Indians over the natives of the Upper Yukon gave me to expect. Their houses were mere hovels of brushwood, with here and there a covering of moose-skin or a worn strip of canvas.

Though the slight character of the houses might find excuse in the fact that these were only used during the summer months, while

ALONG THE BANKS.

OLD FORT YUKON.

the inhabitants fed on the salmon that ran up the river to spawn, a closer inspection showed that the household utensils were equally rude. We found a few buckets and pans, ingeniously made of single pieces of birch-bark. We also found a few spoons made of the horn of the mountain sheep or goat, but the carvings on the handles were dismal failures compared with the elaborate work of the Indians on the Pacific coast of Alaska.

The brush houses of the Ayans seem to be constructed so as to accommodate two families, with a common ridge-pole and an aisle, open at both ends, running down between the two compartments. Possibly this style of architecture was necessary where there was no tree for the pole to rest against. In the roofs of the houses strings of salmon were hung up to dry, and the sleeping dogs held the floor below. Though little room was left, the stranger was always welcome.

In drying the salmon they split it, as packers do when salting the fish. In addition they slice the flesh to the skin in longitudinal and transverse cuts an inch apart. They prepare none for winter use, I understand, though the fish are abundant enough, but depend in that season upon moose, bear, and caribou.

In winter they live in moose-skin tents much like the circular tepees, or lodges, of the Sioux, Cheyennes, and other

INDIAN BURIAL GROUND.

Indians of the treeless plains of the West. When one reflects that winter in this region is simply polar in all its aspects, one wonders how life can hold out in such abodes. From a trader's description of the winter tents, I learn that the Indians know the non-conducting powers of a stratum of air, for these tents are made double.

Directly opposite the large Ayan village is another much smaller one, called Kowsk-hou, and a sketch of it is introduced to show the general tenor of the banks over the larger portion of the Yukon River:—great rolling bluffs, fringed with a footing of spruce, and lower down an almost impenetrable underbrush of deciduous vegetation, make a pleasant contrast in color with the more somber green of the overtopping evergreens. On low alluvial banks, especially those of the islands, this glaxis of bright green has been washed away, and the spruce, becoming undermined by the swift eroding current, form a network of ragged boughs, almost impassable to one who would reach the bank.

One may see this in temperate climes, where felled trees still cling to the washed-out roots, but along the Yukon the soil, frozen to the depth of six or eight feet, will not fall until undermined for many feet. When it does fall, it is with a crash that can be heard for miles, reverberating up and down the valley like the report of a distant cannon. The

whole bank, sinking into the shallow current, presents to one approaching its intact forest of trees, like a body of Polish lancers. Where the current is swiftest the erosion is most marked, and on the swiftest current our raft was always prone to make its onward way.

The morning of the 16th of July we took an early start to avoid much begging, and dropped westward with the current. It was hard that day to imagine, with a blistering heat on the river and thunder-showers often going over us, that we were within a few days' journey of the Arctic circle.

Shortly after one o'clock on the afternoon of the 17th we passed the mouth of the White River. Here the Yukon entirely changes its character. Heretofore a clear, bright mountain river, with now and then a lake-like widening that caught and held the little sediment it might bear, it now becomes the muddiest river on the western coast of North America, and holds this character to its mouth.

This change is caused by the White River.

The White is very swift, and is thus enabled to hold in solution the débris that the glaciers pour into its head-waters. Meeting the Yukon, its rapid current carries its silt and sediment nearly across that river, and changes the blue of the greater stream to a chalky white. All our sport with hook and line now disappeared, and we were thereafter dependent upon the nets and weirs of the Indians for our fish.

A few miles below the White a river of nearly equal size comes in from the right. This is the Stewart, or, as the Indians call it, the Nachonde. Years ago the Hudson's Bay Company had a thriving trading-post near its head-waters, but it, too, fell shortly after the fall of old Fort Selkirk. A small party of American miners had found good prospects in placer digging at the mouth of the Stewart, and were preparing their camp. They certainly deserved success. I took our old water-logged canoe, and, with a half-breed native, visited them at their camp.

Returning late in the evening, with the sun in my face and with no knowledge of the resting-place of my party, I found, in the vast spreading network of islands, no assurance of a speedy meeting. We had made an agreement on parting that the advance should burn spruce boughs at reasonable intervals, that I might have a sign on my return. Though spruce was everywhere in sight, there was that night none found on the island where the camp was made. So I had no sign. I never knew until that evening how like an ascending smoke looked the pencil-points of ridges of spruce fading into the water's edge, and tinged with the rays of the setting

sun. An occasional shout was at last rewarded with an answering cry.

We met a tribe of Indians calling themselves "Tahk-ong" on the following day. With them we found resting four of our Ayan friends, and both said that a short distance ahead we would come upon a trading-post. It was not until the following day that we drifted past the post, marked on the map as Fort Reliance, and found it deserted, to our great disappointment, for we had there hoped to obtain stores.

That evening at ten o'clock we went into camp at a point where a fine river came in from the east, with water so clear that it

ing by astronomical observations, and waited till noon. Only two rough "sights" rewarded my delay. During this time of the year the prevailing winds, I noticed, were from the south, and always brought fog or light rain, a circumstance easily explained by the theory that the winds, coming off the warm Pacific loaded with moisture, have the moisture precipitated in crossing the glacial summits of the Alaskan coast-range.

At the Indian village of Nuclaco, opposite the site of Fort Reliance, the entire population, with a large number of Indians from the Tanana River, received us with a great banging of guns. From here to the mouth of the

SWEEPERS.

tempted some of our party to get out their fishing gear again, but to no purpose. This the traders call the Deer River, from the large number of caribou that congregate in its valley during certain seasons of the year. Here lies the narrowest part of the Yukon for many hundreds of miles. Though its width here cannot be more than two hundred and fifty yards, the majestic river sweeps by with no added force or haste, showing the great depth it must have to discharge the vast volume of water that a short distance above had spread over a bed two or three miles wide.

Here I tried to "check" my dead-reckon-

river this method of welcoming strangers is universal. We made no stop, however, and the salute died suddenly out as we drifted slowly past.

The Tanana Indians, the visitors at Nuclaco that day, are said to be hostile in their own country, but on their frequent trading excursions are discreetly inclined towards peace. The river from which they take their name, the Tanana, is probably the largest unexplored river of the Western continent. Nearly two miles wide at its junction with the Yukon, it is nearly as long as the latter.

On the 20th of July we drifted a little over

AYANS PULLING THE RAFT.

fifty miles in eleven hours. This was one of the very few days that we were not aground for any appreciable length of time, and the distance traveled was great enough to establish firmly the reputation of the river as probably the swiftest stream of any magnitude in the world. We were aground but once that day, having run upon a submerged rock while the entire party was occupied in using four bears for movable but untouched targets. We came to a halt with a shock that would have dis-

jointed our craft had she been less stanch than a well-nigh solid piece. She swung safely around, however, and in three minutes was again holding her undisturbed way.

About three o'clock a most remarkable rock was seen on the east bank of the river, springing directly out of a level plain, bounded in the distance by a crescent of low hills sweeping around a huge bend in the river. It was probably three hundred feet high, and rose with perpendicular sides from the plain. On

JOHNNY'S VILLAGE, OR KLAT-OL-KLIN.

the other side of the river, directly opposite, stood another rock, the exact counterpart of the first, except that the second fades away into the bluff behind it. The Indians explain the situation by a legend which holds that the rocks were long ago man and wife, but incompatibility of temper led the husband to kick the wife out into the plain and draw the river from its bed, near the distant hills, for a perpetual barrier.

July 21st brought us to the Indian village of Klat-ol-klin, a name we found with difficulty, as even the natives call it "Johnny's village," from the Americanized name of its chief. This was the first permanent village we had seen on the river. There were but six log houses in all, abutting against each other, with their gable-ends turned towards the river. It was perched on a steep bank, so close to the crest that two could not pass between the houses and the river. At the water's edge was a perfect network of birch-bark canoes, and back of these an inclined scaffolding of spruce poles, where salmon hung drying in the sun. Here, for the first time, we found the Indians preparing any considerable number of this fish for winter use. The fish are caught with scoop-nets three or four feet long, fastened on two poles from ten to twelve feet in length. A watcher, generally a squaw, standing in front of the cabins, heralds the approach of

a fish, perhaps a half-mile down the river. Never more than one fisherman starts. Paddling out to the middle of the river, he guides his canoe with his left hand, as the voices from the shore direct, and with his right dips his net to the bottom. Upon the

FISHING ON THE YUKON.

KILLING A MOOSE IN THE WATER.

careful adjustment of this depends his success. Failures are rare. As the fish swim near the bottom, I do not understand how they are detected in the muddy water of the river.

On the 22d the soil appeared thick, black, and loamy, and grass, always good, was now becoming luxuriant, with the mosquitoes increasing in number and the country perceptibly opening. On the 23d we came to "Charley's" village, an exact duplicate of "Johnny's," even to the number of the houses and the side of the river.

The next day we camped at St. Michael's Bar, or Island. From here to Fort Yukon the country is as flat and open as the Pampas, and but five or ten feet above the level of the river. Our Indians, having never been so far, thought we were going out to sea, although we were over a thousand miles from the river's mouth.

As soon as this flat country is entered the channel splits and subdivides every few

miles, until for days we could not tell whether we were on the main stream or on one of the many waterways between the many islands. At Fort Yukon the river is said to be seven miles wide. In spite of the many channels into which the river spreads, the current never decreases, and we went drifting on in the same good old way until Fort Yukon was reached.

At this point, one thousand miles from the river's mouth and about the same distance from its head, the river sweeps with a marked curve into the arctic regions, and then, with less enthusiasm than most polar seekers, turns back into the temperate zone, having been in the arctic for less than a league, and, as the current runs, for less than an hour. The early traders at Fort Yukon supposed their river ran parallel to the Mackenzie; and so it was mapped, its bed being continued north to where its hypothetical waters were poured into the Arctic Sea. The conservative slowness of the English to undo what the English have done

had a new illustration as late as 1883, when one of the best of English globe-makers, in a work of art in his line, sent the Yukon with its mighty but unnamed tributaries still into the Arctic. There it will be made to flow until some Englishman shows that it surely flows elsewhere.

For a hundred miles above and two hundred miles below Fort Yukon, the river flows through a region so flat that it seems like the floor of an emptied lake. This area is densely timbered with spruce, and but for this would be nothing but a salient angle of the great flat arctic tundra of the polar coast. The dreariness of unlimited expanse is broken to the northward by the pale-blue outline of the Romantzoff Mountains, so indistinct as to seem a mirage; while to the south arise, in isolated points, the Ratzel Peaks, the outlying spurs of the Alaskan Range, from the Upper Ramparts of which the Yukon flows towards the Lower. Fort Yukon was left behind on the 29th of July, our raft that day drifting by a village where nothing greeted us but a howling troop of dogs. This village would have attracted no attention further up the river, but here, where the river divides itself in many channels, making salmon-catching of but slight importance, villages are very rare.

The 29th was a hot, sweltering day, with the sun and its thousand reflections sending their blistering heat into our faces. In fact, our greatest inconvenience near this short arctic strip of the stream was the tropical heat and the dense swarms of gnats and mosquitoes that met us everywhere when we approached the land. That night none of the party could sleep, despite the mosquito-bars over us. Mosquitoes do not depend for their numbers so much on their latitude as on the superficial extent of stagnant water in which they can breed, and nowhere is this so abundant as in the tundras and timber-flats of the polar coasts. The intense cold of winter sinks its shafts of ice deep into the damp earth, converting it into a thick crust of impervious stone. However warm the short summers may appear to one who judges it from the acclimated standpoint of a rigorous country, it is insufficient to melt more than a superficial portion of this boreal blanket, where only a swampy carpet of moss may flourish upon the frozen stratum below. Through this the stagnant water cannot sink. As the weather is never warm enough to carry it off by evaporation, these marshes extend far and wide, even up the sides of the hills, and give the mosquito ample room to propagate.

We took an early start the next morning, and drifted down the hot river, by low banks that needed nothing but a few breech-clouted

negroes to convince us that we were on the Congo. Between six and eight in the evening the thermometer stood about eighty degrees Fahrenheit in the shade, with shade for nothing but the thermometer. Hoisting one of the spare tents for a protection from the sun would have prevented the helmsman from seeing his course and made grounding almost certain, and heat was to be preferred to this, with its attendant labors.

Singularly enough, at this very time a couple of sun-dogs put in an appearance, a phenomenon we usually associate with cold weather, and now sadly out of place. Rain made sleep possible that night and traveling impossible the next day, and left us nothing to do but to sit in the tent and watch nature waste itself in a rainfall of four inches over a vast marsh already six inches deep. Some of our party, wandering over the gravel-bars, through the showers, found the scattered petrified remains of a huge mastodon. All through the valley such remains are numerous.

On the evening of the 2d of August we came in sight of the high hills where the "Lower Ramparts" begin. So closely do the ramparts of the lower river resemble those of the upper that I could not help thinking them parts of the same range, which bears eastward and westward like a bow-string across the great arc of the Yukon, bending northward into the flat arctic tundra.

Near our camp that night we saw the only family burial-ground we had seen on the river. It contained a dozen graves, perhaps, and was decorated with the usual totems perched on high poles, some of which were fantastically striped in the few simple colors the Indians had at their command.

A gale of wind on the 4th allowed us to drift but twenty-six miles. From here to the mouth of the river strong head-winds are generally raging at this season of the year. On both sides of the river, from this point, the small tributary creeks and rivers bear down clear, transparent water, though deeply colored with a port-wine hue. The streams drain the water from the turfy tundra where the dyes from decaying leaves impart their color. Probably iron-salts are also present.

On the 5th we approached the rapids of the Lower Ramparts, and made all preparations for their stormy passage. Making hasty inquiries at an Indian village concerning them, we found that we had already left them behind us. This part of the river was picturesque, and not unlike the Hudson at West Point. I should have stopped to take some photographs but for the dark lowering clouds and constantly-recurring rain-squalls.

Eighteen miles below the mouth of the

ANVICK INDIANS.

Tanana, we found the trading station of Nuklakayet. Here our raft-journey of over thirteen hundred miles came to an end, the longest of its kind in the interest of exploration. As we dragged the raft upon the bank and left it there to burn out its existence as firewood, we felt that we were parting from a true and trusty friend.

We met our first Eskimo dogs here, a finer and larger race than those I had seen farther to the east. They seemed a distinct type of dog in their likeness to each other, and not the vagabond mass of variable mongrels of all sizes and conditions that my previous knowledge of cold-weather canines had led me to consider them.

At Nuklakayet we were furnished with a small decked schooner of eight or ten tons, called, in the rough Russian vernacular of the country, a "barka." It was said to be the fleetest "barka" on the river, when the sails were spread in a good wind. We had good wind in abundance, but there were no sails, so the current was again our motive power. There was, indeed, a palsied jib that we could tie up when the wind was just right, but the wind rarely made its use possible. We got away from Nuklakayet on the 8th, and drifted down the river till camping-time. Then we found that the "barka" drew so much water that we could not get within thirty or forty yards of shore, and were obliged to bring our rubber boots into use.

All the next day we had a heavy head-wind and made but eight miles, our craft standing so high out of water that at times she actually went up-stream against a three-mile current. At night, however, these daily gales fell and left us a prey to the swarms of mosquitoes. All day the 10th we passed Indian villages, with their networks of fish-weirs spread on the river. We passed, too, the mouth of the Newicargut, or Frog River. On this part of the Yukon we pass, in succession, the Sooncargut, Melozicargut, and Tosecargut, which the traders have simplified into Sunday-cargut, Monday-cargut, and Tuesday-cargut, *cargut* being a local Indian termination meaning river or stream. The Newicargut marks the point where explorers from the upper river connected with those of the lower, and established the identity of the Pelly of the English and the Kwichpak of the Russians. Since then the river has been known as the Yukon, the Russian name disappearing, and the name Pelly becoming restricted to the tributary that flows into the Yukon opposite Selkirk.

Near the Indian village of Sakadelontin we saw a number of coffins perched in trees. This was the first time we had seen this method of burial on the river. In all the Indian villages on this part of the river we found the number of women greatly in excess of the men, for at this season all the able-bodied hunters were inland on the tundra north of the river hunting for their winter stock of reindeer clothing and

bedding. The Russian or local name for the reindeer coat is "parka," and here we saw the first one made from the spotted or tame reindeer of the native tribes of eastern Siberia. The spottings are great brownish-red and white blotches like those on a "calico" pony. A generous offer to the owner of this particular "parka" was immediately and scornfully refused.

Facing the usual gale, we drifted slowly down the river to Kaltag, where the south bank becomes a simple flat plateau, though the north bank is high and even mountainous for more than four hundred miles farther.

It seemed not improbable that this had been the Yukon's ancient mouth, when the river flowed over all the flat plain down to the sea. Certainly the deposit from the river is now filling in the eastern shores of Bering's Sea. Navigators about the coast say it is dangerous for vessels of any considerable draught to sail within fifty or a hundred miles of land near the Yukon's mouth, and every storm lashes the sea into a muddy froth.

We amused ourselves, late in the evening of the 18th, by drifting far into the dark hours of the night in search of a fair place for a camp, but without avail. Two days later it blew so hard that we could not think of stirring, but lay at our moorings in momentary danger of shipwreck. Anvic, a picturesque little trading-post, was reached on the 22d. The trading-posts become more numerous now, but just beyond Anvic the last Indian village is passed, and forty miles below the Eskimo villages begin.

Myriads of geese were now seen everywhere, mobilizing for the autumn journey to the south. We had a further token of coming autumn on the morning of the 24th, when we found the high grass white with frost, and we were told by the trader at Anvic that ice would sometimes be thick by the 1st of Sep-

tember. The little trading-steamer came down the river the same day, and taking us in tow, brought us down to a mission where an old Greek church of the Russian Company still draws subsidies from Russia. The following day we reached an Eskimo village, and slept for the first time since spring under a roof. Andreavsky was made the next day, where the hills were plainly lowering. The spruce and poplar disappeared now, and low willows took their place, though plenty of wood still abounded in immense drifts on the upstream ends of the numerous islands. Near Andreavsky begins the delta of the Yukon, with its interminable number of channels and islands.

We reached Koatlik, at the mouth of the river, on the 28th, and came to St. Michaels on the afternoon of the 30th, meeting our old acquaintance, the southern gale, outside. We had hoped to take sail on the revenue cutter *Corwin*, but she had been gone already two weeks, and we were forced to turn our hopes to the schooner *Leo*.

It was not until the 8th of September that the *Leo* hove in sight, bearing down upon St. Michaels in a gale of wind. She had on board Lieutenant Ray's party from the international meteorological station at Point Barrow, and, although overcrowded already, we were kindly made welcome. The *Leo* was in a bad way, having "stove in" her bow against the ice while trying to make Point Barrow, and a few doubts were expressed as to her seaworthiness in the choppy seas of the autumn. We got under way on the 11th, however, and, once out of Norton Sound, made a quick passage across to Oonalaska in the Aleutian Islands. Here the *Leo* was beached and repaired. We had grown tired of long strolls and trout-fishing in the mountain-streams at Oonalaska, and were glad at last to take ship and bear away from the last foothold on Alaska.

Frederick Schwatka.

A STUDY IN INDEPENDENT JOURNALISM.

THE present year and its predecessor have witnessed a striking development of political independence in the newspaper press. There have been other periods when independence was in fashion, which have been followed by a return to strong partisanship; but on the whole, it can scarcely be doubted, the movement of the better portion of the press is toward independence.

The time may come when such an attitude will be taken as a matter of course, and the term "independent journalism" will be like "an impartial judiciary"—the partisan journal being considered as abnormal as a partial judge. The advance of morals is marked by the ceasing to regard certain virtues as exceptionally meritorious. It was counted a fine eulogy two or three centuries ago to say of a certain English family that "all the sons were brave and all the daughters virtuous." In our day, to say that the women of an English or American family are virtuous is not reckoned as high praise; it is only what is expected.

The phrase "independent journalism" came into fashion during the Greeley campaign, but an independent newspaper in the highest sense was no new thing under the sun in 1872. It had been the ideal of the London "Times" for the better part of a century. Political independence, with some limitations, had characterized the best representatives of the new school of American journalism, which had begun to flourish before 1850. But the successive phases of the great conflict between slavery and its opponents kept politics at a high tension,—men and newspapers were driven to take definitely one side or the other in the controversy; and the breaking of party ties by great journals in 1872 was a sign that the old quarrel was almost over, and the peaceful virtues of moderation, fairness and love of truth were more demanded than passionate devotion to a struggling cause.

It is designed here to set forth a little of the early history of one newspaper; to show something of how its maker's ideal shaped itself, and how that ideal became embodied in reality. "Sam Bowles," as everybody called the editor of the Springfield "Republican," came of New England stock. His father established the "Republican" as a weekly paper in 1824, two years before the birth of the son who was to make it famous. The boy showed no special promise; he was faithful to his tasks, fond of reading, but as a student

rather slow, with not much physical vigor, and with little to point at his future career, unless a strong liking for his own way was a presage of the masterful will that was to carry him through toils and combats. He went to school until he was sixteen and then entered his father's office, and two years later persuaded him to make the "Republican" a daily paper. From that time the son carried the chief burden of it.

Of the period in which his work began Mr. Bowles wrote in the "Independent" thirty years later:

"American journalism was undergoing the greatest transformation and experiencing the deepest inspiration of its whole history. The telegraph and the Mexican war came in together; and the years '46-51 were the years of most marked growth known to America. It was something more than progress, it was revolution. Then the old 'Sun' was in its best estate; then Mr. Bennett was in the prime of his vigorous intellect, and his enterprise and independence were at the height of their audacity. He had as first lieutenant Mr. Frederic Hudson, the best organizer of a mere *newspaper* America has ever seen. Then Mr. Greeley and Mr. Dana were harmoniously and vigorously giving the 'Tribune' that scope of treatment and that intellectual depth and breadth which have never departed wholly from it, and which are perhaps the greatest gifts that any single journal has made to the journalism of the country. Then Mr. Raymond commenced the 'Times' and won for it at once a prominent place among its rivals. And then began that horde of provincial daily journals, springing up like mushrooms all over the land. Hardly a town of ten thousand inhabitants but that essayed its diurnal issue in those fertile years."

It was in this field of provincial journalism that Mr. Bowles's work was done. Of the old-fashioned country newspaper he once wrote:

"News had grown old when it was published. The paper did the work of the chronicler or annalist merely, and was the historian of the past rather than a spectator and actor in the present. It was not upon the printed column that the events of the day struck the heart of the living age, and drew from it its sparks of fire. In those times that place of contact was found in the personal intercourse of men. News ran then along the street, from mouth to mouth; the gossiping neighbor carried it; the post-rider brought it into the groups gathered at the village store. By and by came the heavy gazette, not to make its impression but to record the fact. . . . The journalism was yet to be created that should stand firmly in the possession of powers of its own; that should be concerned with the passing and not with the past; that should perfectly reflect its age, and yet should be itself no mere reflection; that should control what it seemed only to transcribe and narrate; that should teach without assuming the manners of an instructor, and should command the coming times with a voice that had still no sound but its echo of the present."

The editorial work on the daily was done by the younger Bowles, at first jointly with

his father, then with one temporary assistant after another, until Dr. J. G. Holland became his colleague in 1849. He remained in the office of the paper until 1857, and was a constant contributor to its columns until 1864. At the start Bowles's qualifications for his work were unflagging industry, an observant eye, and a stout will. He had at first little facility or power as a writer, and he did not aspire to special success in that direction. He expected to devote himself to the general conduct of the paper, while other men should wield the editorial thunder. But he was a good reporter. He could see what was before him and tell it in a plain story. He began by assiduously picking up the crumbs of village news. The townspeople began to look in his paper for a little daily history of their community. He took always a keen interest in politics; and when he was twenty-two years old he was writing editorials in advocacy of General Taylor for the presidency as against his rivals, Cass and Van Buren. The "Republican" in its early politics was stanchly Whig, and was largely influenced by George Ashmun, one of the most brilliant of Webster's followers in Massachusetts, who sacrificed his half-completed career when his great chief fell.

The accession of Dr. Holland to the "Republican" was an important event in its history. He and Mr. Bowles supplemented each other. Mr. Bowles was a born journalist, and showed early an instinct for news, an aptitude for politics, and a skill in administration. Dr. Holland, who was seven years his senior, came to the paper equipped with more of literary culture and taste, and was always a writer rather than an editor. He was strong in his convictions, warm in his feelings, sensitive to the moral element in any question, and the master of a forcible, lucid, and popular style. His interest lay not so much in politics as in the personal conduct of life, and social usages and institutions. His editorials in the "Republican" were one of the earliest signs that the newspaper press was beginning to exercise, along with its other functions, that of direct moral instruction, which had hitherto been almost a monopoly of the church. Many of his articles were short and pithy lay sermons. They dealt directly with morals and religion, in their practical rather than theological applications. They discussed such topics as the mutual duties of husbands and wives, of laborers and employers; the principles of conduct for young men and young women, and the like. This was an innovation in journalism. It found favor among a community which takes life seriously and earnestly. It signified in truth an expansion of the newspaper's possibilities, which has as yet only

begun to be worked out. Dr. Holland was admirably qualified for a pioneer in this kind of work. He was so far in sympathy with the established churches and the accepted theology that he reached and held a wide constituency; while he was little trammelled by theological or ecclesiastical technicalities. He was quite as impatient as Mr. Bowles of any assumption of authority by a party or a church, and the "Republican" early showed an independence of the clergy, and a willingness to criticise them on occasion, which often drew wrath upon its head. But its attitude toward the churches and the religion they represented, though an independent was also a friendly one. In general, Dr. Holland added to the paper a higher literary tone and a broader recognition of human interests. The paper's growth was won by unsparing labor, by close economy, by making the utmost of each day, yet looking always toward the future. Dr. Holland, just after Mr. Bowles's death, wrote as follows:

"As I think of my old associate and the earnest exhausting work he was doing when I was with him, he seems to me like a great golden vessel, rich in color and roughly embossed, filled with the elixir of life, which he poured out without the slightest stint for the consumption of this people. This vessel was only full at the first and it was never replenished. It was filled for an expenditure of fifty or sixty years, but he kept the stream so large that the precious contents were all decanted at thirty. The sparkle, the vivacity, the drive, the power of the 'Republican,' as I knew it in the early days, the fresh and ever eager interest with which it was every morning received by the people of Springfield and the Connecticut Valley, the superiority of the paper to other papers of its class, its ever widening influence—all these cost life. We did not know when we tasted it and found it so charged with zest that we were tasting heart's blood, but that was the priceless element that commended it to our appetites. A pale man, weary and nervous, crept home at midnight, or at one, two, or three o'clock in the morning, and while all nature was fresh and the birds were singing, and thousands of eyes were bending eagerly over the results of his night's labor, he was tossing and trying to sleep. Yet this work, so terrible in its exactions and its consequences, was the joy of this man's life—it *was* this man's life; and as the best exponent of this kind of devotion to an idea and a life-work I have ever known, I give its memory most affectionate reverence."

He was spending his life-blood, but he got a great price for it. He knew what he was doing; at least he thought he did. When a friend once remonstrated with him about his over-work, he answered: "I know it just as well as you do. When my friends point out that I am working toward a break-down, they seem to think that is to influence my action. Not at all! I have got the lines drawn, the current flowing, and by throwing my weight here now, I can count for something. If I make a long break or parenthesis to get strong, I shall lose my chance. No man is living a

life that is worth living, unless he is willing if need be to die for somebody or something,—at least to *die a little!*”

The faculty in which he first showed eminence was skill in gathering news. Said Mr. Bryan, who was added to the paper's force in 1852: “He and I would go into a little restaurant on Sanford street, and one and another would drop in and exchange a few words, and while we were eating our lunch he would pick up half a column of news.” Said a friend in a neighboring town: “I would meet him on the street, we would chat a few minutes about the events of the day, and next morning I would find in the paper everything I had told him.” In the political conventions which he attended and reported, he was in his native element. He button-holed everybody, and offended nobody; found out the designs of every clique, the doings of every secret caucus, got at the plans of the leaders, the temper of the crowd, *sensed* the whole situation; and the next morning's “Republican” gave a better idea of the convention to those who had staid at home than many of its participants had gained. These reporting expeditions were full of education to him. His mode of growth was by absorption. Other people were to him sponges out of which he deftly squeezed whatever knowledge they could yield.

It was during these years that he established the system of requiring advance payments from subscribers. A few of the great city papers had led the way in this innovation, which was introduced by the New York “Herald” in 1835, but it was so contrary to the tradition of provincial journalism that many predicted utter discomfiture for the rash experiment. But it succeeded. It was a great step to a firmer business footing; and it was also a sign of the new attitude which newspapers were taking in the community. The old-time journal was very deferential to its subscribers and advertisers. It spoke of them as its “patrons.” It was ready to praise the wares which they advertised, and to give all manner of friendly notices and puffs. It was patient, though sometimes plaintive, toward their delay in making payment. The possible message, “Stop my paper,” hung over the editor's head, keeping him docile and respectful. All this was swiftly changing. The newspaper, strengthened by railroad and telegraph, was becoming so strong that it needed not to ask favors or depend on them. The “Republican” took the lead among provincial papers in this independent attitude, of which the advance-payment system was the commercial sign. It had never a master, either among the political chiefs or in the classes with whom its business interests lay.

It depended on their support for its existence; but the editor won that support by making it for their interest to subscribe for his paper and to advertise in it.

The great achievement of Samuel Bowles was that he built up under the limitations of a country town a paying newspaper of national reputation and influence, which expressed the editor's personal opinions, bound by no party, by no school, by no clique. From its early years the paper avowed its opinions and made its criticisms with a freedom that provoked frequent and often emphatic dissent among its readers. The nature of its field made this independence hard to maintain. A great city offers an immense and various constituency, and a paper which can make itself readable to some one large class can afford to ignore even a wide and weighty disapprobation from other classes. But the “Republican” was in a small community; it could reach, at most, only a circle of country towns; the utmost number who would take a daily paper was limited; and the paper could ill afford to drive off subscribers, or incline them toward the local rivals which from time to time disputed the ground with it. Besides, a provincial neighborhood is full of strong prejudices. It has its heroes who must not be lightly spoken of; its traditional code of manners and morals which must be deferred to. There is still a deal of very stiff stuff in the descendants of the Puritans, but the community thirty years ago was far more provincial, more conservative, more set in its preferences and prejudices than it is to-day. The environment was by no means favorable to the outspoken independence which was a growing trait of the “Republican.” The editor conquered his environment. He did it by making so good a newspaper that the people had to buy it. By industry and skill he won the opportunity for independence.

There grew up in Mr. Bowles's mind an ideal of “journalism,”—a combination of principles, methods, and instincts, based partly on ethics, partly on expediency. With him, to say a thing was or was not “good journalism” was to put the final seal upon its character. It belonged to good journalism, in his idea, to tell all the news, and as a part of this to give every side a fair hearing. His opponents and critics could always find place for their articles, under reasonable conditions, in his paper. But it also belonged to his ideal of journalism that a paper should as seldom as possible own itself in the wrong. Accordingly, if a man wrote to him in correction of a statement, or in defense against criticism, he generally found his letter printed, but with some editorial comment that gave

the last word tellingly against him. It was commonly said that to seek redress from the "Republican" did more harm than good. This trait was partly due to deliberate unwillingness to weaken the paper's authority by admission of error. But it was probably more due to a personal idiosyncrasy. In many ways a most generous man, Mr. Bowles always hated to admit that he had been in the wrong. Sometimes he did it — not often — in private life; but in his paper never, when he could help it. "We sometimes discussed this," said Dr. Holland, "and he once said: 'I sympathize with the Boston editor, to whom a man came with the complaint, "Your paper says that I hanged myself, and I want you to take it back." "No," said the editor, "we're not in the habit of doing that, but we will say that the rope broke and you escaped!"'"

But it must be said that this fault lies at the door of a good many papers besides the "Republican." It is a characteristic sin of journalism — one of the vices of irresponsible power. The English press is assumed to be far more fair and decorous than the American; but Trollope, that faithful photographer of English manners, characterizes the "Times" in this same respect. "Write to the 'Jupiter,'" counsels Bishop Grantley to the aggrieved Mr. Harding who has been misrepresented by that paper. "Yes," says the more worldly-wise Archdeacon, "yes, and be smothered with ridicule; tossed over and over again with scorn; shaken this way and that, as a rat in the grip of a practiced terrier. A man may have the best of causes, the best of talents, and the best of tempers; he may write as well as Addison or as strongly as Junius; but even with all this he cannot successfully answer when attacked by the 'Jupiter.' Answer such an article! No, Warden; whatever you do, don't do that."

The vital principle of independent journalism, as Mr. Bowles understood it, was illustrated by an incident which occurred in 1856. While Mr. Bowles was out of town a prize-fight was attempted in Springfield, and among those who gathered to witness it were some young men of good social standing, belonging to families with whom he was in friendly relations. Dr. Holland treated the incident in a very sharp article, as an instance of the coarse immoralities in which the rapidly growing town was beginning to imitate the worst features of the great cities. The article stated that the matter would come up in the police court, and those who had been concerned in it might expect full publicity to be given to their conduct. Before the trial Mr. Bowles returned to town. In the evening, sitting on the door-step, his wife said to him, "Can't

you let this thing drop? If you publish these young men's names it will wound and alienate a great many of our friends." He answered, "Mary, I have considered it all, most thoughtfully and conscientiously. The blame must be given where it is deserved. This is the time to put an end to prize-fighting in Springfield." The trial was fully reported in the "Republican," including the names of those who as attendants at the prize-fight were called as witnesses; and the paper commented in a few vigorous words on their presence at such a scene. Personal alienations did follow, painful and not soon healed. But there never was another prize-fight in Springfield. In this and similar cases the morals of the town were vastly the gainer by the unsparing publicity given to the misdeeds of men who had reputations to suffer. Just as the introduction of street-lights into cities did more to stop nocturnal crime than constables and courts could do, so by its reports of wrong-doing has the modern newspaper added a new safeguard to social morality. To exercise that great function as free from fear or favor as the judge on the bench was the aim of the "Republican." Its editor liked to make his power felt,— he liked to use it for the public good,—but the personal alienations which it brought were none the less painful to him.

The limitation on the moral power of politician or journalist is that in order to lead he must in a degree conform. In a democracy no kind of leadership is free from that necessity, save that of the pure idealist—the poet or the prophet. Over all but him conformity lays its heavy hand. But under the sharpest rein of all does it hold the man who makes it his business to take active part in government. Agreement with the majority is the inexorable price of his personal success. As often as election-day comes round he must have the approval of a majority of his constituency or be thrown out of his work. The journalist's necessity, on the other hand, is to make a paper that men will buy. One way to that end is to express sentiments agreeable to its readers,—to soothe them with assent and approval. Another way is to make a newspaper so attractive by its general merits that men will buy it even though they dissent from its doctrines. That was the path which Mr. Bowles chose for the "Republican."

Not till near the end of his life was the paper confronted with the severe test of directly opposing, in a presidential campaign, the party to which the mass of its readers belonged. But at a much earlier stage it committed itself to the then novel position of criticising with entire freedom the special measures and the individual leaders of the

party to which it gave a general support; its theory of independent journalism was as clearly avowed, as sincerely followed, in 1856 as in 1872. The difference was that until the later date the editor's political convictions differed from the mass of his constituents only as to occasional and subordinate issues. But the old theory of party allegiance — a theory still substantially practiced in this year of grace 1885 by a large majority of American journals — is that the individual or the newspaper shall support the party, as the patriot stands by his country or the believer by his church. Interior discussion, guarded criticism, are allowable, but are always to be subordinated to the prime object of victory over the foreign foe, the heretic or the opposing faction. The approved temper toward the party is to

“Be to its faults a little blind,
Be to its virtues very kind.”

The “Republican,” after it began its existence as a daily, was never extreme in its partisanship; but for its first decade it virtually owed allegiance to the Whig party.

Its declaration of independence was made in February, 1855. In the previous year, when the repeal of the Missouri Compromise roused the North for the first time to a general resistance to the extension of slavery, the “Republican” had vainly pleaded with the Whig leaders in the State to merge that organization in a new party devoted to freedom. It had given a lukewarm support to the Whig nominees, the Republican organization being at that time abortive, and the proscriptive Know-nothing movement sweeping to a sudden and brief success. After the election the paper devoted itself with fresh energy to building up a genuine Republican party, but at the same time it asserted its freedom thenceforth from all partisan trammels. It took occasion on the enlargement of its sheet to review its own history; and after mentioning the general improvement in journalism dating from the era of the telegraph, it continued:

“With the dawn of a new national growth upon the press of America, at the period of which we speak, came also a more perfect intellectual freedom from the shackles of party. The independent press of the country is fast supplanting the merely partisan press. Parties are taking their form and substance from the press and pulpit, rather than the press and pulpit echoing merely the voice of the party. A merely party organ is now a thing despised and contemned, and can never take rank as a first-class public journal. The London ‘Times,’ the great journal of the world, is the creator, not the creature of parties. There is not in New York, where journalism in this country has reached its highest material and intellectual perfection, a single party organ in existence. All are emancipated. None conceal facts lest they injure their party. None fear to speak the truth lest they utter treason against merely partisan power. The true purpose of the press is understood and practiced upon.

They are the mirrors of the world of fact and of thought. Upon that fact do they comment with freedom, and to that thought do they add its freshest and most earnest cumulations.

“Such in its sphere does the ‘Republican’ aim to be. Whatever it has been in the past, no more shall its distinction be that of a partisan organ, blindly following the will of party, and stupidly obeying its behests. It has its principles and purposes. But these are above mere party success. To these it will devote itself. Whenever and wherever the success of men or of parties can advance those principles and purposes, the ‘Republican’ will boldly advocate such success; whenever men and parties are stumbling blocks to the triumph of those principles, they will be as boldly opposed and denounced.”

To one who knows the character of the New York press, and the American press in general, during most of the thirty years since this was written, this description of its impartial character reads like a sarcasm. The era of journalistic independence was as brief as that of the disintegration of parties. When the new lines had been drawn the newspapers fell into place on one side or the other, — not upon the whole with the old subservience, yet with a degree of partisan fidelity which grew with the growth of party discipline as the Republican party matured and the Democratic party recovered from its successive disruptions; so that in 1872 “independent journalism” was greeted by the general public as a new phenomenon. There were, of course, exceptions among the press, to trace which would belong to a general history of journalism. But through the intervening period, whether heartily favoring or criticising or opposing the general course of the Republican party, Mr. Bowles's paper never hesitated to pronounce a frank, independent judgment on the measures and men of that party and of all parties. Its political news was honest. Its readers could always find the views of its opponents fairly quoted and ungarbled. Its regular correspondents at Washington and elsewhere were always under instructions to give the facts as they were, whether they suited the editorial views or not. In the correspondents' galleries in the Capitol one may sometimes hear such remarks as this: “The situation looks to me so and so — but the old man at home will not let me say so in my dispatches.” The “Republican” correspondents had no occasion to say that. They were chosen with due regard to their general agreement with the paper's views, but the instructions given them were to tell the truth. They were allowed, too, to tell it largely from the stand-point of their personal convictions. It was often the case that the paper's own Washington dispatches were considerably more radical in their tone than the editorial columns; while the biting criticisms of “Warrington,” the

Boston correspondent, fell often on the measures and men that the "Republican" editorially approved.

To trace even in outline the relation of the "Republican" to the political events of the period in which its chief's life fell, is foreign to the scope of this article. It is designed here only to show the broad ideas out of which were developed the principle and the practice of independent journalism. An instance has been given of the application of that principle to politics, but it has a far wider application than to questions of civil government. Something further may be added on the spirit in which Mr. Bowles dealt with a subject as to which a courageous and wise independence is quite as essential as in politics, and even more difficult for the American journalist.

Nothing was more characteristic of the "Republican" than its attitude toward the churches and the questions connected with them. The half-century of Mr. Bowles's life witnessed immense changes in the social life of the Connecticut Valley. The multiplying of interests, the new forms of industry, the quickening of pace, the widened range of thought, the change in the whole aspect of the community were such as volumes could not describe. The church organizations necessarily partook of the general changes; but, as is generally the case with religious institutions, they showed a tenacity and conservatism beyond most other departments of social life. They continued to include in their membership a preponderance of the social respectability, the intelligence, and the virtue of the community. In their formal creeds there was little change; but their preaching showed a growing indisposition to emphasize the harsher elements of the old creed, and a growing insistence on ethical rather than dogmatic themes. The thought and research which within that period had unsettled the foundations of the ancient creed of Christendom were, of course, felt throughout the intelligent part of the community—or rather through the whole community; no social stratum has any longer a belief or a doubt peculiar to itself. But whatever of radical doubt or dissent existed lay largely beneath the surface. The ministry were as a body very conservative of the substance and most of the form of the ancient faith. Of the earnest and sober-minded laity, a larger proportion held more or less closely to the same faith, which offered an assurance of human salvation, of God, of immortality, while no equally clear and authoritative utterance seemed to come from any other quarter. The churches fostered an atmosphere throughout the community which made open dissent unpleasant for most men who

wished to live on good terms with their neighbors. They assumed to offer the only way to a right life in this world, and to something better beyond this world. Those who did not in their hearts admit the assumption, seldom cared to openly deny, still less to defy it.

The "Republican" acquiesced neither openly nor tacitly in the churches' assumption of an infallible way of salvation; but it neither made war upon the churches nor ignored them. It always assumed that they were a great and useful instrumentality in improving the community. It recognized them as associations for helping men in right living. It discussed their practical methods as freely as it discussed questions of politics. It did not discuss the dogmas of theology, just as it did not discuss the fundamental principles of philosophy or of science. Not even the broad realm of the daily newspaper includes the settlement of the ultimate principles of special departments of thought. But, just as the "Republican" reported as a matter of news the progress of opinion among scientists concerning Darwinism or among philosophers concerning evolution, so it took note of the theological movements and controversies. Whenever questions of church administration had a direct bearing on the practical interests of the community, the paper not only reported them as news, but took part in the debate as an advocate. A contributor once offered an editorial in regard to the ostracism of the Liberal sects by the Orthodox; the form of expression being, "The world, looking on at the conduct of the church which seeks to convert it, is inclined in a friendly way to suggest, etc." Mr. Bowles sent back the article with the answer: "There is a fault of construction in your article for the 'Republican.' We have always discussed these questions as insiders, and not as outsiders. I have no idea of giving up the churches to the ministers and deacons." As to all questions of dogma, the "Republican's" habitual ground was not that some particular doctrine was true or false, but that all doctrine should be held and used with reference to the moral advancement of men; that no question of intellectual belief should stand in the way of anything which could make men stronger, sweeter, more useful to the community. Its independence of creeds was distasteful to the professional guardians of orthodoxy; its free criticism of churches and ministers often drew on it the wrath, not only of the immediate object of criticism, but of the ecclesiastical body in general, sensitive at seeing its dignitaries so summarily dealt with. Yet the paper had nowhere warmer friends than among the most intelligent and earnest of the clergy, orthodox as well as

liberal. It was in strong sympathy with the most vital elements in church life. It appealed to the clergy as the natural leaders of moral reforms. It was unfriendly to destructive methods in theology and religion. Its principles were just those on which the American churches have found their best growth depends,—the exaltation of spiritual life above dogma and ritual; the widening of fellowship beyond the limits of sect, to “the blessed company of all faithful people”; the conception of religion not as a particular set of opinions but as the spirit of duty, love, and faith. The church as an institution is saved by the men who reform it.

As to Mr. Bowles's ideas of the church and of the newspaper, a few sentences may be borrowed from a private letter in 1861 to Dr. Frederick D. Huntington, with whom the “Republican” had had some controversy, and who was a personal friend of the editor.

“The ‘Republican’ has assumed a ground to which you hardly do justice. It is greater than the practice or position of its Editors — higher than denominations or sects, as life is greater than thought, practice than profession, Christianity than theology, piety than prayer. It seems to me to stand above the strife of sects, above the ‘bandying of phrases,’ and to reach to the truest and purest ideas of the Divine purpose. . . . We are content to say [of the various Christian denominations], they are all alike — to put them in one great plan, or scheme, each having excellences, each defects, each having its field, its work, its mission, and all seeking the glory of God and the purification and elevation of men.

“Individually, each of us may have our choice and preference; but is not the idea of the journal worthy of respect? . . . It would be presumption in me to pretend to discuss theology as thoroughly as politics, but I have made no such pretense. The ‘Republican’ has, and has the right to, because it can command and does command talent and learning equally in both sciences. It has on its regular editorial staff one man* as learned in all the dry and disgusting lore of the theological schools as ninety-nine out of one hundred clergymen, and another whose fervor and unction as a lay preacher are hardly less than the rector of Emanuel's himself † in the pulpit. Pray make the distinction. . . .

“The ‘Republican's’ sympathies and its hopes are in the right direction. In the quick judgments and rough, direct diction of daily journalism, it must assuredly often mistake, often wound; and wanton doubtless is it in its freedom of utterance; but I know that its heart is right and that you and such as you ought never long or seriously have reason to complain of it. I shall send you the ‘Republican,’ for I wish you to see that its pretensions to being a religious, as well as a political paper — ‘to discuss religious questions’ (not theology purely or mainly) ‘and distribute religious intelligence’ — these being our words, — are not mere pretensions. Our idea of a public journal covers all life — life in its deepest and highest significance, as well as the superficialities of food and raiment, business and government.”

One quotation may here be given from the “Republican's” later utterances as illustrating the spirit in which it treated religious

subjects. It is from an editorial of December 3, 1874, on “John Stuart Mill as a theologian”; the occasion being the publication of his posthumous essays. The article does not bear the mark of Mr. Bowles's hand, but is in full harmony with the larger personality of the “Republican” itself.

“The misconception which runs through the two essays of Mill on ‘The Utility of Religion’ and on ‘Theism’ is indeed that which lies at the bottom of the whole utilitarian philosophy; namely, that the human soul acts only or chiefly upon selfish motives, and that human life in this world and the next is an affair of logic and comprehensible by the understanding. However high the point of cultivation reached, however noble the morality which rests upon reasoning, there is always a beyond where the divine powers, the supernatural attitudes of the soul, range free and direct our activity. In that realm the hope of pleasure and the fear of pain are equally indifferent to the enlightened spirit, and all the ordinary sanctions and promoting causes of religion shrink out of sight. The oriental legend of the believer who was met on the road with a torch in one hand and a pitcher of water in the other, conveys a meaning which seems almost beyond the apprehension of Mr. Mill. ‘With this fire,’ said the mystic, ‘I go to burn up the palaces of Heaven, and with this water to quench the flames of Hell, so that man hereafter may worship God truly, and no longer serve Him for hope or for fear.’

“The sadness of the book is neither depressing nor likely to infect others; its warnings and encouragements are all of a high mood, and its errors are such as throw no blame upon its author. To this great man, lingering upon the confines of the two worlds and sharpening his vision with love and regret toward the world unseen and almost despaired of, the life of mankind assumed a serious and tender aspect, not devoid of a melancholy hope, and rich in virtuous manly endeavors and accomplished deeds. The truly devout alone have the right to censure him, for he stands, like the Stoics and the highest of the followers of Epicurus, far above the plane of the ordinary religions of the world. Such souls need the teachings of Christ himself, not the discourses of Paul or of the ecclesiastics.”

The church and its ministry have high functions which the press cannot share. The personal cure of souls; the spoken word of inspiration, sent home with the impact which only figure and face and voice can impart; the organization for direct mutual help in the conduct of life; the supplying of a visible basis and stronghold for the moral forces of the community,— these are still the church's province. But men no longer look to the church's pulpit as they used to look for guidance in thought and opinion. That scepter has passed to the journalist. He, in a broader sense than any other, is the teacher of the community, or rather the official teacher; for the highest leadership is not an office, but a personal endowment. The transfer of authority has been going on for centuries, but it was consummated in that same third of a century in which Mr. Bowles built up the “Republican.” In the beginning of that period it might have been fair to take Mr. Peabody, pastor of the Uni-

*Joseph E. Hood. †Dr. Holland. ‡Dr. Huntington.

tarian church in Springfield, as the type of the public teacher in New England,— a dignified personage, speaking his weekly word from the pulpit, clad in gown of solemn black; dwelling much on the transitoriness and woe of this present life, urging an ideal of character which was pure and lofty, but had few points of contact with the matter-of-fact world in which his hearers must needs live. Against this figure thirty years later we may set the journalist at his desk, alert, high-strung, the telegraph pouring upon him the news of the whole planet, with now and then an item from the solar system beyond, his swift pen touching every interest of politics, trade,

society, conduct, faith, every phase of the great world's teeming activity. He is now the King,— well for him if he be also the Saint and Prophet! "You see in me only a fraction of the king," Mr. Bowles would have said; "here is the sovereign, the paper itself— with world-wide agencies at its command; fed by the life-juices of many workers; governed by an ideal which is a birth of the age-spirit, and which unstinted labor and love have built up. The life I have planted in the paper is as distinct from my own as the life which a father transmits to his son, and it shall live when I and my sons have passed away."

George S. Merriam.

A POET'S SOLILOQUY.

ON a time, not of old,
 When a poet had sent out his soul, and no welcome had found
 Where the heart of the nation in prose stood fettered and bound
 In fold upon fold —
 He called back his soul who had pined for some answer afloat;
 And thus in the silence of night and the pride of his spirit he wrote:

Come back, poet-thought!
 For they honor thee not in thy vesture of verse and of song.
 Come back — thou hast hovered about in the markets too long.
 In vain thou hast sought
 To stem the strong current that swells from the Philistine lands;
 Thou hast failed to deliver the message the practical public demands.

Come back to the heights
 Of thy vision, thy love, thy Parnassus of beauty and truth —
 From the valleys below where the labor of age and of youth
 Has no need of thy lights; —
 For Science has marshaled the way with a lamp of its own.
 Till they woo thee with wakening love, thou must follow thy pathway alone.

We have striven, have toiled —
 Have pressed with the foremost to sing to the men of our time
 The thought that was deepest, the lay that was lightest in rhyme.
 We are baffled and foiled.
 The crowd hurries on, intent upon traffic and pay.
 They have ears, but they hear not. What chance to be heard has the poet to-day?

So we turn from the crowd,
 And we sing as we please — like the thrush far away in the woods;
 They may listen or not, as they choose, to our fancies and moods
 Chanted low, chanted loud
 In the sunshine or storm — 'mid the hearts that are tender or hard.
 What need of applause from the world when art is its own reward?

Christopher P. Cranch.

“LOVE AT FIRST SIGHT.”

A DOUBTFUL day of mingled snow and rain, such as we often have in New York in February, had been followed, as night fell, by a hard frost; and as Robert White mounted the broad brown-stone steps of Mrs. Martin's house and, after ringing the bell, looked across Washington Square to the pseudo-picturesque University building, he felt that form of gratitude toward his hostess which has been defined as a lively sense of benefits to come. His ten-minute walk through the hard slush of the pavements had given an edge to his appetite, and he knew of old that the little dinners of the Duchess of Washington Square were everything that little dinners should be. He anticipated confidently a warm reception by his hospitable hostess; an introduction to a pretty girl, probably as clever as she was good-looking; a dignified procession into the spacious dining-room; a bountiful dinner, neither too long nor too short, as well served as it was well cooked; and at the end a good cup of coffee and a good cigar, and a pleasant quarter of an hour's chat with four or five agreeable men, not the least agreeable of them being Mr. Martin, who was known to most people only as Mrs. Martin's husband, but whom White had discovered to be as shrewd and sharp as he was reserved and retiring.

And so it came to pass, except that the state of the streets had made White a little late, wherefore the Duchess was slightly hurried and peremptory. She took him at once under her wing and led him up to a very pretty girl. “Phyllis,” she said, “this is Mr. White, to whom I confide you for the evening.”

As White bowed before the young lady whom Mrs. Martin had called Phyllis, he wished that the Duchess had kindly added her patronymic, as it is most embarrassing not to know to whom one is talking. But there was no time for inquiry; the rich velvet curtains which masked the open doorway leading from the parlor into the hall were pushed aside, and the venerable colored butler announced that dinner was served. White offered his arm to Miss Phyllis, and they filed into the dining-room in the wake of Mr. Martin and Mrs. Sutton; the Duchess, on the arm of Judge Gillespie, brought up the rear.

There were fourteen at table,—a number too large for general conversation, and therefore conducive to confidential talks between any two congenial spirits who might be sitting side by side. White had at his left Mrs. Sutton,

but she was a great favorite with Mr. Martin, and White had scarcely a word with her throughout the dinner. On the other side of Miss Phyllis was a thin, short, dyspeptic little man, Mr. C. Mather Hitchcock, whom White knew slightly, and whom Miss Phyllis evidently did not like, as White saw at a glance. So it happened that White and Miss Phyllis were wholly dependent on each other for entertainment, as long as they might sit side by side at the Duchess's table.

“A mean day like this makes the comfortable luxury of a house like Mrs. Martin's all the more grateful,” began White, by way of breaking the ice; “don't you think so?”

“It has been a day to make one understand what weather-prophets have in mind when they talk about the average mean temperature of New York,” she answered, smiling.

“I hope you do not wish to insinuate that the average temperature of New York is mean. I have lived here only a few years, but I am prepared to defend the climate of New York to the bitter end.”

“Then you must defend the weather of today,” she retorted gayly, “for it had a very bitter end. I felt like the maid in the garden hanging out the clothes, for down came a black wind to bite off my nose.”

“Just now you remind me rather of the queen in the parlor eating bread and honey.”

“I have an easy retort,” she laughed back. “I can say you are like the king in his chamber counting out his money; for that is how most New York men seem to spend their days.”

“But I am not a business man,” explained White, thinking that Miss Phyllis was a ready young lady with her wits about her, and regretting again that he had not learnt her name.

“They say that there are only two classes who scorn business and never work—the aristocrats and the tramps,” she rejoined mischievously. “Am I to infer that you are an aristocrat or a tramp?”

“I regret to say that I am neither the one nor the other. A tramp is often a philosopher—of the peripatetic school of course; and an aristocrat is generally a gentleman, and often a good fellow. No, I am afraid your inference was based on a false premise. I am not a business man, but, all the same, I earn my living by my daily work. I am a journalist, and I am on the staff of the ‘Gotham Gazette.’”

“Oh, you are an editor? I am so glad. I have always wanted to see an editor,” ejaculated Miss Phyllis with increasing interest.

“You may see one now,” he answered. “I am on exhibition here from seven to nine to-night.”

“And you are really an editor?” she queried, gazing at him curiously.

“I am a journalist, and I write brevier, so I suppose I may be considered as a component unit of the editorial plural,” he replied.

“And you write editorials?”

“I do; I have written yards of them—I might almost say miles of them.”

“How odd! Somehow the editorials of a great paper always remind me of the edicts of the Council of Ten in Venice—nobody knows whose they are, and yet all men tremble before them.” As she said this, Miss Phyllis looked at him meditatively for a moment, and then she went on, impulsively, “And what puzzles me is how you ever find anything to say.”

A quiet smile played over White’s face as he answered gravely: “We have to write a good deal, but we do not always say anything in particular.”

“When I read the telegrams,” continued Miss Phyllis, “especially the political ones, I never know exactly what it’s all about until I’ve read the editorial. Then, of course, it all seems clear enough. But *you* have to make all that up out of your own head. It must be very wearing.”

The young journalist wondered for a second whether this was sarcasm or not; then he admitted that he had been using up the gray matter of his brain very rapidly of late.

“I know I exhausted myself one election,” she went on, “when I tried to understand politics. I thought it my duty to hear both sides, so I read two papers. But they contradicted each other so, and they got me so confused, that I had to give it up. Really I hadn’t any peace of mind at all until I stopped reading the other paper. Of course, I couldn’t do without the ‘Gotham Gazette.’”

“Then are all our labors amply rewarded,” said White gallantly, thinking that he had only once met a young lady more charming than Miss Phyllis.

“Now tell me, Mr. White, what part of the paper do you write?”

“Tell me what part of the paper you read first—but I think I can guess that. You always begin with the deaths and then pass on to the marriages. Don’t you?”

Miss Phyllis hesitated a moment, blushed a little,—whereat White thought her even prettier than he had at first,—and then confessed. “I do read the deaths first; and why not?”

Our going out of the world is the most important thing we do in it.”

“Except getting married—and that’s why you read the marriages next?” he asked.

“I suppose so. I acknowledge that I read the marriages with delight. Naturally I know very few of the brides, but that is no matter—there is all the more room for pleasant speculation. It’s like reading only the last chapter of a novel—you have to invent for yourself all that went before.”

“Then you like the old-fashioned novels which always ended like the fairy stories, ‘So they were married and lived happily ever afterward’?” he queried.

“Indeed I do,” she answered vehemently, “Unless I have orange-blossoms and wedding-cake given to me at the end of a story, I feel cheated.”

“I suppose you insist on a novel’s being a love-story?” White inquired.

“If a story isn’t a love-story,” she answered energetically, “it isn’t a story at all. Why, when I was only nine years old, a little chit of a girl, I wouldn’t read Sunday-school books, because there was no love in them!”

Robert White laughed gently, and said: “I spurned the Sunday-school book when I was nine, too, but that was because the bad boys had all the fun and the good boys had to take all the medicine, in spite of which, however, they were often cut off in the flower of their youth.”

“Do you ever write stories, Mr. White?”

“I have been guilty of that evil deed,” he answered. “I had a tale in the ‘Gotham Gazette’ one Sunday a few months ago, called ‘The Parrot that Talked in his Sleep’; it was a little study in zoölogic psychology. Did you read it?”

“I don’t seem to recall it,” she hesitated. “I’m afraid I must have missed it.”

“Then you missed a great intellectual treat,” said the journalist, with humorous exaggeration. “Fiction is stranger than truth sometimes, and there were absolutely no facts at all in ‘The Parrot that Talked in his Sleep.’”

“It was a fantastic tale, then?”

“Well, it was rather eccentric.”

“You must send it to me. I like strange, weird stories—if they do not try to be funny. They say I haven’t any sense of humor, and I certainly do not like to see anybody trying hard to be funny.”

With a distinct recollection that “The Parrot that Talked in his Sleep” had been noticed by several friendly editors as “one of the most amusing and comical conceits ever perpetrated in America,” White thought it best not to promise a copy of it to Miss Phyllis.

"Perhaps you would prefer another sketch I published in the 'Gotham Gazette,'" he ventured. "It was called 'At the End of his Tether,' and it described a quaint old man who gave up his life to the collecting of bits of the ropes which had hanged famous murderers."

"How gruesome!" she exclaimed, with a little shudder, although the next minute she asked with interest: "And what did he do with them?"

"He arranged them with great care, and labeled them exactly, and gloated over them until his mind gave way, and then he spliced them together and hung himself on a gallows of his own inventing."

"How delightfully interesting!"

"It was a little sketch after Hawthorne—a long way after," he added modestly.

"I just doat on Hawthorne," remarked Miss Phyllis critically. "He never explains things, and so you have more room for guessing. I do hate to see everything spelt out plain at the end of a book. I'm satisfied to know that they got married and were happy, and I don't care to be told just how old their children were when they had the whooping-cough!"

"A hint is as good as a table of statistics to a sharp reader," said the journalist. "I think the times are ripe for an application to fiction of the methods Corot used in painting pictures. Father Corot, as the artists call him, gave us a firm and vigorous conception veiled by a haze of artistic vagueness."

"That's what I like," agreed Miss Phyllis. "I like something left to the imagination."

"Your approbation encourages me to persevere. I had planned half a dozen other unconventional tales, mere trifles, of course, as slight as possible in themselves, but enough, with 'The Parrot that Talked in his Sleep' and 'At the End of his Tether,' to make a little book, and I was going to call it 'Nightmare's Nests.'"

"What an appetizing title!" declared the young lady. "I'm so sorry it is not published now—I couldn't rest till I'd read it."

"Then I am sure of selling at least one copy."

"Oh, I should expect you to send me a copy yourself," said Miss Phyllis archly, "and to write 'with the compliments of the author' on the first page."

Robert White looked up with a smile, and he caught Miss Phyllis's eye. He noted her bright and animated expression. He thought that only once before had he ever met a prettier or a livelier girl.

"You shall have an early copy," he said, "a set of 'advance sheets,' as the phrase is."

Here his attention and hers was distracted by the passing of a wonderful preparation of lobster, served in sherry, and cooked as though it were terrapin; this was a specialty of the Duchess's Virginian cook, and was not to be treated lightly. When this delicacy had been duly considered, Miss Phyllis turned to him again.

"Can't you tell me one of the stories you are going to write?" she asked.

"Here—now—at table?"

"Yes; why not?"

"Do you play chess? I mean do you understand the game?"

"I think it is poky; but I have played it with grandpa."

"There is a tale I thought of writing, to be called 'The Queen of the Living Chessmen'; but——"

"That's a splendid title. Go on."

"Are you sure it would interest you?" asked the author.

"I can't be sure until you begin," she answered airily; "and if it doesn't interest me, I'll change the subject."

"And we can talk about the weather."

"Precisely. And now, do go on!"

She gave an imperious nod, which White could not but consider charming. There was no lull in the general conversation around the table. Mr. Martin was monopolizing Mrs. Sutton's attention, and Mr. C. Mather Hitchcock had at last got into an animated discussion with the lady on the other side of him. So White began:

"This, then, is the tale of 'The Queen of the Living Chessmen.' Once upon a time——"

"I do like stories which begin with 'Once upon a time,'" interrupted Miss Phyllis.

"So far at least, then, you may like mine. Once upon a time there was a young English surgeon in India. He was a fine, handsome, manly young fellow——"

"Light or dark?" asked the young lady. "That's a very important question. I don't take half the interest in a hero if he is dark."

"Then my hero shall be as fair as a young Saxon ought to be. Now, on his way out to India, this young fellow heard a great deal about a beautiful English girl, the daughter of a high official in the service of John Company——"

"Is she going to fall in love with him?" interrupted Miss Phyllis again.

"She is."

"Then this is a love-story?"

"It is indeed," answered the author, with emphasis.

"Then you may go on," said the young lady; "I think it will interest me."

And White continued:

“The young doctor had heard so much about her beauty that he was burning with anxiety to behold her. He felt as though the first time he should see her would be an epoch in his life. He was ready to love her at first sight. But when he got to his post he found that she had gone to Calcutta for a long visit, and it might be months before she returned. He possessed his soul in patience, and made friends with her father, and was permitted to inspect a miniature of her, made by the best artist in India. This portrait more than confirmed the tales of her beauty. The sight of her picture produced a strange but powerful effect upon the doctor, and his desire to see the fair original redoubled. From Calcutta came rumors of the havoc she wrought there among the susceptible hearts of the English exiles, but, so far as rumor could tell, she herself was still heart-free. She had not yet found the man of her choice; and it was said that she had romantic notions, and would marry only a man who had proved himself worthy, who had, in short, done some deed of daring or determination on her behalf. The young Englishman listened to these rumors with a sinking of the heart, for he had no hope that he could ever do anything to deserve her. At last the news came that she was about to return to her father, and at the same time came an order to the doctor to join an expedition among the hill-tribes. He called on her father before he went, and he got a long look at her miniature, and away he went with a heavy heart for the love he bore a woman he had never seen. No sooner had his party set off than there was trouble with the Hindoos. The British residents and the native princes led a cat-and-dog life, and there began to be great danger of civil war. There were risings in various parts of the country.”

“In what year was this?”

“I don’t know yet,” answered the journalist. “You see I have only the general idea of the story. I shall have to read up a good deal to get the historical facts and all the little touches of local color. But I suppose this must have been about a hundred years ago or thereabouts. Will that do?”

“If you don’t *know* when your story happened,” said Miss Phyllis, “of course you can’t tell me. But go on, and tell me all you *do* know.”

“Well, the young doctor was captured by a party of natives and taken before a rajah or whatever they call him, a native prince, who had renounced his semi-allegiance to the British and who had at once revealed his cruelty and rapacity. In fact, the chief into whose hands the young surgeon had fallen was nothing more nor less than a bloodthirsty

tyrant. At first he was going to put the doctor to death, but fortunately, just then, one of the lights of the harem fell ill and the doctor cured her. So, instead of being killed, he was made first favorite of the rajah. He had saved his life, although he was no nearer to his liberty.”

“Why, wouldn’t the rajah let him go?” asked Miss Phyllis with interest.

“No, he wanted to keep him. He had found it useful to have a physician on the premises, and in future he never meant to be without one. After a few vain appeals, the doctor gave up asking for his liberty. He began to plan an escape without the rajah’s leave. One evening the long-sought opportunity arrived, and as a large detachment of English prisoners was brought into town, the doctor slipped out.”

“Did he get away safely?”

“You shall be told in due time. Let us not anticipate, as the story-tellers say. Did I tell you that the rajah had found out that the doctor played chess, and that he had three games with him every night?”

“This is the first I have heard of it,” was the young lady’s answer.

“Such was the fact. And this it was which led to the doctor’s recapture. On the evening of his escape the rajah wanted his chess a little earlier, and the doctor could not be found; so they scoured the country for him, and brought him before the prince, who bade them load him with chains and cast him into a dungeon cell.”

“And how long did he languish there?”

“Till the next morning only. At high noon he was taken out and the chains were taken off, and he was led into a spacious balcony overlooking a great court-yard. This court-yard was thronged with people and the sides were lined with soldiers. In the center was a large vacant space. This vacant space was a square composed of many smaller squares of alternating black and white marble. Unconsciously the doctor counted these smaller squares; there were exactly sixty-four — eight in a row and eight rows.”

“Just as though it was a huge chess-board?” inquired Miss Phyllis.

White was flattered by the visible interest this pretty girl took in his narrative.

“It *was* a huge chess-board, nothing else,” he answered, “and a game of chess was about to be played on it by living chess-men. Soon after the doctor was brought into the gallery, there was a movement in the outskirts of the throng below and four elephants came in and took their places at the four corners of the gigantic chess-board. Two of these elephants were draped with white and two with black,

and their howdahs were shaped like castles. Then came in four horsemen, two on white steeds and two on black, and they took their places next to the castles."

"They were the knights! Oh, how romantic!" ejaculated the young lady.

"Next came four fools or jesters, for in the oriental game of chess the bishop is replaced by a clown. Two of these were white men and two were Hindoos. They took their places next to the knights. Then there entered two files of eight soldiers, and the eight white men took the second row on one side while the eight Hindoos faced them on the second row opposite."

"They were the pawns, I suppose?"

"They were the pawns. The doctor now began to suspect what was going on, and he saw a white man and a Hindoo, both magnificently caparisoned, and with tiny pages supporting the skirts of their robes, enter the square allotted to the kings. Finally in two litters or sedan-chairs the two queens were borne in; the doctor saw that one was a white woman and the other a Hindoo, but the white pieces were on the side of the court opposite him, and he could not distinguish the features of any of his countrymen—for that they were English captives he felt convinced."

"But who was to play the game?" asked Miss Phyllis eagerly.

"The rajah and the doctor. The rajah came into the balcony and told the doctor that since he wanted to get away he might have a chance for his life. If he could win the game, the rajah would not only spare his life, but he might depart in peace, and, even more, he might select from the English captives any one he chose to depart with him."

"But if he lost the game?"

"Then he lost his life. For the doctor that game of chess with the living chess-men meant life or death. But the sturdy young Englishman had a stout heart and a strong head, and he was not frightened. Although he had generally managed to lose when playing with the rajah, he knew that he played a finer game. He knew, moreover, that although the rajah was a despot and a bloody-minded villain, yet he would keep his word, and if he lost the game the doctor would be sent away in safety and honor, as had been promised. So the doctor planned his game with care and played with more skill than the rajah had suspected him of having. After half a dozen moves there was an exchange of pawns. The captured men were led to the sides of the court-yard, and there stood an executioner, who whipped off their heads in a second."

"What!" almost shouted Miss Phyllis. "Do you mean to say he killed them?"

"The living chess-men, white or black, English or Hindoo, were all prisoners and had all been condemned to death. The rajah was using them for his amusement before killing them—that was all. As soon as they were taken in the course of the game, they were no longer useful, and the headsman did his work upon them at once."

"You don't call *this* a love-story, do you?" was Miss Phyllis's indignant query.

"You shall see. When the doctor saw the fate of the captured pieces he almost lost his self-control. But he was a brave man, and in a little while he regained courage. An attendant explained that these men would die anyhow, and in time the doctor got interested in the game and intent on saving his own life, and he ceased to think about the lives of the hapless human chess-men. And the rajah gave him enough to think about. The rajah, having nothing at stake, and knowing it was the last game with the doctor, played with unusual skill and success. With oriental irony the rajah had chosen the white pieces, and he kept sending the white queen on predatory excursions among the black chess-men. The doctor saw that if he did not take the white queen he was a dead man; so he laid a trap for her, and the rajah fell into the trap and sent the white queen close to the black pieces, taking a black pawn. For the first time the doctor got a good look at the white queen. His heart jumped into his mouth and beat so loud that he thought the rajah must hear it. The white queen was the beautiful English girl of whom he had thought so much and so often and whom he had never seen. He knew her at a glance, for the miniature was a good likeness, though it could not do justice to her wonderful beauty; it was indeed fit that she should be robed as a queen. As soon as the doctor saw her he felt that he loved her with the whole force of his being; no stroke of love at first sight was ever more sudden or more irresistible. For a moment love, astonishment, and fear made him stand motionless."

"And what did she do?"

"She could do nothing. And what could he do? It was a tremendous predicament. If he captured the white queen, she would be killed at once. If he did not capture her, the rajah in all probability would win the game—and then both he and she would have to die. He had a double incentive to win the game, to save his own life and to save hers also, by selecting her as the one to accompany him. But the game became doubly difficult to win, because he dare not take the rajah's most powerful piece. To make the situation more hopeless, the rajah, seeing that the doctor let him withdraw the queen from a posi-

tion the full danger of which he discovered as soon as the move was made, and detecting the signals with which the doctor tried to encourage the woman he loved, and to bid her be of good cheer—the rajah began to count on the doctor’s unwillingness to take the white queen; he made rash raids into the doctor’s intrenchments and decimated the doctor’s slender force. In half an hour the game looked hopeless for the young Englishman. Less than half of the thirty-two living chess-men stood upon the marble squares, and of these barely a third belonged to the doctor. The rajah had the advantage in numbers, in value, and in position.”

“Then how did the doctor get out of it?”

“The rajah’s success overcame his prudence, and he made a first false move. The doctor saw a slight chance, and he studied it out as though it were an ordinary end game or a problem. Suddenly the solution burst upon him. In three swift moves he checkmated the astonished rajah.”

“And saved his own life and hers too?” asked the young lady, with great interest.

“So they were married and lived happily ever afterward. You see my love-story ends as you like them to end.”

“It’s all very well,” said Miss Phyllis, “but the man did everything. I think she ought to have had a chance too.”

It must not be supposed that there had been any break in the continuous courses of Mrs. Martin’s delightful dinner while White was telling the tale of “The Queen of the Living Chess-men.” In fact, he was unable to answer this last remark of Miss Phyllis’s as he was helping himself to a delicious *mayonnaise* of tomatoes, another specialty of the Duchess’s, who always served it as a self-respecting *mayonnaise* should be served—in a shallow glass dish imbedded in the cracked ice which filled a deeper dish of silver. So the young lady had a chance to continue.

“I do not object to the bloodshed and murder and horrors in your story, of course. I don’t mean that I *like* horrors, as some girls do, but I am not squeamish about them. What I don’t like is your heroine; she doesn’t *do* anything.”

“She is loved,” answered the author; “is not that sufficient?”

“You *say* she is loved, but how do I know that she loves back? I have only your word for it; and you are a man, and so, of course, you may be mistaken in such matters.”

“What more could I do to convince you of her affection for her lover?”

“You needn’t do anything, but you ought to have let her do something. I don’t know what, but I feel she ought to have done a

deed of some sort, something grand, heroic, noble,—something to make my blood run cold with the intensity of my admiration! I’d like to see her sacrifice her life for the man she loves.”

“You want a Jeanne d’Arc for a heroine?”

“Rather a Mary Queen of Scots, eager to love and to be loved, and ready to do and to die—a woman with an active spirit, and not a mere passive doll, like the weak girl your doctor married.”

Robert White remarked that her slight excitement had heightened her color and that the flush was very becoming to her.

“We shall have to go back,” he said, “to the days of Rebecca and Rowena, if you insist on having lissome maidens and burly warriors, hurtling arrows and glinting armor, the flash of scarlet and the blare of the trumpet.”

“I don’t think so,” she retorted; “there is heroism in modern life, and in plenty too, though it goes about gravely and in sad-colored garments. And besides,” she added, changing the subject with feminine readiness, “you tell us only about the peril they were in, and nothing at all about their love-making. Now, that’s the part I like best. I just delight in a good love-scene. I used to wade through Trollope’s interminable serials just for the sake of the proposals.”

“It is never too early to mend. I will take your advice, and work up the love interest more. I will show how it was that the young English beauty who was ‘The Queen of the Living Chess-men’ came in time and by slow degrees to confess that the young doctor was the king of her heart.”

“Then I will read it with even more pleasure.”

“But, do you know,” he continued, dropping his mock-heroic intonation, “that it is not easy to shoot Cupid on the wing? Indeed, it is very difficult to write about love-making.”

“From lack of experience?” inquired Miss Phyllis mischievously.

“Precisely so. Now, how does a man propose?” asked White innocently.

The flush of excitement had faded before this, but suddenly a rich blush mantled her face and neck. For a second she hesitated; then she looked up at White frankly, and said, “Don’t you know?”

Under her direct gaze it was his turn to flush up, and he colored to the roots of his hair.

“Pray forgive me if I have seemed personal,” he said, “but I had supposed a young lady’s opportunities for observation were so many more than a man’s, that I hoped you might be willing to help me.”

"I think that perhaps you are right," she replied calmly, "and that 'The Queen of the Living Chess-men' will be interesting enough without any love-passages."

"But I have other stories," he rejoined eagerly; "there is one in particular,—it is a love-story, simply a love-story."

"That will be very nice indeed," she said seriously, and as though her mind had been recalled suddenly.

"I am going to call it 'Love at First Sight.' You believe in love at first sight, don't you?"

Again the quick blush crimsoned her face. "I—I don't quite know," she answered.

"I thought all young ladies maintained as an article of faith, without which there could be no salvation, that love at first sight was the only genuine love?"

"I do not know what other girls may think," said Miss Phyllis, with cold dignity, "but I have no such foolish ideas!"

White was about to continue the conversation, and to ask her for such hints as she might be able to afford him toward the writing of "Love at First Sight," when the Duchess gave the signal for the departure of the ladies. As Miss Phyllis rose White fancied that he caught a faint sigh of relief, and as he lifted back her chair he wondered whether he had been in any way intrusive. She bowed to him as she passed, with the brilliant smile which was, perhaps, her greatest charm. As she left the room his eyes followed her with strange interest. The heavy curtain fell behind the portly back of the Duchess, and the gentlemen were left to their coffee and to their cigars; but Mat Hitchcock took the chair next to White's, and began at once to talk about himself in his usual effusive manner. The aroma of the coffee and the flavor of his cigar were thus quite spoilt for White, who seized the first opportunity to escape from Hitchcock and to join the ladies. As he entered the spacious parlor Hitchcock captured him again, and although White was able to mitigate the infliction by including two or three other guests in the conversation, it was not until the party began to break up that he could altogether shake off the incubus. Then he saw Miss Phyllis just gliding out of the door, after having bade the Duchess a fond farewell.

Robert White crossed over to Mrs. Martin at once. "I have to thank you for a very delightful evening," he began. "The dinner was a poem,—if you will excuse the brutality of the compliment,—and the company were worthy of it—with one unworthy exception, of course."

"Oh, Mr. White, you flatter me," said the pleased Duchess.

"Indeed, I do not. Very rarely have I heard such clever talk——"

"Yes," interrupted Mrs. Martin. "I do like the society of intellectual people."

"And," continued White, "I quite lost my heart to the very pretty girl I took in to dinner."

"Isn't she charming?" asked Mrs. Martin enthusiastically. "I think she is the nicest girl in New York."

"By the way—do you know, I did not quite catch her name——"

"Hadn't you ever met her before? Why, she is the daughter of old Judge Van Rensselaer. You must have heard me talk of Baby Van Rensselaer, as I always call her? She's engaged to Delancey Jones, you know. It's just out. She didn't like him at first, I believe, and she refused him. But he offered himself again just after we all got back from Europe this fall, and now she's desperately in love with him. Dear Jones would have been here to-night, of course, but he's in Boston building a flat, so I put you in his seat at table. You know dear Jones, don't you?" And the Duchess paused for a reply.

"Mr. Jones is a cousin of Miss Sargent's, I think——" began White.

"Of Miss Dorothy Sargent? Of course he is. Sam Sargent married his mother's sister. Dorothy's a dear, good girl, isn't she? Do you know her?"

At last White had his chance.

"She is a great friend of mine," he said, blushing slightly; "in fact, although it is not yet announced generally, I do not mind telling *you*, Mrs. Martin, that she's engaged to be married."

"Dorothy Sargent engaged to be married?" cried the Duchess, delighted at a bit of matrimonial news. "And to whom?"

"To me," said Robert White.

Brander Matthews.

STUDIO OF THOMAS COLE.

THE SUMMER HAUNTS OF AMERICAN ARTISTS.

EVERY summer the Europe-bound steamers go out freighted with tourists; and, in proportion to their numbers, our artists are more fully represented in the general exodus than any other class. They have strapped their sketch-boxes for out-of-the-way nooks in Surrey and Kent; for the Scottish Highlands and Lakes; for Normandy and Brittany, the Rhine and the Black Forest; for Grez and Barbizon; for the Tyrol or the Pyrenees, or the fiords and mountains of Scandinavia. Yet those who stay at home are more numerous than those who seek foreign scenes and exhibitions, and include, naturally, names of assured reputation,—men who have already profited by the educational advantages of Europe, and for whom castles, cathedrals, and wooden-shoed peasants have lost a little of the novelty and romance which appealed to their earlier years, and upon whom has dawned a growing appreciation of the artistic resources of their own country. They know that there is hardly a picturesque spot in Europe which is not so copyrighted by genius and association with some great name that any further painting of it seems plagiarism and impertinence.

It has come to be an open secret that most of the artists who go abroad do so for the stimulus which comes from associating with skilled men, and for the instruction which they gain from the exhibitions, rather than for the attractions of a foreign sketching-field. The Royal Academy, the Grosvenor, and above all the Salon, are magnets more powerful than all the scenery of Europe, and — heresy though it seem — than the galleries of the Old Masters.

Many of our traveling artists have taken only a short holiday to attend these exhibitions, and, after a brief call at the studios of old friends abroad, will return to their chosen surroundings in America, having hardly touched brush to canvas during their absence. The demand made by the public and the critics that the work of American artists should be American in subject at least, is largely conceded; and the varied scenes of our mountains and coasts, and our more pronounced and picturesque human types, are everywhere studied with avidity. One can now scarcely make a summer excursion in any picturesque locality without encountering the white umbrellas and light portable easels of the nomad artist. A few favorite sketching-grounds, typical artist-camps and summer studios, it is our purpose to describe.

The Hudson has long been considered the property of the older men. The broad sweep of its waters suggested to Cole his "Voyage of Life." He wrote from Italy, "Neither the Alps nor the Apennines, nor even Etna itself, has dimmed in my eyes the beauty of our own Catskills." Kensett delighted in its crags and rocks, and F. E. Church, one of the celebrated of the river-gods, built long ago his picturesque cottage opposite the Catskills, where, as it seemed to him, sunset panoramas were to be obtained rivaling those of the Andes. Lower down Mr. Bierstaedt's stately residence lifted its towers at Irvington until it was so unfortunately destroyed by fire, with its valuable contents. In these later days other less imposing names and buildings have bor-

EXTERIOR OF GEORGE INNESS'S STUDIO, MONTCLAIR, N. J.

dered each side of the river with a picket-line of studios. Some are mere gypsy booths, or bivouacs in barns and venerable canal-boats which have outlived their days of commercial usefulness and now luxuriantly devote their declining years to Art; and over in the Catskills we have artistic campers and trampers whose entire summer's outfit might be fastened in a pair of shawl-straps. So varied is the environment with which artists love to surround themselves that one is tempted to ask for a new definition of the word studio. We have borrowed it from the Italian, where it means study or school. The French *atelier*, workshop, on account of its newness smacks a little of affectation, but it pretends to less and would serve our purpose better. Especially is it appropriate to the painter's summer shed. In the city he often yields to the temptation of a *show* studio, a museum of rare bric-à-brac and artful effects of interior decoration; in the country he surrounds himself rather with the necessary conditions of *work*, and with some these conditions are very simple, embracing little more than Nature and isolation. Barns have always been favorite workshops for artists. The airy loft, with its one great window and undivided space, would seem to furnish favorable light and elbow-room. But inasmuch as hay is dusty, an abandoned barn is a still greater treasure.

One of the humblest studios on the Hud-

son, a certain old barn in an apple-orchard at Milton, belonged until his removal to Montclair to George Inness, Sr. This old orchard has been a mine of artistic wealth to the artist. But Mr. Inness is a many-sided man; he does not always paint old orchards or wrap us in reveries. Sometimes he limns the factory chimneys of Montclair or an engine and train of cars on a railroad embankment, when, somehow, a certain dignity creeps into the unpicturesque subjects. One might guess that, although the technique of his work has been compared with that of such widely different artists as Corot, Rousseau, and Turner, in spirit Mr. Inness sympathizes most with Millet.

Mr. Will. H. Low also has a studio at Milton—an old tool-house, in which the carpenter's bench serves as model-stand. In one of the old gardens here he painted his recent picture, "Telling the Bees." A little girl is draping the bee-hives in mourning, in observance of the old superstition that unless the bees are told of the death at the house they will all desert their homes. The child's face is simple and unintellectual, as befits the artist's idea, but it is full of the pathos of a sorrow past its own comprehension.

Mr. Nicoll owns a charming country-house at Shrub-oak, six miles from Peekskill. Drives through retired and shaded lanes to the lakes, which are the feature of this locality, tempt

to the exercise of his horses, and an unusual extent of piazza-space furnishes a promenade for rainy days. The gardener's lodge, overgrown with vines, is a picturesque adjunct to the grounds.

The Indian summer continues to gild river and woodland and hill-top around Sandford

little gables, you'll make your studio look like one of them old Dutch manor-houses at Kingston." Here Mr. Blum spent a summer in sketching and photographing; and at Ellenville, if we are to judge from the portfolio of the Misses Greatorex, is the very queen of old-fashioned gardens:

STUDIO OF GEORGE INNESS, JR., MONTCLAIR, N. J.

Gifford's deserted studio in the Catskills, but other artists catch the effects of which he was so fond. The autumn tints are reproduced in the canvases of Jervis McEntee, who paints with equal power the November woods. Arthur Parton prefers the quiet charm of misty mornings. His "Ice on the Hudson" at the late Prize Exhibition also shows his appreciation of the river in its winter phases.

In the Neversink Valley, Sullivan County, Messrs. Guy and J. G. Brown have found fascinating old barn-yards and rustic models; while at Ellenville a group of artists have taken possession of one of the old farm-houses. Here Mr. and Mrs. E. L. Henry have established themselves. Mr. Henry, in building a studio, found great difficulty in impressing his ideas of architecture on the local carpenters. "If you have the rafters show like that," they complained, "and stick the roof all over with

"There are the red rose and the white,
And stems of lilies strong and bright;
The streaky tulip, gold and jet;
The amaranth and violet;
The crumpled poppy, brave and bold;
The pea, the pink, the marigold."

The Jersey Flats would seem at first glance to offer but scant inducement to landscape painters, and yet here Messrs. Murphy, Dewey, and Silva have found suggestive material. Mr. De Luce has sketched about Morristown, where Mr. G. H. McCord has a home; and Mr. W. M. Chase has found interesting roadway studies at Hackensack. At South Orange Mr. H. Bolton Jones has painted many of his delightful wood, brook, and marsh subjects, always charming, whether under the guise of winter, when the fields are smothered with swan's-down and leafless twigs outline themselves against faintly flushed sunset skies, or when spring sets fuller palette.

Montclair, near Orange Mountain, is the home of George Inness, Jr. His country studio near by gives him every facility for the painting of his favorite subjects, animals in landscape. It is an old house

remodeled with every needful appliance, including a stable-yard under glass, for the posing of his dumb models with outdoor lighting and effects. This zoölogical glass house is especially serviceable in winter, when the animals can be painted against a background of snow while both they and the artist are snug and warm.

GABLE OF HARRY FENN'S STUDIO.

Harry Fenn has recently built a picturesque home on the slope of Orange Mountain, five hundred feet above tide-water. From his veranda the view includes Coney Island and the Highlands of the Hudson as far north as Peekskill. The house is built in imitation of the old English dwellings, "half timbered," with plaster from beam to beam, on which Mr. Fenn has incised patterns intermixed with bosses of glass. The studio is directly under the roof. A feature of the room is a quaint corner extending into a north gable, not included in the illustration. Sketches are tacked upon the wall, whose subjects "range from Florida to Egypt and from Warwick to Jerusalem," and scattered about are costumes of various Oriental and European peoples, relics of many artistic pilgrimages.

From the heights of Orange Mountain the view drops down to the masts of New York Harbor. Here Arthur Quartley, who is now abroad, has made his studies on the deck of a tug or in the stern of a row-boat, glancing about amongst the shipping, under the hull of some great Indiaman, following the wake of a white-winged yacht, or steaming to a wreck.

At Easthampton, near the sea end of Long Island, there is a true artist colony, and perhaps the most popular of adjacent sketching-grounds for New York artists. This popularity is not entirely due to its accessibility, for its attractions are as pronounced and as varied as

INTERIOR OF HARRY FENN'S STUDIO, MONTCLAIR, N. J.

those of any of its more remote rivals. Nowhere on our coast can be found quainter houses and people, fishermen more available as models, or old salts with more marvelous stories of wreck and rescue, more fog-horn keepers and light-house men, or men of more isolated lives and rugged individuality. Nantucket is not more unique or Brittany more poetic. Here are rural nooks for the landscape-painter delightfully English in sentiment. Here are beach and sea panoramas, stormy cloud-battles, or shimmering calm for the marine-painter. Here are associations

room. After the fair white canvas was spread upon her floor, she painted a border of roses upon it, with sprays of roses in the center. This carpet was the pride and astonishment of her husband's parish. People came to the front door to gaze, but refused to desecrate its surface with their feet.

Of the artists who now keep up the prestige which Mrs. Beecher conferred upon Easthampton, Mr. C. Y. Turner is perhaps the most prominent figure-painter. His large picture at the Water-Color Exhibition of 1883, "On the Beach at Easthampton," gives the society

INTERIOR OF THOMAS MORAN'S STUDIO, EASTHAMPTON, LONG ISLAND.

and legends, old manuscripts and romances for the antiquary, with Chippendale sideboards, blue china, and colonial spinning-wheels for the collector. Here are costumes of the last century and fascinating faces for the figure-painter; and here are salt sea-breezes and sunshine for all. Nor is the artistic impulse a new mania for Easthampton. She can lay claim to being the first in this country to apply original decorative art to house interiors. The story has been told before, but will bear retelling, how in 1799 young Mrs. Lyman Beecher spun a ball of cotton and had it woven into a carpet for her best

phase; but Mr. Turner finds another field here, and one in which we like him better. He is a son of the peaceful city whose

"streets still reëcho the names of the trees of the forest."

The simplicity and gentleness, the purity and sweet primness of the "Friends" touch his heart, and his

"ear is pleased with the Thee and Thou of the Quakers."

Dorothy Fox is one of his most charming creations. The old house in which she lived

still stands here, with its wainscoted parlor and low-hung ceilings. Other gray buildings of the colonial period, the old court-house and the academy, lend historical backgrounds, which Mr. Turner utilizes so well. His "Harvest Meal," at the Academy Exhibition of 1883, was a realistic study of an Easthampton farm-laborer sitting down *al fresco* to a "boiled dinner." Mr. Turner may be regarded as a resident of the place, and not a mere bird of passage, for he has fitted up here another of those fascinating barn-studios in which interesting exhibitions have been held of the work of "the colony." The landscape-painters

Mrs. Smillie has discovered in Easthampton suggestive figure-subjects and old-fashioned costumes which have led her to wander in the tempting paths of the olden time.

Mr. H. Bolton Jones not long ago contributed to an Academy exhibition a delightful Easthampton landscape, and he has made numerous interesting sketches of the place in its various aspects. Dreary sand-dunes, barn-yards, and straw-stacks, vague roads winding indistinctly no one cares whither, weird poplar-trees whose sparse leaves shiver lightly in contrast to the close-set foliage of twisted apple-trees,— all tell of the great variety

INTERIOR OF STUDIO OF PERCY MORAN, GREENPORT, LONG ISLAND.

have predominated in numbers, and embrace the names of George H. Smillie, H. Bolton Jones, Bruce Crane, and others. Here, also, Mr. Thomas Moran has a house and studio, and his wife, Mrs. Nimmo Moran, has etched many of her vigorous plates.

Easthampton has furnished to Mr. Smillie many interesting subjects, which have been shown at the exhibitions. His city studio contains interesting souvenirs of old gardens and poultry-yards. Mr. Smillie, who is also identified with Marblehead, paints trees and rocks as the masters of *genre* paint aged men and women, making every wrinkle and scar tell its story.

which Easthampton offers to the painter of landscape alone. She is still more capricious in the aspects which she shows her different suitors. Mr. Smillie finds here a likeness both to England and Holland. The gardens and orchards, the lanes, barns, and shrubbery, are all English; while the meadows stretching to low horizons, the windmills "with their delicate white vans outlined against the sky," are Dutch. Mr. Jones, on the other hand, is struck by the resemblance of the locality to Brittany. Mr. Bruce Crane, too, is carried straight to Pont Aven by the hay-ricks and poultry-yards, and by the soft gray atmos-

FIREPLACE OF SAMUEL COLMAN'S STUDIO, NEWPORT, R. I.

phere. Mr. Walter Clarke, who has laid aside the chisel for the brush, also goes to Easthampton. Mr. Dielman's sketching umbrella has tented frequently in this attractive spot.

The more fashionable beaches in the vicinity of New York have fewer artist visitors, though Mr. Muhrman loves to paint at Coney Island, and Mr. F. S. Church finds the marsh lands for his king's flamingoes near Long Branch and elsewhere in New Jersey. Houghton Farm, with its thousand acres of woodland and meadow, claims him as a guest, and it is in such solitudes that his humorous fancies and grotesques have found expression.

Frank Fowler and his artist wife usually pass the months of June and September in a quaint old house at Bridgeport, Conn. It is

pleasantly situated on Golden Hill, the highest point of the city, and in view of the Sound, along the shore of which they find most suggestive material. Mr. Tracy has a home at Greenwich. The historic old towns of Stratford, Fairfield, and Milford are within easy distance. Stratford was much frequented by the late landscape-painter A. F. Bellows.

The "Trowbridge House" at Litchfield, an old mansion with large grounds, has been fitted up by Mr. Dielman, and a handsome paneled room is the studio. Mr. Dolph painted during the summer at Belport, Mr. M. D. F. Boemer at Babylon; and indeed there is hardly an inviting spot near New York which has not its artist visitors,—some of whom live in the city and run out for a day's sketching,

WINDOW OF SAMUEL COLMAN'S STUDIO.

and others, like Mr. Volkmar, have suburban cottages in Harlem and the other environs of the city.

Edward Moran, brother of Thomas, has established his family art colony at Greenport on the northern shore of Long Island; and here his sons, Percy and Leon, sketch throughout the summer. All along that coast are paintable spots; Southampton, Montauk Point, Orient, Sag Harbor, and Shelter Island have all contributed to Art, and have supplied Mr. Moran with many of his most popular marines and fishermaidens. The Moran cottage, an unassuming, homelike structure, nestles so close to the shore that one can almost leap from its steps to the deck of a yacht; and the studio walls of both father and sons are hung with all manner of sea-plunder.

Across the Sound from Long Island are the red rocks of Narragansett Pier, where Mr. De Haas for many seasons has found a favorite sketching-station. E. D. Lewis of Philadelphia is another artist thoroughly identified with the place. Narragansett Pier from the water shows only a long line of white hotels glittering in sunlight and of pretty Queen Anne cottages scattered among the rocks. It is not all fresh and new, however. There are old estates in the neighborhood and manor-houses of revolutionary date. In the depths of a tangled wood, large enough for a baronial park,

stands a "castle," so called here, and indeed, had the ambition of the owner been realized, it might have deserved the name. An unfinished tower rises imposingly, and an eccentric labyrinth of oddly shaped apartments cluster at its base. Of course the building has its legend of love and grief. It should have welcomed to its halls an accomplished and beautiful bride, but the lady died before her wedding-day, and her inconsolable lover stopped the building and left his native land in the good old-fashioned way which exists now only in romance. The house, in its ruinous incom-

pleteness, is the very place for an artist, and has for several seasons been occupied by Mr. Tryon.

Rhode Island abounds in colonial buildings, and at Conanicut Mr. Sword of Philadelphia has leased the town hall, which he has fitted up as a most interesting atelier. In the same old town Walter Satterlee has established a summer studio.

Across the bay from Narragansett Pier is Newport, too fashionable a resort to be dear to men of the usual type of artistic temperament. "A man cannot serve two masters," and an artist, be he never so genial, cannot give himself to polo, lawn-tennis, garden-parties, and society, and be worthy of his calling. Newport, however, claims Mr. John La Farge and Mr. William T. Richards, whose new resi-

STUDIO OF EASTMAN JOHNSON, NANTUCKET.

dence is at Conanicut; and Mr. Samuel Colman has dared to build a beautiful studio and home in the very center of the summer Vanity Fair.

Due east from Newport, on the mainland, lies the old town of Little Compton, which Mr.

tasteful studio. It is an old joke that both Mr. Sartain and Mr. Gifford paint Moors; but while Mr. Sartain's have been Saracens of Tangier, sheiks with Koran or nargileh, Mr. Gifford's are the lowlands that stretch about Nonquitt to the sea. Salt marshes, sand dunes, and low,

STUDIO OF R. SWAIN GIFFORD, NONQUITT, MASS.

Blashfield has chosen as his country home. Here he has built a "glass studio" for the painting of figures with outdoor effects, and on these lonely sands, almost as retired from the world as the Ionian Isles, many of his decorative classical designs, processional friezes, and goddesses with whirling drapery and floating hair have passed to canvas.

Continuing our tour around the New England coast, we arrive at Nonquitt, near New Bedford,— a beach most appropriately named, for its waters seem to possess the magical return-compelling property of the Fountain of Trevi. Neighbors both in winter and summer, and friends all the year round, are Messrs. Swain Gifford and William Sartain. Mr. Gifford has painted here for twenty years. Eight years ago he established a summer home here, and five years since commissioned Mr. Emerson, the Boston architect, to build his

flat reaches appeal to him strongly through their windy desolateness.

"A low, gray sky, a freshing wind,
A cold scent of the misty sea;
Before, the barren dunes; behind,
The level meadows, far and free."

This is the landscape which encircles his studio, and which he loves to interpret. Here too Mrs. Gifford doubtless finds the originals of some of her vigorous studies of wild flowers and birds.

Mr. Sartain meets his summer class at his studio on the rocks. His figure-work appears to be the product of his city studio, while the small landscapes which he often contributes to the Society of American Artists and other exhibitions faithfully reproduce the character of Nonquitt scenery—marshes with clumps of coarse, sedgy grass, the level shore, and the rocks with their warm coloring.

STUDIO OF WILLIAM SARTAIN, NONQUITT, MASS.

Across the bay is Padanaram, the favorite resort of W. S. Macy, whose snow-scenes, studied here, prove that he inhabits the place in winter as well as in summer. Harry Chase and D. W. Tryon are both habitués of the pleasant place with the quaint Biblical name full of suggestions of Rebeccas and Rachels. Benoni Irwin finds portrait-work among summer visitors, and Messrs. Swift, Cummings, Bradford, Bierstadt, and Charles Gifford belong to the New Bedford colony.

Sailing across Buzzard's Bay and skirting the shores of the Vineyard, we reach Nantucket, one of the rare spots which preserve the flavor and atmosphere of the olden time. The island — with its types of old men and women that are fading out elsewhere, even in other remote nooks of Massachusetts, its queer houses and windmills, its antique furniture and costume — has long been the artistic "property" of Mr. Eastman Johnson. The man and the

place have a natural sympathy for each other. He is a chronicler of a phase of our national life which is fast passing away, and which cannot be made up with old fashion-plates and the lay figure of the studio. He lives in a fascinating "house of seven gables," filled with curiosities brought to Nantucket by seafaring men, — keepsake pitchers inscribed with amatory poetry, and made in England a century ago as gifts for sailors' sweethearts, and many another treasure in willow-ware or other china. Mr. Johnson's studio is stored with antique furniture, spinning-wheels, and costumes. A row of battered hats suggest the antiquated

squires, Quakers, and gentlemen of the olden time that have made their bow to us in his pictures.

The whole Massachusetts coast is Art ground, but at Cape Cod the entire aspect of the coast changes. Species are found north of its threatening arm which are common to Greenland and are not traceable south of it; while in Narragansett Bay and Long Island Sound we have some Florida and Gulf varieties, which never stray north of Cape Cod. The historical associations are sterner than those of lower latitudes. Mr. Douglas Volk is prominent among our younger figure-painters in availing himself of the field offered by the Puritan element in early colonial history — a field which Mr. Boughton has worked thoroughly, but which he has by no means exhausted.

The artistic qualities of the Massachusetts coast have been made use of chiefly by Boston artists. Messrs. Norton, Lansil, Halsall, and others have given their transcripts of

STUDIO OF WILLIAM F. HALSALL, BOSTON HARBOR.

“ Storm and blinding mist,
And the stout hearts which man
The fishing-smacks of Marblehead,
The sea-boats of Cape Ann.”

Mr. Halsall's love of the ocean developed early in life, when as a boy he ran away to sea, and through varied vicissitudes at length became a marine-painter. His summer working-place is on the Middle Brewster, one of a group of rugged islands forming a protection to Boston Harbor. He finds this wild crag an excellent place to work and study, with a magnificent background of scenery and panorama of shipping constantly passing, “almost like being at sea, without the discomforts of a vessel.”

The New York artists, Messrs. Nicoll, Farrer, Bricher, and others, have also spied out the land and have invaded this Yankee reservation; a number have summer sheds upon the rocks at Magnolia, Marblehead, Pigeon Cove, Cape Ann, and other points. Magnolia suggests to us Hunt's summer studio, “The Old Ship,” as it was nicknamed. His sanctum was in the second story, and the entrance to it was by steps through a trap-door. When he wished to work, it was his custom to hoist these up after him by pulley and tackle, so that he was as completely isolated from marauding, time-stealing visitors as an old baron in his moated castle. Miss Agnes Abbott has painted there in past summers, bringing home portfolios of breezy water-colors worthy of the spot.

The Isles of Shoals attract many artists, among them Joseph Lyman; and the wild Maine coast is full of attractive nooks, from York and Old Orchard Beach to Mount Desert. The last-named locality was first introduced to Art by Mr. Church, and has since been exploited by Prosper L. Senat of Philadelphia. Winslow Homer's imaginative and vigorous style finds peculiar affinity in the fine natural scenery to be found here.

A number of artists desert the land altogether and make the heaving deck their summer studio. Harry Chase, in his yacht *Bonnie*, has coasted our shores in search of artistic booty. Mr. Bradford, the well-known painter of icebergs and Arctic scenes, cruises still more boldly in the wake of the explorers, and gives us from his steam-launch views of “Fishing-craft Working through the Ice on the Coast of Labrador,” and other chilly glimpses suggestive of the experiences of Arctic explorers.

The heart of New England is as fully appreciated by painters as the coast. All through

ON BOARD THE “BONNIE,” HARRY CHASE'S STUDIO.

the interior is found the most charming scenery of mountain, river, and meadow. The White Mountains, brought by their special trains within a day of New York, grow more popular each year. In several instances the artists' sheds have been the pioneers, and the great hotels have come after. At Crawford's, Mr. Frank Shapleigh of Boston has, near the hotel, a studio, which he has made so picturesque and attractive that it is one of the sights of the place. Jackson is also a favorite sketching-field for this artist. Conway was preëmpted long ago by Benjamin Champney of Boston, one of our early painters of landscape.

Mr. W. Hamilton Gibson's picturesque drawings have doubtless done more to spread the fame of the White Mountains than the most glowing of written descriptions.

Mr. Casilear has painted the lakes and mountains of New Hampshire, and Mr. Shirlaw has been attracted by the glistening caves and walls of the marble-quarries of Rutland and Manchester,—a new field in art, and one offering brilliant effects in color, as well as strong contrasts in light and shade. The marble industry is characteristic of New England, and deserves notice as one of the great American interests, but it bases its claim on the artist's attention upon the distinctive and

picturesque effects which it confers upon landscape, and for its association with the arts.

The stony pastures of Vermont are often as white with sheep and lambs as with marble. J. A. S. Monks, who appreciates so well their awkward and frisky attitudes, their middle-aged content and laziness, and the inquisitive baby-impudence of their youth, has painted and etched them in West Rutland and in Medford, and at present has a little artist's ranch at Cold Spring on the Hudson, where, from a side window of his studio, he paints the sheep as they are corraled upon his lawn.

Mr. T. W. Wood has found at Montpelier the backgrounds of hay-loft, farm-house, and barn-yard for his *genre* paintings.

The vicinity of Boston is thickly strewn with summer and home studios. Ernest Longfellow, the son of the poet, has one in Cambridge. Mr. Enneking lives in Hyde Park. He has a studio in the rear of his home in the center of the town, but the woods and byways are near. There are some grand views in the neighborhood, but he has always chosen meadow and wood scenes, a hill-side with an old stone wall, and quiet rustic views.

Frank Millet's interesting studio at Bridge-water, with its Roumanian, Bulgarian, Greek, and Russian curiosities, and its old-fashioned kitchen taken bodily from a house in the neighborhood built in 1695, has already been described in print. Mr. and Mrs. J. Appleton Brown summer at Byfield, a suburb of Newburyport, and find here the twisted apple-trees and hill-side sketches and quiet skies which both are fond of painting.

Connecticut is full of quiet inland nooks that attract the artist. The vicinity of Hartford is especially attractive, and some interesting work has been accomplished by the

ladies of the Decorative Art Society. Farmington with its elms is a favorite with all artists who are familiar with this "bath of silence." Mr. Shattuck has reproduced the quiet loveliness of this nestling village under varied aspects. The environing hills form lines and masses of rare beauty seen from whatever direction, and from their summits one gains a far-reaching panorama of enchantment. To the north one catches a glimpse of the Holyoke range, which guards one of the most charmingly retired portions of Massachusetts. Mr. Elbridge Kingsley, the artist engraver, has made most of his work from nature in the vicinity of Mount Tom, Mount Holyoke, and Chestnut Mountain, in as wild and forsaken regions as can be found in our more remote wildernesses. He has had built for his purposes an ingenious jaunting-car fitted up with every convenience for photography, sketching, painting, and engraving, combined with sleeping and house-keeping conveniences. The body is ten feet long, seven feet high, and three and one-half feet wide. The running-gear is a heavy country one-horse wagon. The windows have outside blinds, mosquito-frames, and single panes of glass in sliding frames, like those used for horse-cars. On the back of the car is an extension, a sort of veranda, with waterproof curtains to let down and inclose the whole, making a dark chamber for photography. The interior of the car is fitted up with drawers, tanks, and cupboards in the most compact ship-shape, with folding bunk and kerosene stove apparatus, swinging lamp, and every adjunct for bachelor comfort. The car is followed by a companion boat on wheels, and the machine can be stocked for solitary camping in one place for a month at

ELBRIDGE KINGSLEY'S STUDIO-CAR IN WHATELY GLEN.

J. A. S. MONKS' STUDIO AT WEST RUTLAND, VT.

a time. Mr. Kingsley has also camped and sketched the past summer upon the Saguenay, but he has found no conditions so well adapted for his work as in the Connecticut Valley seen from the windows of his gypsy cart.

If we follow the Connecticut Valley a little farther to the north, we find Deerfield, a veritable Sleepy Hollow, hidden away under its elms as you look down upon it from the fast-flying express trains which pass its tiny station in swift disdain. The elms of Deerfield are its glory; nowhere in New England can there be found nobler ones. Mr. A. F. Bellows has painted them again and again. Messrs. F. D. Williams, Frank Currier, Fred Wright, and others have painted here, and the summer homes and studios of J. Wells Champney and the late George Fuller are in and near the village. Mr. Fuller removed the floors of the second story from the old family homestead, and constructed a fascinating and rambling atelier, with many odd nooks and corners, three fireplaces, and a wall of old paneling. Across the way stands the pretty cottage which was his, and around stretch the broad acres of his meadow farm. On these meadows the mist drifts low at dawn and twilight, and the Indian summer haze blurs all too distinct outline into the subtle harmony of light and color of which Mr. Fuller was so pre-

eminent a master. In this homestead studio many of his most original and poetic conceptions took shape.

No picture of his painting is now more touching than this same empty studio, so instinct with the personality of the man that one cannot help fancying that he has only left it for a moment, that he has stepped behind the great easel or is hidden by the chimney-corner. The historic associations of Deerfield carry the imagination back across two centuries. Hatchets and spinning-wheels, looms and foot-stoves, and all the obsolete and prehistoric paraphernalia of the olden time abound in the village—the paradise of the antiquary as well as of the artist. It is not surprising that Mr. Fuller should be acknowledged to occupy a place in art analogous to that of Hawthorne in literature.

West of Deerfield lie the Berkshire Hills, so widely celebrated for their beauty. Mr. Thomas Allen is a native of Pittsfield, and many of our landscape-painters find their way each summer to this enchanting region. Jerome Thompson, Frank Waller, and others have painted at Lenox and Stockbridge, though Mr. Waller has deserted the region for a lodge among the beautiful hop-vines of Coopers-town, N. Y. At Great Barrington Mr. Bristol has established a charming studio, which

is a perfect arbor of Virginia creepers and other vines. Mr. Bristol is best known to the public for his lakes, but he delights also in river effects, and here upon the banks of the Housatonic and the Green River, which Bryant loved, he has sketched with such friends as Bellows and Shattuck.

Still to the westward gleams Lake George, the favorite resort of George H. Yewell. Here by the lake Mr. and Mrs. Loophave a country-

and individual trees, with their inherited characteristics. Here are the selfish beech, thrusting other trees away from it and taking up all the cleared space for itself, the birch in her bridal dress of white satin, the hemlock sheltering a spruce — for these trees are lovers, and can no more bear to be separated than goldenrod and aster.

Mr. Shurtleff takes a more comprehensive view of the forest than Mr. Fitch, and a more

THE LATE GEORGE FULLER'S STUDIO AT DEERFIELD.

seat, old-fashioned in its appointments and its free-hearted hospitality.

A step farther and we have reached the Adirondacks, that enchanted country with which Charles Dudley Warner has made us so well acquainted, where man returns to a delightful savagery, and fishing, camping, climbing, and hunting take the place of the excitements and toil of the city. Here too the emancipated society woman exchanges her elaborately ordered dinners for the coffee-pot smoking over a camp-fire, a string of trout, and a basket of berries; while the theater and opera are replaced by fish and bear stories.

It is possible that the visitor at Keene Valley to-day would hardly recognize this picture; but here, at all events, are the everlasting hills, and just beyond them are the forests, lakes, and solitudes of the wilderness.

The charms of Keene Valley, the peaks of Sentinel Mountain, of Mounts Marcy and Dix, of Noonmark or the Dial, have all been presented to the public by Mr. Robbins. Though dealing generally with small canvases, he loves to depict wide-spreading views. Mr. Fitch gives us detail — nooks in the forest

intimate one than Mr. Robbins. His "lodge in the wilderness" is graced by antlered heads and wild-wood trophies of bark and moss. Mr. Wyant's delicate paintings are too well known to require description.

Mr. William Hart finds the lower end of Keene Valley attractive, and may be met occasionally striding over the hills in search of his favorite sketching-grounds, or quietly seated before some bovine beauty while the herdsman exerts himself in the almost vain attempt to keep the refractory model in position.

Other artists — notably Mr. Robert C. Minor, whose "Heart of the Wilderness," painted here, was shown at the regular Academy Exhibition of 1883, Messrs. J. Alden Weir, Bloodgood, and Douglas Volk — have all visited and worked in the Adirondacks.

The ranges of mountains in the Middle and Southern States have artist visitors. Mr. James Smillie has a summer home in Montrose, Susquehanna County, Penn. Here from his painting studio, through an immense single-paned window of plate-glass, he can look away over the Alleghany ranges and study sky-effects in stormy weather; while an ad-

INTERIOR OF R. M. SHURTLEFF'S STUDIO, KEENE VALLEY, NEW YORK.

joining room is fitted up with every appliance for his favorite department of etching.

Mr. J. Carroll Beckwith has also found a double attraction in the trout streams of the Pennsylvania mountains. Farther south Mr. Gilbert Gaul has purchased a sheep farm in the Cumberland Mountains.

Mr. T. Addison Richards also spends his summer upon the Delaware, sketching the rivulets and brooks which follow its course.

We have more marine-painters than painters of mountains, and yet the hills will hold their own against the sea in grandeur. The Adirondack region furnishes the mountain waves that Ruskin speaks of, and only a few adventurous spirits will require anything bolder or wilder. Even these need seek no Alps or Andes, for our own continent, in the tremendous architecture of the Rockies and Sierras, stands waiting "to startle the lethargy of the human heart with the deep and pure agitation of astonishment." Mr. Bierstadt has visited this region six times since 1859, and his pictures have dealt with the mastodon trees, the grand domes of Sentinel Rock, El Capitan, the Cathedral Rocks, and the Yosemite.

Mr. Thomas Moran has given us the geysers and hot springs of Utah, thermal fountains throwing their jets of scalding steam four hundred and fifty feet into the air, and

has dared to reproduce the vivid carnelian, sulphur, and copper blue-coloring of the springs of Firehole River. His "Cañon of the Yellowstone" and "Chasm of the Colorado" are in the Capitol in Washington, and his "Mountain of the Holy Cross" is a well-known picture.

Mr. W. Whittredge has contributed to the Yale collection of paintings some studies of prairie and mountain scenes, and Mrs. Mary Hallock Foote has given us some remarkably fine work in black and white. The opportunities which the Indian offers to the figure-painter have never been fully seized. Mr. Brush, one of our younger men, has been wise enough to see this; and while others have swarmed to Europe to paint the Italian peasant, he has studied in the wilds of Montana and Wyoming, and at the Arapahoe and Crow agencies, the peculiar customs, types, and costumes of the Indians.

Mr. Moser of Atlanta, Georgia, deserves mention as a delineator of African character. His conception of Uncle Remus is the only one accepted by Mr. Harris; and we may expect future work of importance from his plantation studio. Pennell has given us an idea of the picturesqueness of New Orleans.

Mexico presents another American field, which Mrs. Mary Hallock Foote has shown us in black and white, and Mr. Ferguson in

color; while Hopkinson Smith has spent a busy vacation in Cuba.

We have given but a hasty survey, noticing only a few of the outposts. Other home fields are worthily occupied, while more are still un-

developed. The South allures, and the North is full of stimulus. Everywhere the whole wide new land invites her artist sons, not in summer alone, but throughout every season of the changing year, to tell her story to the world.

Lizzie W. Champney.

THE GRAY GULL'S WING.

I HOLD in my hand the gray gull's wing,
 And seem to touch a perpetual flight;
 So alert is this softly shining thing,
 Sharply pointing from height to height,
 That I follow its charmed, vagarious flight:

Where great gray seas beneath it swing,
 And soft gray clouds drop against the sea,
 That beats its grayer horizon-ring,
 And sighs o' nights, and prays to be
 Moon-led, moon-lifted, and set free.

Out of weird, tossed shadows the gray bird slips,
 Vaguely gleaming against the dawn;
 Till into some sudden splendor it dips,
 Flashing outward, and strangely gone,
 And I hear but a cry go on and on.

Beaconed headlands and rock-bound shores,
 Wild, crowding crags to rebut the sea,
 Sails that flit while the gray bird soars,
 Shadows blown out of eternity
 To the cold, purple gray of this pinnacled sea.

Fields of sedge, and levels of sand,
 And a slow tide drearily slipping away,
 And a dim sky falling against the land,
 And the fishing-boats loitering up the bay,
 And still the gray bird leads the gray.

Over this flying shape I dream,
 Reaching a strength to which I cling;
 And glad, sweet thoughts seem to rustle and gleam
 In the swift elation in which they spring
 Higher, to follow the gray gull's wing.

Mary Allen.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "The Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

XXIX.

MRS. LUNA was early in the field the next day, and her sister wondered to what she owed the honor of a visit from her at eleven o'clock in the morning. She very soon saw, when Adeline asked her whether it had been she who procured for Basil Ransom an invitation to Mrs. Burrage's.

"Me — why in the world should it have been me?" Olive asked, feeling something of a pang at the implication that it had not been Adeline, as she supposed.

"I didn't know — but you took him up so."

"Why, Adeline Luna, when did I ever —?" Miss Chancellor exclaimed, staring and intensely grave.

"You don't mean to say you have forgotten how you brought him on to see you, a year and a half ago!"

"I didn't bring him on — I said if he happened to be there."

"Yes, I remember how it was: he did happen, and then you happened to hate him, and tried to get out of it."

Miss Chancellor saw, I say, why Adeline had come to her at the hour she knew she was always writing letters, after having given her all the attention that was necessary the day before; she had come simply to make herself disagreeable, as Olive knew, of old, the spirit sometimes moved her irresistibly to do. It seemed to her that Adeline had been disagreeable enough in having beguiled Basil Ransom into a marriage, according to that memorable calculation of probabilities in which she indulged (with a license that she scarcely liked definitely to recall) when the pair made acquaintance under her eyes in Charles street, and Mrs. Luna seemed to take to him as much as she herself did little. She would gladly have accepted him as a brother-in-law, for the harm such a relation could do one was limited and definite; whereas, in his general capacity of being at large in her life, the ability of the young Mississippian to injure her seemed somehow immense. "I wrote to him—that time—for a perfectly definite reason," she said. "I thought mother would have liked us to know him. But it was a mistake."

"How do you know it was a mistake? Mother would have liked him, I dare say."

"I mean my acting as I did; it was a theory of duty which I allowed to press me too much. I always do. Duty should be obvious; one shouldn't hunt round for it."

"Was it very obvious when it brought you on here?" asked Mrs. Luna, who was distinctly out of humor.

Olive looked for a moment at the toe of her shoe. "I had an idea that you would have married him by this time," she presently remarked.

"Marry him yourself, my dear! What put such an idea into your head?"

"You wrote to me at first so much about him. You told me he was tremendously attentive, and that you liked him."

"His state of mind is one thing and mine is another. How can I marry every man that hangs about me — that dogs my footsteps? I might as well become a Mormon at once!" Mrs. Luna delivered herself of this argument with a certain charitable air, as if her sister could not be expected to understand such a situation by her own light.

Olive waived the discussion, and simply said: "I took for granted *you* had got him the invitation."

"I, my dear? That would be quite at variance with my attitude of discouragement."

"Then she simply sent it herself."

"Whom do you mean by 'she'?"

"Mrs. Burrage, of course."

"I thought you might mean Verena," said Mrs. Luna, casually.

"Verena — to him? Why in the world —?" and Olive gave the cold glare with which her sister was familiar.

"Why in the world not — since she knows him?"

"She had seen him twice in her life before last night, when she met him for the third time and spoke to him."

"Did she tell you that?"

"She tells me everything."

"Are you very sure?"

"Adeline Luna, what *do* you mean?" Miss Chancellor murmured.

"Are you very sure that last night was only the third time?" Mrs. Luna went on.

Olive threw back her head and swept her sister from her bonnet to her lowest flounce. "You have no right to hint at such a thing as that unless you know!"

"Oh, I know — I know, at any rate, more than you do!" And then Mrs. Luna, sitting with her sister, much withdrawn, in one of the windows of the big, hot, faded parlor of the boarding-house in Tenth street, where there was a rug before the chimney representing a Newfoundland dog saving a child from drowning, and a row of chromo-lithographs on the walls, imparted to her the impression she had received the evening before — the impression of Basil Ransom's keen curiosity about Verena Tarrant. Verena must have asked Mrs. Burrage to send him a card, and asked it without mentioning the fact to Olive — for wouldn't Olive certainly have remembered it? It was no use her saying that Mrs. Burrage might have sent it of her own movement, because she wasn't aware of his existence, and why should she be? Basil Ransom himself had told her he didn't know Mrs. Burrage. Mrs. Luna knew whom he knew and whom he didn't, or at least the sort of people, and they were not the sort that belonged to the Wednesday Club. That was one reason why she didn't care about him for any intimate relation — that he didn't seem to have any taste for making nice friends. Olive would know what *her* taste was in this respect, though it wasn't that young woman's own any more than his. It was positive that the suggestion about the card could only have come from Verena. At any rate Olive could easily ask, or if she was afraid of her telling a fib she could ask Mrs. Burrage. It was true Mrs. Burrage might have been put on her guard by Verena, and would perhaps invent some other account of the matter; therefore Olive had better just believe what *she* believed, that Verena had secured his presence at the party and had had private reasons for doing so. It is to be feared that Ransom's remark to Mrs. Luna the night before about her having lost her head was near to the mark; for if she had not been blinded by her rancor, she would have guessed the horror with which she inspired her sister when she spoke in that off-hand way of Verena's lying and Mrs. Burrage's lying. Did people lie like that in Mrs. Luna's set? It was Olive's plan of life not to lie, and attributing a similar disposition to people she liked, it was impossible for her to believe that Verena had had the intention of deceiving her. Mrs. Luna, in a calmer hour, might also have divined that Olive would make her private comments on the strange story of Basil Ransom's having made up to Verena out of pique at Adeline's rebuff; for this was the account of the matter that she

now offered to Miss Chancellor. Olive did two things: she listened intently and eagerly, judging there was distinct danger in the air (which, however, she had not wanted Mrs. Luna to tell her, having perceived it for herself the night before); and she saw that poor Adeline was fabricating fearfully, that the "rebuff" was altogether an invention. Mr. Ransom was evidently preoccupied with Verena, but he hadn't needed Mrs. Luna's cruelty to make him so. So Olive maintained an attitude of great reserve; she didn't take upon herself to announce that her own version was that Adeline, for reasons absolutely imperceptible to others, had tried to catch Basil Ransom, had failed in her attempt, and, furious at seeing Verena preferred to a person of her importance (Olive remembered the *spretæ injuria formæ*), now wished to do both him and the girl an ill turn. This would be accomplished if she could induce Olive to interfere. Miss Chancellor was conscious of an abundant readiness to interfere, but it was not because she cared for Adeline's mortification. I am not sure, even, that she did not think her *fiasco* but another illustration of her sister's general uselessness, and rather despise her for it; being perfectly able at once to hold that nothing is baser than the effort to entrap a man, and to think it very ignoble to have to renounce it because you can't. Olive kept these reflections to herself, but she went so far as to say to her sister that she didn't see where the "pique" came in. How could it hurt Adeline that he should turn his attention to Verena? What was Verena to her?

"Why, Olive Chancellor, how can you ask?" Mrs. Luna boldly responded. "Isn't Verena everything to you, and aren't you everything to me, and wouldn't an attempt — a successful one — to take Verena away from you knock you up fearfully, and shouldn't I suffer, as you know I suffer, by sympathy?"

I have said that it was Miss Chancellor's plan of life not to lie, but such a plan was compatible with a kind of consideration for the truth which led her to shrink from producing it on poor occasions. So she didn't say, "Dear me, Adeline, what humbug! you know you hate Verena and would be very glad if she were drowned!" She only said, "Well, I see; but it's very roundabout." What she did see was that Mrs. Luna was eager to help her to stop off Basil Ransom from "making head," as the phrase was; and the fact that her motive was spite, and not tenderness for the young women in Charles street, would not make her assistance less welcome if the danger were real. She herself had a nervous dread, but she had that about everything; still, Adeline had perhaps seen something, and what in the world

did she mean by her reference to Verena's having had secret meetings? When pressed on this point, Mrs. Luna could only say that she didn't pretend to give definite information, and she wasn't a spy anyway, but that the night before he had positively flaunted in her face his admiration for the girl, his enthusiasm for her way of standing up there. Of course he hated her ideas, but he was quite conceited enough to think she would give them up. Perhaps it was all directed at *her* — as if she cared! It would depend a good deal on the girl herself; certainly, if there was any likelihood of Verena's being affected, she should advise Olive to look out. She knew best what to do; it was only Adeline's duty to give her the benefit of her own impression, whether she was thanked for it or not. She only wished to put her on her guard, and it was just like Olive to receive such information so coldly; she was the most disappointing woman she knew.

Miss Chancellor's coldness was not diminished by this rebuke; for it had come over her that, after all, she had never opened herself at that rate to Adeline, had never let her see the real intensity of her desire to keep the sort of danger there was now a question of, away from Verena, had given her no warrant for regarding her as her friend's keeper; so that she was taken aback by the flatness of Mrs. Luna's assumption that she was ready to enter into a conspiracy to circumvent and frustrate the girl. Olive put on all her majesty to dispel this impression, and if she couldn't help being aware that she made Mrs. Luna still angrier, on the whole, than at first, she felt that she would much rather disappoint her than give herself away to her — especially as she was intensely eager to profit by her warning!

xxx.

MRS. LUNA would have been still less satisfied with the manner in which Olive received her proffered assistance, had she known how many confidences that reticent young woman might have made her in return. Olive's whole life now was a matter for whispered communications; she felt this herself, as she sought the privacy of her own apartment, after her interview with her sister. She had for the moment time to think; Verena having gone out with Mr. Burrage, who had made an appointment the night before to call for her to drive at that early hour. They had other engagements in the afternoon — the principal of which was to meet a group of earnest people at the house of one of the great local promoters. Olive would whisk Verena off to these appointments directly after lunch; she flat-

tered herself that she could arrange matters so that there would not be half an hour in the day during which Basil Ransom, complacently calling, would find the Bostonians in the house. She had had this well in mind when, at Mrs. Burrage's, she was driven to give him their address; and she had had it also in mind that she would ask Verena, as a special favor, to accompany her back to Boston on the next day but one, which was the morning of the morrow. There had been considerable talk of her staying a few days with Mrs. Burrage — staying on after her own departure; but Verena backed out of it spontaneously, seeing how the idea worried her friend. Olive had accepted the sacrifice, and their visit to New York was now cut down, in intention, to four days, one of which, the moment she perceived whither Basil Ransom was tending, Miss Chancellor promised herself also to suppress. She had not mentioned that to Verena yet; she hesitated a little, having a slightly bad conscience about the concessions she had already obtained from her friend. Verena made such concessions with a generosity which caused one's heart to ache for admiration, even while one asked for them; and never once had Olive known her to demand the smallest credit for any virtue she showed in this way, or to bargain for an instant about any effort she made to oblige. She had been delighted with the idea of spending a week under Mrs. Burrage's roof; she had said, too, that she believed her mother would die happy (not that there was the least prospect of Mrs. Tarrant's dying) if she could hear of her having such an experience as that; and yet, perceiving how solemn Olive looked about it, how she blanched and brooded at the prospect, she had offered to give it up, with a smile sweeter, if possible, than any that had ever sat in her eyes. Olive knew what that meant for her, knew what a power of enjoyment she still had, in spite of the tension of their common purpose, their vital work, which had now, as they equally felt, passed into the stage of realization, of fruition; and that is why her conscience rather pricked her, as I have said, for consenting to this further act of renunciation, especially as their position seemed really so secure, on the part of one who had already given herself away so sublimely.

Secure as their position might be, Olive called herself a blind idiot for having, in spite of all her first shrinkings, agreed to bring Verena to New York. Verena had jumped at the invitation, the very unexpectedness of which on Mrs. Burrage's part — it was such an odd idea to have come to a mere worldling — carried a kind of persuasion with it. Olive's im-

mediate sentiment had been an instinctive general fear; but, later, she had dismissed that as unworthy; she had decided (and such a decision was nothing new) that where their mission was concerned they ought to face everything. Such an opportunity would contribute too much to Verena's reputation and authority to justify a refusal at the bidding of apprehensions which were after all only vague. Olive's specific terrors and dangers had by this time very much blown over; Basil Ransom had given no sign of life for ages, and Henry Burrage had certainly got his quietus before they went to Europe. If it had occurred to his mother that she might convert Verena into the animating principle of a big soirée, she was at least acting in good faith, for it could be no more her wish to-day that he should marry Selah Tarrant's daughter than it was her wish a year before. And then they should do some good to the benighted, the most benighted, the fashionable benighted; they should perhaps make them furious—there was always some good in that. Lastly, Olive was conscious of a personal temptation in the matter; she was not insensible to the pleasure of appearing in a distinguished New York circle as a representative woman, an important Bostonian, the prompter, colleague, associate of one of the most original girls of the time. Basil Ransom was the person she had least expected to meet at Mrs. Burrage's; it had been her belief that they might easily spend four days in a city of more than a million of inhabitants without that disagreeable accident. But it had occurred; nothing was wanting to make it seem serious; and, setting her teeth, she shook herself, morally, hard, for having fallen into the trap of fate. Well, she would scramble out, with only a scare, probably. Henry Burrage was very attentive; but somehow she didn't fear him now; and it was only natural he should feel that he couldn't be polite enough, after they had consented to be exploited in that worldly way by his mother. The other danger was the worst; the palpitation of her strange dread, the night of Miss Birdseye's party, came back to her. Mr. Burrage seemed, indeed, a protection; she reflected, with relief, that it had been arranged that after taking Verena to drive in the Park and see the Museum of Art in the morning, they should in the evening dine with him at Delmonico's (he was to invite another gentleman) and go afterwards to the German opera. Olive had kept all this to herself, as I have said; revealing to her sister neither the vividness of her prevision that Basil Ransom would look blank when he came down to Tenth street and learned they had flitted, nor the eagerness of her desire

just to find herself once more in the Boston train. It had been only that prevision that had sustained her when she gave Mr. Ransom their number.

Verena came to her room shortly before lunch, to let her know she had returned; and while they sat there waiting to stop their ears when the gong announcing the repast was beaten, at the foot of the stairs, by a negro in a white jacket, she narrated to her friend her adventures with Mr. Burrage—expatiated on the beauty of the park, the splendor and interest of the Museum, the wonder of the young man's acquaintance with everything it contained, the swiftness of his horses, the softness of his English cart, the pleasure of rolling at that pace over roads as firm as marble, the entertainment he promised them for the evening. Olive listened in serious silence; she saw Verena was quite carried away; of course she hadn't gone so far with her without knowing that phase.

"Did Mr. Burrage try to make love to you?" Miss Chancellor inquired at last, without a smile.

Verena had taken off her hat to arrange her feather, and as she placed it on her head again, her uplifted arms making a frame for her face, she said: "Yes, I suppose it was meant for love."

Olive waited for her to tell more, to tell how she had treated him, kept him in his place, made him feel that that question was over long ago; but as Verena gave her no further information she didn't insist, conscious as she always was that in such a relation as theirs there should be a great respect on either side for the liberty of each. She had never yet infringed on Verena's, and of course she wouldn't begin now. Moreover, with the request that she meant presently to make of her, she felt that she must be discreet. She wondered whether Henry Burrage were really going to begin again; whether his mother had only been acting in his interest in getting them to come on. Certainly, the bright spot in such a prospect was that if she listened to him she couldn't listen to Basil Ransom; and he *had* told Olive herself last night, when he put them into their carriage, that he hoped to prove to her yet that he had come round to her gospel. But the old sickness stole upon her again, the faintness of discouragement, as she asked herself why in the name of pity Verena should listen to any one at all (but her). Again it came over her, when she saw the brightness, the happy look, the girl brought back, as it had done in the earlier months, that the great trouble was that weak spot of Verena's, that sole infirmity and subtle flaw, which she had expressed to her very soon

after they began to live together, in saying (she remembered it through the ineffaceable impression made by her friend's avowal), "I'll tell you what is the matter with you — you don't dislike men as a class!" Verena had replied on this occasion, "Well, no, I don't dislike them when they are pleasant!" As if organized selfishness could ever be pleasant! Olive disliked them most when they were least unpleasant. After a little, at present, she remarked, referring to Henry Burrage: "It is not right of him, not decent, after your making him feel how, while he was at Cambridge, he tormented you, wearied you."

"Oh, I didn't show anything," said Verena gayly. "I am learning to dissimulate," she added in a moment. "I suppose you have to as you go along. I pretend not to notice."

At this moment the gong sounded for lunch, and the two young women covered up their ears, face to face, Verena with her quick smile, Olive with her pale patience. When they could hear themselves speak, the latter said abruptly:

"How did Mrs. Burrage come to invite Mr. Ransom to her party? He told Adeline he had never seen her before."

"Oh, I asked her to send him an invitation — after she had written to me, to thank me, when it was definitely settled we should come on. She asked me in her letter if there were any friends of mine in the city to whom I should like her to send cards, and I mentioned Mr. Ransom."

Verena spoke without a single instant's hesitation, and the only sign of embarrassment she gave was that she got up from her chair, passing in this manner a little out of Olive's scrutiny. It was easy for her not to falter, because she was glad of the chance. She wanted to be very simple in all her relations with her friend, and of course it wasn't simple so soon as she began to keep things back. She could at any rate keep back as little as possible, and she felt as if she were making up for a dereliction when she answered Olive's inquiry so promptly.

"You never told me of that," Miss Chancellor remarked, in a low tone.

"I didn't want to. I know you don't like him, and I thought it would give you pain. Yet I wanted him to be there — I wanted him to hear."

"What does it matter — why should you care about him?"

"Well, because he is so awfully opposed!"

"How do you know that, Verena?"

At this point Verena began to hesitate. It was not, after all, so easy to keep back only a little; it appeared rather as if one must either tell everything or hide everything. The

former course had already presented itself to her as unduly harsh; it was because it seemed so that she had ended by keeping the incident of Basil Ransom's visit to Monadnoc Place buried in unspoken, in unspeakable, considerations, the only secret she had in the world — the only thing that was all her own. She was so glad to say what she could without betraying herself that it was only after she had spoken that she perceived there was a danger of Olive's pushing the inquiry to the point where, to defend herself as it were, she should be obliged to practice a positive deception; and she was conscious at the same time that the moment her secret was threatened it became dearer to her. She began to pray silently that Olive might not push; for it would be odious, it would be impossible, to defend herself by a lie. Meanwhile, however, she had to answer, and the way she answered was by exclaiming, much more quickly than the reflections I note might have appeared to permit, "Well, if you can't tell from his appearance! He's the type of the reactionary."

Verena went to the toilet-glass to see that she had put on her hat properly, and Olive slowly got up, in the manner of a person not in the least eager for her lunch. "Let him react as he likes — for heaven's sake don't mind him!" That was Miss Chancellor's rejoinder, and Verena felt that it didn't say all that was in her mind. She wished she would come down to lunch, for she, at least, was honestly hungry. She even suspected Olive had an idea she was afraid to express, such distress it would bring with it. "Well, you know, Verena, this isn't our *real* life — it isn't our work," Olive went on.

"Well, no, it isn't, certainly," said Verena, not pretending at first that she did not know what Olive meant. In a moment, however, she added, "Do you refer to this social intercourse with Mr. Burrage?"

"Not to that only." Then Olive asked abruptly, looking at her, "How did you know his address?"

"His address?"

"Mr. Ransom's — to enable Mrs. Burrage to invite him?"

They stood for a moment interchanging a gaze. "It was in a letter I got from him."

At these words there came into Olive's face an expression which made her companion cross over to her directly and take her by the hand. But the tone was different from what Verena expected when she said, with cold surprise: "Oh, you are in correspondence!" It showed an immense effort of self-control.

"He wrote to me once — I never told you," Verena rejoined, smiling. She felt that her friend's strange, uneasy eyes searched very

far; a little more and they would go to the very bottom. Well, they might go if they would; she didn't, after all, care so much about her secret as that. For the moment, however, Verena didn't learn what Olive had discovered, inasmuch as she only remarked presently that it was time to go down to lunch. As they descended the staircase she put her arm into Miss Chancellor's and perceived that she was trembling.

Of course there were plenty of people in New York interested in the uprising, and Olive had made appointments, in advance, which filled the whole afternoon. Everybody wanted to meet them, and wanted everybody else to do so, and Verena saw they could easily have quite a vogue, if they only chose to stay and work that vein. Very likely, as Olive said, it wasn't their real life, and people didn't seem to have such a grip of the movement as they had in Boston; but there was something in the air that carried one along, and a sense of vastness and variety, of the infinite possibilities of a great city, which — Verena hardly knew whether she ought to confess it to herself — might in the end make up for the want of the Boston earnestness. Certainly, the people seemed very much alive, and there was no other place where so many cheering reports could flow in, owing to the number of electric feelers that seemed to stretch out everywhere. The principal center appeared to be Mrs. Croucher's, on Fifty-sixth street, where there was an informal gathering of sympathizers, who didn't seem as if they could forgive her when they learned that she had been speaking the night before in a circle in which they none of them were acquainted. Certainly, they were very different from the group she had addressed at Mrs. Burrage's, and Verena heaved a thin, private sigh, expressive of some helplessness, as she thought what a big, complicated world it was, and how it appeared to contain a little of everything. There was a general demand that she should repeat her address in a more congenial atmosphere; to which she replied that Olive made her engagements for her, and that as the address had been intended just to lead people on, perhaps she would think Mrs. Croucher's friends had reached a higher point. She was as cautious as this because she saw that Olive was now just straining to get out of the city; she didn't want to say anything that would tie them. When she felt her trembling that way before lunch, it made her quite sick to realize how much her friend was wrapped up in her — how terribly she would suffer from the least deviation. After they had started for their round of engagements, the very first thing Verena spoke of in the carriage (Olive had taken one, in her liberal way, for the whole

time) was the fact that her correspondence with Mr. Ransom, as her friend had called it, had consisted on his part of only one letter. It was a very short one, too; it had come to her a little more than a month before. Olive knew she got letters from gentlemen; she didn't see why she should attach such importance to this one. Miss Chancellor was leaning back in the carriage, very still, very grave, with her head against the cushioned surface, only turning her eyes towards the girl.

"You attach importance yourself; otherwise you would have told me."

"I knew you wouldn't like it — because you don't like *him*."

"I don't think of him," said Olive; "he's nothing to me." Then she added suddenly, "Have you noticed that I am afraid to face what I don't like?"

Verena couldn't say that she had, and yet it was not just on Olive's part to speak as if she were an easy person to tell such a thing to; the way she lay there, white and weak, like a wounded creature, sufficiently proved the contrary. "You have such a fearful power of suffering," she replied in a moment.

To this at first Miss Chancellor made no rejoinder; but after a little she said, in the same attitude, "Yes, *you* could make me."

Verena took her hand and held it awhile. "I never will, till I have been through everything myself."

"*You* were not made to suffer — you were made to enjoy," Olive said, in very much the same tone in which she had told her that what was the matter with her was that she didn't like men as a class, — a tone which implied that the contrary would have been much more natural and perhaps rather higher. Perhaps it would; but Verena was unable to rebut the charge; she felt this, as she looked out of the window of the carriage at the bright, amusing city, where the elements seemed so numerous, the animation so immense, the shops so brilliant, the women so strikingly dressed, and knew that these things quickened her curiosity, all her pulses.

"Well, I suppose I mustn't presume on it," she remarked, glancing back at Olive with her natural sweetness, her uncontradicting grace.

That young lady lifted her hand to her lips — held it there a moment; the movement seemed to say, "When you are so divinely docile, how can I help the dread of losing you?" This idea, however, was unspoken, and Olive Chancellor's uttered words, as the carriage rolled on, were different.

"Verena, I don't understand why he wrote to you."

"He wrote to me because he likes me. Perhaps you'll say you don't understand why

he likes me," the girl continued, laughing.

"He liked me the first time he saw me."

"Oh, that time!" Olive murmured.

"And still more the second."

"Did he tell you that in his letter?" Miss Chancellor inquired.

"Yes, my dear, he told me that. Only he expressed it more gracefully." Verena was very happy to say that; a written phrase of Basil Ransom's sufficiently justified her.

"It was my intuition—it was my foreboding!" Olive exclaimed, closing her eyes.

"I thought you said you didn't dislike him."

"It isn't dislike—it's simple dread. Is that all there is between you?"

"Why, Olive Chancellor, what do you think?" Verena asked, feeling now distinctly like a coward. Five minutes afterwards she said to Olive that if it would give her pleasure they would leave New York on the morrow, without taking a fourth day; and as soon as she had done so she felt better, especially when she saw how gratefully Olive looked at her for the concession, how eagerly she rose to the offer in saying, "Well, if you *do* feel that it isn't our own life—our very own!"

It was with these words, and others besides, and with an unusually weak, indefinite kiss, as if she wished to protest that, after all, a single day didn't matter, and yet accepted the sacrifice and was a little ashamed of it—it was in this manner, I say, that the agreement as to an immediate retreat was sealed. Verena could not shut her eyes to the fact that for a month she had been less frank, and if she wished to do penance, this abbreviation of their pleasure in New York, even if it made her almost completely miss Basil Ransom, was easier than to tell Olive just now that the letter was *not* all, that there had been a long visit, a talk, and a walk besides, which she had been covering up for ever so many weeks. And of what consequence, anyway, was the missing? Was it such a pleasure to converse with a gentleman who only wanted to let you know—and why he should want it so much Verena couldn't guess—that he thought you quite ridiculous? Olive took her from place to place, and she ended by forgetting everything but the present hour and the bigness and variety of New York, and the entertainment of rolling about in a carriage with silk cushions, and meeting new faces, new expressions of curiosity and sympathy, assurances that one was watched and followed. Mingled with this was a bright consciousness, sufficient for the moment, that one was moreover to dine at Delmonico's and go to the German opera. There was enough of the epicurean in Verena's composition to make it easy for her in certain conditions to live only for the hour.

XXXI.

WHEN she returned with her companion to the establishment in Tenth street, she saw two notes lying on the table in the hall; one of which she perceived to be addressed to Miss Chancellor, the other to herself. The hand was different, but she recognized both. Olive was behind her on the steps, talking to the coachman about sending another carriage for them in half an hour (they had left themselves but just time to dress); so that she simply possessed herself of her own note and ascended to her room. As she did so she felt that all the while she had known it would be there, and was conscious of a kind of treachery, of unfriendly willfulness, in not being more prepared for it. If she could roll about New York the whole afternoon and forget that there might be difficulties ahead, that didn't alter the fact that there *were* difficulties, and that they might even become considerable—might not be settled by her simply going back to Boston. Half an hour later, as she drove up the Fifth Avenue with Olive (there seemed to be so much crowded into that one day), smoothing her light gloves, wishing her fan were a little nicer, and proving by the answering, familiar brightness with which she looked out on the lamp-lighted streets that, whatever theory might be entertained as to the genesis of her talent and her personal nature, the blood of the lecture-going, night-walking Tarrants did distinctly flow in her veins; as the pair proceeded, I say, to the celebrated restaurant, at the door of which Mr. Burrage had promised to be in vigilant expectancy of their carriage, Verena found a sufficiently gay and natural tone of voice for saying to her friend that Mr. Ransom had called upon her while they were out, and had left a note in which there were many compliments for Miss Chancellor.

"That's wholly your own affair, my dear," Olive replied, with a melancholy sigh, gazing down the vista of Fourteenth street (which they happened just then to be traversing, with much agitation) toward the queer barrier of the elevated railway.

It was nothing new to Verena that if the great striving of Olive's life was for justice, she yet sometimes failed to arrive at it in particular cases; and she reflected that it was rather late for her to say, like that, that Basil Ransom's letters were only his correspondent's business. Had not his kinswoman quite made the subject her own during their drive that afternoon? Verena determined now that her companion should hear all there was to be heard about the letter; asking herself whether, if she told her at present more than she cared

to know, it wouldn't make up for her hitherto having told her less. "He brought it with him, written, in case I should be out. He wants to see me to-morrow — he says he has ever so much to say to me. He proposes an hour — says he hopes it won't be inconvenient for me to see him about eleven in the morning; thinks I may have no other engagement so early as that. Of course our return to Boston settles it," Verena added, with serenity.

Miss Chancellor said nothing for a moment; then she replied, "Yes, unless you invite him to come on with you in the train."

"Why, Olive, how bitter you are!" Verena exclaimed, in genuine surprise.

Olive could not justify her bitterness by saying that her companion had spoken as if she were disappointed, because Verena hadn't. So she simply remarked, "I don't see what he can have to say to you — that would be worth your hearing."

"Well, of course, it's the other side. He has got it on the brain!" said Verena, with a laugh which seemed to relegate the whole matter to the category of the unimportant.

"If we should stay, would you see him — at eleven o'clock?" Olive inquired.

"Why do you ask that — when I have given it up?"

"Do you consider it such a tremendous sacrifice?"

"No," said Verena, good-naturedly; "but I confess I am curious."

"Curious, — how do you mean?"

"Well, to hear the other side."

"Oh, mercy!" Olive Chancellor murmured, turning her face upon her.

"You must remember I have never heard it." And Verena smiled into her friend's wan gaze.

"Do you want to hear all the infamy that is in the world?"

"No, it isn't that; but the more he should talk, the better chance he would give me. I guess I can meet him."

"Life is too short. Leave him as he is."

"Well," Verena went on, "there are many I haven't cared to move at all, whom I might have been more interested in than in him. But to make him give in just at two or three points — that I should like better than anything I *have* done."

"You have no business to enter upon a contest that isn't equal; and it wouldn't be, with Mr. Ransom."

"The inequality would be that I have right on my side."

"What is that — for a man? For what was their brutality given them, but to make that up?"

"I don't think he's brutal; I should like to see," said Verena gayly.

Olive's eyes lingered a little on her own; then they turned away, vaguely, blindly, out of the carriage-window, and Verena made the reflection that she looked strangely little like a person who was going to dine at Delmonico's. How terribly she worried about everything, and how tragical was her nature; how anxious, suspicious, exposed to subtle influences! In their long intimacy Verena had come to revere most of her friend's peculiarities; they were a proof of her depth and devotion, and were so bound up with what was noble in her that she was rarely provoked to criticise them separately. But at present, suddenly, Olive's earnestness began to appear as inharmonious with the scheme of the universe as if it had been a broken edge; and she was positively glad she had not told her about Basil Ransom's appearance in Monadnoc Place. If she worried so about what she knew, how much would she not have worried about the rest! Verena had by this time made up her mind that her acquaintance with Mr. Ransom was the most episodic, most superficial, most unimportant, of all possible relations.

Olive Chancellor watched Henry Burrage very closely that evening; she had a special reason for doing so, and her entertainment, during the successive hours, was derived much less from the delicate little feast, over which this insinuating proselyte presided, in the brilliant public room of the establishment, where French waiters flitted about on deep carpets, and parties at neighboring tables excited curiosity and conjecture, or even from the magnificent music of "Lohengrin," than from a secret process of comparison and verification, which shall presently be explained to the reader. As some discredit has possibly been thrown upon her impartiality, it is a pleasure to be able to say that on her return from the opera she took a step dictated by an earnest consideration of justice — of the promptness with which Verena had told her of the note left by Basil Ransom in the afternoon. She drew Verena into her room with her. The girl, on the way back to Tenth street, had spoken only of Wagner's music, of the singers, the orchestra, the immensity of the house, her tremendous pleasure. Olive could see how fond she might become of New York, where that kind of pleasure was so much more in the air.

"Well, Mr. Burrage was certainly very kind to us — no one could have been more thoughtful," Olive said; and she colored a little at the look with which Verena greeted this tribute of appreciation from Miss Chancellor to a single gentleman.

"I am so glad you were struck with that,

because I do think we have been a little rough to him." Verena's *we* was angelic. "He was particularly attentive to *you*, my dear; he has got over me. He looked at you so sweetly. Dearest Olive, if you marry him —!" And Miss Tarrant, who was in high spirits, embraced her companion, to check her own silliness.

"He wants you to stay there, all the same. They haven't given *that* up," Olive remarked, turning to a drawer, out of which she took a letter.

"Did he tell you that, pray? He said nothing more about it to me."

"When we came in this afternoon I found this note from Mrs. Burrage. You had better read it." And she presented the document, open, to Verena.

The purpose of it was to say that Mrs. Burrage could really not reconcile herself to the loss of Verena's visit, on which both she and her son had counted so much. She was sure they would be able to make it as interesting to Miss Tarrant as it would be to themselves. She, Mrs. Burrage, moreover, felt as if she hadn't heard half she wanted about Miss Tarrant's views, and there were so many more, who were present at the address, who had come to her that afternoon (losing not a minute, as Miss Chancellor could see), to ask how in the world they too could learn more — how they could get at the fair speaker and question her about certain details. She hoped so much, therefore, that even if the young ladies should be unable to alter their decision about the visit, they might at least see their way to staying over long enough to allow her to arrange an informal meeting for some of these poor thirsty souls. Might she not at least talk over the question with Miss Chancellor? She gave her notice that she would attack her on the subject of the visit too. Might she not see her on the morrow, and might she ask of her the very great favor that the interview should be at Mrs. Burrage's own house? She had something very particular to say to her, as regards which perfect privacy was a great consideration, and Miss Chancellor would doubtless recognize that this would be best secured under Mrs. Burrage's roof. She would therefore send her carriage for Miss Chancellor at any hour that would be convenient to the latter. She really thought much good might come from their having a satisfactory talk.

Verena read this epistle with much deliberation; it seemed to her mysterious, and confirmed the idea she had received the night before — the idea that she had not got quite a correct impression of this clever, worldly, curious woman on the occasion of her visit to Cambridge, when they met her at her son's rooms.

As she gave the letter back to Olive she said to her, "That's why he didn't seem to believe we are really leaving to-morrow. He knows she had written that, and he thinks it will keep us."

"Well, if I were to say it may — should you think me too miserably changeful?"

Verena stared with all her candor, and it was so very queer that Olive should now wish to linger that the sense of it, for the moment, almost covered the sense of its being pleasant. But that came out after an instant, and she said, with great honesty, "You needn't drag me away for consistency's sake. It would be absurd for me to pretend that I don't like being here."

"I think perhaps I *ought* to see her." Olive was very thoughtful.

"How lovely it must be to have a secret with Mrs. Burrage!" Verena exclaimed.

"It won't be a secret from you."

"Dearest, you needn't tell me unless you want." Verena went on thinking of her own unimparted knowledge.

"I thought it was our plan to divide everything. It was certainly mine."

"Ah, don't talk about plans!" Verena exclaimed, rather ruefully. "You see, if we *are* going to stay to-morrow, how foolish it was to have any. There is more in her letter than is expressed," she went on, as Olive appeared to be studying in her face the reasons for and against making this concession to Mrs. Burrage, and that was rather embarrassing.

"I thought it over all the evening — so that if now you will consent, we will stay."

"Darling — what a spirit you have got! All through all those dear little dishes — all through 'Lohengrin!' As I haven't thought it over at all, you must settle it. You know I am not difficult."

"And would you go and stay with Mrs. Burrage, after all, if she should say anything to me that seems to make it desirable?"

Verena smiled, broke into a laugh. "You know it's not our *real* life!"

Olive said nothing for a moment; then she replied: "Don't think *I* can forget that. If I suggest a deviation, it's only because it sometimes seems to me that perhaps, after all, almost anything is better than the form reality *may* take with us." This was slightly obscure, as well as very melancholy, and Verena was relieved when her companion added, in a moment, "You must think me strangely inconsequent"; for this gave her a chance to reply, soothingly:

"Why, you don't suppose I expect you to keep always screwed up! I will stay a week with Mrs. Burrage, or a fortnight, or a month, or anything you like," she went on; "any-

thing it may seem to you best to tell her after you have seen her."

"Do you leave it all to me? You don't give me much help," Olive said.

"Help to what?"

"Help to help *you*."

"I don't want any help; I am quite strong enough!" Verena cried, gayly. The next moment she added, in an appeal half comical, half touching, "My dear colleague, why do you make me say such conceited things?"

"And if you do stay—just even to-morrow—shall you be—very much of the time—with Mr. Ransom?"

As Verena for the moment appeared ironically-minded, she might have found a fresh subject for hilarity in the tremulous, tentative tone in which Olive made this inquiry. But it had not that effect; it produced the first manifestation of impatience—the first, literally, and the first note of reproach—that had occurred in the course of their remarkable intimacy. The color rose to Verena's cheek, and her eye for an instant looked moist.

"I don't know what you always think, Olive, nor why you don't seem able to trust me. You didn't, from the first, with gentlemen. Perhaps you were right then—I don't say; but surely, it is very different now. I don't think I ought to be suspected so much. Why have you a manner as if I had to be watched, as if I wanted to run away with every man that speaks to me? I should think I had proved how little I care. I thought you had discovered by this time that I am serious; that I have dedicated my life; that there is something unspeakably dear to me. But you begin again, every time—you don't do me justice. I must take everything that comes. I mustn't be afraid. I thought we had agreed that we were to do our work in the midst of the world, facing everything, keeping straight on, always taking hold. And now that it all opens out so magnificently, and victory is really sitting on our banners, it is strange of you to doubt of me, to suppose I am not more wedded to all our old dreams than ever. I told you the first time I saw you that I could renounce, and knowing better to-day, perhaps, what that means, I am ready to say it again. That I can, that I will! Why, Olive Chancellor," Verena cried, panting a moment, with her eloquence, and with the rush of a culminating idea, "haven't you discovered by this time that I *have* renounced?"

The habit of public speaking, the training, the practice, in which she had been immersed, enabled Verena to unroll a coil of propositions dedicated even to a private interest, with the most touching, most cumulative effect. Olive

was completely aware of this, and she stilled herself, while the girl uttered one soft, pleading sentence after another, into the same rapt attention she was in the habit of sending up from the benches of an auditorium. She looked at Verena fixedly, felt that she was stirred to her depths, that she was exquisitely passionate and sincere, that she was a quivering, spotless, consecrated maiden, that she really had renounced, that they were both safe, and that her own injustice and indelicacy had been great. She came to her slowly, took her in her arms and held her long—giving her a silent kiss. From which Verena knew that she believed her.

XXXII.

THE hour that Olive proposed to Mrs. Babbage, in a note sent early the next morning, for the interview to which she consented to lend herself, was the stroke of noon; this period of the day being chosen in consequence of a prevision of many subsequent calls upon her time. She remarked in her note that she didn't wish any carriage to be sent for her, and she surged and swayed up the Fifth Avenue on one of the convulsive, clattering omnibuses which circulated in that thoroughfare. One of her reasons for mentioning twelve o'clock had been that she knew Basil Ransom was to call at Tenth street at eleven, and (as she supposed he didn't intend to stay all day) this would give her time to see him come and go. It had been tacitly agreed between them, the night before, that Verena was quite firm enough in her faith to submit to his visit, and that such a course would be much more dignified than dodging it. This understanding passed from one to the other during that dumb embrace which I have described as taking place before they separated for the night. Shortly before noon, Olive, passing out of the house, looked into the big sunny double-parlor, where, in the morning, with all the husbands absent for the day, and all the wives and spinsters launched upon the town, a young man desiring to hold a debate with a young lady might enjoy every advantage in the way of a clear field. Basil Ransom was still there; he and Verena, with the place to themselves, were standing in the recess of the window, their backs presented to the door. If he had got up, perhaps he was going, and Olive, softly closing the door again, waited a little in the hall, ready to pass into the back part of the house if she should hear him coming out. No sound, however, reached her ear; apparently he did mean to stay all day, and she should find him there on her return. She left the house, knowing they were looking at

her from the window as she descended the steps, but feeling she could not bear to see Basil Ransom's face. As she walked, averting her own, toward the Fifth Avenue, on the sunny side, she was barely conscious of the loveliness of the day, the perfect weather, all suffused and tinted with spring, which sometimes descends upon New York when the winds of March have been stilled; she was given up only to the remembrance of that moment when *she* had stood at a window (the second time he came to see her in Boston), and watched Basil Ransom pass out with Adeline — with Adeline, who had seemed capable then of getting such a hold on him, but had proved as ineffectual in this respect as she was in every other. She recalled the vision she had allowed to dance before her as she saw the pair cross the street together, laughing and talking, and how it seemed to interpose itself against the fears which already then — so strangely — haunted her. Now that she saw it so fruitless — and that Verena, moreover, had turned out really so great — she was rather ashamed of it; she felt associated, however remotely, in the reasons which had made Mrs. Luna tell her so many fibs the day before, and there could be nothing elevating in that. As for the other reasons why her fidgety sister had failed and Mr. Ransom had held his own, of course, naturally Miss Chancellor didn't like to think of them.

If she had wondered what Mrs. Burrage wished so particularly to talk about, she waited some time for the clearing-up of the mystery. During this interval she sat in a remarkably pretty boudoir, where there were flowers and faïences and little French pictures, and watched her hostess revolve round the subject in circles, the vagueness of which she tried to dissimulate. Olive believed she was a person who never could enjoy asking a favor, especially of a votary of the new ideas; and that was evidently what was coming. She had asked one already, but that had been handsomely paid for; the note from Mrs. Burrage which Verena found awaiting her in Tenth street, on her arrival, contained the largest cheque this young woman had ever received for an address. The request that hung fire had reference to Verena too, of course; and Olive needed no prompting to feel that her friend's being a young person who took money could not make Mrs. Burrage's present effort more agreeable. To this taking of money (for when it came to Verena it was as if it came to her as well) she herself was now completely injured; money was a tremendous force, and when one wanted to assault the wrong with every engine, one was happy not to lack the

sinews of war. She liked her hostess better this morning than she had liked her before; she had more than ever the air of taking all sorts of sentiments and views for granted between them; which could only be flattering to Olive so long as it was really Mrs. Burrage who made each advance, while her visitor sat watchful and motionless. She had a light, clever, familiar way of traversing an immense distance with a very few words, as when she remarked, "Well then, it is settled that she will come, and will stay till she is tired."

Nothing of the kind had been settled, but Olive helped Mrs. Burrage (this time) more than she knew by saying, "Why do you want her to visit you, Mrs. Burrage? why do you want her socially? Are you not aware that your son, a year ago, desired to marry her?"

"My dear Miss Chancellor, that is just what I wish to talk to you about. I am aware of everything; I don't believe you ever met any one who is aware of more things than I." And Olive had to believe that, as Mrs. Burrage held up, smiling, her intelligent, proud, good-natured, ugly head. "I knew a year ago that my son was in love with your friend, I know that he has been so ever since, and that in consequence he would like to marry her to-day. I dare say you don't like the idea of her marrying at all; it would break up a friendship which is so full of interest" (Olive wondered for a moment whether she had been going to say "so full of profit") "for you. This is why I hesitated; but since you are willing to talk about it, that is just what I want."

"I don't see what good it will do," Olive said.

"How can we tell till we try? I never give a thing up till I have turned it over in every sense."

It was Mrs. Burrage, however, who did most of the talking; Olive only inserted from time to time an inquiry, a protest, a correction, an ejaculation tinged with irony. None of these things checked or diverted her hostess; Olive saw more and more that she wished to please her, to win her over, to smooth matters down, to place them in a new and original light. She was very clever and (little Olive said to herself) absolutely unscrupulous, but she didn't think she was clever enough for what she had undertaken. This was neither more nor less, in the first place, than to persuade Miss Chancellor that she and her son were consumed with sympathy for the movement to which Miss Chancellor had dedicated her life. But how could Olive believe that, when she saw the type to which Mrs. Burrage belonged — a type into which

nature herself had inserted a face turned in the very opposite way from all earnest and improving things? People like Mrs. Burrage lived and fattened on abuses, prejudices, privileges, on the fixed cruel fashions of the past. It must be added, however, that if her hostess was a humbug, Olive had never met one who provoked her less; she was such a brilliant, genial, artistic one, with such a recklessness of perfidy, such a willingness to bribe you if she couldn't deceive you. She seemed to be offering Olive all the kingdoms of the earth if she would only exert herself to bring about a state of feeling on Verena Tarrant's part which would lead the girl to accept Henry Burrage.

"We know it's you — all, everything; that you can do what you please. You could decide it to-morrow with a word."

She had hesitated at first, and spoken of her hesitation, and it might have appeared that she would need all her courage to say to Olive, that way, face to face, that Verena was in such subjection to her. But she didn't look afraid; she only looked as if it were an infinite pity Miss Chancellor couldn't understand what immense advantages and rewards there would be for her in striking an alliance with the house of Burrage. Olive was so impressed with this, so occupied, even, in wondering what these mystic benefits might be, and whether after all there might not be a protection in them (from something worse), a fund of some sort that she and Verena might convert to a large use, setting aside the mother and son when once they had got what they had to give — she was so arrested, I say, with the vague daze of this vision, the sense of Mrs. Burrage's full hands, her eagerness, her thinking it worth while to flatter and conciliate, whatever her pretexts and pretensions might be, that she was almost insensible, for the time, to the strangeness of such a woman's coming round to a positive desire for a connection with the Tarrants. Mrs. Burrage had indeed explained this partly by saying that her son's condition was wearing her out, and that she would enter into anything that would make him happier, make him better. She was fonder of him than of the whole world beside, and it was an anguish to her to see him yearning for Miss Tarrant only to lose her. She made that charge about Olive's power in the matter in such a way that it seemed at the same time a tribute to her force of character.

"I don't know on what terms you suppose me to be with my friend," Olive returned, with considerable majesty. "She will do exactly as she likes in such a case as the one you allude to. She is absolutely free; you speak as if I were her keeper!"

Then Mrs. Burrage explained that of course she didn't mean that Miss Chancellor exercised a conscious tyranny; but only that Verena had a boundless admiration for her, saw through her eyes, took the impress of all her opinions, preferences. She was sure that if Olive would only take a favorable view of her son, Miss Tarrant would instantly throw herself into it. "It's very true that you may ask me," added Mrs. Burrage, smiling, "how you can take a favorable view of a young man who wants to marry the very person in the world you want most to keep unmarried!"

This description of Verena was of course perfectly correct; but it was not agreeable to Olive to have the fact in question so clearly perceived, even by a person who expressed it with an air intimating that there was nothing in the world *she* couldn't understand.

"Did your son know that you were going to speak to me about this?" Olive asked, rather coldly, waiving the question of her influence on Verena and the state in which she wished her to remain.

"Oh, yes, poor dear boy; we had a long talk yesterday, and I told him I would do what I could for him. Do you remember the little visit I paid to Cambridge last spring, when I saw you at his rooms? Then it was I began to perceive how the wind was setting; but yesterday we had a real *éclaircissement*. I didn't like it at all, at first; I don't mind telling you that now — now that I am really enthusiastic about it. When a girl is as charming, as original, as Miss Tarrant, it doesn't in the least matter who she is; she makes herself the standard by which you measure her; she makes her own position. And then Miss Tarrant has such a future!" Mrs. Burrage added, quickly, as if that were the last thing to be overlooked. "The whole question has come up again — the feeling that Henry tried to think dead, or at least dying, has revived, through the — I hardly know what to call it, but I really may say the unexpectedly great effect of her appearance here. She was really wonderful on Wednesday evening; prejudice, conventionality, every presumption there might be against her, had to fall to the ground. I expected a success, but I didn't expect what you gave us," Mrs. Burrage went on, smiling, while Olive noted her "you." "In short, my poor boy flamed up again; and now I see that he will never again care for any girl as he cares for that one. My dear Miss Chancellor, *j'en ai pris mon parti*, and perhaps you know my way of doing that sort of thing. I am not at all good at resigning myself, but I am excellent at taking up a craze. I haven't renounced, I have only changed sides. For or against, I must be a partisan. Don't you

know that kind of nature? Henry has put the affair into my hands, and you see I put it into yours. Do help me; let us work together."

This was a long, explicit speech for Mrs. Burrage, who dealt, usually, in the cursory and allusive; and she may very well have expected that Miss Chancellor would recognize its importance. What Olive did, in fact, was simply to inquire, by way of rejoinder, "Why did you ask us to come on?"

If Mrs. Burrage hesitated now, it was only for twenty seconds. "Simply because we are so interested in your work."

"That surprises me," said Olive, thoughtfully.

"I dare say you don't believe it; but such a judgment is superficial. I am sure we give proof in the offer we make," Mrs. Burrage remarked, with a good deal of point. "There are plenty of girls — without any views at all — who would be delighted to marry my son. He is very clever, and he has a large fortune. Add to that that he's an angel!"

That was very true, and Olive felt all the more that the attitude of these fortunate people, for whom the world was so well arranged just as it was, was very curious. But as she sat there it came over her that the human spirit had many variations, that the influence of the truth was great, and that there were such things in life as happy surprises quite as well as disagreeable ones. Nothing, certainly, forced such people to fix their affections on the daughter of a "healer"; it would be very clumsy to pick her out of her generation only for the purpose of frustrating her. Moreover, her observation of their young host at Demonico's and in the spacious box at the Academy of Music, where they had privacy and ease, and murmured words could pass without making neighbors more given up to the stage turn their heads — her consideration of Henry Burrage's manner, I say, suggested to her that she had measured him rather scantily the year before, that he was as much in love as the feebler passions of the age permitted (for though Miss Chancellor believed in the amelioration of humanity, she thought there was too much water in the blood of all of us), that he prized Verena for her rarity, which was her genius, her gift, and would therefore have an interest in promoting it, and that he was of so soft and fine a paste that his wife might do what she liked with him. Of course there would be the mother-in-law to count with; but unless she was perjuring herself shamelessly, Mrs. Burrage really had the wish to project herself into the new atmosphere, or at least to be generous personally; so that, oddly enough, the fear that most glanced before Olive was not that this

high, free matron, slightly irritable with cleverness and at the same time good-natured with prosperity, would bully her son's bride, but rather that she might take too fond a possession of her. It was a fear which may be described as a presentiment of jealousy. It occurred, accordingly, to Miss Chancellor's quick conscience that, possibly, the proposal which presented itself in circumstances so complicated and anomalous was simply a magnificent chance, an improvement on the very best, even, that she had dreamed of for Verena. It meant a large command of money — much larger than her own; the association of a couple of clever people who simulated conversion very well, whether they felt it or not, and who had a hundred useful worldly ramifications, and a kind of social pedestal from which she might really shine afar. The conscience I have spoken of grew positively sick as it thought of having such a problem as that to consider, such an ordeal to traverse. In the presence of such a contingency the poor girl felt grim and helpless; she could only vaguely wonder whether she were called upon in the name of duty to lend a hand to the torture of her own spirit.

"And if she should marry him, how could I be sure that — afterwards — you would care so much about the question which has all our thoughts, hers and mine?" This inquiry evolved itself from Olive's rapid meditation; but even to herself it seemed a little rough.

Mrs. Burrage took it admirably. "You think we are feigning an interest, only to get hold of her? That's not very nice of you, Miss Chancellor; but of course you have to be tremendously careful. I assure you my son tells me he firmly believes your movement is the great question of the immediate future, that it has entered into a new phase; into what does he call it? the domain of practical politics. As for me, you don't suppose I don't want everything we poor women can get, or that I would refuse any privilege or advantage that's offered me? I don't rant or rave about anything, but I have — as I told you just now — my own quiet way of being zealous. If you had no worse partisan than I, you would do very well. My son has talked to me immensely about your ideas; and even if I should enter into them only because he does, I should do so quite enough. You may say you don't see Henry dangling about after a wife who gives public addresses; but I am convinced that a great many things are coming to pass — very soon, too — that we don't see in advance. Henry is a gentleman to his finger-tips, and there is not a situation in which he will not conduct himself with tact."

Olive could see that they really wanted

Verena immensely, and it was impossible for her to believe that if they were to get her they would not treat her well. It came to her that they would even over-indulge her, flatter her, spoil her; she was perfectly capable, for the moment, of assuming that Verena was susceptible of deterioration, and that her own treatment of her had been discriminatingly severe. She had a hundred protests, objections, replies; her only embarrassment could be as to which she should use first.

"I think you have never seen Doctor Tarrant and his wife," she remarked, with a calmness which she felt to be very pregnant.

"You mean they are absolutely fearful? My son has told me they are quite impossible, and I am quite prepared for that. *Do* you ask how we should get on with them? My dear young lady, we should get on as you do!"

If Olive had answers, so had Mrs. Burrage; she had still an answer when her visitor, taking up the supposition that it was in her power to dispose in any manner whatsoever of Verena, declared that she didn't know why Mrs. Burrage addressed herself to *her*, that Miss Tarrant was free as air, that her future was in her own hands, that such a matter as this was a kind of thing with which it could never occur to one to interfere. "Dear Miss Chancellor, we don't ask you to interfere. The only thing we ask of you is simply *not* to interfere."

"And have you sent for me only for that?"

"For that, and for what I hinted at in my note; that you would really exercise your influence with Miss Tarrant to induce her to come to us now for a week or two. That is really, after all, the main thing I ask. Lend her to us, here, for a little while, and we will take care of the rest. That sounds conceited — but she *would* have a good time."

"She doesn't live for that," said Olive.

"What I mean is that she should deliver an address every night!" Mrs. Burrage returned, smiling.

"I think you try to prove too much. You do believe — though you pretend you don't — that I control her actions, and as far as possible her desires, and that I am jealous of any other relations she may possibly form. I can imagine that we may perhaps have that air, though it only proves how little such an association as ours is understood, and how superficial is still" — Olive felt that her "still" was really historical — "the interpretation of many of the elements in the activity of women, how much the public conscience with regard to them needs to be educated. Your conviction with respect to my attitude being what I believe it to be," Miss Chancellor went on, "I am surprised at your not perceiving how little

it is in my interest to deliver my — my victim up to you."

If we were at this moment to take, in a single glance, an inside view of Mrs. Burrage (a liberty we have not yet ventured on), I suspect we should find that she was considerably exasperated at her visitor's superior tone, at seeing herself regarded by this dry, shy, obstinate, provincial young woman as superficial. If she liked Verena very nearly as much as she tried to convince Miss Chancellor, she was conscious of disliking Miss Chancellor more than she should probably ever be able to reveal to Verena. It was doubtless partly her irritation that found a voice as she said, after a self-administered pinch of caution not to say too much, "Of course it would be absurd in us to assume that Miss Tarrant would find my son irresistible, especially as she has already refused him. But even if she should remain obdurate, should you consider yourself quite safe as regards others?"

The manner in which Miss Chancellor rose from her chair on hearing these words showed her hostess that if she had wished to take a little revenge by frightening her, the experiment was successful. "What others do you mean?" Olive asked, standing very straight, and turning down her eyes as from a great height.

Mrs. Burrage — since we have begun to look into her mind we may continue the process — had not meant any one in particular; but a train of association was suddenly kindled in her thought by the flash of the girl's resentment. She remembered the gentleman who had come up to her in the music-room, after Miss Tarrant's address, while she was talking with Olive, and to whom that young lady had given so cold a welcome. "I don't mean any one in particular; but, for instance, there is the young man to whom she asked me to send an invitation to my party, and who looked to me like a possible admirer." Mrs. Burrage also got up; then she stood a moment, closer to her visitor. "Don't you think it's a good deal to expect that, young, pretty, attractive, clever, charming as she is, you should be able to keep her always, to exclude other affections, to cut off a whole side of life, to defend her against dangers — if you call them dangers — to which every young woman who is not positively repulsive is exposed? My dear young lady, I wonder if I might give you three words of advice?" Mrs. Burrage did not wait till Olive had answered this inquiry; she went on quickly, with her air of knowing exactly what she wanted to say, and feeling at the same time that, good as it might be, the manner of saying it, like the manner of saying most other things, was not

worth troubling much about. "Don't attempt the impossible. You have got hold of a good thing; don't spoil it by trying to stretch it too far. If you don't take the better, perhaps you will have to take the worse; if it's safety you want, I should think she was much safer with my son — for with us you know the worst — than as a possible prey to adventurers, to exploiters, or to people who, once they had got hold of her, would shut her up altogether."

Olive dropped her eyes; she couldn't endure Mrs. Burrage's horrible expression of being near the mark, her look of worldly cleverness, of a confidence born of much experience. She felt that nothing would be spared her, that she should have to go to the end, that this ordeal also must be faced, and that, in particular, there was a detestable wisdom in her hostess's advice. She was conscious, however, of no obligation to recognize it then and there; she wanted to get off, and even to carry Mrs. Burrage's sapient words along with her — to hurry to some place where she might be alone and think. "I don't know why you have thought it right to send for me only to say this. I take no interest whatever in your son — in his settling in life." And she gathered her mantle more closely about her, turning away.

"It is exceedingly kind of you to have come," said Mrs. Burrage, imperturbably. "Think of what I have said; I am sure you won't feel that you have wasted your hour."

"I have a great many things to think of!" Olive exclaimed, insincerely, for she knew that Mrs. Burrage's ideas would haunt her.

"And tell her that if she will make us the little visit, all New York shall sit at her feet!"

That was what Olive wanted, and yet it seemed a mockery to hear Mrs. Burrage say it. Miss Chancellor retreated, making no response even when her hostess declared again that she was under great obligations to her for coming. When she reached the street she found she was deeply agitated, but not with a sense of weakness; she hurried along, excited and dismayed, feeling that her insufferable conscience was bristling like some irritated animal, that a magnificent offer had really been made to Verena, and that there was no way for her to persuade herself she might be silent about it. Of course, if Verena should be tempted by the idea of being made so much of by the Burrages, the danger of Basil Ransom getting any kind of hold on her would cease to be pressing. That was what was present to Olive as she walked along, and that was what made her nervous, conscious only of this problem that had suddenly turned the bright day to grayness, heedless of the sophisticated-looking people who passed her

on the wide Fifth Avenue pavement. It had risen in her mind the day before, planted first by Mrs. Burrage's note; and then, as we know, she had vaguely entertained the conception, asking Verena whether she would make the visit if it were again to be pressed upon them. It had been pressed, certainly, and the terms of the problem were now so much sharper that they seemed cruel. What had been in her own mind was that if Verena should appear to lend herself to the Burrages, Basil Ransom might be discouraged — might think that, shabby and poor, there was no chance for him as against people with every advantage of fortune and position. She didn't see him relax his purpose so easily; she knew she didn't believe he was of that pusillanimous fiber. Still, it was a chance, and any chance that might help her had been worth considering. At present she saw it was a question not of Verena's lending herself, but of a positive gift, or at least of a bargain in which the terms would be immensely liberal. It would be impossible to use the Burrages as a shelter on the assumption that they were not dangerous, for they became dangerous from the moment they set up as sympathizers, took the ground that what they offered the girl was simply a boundless opportunity. It came back to Olive, again and again, that this was, and could only be, fantastic and false; but it was always possible that Verena might not think it so, might trust them all the way. When Miss Chancellor had a pair of alternatives to consider, a question of duty to study, she put a kind of passion into it — felt, above all, that the matter must be settled that very hour, before anything in life could go on. It seemed to her at present that she couldn't reënter the house in Tenth street without having decided first whether she might trust the Burrages or not. By "trust" them, she meant trust them to fail in winning Verena over, while at the same time they put Basil Ransom on a false scent. Olive was able to say to herself that he probably wouldn't have the hardihood to push after her into those gilded saloons, which, in any event, would be closed to him as soon as the mother and son should discover what he wanted. She even asked herself whether Verena would not be still better defended from the young Southerner in New York, amid complicated hospitalities, than in Boston with a cousin of the enemy. She continued to walk down the Fifth Avenue, without noticing the cross-streets, and after a while became conscious that she was approaching Washington Square. By this time she had also definitely reasoned it out that Basil Ransom and Henry Burrage could not both marry Miss Tarrant, that therefore there could not be

two dangers, but only one, that this was a good deal gained, and that it behooved her to determine which peril had most reality, in order that she might deal with that one only. She held her way to the Square, which, as all the world knows, is of great extent and open to the encircling street. The trees and grass-plats had begun to bud and sprout, the fountains plashed in the sunshine, the children of the quarter, both the dingier types from the south side, who played games that required much chalking of the paved walks, and much sprawling and crouching there, under the feet of passers, and the little curled and feathered people who drove their hoops under the eyes of French nursemaids,—all the infant population filled the vernal air with small sounds which had a crude, tender quality, like the leaves and the herbage. Olive wandered through the place, and ended by sitting down on one of the continuous benches. It was a long time since she had done anything so vague, so wasteful. There were a dozen things which, as she was staying over in New York, she ought to do; but she forgot them, or, if she thought of them, felt that they were now of no moment. She remained in her place an hour, brooding, tremulous, turning over and over certain thoughts. It seemed to her that she was face to face with a crisis of her destiny, and that she mustn't shrink from seeing it exactly as it was. Before she rose to return to Tenth street, she had made up her mind that there was no menace so great as the menace of Basil Ransom; she had accepted in thought any arrangement which would deliver her from that. If the Burrages were to take Verena, they would take her from Olive immeasurably less than he would do; it was from him, from him they would take her most. She walked back to her boarding-house, and the servant who admitted her said, in answer to her inquiry as to whether Verena were at home, that Miss Tarrant had gone out with the gentleman who called in the morning, and had not yet come in. Olive stood staring; the clock in the hall marked three.

XXXIII.

“COME out with me, Miss Tarrant; come out with me. *Do* come out with me.” That was what Basil Ransom had been saying to Verena when they stood where Olive perceived them, in the embrasure of the window. It had of course taken considerable talk to lead up to this; for the tone, even more than the words, indicated a large increase of intimacy. Verena was mindful of this when he spoke; and it frightened her a little, made her uneasy, which was one of the reasons why

she got up from her chair and went to the window — an inconsequent movement, inasmuch as her wish was to impress upon him that it was impossible she should comply with his request. It would have served this end much better for her to sit, very firmly, in her place. He made her nervous and restless; she was beginning to perceive that he produced a peculiar effect upon her. Certainly, she had been out with him at home the very first time he called upon her; but it seemed to her to make an important difference that she herself should then have proposed the walk — simply because it was the easiest thing to do when a person came to call upon you in Monadnoc Place.

They had gone out that time because she wanted to, not because he did. And then it was one thing for her to stroll with him round Cambridge, where she knew every step and had the confidence and freedom which came from being on her own ground, and the pretext, which was perfectly natural, of wanting to show him the college, and quite another thing to go wandering with him through the streets of this great strange city, which, attractive, delightful as it was, had not the suitability even of being his home, not his real one. He wanted to show her something; he wanted to show her everything; but she was not sure now — after an hour's talk — that she particularly wanted to see anything more that he could show her. He had shown her a great deal while he sat there, especially what moonshine he thought it,—the whole idea of women's being equal to men. He seemed to have come only for that, for he was all the while revolving round it; she couldn't speak of anything but what he brought it back to the question of some new truth like that. He didn't say so in so many words; on the contrary, he was tremendously insinuating and satirical, and pretended to think she had proved all and a great deal more than she wanted to prove; but his exaggeration, and the way he rung all the changes on two or three of the points she had made at Mrs. Burrage's, was just the sign that he was a scoffer of scoffers. He wouldn't do anything but laugh; he seemed to think that he might laugh at her all day without her taking offense. Well, he might if it amused him; but she didn't see why she should ramble round New York with him to give him his opportunity.

She had told him, and she had told Olive, that she was determined to produce some effect on him; but now, suddenly, she felt differently about that—she ceased to care whether she produced any effect or not. She didn't see why she should take him so seriously,

when he wouldn't take her so ; that is, wouldn't take her ideas. She had guessed before that he didn't want to discuss them ; this had been in her mind when she said to him at Cambridge that his interest in her was personal, not controversial. Then she had simply meant that, as an inquiring young Southerner, he had wanted to see what a bright New England girl was like ; but since then it had become a little more clear to her—her short talk with Ransom at Mrs. Burrage's threw some light upon the question—what the personal interest of a young Southerner (however inquiring merely) might amount to. Did he too want to make love to her? This idea made Verena rather impatient, weary in advance. The thing she desired least in the world was to be put into the wrong with Olive ; for she had certainly given her ground to believe (not only in their scene the night before, which was a simple repetition, but all along, from the very first) that she really had an interest which would transcend any attraction coming from such a source as that. If yesterday it seemed to her that she should like to struggle with Mr. Ransom, to refute and convince him, she had this morning gone into the parlor to receive him with the idea that, now they were alone together in a quiet, favorable place, he would perhaps take up the different points of her address one by one, as several gentlemen had done after hearing her on other occasions. There was nothing she liked so well as that, and Olive never had anything to say against it. But he hadn't taken up anything ; he had simply laughed and chaffed, and unrolled a string of queer fancies about the delightful way women would fix things when, as she said in her address, they should get out of their box. He kept talking about the box ; he seemed as if he wouldn't let go that simile. He said that he had come to look at her through the glass sides, and if he wasn't afraid of hurting her he would smash them in. He was determined to find the key that would open it, if he had to look for it all over the world ; it was tantalizing only to be able to talk to her through the keyhole. If he didn't want to take up the subject, he at least wanted to take *her* up—to keep his hand upon her as long as he could. Verena had had no such sensation since the first day she went in to see Olive Chancellor, when she felt herself plucked from the earth and borne aloft.

"It's the most lovely day, and I should like so much to show you New York, as you showed me your beautiful Harvard," Basil Ransom went on, pressing her to accede to his proposal. "You said that was the only thing you could do for me then, and so this is

the only thing I can do for you here. It would be odious to see you go away, giving me nothing but this stiff little talk in a boarding-house parlor."

"Mercy, if you call this stiff!" Verena exclaimed, laughing, while at that moment Olive passed out of the house and descended the steps before her eyes.

"My poor cousin's stiff ; she won't turn her head a hair's breadth to look at us," said the young man. Olive's figure, as she went by, was, for Verena, full of a certain queer, touching, tragic expression, saying ever so many things, both familiar and strange ; and Basil Ransom's companion privately remarked how little men knew about women, or indeed about what was really delicate, that he, without any cruel intention, should attach an idea of ridicule to such an incarnation of the pathetic, should speak rough, derisive words about it. Ransom, in truth, to-day, was not disposed to be very scrupulous, and he only wanted to get rid of Olive Chancellor, whose image, at last, decidedly bothered and bored him. He was glad to see her go out ; but that was not sufficient ; she would come back quick enough ; the place itself contained her, expressed her. For to-day he wanted to take possession of Verena, to carry her to a distance, to reproduce a little the happy conditions they had enjoyed the day of his visit to Cambridge. And the fact that in the nature of things it could only be for to-day made his desire more keen, more full of purpose. He had thought over the whole question in the last forty-eight hours, and it was his belief that he saw things in their absolute reality. He took a greater interest in her than he had taken in any one yet, but he proposed, after to-day, not to let that accident make any difference. This was precisely what gave its high value to the present limited occasion. He was too shamefully poor, too shabbily and meagerly equipped, to have the right to talk of marriage to a girl in Verena's very peculiar position. He understood now how good that position was, from a worldly point of view ; her address at Mrs. Burrage's gave him something definite to go upon, showed him what she could do, that people would flock in thousands to an exhibition so charming (and small blame to them) ; that she might easily have a big career, like that of a distinguished actress or singer, and that she would make money in quantities only slightly smaller than performers of that kind. Who wouldn't pay half a dollar for such an hour as he had passed at Mrs. Burrage's? The sort of thing she was able to do, to say, was an article for which there was more and more demand—fluent, pretty, third-rate palaver, conscious or unconscious perfected hum-

bug; the stupid, gregarious, gullible public, the enlightened democracy of his native land, could swallow unlimited draughts of it. He was sure she could go, like that, for several years, with her portrait in the druggists' windows and her posters on the fences, and during that time would make a fortune sufficient to keep her in affluence for evermore. I shall perhaps expose our young man to the contempt of superior minds if I say that all this seemed to him an insuperable impediment to his making up to Verena. His scruples were doubtless begotten of a false pride, a sentiment in which there was a thread of moral tinsel, as there was in the Southern idea of chivalry; but he felt ashamed of his own poverty, the positive flatness of his situation, when he thought of the gilded nimbus that surrounded the protégée of Mrs. Burrage. This shame was possible to him, even while he was conscious of what a mean business it was to practice upon human imbecility, how much better it was even to be seedy and obscure, discouraged about one's self. He had been born to the prospect of a fortune, and, in spite of the years of misery that followed the war, had never rid himself of the belief that a gentleman who desired to unite himself to a charming girl couldn't yet ask her to come and live with him in sordid conditions. On the other hand, it was no possible basis of matrimony that Verena should continue for his advantage the exercise of her remunerative profession; if he should become her husband he should know a way to strike her dumb. In the midst of this an irrepressible desire urged him on to taste, for once, deeply, all that he was condemned to lose, or at any rate forbidden to attempt to gain. To spend a day with her and not to see her again — that presented itself to him at once as the least and the most that was possible. He didn't need even to remind himself that young Mr. Burrage was able to offer her everything *he* lacked, including the most amiable adhesion to her views.

"It will be lovely in the Park to-day. Why not take a stroll with me there as I did with you in the little park at Harvard?" he asked, when Olive had disappeared.

"Oh, I have seen it, very well, in every corner. A friend of mine kindly took me to drive there yesterday," Verena said.

"A friend?—do you mean Mr. Burrage?" And Ransom stood looking at her with his extraordinary eyes. "Of course, I haven't a vehicle to drive you in; but we can sit on a bench and talk." She didn't say it was Mr. Burrage, but she was unable to say it was not, and something in her face showed him that he had guessed. So he went on: "Is it only with him you can go out? Won't he like it,

and may you only do what he likes? Mrs. Luna told me he wants to marry you, and I saw at his mother's how he stuck to you. If you are going to marry him, you can drive with him every day in the year, and that's just a reason for your giving me an hour or two now, before it becomes impossible." He didn't mind much what he said,—it had been his plan not to mind much to-day,—and so long as he made her do what he wanted, he didn't care much how he did it. But he saw that his words brought the color to her face; she stared, surprised at his freedom and familiarity. He went on, dropping the hardness, the irony of which he was conscious, out of his tone. "I know it's no business of mine whom you marry, or even whom you drive with, and I beg your pardon if I seem indiscreet and obtrusive; but I would give anything just to detach you a little from your ties, your belongings, and feel for an hour or two, as if — as if —" and he paused.

"As if what?" she asked very seriously.

"As if there were no such person as Mr. Burrage — as Miss Chancellor — in the whole place." This had not been what he was going to say; he used different words.

"I don't know what you mean, why you speak of other persons. I can do as I like, perfectly. But I don't know why you should take so for granted that *that* would be it!" Verena spoke these words not out of coquetry, or to make him beg her more for a favor, but because she was thinking, and she wanted to gain a moment. His allusion to Henry Burrage touched her, his belief that she had been in the Park under circumstances more agreeable than those he proposed. They were *not*; somehow, she wanted him to know that. To wander there with a companion, slowly, stopping, lounging, looking at the animals as she had seen the people do the day before; to sit down in some out-of-the-way part where there were distant views, which she had noticed from her high perch beside Henry Burrage — she had to look down so, it made her feel unduly fine; that was much more to her taste, much more her idea of true enjoyment. It came over her that Mr. Ransom had given up his work to come to her at such an hour; people of his kind, in the morning, were always getting their living, and it was only for Mr. Burrage that it didn't matter, inasmuch as he had no profession. Mr. Ransom simply wanted to give up his whole day. That pressed upon her; she was, as the most good-natured girl in the world, too entirely tender not to feel any sacrifice that was made for her; she had always done everything that people asked. Then, if Olive should make that strange arrangement for her to go to

Mrs. Burrage's, he would take it as a proof that there was something serious between her and the gentleman of the house, in spite of anything she might say to the contrary; moreover, if she should go she wouldn't be able to receive Mr. Ransom there. Olive would trust her not to, and she must certainly, in future, not disappoint Olive nor keep anything back from her, whatever she might have done in the past. Besides, she didn't want to do that; she thought it much better not. It was this idea of the episode which was possibly in store for her in New York, and from which her present companion would be so completely excluded, that worked upon her now with a rapid transition, urging her to grant him what he asked, so that in advance she should have made up for what she might not do for him later. But most of all she disliked his thinking she was engaged to some one. She didn't know, it is true, why she should mind it; and indeed, at this moment, this young lady's feelings were not in any way clear to her. She did not see what was the use of letting her acquaintance with Mr. Ransom become much closer (since his interest did really seem personal); and yet she presently asked him why he wanted her to go out with him, and whether there was anything particular he wanted to say to her (there was no one like Verena for making speeches apparently flirtatious, with the best faith and the most innocent intention in the world), as if that would not be precisely a reason to make it well she should get rid of him altogether.

"Of course I have something particular to say to you — I have a tremendous lot to say to you!" the young man exclaimed. "Far more than I can say in this stuck-up, confined room, which is public, too, so that any one may come in from one moment to another. Besides," he added, sophisticatedly, "it isn't proper for me to pay a visit of three hours."

Verena didn't take up the sophistry, nor ask him whether it would be more proper for her to ramble about the city with him for an equal period; she only said, "Is it something that I shall care to hear, or that will do me any good?"

"Well, I hope it will do you good; but I don't suppose you will care much to hear it." Basil Ransom hesitated a moment, smiling at her; then he went on: "It's to tell you, once for all, how much I really do differ from you!" He said this at a venture, but it was a happy inspiration.

If it was only that, Verena thought she might go, for that wasn't personal. "Well, I'm glad you care so much," she answered, musingly. But she had another scruple still, and she expressed it in saying that she should

like Olive very much to find her when she came in.

"That's all very well," Ransom returned; "but does she think that she only has a right to go out? Does she expect you to keep the house because she's abroad? If she stays out long enough, she *will* find you when she comes in."

"Her going out that way — it proves that she trusts me," Verena said, with a candor which alarmed her as soon as she had spoken.

Her alarm was just, for Basil Ransom instantly caught up her words, with a great mocking amazement. "Trusts you? and why shouldn't she trust you? Are you a little girl of ten and she your governess? Haven't you any liberty at all, and is she always watching you and holding you to an account? Have you such disorderly instincts that you are only thought safe when you are between four walls?" Ransom was going on to speak, in the same tone, of her having felt it necessary to keep Olive in ignorance of his visit to Cambridge — a fact they had touched on, by implication, in their short talk at Mrs. Burrage's; but in a moment he saw that he had said enough. As for Verena, she had said more than she meant, and the simplest way to unsay it was to go and get her bonnet and jacket and let him take her where he liked. Five minutes later he was walking up and down the parlor, waiting while she prepared herself to go out.

They went up to the Central Park by the Elevated Railway, and Verena reflected, as they proceeded, that anyway Olive was probably disposing of her somehow at Mrs. Burrage's, and that therefore there wasn't much harm in her just taking this little run on her own responsibility, especially as she should only be out an hour — which would be just the duration of Olive's absence. The beauty of the Elevated was that it took you up to the Park and brought you back in a few minutes, and you had all the rest of the hour to walk about and see the place. It was so lovely now that one was glad to see it twice over. The long, narrow inclosure, across which the houses in the streets that border it look at each other with their glittering windows, bristled with the raw delicacy of April, and, in spite of its rockwork grottoes and tunnels, its pavilions and statues, its too numerous paths and pavements, lakes too big for the landscape and bridges too big for the lakes, expressed all the fragrance and freshness of the most charming moment of the year. Once Verena was fairly launched, the spirit of the day took possession of her; she was glad to have come, she forgot about Olive, enjoyed the sense of wandering in the great city with a remarkable young man who would take beautiful care

of her, while no one else in the world knew where she was. It was very different from her drive yesterday with Mr. Burrage, but it was more free, more intense, more full of amusing incident and opportunity. She could stop and look at everything now, and indulge all her curiosities, even the most childish; she could feel as if she were out for the day, though she wasn't really — as she hadn't done since she was a little girl, when in the country. Once or twice, when her father and mother had drifted into summer quarters, gone out of town like people of fashion, she had, with a chance companion, strayed far from home, spent hours in the woods and fields, looking for raspberries and playing she was a gypsy. Basil Ransom had begun with proposing, strenuously, that she should come somewhere and have some lunch; he had brought her out half an hour before that meal was served in West Tenth street, and he maintained that he owed her the compensation of seeing that she was properly fed; he knew a very quiet, luxurious French restaurant, near the top of the Fifth Avenue; he didn't tell her that he knew it through having once lunched there in company with Mrs. Luna. Verena for the present declined his hospitality — said she was going to be out so short a time that it wasn't worth the trouble; she should not be hungry, lunch to her was nothing, she would lunch when she went home. When he pressed she said she would see later, perhaps, if she should find she wanted something. She would have liked immensely to go with him to an eating-house, and yet, with this, she was afraid, just as she was rather afraid, at bottom, and in the intervals of her quick pulsations of amusement, of the whole expedition, not knowing why she had come, though it made her happy, and reflecting that there was really nothing Mr. Ransom could have to say to her that would concern her closely enough. He knew what he intended about her having lunch with him somehow; it had been part of his plan that she should sit opposite to him at a little table, taking her napkin out of its curious folds — sit there smiling back at him while he said to her certain things that hummed, like memories of tunes, in his fancy, and they waited till something extremely good, and a little vague, chosen out of a French *carte*, was brought them. That was not at all compatible with her going home at the end of half an hour, as she seemed to expect to. They visited the animals in the little zoölogical garden which forms one of the attractions of the Central Park; they observed the swans in the ornamental water, and they even considered the question of taking a boat for half an hour, Ransom saying that they needed this to make

their visit complete. Verena replied that she didn't see why it should be complete, and after having threaded the devious ways of the Ramble, lost themselves in the Maze, and admired all the statues and busts of great men with which the grounds are decorated, they contented themselves with resting on a sequestered bench, where, however, there was a pretty glimpse of the distance and an occasional stroller creaked by on the asphalted walk. They had had by this time a great deal of talk, none of which, nevertheless, had been serious to Verena's view. Mr. Ransom continued to joke about everything, including the emancipation of women; Verena, who had always lived with people who took everything very earnestly, had never encountered such a power of disparagement or heard so much sarcasm leveled at the institutions of her country and the tendencies of the age. At first she replied to him, contradicted, showed a high, jesting spirit, and turned his irreverence against himself; she was too quick and ingenious not to be able to think of something to oppose — talking in a fanciful strain — to almost everything he said. But little by little she grew weary and rather sad; brought up, as she had been, to admire new ideas, to criticise the social arrangements that one met almost everywhere, and to disapprove of a great many things, she had yet never dreamed of such a wholesale arraignment as Mr. Ransom's, so much bitterness as she saw lurking beneath his exaggerations, his misrepresentations. She knew he was an intense conservative, but she didn't know that being a conservative could make a person so aggressive and unmerciful. She thought conservatives were only smug and stubborn and self-complacent, satisfied with what actually existed; but Mr. Ransom didn't seem any more satisfied with what existed than with what she wanted to exist, and he was ready to say worse things about some of those whom she would have supposed to be on his own side than she thought it right to say about almost any one. She ceased after a while to care to argue with him, and wondered what could have happened to him to make him so perverse. Probably something had gone wrong in his life — he had had some misfortune that colored his whole view of the world. He was a cynic; she had often heard about that state of mind, though she had never encountered it, for all the people she had seen only cared, if possible, too much. Of Basil Ransom's personal history she knew only what Olive had told her, and that was but a general outline, which left plenty of room for private dramas, secret disappointments and sufferings. As she sat there beside him she thought of some of these

things, asked herself whether they were what he was thinking of when he said, for instance, that he was sick of all the modern cant about freedom and had no sympathy with those who wanted an extension of it. What was needed for the good of the world was that people should make a better use of the liberty they possessed. Such declarations as this took Verena's breath away; she didn't suppose you could hear any one say that in the nineteenth century, even the least advanced. It was of a piece with his denouncing the spread of education; he thought the spread of education a gigantic farce—people stuffing their heads with a lot of empty catchwords that prevented them from doing their work quietly and honestly. You had a right to an education only if you had an intelligence, and if you looked at the matter with any desire to see things as they are, you soon perceived that an intelligence was a very rare luxury, the attribute of one person in a hundred. He seemed to take a pretty low view of humanity, anyway. Verena hoped that something really pretty bad had happened to him—not by way of gratifying any resentment he aroused in her nature, but to help herself to forgive him for so much contempt and brutality. She wanted to forgive him, for after they had sat on their bench half an hour and his jesting mood had abated a little, so that he talked with more consideration (as it seemed) and more sincerity, a strange feeling came over her, a perfect willingness not to keep insisting on her own side and a desire not to part from him with a mere accentuation of their differences. Strange I call the nature of her reflections, for they softly battled with each other as she listened, in the warm, still air, touched with the far-away hum of the immense city, to his deep, sweet, distinct voice, expressing monstrous opinions with exotic cadences and mild, familiar laughs, which, as he leaned towards her, almost tickled her cheek and ear. It seemed to her strangely harsh, almost

brutal, to have brought her out only to say to her things which, after all, free as she was to contradict them and good-natured as she always tried to be, could only give her pain; yet there was a spell upon her as she listened; it was in her nature to be easily submissive, to like being overborne. She could be silent when people insisted, and silent without acrimony. Her whole relation to Olive was a kind of tacit assent to perpetual insistence, and if this had ended by being easy and agreeable to her (and indeed had never been anything else), it may be supposed that the struggle of yielding to a will which she felt to be stronger even than Olive's was not of long duration. Ransom's will had the effect of making her linger even while she knew the afternoon was going on, that Olive would have come back and found her still absent, and would have been submerged again in the bitter waves of anxiety. She saw her, in fact, as she must be at that moment, posted at the window of her room in Tenth street, watching for some sign of her return, listening for her step on the staircase, her voice in the hall. Verena looked at this image as at a painted picture, perceived all it represented, every detail. If it didn't move her more, make her start to her feet, dart away from Basil Ransom and hurry back to her friend, this was because the very torment to which she was conscious of subjecting that friend made her say to herself that it must be the very last. This was the last time she could ever sit by Mr. Ransom and hear him express himself in a manner that interfered so with her life; the ordeal had been so familiar and so complete that she forgot, for the moment, that it was also the first time it had occurred. It might have been going on for months. She was perfectly aware that it could bring them to nothing, for one must lead one's own life; it was impossible to lead the life of another, especially when the person was so different, so arbitrary, so inconsiderate.

(To be continued.)

Henry James.

THE CANADA PACIFIC RAILWAY.

WHAT tempted the people of Canada to undertake so gigantic a work as the Canada Pacific Railway? The difficulties in the way were great, unprecedented, unknown. Had they been known beforehand, the task would not have been attempted. We were under the inspiration of a national idea, and went forward. We were determined to be something more than a fortuitous collocation of provinces. That the difficulties were faced and overcome as they emerged, great temptations to halt or retreat being quietly set aside, proves that we, like our neighbors and progenitors, are not easily discouraged. Our ultimate destiny will be none the worse because we have — not unwillingly — made sacrifices in order to make ourselves a nation.

Roughly speaking, the new country through which the great railway runs consists of three sections,—about a thousand miles of forest from the upper Ottawa to the Red River of the North; then a thousand miles of alluvial; and then five or six hundred miles of mountains, from the first chain of the Rockies to where the waters of the Pacific are sheltered by the breakwater of Vancouver Island. The total length of the line from Montreal to the Pacific terminus is 2895 miles. The first section was long considered impracticable for a railway, and the expense of construction has been enormous. The rocks at the back of Lake Superior are the oldest known to men of science and the toughest known to engineers. But dynamite, if there be enough of it, can do anything. This part of the line was opened last spring most dramatically, it being used before actual completion to transport our militia to put down the half-breed and Indian rising in the North-west. No amount of champagne-drinking and of driving last spikes of gold could have called the attention of the country so emphatically to its importance. The second section runs through what promises to be the great granary of the world. The third is being pushed across a sea of mountains. Thousands of navvies of all nationalities are swarming in the valley of the Columbia, and thousands of Chinese are working on the grade easterly. When this section is completed, and the shortest of all transcontinental railways opened for traffic from ocean to ocean, Canada will have attained to unification, so far as links of steel can unify.

The work is so completely a political necessity that — along with the Intercolonial Railway, which binds the Atlantic provinces to

old Canada — it may be called the symbol of our national existence. Whether it will pay the company financially or not is a question on which experts differ. That it will develop the country, and thus at any rate pay indirectly, seems to me unquestionable. The Intercolonial was run for a time at a cost to the Dominion of over half a million dollars annually. It now pays its way; and though shorter through lines are to be built, the increasing local traffic, the best indication of the real value of the road to the country, will keep it running. So, too, the first section of the Canada Pacific pierces a wilderness that wise men said would not furnish business to pay for greasing the wheels; but it gets freight enough in the shape of lumber alone to pay for the wheels as well as the grease. It is revolutionizing the mode of lumber transportation on the upper Ottawa and to the West. The lumber kings find that time is money. It is more profitable to send on logs to market by rail than to continue the tedious plan of floating them, from the banks of far-away lakes and nameless streams in the interior, down countless rapids and slides to unbroken waterways. The danger now is that our timber limits, which constitute an essential part of the national capital, may be exhausted within a measurable time. With regard to the rugged Laurentian regions to the north of Lake Superior, unexplored as yet by men of science, there are grounds for believing that they will turn out to be as rich in mineral wealth as the southern shores of the lake; and no business pays a railway so well as that which a mining community supplies. Then, the fertile plains of the North-west are certain to yield harvests that will tax to the utmost the carrying capacity of branch as well as trunk lines.

These plains extend for eight hundred miles west of Winnipeg. Originally a north-western instead of a western route from Winnipeg had been chosen for the railway, because every one said that the only "fertile belt" was in that direction. This "belt," or rainbow, of fertile land swept semicircularly round a supposed great wedge of the American desert. But the company came to the conclusion that the plains west of Winnipeg had been belied, and that the rainfall was sufficient for the growth of cereals or root crops. Singularly enough, their faith has been vindicated; it turns out that we have no desert. This fact is a physical reality of the greatest importance with regard to the area in the North-west available for

settlement. That area is now known to be practically illimitable. The waves of a great human sea will in a short time roll steadily on, without break, from the boundary line to the prairies of the mighty Peace River. That new North-west of ours will a century hence have fifty millions of people, and they will raise enough to feed themselves and the rest of the world, if need be.

Manitobans, it may be said here, have also great expectations of being able to export directly to Liverpool by Hudson's Bay, and of being thus independent of Chicago and Montreal alike. Should such an alternative route prove a reality, it would serve the whole Red River valley, as well as the Saskatchewan. Last year the Dominion Government sent out a well-equipped vessel to ascertain definitely for how many months in the year the Hudson's Bay Straits are navigable, and other facts bearing on the question at issue. Parties were left at different points along the coast to winter, and make all needed observations. We shall soon know whether it is worth while constructing a railway to Fort Churchill. Dr. Robert Bell, Assistant Director of the Dominion Geological Survey, is sanguine that the produce of the North-west will have a new outlet in this direction. If so, it will be a potent factor in the development of those far inland fertile wildernesses. But this line to Hudson's Bay is as yet in the air. For years to come the North-west must be served by the Canada Pacific Railway. But how came it that the greater part of the country directly west from Winnipeg to the Rocky Mountains was once supposed to be semi-desert? Captain Palliser, who was sent with a well-organized expedition by Her Majesty's Government, in 1857, to explore the country between Lake Superior and the Rocky Mountains, found it rainless and condemned it. Superficial observers who visited it subsequently, and looked only at the short russet-colored grass that covered its illimitable, treeless, terribly lonely plains, had no hesitation in confirming his opinion. But five or six years ago Mr. John Maccoun, an accomplished practical botanist, after exploring it lengthways and crossways and thoroughly examining soil, flora, and fauna, gave testimony of an entirely opposite character. He was derided as an enthusiast or worse, but his opinions had probably something to do with determining the new route taken by the Canada Pacific Railway; and in 1881 and 1882 settlers, ignoring the proved fertility of the "fertile belt," or postponing its claims to a more convenient season, took up land along the railway almost as fast as it was constructed. They found that the soil was actually better for their purposes than the heavy tenacious loam of the Red River

valley, just because it was lighter. Population flowed for some four hundred miles west of Winnipeg to the little towns of Regina and Moosegaw. There the masses of drift that constitute the "Coteau" of the Missouri show themselves, and there it was then said the good land ceased. The railway was built in the early part of 1883 four hundred miles farther west, and soon after Mr. Sandford Fleming and myself had sufficient opportunities of examining the nature of the soil. Far from being barren, "it resembles," says Mr. Fleming, "in color and character that of the Carse of Gowrie in Perthshire," notoriously the most productive district in Scotland.

But why, then, had those vast plains been condemned? Because there is very little rain in the summer months; and because observers could not fail to notice that the grass was light, short, dry, and apparently withered. To their eyes it contrasted most unfavorably with the luxuriant green herbage of the well-watered belt along the North Saskatchewan. It did not occur to them that the grass of the plains might be the product of peculiar atmospheric conditions, and that what had been food in former days for countless millions of buffaloes, whose favorite resorts these plains had been, would in all probability be good food for domestic cattle. The facts are that spring comes early in these far western districts, and that the grass matures in the beginning of June, and turns into nutritious hay. If burned, there is sufficient moisture in the soil to produce a second growth. We saw at different points, towards the end of August, green patches where little prairie fires had run some weeks previously. If there is enough moisture for such a second crop, it seemed clear to us that there must be enough for cereals. The fact is that the roots of wheat penetrate to a great depth in search of moisture or nutriment. The intense cold of winter, instead of being a drawback, acts in the farmer's interest. The deeper the frost goes, the better. As it thaws out gradually in the summer it loosens the sub-soil, and sends up the needed moisture to the roots of the grain. Coal, too, of cretaceous age, being abundant, no one who is at all robust objects to the intense dry cold. Sufficient moisture being all but certain, the lack of rain makes harvesting sure, while the purity and dryness of the air and the continual breeziness render the climate most healthful and pleasant. But, notwithstanding these facts, the impression was general that, at any rate from *le grand Coteau du Missouri* to the Rocky Mountains, the country was worthless. The company, therefore, determined to try experiments that would be conclusive. Late in the autumn of 1883 men were sent

out with instructions to plow up a few acres at intervals of about twenty miles along the line. This work was done, necessarily, in rough-and-ready fashion. The sod was turned up, and then the teams, put on board the next train, were moved on to another point. The following March seeds of various kinds were sown on the plowed sections and roots planted. No attempt at cultivating, cleaning, or protecting could be made, and yet the result was a magnificent crop on the experimental "farms." Every one who knows anything of prairie farming will acknowledge that a more rigorous test could not have been tried. The south of the beautiful Bow River is the chosen country of our cow-boys, a race—from Texas to the North—free, fearless, and peculiar, to whom all the rest of the world are "tenderfeet," and in whose eyes horse-stealing is the unpardonable sin. The transport to England of cattle from this district, and ultimately from the adjoining territories of Montana and Idaho, is certain to supply steady business to the railway; and the transport of coal on a large scale to Manitoba from the vast deposits which are being opened up near Medicine Hat and the head-waters of the Saskatchewan is still more certain. The Bow River, which takes its name from its repeated windings and doublings like an ox-bow, guides the railway into the mountains. The wide valley, inclosed by foot-hills, not very long ago the favorite haunt of the buffalo, is divided into ranches. These and all other industries in southern Alberta converge at Calgary, an enterprising little town, once a Hudson's Bay fort, on a site of ideal beauty. It fronts the illimitable plains; snow-peaked mountains, Devil's Head preëminent, tower up behind; and two impetuous glacier-fed streams meet in the natural amphitheater that has been scooped out of the surrounding hills to give it ample room to spread itself. Forty miles farther up the river, and so much nearer the best hunting-grounds in the mountains, two villages of Stonies have gathered round the Methodist Mission of Morley,—a brave and hardy tribe of mountaineers who, like their white neighbors, are taking to stock-raising, as they can no longer live by hunting. The railway climbs the valley of the Bow, crossing and recrossing, past Morley, past the mass of rock five thousand feet high called Cascade Mountain, where anthracite coal has been discovered, past the chiseled turrets of Castle Mountain, and into the core of the range, till within six miles of the summit, where it abandons the river and strikes up the bed of one of its tributaries.

The railway terminus in September, 1883, being Calgary, tourists generally stopped

there; but our party determined to push on to the Pacific. Four ranges of mountains intervened—the Rockies, the Selkirks, the Gold, and the Cascades. One engineer told us that it was problematical whether we should get through. Another said that we should not. We determined to try, and we now congratulate ourselves that we were the first to cross from one side of the four ranges to the other side, on the line on which the railway is constructed.

It was a journey to be remembered. I have seen many countries, but I know none where there are such magnificent rock-exposures for a hundred miles continuously as up the valley of the Bow, from Calgary to the summit of the Rockies. The general elevation of the valley is between four and five thousand feet, and the mountains on each side are only from one to six thousand feet higher; consequently, the beauty does not consist in the altitude of the mountains. Beside the Andes or even the Alps they are hardly worth speaking about; but nothing can be finer than the distinct stratification, the variety of form and clearness of outline, the great masses of bare rock standing out as if piled by masons and carved and chiseled by sculptors. Photography alone could bring out their amazing richness in detail. Scenes of gloomy grandeur present themselves at every point for several miles along the summit; and down the western slope the views at times are even more striking. But our journey down the Kicking Horse should be read in the "England and Canada" of the distinguished engineer with whom I traveled, by those who wish to know more of our experiences.

When we crossed the Rockies the hitherto unconquered Selkirks rose before us. To understand the position of this range, take a map and look for the springs of the Columbia. This greatest of salmon rivers rises in Canada, and runs north-west so persistently that it appears doomed to fall into the Fraser. But, reaching the neighborhood of Mounts Brown and Hooker, it seems to have had enough of us, and accordingly, sweeping right round in a "Big Bend," it makes straight for Washington Territory, cutting through all obstacles, the *Dalles* with the significant *Dalle de Mort*, and then spreads out into long, broad, calm expanses known as the Upper and Lower Arrow Lakes. Within that great loop which it makes on our soil are inclosed the Selkirks. As they extend only to the Big Bend of the Columbia, our engineers had no concern with them when it was supposed that the Canada Pacific Railway was to run farther north; but when the company decided that they must have as nearly as possible an air-line from Winnipeg west to the ocean, the question of whether a pass

could be found across the Selkirks became important. If no pass could be found, a *dé-tour* must be made away to the North by the Big Bend. Passes were known to exist through the other three ranges that rise between the plains and the Pacific. The Rockies proper, the backbone of this continent, are cloven north of the boundary line by half a dozen rivers, along the valley of any one of which a railway could be carried with ease to a summit where another stream is generally found beginning its course down the western slope. Then, the two ranges nearest the Pacific have also open gates wide enough for a railway. But between the Gold Mountains and the Rockies rose the Selkirks, apparently without a break. When asked about a pass here, the Indians shook their heads; so did the engineers, Mr. Walter Moberly excepted. He knew something about the Selkirks; but though he pointed out the way, to another fell the honor of solving the problem.

Moberly had discovered a first-rate pass in 1865 through the Gold Mountains, greatly to the satisfaction of himself and all British Columbia. Gold had been found by enterprising prospectors at the Big Bend, and the provincial government, anxious to have a trail cut from the navigable waters in the heart of the colony to the new Eldorado, sent Moberly, then assistant surveyor-general, to explore. One day, not far from Shuswap Lake, among tangled mountains choked with dense underbrush and fallen timber, valleys radiating to every point of the compass, but leading nowhere, he saw an eagle flying to the east up one of the valleys. Accepting the omen, he followed and discovered the pass which he called after the eagle, though it might more fitly be called by his own name. Previous to this the Gold range had been supposed to be "an unbroken and impassable wall of mountains," but, thanks to Moberly, a wagon-road could now be made from the settled part of the province to the Columbia, to be followed—he was convinced—by a railway that would in due time extend to the fertile plains of the North-west. If a pass could only be found across the Selkirks, he felt that his work would be completed. He sent one and then another of his staff to explore, but their reports were discouraging. His Indians knew nothing, except that they could not take their canoes that way. When they wished to get to the other side of the range, they descended the Columbia, and then crossed over to its head-waters by the Kootenay River. To them time was no object. Indians will go a hundred miles in a canoe, or ride across a prairie for the same distance, rather than cut through a mile of brush. In a forest they will walk for a hundred yards round a fallen tree, and others will continue

for years to follow the trail, rather than be at the trouble of cutting through the obstruction. Moberly did not despair. He saw a fracture in the range, almost corresponding to the fracture of the Eagle Pass in the Gold range. Crossing the Columbia, though it was late in the season, and entering the mouth of this fracture, he forced his way up the banks of a stream called the Ille-Cille-Waet, chocolate-colored from the grains of slate it holds in solution. Twenty or thirty miles from its mouth the Ille-Cille-Waet forked. Trying the north fork, it led him into the slate range, intersected by innumerable veins of promising-looking quartz that prospectors have yet to test, but to nothing like a pass. His Indians then struck. He used every means to induce them to go with him up the east fork, but in vain. The snow had begun to fall on the mountains, and they said that they would be caught and would never get out again. Reluctantly Moberly turned back, and as the colony could afford no more explorations, the Big Bend diggings not turning out as had been anticipated, he had to content himself with putting on record that the easterly fork of the Ille-Cille-Waet should be examined before a route for a transcontinental railway was finally determined on.

Thus it happened that up to 1881 no man had crossed the virgin range. It was covered with heavy timber almost up to the snow-line. Without let or hindrance herds of noble caribou trotted along ancestral trails to their feeding-grounds or to water. Bears—black, brown, cinnamon, and grizzly—found in sheltered valleys exhaustless supplies of the berries on which they grow fat. From the opposite flanks of the range, east and west, short swollen streams rush down to join the Columbia, their sands often indicating gold; while on the south, where the drainage flows into the Kootenay Lake and River, which also feed the Columbia, rich mines of argentiferous galena are now being worked. But no one knew of a pass.

In February, 1881, the Syndicate appointed Major A. B. Rogers, C. E., engineer of the Mountain Division of the Canada Pacific Railway. He seemed about as unlikely a man for the work of ascertaining whether the Selkirks problem was soluble as could have been chosen. He knew little or nothing of mountains; his previous experiences had been in States where there is no counterpart to the characteristic scenery and difficulties of British Columbia. But Major Rogers, like a true descendant of the Pilgrim or Puritan fathers, is a man who goes to the particular wilderness to which he may be appointed, asking no questions. Naturally intense, self-reliant,

and scornful of appearances, the opposite schooling of an old-fashioned Down-East training, the rough experiences of engineer and frontier life have made him so downright that he is apt to be appalling to ordinary mortals. Though between fifty and sixty years of age, hair and beard now white, no youngster in his party will plunge into the grimmest mountain ranges with as little thought of commissariat or as complete a contempt of danger, and no Indian will encounter fatigue or famine as stoically. Hard as nails himself, he expects others who take service with him to endure hardness; and should there be shirking, he is apt to show his worst side rather than be guilty of what he has scorned as hypocrisy in others. He fitted out at Kamloops for his first attempt on the Selkirks. The wonder is that he did not start with rifle on shoulder and a piece of pork in his pocket, two or three Indians perhaps carrying blankets and a few fixings; for at that time he thought that a gun ought to feed a party. He does not think so now. Man can have but one paradise at a time. If he goes into the mountains to hunt, he can do that; if to prospect, he can do that, with a slightly different outfit; if to discover a pass or to get through to a given point by a given date, he may or may not succeed,—but it is quite certain that he cannot combine the three characters, or even two, on the one expedition. A bear or caribou may lead you miles from your course; and if you shoot him, your Indians have a capital excuse for delay, while they regard the meat as simply so much “kitchin” to their stock of pork and bacon.

The Major and his nephew, Mr. Albert Rogers, hiring at Kamloops ten Shuswap Indians from the Roman Catholic Mission to carry their packs, started in April to force their way to the east. They succeeded in reaching the core of the Selkirk range, by following the east fork of the Ille-Cille-Waet; but, like Moberly on the north fork, they got only to a *cul de sac*, and their packs having become ominously light, they—heavy with the consciousness of failure—came to the conclusion that retreat was inevitable. Before retracing their steps, however, they climbed the divide to see if any break could be detected in the range. Yes; a valley appeared in the direction of an unexplored little affluent of the Ille-Cille-Waet, and, apparently connected with it, a depression extending to the east. Everywhere else, all around to the horizon, nothing but “snow-clad desolation.” The result of five or six weeks’ endurance of almost intolerable misery was this gleam of hope.

Our journey enabled us to understand what they must have suffered. The underbrush is

of the densest, owing to the ceaseless rain. Black flies or mosquitoes do their part unweariedly. What with fallen timber of enormous size, precipices, prickly thorns, beaver dams, marshes full of fetid water to be waded through, alder swamps, lakelets surrounded by bluffs so steep that it would almost puzzle a chamois to get over or around them, we had all we wanted of the Ille-Cille-Waet and the Eagle Pass. But they had started too early in the season. The snow was not only deep, but it was melting and rotting under spring suns and rains, and therefore would not bear their weight. Down they sank at every step, and often into the worst kind of pitfalls. At first their loads were so heavy that they had to leave part behind, and then, after camping early, return wearily on their tracks for the second load. The Indians would have deserted them a dozen times over, but the Major had arranged with the Mission that if they returned without a certificate they were to get a whipping instead of good pay. Nothing but pluck kept them pegging away; but in spite of all they failed that year. The following May the Major made his attack from the other side of the range, and again he was unsuccessful. Swollen torrents and scarcity of supplies forced him back to his base, at the point where the Kicking Horse River joins the Columbia. On this occasion, had it not been for the discovery of a canoe, he and his party would have starved. Sorely against their will he had put them on half rations, but he gladdened their hearts one morning by announcing that it was his birthday, and producing a little sugar to sweeten their tea.

Nothing daunted, he started again the same summer, in the month of July, from the same base, and succeeded. Proceeding up the valley of the Beaver, a large stream that enters the Columbia through an open cañon, and then following the course of one of its tributaries appropriately called Bear Creek, he at length found the long-sought-for pass. He saw the mountain from the summit of which the year before he and his nephew had noticed the depression extending to the east. Not content while anything remained undone, he made for the Ille-Cille-Waet, and following it down to the north fork, ascended it too, to ascertain if its head-waters would connect with a tributary of the Beaver, and so perhaps afford something better; but nothing better, or rather nothing at all, was found. The Selkirks have only one pass, but it is better than the western slope of the main chain by the Kicking Horse. And an American has had the honor of finding that one on behalf of Canada! All honor to him!

Compared with our experiences down the

Kicking Horse, the ascent of the eastern slope of the Selkirks was remarkably easy. The valley of the Beaver contracts near its mouth, so it is no wonder that observers from the outside formed an incorrect idea of its importance. The Ille-Cille-Waet on the other side of the range ends its course in the same way. The two streams by which the Selkirks are overcome are thus something like two long bottles with their narrow necks facing and ending in the Columbia. The trail up the Beaver led through forests of great cedars, and then of noble spruce, hemlock, and pine, so dense that it was impossible to get any views of the range before reaching the Rogers Pass. Our first evening was spent with a pleasant, fit-looking lot of fellows, who were working down from the summit under the leadership of Major Critchelow, a West Point graduate. They did all they could for us, sharing tents and blankets, as well as porridge, as if we had been life-long comrades. Major Critchelow's party had been at work for three months, and, besides caribou and other large game, had seen about fifty bears, chiefly black and grizzly. I can, with a reasonable measure of confidence, assure sportsmen that the bears are still there, for the engineers were too busy to do much hunting. We saw on our ride to the summit next morning why the place was such a favorite bear center. On both sides of the trail grew an extraordinary profusion of high bushes laden with delicious wild fruits, blackberries and gooseberries as large as small grapes, and half a dozen other varieties, that we could pick by handfuls without dismounting. The rowan-tree drooped its rich red clusters over the bushes, and high above towered the magnificent forest primeval, one cedar that we passed having a diameter of nine feet. It was like riding through a deserted garden. Emerging from the forest, after a leisurely three hours' ride, into a saucer-shaped open meadow covered with tall thick grass, Major Rogers, who had kindly joined our party at the mouth of the Kicking Horse, pointed to a little stream, saying, "That is Summit Creek, and there," pointing to the opposite end of the meadow, "is the summit where our yew stake is planted." We gave a hearty cheer in his honor, and taking our seats on a moss-grown natural rockery, heard him recount the story of the discovery of the pass. A scene of more mingled grandeur and beauty could not be desired. "Such a spot for a summer hotel!" would, I think, be the first cry of an American tourist. Snow-covered mountains, glaciers accumulating in lofty comb, and high above the snow, the looser shales of the peaks having weathered off, fantastic columns of rock giving to each mountain form an individual-

ity that stamps it permanently on the memory; while we in the sunny valley at their feet dined on wild fruit, and our horses rolled contentedly among the deep succulent grasses! Syndicate, the distinctive peak among the mountains at the summit, is a veritable Canadian Matterhorn, but it is not seen till you begin the western descent.

The Selkirks did not let us off so easily as we had hoped from our experience of the ascent. Where the trail ended the Major gave us his nephew as a guide and half a dozen athletic, obliging young men to carry our packs to the second crossing of the Columbia. I shall never attempt to pioneer through a wilderness again, much less to carry a pack; and of all wildernesses, commend me to those of British Columbia as the best possible samples to test wind and limb. It would simply weary readers to go into details of struggling through acres of densest underbrush where you cannot see a yard ahead, wading through swamps and beaver dams, getting scratched from eyes to ankles with prickly thorns, scaling precipices, falling over moss-covered rocks into pitfalls, your packs almost strangling you, losing the rest of the party while you halt to feel all over whether any bones are broken, and then experiencing in your inmost soul the unutterable loneliness of savage mountains. Those who have not tried would not understand. It took us five days to make seventeen miles, and we did our best. Right glad were we to see the Columbia again, a river now twelve hundred feet wide, full from bank to bank, sweeping past this time to the south with a current of six or seven miles an hour. We struck it nearly opposite the Big Eddy, and one or two tents and a group of Indians among the aspens on the bank a little farther down comforted us with the thought that we could at any rate get what man considers the one thing needful in the wilderness—a supply of food. It might have an evil smell, but it would be food; and starvation, at any rate, was now out of the question. Back a little from the noble river rose the Gold Mountains, cloven almost to the feet by the Eagle Pass.

The Indians came across in their canoes and ferried us over; and we spent the night on the river bank, well to windward of Camp Siwash. Under a half-moon shining in a blue, cloudless sky, a great glacier on our right reflected a ghostly light, and every peak came out clearly defined in the pure atmosphere. The rush of the great river and the muffled roar of the distant falls of the Ille-Cille-Waet alone broke the perfect stillness. Four or five camp-fires seen through the trees, with dusky figures silently flitting about, gave life to the scene. Reclining on spruce boughs, softer and more fragrant than beds of down, we felt the

charm of frontier or backwoods life. Two or three hours after, awakened by rain first pattering on tent and leaves and then pouring down in earnest, the charm was forgotten. One had left his boots outside, another had hung his clothes near the camp-fire, and we knew that the men were lying on the ground, rolled in their blankets, and that to-morrow every pack would be fifty per cent. heavier to carry. We were still in the rainy region. Every night but one since leaving the summit of the Selkirks there had been rain with thunder and lightning; and yet, in spite of the discomfort, not a man showed a sign of discontent. Sybarites still growl over their crumpled rose-leaves, but the race is not deteriorating.

Before leaving Winnipeg Mr. Fleming had telegraphed to Hudson's Bay officials in British Columbia to send a party from Kamloops to meet us with provisions at some point on the Columbia near the mouth of the Eagle Pass. When we saw the Indians every one was sure that the Kamloops party had reached the rendezvous before us. Our disappointment was brief, for the same evening half a dozen men were heard hallooing and struggling through the pass. This was our eagerly expected party, and great and natural was the delight at making such wonderfully close connections in a trackless wilderness; but our countenances fell when, asking for the provisions, the leader simply handed us a large sheet of foolscap on which was inscribed in fine legible hand a list of supplies *cached* at a distance of some days' journey! They had been able to carry barely enough for themselves, and had we not wisely husbanded our pork and flour, they and we might have starved.

Next morning we started up the Eagle Pass, with our sheet of foolscap and the Kamloops men. They brought us good news at any rate. In three or four days we should get to horses and supplies, and in a day or two thereafter to a wagon-road that had been commenced from Lake Shuswap by the company that is working the silver-bearing galena mines on the Kootenay. It turned out as they said. We found the horses, and a wealth of good things; cups and saucers of crockery were included, to our infinite amusement. The horses were of little use except to carry the packs, for better speed can be made walking than riding, and walking is safer and much more pleasant — if there can be pleasure on a trail along the Eagle River. We reached the wagon-road, Mr. G. V. Wright, in the center of a canvas town, superintending its construction, and ready to do anything for us. We sat luxuriously stretching our legs in the spring wagon in which he sent us on the

beautiful star-shaped Lake Shuswap — last of a series of lakes strung like beads on the river that drains the western slope of the Eagle Pass. There the Hon. Mr. Mara, having heard of our approach, had kindly kept the steamer *Peerless* waiting for us. The dangers and the toils of our journey were over.

With regard to the scenery in the Selkirk and Gold Mountains little need be said. Rain or snow falls almost unceasingly. The clouds from the Pacific shed some of their contents on Vancouver Island and the Cascades; then, rising high above these coast mountains, they float easterly over a wide intervening region, and empty their buckets most bountifully on the Gold range. A moss carpet several inches thick covers the ground, the rocks, the fallen timber, in every direction — mosses exquisitely delicate, as thickly and uniformly sown as if green showers had fallen silently from the heavens to replace the deep white snow of winter. From the branches of the trees hang mossy streamers. Softer than velvet is the coating of every bank. Dense underbrush and ferns from four to six or seven feet high fill the narrow valleys, save where the prickly devil's-club and enormous skunk cabbage dispute the ground with the ferns. Emerging from the dark-blue waters of Lake Shuswap and sailing the South Thompson, the air, the soft outlines of the hills, the park-like scenery recalling "the upper portions of the Arno and the Tiber," we come upon the intervening region of elevated broken plateau that extends from the Gold range west to the Cascades. Its physical character is the exact opposite of the humid mountains left behind. Low rounded, russet-colored hills, and benches covered with bunch-grass, or, where that has been too greedily cropped, with sage and prickly pear, take the place of lofty, rugged peaks and valleys choked with heavy timber. This intervening region that extends to the Cascades has everywhere a dry, dusty, California look, except where some little creek has been made to do duty in the way of irrigation. Then we have a garden plot, a field, or a ranch converted into a carpet or ribbon of freshest green contrasting beautifully with the surrounding gray or russet. These bits of green are like oases in the desert. They yield abundantly every variety of fruit or grain. Tomatoes, water- and musk-melons, and grapes ripen in the open air. Wheat, as in the most favored spots of Oregon and Washington Territory, yields from forty to seventy bushels to the acre. At Lytton the Fraser comes down from its long circuit round the far north country, through gorges inclosed by snow-crested mountains, to receive the tribute of the united Thompson. The clear blue Thomp-

son flows into the turbid Fraser, and the swollen torrent, deep, narrow, swirling, eddying, resistless, cuts its way through the granite of the Cascades to the sea. In this mountainous region, again, the farmer is no longer dependent on irrigation, and wherever there is soil anything can be raised. The Lower Fraser or New Westminster district is not only the most valuable in British Columbia, agriculturally, but the river is full of salmon and sturgeon, the country abounds with game, and the timber along the coast would furnish masts for all the admirals in the world.

But what will a railway get to do in this great sea of mountains? For along those five hundred miles of road on the mainland, constructed at so enormous a cost, the population, not counting Indians and Chinamen, is less than ten thousand. The British Columbians claim that a portion of the Asiatic trade will come their way, especially as the company that is building the road has announced its intention of putting on steamers to connect the Pacific terminus with the ports of Japan and China; and they also point to their fish, their mines of silver and gold, and their forests, as the complement of the prairies of the North-west. All their hopes and dreams cluster around the railway, and those whom it does not enrich will feel that they have a right to be disappointed. They ignore the fact that the people of the North-west or any other country can afford to pay only a certain price for fish or flesh, galena, gold, or anything else, and that if it cannot be supplied at said price it must be for them all the same as if it were non-existent. They fancy that the difficulty the province has to contend with is not the comparatively small amount of arable land, or the necessity for irrigation in districts otherwise good, or the intervening mountains, or the cañons that prevent river navigation, or the cost of transportation, or the great distances, but simply the presence of some thousands of industrious Chinamen. If Chinamen could only be kept out white people would come in, and wages would go up and keep up. Good prices would then be obtained for everything, and every one could live comfortably.

A most obliging merchant in Kamloops informed me that it would be as well for him to shut shop, because it was impossible to do business any longer. A few Chinamen had come to the place, and beginning as cooks, waiters, barbers, washermen, had at length opened some small shops, and were fast getting hold of the entire trade of the country. Nobody else had a chance with them, he said. I asked

why. "Oh," was the answer, given in perfect simplicity, "they are satisfied with small profits and quick returns, and they make no losses, for they refuse to give credit." He had not so learned business. His former customers, who were now buying goods at reasonable rates, agreed with him that it was a shame. I am sorry to seem to reflect on any of my British Columbian friends, or rather to reflect on their notions of commercial or political economy. They were kindness itself to me, as they are to all travelers. "They are a real nice people," said one of the engineers we fell in with; "they do cheerfully what you want, either for nothing or for an enormous price." That hits the mark. Their hospitality is beyond praise; but when they charge, you are likely to remember the bill. Three of us hired a wagon one afternoon. The boy drove us twenty-three miles in four hours, and the charge was thirty dollars. On another afternoon we engaged a man to row us in his little boat to a steamer on Burrard Inlet. It took him an hour, and we had to pay four dollars for the use of his boat and the pleasure of his company. A friend wished to negotiate for the removal of some lumber. Finding that the cost of a team was fifteen dollars per day, he preferred to do without the lumber. That such costs and charges put a stop to industrial development, that they are equivalent to total prohibition of intercourse or exchange, does not occur to the average politician. Abundance of labor is the one thing absolutely indispensable in British Columbia. Pretty much the only labor attainable on a large scale for many a year is that of Chinamen. Far from welcoming the labor, almost every one's face is set against it, even when necessity forces him to take advantage of it for the time. But this is not the place to discuss the Chinese problem. I have alluded to it simply because the railway has forced it upon our attention, and it presses for solution.

Since the Dominion was constituted the political life of Canada has centered about the Pacific Railway. Now that it is on the eve of completion, we see how great was the task that three millions of people set themselves fourteen years ago to accomplish. The work is imperial in meaning as well as magnitude, though the cost has been wholly defrayed by Canada. It is our contribution to the organization and defense of the empire. It has added to our public burdens, but our credit is better than when it was commenced. When we are told that it has cost fifty, sixty, or a hundred millions, what need one say but that it was a necessity, and that it is worth the cost?

FROM CATHEDRAL AT LUCCA.

TUSCAN CITIES.

I.

AS Pisa made no comment on the little changes she may have observed in me since we had last met, nineteen years before, I feel bound in politeness to say that I found her in April, 1883, looking not a day older than she did in December, 1864. In fact she looked younger, if anything, though it may have been the season that made this difference in her. She was in her spring attire, freshly, almost at the moment, put on; and that counts for much more in Pisa than one who knew her merely in the region of her palaces and churches and bridges would believe. She has not, indeed, quite that breadth of orchards and gardens within her walls which Siena has, but she has space enough for nature to flourish at ease there; and she has many deserted squares and places where the grass was sprouting vigorously in the crevices of the pavement. All this made her perceptibly younger, even with her memories running so far back of Roman times, into twilights whither perhaps a less careful modern historian than myself would not follow them. But when I am in a town that has real claims to antiquity, I like to allow them to the uttermost; and with me it is not merely a duty, it is a pleasure, to remind the reader that Pisa was founded by Pelops, the grandson of Jove, and the son of Tantalus, king of Phrygia. He was the same who was slain by his father, and served in a banquet to the gods, to try if they knew everything, or could be tricked into eating of the hideous repast; and it was after this curious experience — Ceres came in from the field, very tired and hungry, and popped down and tasted a bit of his shoulder before they could stop her — that, being restored to life by his grandfather, he visited Italy, and liking the situation at the mouth of the Arno, built his city there. This is the opinion of Pliny and Solinus, and that generally adopted by the Pisan chroniclers; but the skeptical Strabo would have us think that Pisa was not founded till much later, when Nestor, sailing homeward after the fall of Troy, was cast away on the Etruscan

shore at this point. There are some historians who reconcile the accounts by declaring that Nestor merely joined the Phrygians at Pisa, and could never have pretended to found the city. I myself incline to this notion; but even if Pisa was not built till after the fall of Troy, the reader easily perceives that a sense of her antiquity might affect an Ohio man, even after a residence in Boston. A city founded by Pelops or Nestor could not be converted to Christianity by a less person than St. Peter, who, on his way to Rome, was expressly wrecked on the Pisan coasts for that purpose. Her faith, like her origin, is as ancient as possible, and Pisa was one of the first Italian communities to emerge from the ruin of the Roman empire into a vigorous and splendid life of her own. Early in the middle ages she had, with the arrogance of long-established consequence, superciliously explained the Florentines, to an Eastern potentate who had just heard of them, as something like the desert Arabs,—a lawless, marauding, barbarous race, the annoyance of all respectable and settled communities. In those days Pisa had not only commerce with the East, but wars; and in 1005 she famously beat back the Saracens from their conquests in the northern Mediterranean, and, after a struggle of eighteen years, ended by carrying the war into Africa and capturing Carthage with the Emir of the Saracens in it. In the beginning of this war her neighbor Lucca, fifteen miles away, profited by her pre-occupation to attack her, and this is said to have been one of the first quarrels, if not the first, in which the Italian cities asserted their separate nationality and their independence of the empire. It is supposed on that account to have been rather a useful event, though it is scarcely to be praised otherwise. Of course the Pisans took it out of the Lucchese afterwards in the intervals of their more important wars with the Genoese by sea and the Florentines by land. There must have been fighting pretty well all the time, back and forth across the vineyards and olive orchards that stretch between the two cities; I have counted up

eight distinct wars, bloody and tedious, in which they ravaged each other's territory, and I dare say I have missed some. Once the Pisans captured Lucca and sacked it, and once the Lucchese took Pisa and sacked it; the Pisans were Ghibelline and the Lucchese were Guelph, and these things had to be. In the mean time Pisa was waging, with varying fortune, seven wars with Genoa, seven other with Florence, three with Venice, and one with Milan, and was in a spirited state of continual party strife within herself; though she found leisure to take part in several of the crusades, to break the naval supremacy of the Saracens, and to beat the Greeks in sea-fights under the walls of Constantinople. The warlike passions of men were tightly wound up in those days, and Pisa was set to fight for five hundred years. Then she fell at last, in 1509, under the power of those upstart Florentines whom she had despised so long.

II.

WHAT is odd in the history of Pisa is that it has given but one name to common remembrance. Her prosperity was early and great, and her people employed it in the cultivation of all the arts; yet Andrea and Niccolò Pisano are almost the only artists whose fame is associated with that of their native city. She was perpetually at war by sea and by land, yet her admirals and generals are unknown to the world. Her university is one of the oldest and most learned in Italy, yet she produced no eminent scholars or poets, and one hardly realizes that the great Galileo, who came a century after the fall of his country, was not a Florentine but a Pisan by birth; he was actually of a Florentine family settled in Pisa. When one thinks of Florence, one thinks of Dante, of Giotto, of Cimabue, of Brunelleschi, of Michelangelo, of Savonarola, and of Lorenzo de' Medici and Leo X., of Boccaccio and Pulci and Politian, of Machiavelli, of Giovanni delle Bande Nere and Gino Capponi, of Guido Cavalcanti, of Amerigo Vesputti, of Benvenuto Cellini, and Masaccio and Botticelli, and all the rest. When one thinks of Siena, one thinks of St. Catharine, and Ochino, and Socinus, and the Piccolomini, and Bandini, and Sodoma. But when one thinks of Pisa, Ugolino is the sole name that comes into one's mind. I am not at all sure, however, that one ought to despise Pisa for her lack of celebrities; I am rather of a contrary opinion. It is certain that such a force and splendor as she was for five hundred years could have been created only by a consensus of mighty wills, and it seems to me that a very pretty case might be made out in behalf

of the democracy whose level was so high that no one head could be seen above it. Perhaps this is what we are coming to in our own civilization, and I am disposed to take heart from the heroless history of Pisa when I look round over the vast plain of our equality, where every one is as great as every other.

I wish, if this is the case, we might come finally to anything as clean and restful and lovely as I found Pisa on the day of my arrival; but of course that would be much more difficult for a continent than for a city, and probably our last state will not be so pleasant. On our way down from Florence, through much the same landscape as that through which we had started to Siena, the peach-trees were having their turn in the unhurried Italian spring's succession of blossoms, and the fields were lit with their pathetic pink, where earlier the paler bloom of the almond had prevailed. As I said, Pisa herself was in her spring dress, and it may be that the season had touched her with the languor which it makes the whole world feel, as she sat dreaming beside her Arno, in the midst of the gardens that compassed her about within her walls. I do not know what Pisa had to say to other tourists who arrived that day, but we were old friends, and she regarded me with a frank, sad wonder when she read in my eyes a determination to take notes of her.

"Is it possible?" she expressed, with that mute, melancholy air of hers. "You, who have lived in Italy, and ought to know better? You, who have been here before? Sit down with me beside the Arno!" and she indicated two or three empty bridges, which I was welcome to, or if I preferred half a mile or so of that quay which has the noblest sweep in the world, there it was, vacant for me. I shrugged my excuses, as well as I could, and indicated the artist at my side, who with his etching-plate under his arm, and his hat in his hand, was making his manners to Pisa, and I tried to explain that we were both there under contract to produce certain illustrated papers for THE CENTURY.

"What papers? What century?" she murmured, and tears came into the eyes of the beautiful ghost; and she added with an inexpressible pathos and bitterness, "I remember no century since the fifteenth, when — I — died."

She would not say when she fell under the power of her enemy, but we knew she was thinking of Florence; and as she bowed her face in her hands, we turned away with our hearts in our throat.

We thought it well not to go about viewing the monuments of her fallen grandeur at once,— they are all kept in wonderful repair,

— and we left the Arno, whose mighty curve is followed on either side by lines of magnificent palaces, and got our driver to carry us out to the streets that dwindled into lanes beside the gardens fenced in by the red brick city walls. At one point a long stretch of the wall seemed trellised for yellow roses which covered acres of it with their golden multitude, but when we got down and walked nearer, with the permission of the peasant whose field we passed through, we found they were lemons. He said they grew very well in that shelter and exposure, and his kind old weather-beaten, friendly face was almost the color of one. He bade us go anywhere we liked in his garden, and he invited us to drink of the water of his well, which he said never went dry in the hottest weather. Then he returned to his fat old wife, who had kept on weeding, and bent down beside her and did not follow us for drink-money, but returned a self-respectful adieu from a distance, when we called a good-bye before getting into our carriage. We generalized from his behavior a manly independence of character in the Pisan people, and I am sure we were not mistaken in the beauty of the Pisan women, who, as we met them in the street, were all extremely pretty, and young, many of them, even after five hundred years. One gets over expecting good looks in Tuscany; and perhaps this was the reason why we prized the loveliness of the Pisans. It may have been comparative only, though I am inclined to think it was positive. At any rate there can be no doubt about the landscape outside the walls, which we drove into a little way out of one of the gates, to return by another. It was a plain country, and at this point a line of aqueduct stretched across the smiling fields to the feet of the arid purple hills that propped the blue horizon. There was something richly simple in the elements of the picture, which was of as few tones as a landscape of Titian or Raphael, and as strictly subordinated in its natural features to the human interest which we did our best to represent. I dare say our best was but poor. Every acre of that plain had been the theater of a great tragedy; every rood of ground had borne its hero. Now, in the advancing spring, the grass and wheat were long enough to flow in the wind, and they flowed like the ripples of a wide green sea to the feet of those purple hills, away from our feet where we stood beside our carriage on its hither shore. The warmth of the season had liberated the fine haze that dances above the summer fields, and this quivered before us like the confluent phantoms of multitudes, indistinguishably vast, who had fallen there in immemorial strife. But we could not stand

musing long upon this fact; we had taken that carriage by the hour. Yet we could not help loitering along by the clear stream that followed the road, till it brought us to a flour-whitened mill near the city wall, slowly and thoughtfully turning its huge undershot wheel; and I could not resist entering and speaking to the miller where, leaning upon a sack of wheat, he dimly loomed through the powdered air, in the exact attitude of a miller I used to know in a mill on the Little Miami, in Ohio, when I was a boy.

III.

I TRY to give the reader a true impression of the sweet confusion of travel in those old lands. In the phrases that come out of the point of the pen, rather than out of the head or the heart, we talk about losing ourselves in the associations of the past; but we never do it. A prime condition of our sympathy with it is that we always and every instant and vividly find our dreary, tiresome, unstoried, unstoriable selves in it; and if I had been less modern, less recent, less raw, I should have been by just so much indifferent to the antique charm of the place. In the midst of my reverie of the Pisan past, I dreamily asked the miller about the milling business in the Pisan present. I forget what he said.

The artist outside had begun an etching,— if you let that artist out of your sight half a second he began an etching,— and we got back by a common effort into the town again, where we renewed our impression of a quiet that was only equaled by its cleanliness, of a cleanliness that was only surpassed by its quiet. I think of certain genial, lonely, irregular squares, more or less planted with pollarded sycamores, just then woolily tufted with their leaf-buds; and I will ask the reader to think of such white light over all as comes in our own first real spring days; for in some atmospheric qualities and effects the spring is nowhere so much alike as in America and Italy. In one of these squares the boys were playing ball, striking it with a small tambourine instead of a bat; in another, some young girls sat under a sycamore with their sewing; and in a narrow street running out of this was the house where Galileo was born. He is known to have said that the world moves; but I do not believe it has moved much in that neighborhood since his time. His natal roof is overlooked by a lofty gallery leading into Prince Corsini's garden; and I wish I could have got inside of that garden; it must have been pleasanter than the street in which Galileo was born, and which more nearly approached squalor in its condition

THE LANDING STAIRS, LEGHORN.*

than any other street that I remember in Pisa. It had fallen from no better state, and must always have witnessed to the poverty of the decayed Florentine family from which Galileo sprang.

I left the artist there — beginning an etching, as usual — and wandered back to our hotel; for it was then in the drowsy heart of the late afternoon, and I believed that Pisa had done all that she could for me in one day. But she had reserved a little surprise, quaint and unimaginable enough, in a small chapel of the Chiesa Evangelica Metodista Italiana, which she suddenly showed me in a retired street I wandered through. This Italian Evangelical Methodist Church was but a tiny structure, and it stood back from the street in a yard, with some hollies and myrtles before

it — simple and plain, like a little Methodist church at home. It had not a frequented look, and I was told afterwards that the Methodists of Pisa were in that state of arrest which the whole Protestant movement in Italy has fallen into, after its first vigorous impulse. It has not lost ground, but it has not gained, which is also a kind of loss. Apparently the Protestant church which prospers best in Italy is the ancient Italian church of the Waldenses. This presents the Italians a Protestantism of their own invention, while perhaps the hundred religions which we offer them are too distracting, if unaccompanied by our one gravy. It is said that our missionaries have unexpected difficulties to encounter in preaching to the Italians, who are not amused as we should be by a foreigner's blunder in our

* Mr. Howells's series does not include Leghorn, but Mr. Pennell, who, according to Mr. Howells, is simply irrepressible as an etcher, made such a pretty plate of the "landing stairs" there that we cannot withhold it from our readers. — EDITOR CENTURY.

language, but annoyed and revolted by incorrect Italian from the pulpit. They have, moreover, their intellectual pride in the matter: they believe that if Protestantism had been the wiser and better thing we think it, the Italians would have found it out long ago for themselves. As it is, such proselytes as we make are among the poor and ignorant; though that is the way all religions begin.

After the Methodist church it was not at all astonishing to come upon an agricultural implement warehouse—alongside of a shop glaring with alabaster statuary—where the polite attendant offered me an American pump as the very best thing of its kind that I could use on my *podere*. When I explained that I and his pump were fellow-countrymen, I could see that we both rose in his respect. A French pump, he said, was not worth anything in comparison, and I made my own inferences as to the relative inferiority of a Frenchman.

IV.

ONE of our first cares in Pisa was of course to visit the Four Fabrics, as the Italians call, *par excellence*, the Duomo, the Leaning Tower, the Baptistery, and the Campo Santo.

I say cares, for to me it was not a great pleasure. I perceive, by reference to my note-book, that I found that group far less impressive than at first, and that the Campo Santo especially appeared conscious and finicking. I had seen those Orgagna frescoes before, and I had said to myself twenty years ago, in obedience to whatever art-critic I had in my pocket, that here was the highest evidence of the perfect sincerity in which the early masters wrought—that no one could have painted those horrors of death and torments of hell who had not thoroughly believed in them. But this time I had my doubts, and I questioned if the painters of the Campo Santo might not have worked with almost as little faith and reverence as so many American humorists. Why should we suppose that the men who painted the Vergognosa peeping through her fingers at the debauch of Noah should not be capable of making ferocious fun of the scenes which they seemed to depict seriously? There is, as we all know, a modern quality in the great minds, the quickest wits, of all ages, and I do not feel sure these old painters are always to be taken at their word. Were they not sometimes making a mock of the devout clerics and laics who

THE SWEEP OF THE ARNO AT PISA.

employed them? It is bitter fun, I allow. The Death and the Hell of Orgagna are atrocious—nothing less. A hideous fancy, if not a grotesque, insolent humor, riots through those scenes, where the damned are shown with their bowels dangling out (my pen cannot be half so plain as his brush), with their arms chopped off and their tongues torn out by fiends, with their women's breasts eaten by snakes. I for one will not pretend to have revered those works of art, or to have felt anything but loathing in their presence. If I am told that I ought at least to respect the faith with which the painter wrought, I say that faith was not respectable; and I can honor him more if I believe he was portraying those evil dreams in contempt of them,—doing what he could to make faith in them impossible by realizing them in all the details of their filthy cruelty. It was misery to look upon them, and it was bliss to turn my back and give my gaze to the innocent wilding flowers and weeds—the daisies that powdered the sacred earth brought from the Holy Land in the Pisan galleys of old, for the sweeter repose of those laid away here to wait the judgment day. How long they had been sleeping already!

But they do not dream; that is one comfort.

I revisited the Baptistery for the sake of the famous echo which I had heard before, and which had sweetly lingered in my sense all these twenty years. But I was now a little disappointed in it—perhaps because the custodian who had howled so skillfully to evoke it was no longer there, but a mere tyro intent upon his half franc, with no real feeling for ululation as an art. Guides and custodians of an unexampled rapacity swarmed in and all about the Four Fabrics, and beggars, whom we had almost forgotten in Florence, were there in such number that if the Leaning Tower were to fall, as it still looks capable of doing at any moment, it would half depopulate Pisa. I grieve to say that I encouraged mendicancy in the person of an old woman whom I gave a franc by mistake for a soldo. She had not the public spirit to refuse it; without giving me time to correct the error, her hand closed upon it like a talon of a vulture, and I had to get what consolation I could out of pretending to have meant to give her a franc, and to take lightly the blessings under which I really staggered.

It may have been this misadventure that cast a malign light upon the cathedral, which

AN ARCADED STREET, PISA.

I found, after that of Siena, not at all estimable. I dare say it had its merits; but I could get no pleasure even out of the swinging lamp of Galileo; it was a franc, large as the full moon, and reproachfully pale, that waved to and fro before my eyes. This cathedral, however, is only the new Duomo of Pisa, being less than eight hundred years of age, and there is an old Duomo, in another part of the city, which went much more to my heart. I do not pretend that I entered it; but it had a lovely façade of Pisan Gothic, mellowed through all its marble by the suns of a thousand summers, and weed-grown in every neglected niche and nook where dust and seeds could be lodged; so that I now wonder I did not sit down before it and spend the rest of my life there.

v.

THE reader, who has been requested to imagine the irregular form and the perpetually varying heights and depths of Siena, is now set the easier task of supposing Pisa shut within walls almost quadrangular, and reposing on a level which expands to the borders of the hills beyond Lucca, and drops softly with the Arno towards the sea. The river di-

vides the southward third of the city from the rest, to which stately bridges bind it again. The group of the Four Fabrics, to which we have paid a devoir tempered by modern misgiving, rises in aristocratic seclusion in the north-western corner of the quadrangle, and the outer wall of the Campo Santo is the wall of the city. Nothing statelier than the position of these edifices could be conceived; and yet their isolation, so favorable to their reproduction in small alabaster copies, costs them something of the sympathy of the sensitive spectator. He cannot withhold his admiration of that grandeur, but his soul turns to the Duomo in the busy heart of Florence, or to the cathedral, preëminent but not solitary, in the crest of Siena. The Pisans have put their famous group apart from their streets and shops, and have consecrated to it a region which no business can take them to. In this they have gained distinction and effect for it, but they have lost for it that character of friendly domesticity which belongs to all other religious edifices that I know in Italy. Here, as in some other things not so easily definable, the people so mute in all the arts but architecture—of which they were the origin and school in Italy—seem to have expressed themselves mistakenly. The Four Fabrics are where they are to be seen, to be visited, to be wondered at; but they are remote from human society, and they fail of the last and finest effect of architecture—the perfect adaptation of houses to the use of men. Perhaps also one feels a want of unity in the group; perhaps they are too much like dishes set upon the table: the Duomo a vast and beautiful pudding; the Baptistery a gigantic charlotte russe; the Campo Santo an exquisite structure in white sugar; the Leaning Tower a column of ice-cream which has been weakened at the base by too zealous an application of hot water to the outside of the mold. But I do not insist upon this comparison; I only say that I like the ancient church of St. Paul by the Arno. Some question whether it was really the first cathedral of Pisa, maintaining that it was merely used as such while the Duomo was in repair after the fire from which it suffered shortly after its completion.

One must nowadays seem to have some preference in all æsthetic matters, but the time was when polite tourists took things more easily. In the seventeenth century, "Richard Lassels, Gent. who Travelled through Italy five times as Tutor to several of the English Nobility and Gentry," says of the Pisan Duomo that it "is a neat Church for structure, and for its three Brazen Doors historied with a fine Basso rilievo. It's built after *La maniera Tedescha*, a fashion of Building much used in Italy

four or five hundred years ago, and brought in by Germans or Tedeschi, saith Vasari. Near to the Domo stands (if leaning may be called standing) the bending Tower, so artificially made, that it seems to be falling, and yet it stands firm. . . . On the other side of the Domo is the Campo Santo, a great square cloistered about with a low cloister curiously painted."

Here is no trouble of mind about the old masters, either architects or painters, but a beautiful succinctness, a tranquil brevity, which no concern for the motives, or meanings, or aspirations of either penetrates. We have taken upon ourselves in these days a heavy burden of inquiry as to what the mediæval masters thought and felt; but the tourist of the seventeenth century could say of the Pisan Duomo that it was "a neat church for structure," and of the Campo Santo that it was "curiously painted," and there an end. Perhaps there was a relief for the reader also in this method. Master Lassels vexed himself to spell his Italian correctly no more than he did his English.

He visited, apparently with more interest, the Church of the Knights of St. Stephen, which, indeed, I myself found full of unique attraction. Of these knights he says:

"They wear a Red Cross of Satin upon their Cloaks, and profess to fight against the Turks. For this purpose they have here a good House and Maintainance. Their Church is beautified without with a handsome Faciata of White Marble, and within with Turkish Ensigns and divers Lanterns of Capitanesse Gallies. In this House the Knights live in common, and they are well maintained. In their Treasury they shew a great Buckler of Diamonds, won in a Battle against the Turks. . . . They have their Cancellaria, a Catalogue of those Knights who have done notable service against the Turks, which serves for a powerful exhortation to their Successors, to do, and die bravely. In fine, these Knights may marry if they will, and live in their own particular houses, but many of them choose celibate, as more convenient for brave Soldiers; Wives and Children being the true *impedimenta exercitus*."

The knights were long gone from their House and Maintainance in 1883, and I suspect it is years since any of them even professed to fight the Turks. But their church is still there, with their trophies, which I went and admired; and I do not know that there is anything in Pisa which gives you a more vivid notion of her glory in the past than those flags taken from the infidels and those carvings that once enriched her galleys. These and the ship-yards by the Arno, from which her galleys were launched, do really recall the majesty and dominion of the sea which once was hers — and then Genoa's, and then Venice's, and then the Hanseatic Cities', and then Holland's, and then England's; and shall be ours when the Moral Force of the American

Navy is appreciated. At present Pisa and the United States are equally formidable as maritime powers, unless, indeed, this conveys too strong an impression of the decay of Pisa.

VI.

ISSUING from the Church of the Cavaliers, I found myself in the most famous spot in the whole city: the wide dusty square where the Tower of Famine once stood, and where you may still see a palace with iron baskets swung from the corners of the façade, in which it is said the wicked Archbishop Ruggieri used to put the heads of traitors. It may not be his palace, and the baskets may not have been used for this purpose; but there is no doubt that this was the site of the tower, which was not demolished till 1655, and that here it was that Ugolino and his children and grandchildren cruelly perished.

The writer of an excellent little local guide to Pisa, which I bought on my first visit, says that Dante has told the story of Count Ugolino della Gherardesca, and that "after Dante God alone can repeat it." Yet I fancy the tragedy will always have a fascination to the scribbler who visits Pisa, irresistibly tempting him to recall it to his reader. I for my part shall not do less than remind him that Ugolino was Captain of the People and Podestà of Pisa at the time of her great defeat by Genoa in 1284, when so many of her best and bravest were carried off prisoners that a saying arose, "If you want to see Pisa, go to Genoa." In those days they had a short and easy way of accounting for disaster, which has been much practiced since down even to the date of our own civil war: they attributed it to treason, and in this case they were pretty clear that Count Ugolino was the traitor. He sailed away with his squadron before his critics thought the day lost; and after the battle, in his negotiations with Florence and Genoa, they declared that he behaved as only a man would who wished to ruin his country in order to rule her. He had already betrayed his purpose of founding an hereditary lordship in Pisa, as the Visconti had done in Milan and the Scaligeri in Verona, and to this end had turned Guelph from being ancestrally Ghibelline; for his name is one of the three still surviving in Tuscany of the old German nobility founded there by the emperors. He was a man of furious and ruthless temper; he had caused one of his nephews to be poisoned, he stabbed another, and when the young man's friend, a nephew of the Archbishop, would have defended him, Ugolino killed him with his own hand. The Archbishop, as a Ghibelline, was already no friend of Ugolino's, and

THE CLOCK TOWER OF LUCCA.

here now was bloodshed between them. "And what happened to Count Ugolino a little after," says the Florentine chronicler, Villani,

"was prophesied by a wise and worthy man of the court, Marco Lombardo; for when the count was chosen by all to be Lord of Pisa, and when he was in his highest estate and felicity, he made himself a splendid birthday feast, where he had his children and grandchildren and all his lineage, kinsmen and kinswomen, with great pomp of apparel, and ornament, and preparation for a rich banquet. The count took this Marco, and went about showing him his possessions and splendor, and the preparation for the feast, and that done, he said, 'What do you think of it, Marco?' The sage answered at once, and said, 'You are fitter for evil chance than any baron of Italy.' And the count, afraid of Marco's meaning, asked, 'Why?' And Marco answered, 'Because you lack nothing but the wrath of God.' And surely the wrath of God quickly fell upon him, as it pleased God, for his sins and treasons; for as it had been intended by the Archbishop of Pisa and his party to drive out of Pisa Nino

and his followers, and betray and entammel Ugolino, and weaken the Guelphs, the Archbishop ordered Count Ugolino to be undone, and immediately set the people on in their fury to attack and take his palace, giving the people to understand that he had betrayed Pisa, and surrendered their castles to the Florentines and Lucchese; and finding the people upon him, without hope of escape, Ugolino gave himself up, and in this assault his bastard son and one of his grandchildren were killed; and Ugolino being taken, and two of his sons and two of his son's sons, they threw them in prison, and drove his family and his followers out of Pisa. . . . The Pisans, who had thrown in prison Ugolino and his two sons, and two sons of his son Count Guelfo, as we have before mentioned, in a tower on the Piazza degli Anziani, caused the door of the tower to be locked and the keys to be thrown into the Arno, and forbidding these captives all food, in a few days they perished of hunger. But first, the count imploring a confessor, they would not allow him a friar or priest that he might confess. And all five being taken out of the tower together, they were vilely buried; and from that time the prison was called the Tower of Famine, and will be so always. For this cruelty the Pisans were strongly blamed by the whole world, wherever it was known, not so much for the count, who for his crimes and treasons was perhaps worthy of such a death, but for his sons and grandsons, who were young boys, and innocent; and this sin, committed by the Pisans, did not remain unpunished, as may be seen in after time."

A monograph on Ugolino by an English writer states that the victims were rolled in the matting of their prison floor and interred, with the irons still on their limbs, in the cloister of the church of San Francesco. The grave was opened in the fourteenth century, and the irons taken out; again, in 1822, the remains were found and carelessly thrown together in a spot marked by a stone bearing the name of Vannuchi. Of the prison where they suffered no more remains now than of the municipal eagles which the Republic put to molt there, and from which it was called the Molting Tower before it was called the Tower of Famine.

At Pisa there is nothing of wildness or strife in the Arno, as at Florence, where it rushes and brawls down its channel and over its dams and ripples. Its waters are turbid, almost black, but smooth, and they slip oilily away with many a wreathing eddy, round the curve of the magnificent quay, to which my mind recurs still as the noblest thing in Pisa—as the noblest thing, indeed, that any city has done with its river. But what quick and sensitive allies of Nature the Italians have always shown themselves! No suggestion of hers has been thrown away on them; they have made the most of her lavish kindness, and transmuted it into the glory and the charm of art. Our last moments of sight-seeing in Pisa were spent in strolling beside the river, in hanging on the parapet and delighting in the lines of that curve.

At one end of the city, before this begins,

near a spick-and-span new iron bridge, is the mediæval tower of the galley prison, which we found exquisitely picturesque in the light of our last morning; and then, stretching up towards the heart of the town from this tower, were the ship-yards, with the sheds in which the old republic built the galleys she launched on every sea then known. They are used now for military stables; they are not unlike the ordinary horse-car stables of our civilization; and the grooms, swabbing the legs of the horses and combing their manes, were naturalized to our home-sick sympathies by the homely community of their functions with those I had so often stopped to admire in my own land. There is no doubt but the toilet of a horse is something that interests every human being.

VII.

WITH rather less than the ordinary stupidity of tourists, wretched slaves of routine as they are, we had imagined the possibility of going to Lucca overland; that is, of driving fifteen miles across the country instead of taking the train. It would be as three hours against twenty minutes, and as fifteen francs against two; but my friend was young and I was imprudent, and we boldly ventured upon the expedition. I have never regretted it, which is what can be said of, alas, how few pleasures! On the contrary, it is rapture to think of it still.

Already, at eight o'clock of the April morning, the sun had filled the city with a sickening heat, which intimated pretty clearly what it might do for Pisa in August; but when we had mounted superbly to our carriage-seats, after pensioning all the bystanders, and had driven out of the city into the green plain beyond the walls, we found it a delicious spring day, warm, indeed, but full of a fervent life.

We had issued from the gate nearest the Four Fabrics, and I advise the reader to get that view of them if he can. To the backward glance of the journeyer toward Lucca, they have the unity, the *ensemble*, the want of which weakens their effect to proximity. Beside us swept the great level to the blue-misted hills on our right; before us it stretched indefinitely. From the grass, the larks were quivering up to the perfect heaven, and the sympathy of Man with the tender and lovely mood of Nature was expressed in the presence of the hunters with their dogs, who were exploring the herbage in quest of something to kill.

Perhaps I do man injustice. Perhaps the rapture of the blameless littérateur and artist, who drove along crying out over the exquisite beauty of the scene, was more justly representative of our poor race. I am vexed now when I think how brief this rapture was, and

how much it might have been prolonged if we had bargained with our driver to go slow. We had bargained for everything else; but who could have imagined that one Italian could ever have been fast enough for two Americans? He was even too fast. He had a just pride in his beast,—as tough as the iron it was the color of,—and when implored, in the interest of natural beauty, not to urge it on, he misunderstood; he boasted that it could keep up that pace all day, and he incited it in the good Tuscan of Pisa to go faster yet. Ah me! what enchanting villas he whirled us by! what gray châteaux! what old wayside towers, hoary out of all remembrance! What delightfully stupid-looking little stony picturesque villages, in every one of which that poor artist and I would have been glad to spend the whole day! But the driver could not snatch the broad and constant features of the landscape from us so quickly; these we had time to peruse, and imprint forever on our memories: the green expanses; the peach-trees pink in their bloom; the plums and cherries putting on their bridal white; the gray road, followed its whole length by the vines trained from trees to tall stakes across a space which they thus embowered continuously from field to field. Everywhere the peasants were working the soil; spading, not plowing their acres, and dressing it to the smoothness of a garden. It looked rich and fertile, and the whole land wore an air of smiling prosperity which I cannot think it put on expressly for us.

Pisa seemed hardly to have died out of the horizon before her ancient enemy began to rise from the other verge, beyond the little space in which they used to play bloodily at national hostilities. The plain narrowed as we approached, and hills hemmed us in on three sides, with snow-capped heights in the background, from which the air blew cooler and cooler. It was only eleven o'clock, and we would gladly have been all day on the road. But we pretended to be pleased with the mistaken zeal that had hurried us; it was so amiable, we could not help it; and we entered Lucca with the smiling resolution to make the most of it.

VIII.

LUCCA lies as flat as Pisa, but in shape it is as regularly oblong as that is square, and instead of the brick wall, which we had grown fond of there and in Siena, it has a girdle of gray stone, deeply moated without, and broadly leveled on top, where a lovely driveway winds round the ancient town. The wall juts in a score of angles, and the projecting spaces thus formed are planted with groups of forest trees,

lofty and old, and giving a charm to the promenade exquisitely wild and rare.

To our approach, the clustering city towers and roofs promised a picturesqueness which she kept in her own fashion when we drove in through her gates, and were set down, after a dramatic rattling and banging through her streets, at the door of the *Universo*, or the *Creca di Malta*—I do not really remember which hotel it was. But I remember very well the whole domestic force of the inn seemed to be concentrated in the distracted servant who gave us our rooms, and was landlord, porter, accountant, waiter, and chambermaid all in one. It was an inn apparently very little tainted by tourist custom, and Lucca is certainly one of the less discovered of the Tuscan cities. At the *table-d'hôte* in the evening our commensals were all Italians except an ancient English couple, who had lived so long in that region that they had rubbed off everything English but their speech. I wondered a good deal who they could be; they spoke conservatively—the foreigners are always conservative in Italy—of the good old ducal days of Lucca, when she had her own mild little despot, and they were now going to the Baths of Lucca to place themselves for the summer. They were types of a class which is numerous all over the Continent, and which seems thoroughly content with expatriation. The Europeanized American is always apologetic; he says that America is best, and he pretends that he is going back there; but the continentalized Englishman has apparently no intention of repatriating himself. He has said to me frankly in one instance that England was beastly. But I own I should not like to have said it to him.

In their talk of the ducal past of Lucca these English people struck again the note which my first impression of Lucca had sounded. Lucca was a sort of republic for nearly a thousand years, with less interruption from lords, bishops, and foreign dominions than most of her sister commonwealths, and she kept her ancient liberties down to the time of the French revolution—four hundred years longer than Pisa, and two hundred and fifty years longer than Florence and Siena; as long, in fact, as Venice, which she resembled in an arbitrary change effected from a democratic to an aristocratic constitution at the moment when the change was necessary to her existence as an independent state. The duchy of Lucca, created by the Congress of Vienna in 1817 and assigned to the Bourbons of Parma, lasted only thirty years, when it was merged by previous agreement in the grand duchy of Tuscany, the Bourbons going back to Parma, in which Napoleon's Austrian widow had

SKETCH IN LUCCA.

meantime enjoyed a life interest. In this brief period, however, the old republican city assumed so completely the character of a little principality, that, in spite of the usual Via Garibaldi and Corso Vittorio Emmanuele, I could not banish the image of the ducal state from my mind. Yet I should be at a loss how to impart this feeling to every one, or to say why a vast dusty square, planted with pollarded sycamores, and a huge, ugly palace with but a fairish gallery of pictures, fronting upon the dust and sycamores, should have been so expressive of a ducal residence. There was a statue of Maria Louisa, the first ruler of the temporary duchy, in the midst of these sycamores, and I had a persistent whimsey of her reviewing her little ducal army there, as I sat and looked out from the open door of the restaurant where my friend and I were making the acquaintance of a number of strange dishes and trying our best to be friends with the Lucchese conception of a beef-steak.

It was not because I had no other periods to choose from; in Lucca you can be overwhelmed with them. Her chronicles do not indeed go back into the mists of fable for her origin, but they boast an Etruscan, a Roman antiquity which is hardly less formidable. Here in A. U. 515 there was fixed a colony of two thousand citizens; here in 698 the great Cæsar met with Pompey and Crassus,

and settled who should rule in Rome. After the Romans, she knew the Goths, the Lombards, and the Franks; then she had her own tyrants, and in the twelfth century she began to have her own consuls, the magistrates of her people's choice, and to have her wars within and without, to be torn with faction and menaced with conquest in the right Italian fashion. Once she was sacked by the Pisans under the terrible Ugucione della Faggiuola, in 1314; and more than once she was sold. She was sold for thirty-five thousand florins to two ambitious and enterprising gentlemen, the Rossi brothers, of Parma, who, however, were obliged to relinquish her to the Scaligeri of Verona. This was the sorrow and shame that fell upon her after a brief fever of conquest and glory, brought her by the greatest of her captains, the famous Castruccio Castracani, the condottiere, whose fierce, death-white face, bordered by its pale yellow hair, looks more vividly out of the history of his time than any other. For Ugucione had been in prison, appointed to die, and when the rising of the Lucchese delivered him and made him Lord of Lucca, Ugucione's fetters were still upon him. He was of the ancient Ghibelline family of the Antelminelli, who had prospered to great wealth in England, where they spent a long exile, and where Castruccio learned the art of war. After his death, one of his sons sold his dominion to another for twenty-two thousand florins, from whom his German garrison took it and sold it for sixty thousand to Gherardo Spinola; he, in turn, disposed of it to the Rossi, at a clear loss of thirty-eight thousand florins. The Lucchese suffered six years under the Scali-

geri, who sold them again — the market price this time is not quoted — to the Florentines, whom the Pisans drove out. These held her in a servitude so cruel that the Lucchese called it their Babylonian captivity; and when

Cosmo I. that they were guiltless of complicity. The imperial commissioner came from Milan to preside at his trial, and he was sentenced to suffer death for treason to the empire. He was taken to Milan and beheaded;

A STAIRWAY, LUCCA.

it was ended after twenty years, through the intervention of the Emperor Charles IV., in 1369, they were obliged to pay the German a hundred thousand florins for their liberty, which had been sold so many times for far less money.

An ancient Lucchese family, the Guañigi, whose Gothic palaces are still the most beautiful in the city, now rose to power, and held it till 1430; and then the city finally established the republican government, which in its democratic and oligarchic form continued till 1799.

The noblest event of this long period was the magnanimous attempt of the gonfaloniere, Francesco Burlamacchi, who in 1546 dreamed of driving the Medici from power and reëstablishing the republic throughout Tuscany. Burlamacchi was of an old patrician family, but the love of freedom had been instilled in him by his uncle, Filippo Burlamacchi, that Fra Pacifico who wrote the first life of Savonarola and was one of his most fervent disciples. The gonfaloniere's plot was discovered, and he was arrested by the timid Lucchese Senate, which hastened to assure the ferocious

but now he is the greatest name in Lucca, and his statue in the piazza, fronting her ancient communal palace, appeals to all who love freedom with the memory of his high intent. He died in the same cause which Savonarola laid down his life for, and not less generously.

Poor little Lucca had not even the courage to attempt to save him; but doubtless she would have tried if she had dared. She was under the special protection of the emperors, having paid Maximilian and then Charles V. good round sums for the confirmation of her early liberties; and she was so anxious to be well with the latter, that, when she was accused to him of favoring the new Lutheran heresy, she hastened to persecute the Protestants with the same cowardice that she had shown in abandoning Burlamacchi.

It cost, indeed, no great effort to suppress the Protestant congregation at Lucca. Peter Martyr, its founder, had fled before, and was now a professor at Strasburg, whence he wrote a letter of severe upbraiding to the timorous flock who suffered themselves to be frightened back to Rome. Some of them would not renounce their faith, preferring ex-

ile, and of these, who emigrated by families, were the Burlamacchi, from whom the hero came. He had counted somewhat upon the spirit of the Reformation to help him in his design against the Medici, knowing it to be the spirit of freedom, but there is no one evidence that he was himself more a Protestant than Savonarola was.

Eight years after his death the constitution of Lucca was changed, and she fell under the

while keeping its own; here are the pillars resting on the backs of lions and leopards; here are the quaint mosaics in the façades. You see the former in the cathedral, which is not signally remarkable, like that of Florence, or Siena, or Pisa, and the latter in the beautiful old church of San Frediano, an Irish saint who for some reason figured in Lucca; he was bishop there in the fifth century, and the foundation of his church dates only a century

or two later. San Michele is an admirable example of Lucchese Gothic, and is more importantly placed than any other church, in the very heart of the town, opposite the Palazzo Pretorio. This structure was dedicated to the occupation of the Podestà of Lucca, in pursuance of the republic's high-languaged decree, recognizing the fact that "among the ornaments with which cities embellish themselves, the greatest expenditure should always be devoted to those where the deities are worshiped, the magistracy administers justice, and the people convenes." The Palazzo Pretorio is now the repository of a public archæological collection, and the memory of its original use has so utterly perished that the combined intellects of two

THE TOWER WITH A GROVE ON ITS CREST.

rule of an aristocracy nicknamed the Lords of the Little Ring, from the narrow circle in which her senators succeeded one another. She had always been called Lucca the Industrious; in her safe subordination, she now worked and thrived for two hundred and fifty years, till the French republicans came and toppled her oligarchy over at a touch.

IX.

OF mediæval Lucca I have kept freshest the sense of her Gothic church architecture, with its delicate difference from that of Pisa, which it resembles and excels. It is touched with the Lombardic and Byzantine character,

policemen, whom we appealed to for information, could not assign to it any other function than that of lottery office, appointed by the late grand duke. The popular intellect at Lucca is not very vivid, so far as we tested it, and though willing, it is not quick. The *caffetiera* in whose restaurant we took breakfast, under the shadow of the Pretorian Palace walls, was as ignorant of its history as the policemen; but she was very amiable, and she had three pretty daughters in the bonbon department, who looked the friendliest disposition to know about it if they could. I speak of them at once, because I did not think the Lucchese generally such handsome people as the Pisans, and I wish to be generous before I am just.

the local Scientific and Literary Academy proclaimed "the marvel of her age" for her learning and her gifts in improvisation. The reader will readily identify her from this; or if he cannot, the greater shame to him; he might as well be a Lucchese.

"All there are barrators, except Bontura;
No into yes for money there is changed,"

says Dante of this Lucca in which I found an aspect of busy commonplace, an air of thrift and traffic, and in which I only feign to have discovered an indifference to finer things. I dare say Lucca is full of intelligence and polite learning, but she does not imbue her policemen and *caffetieras* with it, as Boston does.

Yet I would willingly be at this moment in a town where I could step out and see an old Roman amphitheater, built bodily up into the modern city, and showing its mighty ribs through the houses surrounding the market-place — a market-place quaint beyond any

other, with its tile-roofed stands and booths. There is much more silk in Lucca than in Boston, if we have the greater culture; and the oil of Lucca is sublime; and — yes, I will own it! — Lucca has the finer city wall. The town showed shabby and poor from the driveway along the top of this, for we saw the back yards and rears of the houses; but now and then we looked down into a stiff, formal, delicious palace garden, full of weather-beaten statues, old, bad, ridiculous, divinely dear and beautiful!

Corner
Pistoia

Why, indeed, should I be severe with the poor Lucchese in any way, even for their ignorance, when the infallible Baedeker himself speaks of the statue in the Piazza S. Michele as that of "S. Burlamacchi"? The hero thus canonized stood frowning down upon a grain and seed market when we went to offer him our homage, and the peasants thought we had come to buy, and could not understand why we should have only a minor curiosity about their wares. They took the wheat up in their brown hands to show us, and boasted of its superior quality. We said we were strangers, and explained that we had no intention of putting in a crop of that sort; but they only laughed blankly. In spite of this prevailing ignorance, penetrating even to the Baedeker in our hands, Lucca was much tableted to the memory of her celebrities, especially her literary celebrities, who need tablets as greatly as any literary celebrities I know. There was one literary lady whose tablet I saw in a church, and whom

I cannot say that I have been hardly used, when I remember that I have seen such gardens as those; and I humbly confess it a privilege to have walked in the shadow of the Guanigi palaces at Lucca, in which the Gothic seems to have done its best for a stately and lovely effect. I even climbed to the top of one of their towers, which I had wondered at ever since my first sight of Lucca because of the little grove it bore upon its crest. I asked the custodian of the palace what it was, and he said it was a little garden, which I suspected already. But I had a consuming desire to know what it looked like, and what Lucca looked like from it; and I asked him how high the tower was. He answered that it was four hundred feet high, which I doubted at first, but came to believe when I had made the ascent. I hated very much to go up that tower; but when the custodian said that an English lady eighty years old had gone up the week before, I said to myself that I would not be outdone by any old lady of eighty, and I went up. The trees were really rooted in little beds of earth up there, and had been growing for ten years; the people of the house sometimes took tea under them in the summer evenings.

This tower was one of three hundred and seventy in which Lucca abounded before the Guanigi leveled them. They were for the convenience of private warfare; the custodian

showed me a little chamber near the top, where he pretended the garrison used to stay. I enjoyed his statement as much as if it were a fact, and I enjoyed still more the magnificent prospect of the city and country from the tower; the fertile plain with the hills all round, and distant mountains snow-crowned, except to the south where the valley widened toward Florence; the multitudinous roofs and bell-towers of the city, which filled its walls full of human habitations, with no breadths of orchard and field as at Pisa and Siena.

The present Count Guanigi, so the custodian pretended, lives in another palace, and lets this in apartments; you may have the finest for seventy-five dollars a year, with privilege of sky-garden. I did not think it dear, and I said so, though I did not visit any of the interiors, and do not know what state the finest of them may be in.

x.

It was on the last day of March, after our return from Siena, that I ran out to Pistoja with my friend the artist. There were now many signs of spring in the landscape, and the gray olives were a less prevalent tone, amid the tints of the peach and pear blossoms. Dandelions thickly strewn the railroad-sides; the grass was powdered with the little daisies,

white with crimson-tipped petals ; the garden-borders were full of yellow-flowering seed-turnips. The peasants were spading their fields ; as we ran along, it came noon, and they began to troop over the white roads to dinner, past villas frescoed with false balconies and casements, and comfortable brownish-gray farmsteads. On our right the waves of distant purple hills swept all the way to Pistoja.

under the lowering sky, with a locked-up cathedral, a bare baptistry, and a mediæval public palace, and a history early merged in that of Florence ; but to me it must always have the tender interest of the pleasure, pathetically intense, which that young couple took in it. They were very hungry, and they could get no breakfast in the drowsy town, not even a cup of coffee ; but they did not mind that ;

A STREET IN FIESOLE.

I made it part of my business there to look up a young married couple, Americans, journeying from Venice to Florence, who stopped at Pistoja twenty years before, and saw the gray town in the gray light of a spring morning between four and six o'clock. I remembered how strange and beautiful they thought it, and from time to time I started with recognition of different objects — as if I had been one of that pair ; so young, so simple-heartedly, greedily glad of all that eld and story which Italy constantly lavished upon them. I could not find them, but I found phantom traces of their youth in the ancient town, and that endeared it to me, and made it lovely through every hour of the long rainy day I spent there. To other eyes it might have seemed merely a stony old town, dull and cold

they wandered about, famished but blest, and by one of the happy accidents that usually befriended them, they found their way up to the Piazza del Duomo and saw the Communal Palace so thoroughly, in all its Gothic fullness and mediæval richness of detail, that I seemed never to have risen from the stone benching around the interior of the court on which they sat to study the escutcheons carven and painted on the walls. I could swear that the bear on the arms of Pistoja was the same that they saw and noted with the amusement which a bear in a checkered tabard must inspire in ignorant minds ; though I am now able to inform the reader that it was put there because Pistoja was anciently infested with bears, and this was the last bear left when they were exterminated.

We need not otherwise go deeply into the history of Pistoja. We know already how one of her family feuds introduced the factions of the Bianchi and Neri in Florence, and finally caused the exile of Dante; and we may inoffensively remember that Catiline met his defeat and death on her hills A. U.

in whose private warfare she suffered almost as much as from her foreign enemies. Between them the Cancellieri and the Panciatichi burned a thousand houses within her walls, not counting those without, and the latter had plotted to deliver over their country to the Visconti of Milan, when the Floren-

A COUNTRY VILLA.

691. She was ruled more or less tumultuously by princes, popes, and people till the time of her great siege by the Lucchese and Florentines and her own Guelph exiles in 1305. Famine began to madden the besieged, and men and women stole out of the city through the enemy's camp and scoured the country for food. When the Florentines found this out, they lay in wait for them, and such as they caught they mutilated, cutting off their noses, or arms, or legs, and then exposing them to the sight of those they had gone out to save from starvation. After the city fell, the Florentine and Lucchese leaders commanded such of the wounded Pistoiese as they found on the field to be gathered in heaps upon the demolished walls, that their fathers, brothers, and children might see them slowly die, and forbade any one, under pain of a like fate, to succor one of these miserable creatures.

Pistoja could not endure the yoke fastened upon her. A few years later her whole people rose literally in a frenzy of rebellion against the Lucchese governor, and men, women, children, priests, and monks joined in driving him out. After the heroic struggle they reestablished their own republic, which presently fell a prey to the feud of two of her families,

and in whose private warfare she suffered almost as much as from her foreign enemies. Between them the Cancellieri and the Panciatichi burned a thousand houses within her walls, not counting those without, and the latter had plotted to deliver over their country to the Visconti of Milan, when the Floren-

tines intervened and took final possession of Pistoja. We had, therefore, not even to say that we were of the Cancellieri party in order to enter Pistoja, but drove up to the Hotel di Londra without challenge, and had dinner there, after which we repaired to the Piazza del Duomo; and while the artist got out a plate and began to etch in the rain, the author bestirred himself to find the sacristan and get into the cathedral. It was easy enough to find the sacristan, but when he had been made to put his head out of the fifth-story window he answered, with a want of enterprise and hospitality which I had never before met in Italy, that the cathedral was always open at three o'clock, and he would not come down to open it sooner. At that hour I revenged myself upon him by not finding it very interesting, though I think now the fault must have been in me. There is enough estimable detail of art, especially the fourteenth-century monument to the great lawyer and lover, Cino da Pistoja, who is represented lecturing to Petrarch among eight other of his pupils. The lady in the group is the Selvaggia whom he immortalized in his subtle and metaphysical verses; she was the daughter of

Filippo Vergolesi, the leader of the Ghibelines in Pistoja, and she died of hopeless love for Cino, when the calamities of their country drove him into exile at the time of the terrible siege. He remains the most tangible, if not the greatest name of Pistoja; he was the first of those who polished and simplified the Tuscan speech, and he was a wonder of jurisprudence in his time, restoring the Roman law and commenting nine books of the Code; so that the wayfarer, whether grammarian, attorney, littérateur, or young lady, may well look upon his monument with sympathy.

But I brought away no impression of pleasure or surprise from the cathedral generally, and, in fact, the works of art for which one may chiefly, if not solely, desire to see Pistoja again, are the Della Robbias, which immortally beautify the Ospedale del Ceppo. They represent, with the simplest reality and in the proportions of life, the seven works of mercy of St. Andrea Franchi, bishop of Pistoja in 1399. They form a frieze or band round the edifice, and are of the glazed terracotta in which the Della Robbias commonly wrought. The saint is seen visiting "The Naked," "The Pilgrims," "The Sick," "The Imprisoned," "The Dead," "The an Hungered," "The Athirst"; and between the tableaux are the figures of "Faith," "Charity," "Hope," "Prudence," and "Justice." There are also, "An Annunciation," "A Visitation," "An Assumption"; and in three circular reliefs, adorned with fruits and flowers after the Della Robbia manner, the arms of the hospital, the city, and the Medici. But what takes the eye and the heart are the good bishop's works of mercy. In these color is used, as it must be in that material, and in the broad, unmingled blues, reds, yellows, and greens, primary, sincere, you have satisfying actuality of effect. I believe the critics are not decided that these are the best works of the masters, but they gave me more pleasure than any others, and I remember them with a vivid joy still. It is hardly less than startling to see them first, and then for every succeeding moment it is delightful. Giovanni della Robbia, and his brother, the monk Frate Ambrogio, and Andrea and his two sons, Luca and Girolomo, are all supposed to have shared in this work, which has therefore a peculiar interest, though it is not even mentioned by Vasari, and seems to have suffered neglect by all the earlier connoisseurs. It was skillfully restored in 1826 by a Pistojesse architect, who removed the layer of dust that had hardened upon the glaze and hid the colors; and in 1839 the French Government asked leave to reproduce it in plaster for the Beaux-Arts; from which copy another was made for the Crystal Palace

at Sydenham. It is, by all odds, the chiefest thing in Pistoja, where the reader, when he goes to look at it, may like to recall the pretty legend of the dry tree-stump (*ceppo*) breaking into bud and leaf, to indicate to the two good Pistojesse of six hundred years ago where to found the hospital which this lovely frieze adorns.

Apparently, however, Pistoja does not expect to be visited for this or any other reason. I have already held up to obloquy the want of public spirit in the sacristan of the cathedral, and I have now to report an equal indifference on the part of the owner of a beautiful show-villa, which a cabman persuaded me to drive some miles out of the town through the rain to see. When we reached its gate, we were told that the villa was closed; simply that — closed. But I was not wholly a loser, for, in celebration of my supposed disappointment, my driver dramatized a grief which was as fine a theatrical spectacle as I have seen. Besides, I was able to stop on the way back at the ancient church of Sant' Andrea, where I found myself as little expected, indeed, as elsewhere, but very prettily welcomed by the daughter of the sacristan, whose father was absent, and who made me free of the church. I thought that I wished to see the famous pulpit of Giovanni da Pisa, son of Niccolò, and the little maid had to light me a candle to look at it with. She was not of much help otherwise; she did not at all understand the subjects, neither the Nativity, nor the Adoration of the Magi ("Who were the three Magi Kings?" she asked, and was so glad when I explained), nor the Slaughter of the Innocents, nor the Crucifixion, nor the Judgment. These facts were as strange to her as the marvelous richness and delicacy of the whole work, which, for opulence of invention and perfect expression of intention, is surely one of the most wonderful things in all that wonderland of Italy. She stood by and freshly admired, while I lectured her upon it as if I had been the sacristan and she a simple maid from America, and got the hot wax of the candle all over my fingers. She affected to refuse my fee. "*Le pare!*" she said, with the sweetest pretense of astonishment (which, being interpreted, is something like "The idea!"); and when I forced the coin into her unwilling hand, she asked me to come again when her father was at home. Would I could! There is no such pulpit in America, that I know of; and even Pistoja, in the rain and mud, nonchalant, unenterprising, is no bad place.

I had actually business there, besides that of a scribbling dilettante, and it took me, on behalf of a sculptor who had some medallions casting, to the most ancient of the several

bronze founderies in Pistoja. This foundery, an irregular group of low roofs, was inclosed in a hedge of myrtle, and I descended through flowery garden-paths to the office, where the master met me with the air of a host, instead

all winter by the steam-tramway trains snuffling in and out of our Piazza Santa Maria Novella at Florence. I found it a flat, dull, commonplace-looking town at first blush, with one wild, huge, gaunt piazza, planted with

A COURTYARD, FIESOLE.

of that terrifying no-admittance-except-on-business address which I have encountered in my rare visits to founderies in my own country. Nothing could have been more fascinating than the interior of the workshop, in which the bronze figures, groups, reliefs, stood about in every variety of dimension and all stages of finish. When I confessed my ignorance, with a candor which I shall not expect from the reader, of how the sculptur-esque forms to their last fragile and delicate detail were reproduced in metal, he explained that an exact copy was first made in wax, which was painted with successive coats of liquid mud, one dried upon another, till a sufficient thickness was secured, when the wax was melted out, and the bronze poured in. I said how very simple it was when one knew, and he said, yes, very simple; and I came away sighing for the day when our founderies shall be inclosed in myrtle hedges, and reached through garden-paths. I suppose I shall hardly see it, for it had taken a thousand years for that foundery in Pistoja to attain its idyllic setting.

XI.

ON my way home from Lucca, I stopped at Prato, whither I had been tempted to go

straggling sycamores, and banged all round by coppersmiths, whose shops seemed to alternate with the stables occupying its arcades. Multitudinous hanks of new-dyed yarn blew in the wind under the trees, and through all the windows and open doors I saw girls and women plaiting straw. This forms the chief industry of Prato, where, as a kind little priest with a fine Roman profile, in the railway carriage, assured me, between the prayers he kept saying to himself, there was work for all and all were at work. Secular report was not so flattering to Prato. I was told that business was but dull there since the death of the English gentleman, one Mr. Askew, who has done so much for it, and who lies buried in the odor of sanctity in the old Carmelite convent. I saw his grave there when I went to look at the frescoes, under the tutelage of an old, sleek, fat monk, roundest of the round dozen of brothers remaining since the suppression. I cannot say now why I went to see these frescoes, but I must have been told by some local guide they were worthy to be seen, for I find no mention of them in the books. My old monk admired them without stint, and had a particular delight in the murder of St. Martin, who was stabbed in the back at the altar. He rubbed his hands gleefully and pointed

out the flying acolyte: "*Sempre scappa, ma è sempre là.*" (Always running, but always there!) And then he burst into a childish, simple laugh that was rather grewsome, considering its inspiration and the place. Upon the whole it might have been as well to suppress that brother along with the convent; though I was glad to hear his praises of the Englishman who had befriended the little town so wisely; and I was not troubled to learn that this good man was a convert to the religion of his beneficiaries.

I said that Prato was dull and commonplace, but that only shows how pampered and spoiled one becomes by sojourn in Italy. Let me explain now that it was only dull and commonplace in comparison with other towns I had been seeing. If we had Prato in America, we might well visit it for inspiration from its wealth of picturesqueness, of history, and of art. We have, of course, nothing to compare with it; and one ought always to remember, in reading the notes of the supercilious American tourist in Italy, that he is sneering with a mental reservation to this effect. More memory, more art, more beauty cluster about the Duomo at Prato than about — I do not wish to be extravagant — the New Old South in Boston or Grace Church in New York. I am afraid we should not find in the interior even of these edifices such frescoes as those of Lippo Lippi and Ghirlandajo in the cathedral at Prato; and as for the Della Robbia over the door and the pulpit of Donatello on the corner without, where they show the Virgin's girdle on her holiday, what shall one say? We have not even a girdle of the Virgin! These are the facts that must still keep us modest and make us beg not to be taken too positively, when we say Prato is not interesting. In that pulpit, with its "marble brede" of dancing children, one sees, almost at his best, a sculptor whose work, after that of Mino da Fiesole, goes most to the heart of the beholder.

I hung about the piazza, delighting in it, till it was time to take the steam-tramway to Florence, and then I got the local postman to carry my bag to the cars for me. He was the gentlest of postmen, and the most grateful for my franc, and he explained, as we walked, how he was allowed by the Government to make what sums he could in this way, between his distributions of the mail. His salary was fifty francs a month, and he had a family. I dare say he is removed by this time, for a man with an income like that must seem an Offensive Partisan to many people of opposite politics in Prato.

The steam-tramway train consisted of two or three horse-cars coupled together, and

drawn by the pony-engine I was familiar with in our piazza. This is a common means of travel between all large Italian cities and outlying small towns, and I wonder why we have not adopted it in America. We rattled pleasantly along the level of the highway at the rate of ten or twelve miles an hour, and none of the horses seemed to be troubled by us. They had probably been educated up to the steam-tram, and I will never believe that American horses are less capable of intellectual development than the Italian.

XII.

WE postponed our visit to Fiesole, which we had been meaning to make all winter, until the last days of our Florentine sojourn, and it was the middle of April when we drove up to the Etruscan city. "Go by the new road and come back by the old," said a friend who heard we were going at last. "Then you will get the whole thing." We did so; but I am not going to make the reader a partner of all of our advantages; I am not sure that he would be grateful for them; and to tell the truth, I have forgotten which road Boccaccio's villa was on and which the villa of the Medici. Wherever they are, they are charming. The villa of Boccaccio is now the Villa Palmieri; I still see it fenced with cypresses, and its broad terrace peopled with weather-beaten statues, which at a distance I could not have sworn were not the gay ladies and gentlemen who met there and told their merry tales while the plague raged in Florence. It is not only famous as the supposed scene of the Decamerone, but it takes its name from a learned gentleman who wrote a poem there, in which he maintained that at the time of Satan's rebellion the angels who remained neutral became the souls now inhabiting our bodies. For this uncomfortable doctrine his poem, though never printed, was condemned by the Inquisition — and justly. The Villa Medici, once Villa Mozzi, and now called Villa Spence, after the English gentleman who inhabits it, was the favorite seat of Lorenzo, before he placed himself at Villa Carreggi; hither he resorted with his wits, his philosophers, his concubines, buffoons, and scholars; and here it was that the Pazzi hoped to have killed him and Giuliano at the time of their ill-starred conspiracy. You come suddenly upon it, deeply dropped amidst its gardens, at a turn of the winding slopes which make the ascent to Fiesole a constantly changing delight and wonder.

Fiesole was farther than she seemed in the fine, high air she breathes, and we had some long hours of sun and breeze in the exquisite

spring morning before the first Etruscan emissaries met us with the straw fans and parasols whose fabrication still employs their remote antiquity. They were pretty children and young girls, and they were preferable to the mediæval beggars who had swarmed upon us at the first town outside the Florentine limits, whither the Pia Casa di Ricovero could not reach them. From every point the world-old town, fast seated on its rock, looked like a fortress, inexpugnable and picturesque; but it kept neither promise, for it yielded to us without a struggle, and then was rather tame and commonplace,—commonplace and tame, of course, comparatively. It is not everywhere that you have an impressive Etruscan wall; a grass-grown Roman amphitheater, lovely, silent; a museum stocked with classic relics and a custodian with a private store of them for sale; not to speak of a cathedral begun by the Florentines just after they destroyed Fiesole in 1000. Fiesole certainly does not, however, invite one by its modern aspect to think of the Etruscan capital which Cicero attacked in the Roman Senate for the luxury of its banquets and the lavish display of its inhabitants. It was but a plain and simple repast that the Café Aurora afforded us, and the Fiesolans seemed a plain and simple folk; perhaps in

one of them who was tipsy an image of their classic corruptions survived. The only excitement of the place we seemed to have brought with us; there had, indeed, been an election some time before, and the dead walls—it seems odd that all the walls in Fiesole should not be dead by this time—were still placarded with appeals to the enlightened voters to cast their ballots for Peruzzi, candidate for the House of Deputies and a name almost as immemorial as their town's.

However luxurious, the Fiesolans were not proud; a throng of them followed us into the cathedral, where we went to see the beautiful monument of Bishop Salutati by Mino da Fiesole, and allowed me to pay the sacristan for them all. There may have been a sort of justice in this; they must have seen the monument so often before.

They were sociable, but not obtrusive, not even at the point called the Belvedere, where, having seen that we were already superabundantly supplied with straw fans and parasols, they stood sweetly aside and enjoyed our pleasure in the views of Florence. This inflexible prospect—

But let me rather stand aside with the Fiesolans, and leave it to the reader!

W. D. Howells.

FROM THE CATHEDRAL, LUCCA.

MARCH IN JANIVEER.

“Janiveer in March I fear.”

I WOULD not have you so kindly,
Thus early in friendship's year—
A little too gently, blindly,
You let me near.

So long as my voice is duly
Calm as a friend's should be,
In my eyes the hunger unruly
You will not see.

If so in the spring's full season
Your glance should soften and fall,
When, reckless with Love's unreason,
I tell you all.

The eyes that you lift so brightly,
Frankly to welcome mine—
You bend them again as lightly
And note no sign.

I had rather your pale cheek reddened
With the flush of an angry pride:
That a look with disliking deadened
My look defied;

H. C. Bunner.

RIVERSIDE PARK.

IN the current discussion of questions relating to public pleasure grounds "the city's breathing places" has come to be the phrase used oftenest to designate urban parks as a class. From this it would seem that the primary purpose of a city park, according to the popular conception, is to furnish a free bath of fresh air for lungs doomed to inhale some fluid which is not always fresh nor over cleanly. Analysis proves that the air in densely peopled quarters of a great city is heavy with noxious exhalations and impoverished in the elements which promote the processes of life; while that which is sifted through masses of foliage and quickened by sunlight is at once disinfected by the subtle chemistry of nature and enriched with elements of tonic vigor. Among the people crowded together in every compactly built city, no doubt there are too many to whom a breath of pure and fragrant air, wafted across broad stretches of cool herbage or flowing water, and screened through the leaves of lusty trees, would prove a novel and surprising refreshment; and therefore in this one particular it would be difficult to overstate the sanitary importance of accessible and spacious city or suburban parks.

But after all, the ideal park is something more than a fresh-air preserve or a fresh-air factory. Its influence must reach the nobler part of man's nature. It must make a direct appeal to the imagination through the senses, and all its elements and accompaniments must helpfully unite to make that appeal distinct and impressive. Fortunately there is no select class whose minds alone respond sensitively to the sights and sounds and odors of the outdoor world, for what we vaguely term the love of nature is a deep-seated and universal instinct which is never stifled outright even under the most depressing conditions. One who has given a handful of flowers to a street child, and watched the sudden sunshine overspread the little face and chase away the prematurely hard and wary expression, will feel that it is a genuine heart-hunger which has been for the moment allayed. It is the same hunger which the driving man of business feels and promises himself that he will satisfy with a country home, where in the evening of life he can enjoy the brief leisure he has toiled so many years to earn. In fact the mind of man was never haunted by a day-dream of possible earthly felicity unclouded and secure without its vision of fair fields and shining skies. And this instinct is no less persistent than it is spontaneous and universal. It is constantly benumbed by the stupefying discipline of schools,

but it survives even the paralysis of a liberal education. It is one original impulse which is not quite choked to death by the cultured formalisms and insincerities of an artificial world. It is a profounder feeling than the mere relish for natural beauty. It means more than a sensuous delight in color or form or melody or fragrance; and this not only because in nature always, as in the noblest art, sensuous beauty is substantiated, transfigured, and vitalized by some indwelling truth, but because it includes an element of affection, a strange feeling of kinship with material things as if they were informed with conscious life. In the poetry of every language, and wherever else the elemental passions of the soul find spontaneous expression, this affection never lacks recognition. Any instinct which sends its roots so deeply into the constitution of the mind cannot safely be denied all gratification. In so far, then, as the conditions of a city life forbid its enjoyment, they deprive the mind of its natural food; and a city park serves no unworthy purpose if it does no more than offer to intellect and affections the nourishment they crave.

A discriminating interest in various kinds of natural scenery is the specific development of this general inclination to commune with nature which first demands recognition. Whether it is owing to association of ideas, or to some deeper reason in the constitution of things, like the law in accordance with which every phase of the mystery and passion of human life is visibly symbolized somewhere and at some time in the appearances and processes of nature, certain it is that particular kinds of scenery excite definite trains of thought and feeling, as, for example, in the direction of wistfulness, aspiration, or hope, just as the minor music of the autumn wind produces the sentiment of melancholy. Green pastures and still waters are to-day and to every one the essential elements of the typical picture of peace, just as they were in the sacred poetry of Palestine. A reach of gently rolling meadow,

"Whereon the nibbling flocks do stray,"

sloping to the cool border of a brook which lingers here and there to catch the sunlight as it falls through openings in the overhanging foliage, its mantle of closely cropped verdure fitting it so smoothly as to reveal every undulation, and offering a surface texture upon which the very shadows of the trees delight to rest, is always a revelation of innocent contentment. It always brings a sense of restfulness and peace. It is a picture which not only excludes

LOOKING UP THE HUDSON FROM CLAREMONT.

every suggestion of the want and wretchedness, the cruelty, oppression, and strife which society acknowledges as its shame, but its motive is in refreshing contrast to the devouring ambition, the strenuous energy, the eagerness, the adventure, the spirit of progress which the same civilization boasts of as its distinguish-

ing glory. To the imagination it suggests the simplicity, the dignity, the innocence, the conservatism, the freedom, the quietness, the contemplative leisure of the ideal pastoral life; and while it possesses the mind it is a signal relief from the wear and weariness, the strain and pressure, the turbulence and discontent,

VIEW OF CLAREMONT FROM THE SOUTH.

“The fierce confederate storm
Of sorrow barricaded evermore
Within the walls of cities.”

The restful charm of Central Park has a deeper reason than the marked antithesis to physical conditions of rigid confinement between walls of stone and upon streets of stone, which is offered by its broad rural views, its openness and airiness and spacious skies. In spite of the salient scenery about it, its narrow limits and originally rugged surface, it embodies with rare success the tranquilizing pastoral idea. Its scant meadow-land is not fenced off by well-defined boundaries to advertise its meagerness, but is allowed to flow around wooded knolls and lose itself in grassy alcoves which wind among the trees and lead the fancy onward with fair promise of broader fields beyond. Even the bolder features of the park and its passages of sylvan picturesqueness are all subordinate to its central purpose, which they emphasize by shading and contrast. The rising tide of population will soon sweep quite around it, but there will remain one spot in the heart of the city which may not be bounded by a sky-line of roofs and chimneys, for the city is forever walled out of sight by woodside banks of foliage. The time is coming when Central Park will be as unfashionable as the Battery is to-day; but so long as men delight in seclusion and sigh for repose, its tranquil graces will not cease to allure, for its fair prospects, tuneful woods, and scented air, which soothe every sense, bring with them an inward rest and peace which are no less real because their presence is not consciously recognized by those who enjoy them. Indeed, the rest will be more refreshing and the peace more profound because they flow in upon the spirit so quietly and never challenge observation.

But all the possibilities in the way of recreation grounds on Manhattan Island were

not exhausted by a single success in one direction. Besides the placid prospects whose interest lies wholly in the foreground or in the range immediately beyond, there are grand and inspiring landscapes which embrace the blue distance in their sweep. New York, too, from her peerless position as the maritime capital of a continent, looks out upon bright waters on every hand, and from all her breezy shores the sparkling surface of river, bay, or sound can be seen stretching away in endless diversity of cheerful prospect. And questions of scenery apart, there are certain wants which Central Park was never designed to meet and to which it never can be adapted. It is a difficult matter to reconcile the ideas of seclusion and festivity. Pastoral simplicity vanishes as the equipage and bravery of fashion become obtrusive. Even now, with the city half grown, there are times when the roadways of the park are thronged with carriages to the limit of their capacity. The ratio between the grass and gravel of the park is such that any sacrifice of its verdurous elements to the extent which a widening of its wheelways would necessitate is not to be thought of, even if such a change would not be a flagrant violation of the spirit of the work. The roads were laid to command the same quieting scenery which is enjoyed from the walks, and they will suffice for all who drive to find these reposeful landscapes. The carriages driven in gay procession for social pleasure must soon go somewhere else.

To think of Riverside Park simply as a relief from the thronged wheelways of Central

Park is to form a most inadequate and incomplete conception of that work, and yet it is essentially the aggrandizement of a road. The road itself — a cluster of ample ways for pleasure riding, driving, and walking, separated by strips of turf from which stately trees are to rise, and extending for three miles — would have a dignity of its own wherever it might lead through the city. But its position overlooking the broad Hudson gives it an added importance and an individual character which are not repeated nor paralleled in any of the famous avenues of the world. From Seventy-second street to the hollow known in the old maps as "Marritje David's Vly," at what is now One Hundred and Twenty-seventh street, the river banks are bold, rising steeply at one point to the height of one hundred and fifty feet. Down at the river level lies Twelfth

ing and completing the dignified structure. The outer walk follows this bold terrace, although at one point it drops below the level of the drive, allowing carriages to wheel out upon a spacious balcony. Occasionally too, where the grade demands it, the drive breaks from the walk and side road which skirts the property line on the eastern boundary of the park, leaving wide slopes of turf between the ways. Notwithstanding these devices to give variety to the plan of the road proper, one can hardly comprehend how so long a terrace can escape being unpleasantly formal; but in this instance the constant change of level and direction excludes any impression of sameness, and at times the upward sweeping of the parapet curve produces a pleasant effect by its harmony with the skyline of tree-tops beyond. Even now, before

RIVERSIDE DRIVE AT NINETY-SIXTH STREET, LOOKING NORTH.

Avenue, while upon the high ground, eight hundred feet inland and parallel with the pierline, Eleventh Avenue cuts its way square across the long series of side streets in accordance with the orthodox rectangular block system. Between these two avenues, now approaching one and now the other, winds Riverside Drive, following mainly the brow of the bluff, but rising and falling at easy grades, curving about the bolder projections, and everywhere adapting its course so graciously to the contour of the land, that it does not look to have been laboriously "laid out," but to have developed rather as a part of the natural order of things. The broad shelf against the sloping bank formed by the associated ways is supported on the lower side by a massive retaining wall, at some points nearly forty feet in height, and this rises above the drive in a low, heavy parapet which extends throughout its entire length, fitly crown-

ing its trees are grown or its retaining wall mantled with vines, the road itself, as its gray stretches disappear behind some hill and beckon the visitor onward, delights the eye and kindles the imagination.

West of the wall is a strip of land varying in width as the avenue approaches or recedes from the river. It is generally lower than the drive, and falls away to the water with a rapid inclination. In one of its wider portions, however, near Eighty-second street, the granite basement of the island rises in a pair of abrupt hillocks above the road level, bursting through its thin covering of turf here and there, and nursing in its crevices two or three stunted and picturesque honey-locusts. Glimpses of the river and the Jersey shore beyond, caught between these hills, furnish pictures worth remembering even among the many glorious prospects from the drive. This strip of land is too narrow to afford any park-

RIVERSIDE DRIVE NEAR CLAREMONT, LOOKING SOUTH.

like range; and while nothing has been done to adapt it to the purposes of a pleasure-ground, it has unfortunately been hideously scarified to furnish "filling" for the railroad and other improvements. Descending from the drive by stone steps to some points where it is accessible, as at One Hundred and Sixth street, we find an open wood of fine trees with grassy intervals extending for a long distance as a sort of intermediate terrace, which drops suddenly to the river level in a steep bank covered with a wild tangle of trees, shrubs, and vines. Some of the trees have a size and dignity of expression which invest them with an individual interest. The white pines at the northern end of the park, the chestnut oaks in some of the upper groves, the tulip-trees and sycamores at Ninety-sixth street, all wear that venerable look which trees rarely attain in the first century of their history. It is a matter of record, however, that General Robertson stripped the island of all its trees in the cold winter of 1779-80, to furnish fuel for his freezing redcoats. This was the winter when New York was reported by the British officer to be no longer on an island, so solid was the ice which bound it to the land beyond both rivers. Across the bay even, from the Battery to Staten Island, heavy pieces of artillery were driven. The trees were not cut, however, until old houses and the hulks of unseaworthy vessels had been broken up for firewood. No doubt the British axes found trees in plenty remaining, although one hun-

dred and fifty years of felling had gone on since Hendrik Hudson, looking on the island from the deck of his galiot, pronounced it "a pleasant land as one need to tread upon, and abundant in all kinds of timber." It was one of his landing parties who reported here "an abundance of magnificent oaks of a height and thickness one seldom beholds, together with poplars and linden-trees and various other kinds of wood." A remarkable variety of arborescent growth is yet seen wherever the land is left to cover its nakedness. There is hardly a half-mile on the bank at Riverside where one cannot look over from the walk and count forty tree-species. The record of General Robertson's exploit may be put in evidence against any claim for reverence as primeval settlers which our oaks and pines may set up; but they are trees of stately stature, none the less.

The real value of this belt of land below the drive is not, however, to be estimated by any attractions of its own, but is derived from the fact that it secures the water-view and furnishes it with a foreground. It is the impressive presence of the strong and silent river which invests this parkway with its unique interest. No treatment of its shores, however insolent or feeble, can make the Hudson tame or trivial or commonplace. So long as the broad current bears its burden of stately ships so lightly between mountain barriers worthy to contain it and direct its flow, the river and its banks will never fail to

fill the mind and eye with pictures of majesty and might. From the drive the views of the river and the wood-crowned heights beyond are most characteristic. The full expanse of water is not at all times visible. Now it is quite obscured by some headland or cluster of trees, and again barely enough of it is revealed through leafy vistas to provoke the fancy. Here again its full light gleams over the flattened top of some pepperidge, or is softened and sobered as it filters through the spray of birches and willows; while from occasional high levels the eye has free range to the north or south along the bright waterway, and over prospects of great extent and the most varied interest. The crowning view of the whole series is that from Claremont looking up the river. This is at the northern end of the park, where the grounds are widest and where they reach their greatest elevation. As the high ground here abruptly falls away, the road naturally ends, sweeping around in a loop on the brow of the bluff where the interest in the scenery culminates in this commanding prospect. Here, half hidden in a grove, stood the historic mansion once occupied by Lord Churchill, but the oaks and tulip-trees which surrounded it are dead or dying one by one, as destructive "improvements" have gashed the hill-side with deep cuts and drained away the water which fed their roots. But a few months ago a giant pine which had survived the cruelties of the city engineer and at least one lightning stroke was chopped down when the old house which it sheltered was "restored" for victualing purposes beyond all hope of recognition. Other trees were swept away

ACROSS THE HUDSON FROM CLAREMONT, FORT LEE IN THE DISTANCE.

at the same period, when there was much digging out and heaping up of earth hereabout in accordance with some unrevealed plan. But in spite of the desolation of the foreground, the distant prospect remains. Below the bluff the Hudson still broadens out to hold the light of all the sky. The Palisades frown along the left, and seem to end in a bold promontory, around which the river flows from the mysterious distances beyond, while on the island side a rocky arm is thrust out from Washington Heights, to protect the deep and quiet bay.

Of course it is to be understood that the Riverside Park of to-day is little better than a promise, or rather, it is but the foundation and frame of what it is to be. The road-bed is laid, and this establishes the plan beyond any possible abandonment. Of the hundred miles of frontage upon navigable water, possessed by the cities which cluster about this harbor, three miles are thus rescued from commerce and dedicated to recreation. At only two points, and these near its southern extremity, do cross streets extend through the park to the river, so that traffic is forbidden here, and the character of the territory which fronts the drive as a residence quarter is fixed. This land as yet is largely vacant, but its advantages will be plainly squandered if it is not occupied by a line of villas whose deep lawns, while giving them more perfect domestic seclusion, will add to the amplitude and dignity of the parkway. A short space in the life of a city can work this transformation, for a city grows, alas! more swiftly than a tree, and the villas could be built and rebuilt before the lindens, elms, and maples will cover the drive with cooling shadows.

Not until the expanding city has brought a large population within easy reach of the work can it completely fulfil its purpose as a grand promenade, where people in great numbers come together for that stimulating recreation which forms so important a feature in the social life of Old World cities. It is a heart-hardening and mind-depressing process to come into daily contact with throngs of people with whom we have no sympathy. This is an irritating influence to which the city business man is constantly subjected, and it is one cause of wear and exhaustion from which he needs relief. If the same persons, with the hardening struggles of the business day behind them, can meet for the common purpose of recreation, the pervading holiday sympathy contrasts as refreshingly with the jostle and scramble of the exchange and market-place as does the quieting charm which lingers about the secluded borders of a tree-flecked meadow. No one who has ob-

served a multitude of happy people on the Champs Élysées in pleasant weather, or similar gatherings which on occasions assemble in our own parks, can doubt that this inclination to associated recreation is a natural and healthful one, which deserves to be provided for. At such times the joyous light which beams from every face helps to illumine all the rest. There is a manifest contagion of light-heartedness. The source of this peculiar pleasure is plainly in the social instinct. It is abounding human life in its most cheerful aspect which gives so keen a relish to the general enjoyment.

It is plain that the charm of scenery, and especially of quieting scenery, is not essential to a stimulating recreation, whose controlling element is congregated human life. The freedom and exhilaration of fresh open air; rows of full-foliaged trees, greensward and birds; wheelways ample, smooth, clean, a springy bridle-track adjoining the road, so that occupants of carriages can readily turn to converse with friends on horseback; shaded footpaths and cozy resting-places,—these are the essential physical features of a grand promenade. To them can be added the most elaborate decoration, for it will not be out of harmony with the formal colonnades of trees, and the artificial character of the whole structure. Monuments, statues, fountains, tropical plants, and floral embroidery so barbarously misplaced amid quiet rural surroundings, will here help to heighten the brilliant effect, where

“With stately progress to and fro
The double tides of chariots flow,”

and numbers of spirited horses and well-dressed people meet and mingle in a spirit of animated gayety. As a field for such festal assemblages the Riverside Terrace offers a unique opportunity; for besides all the best features of an extended and spacious Spanish Alameda the river flows by to cool and freshen every breeze, even if we count for naught its glorious scenery among the exhilarating sights and sounds of the promenade. But festivity will be at flood-tide for only a fraction of each day, while the river never fails. And even when the scene upon the terrace is in full glitter, there may be one who will turn for refreshment to the sun-glints on the water or to a bit of hazy distance as his friend grows tiresome. A noble horizon may not be essential to social enjoyment, but a more delightful incident to such enjoyment can hardly be imagined, and at times it might prove a wholesome corrective of the inanities of fashionable walk and conversation. Fortunately an elaborately decorative treatment of the terrace will not dissipate attention from the spacious prospect beyond, for the

parapet furnishes such a marked and decisive line of foreground limitation that well-chosen, decorative objects held within it will rather emphasize by contrast the grand effect of the distant scenery. We may lament that the planting of the trees was so long delayed and that such inadequate preparation was made in the original construction for giving them deep root-hold and rich feeding-ground, especially since so much depends upon their vigor and amplitude of shade; but if the place which the work is designed to fill in the social economy of the city comes to be appreciated civic pride will hardly tolerate any further mistakes. No single park centrally situated in a great city can be large enough to furnish space at once for stimulating social recreation and the quieting charm of secluded scenery. Indeed any attempt to mingle the two forms of recreation will be to the disadvantage of both. If New York had prepared twenty-five years ago for a grand promenade from Madison Square to Central Park the trees would now have attained some maturity of stature and expression, and this parkway would already be famous as one of the striking features of the city and the object of its noblest pride. Twenty-five years hence as dense a population will have sprung up on the heights which overlook the river as that now found along the line of Fifth Avenue. One opportunity lost should be a warning. Riverside, as the true complement of Central Park, should be made ready to welcome the expanding city as it sweeps by to the north.

SINCE the foregoing description of Riverside and its possibilities was written an element of the most serious significance has been introduced by the selection of Claremont Heights for the Grant mausoleum. A structure fitly commemorative of the high achievement and patriotic devotion of the nation's foremost soldier might well consist with the spirit and purpose of the park; but the actual sepulture of the hero at this key-point necessitates some

compromise with the prevalent idea of festal assemblage. A certain isolation must be granted to the tomb in deference to the sentiment of reverence, and yet in view of the limitations of the ground at this point of focal and culminating interest it is not desirable that the surrounding space should be considerably encroached upon. The adjustment of conflicting claims of this sort is one phase of the complex problem presented, and obviously a satisfactory result can only be reached after the closest study and the most judicious treatment. On the other hand it should be remembered that Riverside would possess no monument to Grant if his dust were not laid to rest beneath it, and that this presence will add an impressiveness to the monument which belongs to none of the memorial works reared elsewhere. The spot will henceforth be invested with a national and historic interest which will lend new consequence and dignity to the park. [This increased importance will encourage such maintenance as the work merits and help to preserve it from being turned over to traffic or perverted to alien use.] Riverside, until yesterday unheard of, is already a familiar word the world over. It was the solemnities at Claremont that first introduced thousands of people who live within the city limits to a public ground of whose existence they had been hardly aware. But a few months ago one might traverse the drive from end to end without encountering more people than would be met in the same distance on a lonely country road. The memorial grounds have even now proved helpful to the park, and the interest kindled will not fail. The Heights of Claremont offer many artistic advantages as the site of an imposing structure, and these advantages will remain. The idea of mortality suggested by the tomb is not congenial with the motive of the recreation ground, but this idea will gradually fade out as years roll on, and the man of heroic stature assumes his rightful place in history among the world's leaders who live for evermore.

William A. Stiles.

THE LAST DAYS OF GENERAL GRANT.

ON Christmas Eve, 1883, General Grant seemed to himself and to the world a healthy and prosperous man. He was sixty-one years of age, full of mental vigor, and physically as strong, if not as active, as he had ever been. He was engaged in business that brought him in an ample income, and he told his intimate friends that he was worth a million of dollars. He passed that evening at the house of an acquaintance and went home in a cab about midnight. As he alighted he turned to hand the driver a fare, and in doing this his foot slipped on the ice, for the weather was cold and wet, and the rain froze on the pavement. He fell to the ground and was unable to rise. The driver got down from the box to assist him, but the General was suffering acutely, and the man was obliged to call for help from within doors. A servant came out, and General Grant was carried up the steps into his house, which he was never to leave again a well man.

The family at the time consisted only of Mrs. Grant and a young niece, with the servants. Mrs. Grant was naturally very much alarmed, but the General declared that the injury was not serious, and although he was almost senseless from pain he refused to allow a medical man to be summoned. In the morning his son Ulysses, who lived near, was brought, and he at once sent for Dr. Fordyce Barker, the family physician, who pronounced the case one that required surgical treatment, and called in Dr. Lewis A. Stimson. The injury was thought to be the rupture of a muscle in the upper part of the thigh, and although after the first few days the suffering was less, any quick or sudden movement of the limb was so painful that the General was unable to move in his bed without assistance; he did not leave it for weeks. A few days after the fall he suffered an attack of pleurisy, which also at first occasioned excruciating pain, but was not absolutely dangerous.

The effects of this accident detained General Grant in the house many weeks, but after a while he was able to hobble about on crutches, and in March he went, by the advice of his physicians, to Washington and Fortress Monroe. By this time his general health was greatly improved, but the weakness in his leg and hip continued, and the unusual confinement somewhat affected his spirits, though not his temper or his intellect. He was the most patient of sufferers, the most equable of

prisoners. Hosts of friends among the most distinguished people of the country gathered around him wherever he went, and their society, always one of his greatest delights, now cheered the tedium and allayed the suffering of the invalid. In April he returned to New York and was able to drive his own horse and to attend army reunions. He went, however, to no private entertainments. His affairs seemed still very prosperous, and he hoped soon to recover entirely from the effects of his fall.

I had been absent from the country during the winter, but returned late in April, and at once saw much of my old chief. I found him cheerful and uncomplaining, going to his office daily on business, interested in politics and affairs. The Presidential election was approaching, and although he never spoke of such a possibility, many of his political friends thought the prospect of his nomination very bright. Every day revealed apparently irreconcilable differences among the adherents of other candidates, and the party and the country, not a few believed, were turning again to him who had twice been the head of the State. He, however, responded to no such intimations, and never said even to his family that he desired or expected a return to public station. Any expression that ever fell from him on the subject was to repress or repel the suggestion. He was resting from national cares, and in the unwonted enjoyment of a private competence. He told me that in December for the first time in his life he had a bank account from which he could draw as freely as he desired. He was generous in gifts to his children, but never luxurious in his personal habits. He had only two expenses of his own,—his horses and his cigars.

When General Grant returned from Europe in 1879 his entire fortune amounted to one hundred thousand dollars, and the income of this sum just paid his expenses at the hotel where he and Mrs. Grant occupied two rooms. He kept no carriage. Finding that he could not live in New York suitably to his position, he began to consider what other residence he should select or what means of support. His son Ulysses was engaged in the banking business with Ferdinand Ward and James D. Fish, and supposed he had accumulated four hundred thousand dollars. He offered to receive his father as a partner in his profits. General Grant would not consent to this, but

proposed to invest his hundred thousand dollars in the business and become an actual partner. Ward and Fish concurred, and in 1880 General Grant was admitted as a special partner in the firm of "Grant and Ward."

He was never, however, actively engaged in its affairs. His name was used and he gave his money, but others did the business. Ward in reality acted for the firm, made the investments, drew the cheques, received the deposits, and disposed of them. General Grant was assured that the investments were proper, and, utterly unaccustomed as he was to business, he inquired little further. Once or twice he thought he had reason to say that the firm must have no dealings in Government contracts, and he said so promptly. He declared that his position as ex-President made it improper and impossible for a firm of which he was a member to have such dealings; and Ward assured him that there were none. The apparent returns from the business were enormous, but General Grant knew that scores of bankers and brokers around him had made as rapid fortunes as he, and was not surprised. He put all his available capital into the bank, and many of his friends and relatives invested or deposited with it. One of his sons was a partner, another had become an agent of the firm, and their father had all confidence in their integrity and capacity.

But suddenly out of the clear sky came the thunderbolt. On Tuesday morning, the 6th of May, 1884, General Grant went from his house in Sixty-sixth street, supposing himself a millionaire. When he arrived at his place of business in Wall street he found he was ruined. As he entered his office he was met by his son Ulysses, who said at once: "Father, you had better go home. The bank has failed"; but the General went in and waited awhile. I happened to visit him that day about noon, and found him alone. After a moment he said to me gravely enough, but calmly: "We are all ruined here." I was astounded at the news, and he continued: "The bank has failed. Mr. Ward cannot be found. The securities are locked up in the safe, and he has the key. No one knows where he is."

He could not at that time have known the event more than half an hour. In a few moments he got into a carriage and was driven home. He never returned to Wall street.

The world knows that he gave up all that was his. The story of the debt to Mr. Vanderbilt into which he was inveigled is pitiful. Ferdinand Ward had come to him on Sunday the 4th of May and represented that the

Marine Bank, where Grant and Ward had large deposits, was in danger, but that speedy assistance would enable it to overcome the difficulty. The assistance, however, must be immediate if they would save themselves. He urged General Grant to obtain at once a loan of \$150,000 for this purpose; and Sunday though it was, the old warrior sallied out at the instance of the partner, who knew at that moment that all the fortunes of General Grant had been lost through his means. He went first to Mr. Victor Newcomb, who was not at home, and then to Mr. W. H. Vanderbilt, who at once agreed to let General Grant have his cheque for \$150,000 without security. He said that he had never done such a thing before, but he would do it for General Grant. The General expected to return the money immediately; he wanted it only to enable the Marine Bank to find time to collect its loans. Ward had assured him, and he repeated to Mr. Vanderbilt, that there were securities for more than a million of dollars in the vaults of Grant and Ward.

The first thing General Grant did when the failure was known was to make over all his individual property to Mr. Vanderbilt. In this act Mrs. Grant afterwards joined, waiving her right of dower. The house in which they lived belonged to Mrs. Grant. Three years before a hundred thousand dollars had been subscribed to purchase her a home, and the building in Sixty-sixth street was selected; but there was a mortgage on the property which the holders refused to cancel. It was a good investment, and they preferred to retain it. The price of the house was \$98,000, and the mortgage was for \$50,000; so \$48,000 only was paid, and the remainder of the sum subscribed was deposited with Grant and Ward, to be applied to the purchase of bonds. Ward, as the active member of the firm, was commissioned to make the purchase. He reported having done so, received the money, and the interest was regularly paid. But after the failure it was discovered that the purchase had never been made. There was therefore a mortgage on the property which could not be redeemed. The library and the rare contents of the house were, however, made over to Mr. Vanderbilt.

But this was not all. The Trust Fund of \$250,000 raised for General Grant, the interest of which was devoted to his benefit, had been invested in the bonds of a company which at this juncture suspended payment. The fund was guaranteed by the E. D. Morgan estate, but from some technicality of the law the guarantors could not pay the deficient interest until the company had been six months in default; this

resource therefore failed entirely for the time. The last payment had been deposited with Grant and Ward, and of course was lost.

General Grant was as brave, however, as under all circumstances, and though regretting the loss of fortune for himself and his sons, as well as for those who had suffered through their means, he was as yet free from any acute humiliation. He himself was ruined; one son was a partner in the wreck and the liabilities; another, the agent of the firm, was bankrupt for half a million; his youngest son on the 3d of May had deposited all his means, about \$80,000, in the bank of his father and brother, and the bank suspended payment on the 6th; his daughter had made a little investment of \$12,000 with the firm; one sister had put in \$5,000, another \$25,000; a nephew had invested a few thousands, the savings of a clerkship; and other personal friends invested more largely. It was painful and mortifying that all these should lose in this way, but still there was no thought of personal disgrace.

But after a day or two came out the shameful story of craft and guile in all its horrible proportions, and it was seen that his honored name had been used to entice and decoy hosts of friends and acquaintances, to their own injury and General Grant's discredit. Imputations were even cast on the fame that belonged to the country; and this blow was the most terrible that General Grant ever endured. The shock of battle was less tremendous, the mortal agony was less acute.

There seemed, too, under the circumstances, to be nothing to do, nothing to say. He was indeed through life always able to remain silent, but the task was harder now than amid the abuse directed against him during the war, or the detraction and calumnies of political campaigns. His own fair fame, his honor as a man, the honor of his children,—all were assailed; all discussed, doubted, defiled by the tongues of a careless and censorious world. The glory which had been likened to that of Washington was obscured. He never spoke of this even to those closest and dearest, but none the less they knew that the wound was eating into his soul. This sorrow was a cancer indeed.

After a time the clouds were lifted a little, and the world seemed satisfied, at least in part, that his honor was untarnished. He breathed freer now; but still the accusations were hurled against his children; and for him, for whom the family relations were absolutely the profoundest and most intimate of his nature, this was anguish intolerable.

His bodily health was soon affected, though not yet conspicuously. He did not grow openly

worse, but he ceased to grow better. His lameness did not mend. His strength did not increase. He was not morose, but hardly so cheerful as was his wont, although too brave to be willing to seem cast down. But he was indignant to the core at those who had injured him and his fame and his sons.

At first he was distressed even for money for household expenses. Eighty dollars in his pocket-book and one hundred and thirty dollars in cash belonging to Mrs. Grant were all he had to live on. If two friends, one a man he had never seen and the other a foreigner, had not come to his relief, General Grant must have suffered actual want for a while. The very cheques paid out to tradesmen a few days before the failure were dishonored. He was penniless in the house that was crowded with his trophies.

But, four days after the 6th of May an unknown countryman, Mr. Charles Wood, of Lansingburg, New York, wrote to General Grant and offered to lend him \$1000 on his note for twelve months, without interest, with the option of renewal at the same rate. He inclosed a cheque for \$500, "on account," he said, "of my share for services ending April, 1865," and General Grant gratefully accepted the offer.

About the same time Mr. Romero, the Mexican minister, who had been a valued friend from the period when the French were driven from Mexico, came on from Washington, and insisted on lending him \$1000. At first the General declined the offer, but Mr. Romero suddenly quitted the room, leaving his cheque for \$1000 on the table. But for these succors the man who had dined with half the kings of the earth would have wanted money to buy bread for himself and his children.

For it was not only himself and Mrs. Grant who were to be supported, but two of his sons and their families. Ulysses went to live with his father-in-law, the Hon. J. B. Chaffee, who was a man of means; but General Grant must maintain the others, for, until released by their creditors, they could not even go into business. Mrs. Grant, however, owned two little houses in Washington, and she wrote at once to Mr. W. McLean, of Cincinnati, who she knew was buying property at the capital. Mr. McLean was a staunch personal friend of General Grant, although a political opponent, and Mrs. Grant asked him at this crisis to purchase her houses, telling him that she needed money for the absolute living expenses of the family. Mr. McLean at once directed his agent to purchase the houses, whether they were needed or not, and to pay the market price. This timely act relieved the

family from their immediate anxieties. The generous loan of Mr. Romero was repaid; the dishonored cheques for household expenses were redeemed, and enough was left to live on during the summer.

As early as December, 1883, the editors of *THE CENTURY* magazine had inquired of me whether General Grant could not be induced to write about one or two of his battles for their series of papers on the war, mentioning Shiloh and the Wilderness. I laid the matter before him, but he was disinclined to attempt the unfamiliar task. The editors, however, renewed their solicitations. After the failure of Grant and Ward they addressed me a letter, saying: "The country looks with so much regret and sympathy upon General Grant's misfortune that it would gladly welcome the announcement and especially the publication of material relating to him or by him, concerning a part of his honored career in which every one takes pride. It would be glad," they said, "to have its attention diverted from his present troubles, and no doubt such diversion of his own mind would be welcome to him."

He was touched by the tone of the communication, but shrank at first from presenting himself to the public at this juncture, preferring absolute withdrawal and retirement. When I conveyed his reply, I spoke of the complete financial ruin that had overtaken him. The editors at once inquired whether a pecuniary inducement might not have weight, and made an offer to him for two articles on any of his battles which he might select. His necessities decided him. The modern Belisarius did not mean to beg.

In June he went to Long Branch for the summer, and soon afterwards sent for me and showed me a few pages he had written, and called an article. The fragment was terse and clear, of course, like almost everything he wrote, but too laconic and compact, I knew, to suit the editorial purpose; it would not have filled three pages of the magazine. I urged him to expand it.

"But why write more?" he asked. "I have told the story. What more is there to say?"

I begged him to go into detail, to explain his purposes and movements, to describe the commanders, to give pictures of the country; and he seized the idea, and developed the sketch into a more protracted effort. It was copied by his eldest son, who carried it to the editors, one of whom at once came to see him, and asked him to still further extend his article by including topics covered by him in the interview. He consented again, and the paper became the elaborate one—elaborate for its author—which appeared in *THE CENTURY*

for February, 1885. This was General Grant's first attempt at anything like literary or historical composition.

He at once became interested in the work. The occupation had, indeed, distracted him from the contemplation of his misfortunes, and the thoughts of his old companions and campaigns brought back pleasanter recollections. He agreed to prepare still another article. His first theme had been the battle of Shiloh; the second was the Vicksburg Campaign and Siege. If he had been too concise at the start, he was now inclined to be more than full, and covered two hundred pages of manuscript in a few weeks. As soon as it became known that he had begun to write, the story spread that he was preparing his memoirs, and half the prominent publishers in the country made him offers. Again he sent for me, and said he felt inclined to write a book; but that as my own history of his campaigns had been composed with his concurrence, and with the expectation that it would take the place of all he would have to say on the subject, he thought it right to consult me. He wanted also to employ the material I had collected and arranged in it, and to use the work as authority for figures and for such facts as his own memory would not supply. Besides this, he wanted my assistance in various ways; all of which was arranged. In October I went to live at his house.

At this time he seemed in very fair health. He was crippled and unable to move without crutches, but he walked out alone, and he had driven me once or twice at Long Branch behind his own horse. He gave up driving, however, after his return to town. But he was cheerful; his children and grandchildren were a great solace to him; many friends came in to see him and to testify their undiminished respect. His evenings were spent in their society at his own house, for he never visited again; and his days were devoted to his literary labor. He worked often five and six, and sometimes even seven hours a day, and he was a man not inclined to sedentary occupation. The four papers which he had promised to *THE CENTURY*, he intended to incorporate afterwards, with some modifications, into his memoirs. To this the editors agreed. Thus General Grant's book grew out of his articles for *THE CENTURY*.

In October he complained constantly of pains in his throat. He had suffered during the summer from the same cause, but paid no attention to the symptoms until towards the end of his stay at Long Branch, when Dr. Da Costa, of Philadelphia, who was paying him a call, examined his throat. That gentle-

man urged General Grant to consult the most eminent physicians immediately on his return to New York. But General Grant never nursed himself, and it was nearly a month before he acted on this advice. His pains finally became so frequent and so acute that Mrs. Grant persuaded him to see Dr. Fordyce Barker, who instantly said if the case were his own or that of one of his family, he should consult Dr. J. H. Douglas; and General Grant went the same day to Dr. Douglas. This was on the 22d of October.

When he returned he said the physician had told him that his throat was affected by a complaint with a cancerous tendency. He seemed serious but not alarmed, though it was afterwards learned that he had pressed Dr. Douglas for close information, and had detected a greater apprehension on the part of the physician than the family at first discovered. Still there was disquietude and even alarm,—the terrible word cancer was itself almost a knell.

It was now November, and all through this month he went regularly to the physician's house, about two miles from his own, taking the street-car. At first he went alone, but after a while he was persuaded to take a man-servant with him. One or two of the family called on Dr. Douglas to make further inquiry, and the response awakened further solicitude. The pains did not decrease, and the extraction of four teeth greatly aggravated the nervous condition. He went to a dentist to have one tooth taken out, but his fortitude was such that the operator was doubtless deceived, and proposed the extraction of three others, and the shock to the General's system was one from which he did not recover for weeks.

As the weather became colder the disease was further aggravated by the exposure to which he was subjected in the street-car; yet for a long time he refused to go by the carriage. It required much urging to induce him to take this precaution, but he was finally persuaded. In December his pains became still more excruciating; he could not swallow without torture, and his sufferings at table were intense. He was obliged to use liquid food and to avoid acids altogether. I shall always recall his figure as he sat at the head of the table, his head bowed over his plate, his mouth set grimly, his features clinched in the endeavor to conceal the expression of pain, especially from Mrs. Grant, who sat at the other end. He no longer carved or helped the family, and at last was often obliged to leave before the meal was over, pacing the hall or the adjoining library in his agony.

desire to live if he was not to recover. He preferred death at once to lingering, hopeless disease. He made the same remark to several of his family. For a while he seemed to lose, not courage, yet a little of his hope, almost of his grip on life. He did not care to write, nor even to talk; he made little physical effort, and often sat for hours propped up in his chair, with his hands clasped, looking at the blank wall before him, silent, contemplating the future; not alarmed, but solemn, at the prospect of pain and disease, and only death at the end. It was like a man gazing into his open grave. He was in no way dismayed, but the sight was to me the most appalling I have ever witnessed: the conqueror looking at his inevitable conqueror; the stern soldier, to whom armies had surrendered, watching the approach of that enemy to whom even he must yield.

But the apathy was not long-lived; the indifference to his book was soon over. Before long he went to work with renewed vigor. He enjoyed his labors now, and quite got the literary fever for a while. He liked to have his pages read aloud to the family in the evening, so that he might hear how they sounded and receive their comments. He worked, however, for the most part from ten or eleven o'clock in the morning until two or three in the afternoon, and sometimes again later in the day. Once in a while General Tower, a comrade in the Mexican War, came in and discussed the chapters describing the capture of Vera Cruz or the march on Mexico. Sometimes Mr. Chaffee listened to the political passages, and begged the General not to emasculate them, but to say all he thought without fear or favor.

Daily about one o'clock he was interrupted by his grandchildren, who stopped as they passed to their lunch, and looked in at the open door, not entering till he saw them and summoned them. Their prattle and kisses were always welcome, and made me think that the very misfortune which brought them to his house had its compensations. He took a positive pleasure in their society, and when at one time it was thought that they disturbed his labors, and they were told not to visit him, he was distressed at the omission and revoked the order. They came, indeed, like a burst of light into the sick man's study, three of them, dancing, gamboling, laughing — as pretty a brood of merry, graceful grandchildren as ever a conqueror claimed for descendants, or looked upon to perpetuate his name. Those were happy months, at times, despite the anxiety, until the anxiety became despair. For although the doctors had warned the family, there was yet hope of arresting, if not of curing, the disease, and a possibility of arresting it for years. His constitution was good; he

At this time he said to me that he had no

came of a long-lived stock ; his nerve and will were what all the world knows. So there was hope ; not with so much foundation as could have been desired, but still there was hope.

I shall never forget the frolic with the little ones on Christmas Day. They all came to dinner, and the two youngest sat one on each side of him. He was comparatively free from pain at that time ; indeed, for a month or more the excruciating tortures came only at intervals ; and on this day he took his own place at the head of the table. The babies were allowed to talk as much as they pleased, and they pleased a great deal. They monopolized the conversation, and when their mammas endeavored to check them, the General interposed and declared that this was their day. So they prattled across their grandpapa, and made preposterous attempts at jokes in their broken English, at which everybody laughed, and no one more heartily than the great warrior, their progenitor. It was a delicious morsel of sweet in the midst of so much bitter care, a gleam of satisfaction in the gloom of that sad winter, with its fears, and certainties and sorrows.

No one, indeed, can understand the character of General Grant who does not know the strength of his regard for his children. It was like the passion of a wild beast for its cubs, or the love of a mother for her sucking child,—instinctive, unreasoning, overweening ; yet, what everyone can comprehend and appreciate, natural, and in this grim veteran touching in the extreme. He not only thought his sons able, wise, and pure ; he had a trust in them that was absolute and child-like ; his affection even clouded his judgment and turned appreciation into admiration. For them he would have sacrificed fortune, or ease, or even *his* fame ; for them he did endure criticism and censure, and underwent physical fatigue and pain. He rose from his death-bed to work for them, and when he thought he was dying his utterances were about his “boys.” This feeling, lavished on his own children, reached over to theirs. No parent ever enveloped his entire progeny in a more comprehensive or closer regard ; none ever felt them more absolutely a part of himself, his own offspring, the issue of his reins.

By the last of the year the editors of THE CENTURY had received three of his papers for their magazine and announced all four articles for publication. The announcement of the series had been followed by a large increase in their sales. The editors, thinking at least a part of this due to his name, sent him in December a cheque for one thousand dollars more than they had stipulated. General Grant at first intended to divide this sum

between his two daughters-in-law living in the house with him, as a Christmas present. The amount would have been very acceptable to those ladies, but almost immediately he remembered his debt to Mr. Wood, his benefactor of the 10th of May, and inclosed his cheque for the thousand dollars to that gentleman, stating that the money was the result of his first earnings in literature. Still later General Grant received from the CENTURY another thousand dollars in addition to the sum stipulated for the fourth article. This cheque was the last he ever indorsed, and the payment, beyond his expectations, gave him in the last week of his life the satisfaction of knowing that his literary efforts had a high market value.

About Christmas the pecuniary troubles became more complicated. There was a possibility of some small creditors of Grant and Ward attempting to levy on the famous swords and presents he had received from Congress and the States and foreign potentates and cities. In order to save them Mr. Vanderbilt proposed to enforce his prior claim. Talk of this got abroad and was misunderstood.

At this juncture General Sherman was in New York, and of course visited his old chief and comrade. I went to call on him the next day, and he asked me about the possibility of any annoyance to General Grant on this score. He was extremely anxious, and declared : “Grant must not be allowed to suffer this new disgrace.” He would share his own income rather. I did not feel at liberty to say what I knew, even to him, and General Sherman’s talk in New York, Philadelphia and Washington excited a great and general sympathy. The result was that a number of General Grant’s friends, with Mr. Cyrus W. Field at their head, began to raise a fund to save the hero from this last indignity. A hundred thousand dollars were to be subscribed to pay off the debt to Mr. Vanderbilt, who it was supposed would compromise his claim for that amount.

But General Grant was weary of the repeated efforts to aid him. Congress had failed to place him on the retired list. A bill for this purpose had indeed passed the Senate at the preceding session, but President Arthur, it was known, would veto it, in order to preserve his consistency, having vetoed another intended to restore General Fitz John Porter to the army. He forgot, apparently, that the cases were different. General Grant himself said, “I have not been court-martialed.” Mr. Arthur proposed, it is true, a pension, but this General Grant indignantly declined to receive. He disliked to appear to apply for public or private charity, and wrote now to Mr. Vanderbilt, informing him of the well-meant efforts

in his behalf, but declaring that he preferred not to avail himself of them. He requested Mr. Vanderbilt to exercise his legal rights and offer for sale the whole of General Grant's property in his hands, including the presents and trophies of peace and war. He did not feel at liberty to thwart the intentions of his other friends without the sanction of Mr. Vanderbilt, as their efforts would enable him to cancel his debt to Mr. Vanderbilt, but he pre-

guile of a monster in craft, who selected the people's hero as his victim and his decoy; the abandonment of the property, and the surrender—harder still—of those monuments to his fame which his deeds had won; surrendered, it is true, to the nation, which will guard them sacredly, as it will the fame of which they are the symbol and the seal.

All this wore on the frame torn by disease and the spirit racked by imputations, thrown

GRANT'S BIRTHPLACE AT POINT PLEASANT, OHIO. (1885.) THE HOUSE LOOKS UPON THE OHIO RIVER.

ferred that the debt should be paid by the sale of the property, not by a new subscription.

Then came the correspondence which has been given to the world: first the munificent offer of Mr. Vanderbilt to make over all the property to Mrs. Grant, only providing that the presents should be held in trust during her life and that of the General, to be afterwards transferred to the Government, as souvenirs of the glory which is national; then the letter from General Grant, accepting the offer so far as it concerned the disposition of the presents, but declining to receive the return of the property; the persistent pressure of the great millionaire; the acceptance of General Grant under this pressure; Mrs. Grant's letter of an hour afterwards recalling the acceptance, written, of course, with General Grant's sanction, but signed by Mrs. Grant to save the General from the appearance of discourtesy; and the final abandonment of every particle of property he had in the world to satisfy a debt incurred at the instance and through the outrageous falsity and

off, it is true, but some of which still rankled, like poisoned arrows, that wound though they are extracted; all this told on that body which had endured so many sleepless nights and prolonged marches, which had suffered fatigue and hunger and watchings, and that soul which had withstood cares and responsibilities and torturing anxieties such as have fallen to the lot of no other man in our time; for no other bore on his single shoulders the weight of the destiny of a great nation at the very crisis of its history; no other stood before the enemy and the country and the world as the incarnation of the hopes and fears and efforts of a people waiting to be saved. These labors, endured long before, told now, and made him less able to withstand the shocks of fortune and of nature, and he gradually succumbed.

When the extent of General Grant's humiliation became a common story, when it was disclosed to the world that the house in which he lived was no longer his own, that his books and furniture were held on sufferance, that he was stripped even of the insignia of his

LIEUTENANT U. S. GRANT AND GENERAL ALEXANDER HAYS.
(FROM A PHOTOGRAPH OF AN OLD DAGUERRETYPE.)

fame, while he seemed neglected and forgotten in his adversity by the nation he had done so much to save, then even his stout heart gave way. All his symptoms were aggravated; his pains increased, the appalling depression of spirit returned, and more than all, the exhaustion of his strength—far greater than the disease alone could at that stage have produced—occasioned the physicians as well as the family the most painful solicitude. Dr. Barker and Dr. Douglas had as yet retained the case exclusively in their own hands. They had never deceived the family, but said from the beginning that the disease was epithelial cancer; that it might be arrested, but they had never known it cured. Neither Mrs. Grant nor the General had been told so much, although both of course knew that the case was critical, and both were undoubtedly anxious. What General Grant in his heart feared or expected he said to no human being; not his wife nor his children penetrated to the inner sanctuary where his soul contemplated its fate and balanced the

chances of life and death alone. But the gravity of his manner and the dejection of his nevertheless intrepid spirit indicated too plainly that he felt how great was his danger.

In January he ceased to visit his physician. Dr. Douglas now came to the patient daily, and after a while twice in the twenty-four hours. The visits of Dr. Barker were twice a week. The physicians had always agreed perfectly as to the nature of the malady and its treatment, and now were agreed in their alarm at its progress. In fact the earlier stages were past. The phases followed each other with ominous rapidity. The pains in the throat had become lancinating and sharp, the infiltration extended further and further, the cancer was eating into the delicate and vital tissues, and the end seemed in sight. This relapse could be traced directly to its cause,—it was the fresh revelation of his misfortunes, the loss of his honors, the publicity of his humiliation that kindled anew the fatal fires of the disease.

At this juncture the physicians determined to call in other eminent men in their profession. Dr. H. B. Sands and Dr. T. M. Markoe were requested to make a minute examination with the others, after which a general consultation was held. The conclusion was not immediately communicated to the family, but

enough was said to confirm their gravest apprehensions, and no announcement whatever was made either to the General or to Mrs. Grant. At the same time a piece of the affected tissue was submitted to Dr. G. R. Elliott, an expert with the microscope, who, after careful preparation and examination, not knowing the name of the patient on whose case he was to pronounce, declared, as all the others had done, that the indications of the fatal disease were unmistakable. The verdict of science was that a malignant cancer had seized on the system and was hopelessly ravaging the strength and vitality of the sufferer. General Grant was doomed. All that could be done was, not to stay the progress of the destroyer, but to alleviate the tortures that were imminent. This apprehension of approaching and inevitable agony was keener with the physicians than they were willing to betray; but their gloomy manner and guarded words told in spite of them what they were anxious to conceal.

Immediately after this consultation a state-

ment was made in a medical journal, apparently by authority, that General Grant was improving, that the disease was not unquestionably cancer, and that care and good fortune might even yet bring about recovery. Mrs. Grant first saw this statement, and naturally supposed it to be the official report of the consultation. She read it to the General, who, like herself, was greatly relieved. The effect upon his spirits was immediate and evident. He spoke of the report to the family as if it was decisive, and even mentioned it to the physicians. But this publication was a version of what had been said long before, at a time when a peculiar phase of the complaint gave ground for favorable vaticinations, and when it was thought wise not to alarm the public mind for fear of the reaction upon the patient. The delusion was cruel, for it was destined to be dissipated. No utterances of the press, even appearing to emanate from his immediate medical attendants, could conceal from General Grant for more than a day or two the fact that he was rapidly failing. His own sufferings, his extreme prostration, the redoubled care and attention of his physicians,—all combined to disclose to him the reality.

Immediately after this publication a second announcement was made in the newspapers, this one divulging the exact truth, which the family had not yet communicated in its fullness to their most intimate friends, or hardly

admitted in words to themselves. How this statement became public was not discovered, but it mattered little now, for the bitter verity could no longer be withheld. When friends and reporters came instantly to inquire, the sons admitted the danger of their father, as well as the anxieties and distress of the family. These utterances were at once published, and were read by General Grant. He doubtless then for the first time became convinced of his condition, and of the extent of the solicitude of his children. Mrs. Grant also at this time first realized what were the fears of the family. Her disappointment was sharp, coming after the elation of the last few hours, and General Grant himself, it was evident, felt the shock profoundly. No one spoke to him on the subject, nor did he mention it to any one, but he acted like a condemned man. He had no thought before, I believe, that he might not live years, although ill, and with a terrible shadow hanging over him. That his days were numbered was an intimation for which he was not prepared.

He was, I am sure, unwilling to die covered with the cloud of misfortune. On this subject also he was silent to every human being, but the thought added bitterness to his agony. I know it, as well as if he had told me. It could not indeed but be hard for him who had led the armies of his country to repeated victory, who had received more surrenders than any

other conqueror in history, who for eight years had sat in the chair of Washington, and whose greatness had been sealed by the verdict of the world, to leave his children bankrupt, their faith questioned, their name, which was

dred letters and telegrams arrived each day, with pity and affection in every line. The soldiers all over the country were conspicuous in their manifestations of sympathy — Southerners as well as Northerners. Army clubs

his, tarnished — that name which must live forever. The blur on his reputation, even with the taint of dishonor entirely removed, the wreck of his fortune, the neglect of the Government, the humiliations of his poverty,— these stern images hovered around his couch by night and day, and goaded and galled him till the moment when physical torture crowded out even mental pain.

The country received the news of his condition with grief and consternation. Whatever had been said or thought injurious to him was instantly ignored, revoked, stamped out of mind; under the black shadow of Death the memory of his great services became vivid once more, like writing in sympathetic ink before a fire. All the admiration and love of the days immediately after the war returned. The house was thronged with visitors, old friends, army comrades, former cabinet ministers, senators, generals, diplomatists, on errands of inquiry or commiseration. A hun-

and loyal leagues sent messages incessantly. Meetings of former Confederates were held to signify their sorrow. The sons of Robert E. Lee and Albert Sidney Johnston were among the first to proffer good wishes to him whom their fathers had fought. Political opponents were as outspoken as partisan friends, and the bitterest enemies of General Grant in the daily press were generous and constant in the expression of their interest. Rivals in the army like Buell and Rosecrans made known that the calamity which impended over the nation was a sorrow for them, because they were Americans. Mr. Jefferson Davis more than once uttered kind words which were conveyed to the sufferer. The new Secretary of War of the Democratic administration called in person; the new Secretary of State sent remedies and good wishes. The new President dispatched the Marshal of the District of Columbia from Washington to make inquiries. Ex-President Hayes and

(FROM PHOTOGRAPH BY E. AND H. T. ANTHONY.)

ex-Secretary Lincoln had called long before. State legislatures voted their commiseration; the Queen of England telegraphed her condolences, and little children from all parts of the country sent constant messages of affection and tributes of flowers.

But no sympathy could check the progress of the pale rider who bears his summons with impartial footsteps to the hovels of the poor and the palaces of the great. The

malady made incessant advance. The terrible darting pains increased in intensity. Another medical attendant, Dr. G. F. Shradly, was called in to assist and relieve Dr. Douglas. The great fear of the physicians now was of the horrible cancerous pains. They said repeatedly that a speedy termination of the disease was to be desired. If pneumonia or some other quick-ending complaint could carry off the patient in a week, it would be

cause for gratitude. This sickening apprehension of coming physical torment aggravated the expectation of bereavement and left nothing lacking to the intensity of the calamity.

Yet it seemed to me after the first shock that General Grant still had not given up. His unconquerable nature rebounded. He looked at the physicians with an anxiety that could not have been so acute unless the possibility of hope had been mingled. He submitted to every operation, he carefully attended to every injunction, and sustained the long siege of disease with the same determination and tenacity he had displayed in other sieges and campaigns with other enemies. But now he was on the defensive,—it was the first time.

Meanwhile his article on Shiloh had appeared in *THE CENTURY* Magazine, and the influx of letters and criticisms from friends and opponents excited his interest for a while. The greeting offered to his first contribution to written history showed that the world stood ready to receive his story from himself, but even this thought could not arrest the rapid concentration of his attention on bodily ailments and failing powers. The strifes of battle and the contests of history sounded distant and dull to ears that were deadened with the ever present sense of pain, and even the imposing fabric of his fame looked shadowy and unsubstantial to eyes about to close forever on the glories and honors of this world.

As soon as General Grant's condition became known an attempt was made in Congress to revive the measure for restoring him to the army. Since the bill which had already passed the Senate and was actually before the House of Representatives would be vetoed, Senator Edmunds introduced another, with the view of obviating Mr. Arthur's objections. This was rapidly passed by the Senate and sent to the other House. There it was taken up by Mr. Randall, the Democratic leader, who in conjunction with General Grant's personal and political friends, and many Democrats and Southern soldiers, made every effort to secure its success. Most of the Democrats, however, opposed it. They were anxious to pass the earlier bill, and thus force the President either to reverse his previous action in the Porter case or to veto the bill in favor of General Grant. The President allowed it to be known that he would not recede from his position; Congress must pass the bill that he wished, for he would veto the other.

On Sunday morning, the 15th of February, Mr. Cyrus W. Field, who had been incessant in his efforts in the press and in private to secure the passage of the bill, came to General Grant's house and asked for me. He said if a determined effort were made by General

Grant's friends, he thought the bill might be passed the next day; and asked me to go to see whoever I thought would have influence. I told the General of the visit. He was gratified at the interest of his friends, but would give me no advice, and I sallied out and spent the day in his service. I found Mr. Hamilton Fish, General Grant's old Secretary of State, Mr. Evarts, who had just been elected Senator, and General Horace Porter, my former comrade on General Grant's staff. All were willing and earnest; all wrote letters at once to reach members of Congress the next day, and General Porter went with me to visit others who we thought might help us. But Monday came and the bill was called up and lost.

General Grant felt the rebuff acutely. Though he had made no demonstration of anxiety in advance, those who saw most of him and had learned to interpret the few and faint indications he ever gave of his personal preferences and desires, knew how eagerly he had hoped, how cruelly he was disappointed. He had indeed looked to this bill as in some sort a reparation of the injury his reputation had sustained; as an official vindication, an intimation that the country still believed in him and regarded his fame, had not forgotten his services. When the reparation was withheld he suffered proportionally.

But he refused to reveal his emotion. A day or two before the decision he declared that he did not expect the passage of the bill; and when the defeat was announced he made no remark. That evening he played cards with his family and displayed unusual spirit and gayety; but all saw through the mask. All joined, however, in the deception that deceived no one. None spoke of the disappointment; and a grim interest in whist apparently absorbed the party that was heart-broken for him who permitted neither wife nor child to come beneath the cloak that concealed his wound. All he said was that the bill had failed on the 16th of February, the anniversary of the fall of Fort Donelson.

The next day he was worse, and in a week the gravest fears seemed near realization. He himself appeared conscious of the approach of the end. He had all winter been considering and discussing the choice of a publisher for his book, but had made no decision. Now he came to a conclusion, and in the first week in March the agreement was signed with his present publishers, Messrs. C. L. Webster & Co.

At the same time the family thought they could no longer withhold from his daughter, Mrs. Sartoris, the knowledge of her father's condition. She was in England, and they had, of course, notified her of his illness, but, in the hope of amelioration or respite, had deferred

the announcement of its critical character. But at last they wrote and urged her to hasten to him. After his second relapse they telegraphed, and she started for his bedside. They were still unwilling to inform General Grant that she had been summoned, lest he should be depressed by the certainty that they believed the end to be near; they only told him she had written to say that she was coming; but the amiable concealment hardly deceived him. Though his spirit was broken, his exhaustion extreme, his mind depressed, and certainly at this time weakened, he knew too well why she was coming; but he asked nothing and said nothing.

The decay of his energy was to me more distressing than any other symptom. For the inroads extended beyond physical strength; they reached at last mental power, and even that nerve and force which made the great character that the world has recognized. To one who had studied him for half a lifetime, it was acute pain to watch his strength give way, the light of his intellect flicker and fade, the great qualities all apparently crumble. To see General Grant listless, incapable of effort, indifferent to work, absorbed in physical needs and pains,—a sick man in soul as well as in body,—was hardest of all.

The interest of the country still followed him, and, as the disease proceeded, became still more intense. The physicians now sent out daily bulletins, and crowds of people watched the boards where these were published. His friends determined that still another effort should be made in Congress to pass some bill for his retirement; but he felt little interest in the measure now,—the languor had reached his heart.

For many weeks he had been unable to go downstairs to his meals, or to receive a friend, and had spent his days in the room which, before his illness became so acute, he had used as a study. Here his papers still remained, and once in a great while he even yet attempted to write a page; but alas! it was not like what he had once been able to write. Sometimes I tried to catch an idea and took it down from his lips, reading it afterwards to him to verify it. But these opportunities became rarer and rarer; he had no longer strength for the effort, no longer interest in his work, and at last abandoned all idea of being able to finish it.

Then his sleeping-room was changed. Mrs. Grant gave up hers at the front of the house to him, and took that which he had occupied at the rear, so that his bedchamber might be next to his sitting-room. At first he objected to the change, but soon his strength was so

far gone that he recognized the need. The two great chairs in which for months he had sat, leaning back in one with his feet in the other, were taken into that room, in which all now thought he would die. Still, he walked almost daily into the apartment where he had spent so many hours during the winter.

Meanwhile the efforts to pass the bill for his retirement continued. This one Mr. Arthur would sign. It had passed the Senate, and Mr. Randall, General Slocum, and other prominent Democrats wrote to General Grant's family and friends that the final result would be favorable. Mr. Randall had greater power in the matter than any one else, his party being in the majority, and no one was more earnest than he. But General Grant remained indifferent, and this time his indifference was real. He was absorbed in his sufferings, and believed the bill would be of no use to him now. His family, too, cared little for success, save as it might soothe or possibly brighten his last hours. The doctors thought it might possibly revive his spirits and prolong his days; but why, some thought, prolong his sufferings?

Finally, on the morning of the 4th of March, almost in the last moments of the expiring Congress, the bill was taken up by unanimous consent in the House of Representatives, and passed at once amid great cheering. The President, as usual at the close of the session, was in a chamber at the Capitol, waiting to sign such bills as had been left to the last moment, and must fail unless they instantly received his signature. He signed the bill. A nomination had been made out in advance and was sent at once to the Senate. There lacked but a few moments of the hour when Congress would cease to exist; but Senator Edmunds, the presiding officer, announced a message from the President; all other business was suspended, and the nomination was confirmed amid tumultuous applause from the galleries.

President Cleveland signed the commission; it was the second act of his administration.* The news was telegraphed to General Grant by numerous friends, and the same day the adjutant-general of the army notified him officially of his appointment. General Grant wrote the telegram of acceptance in his own hand. He was again in the army which he had so often led to victory. It did seem preposterous that any difficulty should have been made about admitting him to that army of which he had been the most illustrious member.

But the recognition came too late. He was gratified and cheered, but the hand of fate had fallen, and could not be removed. There was no revival of his strength, no reaction

* The nomination of the Cabinet was the first.—EDITOR.

GENERAL GRANT AT HEADQUARTERS DURING THE VIRGINIA CAMPAIGN. (FROM A PHOTOGRAPH BY BRADY.)

from his depression, no cessation of his pain. The exhaustion went on.

Nevertheless his restoration to the army, though it could neither bring back his health nor prolong his days, made a deeper impression on him than he was willing to betray. When the end of the month came this was apparent. All officers of the army are required to make a monthly report of their post-office address to the adjutant-general. I do not remember that this report was ever made by him as general-in-chief, after his headquarters were removed from the field; but now he was extremely anxious to make it, and filled out the form himself, though with extreme difficulty. It was a question at the time whether he would live through the day, and it was strange to read the language required by the regulations: "My post-office address for the ensuing month will be"—3 East Sixty-sixth street, New York.

He was still more eager to draw his pay. It seemed as if he looked upon these two circumstances as the seal of his return to the army. No young lieutenant expecting his stipend for the first time could have been more anxious. He sent for his pay-accounts before the time, and when signed they were forwarded to the paymaster, so that on the day when the first month's pay was due the cheque was handed him. At first he insisted that one of his sons should go at once to the bank to have the cheque cashed; he wanted to handle the money. But at this juncture his sons were unwilling to leave the house even for an hour, and he finally consented that Mr. Chaffee should draw the money. When it was handed him he divided it among Mrs. Grant and his children; saying it was all he had to leave them. This was on the 31st of March, when he was expecting to die within forty-eight hours.

During the month of March his daughter arrived, and although, of course, her coming was a solace, yet he knew too well by this time that she had come to see him die. The gathering of other friends also had significance. He ceased now to leave his room, except at rarest intervals. One physician always slept in the house.

His suffering at last grew so acute that anodynes, the use of which had long been postponed, became indispensable. The pain was not of that violent character which had been so sorely dreaded, and which the progress of the disease did not even yet induce; it was rather an intolerable nervousness, as unlike as possible the ordinary phlegmatic calm of General Grant,—a physical excitement and an excessive sleeplessness, combined with a weakness that was spasmodic.

These sensations were the cause of a consuming wretchedness, but they were not cancerous pains. The physicians constantly declared that although the cancer was making irresistible advance, it was not the cancer that produced the exhaustion and the nervousness, which, unless arrested, would bring about death very soon. It was only too plain that the mental, moral disease was killing General Grant,—it was the blow which had struck him to the dust and humiliated him before the world from which he could not recover. He who was thought so stolid, so strong, so undemonstrative, was dying for a sentiment—because of the injury to his fame, the aspersions on his honor.

This, now, every one recognized. Every one now admitted his purity, contended for his honor, which it was said was the country's. If the universal affection and regard which were showered on him could have salved his wounds he might have been cured, but the recognition and reparation were in vain. He who had passed unscathed through Shiloh and the Wilderness was stricken by a weapon more fatal than the rebels ever wielded; he who had recovered from the attacks of political assailants and resisted the calumnies of partisan campaigns was succumbing under the result of the machinations of one man.

Still, the sympathy soothed his mortal anguish and cast a gleam of consolation into his dying chamber. It seemed to change and soften his spirit. His indignation at former enemies was mollified by their protestations of pity; the bitterness he had once felt for them was converted into gratitude for their compassionate utterings. The very fire of his nature seemed quenched by the cold shadows of impending dissolution. Now, also, an unfamiliar tenderness appeared, which had been long concealed. The depths of his affection were disclosed; he was willing to express more of his intimate feeling than ever before. It was a new man, a new Grant in these matters that was revealed, as if the husks were torn aside and the sweet kernel given to those from whom it had been so long withheld. All who approached him intimately at this time recognized this uncloaking of certain parts of his nature which hitherto had been so carefully veiled.

But one more struggle, one more fierce battle remained. He had yet to justify himself, to say in person what he had never yet said to the world, of his relations with "Grant and Ward," to tell himself the story of the deceit which had brought him low. James D. Fish, one of the partners in the firm, was on trial, and General Grant's testimony was desirable. He was now so feeble that it was almost dangerous

to subject him to the ordeal of an examination; but yet to vindicate his fame, to allow him in his dying moments to utter his own defense, it was worth while incurring whatever danger. His sons, especially, were anxious that he should say what no one else could ever say for him, and for them; and although in his weak condition he did not appear to share their anxiety, he consented for their sake to make the effort.

The examination was held in his bedchamber. The lawyers and the stenographer and one or two others were present. The ceremony of an oath was waived, with the consent of the opposing counsel, and the dying man answered all questions and told how he had been betrayed. As the inquiry went on the old spirit of battle revived; he felt all the importance of the occasion, roused himself for the effort, and made a definite declaration, damning in its evidence of the guilt of one man's action, absolute in the assertion of the purity of his own.

In his testimony he spared neither Fish nor Ward; he felt that this was his last blow, and he dealt it hard. If he had died then, as it was almost feared he might, it would have been, not only like the old warrior of story, standing, but fighting to the last. He never relented in his bitterness to these two men. The harshest words I ever heard him speak were his frequent utterances, after he knew that he was doomed, in regard to them who had been the cause of his ruin, and, as he doubtless felt, of his end.

The examination lasted nearly an hour. When it was over he did not at first appear more than usually exhausted. He never showed immediately the effects of any intense physical or mental strain. Not after his great disappointment in February did his strength or spirit at once give way; so now for a day or two he seemed no weaker than before.

But in forty-eight hours he began to fail. He recognized himself the decrease of vital force, and believed it was the beginning of the end. The physicians shared the belief. Two now remained constantly in the house. Anodynes were doubled, to control the excessive nervousness and to prevent the occurrence of the anticipated agonies. One of his sons was in his room continuously and the family were summoned more than once when he seemed in mortal peril.

At this time General Grant had not lain in his bed for more than a few moments at a time in months; a sensation of choking invariably attacked him in that position, and although the physicians assured him that there was no danger of suffocation, the symptoms were so distressing that he could not be persuaded to

take to his bed. He sat in one great chair, with his feet in another, propped up by pillows, usually wearing a dressing-gown, and his legs swathed in blankets.

Very early in April I was obliged to give up my room; after Mrs. Sartoris arrived, there was no other where the faithful medical attendants could rest in the intervals of their watchings. I still spent my days at the house, and often remained for the night, lying where I could, or snatching sleep in a chair, with Mr. Chaffee or other intimate friends.

One morning General Grant himself thought he was dying. The family were all summoned. He kissed each of them in turn, and when Mrs. Grant asked him to bless her he replied: "I bless you. I bless you all!" After this he went lower and nearer death than ever before. The pulse was flickering like a candle, and the physicians said: "He is going." But there had been an injection of brandy prepared some days before, for just such emergencies, and one physician whispered to the other: "Now! the brandy." "Where is it?" "On the table." "Shall we use it? Is it worth while to bring him back to pain?" "Yes." And Dr. Shradly administered the brandy, which Dr. Douglas had prepared. It stimulated the nerves, it produced another pulsation. The throbbings went on, and General Grant returned to the world he had almost quitted forever.

Another morning I was at my hotel, having left the house after midnight. At about four o'clock I was wakened, and a note was handed me from Colonel Grant. It contained only the word, "Come." I knew too well what this must mean, and hurried to the house. A hemorrhage had occurred. This was one of the contingencies that had always been foreseen, and it was supposed certainly would be fatal. Every one had been summoned. "What shall I say?" asked Colonel Grant, as he wrote the notes. "It makes no difference," said the doctor; "all will be over before they get here." But General Grant walked to the basin and helped to wash his throat, and the hemorrhage proved favorable instead of fatal. It was caused by the loosening of a slough that had formed over a part of the throat, and the slough in a day or two came entirely away, after which the cancer itself was eased, and indeed for a while arrested. The weakness, for some cause or by some means which I have never been able to understand, was to a certain extent overcome. The anodynes were lessened in quantity, and their injurious effects passed away. For several days General Grant seemed to hover between life and death, and then came a marvelous change. To the amazement of all, his strength returned and

his spirits revived. At first he disbelieved in the amelioration. He had perhaps for one moment a glimmer of hope, but then the conviction overwhelmed him that recovery was impossible.

At this crisis he did not wish to live. "The doctors are responsible three times," he said, "for my being alive, and — unless they can cure me — I don't thank them." He had no desire to go through the agony again. For, he had suffered death; he had parted with his family; he had undergone every physical pang that could have come had he died before the brandy was administered.

It seemed to me then cruel to bring him back only to renew his torture; for I had no idea, nor had any one else, that he would live more than a week, if so long. He had said more than once: "I have no regrets, except for leaving my family." But he was recalled, and from that time the apparent improvement went on.

He still, however, for a few days remained unwilling to live—in pain; though always eager to be cured. He was never afraid to die. Having disposed of his book and his affairs, these matters he considered settled; just as in battle, after giving an order, he never doubted, or wished to recall it. But the fighting spirit, the unconquerable nature, made him struggle still. The dejection which marks the disease, and which had been so appalling in January and February, did not return. In its stead a new phase came on. He was battling again, and this time harder than before, for the enemy was closer. He fairly grappled and wrestled now with Death. The terrible calm of the fight was exactly like the determination in the Wilderness or before Richmond, where I once heard him say: "I feel as sure of taking Richmond as I do of dying." There was no excitement, no hysterical grief or fear, but a steady effort of vital power, an impossibility for his spirit to be subdued. He was not resigned; neither was he hopeful. He simply, because he could not help himself, made every effort to conquer. After every paroxysm of mortal faintness the indomitable soul revived, and aroused the physical part.

I may not be thought to lift too far the veil from a dying chamber if I mention one circumstance which had for me a peculiar interest. During all of General Grant's illness, down to the hour when his partial recovery began, Mrs. Grant never could bring herself to believe that she was about to lose him. A woman with many of those singular premonitions and presentiments that amount almost to superstition, but which yet affect some of the strongest minds, and from which General

Grant himself was certainly not entirely free, she declared always, even at the moment which every one else thought would prove the last, that she could not realize the imminence of the end. Her behavior was a mystery and a wonder to those who knew the depth of the tenderness and the abundance of the affection that she lavished on her great husband. Her calmness and self-control almost seemed coldness, only we knew that this was impossible. I did not presume, of course, to comment on this apparent stoicism, but once or twice she told me she could not despair; that there was a feeling constantly that this was not to be the last; and even when she wept at the gifts and the words that were thought to be farewells, she was putting up prayers that were full of confidence, and after which the wonderful and unexpected recuperation occurred.

All this while, the public interest was painful. So much of it penetrated into that house under the shadow of Death, that it seemed to us within as if the whole world were partaking of our sorrow. All day through the half-closed shutters we could see the crowds waiting silently and solemnly for news of the beloved sufferer. Every one who left the house was instantly accosted, not only by professional reporters, but by earnest and often weeping men and women, who had never known General Grant personally, but shared the feeling of the country in his behalf.

To me there chanced to come peculiar indications of this feeling. Known to be an inmate of the house, and yet not so near as the nearest relatives, I could be approached by others on subjects which they shrank from broaching to the sons. General Grant belonged to the country as well as to his family, and the country would insist on doing him every honor when the final occasion came. Many public men endeavored to ascertain through me what would be the wishes of the family in regard to the disposition of the great dead; and letters were sent to me to present at the fitting time, offering worthy sepulture. The people of the District of Columbia, through their representatives, declared their desire that the revered ashes should rest at the Capital of the country, and the general-in-chief of the army, the friend and follower of General Grant, sent proffers of a place for him at the Soldiers' Home,—a fitting name for the last habitation of a soldier. The President of the United States sent a messenger from Washington to say that he would attend in person the august obsequies, and I was to communicate in time the probabilities and arrangements. All these sad secrets were to me especial signs of the universal grief that

kept pace with the still more sacred sorrow which I saw; but I was requested not to intrude prematurely upon the family the preparations for what seemed then inevitably at hand, and I bore about with me for weeks the knowledge, undisclosed, that armies and Presidents were waiting to pay General Grant those honors which to himself would be forever unknown.

On Easter Sunday he seemed a little easier, though there was still no hope. I went into his room and found him able to listen and even to utter a few words without too much effort. I had been greatly struck by the universal watching of a nation, almost of a world, at his bedside, and especially by the sympathy from former rivals and political and even personal adversaries; and I recounted to him instances of this magnanimous forgetfulness of old-time enmities. When I told him of the utterances of General Rosecrans and Jefferson Davis he replied: "I am very glad to hear this. I would much rather have their good-will than their ill-will. I would rather have the good-will of any man than his ill-will."

On the 3d of April several newspapers which had followed General Grant with a persistent animosity down to the very beginning of his illness, recalled in touching and even eloquent words that twenty years before he had captured Richmond on that day. I told this to my chief, for I had been with him on that other 3d of April. I said the nation was looking on now, watching his battle as it did then, and that his fight with disease was as good a one as that he had made with the rebels twenty years before. "Ah," he answered, "twenty years ago I had more to say. I was in command then." "But even then," I replied, "it took a year to win; perhaps you may win still." He brightened up at this and told the physicians the story of General Ingalls's dog. Ingalls was the chief quartermaster of the armies operating against Richmond, and had been a classmate with General Grant at West Point; they were always on intimate terms. He had a peculiar dog that often came about the camp-fire at headquarters. One day during the long siege General Grant said, "Ingalls, do you mean to take that dog into Richmond?" "I think I shall," said Ingalls; "he belongs to a long-lived breed."

After this Dr. Shrady sat down to write the bulletin for the morning.

"What shall I say, General?" he asked. "How shall I tell them you are this morning?"

"More comfortable," replied the General.

And the doctor wrote a line about the physical condition of his patient, and read it

to General Grant, who approved. I was still greatly impressed by the public emotion, and I interrupted:

"General, why not say something about the sympathy of all the world, something to thank the people?"

"Yes," he exclaimed willingly, and dictated these words: "I am very much touched and grateful for the sympathy and interest manifested in me by my friends, and by—those who have not hitherto been regarded as friends."

Towards the last he stammered and hesitated, evidently unwilling at this moment to call any one an enemy; and finally made use of the circumlocution, "Those who have not hitherto been regarded as friends."

Dr. Shrady wrote out the bulletin, and read it aloud, when the General added: "I desire the good-will of all, whether heretofore friends or not."

I urged the Doctor to stop just there, to say nothing about physical details, but give this Easter message from General Grant to the world in his own language. Mrs. Grant, however, wished the word "prayerful" to be used before sympathy, and General Grant consented to the change.

Another morning, only a day or two after his improvement began, he said to me, evidently with a purpose, that it was strange how undisturbed a man could be when so near death. He supposed he had been as near the other world as one could be and survive. His feeling had been at the time that every moment might be his last; but he had not suffered one particle of apprehension, or fear, or even discomposure. He evidently wished me to know this, for we had once or twice in the winter talked of religious beliefs. "Yet," he said, "at such a time it hurt no one to have lived a good life." He had been undisturbed,—he repeated this emphatically,—but he believed any one would be more comfortable at such a moment with a conscience that could not reproach him. A good life would certainly contribute to composure at the end.

The 9th of April came, the anniversary of Appomattox, and recovery was still not assured. One of the sons had a presentiment that his father would not survive that day, but it would have been hard to have General Grant surrender on the anniversary of his greatest victory. Then came another jubilee. His birthday was the 27th of April, and by this time he was so far restored as to be able to join the family for a while at dinner. There were sixty-three lighted candles on the table to celebrate the sixty-three years, which a month before no one had hoped would ever

be completed, and the house was crowded with flowers, the gifts of thankful friends. By the 1st of May he was so well that he sent for a stenographer and began to dictate matter for his book.

His strength, however, was intermittent, and the cancer soon began to make progress again. Nevertheless, one crisis was past. A new chapter in the disease was begun. He was able now to drive out, and dictated, and sometimes wrote, at intervals during the month of May and the earlier days of June. His interest in his work seemed keener than ever. It doubtless gave him strength to make a new fight—a hopeless one, he felt before long, so far as recovery was concerned. Still there was a respite, and this period, with his usual determination, he employed in the effort to complete his memoirs.

The secret of this partial recovery is not far to find. It was after the great expression of public sympathy that General Grant began to improve, after his place in the affections of the people was restored or resumed that his whole nature, moral and physical, became inspired and renovated. For this it was almost worth while to have suffered—to have the world recognize his sensitiveness, and to receive himself its appreciation in return. Few men indeed have known in advance so nearly the verdict of posthumous fame. No death-bed was ever so illumined by the light of universal affection and admiration. Garfield had not the same claims on his countrymen, and the feeling for him was pity and indignant grief rather than gratitude or lofty enthusiasm; Lincoln knew nothing of the shock that went round the world at his assassination; Washington lived before the telegraph; and no European monarch or patriot was ever so universally recognized in his last moments as a savior and hero as Grant. All this was borne in to him as he sat struggling with Death, and like the giant of old he received new strength from his contact with earth. The consciousness of a world for spectators might indeed nerve any combatant, and when he found that the attacks on his fame were parried, the reproaches forgotten, his very mistakes lost sight of in the halo that enveloped him, he gathered himself up for a further contest. The physicians, doubtless, did their part, and nothing that science or devotion could suggest was withheld; but neither science nor devotion expected or produced the resurrection and return of him whose very tomb had been prepared. It was the sense of humiliation that had stricken him, and had more to do with his prostration than disease; and when this was removed, he rose from the embrace of the

King of Terrors, and flung himself for a while into new toils and battles, and though wounded and bleeding, refused to die.

On the 9th of June he was removed to Mount McGregor, near Saratoga, where a cottage had been offered him by its owner, Mr. Joseph W. Drexel. His strength had so far lapsed that the physicians afterwards declared he could not have lived a week longer in the heats and sultriness of New York. When the fatigues of the journey were over, however, and there was time for the fresh and reviving air of his new situation to affect him, his spirits rallied, and he resumed his literary labor with extraordinary energy for a man in his condition.

I was not with him at Mount McGregor, but I know that his effort there must have been prodigious. He dictated or composed more matter in the eight weeks after the 1st of May than in any other eight weeks of his life; while in the eight weeks immediately preceding that date he did not compose as many pages. But the dying General seemed to summon back his receding powers; and expression, memory, will, all revived and returned at his command. His voice failed him, however, after a while, and he was obliged to desist from dictation and to use a pencil, not only in composition, but even in communicating with his family and friends. This was doubtless a hardship at the moment, but was fortunate in the end for his fame; for the sentences jotted down from time to time were preserved exactly as they were written, and many of them are significant. They especially indicate his recognition of the magnanimous sympathy offered him by Southerners. This recognition was manifest in a score of instances. He had determined in the winter to dedicate his book to the American Volunteers,—in both armies,—and now he repeated and emphasized the declaration. He was visited at Mount McGregor by General Buckner, the Confederate commander who had surrendered to him at Fort Donelson, and he declared to his former foe: "I have witnessed since my sickness just what I wished to see ever since the war—harmony and good feeling between the sections." To Dr. Douglas he expressed the same sentiment in nearly the same words: "I am thankful for the providential extension of my time, because it has enabled me to see for myself the happy harmony which so suddenly sprung up between those engaged but a few short years ago in deadly conflict." These utterances were not left to a fading or faulty memory to gather up, but remain legible in the handwriting of their author. They form a fitting sequel to the acts of Donelson and Vicksburg and Appomattox. Certainly it never hap-

pened to a conqueror before to reap such a harvest of appreciation and even affection from the men that he subdued; to accomplish in his death more of the aim of his life than even the victories of his life had achieved.

He saw few friends at this time, and did little besides write, and obey the directions of his physicians, or submit to the attentions of his family and nurses. His suffering, fortunately, was not greater than that of a patient in any ordinary lingering illness; it proceeded principally from weakness, for the opiates always controlled the excruciating pains. These he was spared to the last. He perhaps once or twice had a glimmer of hope, but the rays were faint, and quickly faded back into the obscurity of despair. He felt that he was working only to finish his self-appointed task.

For he had an intense desire to complete his memoirs. It was upon the sale of his book that he counted for the future fortune of his family. It was indeed for his family, not for his fame, that he was laboring now; his fame he felt was secure. But at his death his army pay would cease. There would remain to Mrs. Grant and his children, it is true, the Trust Fund, the income of which he had authority to dispose of by will; but besides this and the mortgaged house in Sixty-sixth street, and one or two inconsiderable properties elsewhere, there was nothing; and three families depended on him. His "Personal Memoirs," it was hoped, would bring in half a million of dollars; but when he had ceased work in the winter, this was little more than half completed, and the monetary value of the book would be greatly depreciated, if it must be concluded by any hand but his own. This was the consideration that strengthened the sinking soldier, that gave him courage to contend with fate and despair, and, stricken as he was by one of the most terrible of maladies, to check the advance of Death himself, while he made his preparations under the very shadow of the wing and the glare of the scythe of the Destroyer, to secure a competence for his family after he himself should have left this world. The spectacle of the hero who had earned and worn the highest earthly honors, working amid the miseries of a sick-chamber to glean the gains that he knew he could never enjoy,—the fainting warrior propped up on that mountain-top to stammer out utterances to sell for the benefit of his children,—is a picture to which history in all her annals can find no parallel.

Indeed, this simple, plain, and undramatic man, who never strove for effect, and disliked the demonstration of feeling as much as the parade of circumstance and power, was performing the most dramatic part before the

world. His whole life had been a drama, in spite of him, full of surprises and startling results and violent contrasts, but nothing in it all was more unexpected than this last scene, this eager haste, not in business nor in battle, but in literary labor: this race with Death, this effort to finish a book in order to secure a fortune for his family.

But there was a key to the mystery, a solution of the riddle, and it is the explanation of every apparent mystery in the character of General Grant. His character at bottom was like that of other men. He loved and hated; he suffered and enjoyed; he appreciated what was done for and against him; he relished his fame and his elevation, he felt his disappointments and his downfall; his susceptibilities were keen, his passions strong; but he had the great faculty of concealing them so that those closest and acutest could seldom detect their existence. I sometimes wondered whether he was conscious of his own emotions, they were so completely under control; but they were all there, all alive, all active, only enveloped in a cloak of obstinate reserve and majestic silence which only at the rarest intervals was torn aside by misfortune or lifted for a moment to a friend.

And now he may himself have been but half aware of the sentiment that inspired him; but since he had discovered that his personal honor was as clean, and his military fame as brilliant in the eyes of men as they had ever been, he determined that his reputation for worldly sense and shrewdness should also be redeemed. He would not die without regaining a fortune equal to that which had been wrung from him by fraud. No man should say that after all General Grant left his children penniless. Away down in the depths of his nature where neither affection nor friendship ever penetrated, except by the intuitions of a life-long intimacy,—this was the incentive that poured oil on the flames which the disease was quenching, this was the fuel that kept the worn-out machine still in motion, to the amazement of a world.

When the work was over, the energy expired; when the motive was withdrawn, the effort ceased; when the influence that was the impetus of the machine was exhausted, will and strength alike failed. Immediately after the end of the book was reached, the other end was seen to be at hand. One or two spasmodic bursts of life flared up, like gusts of an expiring fire, but they probably deceived not even himself, and certainly no one besides. His former indifference to life returned as soon as his task was accomplished.

The country too had no wish that he should linger on in agony. If he could have been re-

stored to health and strength, nothing that the nation could have done to secure that end would have been lacking, or been thought too costly; but now that he could never be more than a sufferer, prostrate and hopeless, there was no desire to retain him. Reverent sorrow and sympathy had long ascended from every quarter of the land towards the cottage on that mountain-top, but there were no prayers uttered for protracted days.

The final crisis was neither long nor painful. On the 21st of July the country was informed that he was failing again. For two days his symptoms indicated increasing depression and exhaustion, and on the 23d came

the end. There was no renewed struggle, no distinct consciousness on his part that his feet were wet with the waters of that river which we all must cross; he made no formal parting again with his family; he endured no pangs of dissolution, but passed away quietly without a groan or a shudder, with no one but his wife and children and his medical attendants by his side. He had done most of the great things of his life with calmness and composure, and in the same way he entered the long procession in which Alexander and Cæsar and Wellington and Napoleon had preceded him.

AUTOGRAPH OF GENERAL GRANT WRITTEN WHILE AT WEST POINT, IN THE ALBUM OF A CLASSMATE.

[General Grant was christened Hiram Ulysses, and is said to have reversed the initials to avoid the humorous conjunction of them. In his commission as cadet the name was by mistake written Ulysses S., and as it could not be changed officially, he afterward adopted it, taking Simpson, a family name, for the second initial.—EDITOR.]

LINCOLN AND GRANT.

THE names of Lincoln and Grant will always be inseparably associated in connection with the events of the War of the Rebellion. At first thought they present two characters in American history entirely dissimilar. Their careers seem in striking contrast. One led the life of a civilian, and made his reputation as a statesman; the other was essentially a soldier, and is naturally classed amongst the great military captains of history. But upon a closer study of their lives, it will be found that the two men had many traits in common, and that there were many points of resemblance in their remarkable careers. Each was of humble origin, and had been compelled to struggle with adverse fortune, and learn the first lessons of life in the severe school of adversity. Each had risen from the people, possessed an abiding confidence in them, and always retained a deep hold upon their affection. Each remembered that though clothed in the robes of a master he was still the servant of the people. Both entered the public service from the same State, rose in life without the help of wealthy or influential friends, and owed every success to individual merit. Each might have said, to any who were inclined to sneer at his plain origin, what a marshal of France, who had risen from the ranks to a dukedom, said to the hereditary nobles who snubbed him in Vienna: "I am an ancestor; you are only descendants." Each was conspicuous for the possession of that most uncommon of all the virtues—common sense.

Both despised the arts of the demagogue, shrank from attitudinizing in public or posing before the world for effect, and looked upon the exercise of mawkish sentimentality and the indulgence in mock heroics with a righteous contempt. With them there was none of the puppyism which is bred by power, and none of that dogmatism which has been well described as puppyism grown to maturity. Each was endowed with talents especially bestowed upon him by Providence to meet the trying emergencies in which he was placed; each bore a patriot's part in securing the integrity of the Union; and each received from the people a second election to the highest office in their gift. Each had qualities which commanded the respect and admiration of the other, and where their characteristics were unlike, they only served to supplement each other, and to add to the strength which their combined powers exercised in the great cause in which they labored.

The acquaintance between the two men began by official correspondence, which afterwards became more personal in its tone, and when they finally met an intimacy sprang up between them which soon ripened into a genuine friendship. The writer of this article witnessed much of their intercourse; was often a listener to the estimates which each placed upon the other, and could not help being profoundly impressed with the extent to which these two historic characters became attached to each other.

They did not meet till March, 1864, and previous to that time had had but little personal correspondence. Most of the communications which the General received from the President had been in the form of executive orders sent through the War Department. Lincoln had early formed a high opinion of the Western general, in consequence of his victories at Donelson and Shiloh, and because he did not spend his time in calling for troops, but made the best use of those that were sent him. In other words, he was a man who asked for nothing, and gave the executive no trouble.

Grant's successes brought with them the usual number of jealousies and rivalries. Political generals had their advocates in Washington to plead their cause, while Grant stood without friends at court. His detractors gathered at times a great deal of strength in their efforts to supplant him with a general of their own choosing, and Lincoln was beset by many a delegation who insisted that nothing would harmonize matters in the West but Grant's removal. This nagging continued even after his great triumph at Vicksburg.

Lincoln always enjoyed telling the General, after the two had become personally intimate, how the cross-roads wiseacres had criticised his campaigns. One day, after dwelling for some time on this subject, he said to Grant: "After Vicksburg I thought it was about time to shut down on this sort of thing. So one day, when a delegation came to see me and had spent half an hour in trying to show me the fatal mistake you had made in paroling Pemberton's army, and insisting that the rebels would violate their paroles and in less than a month confront you again in the ranks, and have to be whipped all over again, I thought I should get rid of them best by telling them a story about Sykes's dog. 'Have you ever heard about Sykes's yellow dog?' said I to the spokesman of the delegation. He said he hadn't. 'Well, I must tell you about him,' said I. 'Sykes had a yellow dog he set great store by, but there were a lot of small boys around the village, and that's always a bad thing for dogs, you know. These boys didn't share Sykes's views, and they were not disposed to let the dog have a fair show. Even Sykes had to admit that the dog was getting unpopular; in fact it was soon seen that a prejudice was growing up against that dog that threatened to wreck all his future prospects in life. The boys, after meditating how they could get the best of him, finally fixed up a cartridge with a long fuse, put the cartridge in a piece of meat, dropped the meat in the road in front of Sykes's door, and then perched themselves on a

fence a good distance off with the end of the fuse in their hands. Then they whistled for the dog. When he came out he scented the bait, and bolted the meat, cartridge and all. The boys touched off the fuse with a cigar and in about a second a report came from that dog that sounded like a small clap of thunder. Stokes came bouncing out of the house, and yelled:

"'What's up! Anything busted?'"

"'There was no reply except a snicker from the small boys roosting on the fence, but as Sykes looked up he saw the whole air filled with pieces of yellow dog. He picked up the biggest piece he could find, a portion of the back with a part of the tail still hanging to it, and after turning it around and looking it all over he said, 'Well, I guess he'll never be much account again—as a dog.'" And I guess Pemberton's forces will never be much account again—as an army.'

"The delegation began looking around for their hats before I had quite got to the end of the story, and I was never bothered any more after that about superseding the commander of the Army of the Tennessee."

About nine days after Vicksburg had fallen the President sent the following letter to General Grant, who was deeply touched by its frank and manly character, and the sincerity of its tone:

EXECUTIVE MANSION,
WASHINGTON, D. C., July 13, 1863.

MY DEAR GENERAL: I do not remember that you and I ever met personally. I write this now as a grateful acknowledgment for the almost inestimable service you have done the country. I wish to say a word further. When you first reached the vicinity of Vicksburg, I thought you should do what you finally did—march the troops across the neck, run the batteries with the transports, and thus go below; and I never had any faith, except a general hope that you knew better than I, that the Yazoo Pass expedition and the like could succeed. When you got below and took Port Gibson, Grand Gulf, and vicinity, I thought you should go down the river and join General Banks; and when you turned northward, east of the Big Black, I feared it was a mistake. I now wish to make a personal acknowledgment that you were right and I was wrong.

A. LINCOLN.

The first time the two men saw each other was about one o'clock on the 9th of March, 1864, when General Grant called upon the President at the White House to receive the commission constituting him lieutenant-general of the armies. The General had arrived in Washington from the West the day before, and was on his way to establish his headquarters in Virginia. The interview took place in the Cabinet room. There were present, besides the members of the Cabinet, General Halleck, a member of Congress, two of General Grant's staff-officers, his eldest son,

Frederick D. Grant, and the President's private secretary. Lincoln, in handing the General his commission, read with much feeling a few words which he had written for the occasion, ending with the remark, "As the country herein trusts you, so, under God, it will sustain you. I scarcely need add that, with what I here speak for the nation, goes my own hearty personal concurrence." The General took the commission very much as a graduate steps up and takes his diploma from the president of his college. He had written a brief reply on a sheet of paper, which he drew from his pocket and read. It closed as follows: "I feel the full weight of the responsibilities now devolving on me; and I know that if they are met it will be due to those armies, and above all to the favor of that Providence which leads both nations and men."

In a subsequent conference the President talked very freely to General Grant about the conduct of the armies in the field. He said he did not pretend to know anything about the art of war, and it was with the greatest reluctance that he ever interfered with the movements of army commanders, but he did know that celerity was absolutely necessary, that while armies were sitting down, waiting for opportunities which might perhaps be more favorable from a military point of view, the Government was spending millions of dollars every day, that there was a limit to the sinews of war, and there would come a time when the spirits and the resources of the people would become exhausted. He had always contended that these considerations must be taken into account, as well as the purely military questions, and he adopted the plan of issuing his executive orders, principally for the purpose of hurrying the movements of commanding generals. He said nothing pleased him more than the fact that the grade of lieutenant-general had been revived by Congress, and that a general-in-chief of the armies had been put at their head, who he felt would appreciate the value of minutes. He told the General he was not going to interfere in any way with his movements, and all he had to do was to call on him for whatever he required, and it would be supplied if the resources of the nation could furnish it.

General Grant soon after entered upon the Wilderness campaign. Cheering messages were frequently sent him by the President, and a number of suggestions were made, but no orders were given for the movement of troops. Many characteristic telegrams were received from the President while the armies were in front of Richmond and Petersburg. One of them afforded Grant great amusement. It closed with the words, "Hold on with a

bull-dog grip and chew and choke as much as possible. A. LINCOLN."

Each tried to anticipate the desires of the other even in matters somewhat out of his particular sphere of action. At the first meeting they had in the field after actual operations had commenced in Virginia, Lincoln said to the General that there was a man who had got a permit at Washington to visit the armies and had abused his privilege by going around using seditious language and trying to stir up trouble among the loyal Virginians in that section of country. He asked the General whether he had heard of the fellow, saying he would have arrested him if he had known just where to catch him. The General replied that he had not heard of him; that if he had he should have arrested him and sent him to Fort Monroe without troubling the President with the matter or letting him know anything about it.

"I see," said the President, "you would have served me like the Irishman wanted the doctor to serve him. The doctor told him he would have to take a quinine tonic. The Irishman asked whether he would let him put some whisky in it, and the doctor said, not a drop; if he expected to be cured he must give up the use of whisky entirely. The Irishman thought a minute, and then remarked to the doctor in a sort of confidential way, 'I say, dochtor, when ye git yer medicine all ready couldn't ye jist put in a little whesky unbeknownce to me?' So when you got your man all ready I suppose you would have put him into Fort Monroe 'unbeknownce' to me."

The nearest Mr. Lincoln ever came to giving General Grant an order for the movement of troops was during Early's raid upon Washington. On July 10, 1864, the President telegraphed a long dispatch from Washington, which contained the following language: "What I think is that you should provide to retain your hold where you are certainly, and bring the rest with you personally, and make a vigorous effort to defeat the enemy's force in this vicinity. I think there is really a fair chance to do this, if the movement is prompt. This is what I think—upon your suggestion, and is not an order." Grant replied that on reflection he thought it would have a bad effect for him to leave City Point, then his headquarters, in front of Richmond and Petersburg, and the President was satisfied with the dispositions which the General made for the repulse of Early without taking command against him in person.

It will be seen that the President did not call for assistance to protect Washington, but for troops and a competent leader to go after Early and defeat him. The President was

undoubtedly possessed of more courage than any of his advisers. There is not an instance in which he seemed to take counsel of his fears. He was always more anxious to have the troops around Washington sent to the field than kept in the fortifications about the capital. He sent a remarkable dispatch to the General on August 4, 1864, which shows his eagerness to have the troops in his vicinity placed "south of the enemy" instead of being kept between the enemy and Washington. It referred to an order which General Grant had sent to General Halleck, chief of staff at Washington, and was as follows :

"I have seen your dispatch in which you say, 'I want Sheridan put in command of all the troops in the field, with instructions to put himself south of the enemy, and follow him to the death; wherever the enemy goes, let our troops go also.' This, I think, is exactly right as to how our forces should move; but please look over the dispatches you may have received from here since you made that order, and discover, if you can, that there is any idea in the head of any one here of 'putting our army south of the enemy,' or of 'following him to the death' in any direction. I repeat to you it will neither be done nor attempted, unless you watch it every day and hour and force it.

"A. LINCOLN."

This is the language of a man of courage, who felt a consciousness that he was bolder than those who counseled him at Washington, and wanted a man of Grant's aggressiveness to force the fighting, and send the troops about the capital after Early to get south of him, and follow him to the death, even if the capital had to go without defense.

On the 23d of November, when matters looked a little quiet along the lines, Grant visited the President in Washington, and spent most of the day with him and the Secretary of War conferring upon the military situation and the carrying out of some recommendations which the General had made regarding the armies in the field. His principal demand was to have eight useless major-generals and thirty brigadiers mustered out of the service to make room for the promotion of men who had won their spurs in the field. The President pointed to a number of names on the list and remarked that they were the General's own personal friends; but Grant urged the matter still more strenuously, saying that the emergency was too great to stop to consider personal feelings, and that those whose services could not be made available must give way to the rising men at the front. He succeeded in securing many vacancies in the list of generals, and the promotions which followed for meritorious services in the field did much for the *morale* of the armies.

On March 20, 1864, the General invited the President to visit him at City Point. The

invitation was accepted the next day, and the President arrived at the headquarters of the armies on the 22d, accompanied by Mrs. Lincoln and their youngest son "Tad." They had come down the Potomac and the Chesapeake Bay and up the James River on the *River Queen*, a comfortable little side-wheel steam-boat, which was convoyed by the United States gun-boat *Bat*, acting as an escort. This vessel had been a blockade-runner and had been captured by the navy and fitted up as a gun-boat. It was commanded by Captain J. S. Barnes, U. S. N. Upon the arrival of the steam-boat at the wharf at City Point General Grant and several members of his staff went aboard to welcome the presidential party. The President gave each one a hearty greeting, and in his frank and cordial way said many complimentary things about the hard work that had been done during the long winter's siege, and how fully the country appreciated it. When asked how he was he said,

"I am not feeling very well. I got pretty badly shaken up on the bay coming down, and am not altogether over it yet."

"Let me send for a bottle of champagne for you, Mr. President," said a staff-officer; "that is the best remedy I know of for seasickness."

"No, no, my young friend," replied the President, "I've seen many a man in my time sea-sick ashore from drinking that very article."

That was the last time any one screwed up sufficient courage to offer him wine.

The party had gathered in the after-cabin of the steam-boat, and in the course of the conversation the President said: "This cabin is the one in which I met the peace commissioners from Richmond,—Stephens, Campbell, and Hunter,—when they came down to Hampton Roads." The meeting referred to had occurred the month before. Alexander H. Stephens was the Vice-President of the Southern Confederacy. He will be remembered as being a mite of a man in stature and having a complexion as yellow as an ear of ripe corn. Mr. Lincoln went on to say: "Stephens sat where I am sitting now, Hunter sat over there, and Campbell lolled on the sofa to the right. Stephens had on an overcoat about three sizes too big for him, with an old-fashioned high collar. The cabin soon began to get pretty warm and after a while he stood up and pulled off his big coat. He slipped it off just about as you would husk an ear of corn. I couldn't help thinking as I looked first at the overcoat and then at the man, 'Well, that's the biggest shuck and the smallest nubbin I ever laid eyes on.'"

During his stay the President spent much of his time riding about with Grant among the

troops during the day, and sitting around the camp-fire at headquarters in the evening. The fire always had a fresh pile of dry rails thrown upon it, in his honor, and as he sat in a camp-chair with his long legs doubled up in grotesque attitudes, and the smoke of the fire curling around him, he looked the picture of comfort and good-nature. He always seemed to feel how much happier were the men who had only to meet Lee's troops in Virginia, and were never compelled to encounter that more formidable army of office-seekers in Washington. The stories he told on these occasions will never be forgotten, and the kindly face of the Chief Magistrate, with its varying expressions of mirth and sadness, will never be effaced from the memory of the men who watched it in those trying times. In the way of story-telling, those City Point nights gave promise of becoming as famous as the Arabian Nights.

Lincoln's stories were not mere anecdotes, they were illustrations. No one ever heard him relate anything simply for the amusement afforded by the story; it was always to illustrate the subject under discussion, or to give point to his statement. Whether he had treasured up in his memory an inexhaustible supply of stories to draw from, or whether he invented them as he went along, to illustrate his views, no one could tell. Perhaps both methods were employed. However this may be, there was hardly a remark made or an object shown to him which did not call to mind some story so pertinent to the subject that the dullest never failed to see the point of it. Nothing appeared to escape his recollection. A soldier once struck the idea when he said of him: "He's got a mighty fine memory, but an awful poor forgetery."

One evening the writer showed him a specimen of the new powder made for the fifteen-inch gun. The piece was about the size of an English walnut.

"What is this?" he asked.

"A grain of mammoth powder, the kind they are using in the fifteen-inch gun at Fort Monroe," was the reply.

"Well," said he, turning it over in his hand, "it is rather larger than the powder we used to buy in my shooting days. This reminds me of what once occurred in a country meeting-house in Sangamon County. You see, there were very few newspapers then, and the country store-keepers had to resort to some other means of advertising their wares. If, for instance, the preacher happened to be late in coming to a prayer-meeting of an evening, the shop-keepers would often put in the time while the people were waiting by notifying

them of any new arrival of an attractive line of goods.

"One evening a man rose up in the meeting and said:

"Brethren, let me take occasion to say while we're a-waitin' that I have just received a new inv'ice of sportin' powder. The grains are so small you kin sca'cely see 'em with the nakid eye, and polished up so fine you kin stand up and comb yer ha'r in front of one o' them grains jes like it was a lookin'-glass. Hope you'll come down to my store at the cross-roads, and examine that powder for yourselves."

"When he had got about this far a rival powder merchant in the meeting, who had been boiling over with indignation at the amount of advertising the opposition powder was getting, rose up and said:

"Brethren, I hope you'll not believe a single word brother Jones has been sayin' about that powder. I've been down thar and seen it for myself, and I pledge you my word, brethren, that the grains is bigger than the lumps in a coal-pile, and any one of you, brethren, in your future state could put a bar'l o' that powder on your shoulder and march squar' through the sulphurious flames of the world below without the least danger of an explosion."

We thought that grain of powder had served a better purpose in drawing out this story than it could ever serve in being fired from a fifteen-inch gun.

On the 27th Sherman arrived at City Point, fresh from his triumphant march to the sea. Admiral Porter, who commanded the fleet, and had contributed so largely to the success of the operations by his brilliant services at Fort Fisher, was sent for, and he, with Grant and Sherman, went to pay their respects to the President on board his steamer. The meeting presented a historical scene which is one of the most memorable of the whole war. It was not a council of war, or even a formal military conference. It was an interchange of views between the four great representative men who at that moment seemed to hold the destinies of the republic in their hands. All were eager to hear more details of his march from the man who had cut so broad a swath through the heart of the Confederacy. Sherman's recital of the event was told with all his vividness of style and crispness of expression. The subject was a grand one and the narrative was a whole epic in itself. The President made no particular suggestions as to the campaign, but at the breaking up of the conference said good-bye to the distinguished company, with buoyant hopes of the future and renewed confidence in his commanders. He was always

willing that they should reap all the glory of the victories in the field. He was like the workmen employed upon the Gobelin tapestries who stand behind the cloth, and are content to work there, knowing they are contributing their full share to the beauties of the front.

General Grant now confided to the President his determination to move against Lee as soon as the roads were dry enough, and to make what he intended should be the final campaign. The President resolved to remain at headquarters until the army moved, and seemed glad of the opportunity of continuing some days longer the pleasant intercourse with the General-in-chief. Sitting by the campfire one evening he spoke very feelingly of the hopes and fears he had experienced at different times during the rebellion. The patriotism of the people, the devotion of the loyal North, the courage and superb fighting qualities of the troops on the one hand; on the other, the financial difficulties, the terrible losses in men, the disloyal element in the rear, and the threatening attitude of England and France. When asked if he ever doubted the final success of the cause, he said, "Never for a moment." Mr. Seward, he told us, had often said that there was always just enough virtue in this republic to save it; sometimes none to spare, but still enough to meet the emergency, and he agreed with Mr. Seward in this view. He said the capture of Mason and Slidell on board the English vessel, and the complications with Great Britain, which resulted at so critical a period of the war, had given him great uneasiness. When asked whether it was not a great trial to surrender them he said:

"Yes, that was a pretty bitter pill to swallow, but I contented myself with believing that England's triumph in the matter would be short-lived, and that after ending our war successfully we should be so powerful that we could call England to account for all the embarrassments she had inflicted upon us. I felt a good deal like the sick man in Illinois who was told he probably hadn't many days longer to live and he ought to make peace with any enemies he might have. He said the man he hated worst of all was a fellow named Brown, in the next village, and he guessed he had better commence on him first. So Brown was sent for, and when he came the sick man began to say, in a voice as meek as Moses', that he wanted to die at peace with all his fellow-creatures, and hoped he and Brown could now shake hands and bury all their enmity. The scene was becoming altogether too pathetic for Brown, who had to get out his handkerchief and wipe the gathering tears from his eyes. It wasn't long before he melted

and gave his hand to his neighbor, and they had a regular love-feast. After a parting that would have softened the heart of a grindstone, Brown had about reached the room door, when the sick man rose up on his elbow and said, 'But see here, Brown, if I *should* happen to get well, mind that old grudge stands!' So I thought that if this nation should happen to get well we might want that old grudge against England to stand."

As Mr. Lincoln abstained from interfering in purely military matters, so General Grant refrained from taking any action in political affairs. On the 2d of March, 1864, Lee wrote a very significant letter to Grant. From some remarks made in an interview which had occurred between General Longstreet and General Ord under a flag of truce, Lee conceived the idea that a military convention might be made the means of a satisfactory adjustment of the existing difficulties. He wrote General Grant a note in which the following language occurs:

"Sincerely desiring to leave nothing untried which may put an end to the calamities of war, I propose to meet you at such convenient time and place as you may designate, with the hope that upon an interchange of views it may be found practicable to submit the subjects of controversy between the belligerents to a convention of the kind mentioned."

General Grant looked upon this as referring to a subject entirely outside of his province, and forwarded it to the President. After some correspondence with him regarding it the General replied to Lee as follows:

"In regard to meeting you on the 6th inst. I would state that I have no authority to accede to your proposition for a conference on the subject proposed. Such authority is vested in the President of the United States alone. General Ord could only have meant that I would not refuse an interview on any subject on which I have a right to act, which, of course, would be such as is purely of a military character, and on the subject of exchanges, which has been intrusted to me."

So the interview never took place. General Grant's spirit of subordination was such that nothing ever led him into an act which might be construed as transcending his powers as a purely military officer. If the General had not had implicit confidence in the wisdom and patriotism of the President he might not have restrained himself so easily from endeavoring to impress his views upon the Government in questions of general policy, but he had an abiding faith in the prudence and sagacity of the executive.

General Grant used to say of Lincoln, "I regard him as one of the greatest of men. He is unquestionably the greatest man I have ever encountered. The more I see of him

and exchange views with him, the more he impresses me. I admire his courage, and respect the firmness he always displays. Many think from the gentleness of his character that he has a yielding nature; but while he has the courage to change his mind when convinced that he is wrong, he has all the tenacity of purpose which could be desired in a great statesman. His quickness of perception often astonishes me. Long before the statement of a complicated question is finished his mind will grasp the main points, and he will seem to comprehend the whole subject better than the person who is stating it. He will take rank in history alongside of Washington."

Lincoln made many visits with Grant to the lines around Richmond and Petersburg. On such occasions he usually rode one of the General's fine bay horses, called "Cincinnati." He was a good horseman, and made his way through swamps and over corduroy roads as well as the best trooper in the command. The soldiers invariably recognized him and greeted him, wherever he appeared amongst them, with cheers that were no lip service, but came from the depth of their hearts. He always had a pleasant salute or a friendly word for the men in the ranks. His son, Robert T. Lincoln, had joined the General's staff some time before, with the rank of captain and aide-de-camp, and was doing good service at headquarters, where he made an excellent record. The practical experience acquired at that time in the field was of important service to him in after years in administering the affairs of the War Department.

One evening, upon return to camp after a ride among the soldiers, Mr. Lincoln said:

"General, you don't seem to have your horse decked out in as gay trappings as some of our generals, or to give yourself any particular trouble about the elegance of your uniform."

"No," said the General; "I once learned a lesson on that subject when I was serving under General Taylor in Mexico. He used to wear about the same kind of clothes and shoes as those issued to the privates, and generally rode a horse that looked as if it had just come off a farm. On the march he often rested himself by sitting woman-fashion on his saddle with both feet on the same side, and no one in the army gave less thought to his style of dress. One day, while in camp near Corpus Christi, he received a very formal note from the commodore in command of the naval squadron in the Gulf, saying he would go ashore the next day for the purpose of paying his respects in person to the commander of the army. General Taylor had a conviction that naval officers were great sticklers for etiquette, and on occasions of ceremony always looked as fine

as if they had just come out of a band-box; and not willing to be outdone by his web-footed visitor, the general set his servant at work to overhaul his wardrobe and burnish up his full-dress uniform, which had probably not been out of his chest since the war began.

"The commodore, it appeared, was a man who had as great a contempt for fine dressing as Taylor, but he had an idea that the commanding general of the army would expect a commodore of the navy to display no end of style in paying a visit of ceremony, and he was determined to exhibit a proper degree of respect in this regard, no matter what it cost in the way of inconvenience; so he ransacked the bottom of his locker for his best toggery, and the next day appeared on shore resplendent in white gloves, blue cloth, and gold lace. There was a broiling Southern sun pouring down, and by the time the commodore had walked from the landing to the general's quarters he was reeking with perspiration and looking as red as a boiled lobster. He found the general sitting in his tent, buttoned up to the chin in a well-wrinkled uniform coat, mopping his head with a handkerchief and swinging a big palm-leaf fan to help catch a breath of air. After these distinguished representatives of the sister services had indulged in profound bows, shaken hands, and exchanged compliments in a very formal and dignified manner, they sat down on opposite sides of a table, looked at each other for some minutes, and then a smile began to steal over their faces, which soon widened into a broad grin, and showed that they were both beginning to take in the absurdity of the situation.

"'Oh! this is all nonsense!' said Taylor, pulling off his coat and throwing it to the other side of the tent.

"'Infernal nonsense!' cried the commodore, jerking off everything but his shirt and trousers. Then they lighted a couple of pipes and had a good sensible talk over the military situation."

Mr. Lincoln was as good at listening as he was at story-telling; and as he gradually took in the absurdity of the scene described he became so convulsed with laughter that his sides fairly shook.

The President remained at headquarters till the armies moved out on the Appomattox campaign. General Grant and staff started about nine o'clock on the morning of March 29, 1865. They went by the military railroad as far as its terminus south of Petersburg and there took their horses. As the party mounted the car the President went through a cordial hand-shaking with each one, speaking many words of cheer and good wishes. As the train was about to move the party collected on the rear platform of the car and respectfully raised

their hats. The President waved a farewell with his long right arm and said, in a voice broken with emotion, "Good-bye, gentlemen. God bless you all. Remember your success is my success."

A few days after, when the lines around Petersburg had been carried and we were closing in about the city, the General telegraphed to City Point:

"... The whole captures since the army started out gunning will not amount to less than twelve thousand men and probably fifty pieces of artillery. . . All seems well with us and everything quiet just now. I think the President might come out and pay us a visit to-morrow."

Mr. Lincoln sent the following reply:

"Allow me to tender to you and all with you the nation's grateful thanks for the additional and magnificent success. At your kind suggestion I think I will meet you to-morrow."

The next day Petersburg had fallen, and about noon the President, accompanied by his son "Tad," joined General Grant in the city. They sat together for nearly two hours upon the porch of a comfortable little house with a small yard in front, and crowds of citizens soon gathered at the fence to gaze upon these remarkable men of whom they had heard so much. The President's heart was filled with joy, for he felt that this was "the beginning of the end." He revealed to the General many of his plans for the rehabilitation of the South, and it could easily be seen that a spirit of magnanimity was uppermost in his heart. They were anxiously awaiting dispatches from General Weitzel, in the hopes that he had already captured Richmond, but General Grant had to take up his march with the columns that had started in pursuit of Lee, before getting the much-coveted news. He had ridden only a short distance when he received a dispatch from Weitzel saying that Richmond had been taken several hours before.

Immediately after the surrender at Appomattox Court House General Grant hurried to Washington, not even stopping to visit Richmond. His first thought was to take prompt measures for disbanding the armies and saving expenses. He arrived at the capital on the morning of the 13th of April. During that day he spent much of his time with the President, and took a drive through the city with Mrs. Lincoln. The people were wild with enthusiasm, and wherever the General appeared he was greeted with cheers, the clapping of hands, waving of handkerchiefs, and every possible demonstration of delight. The next day Lincoln invited the General to accompany him to Ford's Theater in the evening, and take a seat in his box to see the play of "Our American Cousin." The General

begged to be excused, saying Mrs. Grant was anxious to have him go to Burlington, New Jersey, where their children were at school, and he wanted to start as soon as possible. The President was somewhat urgent, and said the people would expect to see the General at the theater, and would be so much delighted to get a sight of him. While they were talking a note came from Mrs. Grant giving reasons for wanting to start that afternoon, and this afforded the General an excuse for declining the invitation to the play. When he bade the President good-bye, he little thought it would be the last time that he would ever see him alive. At lunch at Willard's Hotel, the General noticed a man who sat near him at table, and was apparently trying to overhear his conversation. As he drove to the railway station in the afternoon a man on horseback followed the carriage, and seemed to be the same person who had attracted his attention at lunch. This man was unquestionably John Wilkes Booth. Some time afterwards the General received an anonymous letter from a person who said he had been selected to kill him, and had boarded the train and ridden as far as the Delaware River with the intention of carrying out his purpose, but the car-door was locked, so he could not get in. He expressed himself as very thankful he had failed. The General had a special car, and it is a fact that the conductor locked it, so that there was this much to corroborate the man's story. Besides, it was shown upon the trial of the assassins that General Grant was one of the men marked for assassination. At the Walnut street wharf in Philadelphia, just as he was about to go on board the ferry-boat, he was handed a telegram conveying the appalling announcement that the chief he so much honored, the friend for whom he had conceived so warm an affection, had fallen, the victim of an assassin's bullet. The General returned at once to Washington. He often said that this was the saddest day of his whole life.

Twenty years later when he too had reached the full measure of his greatness his own death plunged the country again into a profound grief, the nation was called upon to put on the mourning it had worn for Lincoln, and the people suffered another loss which was felt by every one in the land with a sense of personal bereavement. The ashes of these two great central figures of the war now lie entombed in the soil their efforts saved; their names have passed into history.

Their devoted loyalty, steadfast courage, pure patriotism, and manly personal virtues will forever command the admiration of all who make a study of their lives. Between them the jealousy which springs from narrow minds

was absent; the rivalry which is born of selfishness had no place in their souls. They taught the world that it is time to abandon the path of ambition when it becomes so narrow that two cannot walk abreast. With them the safety of the nation was above all personal aims; and like the men in the Roman phalanx of old they stood shoulder to shoulder, and

linked their shields against a common foe. It was a priceless blessing to the Republic that the era of the Rebellion did not breed a Marius and a Sulla, a Cæsar and a Pompey, or a Charles the First and a Cromwell, but that the power to which its destinies were intrusted was wielded by a Lincoln and a Grant.

Horace Porter.

REMINISCENCES OF GENERAL GRANT.

I WAS with General Sherman the night before he began his march to the sea, in camp near Gaylesville, in the north-eastern corner of Alabama, to which point he had followed Hood from Atlanta in his counter movement towards Tennessee. I had recently arrived from the Valley of Virginia, whence I had been sent by General Grant to reorganize and command the Western cavalry. After disposing of the business of the day we spent the evening, indeed most of the night, in front of a comfortable camp-fire, chatting about the incidents of the recent campaigns and considering the details of those yet to come. One by one the staff-officers had withdrawn to their tents, for Sherman was "an owl" always ready to make a night of it, and they saw that he was well under way towards it upon that occasion. A dark and solemn forest surrounded us, and a dead silence had fallen upon the sleeping army; not a sound except that of the measured tread of the sentinel in front of the general's tent disturbed the quiet of the night. Twelve o'clock had come and gone, and one o'clock was at hand, when there came a pause in the conversation; then a moment of reflection on the part of Sherman, whose deeply lined face and brilliant, sleepless eyes I see now as plainly as I did then, turned towards and lighted up by the red glare of the blazing logs, and bright with intelligent and energetic life. Then came a quick, nervous upward glance at me, and then the following remark: "Wilson, I am a great deal smarter man than Grant; I see things more quickly than he does. I know more about law, and history, and war, and nearly everything else than he does; but I'll tell you where he beats me and where he beats the world. He don't care a d—— for what he can't see the enemy doing, and it scares me like h——!" And this vigorous and graphic speech is the best description of the fundamental characteristics and differences of the two men I have ever heard. It shows not only a profound self-knowledge on the part of Sherman, but a profound, comprehensive, and discriminating esti-

mate of the personal peculiarities of General Grant; for it is true that the latter was never scared by what the enemy might be doing beyond his sight. He gave his best attention to learning the position, strength, and probable plans of his adversary, and then made his own plans as best he might to foil or overthrow him, modifying or changing them only after it became clearly necessary to do so, but never lying awake of nights trying to make plans for the enemy as well as for himself; never countermanding his orders, never countermarching his troops, and never annoying or harassing his subordinate commanders by orders evolved from his imagination. He never worried over what he could not help, but was always cool, level-headed, and reasonable, never in the least excitable or imaginative. He always had the nerve to play his game through calmly and without any external exhibition of uneasiness or anxiety; and this was constitutional with him, not the result of training nor altogether of reflection. It was his nature, and he could not help it. The sanguine and nervous elements were so happily modified, blended, and held in check by the lymphatic element of his temperament that he could do nothing in a hurry or a heat, and, above all, it was impossible for him to borrow trouble from what he did not know to be certain, or could not change. While this equable temper guided him smoothly through many dangers, it also kept him out of many difficulties of a personal as well as of an official nature. It made it easy for him to command an army of discordant elements, filled with jealousies, and led by generals mostly from civil life, quite ready to quarrel with each other, or with any one else, for that matter, excepting himself, while another commander less happily organized would have been constantly in hot water. The value of such a temperament in war can scarcely be estimated by one not acquainted with the troubles which come from a vivid and excitable imagination. It was this temperament, together with a modest reasonableness and capability, an openness to

good counsels, and a freedom from offensive obstinacy of opinion, in reference to what should be done in a campaign, which caused so many experienced and judicious officers to say, as they frequently did, that they would rather take their chances in a great war or in a desperate campaign with Grant, even in his old age, than with any of his great subordinates.

But Grant had another noticeable characteristic, in a measure flowing from his temperament, which was of immense value, and ultimately gave the greatest confidence to the armies commanded by him. I refer, of course, to his constancy or steadfastness,—that quality which was blood of his blood and bone of his bone, which came to him perhaps from generations of wild and warlike ancestry, and which caused him to fight all his campaigns and battles through to the end, whether it took three days, three weeks, “all summer,” or a whole year. It was that quality which made it natural and easy for him to say at Belmont, when his little army was surrounded, “We must fight our way out as we fought our way in”; which made him exclaim, on seeing the well-filled haversack of a dead rebel at Donelson, “They are trying to escape; if we attack first and vigorously we shall win”; which made him try every possible way of reaching a solid footing for his army in the Vicksburg campaign, and finally run the batteries with his transports, ferry his army across the Mississippi at Bruinsburg, cut loose from his line of communications, swing out into the Confederacy, beat and disperse the army confronting him, break up the railroads and sit down calmly and resolutely behind the fortifications of Vicksburg, resolved to take it by siege or starvation if not by assault. It was that quality which carried him through the perils and difficulties of Chattanooga and Missionary Ridge, and which finally brought him the rank of lieutenant-general, and gave him command of all the loyal armies. And finally it was that quality which caused him to fight his way, inch by inch, through the Wilderness and to continue the fighting day after day, from the morning of May 5th till the evening of the 12th, holding on to all the ground he gained, never halting, never yielding, but inexorably pressing forward, no matter what the discouragements nor what the difficulties to be overcome. Such persistency was never before shown by an American general. The Army of the Potomac had never before been compelled to fight more than two days consecutively. Its commanders had always hesitated even in the full tide of victory, as at Antietam or Gettysburg, or had fallen back as at Fredericksburg or Chancellorsville, after the second day’s fighting, and before any de-

cisive advantage had been gained by either side. It had never been compelled to fight its battles through before, but now all this was changed. And there is no sort of doubt that this change marked the final epoch of the war, inasmuch as it convinced both the officers and men of the Army of the Potomac, and indeed of all the Union armies, that there would be no more yielding, no more retreating, no more rest from fighting and marching till the national cause had everywhere triumphed over its enemies! Neither is there any sort of doubt that Lee and his valiant army also recognized the advent of Grant as the beginning of the end. They were from the first amazed at the unshakable steadiness and persistency with which he held his army to its work, and they saw at once the doom of the Confederacy and the end of all their hopes. This is plainly shown by the defensive attitude which they maintained thenceforth to the end of the war. The only *riposte* Lee ever made against Grant was on the evening of the second day’s fighting in the Wilderness, when the rebels by a happy stroke turned the right flank of the Sixth Corps and threw it into great confusion. There is reason for supposing, notwithstanding statements to the contrary, that Grant’s nerves were severely shaken by this unexpected and untoward reverse. He was in a strange army, surrounded almost entirely by strangers, and naturally enough for a short time amidst the darkness and confusion felt uncertain as to the purposes of the enemy, the extent of the disaster, and the capacity of his own army to recover from it. In all that host there were only three general officers who had served with him in the West,—Rawlins, his able and courageous chief-of-staff, Sheridan, and myself. Meade, whose headquarters were near by, and all the infantry corps and division commanders, were comparatively unknown to him, and what is worse, precedent, so far as there was any precedent, in that army, seemed to require them under such circumstances to retire, and not advance. I was with Sheridan and Forsyth, his chief-of-staff, that night, near Old Chancellorsville. Forsyth and I lay till dawn listening to what seemed to us to be the roar of distant musketry; orders had been received during the night by the cavalry “to cover the trains,” and from our position, and what we knew of the precedents, as well as of the temper of the army, we feared that the next day would find us on the way to the north side of the Rappahannock, instead of on the road to Richmond. Sheridan shared this apprehension. Before dawn he gave me orders to move as soon as I could see with my division towards Germanna Ford, and ascertain if the enemy, after

turning the right flank of the Sixth Corps, had interposed between the army and the river or penetrated towards the rear. By sunrise I had covered the whole region in the direction indicated, and having ascertained that the noise of the night before was the rumbling of the trains on the Fredericksburg turnpike, and that the enemy had withdrawn without discovering the magnitude of his advantage, I rode rapidly to General Grant's headquarters, for the two-fold purpose of reporting the result of my reconnoissance and of ascertaining how the General had stood the alarm and trials of the night and day before. I felt that the Army of the Potomac had not been beaten and that it would be fatal for it to withdraw at that stage of the campaign, and yet I feared that the pressure upon General Grant might be so great as to induce him to yield to it. I found him at his camp on a knoll covered with scrub pine, where he had spent the day and night, just ready to mount and move out. I dismounted at the foot of the knoll, and throwing my bridle to my orderly, started rapidly towards the General, who not only saw me coming, but saw also the look of anxious inquiry in my face, and, without waiting to receive my report or to question or be questioned, called out in cheerful and reassuring tones: "It's all right, Wilson; the army is already on the move for Richmond! It is not going back, but forward, until we beat Lee or he beats us." I saw at a glance that, however severely tried, Grant had recovered his equilibrium, and that his courage was steadfast and unshaken. My anxieties were relieved, and after expressing my gratification at the orders he had given, and saying what I could in support of the policy announced, I remounted my horse and galloped back to my division. I imparted the result of my reconnoissance and of my interview with General Grant promptly to Forsyth and Sheridan, both of whom received it with unmistakable delight and satisfaction. It is not too much to say that a great load was lifted from our minds. We saw that the gravest crisis of Grant's life was safely past, and we felt that our success was now solely a question of pluck and persistency on the part of the army. We knew that the commanding general would do his duty to the bitter end, and we could not doubt what the end would be.

Grant has been severely criticised for the rude and disjointed battles fought by the Army of the Potomac during this memorable campaign, and much of this criticism is well founded, though not so well directed. If Grant had been a great tactician, which he was not, or had more closely supervised the car-

rying out of his own orders, instead of depending upon Meade and his corps and division commanders for all the details and their execution, it is probable that many valuable lives would have been spared; but it must not be forgotten, after all, that whenever everything else fails and the resources of strategy and tactics are exhausted, the fundamental fact remains that that army or that nation generally prevails, or has the greatest capacity for war, which stands killing best. In the words of the rebel General Forrest, "War means fight, and fight means kill." Lee and his army of veterans had to be taught that there was nothing left for them but to fight it out; that no matter how many Union soldiers they killed, their places would be promptly filled; that no matter how many assaults they might repulse, new assaults would follow, until finally there would be no safety left for their steadily decreasing numbers except in flight or surrender. And this was the result which followed! Even the unsuccessful and unnecessary assaults at Spottsylvania, Cold Harbor, and Petersburg contributed to this result, for they taught the rebels to beware of meeting in the open field soldiers who could make such assaults and withstand such bloody repulses without being disgraced or seriously discouraged thereby.

But General Grant's temperament gave him other good qualities besides the one so graphically described by Sherman. It made him modest, patient and slow to anger, and these virtues contributed to his earlier successes almost as much as the rapid and sturdy blows which he dealt the enemy confronting him. They kept him from putting on airs, assuming superiority, or otherwise offending the sensibilities and self-respect of either the officers or men who constituted the rank and file of the army, and while these were negative virtues, they were unfortunately not possessed by all the regular army officers who found themselves in command of volunteers at the outbreak of the rebellion. Notwithstanding Grant's extraordinary success at Donelson and his excellent behavior at Shiloh, there was a great outcry against him not only in the army, but throughout the North-west. He was charged with leaving his command without authority, neglect of duty, and incompetence, and there is no doubt that the Administration not only lent ear to these charges, but authorized Halleck to supersede Grant in the field, and assured General McClernand that he should have command of an expedition for the purpose of opening the Mississippi River.

I joined the staff of General Grant as an officer of engineers, in October, 1862, and found him just starting on the Tallahatchee or Gren-

ada (Mississippi) campaign. Before leaving Washington I became satisfied that the chief honors of his command would be given to McClernand, if the President and Secretary of War could manage it without a public scandal; and I lost no time, after returning from a short tour of duty with McPherson, then commanding the left wing of Grant's army, in making known to Major Rawlins the information upon which I had reached my conclusion. Grant had gone to Memphis, but Rawlins and I followed him shortly, and when fitting opportunity presented itself the former laid my information before the General, and considered it with him. At that time Vicksburg had come to be regarded as the great strategic point in the Western theater of war, and consequently its capture was looked upon as of the first importance to the Union cause. It also became abundantly evident that McClernand had not only been promised the command of the expedition for that purpose, but there was reason for believing that he and his friends were using all the means in their power to foster and spread the discontent with Grant, and if possible to relegate him to a subordinate position. Grant's conduct at this juncture was cautious and prudent. Rawlins and others urged him to make short work of it, and relieve McClernand, or at least to assert his own authority, and rebuke the pretensions of his lieutenant in a manner which could not be misunderstood, but he declined, contenting himself with modestly asking General Halleck if there was any reason why he should not himself go in chief command of that part of the army to be employed in the movement against Vicksburg. Later on, when McClernand showed his resentment and bad temper, and indirectly claimed independence of Grant's control, Rawlins again urged a decided rebuke of his insubordination, but Grant still declined, saying, quietly but firmly: "I can't afford to quarrel with a man whom I have to command." McClernand, it will be remembered, was a politician of influence and distinction, had been a leading and influential member of Congress, was a townsman of Mr. Lincoln, a war Democrat of pronounced and ardent loyalty to the Government, and above all he had shown himself to be a brave, energetic, and fairly skillful division commander, and, notwithstanding his extraordinary vanity and captiousness, was of entirely too much consideration to admit of being relieved for any light or trivial or uncertain cause; and so Grant bore with him modestly and patiently till, in his estimation, forbearance was no longer possible. In this I encouraged him whenever occasion offered, and appreciating my motives, it was his custom to intrust me

with nearly all of the orders and instructions for McClernand's corps. At the battle near Port Gibson, where the enemy was first met after our passage of the Mississippi, McClernand behaved with his accustomed gallantry and sound judgment, and as I had been near him throughout the action, I thought I saw an opportunity in it for bringing about a better understanding between him and General Grant. Accordingly, when the latter arrived upon the field I explained the situation to him, and suggested that he should congratulate and thank McClernand in person for his good management and success. But much to my surprise he declined to do this, merely remarking that McClernand had done no more than his duty, and that it would be time enough to thank and congratulate him when the action was over and good conduct and subordination had become habitual with him. From that day forward the breach between them widened, notwithstanding the bravery of McClernand's corps at the battle of Champion's Hill, and of Lawler's brigade of the same corps at Big Black. McClernand's temper seemed to grow worse and worse. He alienated the only friends he had at headquarters by violent language and threatened insubordination. Finally, "for falsely reporting the capture of the enemy's works in his front," for the publication of a bombastic order of congratulation to his corps, and for failing to send a copy of the same to army headquarters, Grant relieved him from command, while in the trenches before Vicksburg, and ordered him to proceed to such point in Illinois as he might select, reporting thence to the War Department for orders. I mention this circumstance with no intention of passing censure upon McClernand, nor even of judging between him and his commanding general, but merely for the purpose of illustrating Grant's patience and forbearance, and calling attention to the fact that when he was ready to act, his action was vigorous and effective; and that notwithstanding his patience he was inexorable and unrelenting towards one who he thought had intended to do him official and personal injury. In this he was not unlike the most of mankind so far as the feeling of resentment was concerned, but it will be observed that he acted even in this case with caution and prudence, inasmuch as he took no action and raised no questions to be settled by the President or Secretary of War till substantial success had so strengthened him in the popular mind that his position was unassailable. And so it was throughout his military career. He never quarreled with those he had to command, but bore with their shortcomings long and patiently. Such as

proved themselves incompetent or inefficient from any cause were quietly but surely eliminated, while those who were so imprudent as to criticise him or his generalship in such a way as to attract his notice were more summarily and promptly disposed of as his power increased and as his own supremacy became assured. In reference to all official matters he was a man of but few words, either in speech or writing, hence whatever he did in this direction was done decently and in order, and apparently upon the theory that "He who offends by silence offends wisely; by speech rashly." While it is certainly true, as a general rule, that Grant was impatient of even friendly criticism from subordinates, and did not like unfriendly criticism from any quarter, it would give an entirely erroneous impression of him and his peculiarities, if the foregoing statement were not qualified by a brief explanation of his relations with Rawlins, Sherman, and McPherson.

When I reported at his headquarters at Grand Junction, I found Major (afterwards Major-General) John A. Rawlins in charge as assistant adjutant-general. He received me warmly and cordially, explained frankly but impressively the character of General Grant, including its defects as well as its strong array of virtues, described the staff by whom he was surrounded, and gave me a brief account of the army and its subordinate commanders, concluding the conversation by proposing that we should form an "alliance offensive and defensive" in the performance of our duties towards General Grant and the cause in which we were all engaged. We soon became fast friends, with no reserve or concealments of any kind between us. Shortly afterwards the forces serving in that region were organized into "the Army of the Tennessee," and divided into corps; whereupon Rawlins was designated as adjutant-general and I as inspector-general of the army, each with the rank of lieutenant-colonel. The duties of these positions brought us still more closely together, and if possible established our relations on a still firmer footing with each other and with General Grant. I mention this fact merely to show that I was in a position to know all that took place at headquarters, and especially to learn the characteristics and influence of the men by whom Grant was surrounded and with whom I was thrown in daily contact.

Rawlins was a man of extraordinary ability and force of character, entirely self-made and self-educated. When he was twenty-three years of age he was burning charcoal for a living. By the meager gains from this humble calling he had paid his way through the Academy, where he had acquired most of his edu-

cation. He had studied and practiced law, rising rapidly in his profession and acquiring a solid reputation for ability as a pleader and as a public speaker. He had come to be a leader of the Douglas wing of the Democratic party, and was a candidate for the Electoral College on that ticket in 1860, before he had reached his thirtieth year. Immediately after the rebels fired upon Sumter, he made an impassioned and eloquent speech at Galena, in which he declared for the doctrine of coercion, and closed with the following stirring peroration: "I have been a Democrat all my life; but this is no longer a question of politics. It is simply union or disunion, country or no country. I have favored every honorable compromise, but the day for compromise is past. Only one course is left for us. We will stand by the flag of our country and appeal to the God of Battles!" Amongst the audience was Ulysses S. Grant, late captain Fourth United States Infantry, but then a clerk in his father's Galena leather store. He was not a politician, still less a partisan, but he had hitherto called himself a Democrat, and had cast his only presidential vote four years before for James Buchanan. He had listened attentively to Rawlins's speech, and had been deeply impressed by it and by the manly bearing of the orator, with whom he had already formed an acquaintance, and that night on his way home he declared himself in favor of the doctrine of coercion, telling a friend that he should at once offer his services to the Government through the adjutant-general of the army. The story of his fruitless efforts to secure recognition at first, and of his final success in getting into the volunteer army through Governor Yates, who appointed him colonel of the Twenty-first Illinois Infantry, and also of his appointment to the rank of brigadier-general of volunteers through the recommendation of the Hon. E. B. Washburne and his colleagues of the Illinois delegation in Congress, is well known, and needs no repetition here; but it is not so well known that the very first day after Grant's assignment by seniority to the command of a brigade, he wrote to Mr. Rawlins and offered him the place of aide-de-camp on his staff, or that with equal promptitude after receiving notice, only a few days later, of his appointment as brigadier-general, he wrote again to Rawlins, offering him the position of assistant adjutant-general, with the rank of captain. When it is remembered that Rawlins was at that time not only entirely ignorant of everything pertaining to military affairs, but had never even seen a company of artillery, cavalry, or infantry, it will be admitted at once that he must have had other very marked qualities to commend

him so strongly to a professional soldier, and this was indeed the case. Having been a politician himself, he knew many of the leading public men from Illinois and the northwest; being a lawyer, he had carefully studied the relations between the States and the General Government, and had arrived at clear and decided notions in reference to the duties of the citizen towards both. He was a man of the most ardent patriotism, with prodigious energy of both mind and body, of severe, upright conduct, rigid morals, and most correct principles. He was not long in learning either the duties of his own station or the general principles of army organizations; and what is still more important, he also learned, with the promptitude of one having a true genius for war, the essential rules of the military art, so that he became from the start an important factor in all matters concerning his chief, whether personal or official, and was recognized as such by Grant, as well as by all the leading officers in the army with which he was connected. He did not hesitate when occasion seemed to call for it to express his opinion upon all questions concerning Grant, the army he was commanding, or the public welfare; and this he did in language so forcible and with arguments so sound that he never failed to command attention and respect, and rarely ever failed in the end to see his views adopted. It cannot be said that Grant was accustomed to taking formal counsel with Rawlins, but owing to circumstances of a personal nature, and to the fearless and independent character of the latter, this made but little difference to him. Grant himself was a stickler neither for etiquette nor ceremony, while Rawlins never permitted either to stand between him and the performance of what he conceived to be a duty. Grant was always willing to listen, and even if he had not been he could not well have failed to hear the stentorian tones in which Rawlins occasionally thought it necessary to impart his views to a staff or general officer, so that all within ear-shot might profit thereby. I never knew Grant to resent the liberties taken by Rawlins, and they were many, but to the contrary their personal intimacy, although strained at times and perhaps finally in some degree irksome to Grant, remained unbroken to the end of the war, and indeed up to the date of Rawlins's death, in 1869. When the history of the Great Rebellion shall have been fully written, it will appear that this friendship was alike creditable to both and beneficial to the country, and that Rawlins was, as stated by Grant himself, "more nearly indispensable to him than any other man in the army." Indeed nothing is more

certain than that he was altogether indispensable; and that he was a constant and most important factor in all that concerned Grant, either personally or officially, and contributed more to his success at every stage of his military career than any or all other officers or influences combined.

Both Sherman and McPherson were very intimate with Grant, and were held in the highest estimation by him; both were fully trusted, and both acted towards him with the most perfect loyalty; and yet neither of them, although both were men of extraordinary brilliancy, ever exerted a tithe of the influence that was exerted by Rawlins. Sherman was especially open and outspoken in giving his views, whether asked for or not; but having once freed his mind, verbally, or by letter, as in the case of the Vicksburg campaign in opposition to the turning movement as it was finally made, he dropped his contention there, and loyally and cheerfully, without hesitation or delay, and equally without grumbling or criticism, set vigorously about performing the duty assigned to him. It is but fair to add that Sherman always had decided views. He was then, as now, a man of great abilities and great attainments, not only in the art of war, but in nearly everything else. In short, to use his own words, he was "a great deal smarter man than Grant," and knew it, and perhaps Grant knew it also, and yet there was never any rivalry or jealousy between them. In view of all this, and especially in view of the marked differences and idiosyncrasies of the two men, it must be admitted that there is nothing in the life of either which reflects more honor upon him than his friendship for and confidence in the other.

McPherson, who was also serving with Grant when I joined him, and enjoyed his confidence and affectionate regard, was also an officer of rare merit. Like Sherman, he was a graduate of the Military Academy, and was justly noted for the brilliancy of his intellect and his high standing and attainments in the military profession. He was much younger than Sherman, but, unlike him, had never been in civil life since his original entry into the service at West Point. He was cheerful, modest and unassuming, but vigorous and active in the performance of every duty, and while he was justly regarded by all as a general of excellent judgment and great promise, and while it is also certain that he enjoyed Grant's confidence and esteem to the highest degree, it is equally certain that Grant rarely if ever consulted him on questions of policy, or even as to the details of the movements or dispositions of the army. It is still more certain that McPherson

did not, during the Vicksburg campaign nor at any time subsequent, volunteer his opinions. He neither furnished brains nor plans, as was at one time so commonly supposed in army circles to be the case, but confined himself strictly to the duty of commanding his corps, and doing cheerfully and ably whatever he was ordered to do by those in authority over him. He made no protests, wrote no letters of advice, and indulged in no criticisms whatever. He was an ideal subordinate, with a commanding figure and a lofty and patriotic character, and endeared himself, by his frank and open nature and his chivalric bearing and behavior, to his superiors and equals as well as to his subordinates. Grant loved him as a brother, and lost no opportunity to secure his promotion or to advance his fortunes, but never leant upon him for either advice or plans. He sent orders as occasion required, never doubting that they would be understood, and loyally and intelligently carried out according to the requirements of the case and the best interests of the service.

As a rule these orders were general in their terms, and specially designed to leave McPherson free to regulate and arrange the details according to his own judgment. So perfectly in accord were Grant and McPherson, so well placed was Grant's confidence in his admirable lieutenant, that there was never a shade of disappointment or ill feeling on the part of either towards the other. It is almost needless to add that Grant and Rawlins were of one mind in reference to both Sherman and McPherson, and indeed in reference to nearly everybody else. They judged from the same standpoint and from the same facts, knowledge of which necessarily in many cases reached Rawlins first, producing a profound impression on his vigorous and alert mind, and with gathered force upon that of his chief. It is proper to add that I never knew an army which was so little affected by jealousies, ill feeling, and heart-burnings as was the Army of the Tennessee under Grant; and I cannot imagine an army headquarters or administration where prejudice had so little influence or where the public business was conducted on higher principles than at those of General Grant. Merit and success were the sole tests by which subordinate commanders were judged. I say merit and success, but I wish to emphasize the statement that merit even without success was sure to receive the recognition it deserved. In this respect Grant's conduct was a model which cannot be too highly commended. His patience and deliberation caused him to judge fairly of every action before meting out praise or blame. With the former he was lavish and generous; with the latter no one could be more

sparing. If the circumstances did not justify success, or if the orders given were misunderstood, or if contingencies were not properly provided for, he would always say: "It was my fault, not his; I ought to have known better," or "I should have foreseen the difficulty," or "I should have sent so and so," or "I should have given him a larger force." It is not to be wondered at that, with such consideration for his subordinate commanders, Grant should have become exceedingly popular with them, from the highest to the lowest. And yet it should not be forgotten that he was free from and above all clap-trap, and utterly despised the cheap arts of advertisement and popularity so easily mastered by the military charlatan. He was at that period of his life the embodiment of modesty and simplicity, and showed it not only in his relations with those above and below him, but in his retinue and equipage, whether in camp or on the march. This is well illustrated by the fact that he crossed the Mississippi at Bruinsburg, without a horse, and with no baggage whatever except a toothbrush and a paper collar. He rode forward to the battle near Port Gibson on an orderly's horse, and knocked about the field and country like any private soldier till his own horse and camp equipage, which did not cross till after the main body of the army, had rejoined him. Throughout this wonderful campaign he shared every hardship and every peril, and what is more, never for a moment forgot the comfort or hardships of those about him.

Having been engaged the second night in rebuilding the bridges over the north fork of the Bayou Pierre, in order that the army might not be delayed in following up its advantages, after completing my task, and seeing the advanced division well started on the march, I went to the little log-cabin by the roadside where the General and staff had bivouacked. It was between two and three o'clock in the morning, and after reporting to the General, as he always desired should be done under such circumstances, that the bridge was completed and the column moving, I turned in for sleep and rest, and was soon unconscious of everything around me. Breakfast was ready and eaten before daylight, and Grant and the rest of the staff moved out as soon as they could see the road and the marching soldiers; but as it was my second night without sleep he would not permit me to be disturbed, but directed the cook to put up my breakfast, and left an orderly to keep it for me, and to show me the road he and the staff had taken. I rejoined him, after a rapid ride of fifteen miles, about noon that day, shortly after which, hearing that Grand Gulf had been abandoned and

was in Admiral Porter's possession, he started with Rawlins, myself, Mr. Dana, Assistant Secretary of War, and a few orderlies, to that place. Arriving after dark he went at once on board the admiral's flag-ship, where he kept us all busily engaged writing dispatches and orders till eleven o'clock. We then went ashore, remounted our horses, and rode rapidly through the dark by a strange and circuitous road to Hankinson's ferry, to which point the army had been directed. The distance covered that night was between twenty and twenty-five miles, and for the day between forty-five and fifty. We rejoined the army at a double log plantation house about a mile from the ferry, just as dawn began to appear. Hastily unsaddling our horses, we threw ourselves flat upon the porch, using our saddles for pillows and our horse-blankets for covering. General Grant did not even take time to select a soft plank, but lay down at the end of the porch so as to leave room for the rest of us as we came up. In an incredibly short space of time we were all asleep, and yet he and the rest were up and about their respective duties shortly after sunrise. The army was rapidly concentrated, provisions were brought forward, and in a few days operations were again renewed and the country was electrified by the series of brilliant victories which followed. Grant's conduct throughout the campaign was characterized by the same vigor, activity, and untiring and unsleeping energy that he displayed during the two days which I have just described. It is difficult, I should say impossible, to imagine wherein his personal or official conduct from the beginning of the turning movement by Bruinsburg, till the army had sat down behind Vicksburg, could have been more admirable or more worthy of praise. His combinations, movements, and battles were models which may well challenge comparison with those of Napoleon during his best days. Withal he was still modest, considerate, and approachable. Victory brought with it neither pride nor presumption. Fame, so dear to every honorable and patriotic soldier, had now come to him, and his praise resounded throughout the North. Cavil and complaint were silenced. His shortcomings ceased to be matters for public condemnation; and when Vicksburg and the army defending it also fell before his well-directed blows, no name in all the land brought so much pleasure to the minds of the loyal and patriotic people as did that of Ulysses S. Grant. President Lincoln hastened to write him a cordial and magnanimous letter, saying in regard to the forecast of the campaign, "I now wish to

make a personal acknowledgment that you were right and I wrong." It is worthy of remark that whatever were Lincoln's opinions during the campaign he kept them to himself, and, so far as General Grant then knew, did not in any way try to influence him or his movements. It is also worthy of remark that notwithstanding the heartiness and magnanimity of the letter just referred to, a new source of anxiety had arisen in Lincoln's mind in regard to General Grant, and the nature and extent of this anxiety will best appear from the following anecdote.

Amongst the most sagacious and prudent of General Grant's friends was J. Russel Jones, Esq., formerly of Galena, at that time United States Marshal for the northern district of Illinois, and also a warm and trusted friend of the President. Mr. Jones, feeling a deep interest in General Grant, and having many friends and neighbors under his command, had joined the army at Vicksburg and was there on the day of its final triumph. Lincoln, hearing this, and knowing his intimacy with Grant, sent for him, shortly after his return to Chicago, to come to Washington. Mr. Jones started immediately and traveled night and day. On his arrival at the railway station at Washington he was met by the President's servants and carriage, taken directly to the White House, and at once shown into the President's room. After a hurried but cordial greeting the President led the way to the library, closed the doors, and when he was sure that they were entirely alone addressed him as follows:

"I have sent for you, Mr. Jones, to know if that man Grant wants to be President."

Mr. Jones, although somewhat astonished at the question and the circumstances under which it was asked, replied at once:

"No, Mr. President."

"Are you sure?" queried the latter.

"Yes," said Mr. Jones, "perfectly sure; I have just come from Vicksburg; I have seen General Grant frequently and talked fully and freely with him, about that and every other question, and I know he has no political aspirations whatever, and certainly none for the Presidency. His only desire is to see you reëlected, and to do what he can under your orders to put down the rebellion and restore peace to the country."

"Ah, Mr. Jones," said Lincoln, "you have lifted a great weight off my mind, and done me an immense amount of good, for I tell you, my friend, no man knows how deeply that presidential grub gnaws till he has had it himself."

James Harrison Wilson.

“TAPS.”*

August 8, 1885.

BRAVE heart, good-night! the evening shadows fall;
Silenced the tramping feet, the wailing dirge,
The cannons' roar; faint dies the bugle call,
“Lights out!”—the sentry's tread scarce wakes the hush,
Good-night.

Swift flows the river, murmuring as it flows,—
Soft slumber-giving airs invite to rest;
Pain's hours of anguish fled—tired eyelids close—
Love wishes thee, as oft and oft before,
Good-night.

The stars look down upon thy calm repose
As once on tented field, on battle eve;
No clash of arms, sad herald of woes,
Now rudely breaks the sleep God's peace enfolds,—
Good-night.

Thy silence speaks, and tells of honor, truth,
Of faithful service,—generous victory,—
A nation saved. For thee a nation weeps,—
Clasps hands again, through tears! Our Leader sleeps!
Good-night.

F. M. Newton.

THE DEAD COMRADE.*

| | |
|---|--|
| C OME, soldiers, arouse ye! Another has gone; Let us bury our comrade, His battles are done. His sun it is set; He was true, he was brave, He feared not the grave,— There is nought to regret. | Bring music and banners And wreaths for his bier;— No fault of the fighter That Death conquered here. Bring him home ne'er to rove, Bear him home to his rest, And over his breast Fold the flag of his love. |
|---|--|

Great Captain of battles,
We leave him with Thee.
What was wrong, O forgive it;
His spirit make free.
Sound taps, and away!
Out lights, and to bed,—
Farewell, soldier dead!
Farewell—for a day!

R. W. G.

* The burial service at the funeral of General Grant closed impressively with the sound of “Taps”
(Lights out).

MEMORANDA ON THE CIVIL WAR.

A Contradicted "Famous Saying."

EDITOR OF THE CENTURY MAGAZINE.

Sir: About two weeks after the battle of Shiloh there appeared in some newspaper that was shown to me a report of a conversation assumed to have taken place between General Grant and myself soon after the battle, in which I was represented as rallying him upon the narrowness of his escape, and saying that he had not transports enough to carry off ten thousand men; to which he was reported as replying, in substance, that when it came to retreating transportation would not have been required for more than ten thousand.

The story had been colored for popular effect, but was traceable to a conversation in a vein of pleasantry that occurred at my camp among a party of officers, in which I had taken but little part.

Some time afterward it took on a modification which suited the alleged conversation to my meeting with General Grant on my arrival at Pittsburg Landing during the battle. This changed materially the character of the report, but I continued to treat it with the indifference which I thought it deserved, though the story has been freely circulated. I never knew until within a few months past, through the publication of the "War Records," that in its modified form it had the indorsement of an official authorship.

From that publication it appears that a year after the battle General Grant called upon three of his staff-officers to make reports concerning the movements of General Lew Wallace's division on the day of the battle, in answer to a complaint of the latter officer that injustice had been done him in General Grant's reports. Two of the officers, namely, General McPherson and Captain Rowley, in their replies confined themselves to that subject. The third, Colonel Rawlins, on the other hand, made it the occasion of a specific defense, or explanation, or commendation, or whatever it may be called, of General Grant's relation to the battle. Among other things that have since been more or less disputed, he said:

"General Nelson's division of the Army of the Ohio reached Savannah on the afternoon of the 5th of April, but General Buell himself did not arrive. . . . You [General Grant] then rode back to the house near the river that had been designated for headquarters, to learn what word if any had been received from General Nelson, whose division you expected soon to arrive at the landing on the opposite side of the river; and you there met Maj.-Gen. D. C. Buell, who had arrived at Savannah and taken a steamer and come up to see you, and learn how the battle was progressing in advance of his force. Among his first inquiries was: 'What preparations have you made for retreating?' To which you replied, 'I have not yet despaired of whipping them, general'; and went on to state to him your momentary expectation of the arrival of General Wallace, to whom orders had been timely and repeatedly sent, and that General Nelson's division might soon be expected by the wagon-road from Savannah," etc.

This statement, ridiculous and absurd in its principal feature, is incorrect in every particular.

It is well known that I arrived at Savannah on the 5th of April; General Grant did not, as might be inferred, find me at the landing at Pittsburg—I found

him there; we did not meet at "the house near the river," but on his headquarters steamer.

I mention these points only to show the tendency of the statement to error, and I aver that no such conversation as is described ever occurred, and that the contingency of a retreat was not brought forward by General Grant or by me.

My attention has within a few days been called to the fact that an article, in a recent number of THE CENTURY, has given fresh circulation to the story, and has combined the official and the original phraseology of it. I have regarded it as a trivial question, of little moment to either General Grant or myself; but perhaps the value attached to it by others makes it proper for me to give it an attention which I have not heretofore chosen to bestow upon it.

AIRDRIE, July 10, 1885.

D. C. Buell.

General Heintzelman in the Peninsula Campaign.

IN THE CENTURY for May General McClellan has an article, "The Peninsular Campaign," in which there are one or two misstatements in regard to the Third Corps, commanded by General Heintzelman. Fortunately my father's papers, which are in my possession, contain replies to both allegations,—one in the handwriting of General Heintzelman's adjutant-general, and the other the rough draft of a letter addressed to General L. Thomas, then Adjutant-General of the Army.

On page 147 General McClellan states:

"All the corps commanders on the south side were on the 26th directed to be prepared to send as many troops as they could spare in support of Porter on the next day. All of them thought the enemy so strong in their respective fronts as to require all their force to hold their positions."

Upon the demand for troops General Heintzelman replied as follows:

HEADQUARTERS 3D CORPS, 4 P. M., June 26, 1862.

GENERAL MARCY, Chief of Staff: I think I can hold the intrenchments with four brigades for twenty-four hours; that would leave two (2) brigades available for service on the other side of the river, but the men are so tired and worn out that I fear they would not be in a condition to fight after making a march of any distance. . . .

S. P. HEINTZELMAN, Brigadier-General.

This is far from being a statement that all his forces were required to hold his own lines.

Then, on page 148, General McClellan says:

"Meanwhile, through a misunderstanding of his orders and being convinced that the troops of Sumner and Franklin at Savage's Station were ample for the purpose in view, Heintzelman withdrew his troops during the afternoon, crossed the swamp at Brackett's Ford, and reached the Charles City road with the rear of his column at 10 P. M."

When the same statement was first made in 1863 General Heintzelman wrote the following letter:

HEADQUARTERS DEFENCES OF WASHINGTON,
April 11, 1863.

GENERAL L. THOMAS, ADJUTANT-GENERAL, U. S. A., WASHINGTON.

GENERAL: I find in the "New York Tribune" of the 8th of April a "Preliminary Report of the Operations

of the Army of the Potomac, since June 25, 1862," made by General G. B. McClellan. . . .

In a paragraph commencing "On the 28th Porter's corps was also moved across the White Oak Swamp," etc., is the following:

"They were ordered to hold this position until dark, then to fall back across the swamp and rejoin the rest of the army. This order was not fully carried out, nor was the exact position I designated occupied by the different divisions concerned."

I was furnished with a map marked in red with the positions we should occupy.

As I had the fortified lines thrown up some time before by the troops in my command I had no difficulty in knowing where to go, and I did occupy these lines. General Sumner's were more indefinite and he occupied a position in advance of the one designated. This left a space of half a mile unoccupied, between his right and Franklin's left. In the morning I was informed that some rebels were already at or near Dr. Trent's house, where General McClellan's headquarters had been; I sent and found this to be the case. General Franklin had also called at my headquarters and told me that the enemy were repairing the bridges of the Chickahominy and would soon cross in force. About 1 P. M. I saw some of our troops filing into the fields between Dr. Trent's house and Savage's Station, and a few moments later Generals Franklin and W. F. Smith came to me and reported the enemy approaching and urged me to ride to General Sumner and get him to fall back and close this gap. I rode briskly to the front, and on the Williamsburg road, where it passed between my two divisions, met General Sumner's troops falling back. He wished me to turn back with him to arrange for ulterior operations, but as my right flank was entirely uncovered by these movements, I declined until after I had seen my division commanders and given them orders how to fall back. On my return there was some difficulty in finding General Sumner, and when found he informed me he had made his arrangements. I returned to my command, and on the way found the ground filled with troops, more than could be used to any advantage, and if the enemy planted a few batteries of artillery on the opposite side of the railroad, they would have been cut in pieces.

An aide to General McClellan having reported to me the day before to point out to me a road across the White Oak Swamp, opening from the left flank of my position of the fortified lines, I did not hesitate to retreat by that road, and left at 3 P. M. General Smith, of Franklin's corps, having sent to the rear all his batteries earlier in the day, I, at his request, let him have two of mine (Osborn's and Bramhall's), and they did good service that afternoon in checking and defeating the rebel attack.

My remaining would have been no aid to General Sumner, as he already had more troops than he could defile through the narrow road in his rear, and the road I took covered his left flank.

Before dark the advance of my corps was across the swamp, and by 10 P. M. the rear was over, with but little molestation from the enemy. I immediately sought General McClellan, and reported to him what I had done, and this is the first intimation I have had that my conduct was not entirely satisfactory.

To hold my position till dark, by which time I was to receive orders, would have been impossible. After Generals Franklin and Sumner had fallen back, my right flank and rear were uncovered, and by a road which passed entirely in my rear; and beyond my right flank my only line of retreat would have been cut off, and I would have lost my entire corps. I did not know where General McClellan was, and it was therefore impossible to report to him for orders.

When General Birney reached Fisher's Ford, the enemy were there, but not in force; they soon arrived in force, and he had to take another road more to our left. Had we been a little later they would have been in possession, and our retreat by this road cut off.

S. P. HEINTZELMAN.

I trust that you will be able to find space for these letters.

WASHINGTON, D. C.

National Memorials of the Civil War.

VIEWS OF GENERAL GRANT AND SENATOR SUMNER.

TO THE EDITOR OF THE CENTURY MAGAZINE.

SIR: In General Badeau's article on General Grant, published in your current (May, 1885) number, page 160, occurs the following passage:

"Soon after the close of the war I was present when a Committee of Congress, headed by Charles Sumner, waited on him [General Grant] to propose that a picture should be painted of the surrender of Lee, to be placed in the rotunda of the Capitol. But he told them he should never consent, so far as he was concerned, to any picture being placed in the Capitol to commemorate a victory in which our own countrymen were the losers."

Will you allow me to submit the reasons why I think General Badeau is mistaken in affirming that Charles Sumner headed the committee which called on General Grant for the purpose specified? I thought it was generally known that Mr. Sumner stood almost alone in our Congressional annals, among statesmen identified with the Union side in the Civil War, as advocating the policy of not allowing victories of fellow-citizens over each other to be perpetuated by national memorials, but as the statement referred to seems to have passed unchallenged by the press, I think it now incumbent on me to give the evidence as to Mr. Sumner's position on this question, drawn entirely from the proceedings of the United States Senate.

As early as May, 1862, the question arose upon a dispatch of General McClellan, where, after announcing the capture of Williamsburg, he inquired whether he was authorized to follow the example of other generals and direct the names of battles to be placed on the colors of regiments. This being communicated to the Senate, Mr. Sumner, May 8, 1862, moved the following resolution: *Resolved*, That in the efforts now making for the restoration of the Union and the establishment of peace throughout the country, *it is inexpedient that the names of victories obtained over our fellow-citizens should be placed on the regimental colors of the United States.*

February 27, 1865, more than a month before the surrender of Lee, the Senate having under consideration an appropriation for a picture in the National Capitol, Mr. Sumner moved as an amendment, "That in the National Capitol, dedicated to the National Union, *there shall be no picture of a victory in battle with our fellow-citizens.*"

On December 2, 1872, Mr. Sumner introduced in the Senate the following bill: *A Bill to regulate the Army Register and the Regimental Colors of the United States.*

WHEREAS, The National Unity and good-will among fellow-citizens can be assured only through oblivion of past differences, and it is contrary to the usage of civilized nations to perpetuate the memory of civil war. Therefore,

Be it enacted by the Senate, etc.; that the names of battles with fellow-citizens shall not be continued in the Army Register or placed on the regimental colors of the United States.

This bill was the cause of a hasty and ill-considered resolution of censure passed by the Massachusetts Legislature, which did much to embitter the last years of Mr. Sumner's life. Happily the resolution was rescinded the winter before his death. But it was neverthe-

less true that he *suffered* for this, as he had suffered for his advocacy of the cause of the slave.

I know that it is exceedingly difficult to prove a negative, but if the recorded acts and opinions of a man exceedingly tenacious of his views when once adopted *can* prove anything, it seems to me that I have shown that Charles Sumner could not have proposed to General Grant to have a picture of the Surrender of Lee placed in the Rotunda of the Capitol. I am inclined to think that General Badeau may, in this instance, have confounded the action of Senator Wilson with that of Senator Sumner. Senator Wilson was at that time Chairman of the Senate Committee on Military Affairs and, as the Senate proceedings show, held opposite opinions from his colleague in regard to the policy of perpetuating the memorials of civil war. To find Mr. Sumner represented as acting in behalf of such a policy is as surprising to one familiar with his record as it would be to encounter a statement that Cobden had advocated the Corn Laws or Garrison the Slave Trade.

I will only add that on careful investigation it appears that neither Mr. Sumner's motions nor his bill was ever enacted into written law. The idea contained in them, however, has become part of the *unwritten law* of the Republic. No picture or other representation of a victory in battle with fellow-citizens has ever been placed in the National Capitol, and it is safe to say that none will be. The names of the battles of the Civil War were placed on the regimental colors, and in the Army Register, by an order of General McClellan in 1862. In 1878 the names of the battles were stricken from the Army Register by order of the Secretary of War, and when new sets of colors are furnished to the regiments of the regular army the names of the battles are no longer inscribed thereon.

Charles W. Eldridge.

General Grant's Premonition.

GENERAL GRANT'S reticence in talking about himself has always been one of his marked characteristics. The only occasion known to many well-informed persons when General Grant was ever heard to express an opinion of his own qualifications was at a dinner he gave at the White House in March, 1874. There were but few guests, among them Roscoe Conkling, Simon Cameron, and Senator J. M. Johnston of Virginia. The last-named gentleman sat next to General Grant at the table. The talk turned on the war, and

while the others were discussing it Senator Johnston turned to General Grant and said to him:

"Mr. President, will you permit me to ask you a question which has always been of great interest to me? Did you, at the beginning of the war, have any premonition that you were to be the man of the struggle?"

"I had not the least idea of it," replied General Grant. "I saw a lot of very ordinary fellows pitching in and getting commissions. I knew I could do as well and better than they could, so I applied for a commission and got it."

"Then," asked Senator Johnston, "when did you know that you were the man of destiny?"

General Grant looked straight ahead of him, with an expression on his inscrutable face that Senator Johnston had never seen there before.

"After the fall of Vicksburg," he said, after a pause. "When Vicksburg capitulated, I knew then that I was to be the man of the war; that I should command the armies of the United States and bring the war to a close."

"But," said Senator Johnston, "you had had great and notable successes before the days of Vicksburg. You had fought Shiloh and captured Fort Donelson."

"That is true," responded General Grant; "but while they gave me confidence in myself, I could not see what was before me until Vicksburg fell. Then I saw it as plainly as I now do. I knew I should be commander in chief and end the war."

At the same White House dinner Simon Cameron described the scene when General Joseph E. Johnston resigned his commission in the United States army. Mr. Cameron said he was sitting one morning in his room at the War Department, he being Secretary of War, when General Johnston entered, deeply agitated, and carrying in his hand a paper, which Secretary Cameron suspected was General Johnston's resignation. He handed it to the secretary without saying a word. The secretary glanced at it, saw what it was, and said:

"I regret to see this, General; I understand what it means. You are going South. This is not what you should do."

General Johnston replied under great emotion:

"I feel it my duty to resign, and I ask that my resignation be accepted at once."

"It shall be," said the secretary; "but you are mistaken as to your duty."

General Johnston bowed and said:

"I think it my duty," and, without another word, the two men bowed low to each other and General Johnston hurried from the room.

M. E. Seawell.

BIGOTRY.

EACH morn the tire-maids come to robe their queen,
Who rises feeble, tottering, faded, gray.
Her dress must be of silver blent with green;
At the least change her court would shriek dismay.

Each noon the wrinkled nobles, one by one,
Group round her throne and low obeisance give.
Then all, in melancholy unison,
Advise her by antique prerogative.

Reading the realm's laws, while they so advise,
 From scripts whose yellowed parchments crack with age,
 They bend the misty glimmer of bleared eyes
 To trace the text of many a crumbling page.

The poor tired queen, in token of assent,
 At solemn intervals will smile or bow ;
 She learned how vain was royal argument,
 Back in her maidenhood, long years from now.

Each evening, clad in samite faced with gold,
 The queen upon her tarnished throne must wait,
 While through her moldering doorways, gaunt and old,
 Troop haggard-visaged crones, her dames of state.

She hears them while they mumble that or this,
 In courtly compliment, exact and prim ;
 With shriveled lips her shriveled hand they kiss ;
 They peer in her dim eyes with eyes more dim.

Each night the tire-maids lull her to repose
 With warped and rusty lutes whose charms are fled,
 Till softly round her withered shape they close
 The dingy draperies of her spectral bed.

And so she wears the mockery of her crown
 With sad compliance, futile discontent,
 And knows her people like herself crushed down
 By dreary tyrannies of precedent.

But sometimes, wakening out of nightmare's thrall,
 With clammy brow and limbs from terror weak,
 Through the dense dark her voice will faintly call
 A name the laws have made it death to speak.

The name of one her girlish heart loved well,
 A strong, grand youth who felt her soul's deep needs,
 Who strove to snap her fetters and dispel
 The stagnant apathy of senseless creeds. . . .

Again from her steep towers, on that far morn,
 She marks him urge his followers to the fight ;
 She notes with silent pride what fiery scorn
 Leaps from his good blade, battling for the right.

She sees him dare his foes that swarm like bees,
 Brave, beautiful, a rebel, girt with hates. . . .
 And now, in lurid memory, last she sees
 His bare skull whitening at her city gates !

Edgar Fawcett.

ZWEIBAK: BEING NOTES OF A PROFESSIONAL EXILE.

I HAVE come on here from Switzerland, where it has been hot. I stayed with H—— at his villa on the lake of Geneva. H——'s house is suited to hot weather. The lawn comes down to the edge of the lake, with the colors of which the large basins of carnations make a pleasant contrast. The dining-room is upon a level with the lawn and opens directly on it. Its floor is an inlaid one and the porphyry pillars match well with the blue water. It is the kind of house a Roman gentleman should have had on the banks of Como. H—— let me breakfast in a small room on the upper floor, which has no porphyry pillars, it is true, but which had some books, and which looked out on the lake, with whose pervading azure the room seemed to be filled. I sat in the midst of this azure and read and had an unusually good breakfast of cutlets and red wine. There were no women about, nothing to affect the shade, the silence, and the liberty of the house, except the voice of Gustave when he said: "Monsieur est servi."

On the day I left I said to H——, "My dear fellow, I have been very well treated here. You have given me a horse to ride over these hills in the morning, and a boat to sail on the lake in the afternoon. How I have enjoyed this breakfast-room! This permeating azure has taken possession of my being. I have been allowed as much of my own society as I liked. With the exception of giving me your soothing company at dinner, you have kept yourself out of the way. And all this for the twenty francs which I shall give to Gustave. It is the cheapest and best thing I have seen in Europe."

H——'s dinners were excellent. There were two or three snow-peaks in sight. I don't admire Swiss scenery profoundly, but I agree that these peaks are good things to have over your shoulder if you are dining rather well. They have the effect of a pretty label on a bottle of German wine. But I have no respect for them,—not the slightest.

The fact that Switzerland is such a place for holiday-makers has given its scenery a kind of frivolity. It was a lovely day when I came in the steamer through the lake of Thun. The boat was crowded with sight-seers, and Switzerland was determined they should not be disappointed, for there on our right were the white peaks decorating the blue heavens and glistening for the entertainment of the lakes.

I often come to Zweibak, and I have always

liked it. I have a feeling of hope and exhilaration as the train moves into the little station. At the same time I am always on each successive visit afraid I shall not enjoy it as I have done before. But it has never failed to amuse me, and I have always left it with regret.

Of course I don't know how it will be this time, but it promises well. The tradespeople on the main street recognize me. That is one of the good points of the place. I find myself among old friends. I like knowing the people who give me my letters at the post-office and the young woman at the barber's shop. When I alighted at the station the porter of my hotel recognized me with a shout of welcome which seemed to be sincere, and actually shook me by the hand. The hotel to which I go is not one of those with English names, but an honest German place, which is cheaper and better than the smart ones. At the door I received from the landlady that welcome which is proverbially warm. I don't at all think less of kindness from landlords and landladies because I know I am to pay for my entertainment.

The town is full of English and Americans, although there are of course a great many Germans. I am here to see the Americans. Being an exile by profession, a few weeks with my compatriots who are here is almost like a visit home. Some of them are old friends whom I meet after a separation of years; others, again, I shall meet for the first time; and there are still others whom I may not have a chance of meeting at all, but whom I may at any rate look at from a distance. There are but few men among them. They are almost all of the other sex, and I am delighted to see how much they look like women.

... There are two faults I have to find with American women. One is this, that they are apt to be deficient in a positive female character. This is certainly true of many New England women. I do not mean that they are in the least masculine. On the contrary they are often people of a delicate and refined sort; but they appear to be neuters. Their womanly character is rather negative than positive. Now I think that the feminine nature should be as distinct and positive as the male. The female mind should be as strong after its kind as the male should be after its kind. The fault I refer to appears, by the way, to be a quality of well-born and well-educated women. Another fault I have to find with our women is

perhaps the quality of women of inferior education. Many of our women, and particularly our young girls, seem to be wanting in courtesy. Our girls are often rude. A crabbed bachelor of my acquaintance who lives in Paris ascribes this rudeness to the fact that American women find it easier to get husbands than the women of other countries, and therefore do not think it worth their while to be civil to men. Whatever the cause may be, there can be no doubt of the fact. I say that these girls are of inferior education in whom this rudeness appears. Well-bred women are often rude, but their rudeness is of the thought rather than of the speech or behavior. It is perhaps nearly as unpleasant to the recipient as the more outspoken sort, but of course it is more consistent with ladylike pretensions. The rudeness of some girls that one sees seems almost to be an expression of a consciousness of vulgarity.

But it is not enough that women should be civil in speech and bearing while their minds are proud and contemptuous. There is an ideal courtesy in women which is a quality of the soul; it is one of the most beautiful of female attributes. It was this quality in his Beatrice which first struck the delicate and reverential mind of the youthful Dante. I have myself so high an estimate of this quality that I hesitate to say that our girls are wanting in it.

Certainly this generalization led me wrong the other night. It was at the dance on Thursday at the Kursaal. I noticed an interesting figure of a girl standing in one of the groups of a square dance. She was slight, rather small, neatly dressed, and had a pretty face. But what was particularly captivating about her was the modesty of her look. There was a demure sinking of the eye, a patient holding of the shoulders, and her entire figure had an air of exquisite deference.

"I wonder who that is," said an English lady; "I find her quite charming. I think she is one of your compatriots."

I said I feared not. She seemed to me too courteous. Besides, there was a fullness of the features which I thought might have been Austrian.

The lady said, "Either German or American; certainly not English."

We asked the Kurmaster who that fraulein was. He inquired and came and told us that it was "Miss Diggs, of Utica."

. . . I find that the great superiority of our women is in the fact that they are themselves. I do not say that they are superior in individuality to English women, although I am inclined to think that they are, for the reason that the repression of individuality which English

women are compelled to practice must in some degree affect the strength of the quality itself. But the truth is, I fancy, that the people of one country are about as individual as those of another, and that most people are more individual than we suppose. If you go to live in any family or to work in any office, you will find that people whom at first you take to be commonplace become, after you have known them a little while, more and more individual. I have never yet lived in any community which I did not find to contain a good many of what are called "characters." I would not say, therefore, that our women are so much superior in individuality. Their superiority is that they express their individuality. It is for this reason that they please to such a degree. Other women, no doubt, exhibit their individuality in their own families, to their husbands and brothers. Our women exhibit their individuality in society, where we all get the benefit of it. The charm of girlhood and womanhood is freely expressed among us. The difference between European girlhood and our own is that between game in regions hunted by man and the animal life of some virgin island of the sea. In the first instance the game is very wild, but the island bird will settle on your shoulder. The downcast eye, flushed cheek, and low voice are charming; but I am not sure whether I prefer them to the bright confidence of a Yankee maiden. I am not proof against that refined timidity of a nursery-bred young lady of the Old World; but is the charm she communicates quite so lively as that of her American sister?

The repression of the individuality of English women is, of course, due to the necessity they are under of conforming to a standard of manners which they appear always to have before their eyes. The more I see of English women here, the more sure I am that this is true. I observe it not only on comparing them with the women of our own country, but on comparing them with those of other countries. Perhaps to this cause is due the fact — I am sure it is a fact — that English women cannot smile with the force of French women. Yet there is often something admirable about this very repression. Take, for instance, some neat matron or some still comely maiden lady young enough to wish to be handsome,— a class in which that country abounds,— who has her tea-table opinions upon politics and what not, and whose accents, gestures, and sentiments even are modish,— one is often pleased, beneath the bonds which confine her mind, to notice an elastic, vigorous, and charming nature. Indeed I think that a fault of our women is that they are too much expressed; they are too tense. This may be due

in some slight degree to the education which some of them receive in high schools and colleges. I went once to the commencement of an American female college. I did not like what I saw,—the young ladies looked to me so wound up. The life they led seemed unnatural and unreasonable. Why should they be made to read essays to a thousand people in a great hall? This practice is of course borrowed from that of the male colleges. The custom began, I suppose, with the notion that the ability to make a speech was the peculiar ability of a public man, that he was the highest kind of a man, and that colleges were intended for the education of public men. The graduate got up on commencement day and showed what his college education had done for him. This notion has been very much modified, but perhaps it is even yet a good custom to be pursued by male colleges. There will come times in the life of almost any man when it will be necessary for him to make a speech; and he will present a very poor appearance if he cannot do it. But on what occasion is it necessary for a woman to make a speech? Is it when she is engaged or when she is married; is it when she becomes a mother or a grandmother?

At this commencement the young ladies all read essays, and I must admit that they were not so much frightened as they should have been. Then, apart from any objection to their appearing at all, I objected to the character of the appearance they made. I was shocked at the conventional pertness which they seemed to have cultivated. They had adopted in their essays a silly fashion of joking. Now I am always interested in the humorous perceptions of my compatriots. It is often a source of surprise to me when at home to find how many people there are who have a humorous way of looking at things. But the jokes of these young ladies were not good. They consisted of commonplaces, put into long Latin words. The recipe appeared to be this, that that which in Saxon English is a mere plain statement becomes very witty when turned into Latinized English. They kept this up incessantly, the only relief being when some serious allusion to their approaching separation would recall them to their proper employment of shedding tears.

There was one of these essayists, a young lady who really seemed to have some natural humor, who awakened my keen commiseration. Her tense mind seemed altogether too much for her slight body. I wanted to tell her to go and sit at her grandmother's window, near the shadow of the lilac bushes, to immure her mind and thin hands in deep dishes of pumpkin batter, to stay a whole summer in

some still village with only a little poetry to read, and away from all stimulating society.

I have said that American vulgarity exhibits itself in rudeness. English vulgarity, on the other hand, generally appears under the form of undue conformity. I cannot describe to you how strong my sense is of the prevalence of this quality among many of the English people that I see here. There is a rather underdone young Englishman here, a very good-natured fellow, in whom this conformity has settled downwards to the very soles of his boots; you see it in the things he says, in the tones of his voice, his gestures, and attitudes. Want of breeding, by the way, is much more easily discernible in men than in women. Among young women rosy cheeks and a pair of bright eyes and the feminine adaptability cover up this quality very much. But you will see the imitation in them also, if you look closely.

I went this afternoon to take tea with some English people who are at the hotel opposite. There was an amiable, fresh-looking girl who poured out the tea. She was an exceedingly nice girl. If manners must be imitative, I don't think any could be better than hers. But it was true that you could see by her way of sitting, by her way of holding her shoulders, and by the manner of her references to the accidents of English fashionable life, as if they were, and as if they were not, quite her own, that her mind was sat upon by some standard of behavior to which she felt herself obliged to conform. Perhaps this imitation might become tiresome if one lived in England, but with people who have such good nature and such good looks as this family one does not mind a little of it.

. . . I see I have written above rather slightly about the manners of certain English women. I admire them greatly, however. The qualities of the British nature are such as are particularly suitable to women. Those qualities,—benevolence, sense, dignity, decency, rectitude,—when combined with feminine softness, make up a character which is like balsam to the mind. The mental dullness proper to the nation is also to some degree refined away in them. When these qualities are united with beauty, with high breeding, and, as is sometimes the case, with majesty of form and countenance, you have indeed a fine object. The English women here are almost altogether of the middle and upper classes; but what strikes you when you visit England is the high average of female beauty. You see there exceedingly fine persons among the lower classes. One of the most beautiful women I ever saw there was a lodging-house keeper. The last time I was in England I went to

look for lodgings in Queen street. The door was opened by a large woman of thirty-five, fair and rather full in figure, whose mild beauty of countenance and aspect astonished me. For the moment I thought I had before me one of the grand illusions of Rubens. She seemed to me a figure such as the joyful humor of some great painter might have perpetuated from one of those times and places of happy repose which the centuries conceal. Her beauty was one which preferred to flourish in the shade. This good man's house, which no doubt did as well as any, she had selected for her sojourn. She was content here to be cutting bread and butter, glad to be shielded from the eyes of the world. A peculiarity of this woman was that she had an air of habitual perturbation. She was one of that class of women who find their beauty a burden and lament the necessity they are under of having to carry it about with them. The lodgings were extremely nice, and I thought how pleasant it would be to take them and give tea parties at which she should bring in the things; but I found this was out of the question. She asked five guineas for the rooms, with three and sixpence for the kitchen fire and linen, bath, lights, and boots extra.

. . . I have said that English women cannot smile. If they cannot smile they can frown, which I like nearly as well. There is a lady whom I often meet with her children in the streets and at church. I cannot conceive of her smiling. Her face — a dark oval one — and her carriage express the utmost decision, and at service she prays with such resolution! And there is a young girl here of something the same character. Her concentrated gravity and earnestness of expression mask or reveal an honest mind. She has this expression always. When she dances even it is with a serious and energetic face, her shoulders back, — revolving like a soldier on drill.

. . . I am always surprised at the amount of good poetry in the American magazines and newspapers. I came across the other day in "Frank Leslie's Illustrated Paper," a poem written by some girl of about twenty-three (I suppose) who thought herself very old. The poem was addressed to a young man with whom she appeared to have had a flirtation, we will say at the age of twenty. She tells him that the love they threw away so lightly was not a thing to be met with every day and was worth keeping. The title, I think, was "Rags." At any rate the thought was that this love had now become rags. It had gone into the old rag-bag, the Past; "Time" she said, was the "old Rag-man." Isn't it good? You can fancy the poetess to be some rather

high-pressure Yankee girl, clever, perhaps satirical, a little romantic, and what you would call intense, with a brow of premature thought, a sallow cheek (such is my notion), and a face and figure in which is ill concealed the energy of her disposition. What particularly strikes you is that the young lady is evidently her own mistress. There is no chaperon or a suspicion of one anywhere about. I may here say that I think this independence necessary to a thoroughly interesting female character. Do not all the heroines of poetry and romance have it? The Homeric Nausicaa, the Chloes and Phillises of pastoral poetry, and in later times Shakspeare's Rosalind and the Angelina of Goldsmith's ballad, are much like American girls. Any really fine young woman of modern society should have the same independence. She should be like the princess of a small kingdom. She should have ministers and a standing army and should have at her command the sinews of war. She should be able to form treaties of amity and friendship with the surrounding princes. She should have power to make war or, if love is to be made, it should be from the same high vantage-ground. The interesting women one knows at home have been much in this position. I cannot imagine them with chaperons. This liberty is an essential element of their superiority.

Take the fine women I know. There is the gentle and profound Mildred, and there is M. L. The last was the daughter of a Quaker family whose farm-house overlooks Long Island Sound. They see at noon the cheerful blue of its glittering wave and the white rim of the distant shore. She was extremely pretty. She talked incessantly. But it did not seem like talking; conversation, or rather monologue, was her normal state of existence. It was only another sort of silence. I say that she was a Quaker. As a matter of fact I believe that her family had separated from the Quaker faith, but she was sufficiently near the Quaker character and mode of life. Her eloquence must have been derived from generations of preachers of that denomination. Her language, although truthful, was full and fluent. She read you with introvertive eye from the tablets of her mind numbers of thoughts, which seemed to my bewitched ears beautiful and original, upon poetry, art, books, people, etc. She repeated these in a voice the most charming I have ever listened to; poetical quotations sounded so very fine when she uttered them, as she did now and then, in her simple way. She even imparted a certain natural magic to the flinty meters of that pedant W——. She admired widely, and you yourself came in for a share of the lively in-

terest with which she regarded creation. The air of wonder with which she listened to what you said excited your self-love to the highest pitch. I visited their farm-house twice. I remember an orchard near at hand which stretched along the crest of a broken hill. I saw this once when the spring had sent a quick wave of bright verdure over the sod cropped short by the cows. The orchard was cut into three or four small patches, but there was a break in each of the separating fences, so that from room to room you could walk the orchard floors. I went again later, one hot midsummer morning, when our path led to a wood through a blazing wheat-field, in which I stopped to pull a branch of wild roses. We came soon to a deep break on an abrupt hillside, where, shut in by masses of dense and brilliantly painted greenery, moving incessantly with the forest zephyrs, and not far from a white dog-wood tree, we rested from the heat. I began to cut away the thorns from the branch of wild roses, an action which I was half conscious was mistaken. I had better have let her prick her fingers, for she said: "You can't care for wild roses if you cut away the thorns."

Another recollection I have,— of walking along a country road-side in that twilight which is almost dark. The daughter of the Quakers wore a blue silk cape with long fringes. She was talking her "thees" and "thous" to a half-grown lad, her cousin, as if she were no better than other women. The tall white daisies, thickly sown by the road-side, wheeled and swam in ghostly silence. It seemed that the slight figure that stepped briskly before me had a cosmic might and force residing among and descended from those stars and planets which had begun to strew the black heavens.

The family to which this girl belonged seemed to me to be people who practiced a very high order of civilization. She was the most obedient and dutiful of daughters; but for all that she seemed to dominate the whole connection, and the landscape too, I should say. Her liberty was so a part of herself that I could not imagine her without it.

. . . I usually go to a Catholic church here because some friends of mine are Catholics and always go there. What an advantage it must be to belong to a church which you always find wherever you go, however differ-

ent from your own may be the language and manners of the new country. The English churches abroad are not interesting; the clergymen are apt to be second rate. But I rather like the young man they have here; he is so completely and necessarily a clergyman. He is just as much a parson on the street as in church—in his face, I mean; his clothes have nothing to do with it. I find it agreeable to meet with a type so distinct, to see a fellow-creature in a place so evidently meant for him; but one cannot help wondering by what methods of breeding and education such results were produced. What kind of a boy was he, and especially what kind of a baby? I venture to say that he had not been five minutes in existence before he began with—"Dearly beloved brethren, the Scripture moveth us in sundry places."

. . . The poor Germans get very little good of their royalties, of whom there are several staying here. The English capture them. They stalk them daily on the promenade and at the springs. I was present this morning at a kind of a still hunt. I was at the Kurhaus, and found a number of English waiting at the door. They told me that the Grand Duke was having his luncheon. A throng of twenty or thirty people, most of whom could boast some kind of acquaintance with His Royal Highness, were there in the hope that he would speak to them. Two nice women, who were old friends of mine, said in their frank way: "We shall feel very badly if he does not speak to us." Old Jones produced a letter which he had just received from another eminent personage, saying: "I wonder how she knew my address." But the people did not talk much; they were silent and serious. Some of them would now and then try to push to the front, when there were black looks from behind. There was one lady, the wife of a general, I believe, who did not seem welcome among the more fashionable of the bystanders. She held her ground, however. Her pale and anxious face seemed to say, "Did we not entertain His Royal Highness at Aldershot; and did he not send to inquire after our daughter, who had the diphtheria? I think there is reason to hope he will speak to me." Presently the Grand Duke came out, walking fast and brushing his beard. He walked through the company, but did not speak to any of them.

TOPICS OF THE TIME.

North and South.

THE war for the Union closed forever with the funeral of Grant. To be sure the armies of rebellion surrendered twenty years ago; but the solemn and memorable pageant at the tomb of the great Union soldier, where the leading generals of the living Union and of the dead Confederacy stood shoulder to shoulder, and mingled their tears in a common grief—this historical scene marked the virtual conclusion of sectional animosity in America—let us hope for all time to come.

The world is familiar with the fraternal sentiments uttered with so much pathos by the dying soldier, and it is not forgotten that these words were consistent with Grant's action at the close of the war, and with his frequently expressed views since then. The article on "The Siege of Vicksburg," printed in the September CENTURY, was written before he was aware of his fatal illness, and the same sentiments appear there also. In 1875 he said at Des Moines that we were not prepared to apologize for the part we took in the war, yet: "We will not deny to any of those who fought against us any privileges under the government which we claim for ourselves; on the contrary, we welcome all such who come forward in good faith to help build up the waste places, and to perpetuate our institutions against all enemies, as brothers in full interest with us in a common heritage."

As every unprejudiced observer is aware, the manner in which General Grant's sentiments of goodwill were received and reciprocated in the South signifies much more than personal sympathy with a brave, chivalric, and suffering foe. The South believes no longer in slavery, no longer in secession. Some ex-rebels said not long ago: "We are glad we were whipped, and we are in to stay! Now let us see Massachusetts try to get out of the Union!" One of the leading men of the South lately told, in private conversation, a significant incident. He was complaining, he said, to one of the officials of his own State that the official salaries given were not large enough to attract ambitious young men powerfully and permanently to the State government; that their bright youths would be looking rather to the general government for a career, and would perhaps thereby lose the feeling of superior loyalty to their own individual State. "Well, why not?" was the official's reply. "We have given up all that idea; why should we want to cultivate State rather than national loyalty?" This incident and similar ones give color of reason to the theory, held by one of the most public-spirited of Northern Republicans, that the turning of the intense Southern loyalty of patriotism from the various State governments to the national government and flag may yet make the South the most enthusiastically loyal section of the whole country.

The more the South ponders on the past, admiring the heroism of Southern and Northern soldiers alike, and deprecating the unwisdom (and in

some cases the treason and personal dishonor) of its own political leaders,—the more will dangers disappear from the Southern horizon. Indeed there may now, perhaps, be as much danger anticipated from the unthoughtful good-will of the North itself. We have on our desk a letter from a member of "The Grand Army of the Republic," who, while generously commending the spirit of our recent editorial on "Twenty Years after the War," goes on to propose that the general government should "establish and maintain homes for needy disabled ex-Confederate soldiers whose wounds were received at the hands of United States troops." There is a generous and pleasant sound to this proposition, and it honors the *heart*, at least, of the Union soldier who makes it. But is it in the interest of the nation, and of the South as a part of the nation, to act in behalf of Confederate, that is, of insurgent, soldiers, *as such*? If they are now good citizens, have renounced their position of enemies to the government, and wish in good faith to make themselves useful to the common weal—then give them office, if need be, for the country's good; but do not as a government, as a nation, make their very act of rebellion an occasion of bounty. Let private charity, in the North as well as in the South, do what it should for all who are in need.

The war might perhaps, have been averted; and yet it was, after all, the "irrepressible conflict" between liberty and slavery. Let the country join with General Grant in the noble spirit of the dedication of his "Memoirs" to the soldiers and sailors on both sides of the fateful struggle, and not withhold honor from those who fought conscientiously, bravely, and without stain upon either side. We can now all give thanks together to the Almighty that liberty was established and the nation saved, while we bury the last remnant of rancor in the tomb of the captain of the national armies. And if in the war of the Union the South took the mistaken and the unsuccessful side, it may remember that the very same Southern and slave State of Kentucky, which gave birth to the political leader of the slave Confederacy, gave birth also to the chief hero and martyr of the cause of Union and of freedom,—the brightest name produced by the great epoch of the civil war,—Abraham Lincoln.

Prejudice and Progress.

THE progress of the mechanical arts and the development of the physical sciences within the past half of the present century are commonplace topics; but if one should venture the statement that the movements in the intellectual realm have been quite as rapid, and the changes of opinion no less marvelous during the same period, the assertion would be received with incredulity. Yet there are facts which strongly support such a judgment. Some of these facts have lately been brought to light in these pages. It is doubtful whether the chemists or the electricians have any greater marvels to show than those which are visible

in the changed conditions of public sentiment with respect to the black race in this country. Moral changes of this nature are silent and gradual; they cannot be recorded and advertised like the invention of a new instrument or the discovery of a new process; nevertheless they are thorough and effectual. A generation passes, and the people suddenly discover that a revolution has occurred, and that the world they are living in is a wholly different world from the one in which they were living but a few years before.

The changes in the political condition of the negroes have not indeed taken place silently; but political changes are often effected when no corresponding moral change has prepared the way for them. Slavery was destroyed by the war, at the demand of military necessity. Whatever relation the emancipation and enfranchisement of the slaves may have had to the moral feeling of the North, it is evident that it must have greatly embittered the whites of the South toward the negro. When their former slaves were by force of arms set free, and by force of law made their political masters, as they were in many localities, it was inevitable that resentment and hostility toward the negroes should take the place of the humane and paternal feelings that had been cherished by many of the whites. It was a terrible strain to which the temper of the Southern people was thus subjected; the student of history will marvel that they endured it so patiently. Even if this retribution be considered the just penalty of insurrection, just retributions are not always quietly endured. At any rate it is clear that the revolutionary movements, by which their property was torn from them and a social régime utterly repugnant to their convictions and traditions was thrust upon them, could not have inspired the whites of the South with kindlier feelings toward the negroes.

It is evident that a change of popular sentiment, if it could take place, would be far more significant and far more beneficent than any possible political changes. Legal safeguards and constitutional guarantees are of little value save as they are rooted in the convictions of the people. The ballot may sometimes be used as a weapon of defense; it was given the negro with that end in view; but that is a sorry state of political society in which any class needs to use the ballot for purposes of defense. If the class thus armed be ignorant and poor its weapon will be an inadequate protection. Peace and security will only come with the advent of a better public sentiment, from which all thought of encroaching on the rights of the weak shall be put away. The steady growth of this better sentiment throughout the whole land, and especially at the South, furnishes the marvel to which we are pointing.

Doubtless it seems to many that there is need enough of a far more radical change than has yet taken place. The weaker race is yet lacking its full rights in parts of the land; but even a cursory comparison of existing conditions with those of fifty or twenty or even ten years ago will reassure every reasonable man. What have we seen in the pages of *THE CENTURY*? One of the most distinguished literary men of the South defending with manly eloquence "the Freedman's case in Equity" and the Protestant Episcopal Bishop of Kentucky demanding, in the name of the Master

whom he follows, that the manhood of the negro be fully recognized. No right-minded black man could ask for his race more than these two Southerners now strenuously advocate. The measure of justice and consideration that they demand is more than is readily yielded to the negro in some Northern communities. These men are not alone; they have behind them a great and growing constituency of the most enlightened and most enterprising Southern people—members of the class that shapes public opinion. They speak as men who know that their cause is just and who see that it is prevailing. And this discussion, in which they have taken a leading part, but in which they are supported by men of influence and reputation, is going on throughout the South, with some, but with comparatively little bad temper. Mr. Cable and Bishop Dudley find those who strenuously dispute their demands; but, as has been said, debate is proceeding for the most part on these "three quiet convictions: that recrimination and malignment of motives are the tactics of those who have no case; that the truth is worth more than any man's opinion; and that the domination of right is the end we are bound to seek."

Let it be noted, also, that the disputants almost unanimously agree that slavery was both economically and morally wrong and ought to have perished; and that the negro must be protected in the political rights with which the Constitution has invested him. That these rights are still abridged, by fraud or intimidation, in parts of the South cannot be denied; but the sentiment that condemns and denounces this action is steadily gathering strength. When one of the most influential Southern newspapers says: "We believe there is a general desire among the people of the South that the negro shall have all the rights which a citizen of the United States, whatever be the color of his skin, is entitled to," we perceive that the tide has turned. Keep it in mind that it is not with these political rights that the present discussion at the South is concerned, but rather with those civil rights which the national statute, lately annulled, undertook to protect. That the negro may vote and hold office, no one rises to deny; the question is what his rights shall be, not to be sure in private "society," but in the railway car, and the street car, and the hotel, and the theater. Mr. Cable and those who stand with him demand that he shall have the same rights that the white man has in these public places; that no ignominy shall be put upon a citizen in public places on account of his color.

Signs of juster views and actions are visible on every hand. Mr. Cable indignantly calls attention to the discrimination against colored persons in the cars, in portions of the South, but there are also large sections of the South in which well-dressed and well-behaved people of color occupy without protest the first-class cars. In Kentucky and Virginia no such distinction is visible on the railway cars. In South Carolina also (*ecce signum!*) according to the Charleston "News and Courier," quoted by Mr. Cable, "respectable colored persons who buy first-class tickets on any railroad ride in the first-class cars as a right, and their presence excites no comment on the part of their white fellow-passengers. It is a great deal pleasanter," this editor continues, "to travel with respectable and well-behaved colored people than with un-

mannerly and ruffianly white men." A radical champion of the rights of the negro, on his recent return from the Southern Exposition, testified that he saw during his journey no discrimination against negroes upon the railway cars.

Colonel W. C. P. Breckinridge of Lexington, Kentucky, late of the Confederate army and recently elected to Congress, is a man strongly in sympathy with the Southern community and its way of thinking. But after the war this man, a busy and able lawyer, and a speaker in demand on important occasions, devoted something like a dozen years to the improvement of the colored schools in his neighborhood—working against a gradually disappearing local prejudice. Judge Beckner, of the same State, recently accepted an invitation to deliver an address at Berea, Kentucky, where it is claimed that local conditions make it advisable to try the double experiment of the co-education of the sexes and of the races. Judge Beckner is personally opposed to the theory of such mixed schools, but believing that the institution had accomplished good results, he did not refuse to attend, thinking, as he has since said, in reply to criticism on his conduct, that it would have been cowardly so to do. The fact that Judge Beckner, who is a staunch Democrat, disapproved of the views held at Berea makes his general sentiments on the negro question all the more significant. Says the judge in a recent letter to "The Clarke County Democrat":

"They, the colored people, cannot be put out of our sight by standing on the night's Plutonian shore and muttering the gibberish of a day that is done. . . . Every dictate of patriotism, humanity, and religion requires that we shall not only give them a chance, but that we shall assist them to rise from the state of degradation in which they were left by the abolition of slavery. They are citizens and voters, and will remain such as long as the Republic lasts. . . . I stand exactly in line with Lamar, Wade Hampton, Garland and other Southern Democrats."

This revolution in public sentiment has not been confined to the Southern States. In several Democratic States of the North, as Mr. Cable shows, laws for the protection of the civil rights of the negro have been enacted with substantial unanimity.

Contrast, now, with these indications of the public sentiment, a few typical facts taken from the recent history of this country. Twenty-five years ago the founder of Berea College was hunted like a wild beast through the region where now his name is spoken by men of all parties with reverence. It is only true to say that in eastern Kentucky to-day few men are held in greater respect than John G. Fee. Thirty or forty years ago large rewards were constantly offered at the South for the seizure of leading abolitionists at the North; and all such persons were warned that it would be unsafe for them to venture into that region. Prominent clergymen of the South joined in these threats of violence. Names that are illustrious in the ecclesiastical records of the great denominations are appended to the most sanguinary suggestions respecting the treatment of fellow-Christians whose only disagreement with themselves concerned the rightfulness of slavery. A leading newspaper of South Carolina uttered these words:

"Let us declare, through the public journals of our country, that the question of slavery is not, and shall not be open to discussion—that the very moment any pri-

vate individual attempts to lecture us upon its evils and immorality, in the same moment his tongue shall be cut out and cast upon the dunghill."

This was a fair sample of Southern sentiment forty years ago. The feeling at the North was not much better. The story of Prudence Crandall, told in *THE CENTURY* for September, shows how a good woman was mobbed and boycotted fifty years ago by so-called Christians in Connecticut for the same deeds that are now done with applause throughout the Southern States; that the Legislature of Connecticut then forbade by statute, amidst great popular rejoicings, what the Legislatures of Georgia and Tennessee and Mississippi now encourage by appropriations,—the establishment of schools for the teaching of colored girls. Miss Crandall's school was not the only one that suffered. An academy in Canaan, New Hampshire, was opened two years later for the reception of pupils, without distinction of color. Immediately New Hampshire was on fire. After a cannonade of abuse and vituperation from the newspapers, the people of Canaan and the surrounding towns gathered, and with a hundred yoke of oxen dragged the school-house from its site and left it a heap in the highway. The mob was led by a member of the Congregational church, and it expressed the public sentiment of that period. It was about this time that Garrison was dragged through the streets of Boston with a rope about his body; that Pennsylvania Hall, erected for the use of the abolitionists in Philadelphia, was burned by a mob, three days after its dedication, with the evident connivance of the authorities; that Lovejoy was murdered in Alton, Illinois; that the students in Lane Seminary, Cincinnati, were forbidden by the trustees to discuss slavery; and that Marius Robinson, a man of gentle spirit and reverent lips, was hauled from his lodgings in Berlin, Ohio, and tarred and feathered simply because he had tried to prove that the Bible was opposed to slavery. In many of these mobs leading members of the churches were active participants, and the voices lifted up by press and pulpit to reprove their outrages were few and feeble.

Such reminiscences, which could easily be multiplied, show how great and how recent has been the change in public sentiment at the North respecting the colored people, and how much need there is of patience and tolerance in judging the movements of Southern opinion upon this question. It is clear that the cause of the negro may safely be left to such champions as those who have now risen up on Southern soil to defend his rights, and it is equally clear that the people of Connecticut, and New Hampshire, and Pennsylvania, and Ohio, may well remember their own former attitude, while they are throwing stones at their neighbors across the Potomac and the Ohio.

Civic Rivers.

A FEW years ago a citizen of New York returned from his first visit to Europe with his memory full of the civic rivers of the Old World. He remembered the splendid sweep of the Arno at Pisa, which Mr. Howells has just described; the Thames embankment; the masterly use made of the Seine for the pleasure of Paris. Here in New York, he said to

himself, we have two great rivers, and we make little or no use of them for the decoration of our city; there is not one drive from which they are visible, and there are but two small parks from which they can be seen. The Riverside Drive and Park were then in their infancy, but a drive on the former soon showed him that the need had been partly supplied — that the splendid Hudson had been at last taken into the city and made a part of its pleasure-ground. And now that a portion of the park has been selected as the burial-place of General Grant, there is every prospect that the whole plan will be completed in a manner worthy of its natural associations and its new honor. Moreover, the attention which has been drawn to Riverside Park by that event has broadened the ideas of New Yorkers as to the adaptability of other waters about the island to the purposes of public recreation.

Of recent years, New York Harbor has been virtually added to the accessible attractions of the city by the numerous lines which have been opened to the adjacent sea-coast. Any one who has ever come by night from Bay Ridge or Staten Island must have been struck with the unique beauty of the view; and of late the panorama has taken on new impressiveness from the stately procession of electric lamps upon the Brooklyn Bridge, with which the great beacon of the Statue of Liberty bids fair to "compose" in a picture of rare and modern character. What foreign city presents in a noble natural outlook two artificial features better adapted to inspire the imagination? For a trifle, this scene is now within the reach of every visitor to the city. Moreover, during the past year a new delight has been discovered in the views of the Harbor, which have been made accessible from the high roofs in the lower part of the city,—views so unusual in point of view, so comprehensive in scope, and so animated, that it is difficult to speak of them with reticence. From the top of these ten-story buildings, it seems to old frequenters of the Battery as though the Harbor were now seen for the first time. Much can be done by municipal effort to preserve the impressiveness of these views. The elevated railway can and should be removed from Battery Park. The ugly buildings now devoted to public baths should not be allowed to disfigure the scene; if not feasible to place them elsewhere, they should be taken from the middle of the view, be made picturesque on the water side, and be concealed by trees from the land. Castle Garden should be rescued from its present use as a landing-place for immigrants and made to minister to the needs of residents and visitors. The memory of its former triumphs might well be restored by devoting the building to music of a high order. If any one doubt the response of the public to such a proposition, let him fancy Theodore Thomas at the baton and remember the crowds of ten years ago at the Central Park Garden.

A third, and, for the health and enjoyment of the

city, a hardly less valuable addition to the city's water parks, lies *in posse* about the region known as Hell Gate. Here virtually is the meeting-place of four streams,—the two channels of the East River reuniting above Blackwell's Island, and the broad stretch from Harlem blending below Ward's Island with the inlet from the Sound. It is a waterscape of fine dimensions and of surroundings that may easily be made picturesque. On the east are the wooded slopes of Astoria, a beautiful town which is going to ruin through municipal mismanagement. On the New York side is a bluff half a mile long, partly wooded, and in the judgment of Mr. Frederick Law Olmsted and Mr. Calvert Vaux, now our two most valued landscape architects, beautifully adapted to park purposes. This ground includes a part of the original rocky shore of Manhattan Island. It looks upon a river which possesses a most individual and interesting aspect, and to which the unusual force of the tides lends great changeableness,—making it now as smooth as glass, now as turbulent as the sea beyond the breakers. Through these gates to the city passes a variety of craft which lacks only the great ocean steamers to surpass that of any other waters.

Aside from the picturesqueness of the view, the absolute need of the establishment of such a breathing-place will be evident when it is seen that on the east shore of Manhattan Island (excepting a small part of this bluff, hardly of the extent of one city block) there is no public park reservation below Harlem, nor is there any whatever east of Central Park above Seventeenth street. With the success of the excavations at Hell Gate, this waterway will become for more and more people the portal of the city. It will be unfortunate indeed if some way is not found by the official authorities for the preservation of this eligible spot. Years from now New York will be tearing down buildings, for the sake of providing facilities for popular pleasure which now lie at her doors.

What is here said of New York may well apply to other American cities. Every moment of delay in planning for the future pleasure and health of our municipal populations is a moment lost. We have the finest rivers and lakes of the world, and with a forethought equal to that which has made Washington City in this respect a source of national pride, we should not now have to be laboriously planning to save scraps and patches of our water-fronts. Of late years there has been a marked awakening on the general subject of city parks. In some instances, as in Buffalo, Cleveland, Chicago, and at Niagara, it has extended to the waterways. In the suburbs of many cities there are fashionable drives along rivers or lakes, but in no other city than New York could municipal effort bring the beauties of water scenery nearer to the large majority of the people.

OPEN LETTERS.

The Connecticut Training School for Nurses.*

[NEW HAVEN HOSPITAL.]

A NEW idea usually finds simultaneous development in several directions, and it is rare that one person alone is the discoverer. The common parent of American hospital schools is the Nightingale Memorial of St. Thomas's Hospital, London; but the plan for their organization here was common to several communities. For example, the New Haven School was developed, a small endowment raised, and the charter obtained, simultaneously with the Bellevue Hospital school—though chance prevented the reception of pupils in New Haven until six months later.

A school of the size of the New Haven School, adapted to the wants of a comparatively small hospital, stands in relation to similar organizations in large charity hospitals as the private select school does to the large public ones in the common-school system. In a hospital of only one hundred and sixty beds, there is no great mass of sick to care for; nurses have time to study the accomplishments of their profession, and lady visitors and managers are able to give personal attention and supervision to the classes. That the results are favorable is shown in the New Haven School by the number, in proportion to the graduate, who have been called to fill positions of trust in other hospitals, nearly one-fourth having been given the supervision of nursing in hospitals, in New Haven, New York City, Brooklyn, Pittsfield (Massachusetts), Boston, and the States of New Jersey, Indiana, Ohio, Vermont, and Virginia. The growth of the school in public favor is shown by the constantly increasing demand for nurses for private families, two-thirds in excess of the provision, and also by the applications for admissions, which at the present moment are greatly in excess of the vacancies. Another proof of the favor with which the enterprise is regarded is found in the liberal way in which money has lately been contributed to build in the hospital inclosure a nurses' home, now finished and occupied, having accommodations for thirty,—a handsome, ample three-story brick building, with cheerful parlors, single bedrooms, bathrooms, piazzas, etc., well-warmed, ventilated, and lighted, which—it may be useful to those engaged in similar undertakings to know—has been substantially and satisfactorily completed at an outside cost of \$11,800.

It might be supposed that the New Haven School, comparatively small as it is, would have a local reputation only; it is noticeable, however, that young women all over the country are increasingly interested in the new profession open to them, and anxious to collect information concerning all the schools. Thus far the following places have been represented in the New Haven School by accepted pupils: Connecticut, Vermont, Maine, New Hampshire, Massachusetts,

Rhode Island, New York, New Jersey, Michigan, Pennsylvania, Maryland, Georgia, Illinois, Wisconsin, Washington, Canada, Nova Scotia, and Australia. Trained nurses have been sent on application to all the New England States, New York, Florida, and Virginia, and on graduation have scattered to all quarters, from Canada to California. For the benefit of those who may be desirous of connecting a nursing school with smaller hospitals than those found in our large cities, it may be useful to give the points of difference between the New Haven organization and similar undertakings in New York and Boston.

The New Haven School is in charge of a president, vice-presidents, general treasurer, and auditors, and a committee of twenty-one ladies and gentlemen, five being physicians, two of whom are connected with the hospital staff; this makes a connecting link between the ladies' committee and medical and other male boards of hospital management. The gentleman who is the general treasurer pays out to the sub-treasurer, who is a lady, the funds necessary for the current expense of the school, which she accounts for, making weekly payments to the nurses. The secretary, another member of the ladies' committee, conducts all the correspondence with applicants, accepts them if they answer the requirements, and notifies the lady superintendent when to expect new arrivals. The assumption by the ladies' committee of all these duties relieves the superintendent of much outside responsibility and gives her time for her legitimate duties as instructor of the pupils in the wards. That the pupils may be under the best teaching it is required that the superintendent of nursing and her assistant shall themselves be ladies of thorough hospital training, knowing the theory and practice of skillful nursing, and able to recognize at once bungling work on the part of the pupils and to set them right.

In a small hospital it is unnecessary that ward head-nurses should be employed, as in large institutions, at an increased expense. Here the senior nurse in each ward is in that position, at the ordinary payment. Each pupil, coming in turn to be senior nurse, gains greatly in self-possession and quick perception—faculties which are required in this responsible position.

The hospital contributes nothing towards the payment of the nurses; that is attended to by the society. The table for the school is, however, provided by the hospital; and the officers, relieved from the daily cares of housekeeping, give their whole time to the supervision of the nursing. Differing again from other schools, the course of instruction here is shortened to nineteen months,—thirteen spent in hospital and six at private nursing; this private nursing is required of all pupils.

In this way the school receives additions to its funds in payments from families, and the committee know from actual trial and report whether the nurse is entitled to her diploma. The exigencies of very large hospitals make it necessary often to decline to send nurses to private families. The New Haven School re-

* For a description of the interesting work of the Bellevue Hospital (New York) Training School for Nurses see THE CENTURY for November, 1882.—EDITOR.

quires that all should serve in this way for six months, their places in the hospital being taken by new pupils. In all these ways—in the absence of increased payments toward head-nurses, and of housekeeping cares, and in the requirement of nursing in private families—the school finds an advantage over other systems. One other difference is in the form of graduation papers. Each graduate receives with her diploma a printed statement of her standing in the school during her course of study, and the seal of the school is not affixed to the diploma until one year after graduation. At this time, the self-reliance of the nurse having been tested for this additional twelve months, a certain number of testimonials from physicians are required to be returned with the diploma for final action, and if a majority of the committee so decide the seal is affixed.

The course of instruction consists of careful teaching in the ward by the lady superintendent, recitations held daily from text-books, lectures, autopsies, attendance at surgical operations, and three weeks or more spent in the diet kitchen. Quarterly examinations are held and a prize is given for the best recitation. Examinations for diplomas are conducted by one of the physicians of the committee.

The school has published a hand-book of nursing, which is in use in the hospital schools of New York, Brooklyn, Chicago, Washington, and Orange, and in one of the large English hospital schools. It may be an encouragement to other schools in their beginning to see at the close of ten years how far a little candle throws its beams.

It is important to those about organizing a nursing school to lay special stress upon the need of strong health in their pupils. Only about one-third of all the accepted pupils of the New Haven School have finished their hospital course; and the cause of failure in a large majority of cases has been ill health. The work makes a drain upon the system mentally and physically, and it often happens that physicians who do not understand the wearing nature of hospital life will certify to the physical fitness of a young woman who in six months' time breaks down entirely, and the result is loss of health to her and loss of time and money to the school. Some applicants who bring clean bills of health from home are pronounced by our own physician unequal to the strain.

One other difference between this school and others is in the requirement that at the close of a year's hospital life the pupils shall take a month's vacation, to be spent away from the hospital. This is considered necessary, in order that pupils may go in a good physical condition to their nursing in private families.

The "sources of financial support" are a small endowment and payments made by families for the services of nurses.

There is no hospital too small to furnish useful training to at least three or four pupil nurses, and all over the country there is a demand for skilled services in illness.

The New Haven School began in a very small way a few years ago, with six pupils, and has now over forty under its control, with a graduate list of more than one hundred. What is a far better test of success, however, than mere numbers, is the wide reputation it has secured for faithful training; and this reputation can be obtained by even the smallest cottage hospital.

In the Chilcat Country.

ALASKA is a land of winter shadow and summer sun. Appointed by the Board of Presbyterian Home Missions to establish its farthest outpost in the country of the Chilcats, we left our old Middle State home in the early part of May, 1881, and sailed from San Francisco on the 21st. At that time there was no such thing as a "through steamer."

On reaching Sitka, June 11th, with the expectation of getting out almost immediately to our post, we heard that two powerful families of the Chilcats (the Crows and the Whales) were engaged in war, and that we would not be permitted to enter the field until there was some promise of peace. However, after a month's detention, we were allowed to proceed, and on the evening of July 18th the little trading vessel cast anchor. After plunging through the surf of Portage Bay, we set our feet upon the beautiful shore of Da-shu—the site of the mission village of Haines.

From Portage Bay west to the Chilcat River and southward to the point, lies the largest tract of arable land, so far as my knowledge goes, in south-eastern Alaska, while the climate does not differ greatly from that of Pennsylvania. Though the winters are longer and the snows deeper, the thermometer never falls as low as it does sometimes at home,—there are no such sudden and constant changes,—and the air is salt and clear as crystal. Our first snow fell on the 10th of October, and we never saw the ground again until May. In the month of February alone we had eighteen and three-fourths feet of snow-fall, and for months it lay from eight to twelve feet in depth. Here summer reaches perfection, never sultry, rarely chilling. During the winter months the sun lingers behind the eastern range till nearly noon; then, barely lifting his lazy head above the southern peak for two or three hours, sinks again into the sleepy west and leaves us a night of twenty-one hours.

But in May the world and the sun wake up together. In his new zeal we find old Sol up before us at 2:15 A. M., and he urges us on till 9:45 at night. Even then the light is only turned down,—for the darkest hour is light early summer twilight, not too dark for reading.

From our front door to the pebbly beach below, the wild sweet-pea runs rampant, while under, and in, and through it spring the luxuriant phlox, Indian rice, the white-blossomed "yun-ate," ferns, and wild roses which make redolent every breath from the bay. Passing out the back door, a few steps lead us into the dense pine woods, whose solitudes are peopled with great bears, and owls, and—Kling-get ghosts! while eagles and ravens soar without number. On one tree alone we counted thirty bald eagles. These trees are heavily draped with moss, hanging in rich festoons from every limb; and into the rich carpeting underneath one's foot may sink for inches. Here the ferns reach mammoth size, though many of fairy daintiness are found among the moss; and the devil's walking-stick stands in royal beauty at every turn, with its broad, graceful leaves and waxen red berries.

Out again into the sunshine and we discover meadows—of grass and clover, through which run bright little streams, grown over with willows just as at home. And here and there are clumps of trees, so like the peach and apple that a lump comes into your

throat. But you lift your eyes, and there beyond is the broad shining of the river, and above it the ever-present, dream-dispelling peaks of snow, with their blue ice sliding down and down.

The winter night display of *Aurora Borealis* is another feature of the north country scenery, where the stars seem twice as large as they do at home, and *Polaris* hangs the central light in the heavenly vault. The finest lights we have seen were in the north. First appears a glimmering, then a flashing light which gradually assumes the form of a solid arch of sheeny, scintillating whiteness; then a bright bow springs from and over it, and presently another, while from their base on either side are thrown, clear into the zenith, great flashing streamers of red and white and green. When there is much of this lightning crimson the Indians are troubled, as to them it indicates that war is engaging the spirit world's inhabitants, and forebodes the same for them.

The Chilcat people long ago gained for themselves the reputation of being the most fierce and warlike tribe in the Archipelago. Certain it is that, between themselves and southern Hy-dah, there is not another which can compare with them in strength, either as to numbers, intelligence, physical perfection, or wealth.

A diseased person among the Chilcats is rather the exception, and prostitution as defined by them is punishable with death. At first thought their marriage laws seem very elastic, but such is not the case. Though they do not bind tightly they bind strongly, and the limits which are fixed are fixed indeed. The children always belong to their mother and are of her to-tem. This to-temic relation is considered closer than that of blood. If the father's and mother's tribes be at war the children must take the maternal side, even if against their father. It is this law which makes illegal any marriage between members of the same tribe; though the contracting persons may be entire strangers, and unable to trace any blood relation. At the same time a man may marry his half-sister (one having a different mother) or a woman and her daughter—either at the same time or consecutively; for plural marriages are not uncommon, though they are by no means general. In very rare cases a woman has two husbands, oftener we find a man with two wives, even three; but more frequently met than either is the consecutive wife. One contract may be set aside by mutual consent, in favor of a new one. But in any case, while a contract exists, it must be lived up to; each must be faithful to the other.

The women are generally plump, healthy, and modest, and are always modestly clothed, some avoiding bright colors. I noticed one day at church a pretty young woman wrapped in a scarlet blanket, with a black silk handkerchief tied becomingly about her face; but her eyes were downcast; scarcely did she lift them during the service. Thinking that something troubled her, I made inquiry after we were dismissed, and found that it was the bright blanket. "I felt," she said, "that I was in everybody's eye. I wore it because my husband gave it to me last night; but I'll never wear it again," and she didn't. The men are large, straight, and muscular, with an air of natural dignity, and unconscious grace in pose, and in the manner of wearing their blanket or fur-robe, that one is reminded constantly of the ancient Roman and

his toga. The head, too, is rather small and shapely; the eye well set, clear, and bright; the chin and mouth firm, but seldom heavy; while the nose—usually adorned with a ring—is well-developed, and somewhat of the Roman cast. But in some cases the physiognomy bears a striking resemblance to that of the Chinese, small, thin features, a sharp or turned-up nose, and small eyes set obliquely. They are, comparatively, a cleanly people, both as to their persons and houses. I have been in Indian houses where the floors were so scoured with wood ashes and sand that I had rather eat from them than from their oily dishes; and I have seen a boy and girl wash and wipe these wooden dishes and horn spoons after the family meal, as handily as ever I did it myself.

Since they have come to know of the Christian Sabbath they measure time by so many Sundays; before, it was kept by means of knots in a string or notches in a stick for *days*, as they do now outside of the mission village. Saturday is general cleaning-up day. Heads are carefully washed, and are dried by running the fingers through the hair in the sun or by the fire. Then all who possess or can borrow a comb use it to the best advantage, and the hair is then oiled and tightly braided from the "part" close about the face and joined in one plait at the back. On Sunday it is *smoothed down* and a "j'eue" or covering of bead-work tied over the braid, though this last is a mark of "high class," and I have heard of a slave having been killed for daring to wear one. Though slavery is almost a thing of the past, there are still some captives in the Chilcat country. They are mainly from the Far South "Flat Heads." The Chilcats wash their blankets by rubbing them on a flat board, then by swishing them back and forth in the surf. And in utter defiance of the old belief that cold water, and especially salt, would ruin wools, their white blankets are among the whitest, woolliest, and softest I have ever seen.

It is a general custom for the men and boys to take a morning bath in the river or bay, even when they have first to break the ice. Casting aside every garment, within doors, they walk leisurely down to the dipping place. After plunging about to their satisfaction they come out and roll awhile in the snow. Then taking up a short thick bunch of rods they switch themselves until a perfect reaction is secured. The babies are bathed indoors in a large native basket; but a new-born child is *never* washed. These baskets are closely woven from grasses and the inside bark of the yellow cedar. Some of them are very handsome. They are used for almost everything—from the bathtub and water-bucket, to the dinner pot, in which their food is easily cooked by dropping into it stones first heated in the fire. It is in this way in their canoes that such immense quantities of salmon are cooked, in the manufacture of salmon oil. The canoe is half buried in earth, filled with red salmon and a little water; great heaps of stones about fist size are made red-hot and dropped into the great boiler. In a very short time the whole canoe is boiling and hissing like a common dinner pot. The boiled fish is then pressed in coarse baskets, or trodden rather, for it is done with the feet. The juice is collected in a canoe and again heated. It then stands for a day, and the clear red oil is taken from the top. That made at Chilcoot is the

finest, and is in demand even as far south as Fort Simpson, British Columbia, as it is a choice and indispensable article of diet among Northern Indians.

The Chilcats are, comparatively, an industrious people. On the mainland we have none of the deer which so densely populate the islands, owing, it is said, to the presence of bears and wolves; but we have the White Mountain sheep, which while it is lamb is delicious meat. From its black horns the finest carved spoons are made, and its pelt when washed and combed forms a necessary part of the Indian's bedding and household furniture. The combings are made by the women into rolls similar to those made by machinery at home. Then with a great basket of these white rolls on one side, and a basket on the other to receive the yarn, a woman sits on the floor and, on her bared knee, with her palm, rolls it into cord. This they dye in most brilliant colors made of roots, grasses and moss, and of different kinds of bark.

It is of this yarn that the famous Chilcat dancing-blanket is made. This is done by the women with great nicety and care. The warp, all white, is hung from a handsomely carved upright frame. Into it the bright colors are wrought by means of ivory shuttles. The work is protected during the tedious course of its manufacture by a covering resembling oiled silk, made from the dressed intestines of the bear. Bright striped stockings of this yarn are also knitted, on little needles whittled from wood.

In sewing nearly every woman is an expert. Their moccasins and other leather garments are well fitted, and sewed with *tus*, a thread made from animal sinew. The leather and furs are tanned and dressed by the women. They use much of the unbleached muslin in their dress now, and the garments are, for the most part, torn out and fitted with gussets. The ravelings are rolled on the knee into thread and used in making all the different articles of cotton clothing; and they are all made with extreme neatness. I have seen an old-fashioned white shirt made by one of these women with all the pleats and bands stitched with such accuracy and delicacy that it could not have been told from the finest machine work. In addition to the work already mentioned, the women weave the nets and baskets, gather and cure the berries and sea moss, help to raise the potatoes and turnips and to prepare the winter's store of oil and salmon, and care for the house and children; though the men share the last-named duty, and that often in a tender way, especially if the child is sick.

The men bear the burdens, cut and drag the wood, tend the fires, take the fish, make canoes and dishes, carve spoons and decorations for almost everything, but their principal business is trading in furs.

Just over the mountain range, to the north and east, which marks the dividing line between American and British possessions, live the "Gun-un-uh" or Stick Indians (more freely translated, the Indians of the wood), who are the fur *takers*. For generations the Chilcats have been the middle-men between these trappers and the outside world, and in this way have gained their wealth. Having so intimidated the Sticks that they dare not come to the coast, about four trips annually are made to the interior by the Chilcats, who carry with them American goods for the purpose of buying up furs.

In our upper village on the Chilcat River, called by the Indians Clok-won, lives Shat-e-ritch, the highest chief of all the Chilcats, being head of the Cinnamon Bear family. Every honest white man visiting this country has found in him a cordial host and a trusty friend. We have now in this upper village (which is about twenty miles north of Portage Bay) a native teacher and wife, under the missionary's supervision, and Shateritch is their patron and protector.

Over the two lower villages, on the same river, is the Crow Chief, "Don-a-wok" (Silver-eye), our aid and friend. When it was thought best to establish the mission on Portage Bay, he and his larger village came over in a body and built what, together with our mission buildings and those of a trading company, constitutes the village Haines. We have had accessions also from the Chilcoot village, whose chief bears the name of "Hū-Kūph-hink-Kush-Kiwā." He made me a present of a carved pipe-bowl, which he assured me was a treasure he would not sell, as it had been from time unknown the property of Chilcoot chiefs, and so had descended to him. I thanked him, and afterward made for him a little bag, such as they prize very much for carrying trifles and treasures. He is a very large, handsome old man of about fifty, but almost blind; and, if the reason for the excitement had not been so trivial as to make it ludicrous, his reception of the gift would have been most impressive, not to say imposing. Staring at me a moment with the blankness of utter astonishment, of unspeakable surprise, and laying his hand upon his heart he bowed silently, again and again; then in a low, deep voice he said in his own language, "My sister, I thank you, I thank you, I thank you! My heart shakes so that I cannot speak to you, thank you, thank you, thank you. To every one I show my treasure, my treasure which my snow sister gave me. It shall go with me always till I die, then it must be laid over my heart." And seizing my hand he held and gently shook it in both of his own, while tears gathered in his eyes.

Mrs. Eugene S. Willard.

HAINES, CHILCAT COUNTRY, ALASKA.

Police Reform.

AS THE large cities of the United States grow larger, the control of the vicious and criminal classes by a police force deriving its authority from the local political influence grows more and more inefficient. Here in Boston we have taken the first step toward reform in this direction, and believing that the time is near when all the large cities will have to grapple with this problem, I have thought your readers might be interested in some account of what has been done here, and the reasons for the action that has been taken.

Previous to the amendment of the Constitution of Massachusetts in 1852 the sheriffs of the several counties were appointed by the Governor and Council, and they appointed their deputies and enforced the State laws. The rage for extreme democracy which went like a great rolling wave over Europe in the years immediately following 1848, had reached the United States in 1852 and exerted a great influence in our Constitutional Convention of that year. A determined effort was made to change the method of appointing

the judges of our courts to hold office during good behavior, and to make them elective by the people for short terms. To defeat this movement the convention made district attorneys and sheriffs elective for terms of three years. Upon this concession was founded the local system of police to enforce in the city the laws of the State.

From the beginning all laws which were strenuously opposed by strong factions of men with political influence have remained practically dead letters so far as they applied to the great city. The first public demonstration against this local system was made in 1860, when a mob had broken up the John Brown meeting. Those people believed they had a right to assemble peaceably for a legitimate purpose, and strongly resented the interference of the mob and the hostility or apathy of the police upon whom they felt they had a right to rely for protection. Then began the movement for a police deriving its authority directly from the State which has just now crystallized into a law.

During the quarter of a century of agitation upon this question the retail liquor dealers, the gamblers, and other lawless classes have been growing relatively stronger to the rest of the population, and for many years the laws placing restrictions upon the liquor traffic have had only a semblance of enforcement in the city of Boston. At last the political government of the city had fallen almost absolutely into the hands of these lawless classes. The greed of these would-be rulers of the people has, we hope, at last worked their own downfall, and we expect to see the liquor traffic in future obedient to the law.

The law just enacted directs the Governor, with the consent of his council, to appoint three commissioners, who shall be a Board of Police for the city of Boston. The appointments are for five years. The Board may remove any officer for cause, the reasons being stated in the order for removal, and all appointments are to be made under the civil-service rules. The active friends of the reform desired to have the commissioners appointed to hold office during good behavior, to the end that the force might be entirely removed from political influence; however, the system adopted is a great improvement over the system it overturned.

The representatives of the slums, backed by a powerful lobby, made a determined fight against this bill. Their real reason for opposition they could not state, and they fell back upon the statement reiterated by every opposition speaker in every speech, that it was an interference with local self-government. But a legislature which had just remodeled the city charter, limiting the rate of taxation, and in many ways changing the whole theory of municipal government, was not doubtful about its power in the premises. The sound argument upon which the reform rests is that the whole people of the State is the law-making power. Laws are made, not for localities, but for the commonwealth, and should be enforced in Boston as thoroughly as in the smallest town or village. The executive officers charged with the administration of law should derive their authority from the same source as the law-making power, to the end that there shall be harmony between legislation and administration.

The weakness of the position that a police force should be a local institution is shown when it is re-

membered that out of every sixty arrests made by the police of Boston last year, fifty-nine were for violation of State laws, and only one for infringing the ordinances of the city. Sixty-one per cent. of the taxes in Boston are paid by non-residents. The city is the capital of the State and the commercial metropolis of New England, and near a hundred thousand persons are brought into Boston daily by the transportation lines. The enforcement of the laws, then, concerns others besides the voters of Boston. The example of the city works good or ill to the remotest corners of the commonwealth.

This measure was not initiated by any political party nor from any partisan motives. The active members of the Citizens' Law and Order League, embracing men from all parties, brought it forward in the interest of good order, and for the peace, quietness, and good name of their city. The reform goes into operation here, and its results will be of general interest to the good people of all our large cities.

L. Edwin Dudley,

Secretary Citizens' Law and Order League.

BOSTON, MASS., June 19, 1885.

"Hunting the Rocky Mountain Goat."

REFERRING to Mr. Baillie-Grohman's "instructive and entertaining article in the December number of THE CENTURY," Mr. B. G. Duval, of San Antonio, Texas, corrects the statement that the animal is not found below the forty-fifth parallel. He says he killed a Rocky Mountain goat in July, 1882, near the thirtieth parallel, in the Chenati Mountains, about sixty miles south of Fort Davis and not more than fifteen miles from the Rio Grande. Mexicans who were with him said the animal was seen occasionally in that range, and also in the mountains of Northern Mexico.

Mr. Frank P. Davis, of Washington, D. C., writes that the author of the article was in error in saying that the goat does not inhabit the main range of the Rocky Mountains, and that its haunts are entirely above the timber line. During two years' experience in the main range of the Rocky Mountains, between the eastern base and the Columbia River, and in the valley of the Kicking Horse River, he killed many goats, all of them being below the timber line.

"The Summer Haunts of American Artists."

EDITOR OF THE CENTURY:

SIR: The sketch of my father's studio on page 845 of the October CENTURY, is a sketch of his first studio in Catskill village. It stands a little back of the house he occupied on the Athens road, on a ridge north of the village, and within ten minutes' walk of the main street. The building was originally a carriage house, and the right end shown in the sketch was used for that purpose while my father had his studio there. The part he used for a studio does not appear in the picture. It is needless to say that the building did not present such a dilapidated appearance in my father's time.

Yours truly,

SAUGERTIES, N. Y., August 13, 1885.

Thomas Cole.

BRIC-À-BRAC.

Madrigal.

ALL the world is bright,
All my heart is merry,
Violets and roses red,
Sparkling in the dew:
Brow — the lily's white;
Lip — the crimson berry;
Hark, I hear a lightsome tread,—
Ah, my love, 'tis you!

Wing to me, birds, and sing to me;
None so happy as I!
Only the merriest melodies bring to me
When my beloved is by.

All the air is sweet,
All my heart is quiet,
Fleecy clouds on breezes warm
Floating far above:
Eye — where soft lights meet;
Cheek — where roses riot;
Look, I see a gracious form,—
Ah, 'tis you, my love!

Wing to her, birds, and sing to her;
None so happy as she!
Only the merriest melodies bring to her,—
Only this message from me!

Frank Dempster Sherman.

Accepted.

HOW MANY years it's lain away,
Unknown, unread, unseen,
The little song I sent one day
To that great magazine!

For I was very young indeed,
With hopes of rosy tint:—
I thought I e'en might live to see
My little song in print.

But only now, when I am gray,
And life is fleeting fast,
The longed-for — after long delay —
"Accepted" comes at last.

And in the joy it brings to me
There lurks a mournful doubt
If I shall ever live to see
That little song "come out."

For magazines are fresh and strong,
They grow not old and gray;
And though it's true that "Art is long,"
'Tis not so long as they.

But we — *we* fade! With bitter pain
I learn that well-worn truth.
Alas! I shall not live to gain
The cherished hope of youth.

I shall not hear my little song
By others read or sung;
I feel I cannot live so long —
I am no longer young!

Robertson Trowbridge.

The Wood-sprite.

HOW BLACK, how bleak, how cold, how wild!
Squirrels and mice don't know what's fun;
They skulk below in fur three-piled,
Nor show their nose till all is done;

How blows the snow, how branches bow,
Cut to and fro, lash high and low!
Till crack! alack, they snap and go.
O night of ruin, night of woe!
To-morrow, to the wood-folks' sorrow,
Many a fine tree, lying low
Will show with top-twigs in the snow.

But naught care I should pines fall, pat
I rise from 'neath them like the air;
Or, 'gainst the trunks blown, like a bat,
I cling and stay suspended there.
Or, should a spruce-bough scurry by,
With cones up-pointed, leaf-tufts trailed,
I board it, and away speed I,
The maddest voyage ever sailed.

I skip and skim, and bang and bump,
And bounce and jump, and thud and thump,
And chase ten devils round a stump;
Till rolled in snow, a frozen lump,
I tumble where some soul must stumble
Upon me — down he flounders plump
Like a lost soul at doomsday trump.

Last night, the deacon, hurrying past,
On good works bent, my form did find.
He picked me up and stood aghast,
But wrapped me from the bitter wind,
Then ran through banks and brakes and drifts,
And plunge he did, and slip, and slide,
And fall off rocks, and stick in rifts,
Before he reached his cold fire-side.

Then, while he plies the fire, and tries,
With puffing cheeks and smarting eyes,
His best to raise a flame — my cries
They drown the tempest, pierce the skies;
Hooting, calling, yelling, squalling,
Like everything that runs or flies,
To the good man's wild surprise.

Roger Riordan.

E.W. Kemble
June 85

AT THE CAPITAL.

Visitor: "Can you tell me the name of the architect of this building?"
The Gardener: "Yes, sah. Dis yer building, and in fac' most ob de buildings yo' witness 'roun' dis yer place, am done, strickly speakin', in de architeac ob de Modren French Kem' niscences, Sah!"
De Modren French Kem' niscences, Sah!"

My Rival.

How I hate to see him there,
With his haughty, well-bred air,
At her side,
Looking with a scornful eye
At poor me, as I walk by
While they ride.

Well I know he is not worth,
Spite of all his pride of birth,
Such a favor;
And I think, as I advance,
Of that calculating glance
That he gave her.

Lady dear, he cares for naught
But the things which may be bought
With your pelf;
In his thoughts you have no part,
And his cold and sluggish heart
Beats for self.

Yet how glad I'd be and gay
If you'd treat me in the way
You treat him.
'Twould with heaven itself surround me,
And the sad old world around me
Would grow dim.

Ah, my lady, fair and sweet,
Will you tell me when we meet
If it's true,
That your heart has grown so small,
There is no room there at all
For me too?

Did she answer no or yes?
She but gave *him* a caress,
Quite a hug,
And I staid to see him courted,
For he is her fine, imported,
English pug.

Bessie Chandler.

The Race.

"WE'LL run a race," quoth Thought to Heart,
"To find a just decree
If 'tis with you Love makes his home,
Or, Kardia, dear, with me.

"The goal, my sweet, shall be the mouth,
The eyes the signal give;
Sir Tongue shall then proclaim the seat
Where Love does really live."

That moment passed Diana fair;
Thought leapt the journey o'er!
Too late, too late; the throbbing Heart
Was at the goal before.

Charles G. Blanden.

Hobson's Choice.

A THIEF on his trial refused to be sworn.
"Of what use," queried he, "will my evidence be?
If I tell the whole truth, I shall get the Old Nick;
If I tell what's not true, the Old Nick will get *me*."

Francis E. Leupp.

Compensations.

DARS lots o' things in dis 'ere wul dat's better
dan dey seem;
De weeds an' grass dat crowd de corn may fatten
up de team;
De rain dat spiles de cotton-fiel' will he'p clean
out de ditch,
An' de oberflow dat kills de crap will make de
bottoms rich;
De nubbins in de pile o' corn will 'zactly suit de
steers;
And de row across de new groun's may be shorter
dan it 'pears;
De oak-tree flings a shadder in de hottest summer
noon,
An' de dog dat miss de possum-track may stumble
on de coon.

De stalks o' corn dat grow too thick is mighty apt
to fail;
Too many coon-tracks in de paf will fling you orf
de trail;
A swarm o' flies kin bus de web de cunnin' spider
weaves,
An' de backer plant won't come to much dat spreads
too many leaves;
To crowd in ebery sort o' truck may spile de Sun-
day pie,
An' a sermon wid too many p'int's will hardly clawe
de sky.
A little sow wid lots o' pigs is in a sorry fix.
An' de old hen's got to scuffle hard dat feeds too
many chicks;
So, de man dat's gittin' l'arnin' ought to stop wid
jes' enough,
An' nebber cram his head too full wid diffunt kinds
o' stuff.

A little horn kin make a' awful racket in de night;
A minner oftentimes kin sink de cork clean out o'
sight;
A little grabble in your shoe may start your foot
to risin',
An' a flea dat's got a' appetite kin stir up things
surprisin';
A narrer creek may swell itse'f an' oberflow de lan;
A bent pin in a rockin'-cheer kin lif' a whoppin'
man;
A little thread is strong enough to raise de cabin latch,
An' a ragged coat-tail's mighty good to hide a' ugly
patch.

A might rusty-lookin' dog kin take de 'possum-track,
An' de ha'r on top a nigger's head may kiver up
a fac'
Dat 'ill he'p you dodge a mud-hole as you push
along de way,
Or lead you froo a thicket whar de safes' walkin'
lay.
We put some mighty sorry things to hifalutin use;
Dars heaps o' fryin' chickens grabbed from orf a
rotten roos';
You know much 'bout de pea befo' you bus' de hull,
An' some handy things may float aroun' inside a
woolly skull,
A corn-cob pipe kin gib you smoke an' answer
mighty well;
A fus'-class man may put up at a second-class hotel;
An' a mighty solid thought may sometimes run in
out de rain
An' lodge for jes' a' ebenin in a common jackass'
brain.

J. A. Macon.
